If you checked the "Other" box, please describe payment frequency below:

75) For potential offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

Increased transparency, as discussed in response to questions 2, 24, 25 and 63, is necessary to strengthen relationships with RCCOs as it is not clear that funding is being sufficiently invested in care and the care system. To address this, RCCO's should have a ten percent administrative cost threshold. Additionally, a medical loss ratio standard should be established and RCCOs should have reporting requirements regarding funds spent and unspent.

76) For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

CHCs monitor and report performance publicly via the Uniform Data System and small amounts of funding are increasingly tied to quality payments, including:

- Performance in Medicare Advantage
- Meaningful Use has paid practices based on meeting quality outcomes with HIT PCMH attainment

CHCs are increasingly seeking and occasionally receiving reimbursement for performance on patient satisfaction, provider satisfaction, services and screening rates, and access and availability measures.

Health Information Technology (HIT)

77) **Types of communication.** For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	☐
Text message	☐	☐
Web portal	☐	☐
Email	☐	☐
Telemedicine / Video chat	☐	☐
Face-to-face meeting	☐	☐
Smartphone app	☐	☐
Other: As providers, CHCs find phone calls and face-to-face meetings to have the most success in communicating with patients. Some CHCs have begun to use text messages and all are working to get patients to use web portals. Meaningful Use requires the use of patient portals, but it is too early to know at this time if this will work with the population served.		

78) **HIT investments by organizations.** For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below:

Responses in the table below reflect what the majority of CHCs in Colorado have. Individual CHCs have been encouraged to respond with their specifics.

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	☒	☐
Digital care management tool	☒	☐
Care transitions alerts	☒	☐
Electronic Health Records (EHRs)	☒	☐
Health risk assessment software	☒	☐
Practice assessment tools	☒	☐
Practice management tools (scheduling, billing)	☒	☐
Client web portal for communicating care plan, services, benefit enrollment	☒	☐
Patient education/wellness tools	☒	☐
Provider/case manager directory	☒	☐
Shared decision-making tools	☒	☐
Telemedicine software	☐	☐
Other:	☐	☐

79) **Importance of technology by type.** The Department is working to determine what technology is in place, what technology is needed, and what technology should be standardized. For RCCOs, providers, and other organizations, use the table below to answer what HIT infrastructure outside of the SDAC your organization would use to perform population health management activities. Tools are scored from 1-5, where 1 are those items least-likely to be used, and 5 are items most-likely to be used:

Tool	1 Least	2	3	4	5 Most
Population analytics / reporting / dashboard	☐	☐	☐	☐	☒
Care management tool	☐	☐	☐	☐	☒
Care transitions alerts	☐	☐	☐	☐	☒
Electronic Health Records (EHRs)	☐	☐	☐	☐	☒
Practice assessment tools	☐	☐	☐	☐	☒
Health risk assessment software	☐	☐	☐	☐	☒
Practice management tools (scheduling, billing)	☐	☐	☐	☐	☒
Client web portal for communicating care plan, services, benefit enrollment	☐	☐	☒	☐	☐
Patient education wellness tools	☐	☐	☐	☐	☒
Provider/case manager directory	☐	☐	☒	☐	☐
Shared decision-making tools	☐	☐	☐	☐	☒
Telemedicine	☐	☐	☒	☐	☐
Other:	☐	☐	☐	☐	☐

80) What are the primary barriers to RCCOs and providers increasing their use Health Information Technology to improve the performance of Primary Care Practices?

The lack of access to timely, updated and accurate information regarding care sought outside of a CHCs system are needed to be actionable for care transitions and planned care. The lack of shared data systems is a huge barrier to this, but CORHIO is a quickly developing solution to this issue that should be utilized and encouraged.

The issue is the inability to share data across systems, not necessarily the systems themselves. Consequently, requirements from RCCOs to implement specific systems that don't align with a practice's existing system will not address the issue and will only create need for additional administration resources. RCCOs should work with their providers and CORHIO to address these issues.

81) How can Health Information Technology support Behavioral Health Integration?

The issue with technology and the integration of physical and behavioral health is not in relation to the capabilities of technology. As mentioned in response to question 80, CORHIO has been able to develop

mechanisms to bridge gaps between different systems in order to facilitate access to real time data. However, CORHIO has not been able to address the barriers related to sharing behavioral health information as the federal regulatory requirements on sharing this information are more burdensome. Changes are needed to the regulations that are preventing data sharing from behavioral health.

Without changes to regulation, integrating and sharing data between behavioral and physical health can only be done on an individual partnership level and will continue to require highly sophisticated systems. Until regulations can be changed, RCCOs sould be supporting local efforts to develop these systems.

82) In the next iteration of the ACC, should there be a shared resource for data and analytics? Please describe the basic criteria for what a shared data and analytics platform needs to contain in order for it to be useful.

Yes, there needs to be a way to share data across systems in the next iteration of the ACC because without it there is no way to ensure that PCMPs across the state are getting consistent data, which is of particular concern for those participating in multiple RCCOs. As discussed throughout this response, this shared data and analytics platform should not create additional administrative burdens and costs for PCMPs, but should utilize available technology to share data across systems. In order for it to be useful, it must also meet basic requirements of transparency and timeliness:

- Transparency would be established by ensuring the ability to see background data being compiled and a vendor that is responsive to questions.
- Real time information about care accessed is necessary to provide timely, actionable data for care coordinators the information needed to address high utilizers now.

While individual care data is useful in care coordination, a shared data and analytics system should also be able to run useful reports on the population they serve as a whole. These reports should include outcome data and true cost of care comparisons rather than just percentage change information. Additionally, for PCMPs to control the cost of care they need information about the charges associated with care provided outside of their system. The data and analytics tool should allow providers to see if a hospital or specialist cost is significantly higher than another to enable the provider to make a smart referral.

83) Should there be a shared care management tool? Please describe the basic criteria for what a care management tool would need to contain in order for it to be useful.

No. Refer to response to question 80 regarding the issue to address being the ability to share information across systems, not implementation of duplicative systems at the practice level.

84) Should there be a shared population health management tool? Please describe the basic criteria for what a population health management tool would need to contain in order for it to be useful.

No. Refer to response to question 80 regarding the issue to address being the ability to share information across systems, not implementation of duplicative systems at the practice level.

85) Please describe the functionality that a common Medicaid provider directory would need to contain in order for it to be useful.

A provider directory should be searchable by provider, site, and/or entity; contain information on if they are currently accepting new ACC enrollees; and contain accessibility information such as hours of operation and languages spoken. Additionally, the provider interface should have a way to easily update information, contain provider contact information, and contain information regarding making referrals to the practice. On the patient side it should also contain quality information about the provider.

86) How can the RCCOs support providers' access to actionable and timely clinical data?

As stated throughout this response, access to actionable, real-time data needs to be prioritized by the Department. PCMPs need access to more complete patient care and cost data, often across RCCOs, to effectively manage the population and provide care coordination.

In addition to the comments made in response to question 82, RCCOs should be working with providers, including PCMPs, hospitals and specialists, across their region regarding how data will be shared. These conversations should happen within a state wide context as often patients and providers cross RCCO region lines. RCCOs could both be supportive of efforts to join CORHIO to achieve the outcome of sharing actionable and timely clinical data, and be implementing requirements that providers engage in these efforts.

87) What are the HIT solutions that would benefit clients, providers, and RCCOs? Please comment on the parameters these tools or platforms would need to possess and the ways in which they could be used.

There are many HIT solutions which would provide benefits to clients, providers and RCCOs. Patient access to web portals to track their health information and direct messaging with providers would be useful in engaging patient in their health. Telemedicine, especially in relation to accessing specialists, would beneficial in expanding access to care. Instant communication in the form of email or text when a patient presents in the ER would be beneficial to case managers.

In order for any of these to be utilized to the full extent of their possibilities, there needs to be a system in place for sharing data across systems. CORHIO is a locally developed solution that could be wider used to address this barrier.

88) What technical assistance or resources related to HIT infrastructure should the RCCOs supply? This assistance or these resources could be for providers, social service organization, clients/families, or for others.

RCCOs should be encouraging or requiring participation in CORHIO and including technical assistance with that process, which would address a requirement that they should have to ensure the flow of information across systems. Additionally, RCCOs should be providing support to Meaningful Use implementation, which could be simply coordinating with organizations that provide support in this area

89) What role should health information exchange platforms like CORHIO or QHN play in the next iteration of the ACC?

As mentioned throughout the answers to questions in this section, CORHIO has a large role to play in successfully developing the data systems which will allow real-time, clinical data to be shared, which is required to fully realize the benefits of care coordination. Many of the barriers that were alluded to in the questions of this RFI, such as is a single system needed for a particular purpose across a region, are issues CORHIO has already been working on solutions to, so they should be included as a partner in these efforts from the beginning.

90) Please share any information, advice, and suggestions you have about health information technology in the ACC Program.

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Elizabeth Freudenthal
Location: Denver, Colorado

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Colorado Association for School-Based Health Care
Location: Denver, Colorado
☒ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☐ Medical provider / PCMP / other provider
  i. Type or specialty: Click here to enter text.
  ii. Area of practice: Click here to enter text.
☒ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☐ Other (please describe): Click here to enter text.

Are you currently involved in the ACC program?

☐ Yes
☒ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☐ 3-4 years

How have you been involved in the ACC program and what interaction have you had with RCCOs:

We support our members, the 56 school-based health centers (SBHCs) in Colorado. This response is compiled based on the direct input of many of our members, as well as our own ongoing work supporting SBHCs.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:

Colorado's SBHCs served nearly 32,000 unduplicated patients in the 2012-13 academic year. Of those, nearly 60% were covered by Medicaid. A full 25% of total SBHC funding comes from Medicaid payments. SBHCs typically help families enroll in Medicaid. Nearly all SBHCs are enrolled in their RCCOs. There are a few SBHCs who are trying to enroll in their RCCOs but are experiencing administrative difficulties.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

General Questions

1) **What is working best in the Accountable Care Collaborative (ACC) right now?**

For school-based health centers (SBHCs), the ACC program provides several benefits.

RCCOs help SBHC providers support better continuity of care for their patients. SBHCs serve patients as a primary care medical home, but they also see patients with other primary care providers. The RCCO helps all the providers that treat each patient communicate with each other about that patient.

SBHCs get reimbursements for the integrated care they provide their members. And they get data that they can use for improving their practices. For example, monthly reports about high emergency department utilizers help SBHC providers target those patients for comprehensive intervention, prevention, and care coordination activities.

From a systemic perspective, the ACC begins to lay a foundation for reimbursing SBHCs for the innovative care that they've been doing for decades in Colorado: integrated, place-based, whole-child health care.

2) **What is not working well in the ACC Program?**

There are three major issues facing SBHCs in the ACC program.

1. Many SBHCs have difficulty getting their patients attributed to them. They perform well child exams and increase that KPI for their RCCO, but they don't get the related incentive per-member-per-month payments because they are not the attributed primary care provider for those patients.

2. The current funding structure for behavioral health care is inadequate for meeting the needs of children and adolescents. SBHCs rely on the resources of their Community Mental Health Center (CMHC) to provide behavioral health care. Too often, the CMHC does not provide a staff member with regular, adequate hours at the SBHC. There is high staff turnover, and long waiting lists for students with urgent mental health needs. Many SBHCs provide behavioral health services without seeking reimbursement, or they rely on grant funding for behavioral health services. Many SBHC administrators and providers have sought CASBHC's support in getting direct reimbursement for the behavioral health care they provide.

    a. Another consequence of the SBHC's reliance on CMHCs for behavioral health care is that the SBHC and CMHC staff typically use different electronic health records. The incompatibility makes fully integrated care more difficult. CORHIO could help support efforts to better integrate existing EHRS and to distribute protocols for better coordination between behavioral health records and physical health records.

    If SBHCs could get direct reimbursement for the behavioral health care they are already providing, they could keep therapists on staff, fully integrated into their IT systems, confidentiality protocols, and culture. They would also be able to provide crucial services in

a more financially sustainable way. And with this financial sustainability, they would be able to support enough staff to fully meet the needs of their patients.

3. Some SBHCs have had difficulty getting acknowledged as patient-centered medical homes by the ACC. SBHCs meet all of the characteristics of patient-centered medical homes: They are whole-child-centered—more so than standard clinics, because they coordinate with each patient's school and address learning barriers. They provide coordinated, integrated health care, they are uniquely accessible to pediatric populations, and they provide culturally sensitive health care. They provide systematic referral services for times when clinics are closed. They routinely provide health education and other empowering programs, including youth health advisory councils and programs. They are the primary medical home for many of their patients.

Providers also described some ways that the data they get from their RCCOs could be more useful. There is currently a 3-4 month lag in processing time. That is a long time for pediatric providers to use the data to improve care for their patients. In addition, primary care data are provided as a lump sum. Providers cannot use this undifferentiated data to understand if their treatment plans are appropriate. Primary care providers have expressed the desire for expenses broken down to allow for better interventions.

3) What is working best in the Behavioral Health Organization (BHO) system right now?

Many SBHCs form partnerships with the local community mental health center (CMCH) to provide mental health care and substance abuse treatment. The SBHCs with strong, positive relationships with their CMHCs are able to meet most of the health care needs of their patients. They are able to staff their SBHC with full-time providers who have the capacity to practice integrated care. With full staffing and close relationships, behavioral health providers are able to be present at well child exams and for "warm handoffs" between the medical and behavioral health provider. They are also able to have shared access to electronic health records, which simplifies tracking and coding and improves the quality of care.

4) What is not working well in the BHO system?

Expanding on the summary provided above, there are two specific structural barriers to SBHCs meeting the full need for behavioral health care at schools.

1. Individual BHOs control the ability for licensed therapists to get reimbursed by Medicaid for providing services to Medicaid patients.

   One Western Slope provider said, "[Our regional BHO and CMCH] don't have enough providers that are bilingual and culturally competent. They say that they don't need these providers. They say there are plenty of providers in our area, and it's not true. Our valley is half Hispanic, with 58% Hispanic children in our schools, and there is only one part-time, bilingual therapist in the valley. We have a lot of Medicaid kids that cannot wait for this provider to see them in 2-3 months. The BHO doesn't open their doors for other providers."

This site, and other sites in this situation, hire bilingual therapists to meet the needs of their patients. In-house therapists are more able to provide fully integrated care. They work closely with medical and other providers, and they can share the same EHR. They are located fully at school and have capacity to integrate their services with school programming as well as SBHC activities.

However, SBHCs are paying for these services with already-scarce grant funding, typically from the Colorado Department of Public Health and Environment (CDPHE). CDPHE's SBHC program is working hard to find a way to maintain funding for the expansion of the SBHC system over the next few years. CDPHE should not be funding provision of Medicaid-covered services to Medicaid-enrolled children and youth.

2. SBHCs rely on already-underfunded CMCHs for staffing. Even when the SBHC has a great relationship with their partner organizations, they do not have enough behavioral health providers to meet the needs of their communities. Even the SBHCs with the strongest behavioral health programs have expressed the clear need for more behavioral health staff. If therapists were paid higher wages, as well, there would be lower rates of workforce attrition and turnover. This would improve the delivery of integrated health care at SBHCs.

   If Colorado preserves the Medicaid carve-out, CASBHC recommends two changes that would meet the needs of SBHCs: Allow a neutral state agency, rather than regional BHOs, to provide Medicaid accreditation to behavioral health providers. And significantly increase the size of the carve-out to more fully fund behavioral health providers statewide.

   As one provider, whose relationship to her BHO is strong, said, "We need more. That's really the biggest thing. We need more clinicians and hours. Ours are stretched to the max. We use them completely to the fullest extent possible, and we need more."

5) What is working well with RCCO and BHO collaboration right now?

6) What is not working well with RCCO and BHO collaboration right now?

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

SBHCs are well-positioned to provide the innovative, fully integrated, whole-child health care that the ACC prioritizes and that the health care field is increasingly recognizing is ideal.

Integrated into their school communities, SBHCs provide children and adolescents with culturally sensitive, person-centered care. They coordinate with teachers and administration to provide a supportive environment for Colorado's most vulnerable children and youth. SBHCs are required to have licensed therapists on staff, either through partnerships with their CMHCs or through their medical sponsors. These providers work closely with primary care providers and other providers treating each child or adolescent at the clinic. A majority of their patients are covered by Medicaid. Their Medicaid patients' behavioral health care needs remain largely unmet, due to structural barriers described above. SBHC providers should be reimbursed by Medicaid for the behavioral health care services they offer to their Medicaid patients.

SBHCs have been pioneering team-based, integrated health care for decades in Colorado. If the ACC is going to provide fully integrated health care, they can look to Colorado's school-based health centers as a model for all medical homes.

However, the current funding streams for behavioral health care constitute significant barriers to SBHCs providing fully integrated, comprehensive health care that's financially sustainable.

If Medicaid would reimburse SBHCs directly for the behavioral health care that they already provide, SBHCs can provide the best possible integrated health care for Colorado's most vulnerable children and youth.

For a practical next step, HCPF could collaborate with CDPHE and CASBHC to pilot a program testing reimbursement for behavioral health services at a few school-based health centers. This pilot could include fully integrated behavioral health care as an incentive in the per member per month (PMPM) payment system. Participating SBHCs could report on integration measures in return for increased PMPM payments. These payments could help support provision of fully integrated behavioral health services for SBHC members. Such payments would allow some SBHCs to expand their behavioral health services and increase the integration of these services.

"It would be amazing," said one SBHC administrator about this proposal. Another said, "That would be great. They would give us more dollars, and we could provide more behavioral health care."

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☒	☐	
Community Behavioral Health Services Rule	☐	☐	
Covered diagnoses list	☐	☐	
Different behavioral / physical health reimbursement	☒	☐	
Institutions for Mental Diseases exclusion	☐	☐	
OBH rules, reporting, or financing (regulatory differences between agencies)	☐	☐	
PCMP financing structure	☐	☐	
Per-member per-month amount	☐	☐	
Physical space constraints	☐	☐	
Privacy Laws (HIPAA, 42 CFR)	☐	☐	
Professional / cultural divisions	☐	☐	
RCCO or BHO contracts	☒	☐	
Staff capacity	☒	☐	
State/Federal rules or reporting requirements	☐	☐	
Technical resources / data sharing	☒	☐	
Training	☐	☐	
Others	Please type your response here.		

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

School-based health centers provide integrated, whole-person physical and behavioral health care. A clinic providing such care should include these characteristics:

Staffing

- One or more primary care provider, including a nurse practitioner, physician assistant, or physician
- One or more master's level social worker or licensed therapist/counselor

Depending on capacity, clinics should also staff health educators, outreach and enrollment specialists, patient navigators/care coordinators, and case managers. Many of these roles in small school-based health centers are filled by a single person.

Integrated care providers should also have policies and procedures in place for the following:

- Co-location of services
- Communication and coordination of data, team meetings, scheduling
- Integration of electronic health records to the greatest extent possible
- Patient tracking across clinic providers
- Coordinated referral of patients to other community resources, including nutrition support, specialist care,
- Case management/patient navigation/care coordination
- Some kind of tracking and coding system for behavioral health, aligned with and/or integrated into clinic system tracking and coding physical health

As one SBHC provider described, "In order to say you have integrated care, you need to have behavioral and medical health *living together*. They need to be able to see patients together when appropriate, have shared responsibility, and good communication. Everyone's on an equal playing field. No one holds all the cards."

10) Please share any other general advice or suggestions you may have about behavioral health integration.

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination?

The care coordinator position at an SBHC is essential to providing fully integrated health care for vulnerable patients.

SBHCs define care coordination as the activities of the person who helps patients and their families navigate health care and wellness services, and who helps them stay compliant with treatment plans. When data show that a patient needs intervention out of the clinic, the care coordinator is the person who conducts that intervention. One provider said, "Care coordination is the centerpiece of all the services we provide. The care coordinator is the position that ties everything down."

Some providers felt that while the RCCO should support care coordination by providing trainings, data, and resources, the person doing that work should be located in each clinic, fully integrated into all the clinic's services and information systems. It's crucial for a care coordinator to have personal relationships with each patient and her family. If a patient misses an appointment outside the clinic, or is having difficulty adhering to a treatment plan, the care coordinator can draw on a personal relationship to support that patient through change.

The care coordination role is also central to each clinic's work saving on health care costs overall. The care coordinator can take charge of reducing a patient's unnecessary emergency department visits, for example. The care coordinator is the person who is able to look at the larger issues facing each patient, including home and school or work environments, and provide targeted wellness support across disciplines and agencies.

While recognizing the potential for confusion of the care coordinator role across the RCCO system, CASBHC believes that this role is essential to the optimal function of an integrated health care clinic like an SBHC. The care coordinator working at each SBHC is part of its processes and systems and can best take charge of the aspects of a patient's care that must happen outside of the exam room.

Some of the SBHCs are officially taking on care coordinator responsibilities, along with the associated extra tracking responsibilities, so that they receive additional reimbursements by the ACC program. Some SBHCs do not have the capacity for the administrative burdens associated with this enhanced PCMP status. However, CASBHC urges the ACC staff to consider ways to reimburse all patient navigators and care coordinators at SBHCs.

b. How should RCCOs prioritize who receives care coordination first?

Most of SBHC providers believe that care coordination is most important for patients with multiple diagnoses, chronic conditions, or special high needs circumstances, including refugee or asylum

status. It's also important for people with language and cultural differences, because these families need additional support navigating the health care system.

c. How should RCCOs identify clients and families who need care coordination?

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

12) What services should be coordinated and are there services that should not be a part of care coordination?

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today?

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

d. What are the gaps in care coordination across the continuum of care?

15) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	Should the RCCO have a role?	Should the RCCOs coordinate with community	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?

	Yes	No	supports and services? Yes	
Abuse, neglect, and trauma	☒	☐	☒	
Affordability (assistance with prescriptions or co-pays)	☒	☐	☒	
Daycare / childcare	☐	☐	☐	
Economic stability & employment	☐	☐	☐	
Education	☐	☐	☐	
Environment	☐	☐	☐	
Food access / nutrition	☒	☐	☒	
Health literacy	☒	☐	☒	
Housing	☐	☐	☐	
Language or translation services	☒	☐	☒	
Literacy	☐	☐	☐	
Transportation	☒	☐	☒	
Other	Please type your response here. Feel free to list as many non-medical factors as you want, and please explain how the RCCO should be involved. RCCOs should coordinate dental care on a systems level and support clinics with data and resources about regional dental providers.			

16) **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	Coordinate care? Yes	No	In what capacity should these individuals coordinate care in the ACC Program?
Advanced Practice (Registered) Nurses	☐	☐	
Certified Addiction Councilors	☐	☐	
Certified Nurse Midwives	☐	☐	
Community Health Workers	☐	☐	
Generalists (BA/BS/MA/MS)	☐	☐	
Health Coaches	☐	☐	
Licensed Clinical Social Workers	☐	☐	
Licensed Marriage and Family Therapist	☐	☐	
Licensed Mental Health Counselors	☐	☐	
Licensed Professional Counselor	☐	☐	
Masters of Public Health	☐	☐	
Medical Doctors / Doctors of Osteopathic Medicine	☐	☐	
Nurse Practitioners	☐	☐	
Patient Navigators	☐	☐	
Peer Advocates	☐	☐	
Promotoras	☐	☐	
Psychiatrists	☐	☐	
Psychologists	☐	☐	
Registered Nurses	☐	☐	
Social Workers	☐	☐	
Wraparound facilitators	☐	☐	
Other	Please type your response here. Everyone who touches a patient should have some responsibility to ensure that that patient has access to all the resources she or he needs to get and stay healthy. This responsibility could consist of communication and data-sharing with the care coordinator. The care coordinator should be in regular contact with all providers and be tied into the clinic's electronic health records system to		

optimize tracking and communications. SBHC providers, however, feel that care coordination is a complex enough position that providers do not have the resources to take that on adequately.

17) **Care coordination requirements for specific populations.** Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and infants	☐	☐	
Children	☐	☐	
Children who are healthy, but in socially-complex environments	☐	☐	
Children involved in the foster care system	☐	☐	
Children with a chronic illness	☐	☐	
Children with a serious emotional disturbance	☐	☐	
Children with medical complexity	☐	☐	
Children or youth with a behavioral health diagnosis or substance use disorder	☐	☐	
Transition-age adolescents	☐	☐	
Parents and families	☐	☐	
Pregnant women	☐	☐	
Adults	☐	☐	
Adults who are healthy, but in socially-complex situations	☐	☐	
Adults with a chronic illness	☐	☐	
Adults with a behavioral health diagnosis or substance use disorder	☐	☐	
Clients involved in the criminal justice system	☐	☐	
Clients with a disability	☐	☐	
Clients in a nursing facility	☐	☐	
Elderly clients	☐	☐	
Frail elderly clients	☐	☐	
Clients in palliative care	☐	☐	
Other populations, please comment:			

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

19) How should care coordination be evaluated? How should its outcomes be measured?

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

a. What is the PMPM cost for providing care coordination services?

SBHC providers agreed that care coordination in their clinics costs significantly more than $8-$9, but could not provide a number. A small number of high-using patients cost a great deal to support. Many SBHCs have remaining unmet needs for care coordination. An increased reimbursement for that service could help meet the need for those services.

b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

Patients with more than three diagnoses or with chronic disease warrant an increased PMPM for care coordination.

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

a. **Care coordinator to client ratios.** If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☐
51-100	☐
101-200	☐
201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

When patients are resistant to changing their habits, their outcomes may not improve. The department could measure assessments, referrals, and follow-up visits. Some SBHCs use decreasing emergency department and hospital admissions as an outcome. If care coordination decreases preventable hospital admissions, that's an indicator that care coordination has been effective.

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

27) Should the RCCO region maps change? Why or why not? If so, how?

RCCO maps should match BHOs to enable full integration of care, full coordination of services, and the least administrative burden on clinics.

28) Should the BHO region maps change? Why or why not? If so, how?

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

34) What role should RCCOs play in attributing clients to their respective PCMPs?

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

42) How should the Department structure stakeholder engagement for the ACC as a whole?

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

a. If no, what are the gaps?

b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

a. What role should hospitals play in the next iteration of the ACC Program?

b. What role should pharmacies play in the next iteration of the ACC Program?

c. What role should specialists play in the next iteration of the ACC Program?

d. What role should home health play in the next iteration of the ACC Program?

e. What role should hospice care play in the next iteration of the ACC Program?

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

g. What role should counties play in the next iteration of the ACC Program?

h. What role should local public health agencies play in the next iteration of the ACC Program?

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

45) How can RCCOs help to support clients and families in making and keeping appointments?

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

47) **Community Health Worker reimbursement.** Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement process	(Please check all that apply)
Independently bill	☐
On staff (salary) at Primary Care Medical Provider Clinic	☐
On staff (salary) at RCCO	☐
Per Member Per Month Payment	☐

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you?

b. What RCCO requirements would ensure cultural competency?

Haidith: beyond being more supportive of bilingual providers, any language. Very important to train staff for them to be away of cultural differences, be mindful of how to reach higher needs populations (esp of newcomers to country). They will not be successful if they don't have skills. Training. They should conduct trainings—they know the immigrant communities. Training in all the countries where there are immigrant populations. Supporting the medical practices that do that work—hard to attract good providers in rural areas. How will they learn it if they are in crisis mode all of the time.

Cultural diversity within Latina population. A lot of diversity: another challenge. Cultural training has to talk about differences within Central and South America.

LB: to be able to provide access to training, education opportunities. Our staff does not have enough training. We've been entrenched in our own way of seeing the world and its' hard for individuals to step out of their own lens. We have such a diverse patient population. The number one thing is to have health staff to take a breath and set judgments aside, and that's not easy in a very fast-paced, numbers-driven system. The RCCO would be the place--where are all the resources for these various populations. It's not just ethnicity, socio-economic populations, LGBTQ, single parents, a lot.

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

51) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

ACC shouldn't reimburse emergency room doctors at higher rates for non-emergency services.

52) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

Practice Support

53) **Support for practices.** Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☐	☐	☐	☐
Network provider education	☐	☐	☐	☐
Assistance with practice redesign	☐	☐	☐	☐
Assistance with efficiency-enhancing activities	☐	☐	☐	☐
Provide web-based resources and directories	☐	☐	☐	☐
Provide practice-specific data reports	☐	☐	☐	☐
Provide clinical care guidelines and best practices.	☐	☐	☐	☐
Provide clinical screening tools	☐	☐	☐	☐
Provide health and functioning questionnaires	☐	☐	☐	☐
Provide chronic care templates	☐	☐	☐	☐
Provide registries	☐	☐	☐	☐
Offer client reminders	☐	☐	☐	☐
Offer client self-management tools	☐	☐	☐	☐
Offer educational materials about specific conditions	☐	☐	☐	☐
Supply behavioral health surveys	☐	☐	☐	☐
Supply other self-screening tools	☐	☐	☐	☐
Administer behavioral health surveys	☐	☐	☐	☐
Administer other self-screening tools	☐	☐	☐	☐
Prepare client action plans	☐	☐	☐	☐
Provide training on providing culturally-competent care	☐	☐	☐	☐
Provide training to supporting staff	☐	☐	☐	☐
Provide training on motivational interviewing	☐	☐	☐	☐
Provide tools and software for phone call and appointment tracking	☐	☐	☐	☐
Provide tools and resources for tracking labs, referrals, etc.	☐	☐	☐	☐
Provide referral and transitions of care checklists	☐	☐	☐	☐
Provide visit agendas or templates	☐	☐	☐	☐
Provide standing pharmacy order templates	☐	☐	☐	☐
Provide comprehensive directory of community resources	☐	☐	☐	☐
Provide directory of other resources	☐	☐	☐	☐
Provide materials regarding Nurse Advice Line	☐	☐	☐	☐
Ensure all tools and resources are centrally located on RCCO-specific website	☐	☐	☐	☐
Others				

54) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

55) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

56) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

57) Should the Department require that PCMPs utilize disease registries to manage the health of their population?

58) Please share any other advice or suggestions about provider support in the ACC.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

62) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

63) What role – if any – should the RCCOs play in the distribution of payments to providers?

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

66) **Measuring Client experience.** Please complete the table below to indicate how the Department should measure Client/patient experience:

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☐	☐	
SF-12 Health Survey	☐	☐	
Other types of client interviews / surveys	☐	☐	
Patient Activation Measure	☐	☐	
Focus groups	☐	☐	
Other	Please type your response here.		

67) Knowing that, at this time, the Department only has claims data, how should population health be measured?

68) How should quality and performance data be reported to the RCCOs, PCMPs, and the public?

69) **Measures for payment.** Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☐
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

70) What percent of RCCO payments should be tied to measures or performance?

Percentage	
10-20%	☐
21-30%	☐
31-40%	☐
41-50%	☐
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

71) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?

72) Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?

73) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

74) **Incentive payment frequency**. Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	☐
Annually	☐
Other	☐

If you checked the "Other" box, please describe payment frequency below:

75) For potential offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

76) For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

Health Information Technology (HIT)

77) **Types of communication.** For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	☐
Text message	☐	☐
Web portal	☐	☐
Email	☐	☐
Telemedicine / Video chat	☐	☐
Face-to-face meeting	☐	☐
Smartphone app	☐	☐
Other:		

78) **HIT investments by organizations.** For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below:

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	☐	☐
Digital care management tool	☐	☐
Care transitions alerts	☐	☐
Electronic Health Records (EHRs)	☐	☐
Health risk assessment software	☐	☐
Practice assessment tools	☐	☐
Practice management tools (scheduling, billing)	☐	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☐
Patient education/wellness tools	☐	☐
Provider/case manager directory	☐	☐
Shared decision-making tools	☐	☐
Telemedicine software	☐	☐
Other:	☐	☐
Other:	☐	☐

79) **Importance of technology by type.** The Department is working to determine what technology is in place, what technology is needed, and what technology should be standardized. For RCCOs, providers, and other organizations, use the table below to answer what HIT infrastructure outside of the SDAC your organization would use to perform population health management activities. Tools are scored from 1-5, where 1 are those items least-likely to be used, and 5 are items most-likely to be used:

Tool	1 Least	2	3	4	5 Most
Population analytics / reporting / dashboard	☐	☐	☐	☐	☐
Care management tool	☐	☐	☐	☐	☐
Care transitions alerts	☐	☐	☐	☐	☐
Electronic Health Records (EHRs)	☐	☐	☐	☐	☐
Practice assessment tools	☐	☐	☐	☐	☐
Health risk assessment software	☐	☐	☐	☐	☐
Practice management tools (scheduling, billing)	☐	☐	☐	☐	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☐	☐	☐	☐
Patient education wellness tools	☐	☐	☐	☐	☐
Provider/case manager directory	☐	☐	☐	☐	☐
Shared decision-making tools	☐	☐	☐	☐	☐
Telemedicine	☐	☐	☐	☐	☐
Other:	☐	☐	☐	☐	☐

80) What are the primary barriers to RCCOs and providers increasing their use Health Information Technology to improve the performance of Primary Care Practices?

81) How can Health Information Technology support Behavioral Health Integration?

Most SBHCs are collaborations of at least two health care providers—the medical sponsor and the behavioral health provider—as well as any dental providers, health educators, or others. All entities have different EHRs, and their EHRs are typically incompatible with each other. Providers cannot legally share patient information across disciplines when they are employed by different entities unless they have specific privacy protocols in place. When their privacy procedures enable such sharing, their incompatible EHRs make that sharing difficult.

However, some cultural differences between physical and behavioral health care providers are also relevant. Behavioral health providers typically do not "code" encounters in the same way that medical providers do. Their patient records are confidential, to best treat their patients. Medical providers can be frustrated by the lack of data generated by behavioral health care providers. And behavioral health

providers may be frustrated by any demands that they change their patient record practices in ways that do not suit the nature of mental health work.

These cultural and technological incompatibilities have broad effects on SBHCs. Patients do not receive the optimal care when their providers cannot share information about each patient. SBHCs cannot track behavioral health encounters and cannot incorporate behavioral health data into their ongoing quality improvement efforts. Some SBHCs use double or triple entry of patient information to supplement their patient records with behavioral health information. More commonly, they accommodate the IT gaps using inefficient and transitory in-person communications.

Efforts such as CORHIO, to align separate EHRs and increase compatibility, will only work if all providers participate. Currently, some SBHCs cannot get any information about patient hospital visits if patients go to certain hospital systems. Furthermore, CORHIO does not help solve the different IT and cultural systems that physical and behavioral health providers use.

Some SBHCs with strong behavioral health integration employ internal tracking codes for behavioral health. They use these codes in their ongoing quality improvement efforts. They could be models for a broader system of using IT and internal tracking processes to better integrate behavioral health care into the SBHC practice.

Any adjustment to behavioral health IT must accommodate a clinic's need to track data with the behavioral health provider's need to preserve patient confidentiality.

Ultimately, however, these incompatibilities point to the broader difficulties that the Medicaid carve-out has imposed on integrated health care clinics. When behavioral health providers can be employed by the integrated clinic, incorporated into their protocols, processes and IT systems and reimbursed by Medicaid for treating Medicaid-covered patients, they can provide fully integrated care. When behavioral health providers are employed by outside entities and try to integrate into an SBHC, the financial, technological, and cultural barriers make full integration extremely challenging.

Colorado Department of Health Care Policy and Financing

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Kristen Pieper
Location: Denver, Denver, CO

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Colorado Covering Kids and Families
Location: Denver, Denver, CO
☒ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☐ Medical provider / PCMP / other provider
  i. Type or specialty: Click here to enter text.
  ii. Area of practice: Click here to enter text.
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☒ Other (please describe): Advocacy organization

Are you currently involved in the ACC program?

☐ Yes
☒ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☐ 3-4 years

How have you been involved in the ACC program and what interaction have you had with RCCOs:

Click here to enter text.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:

The Colorado Covering Kids and Families (CKF) mission is to increase access to affordable health coverage and high quality health care by ensuring that Medicaid, Child Health Plan Plus (CHP+), and subsidized private insurance through Colorado's state-based marketplace consistently meet the needs of low-income Coloradans. CKF works to ensure that eligible Coloradans are enrolled in Medicaid, CHP+, and subsidized private insurance through Colorado's state-based marketplace by coordinating and improving outreach efforts; identify the successes, challenges, and barriers low-income Coloradans face in enrolling in and retaining affordable health coverage and accessing health care services; and propose solutions that simplify, streamline, and coordinate affordable health coverage programs by maintaining strong relationships with the Colorado Department of Health Care Policy and Financing, Colorado's state-based marketplace, and other relevant entities.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely

☐ Since before the program was implemented.

☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

Please feel welcome to describe why or why not using the space below.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?
2) What is not working well in the ACC Program?
3) What is working best in the Behavioral Health Organization (BHO) system right now?
4) What is not working well in the BHO system?
5) What is working well with RCCO and BHO collaboration right now?
6) What is not working well with RCCO and BHO collaboration right now?

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☐	☐	
Community Behavioral Health Services Rule	☐	☐	
Covered diagnoses list	☐	☐	
Different behavioral / physical health reimbursement	☐	☐	
Institutions for Mental Diseases exclusion	☐	☐	
OBH rules, reporting, or financing (regulatory differences between agencies)	☐	☐	
PCMP financing structure	☐	☐	
Per-member per-month amount	☐	☐	
Physical space constraints	☐	☐	
Privacy Laws (HIPAA, 42 CFR)	☐	☐	
Professional / cultural divisions	☐	☐	
RCCO or BHO contracts	☐	☐	
Staff capacity	☐	☐	
State/Federal rules or reporting requirements	☐	☐	
Technical resources / data sharing	☐	☐	
Training	☐	☐	
Others	Please type your response here.		

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

10) Please share any other general advice or suggestions you may have about behavioral health integration.

The focus of the ACC should be on prevention and health promotion, not just intervention. Investing in preventive health care, both physical and behavioral, among children is a surefire way to decrease the development of chronic disease in the adult population, which will lead to lower health care costs.

Payment systems and contracts for behavioral and physical health must reimburse for preventive efforts. The current behavioral health payment system is designed to respond to individuals with behavioral health diagnoses only, as opposed to paying for early psychosocial and behavioral intervention for individuals and families with risk factors. Behavioral health prevention and health promotion efforts are critically important to cost effective, patient-centered care.

Care Coordination

11) Care coordination is an important part of the ACC Program.

   a. What is the best definition of care coordination?

   b. How should RCCOs prioritize who receives care coordination first?

   c. How should RCCOs identify clients and families who need care coordination?

   d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

12) What services should be coordinated and are there services that should not be a part of care coordination?

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

   a. What care coordination is going on today?

   b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

   c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

   d. What are the gaps in care coordination across the continuum of care?

15) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

The areas identified in the table below are functions that the organization providing care coordination, whether it is the RCCO or PCMP through a care delegation agreement, should be providing.

Non-medical need:	Should the RCCO have a role? Yes	No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma	☐	☐	☐	
Affordability (assistance with	☐	☐	☐	

prescriptions or co-pays)				
Daycare / childcare	☐	☐	☐	
Economic stability & employment	☐	☐	☐	
Education	☐	☐	☐	
Environment	☐	☐	☐	
Food access / nutrition	☐	☐	☐	
Health literacy	☐	☐	☐	
Housing	☐	☐	☐	
Language or translation services	☐	☐	☐	
Literacy	☐	☐	☐	
Transportation	☐	☐	☐	
Other	Please type your response here. Feel free to list as many non-medical factors as you want, and please explain how the RCCO should be involved.			

16) **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Care coordination models should not be dictated by the state or RCCO. Focus should be placed on the outcomes desired, not on restricting or defining the providers or provider team. RCCOs and PCMPs with care coordination delegation should have the flexibility to create a system that works for their population in achieving those outcomes.

Type:	**Coordinate care?** Yes	No	**In what capacity should these individuals coordinate care in the ACC Program?**
Advanced Practice (Registered) Nurses	☐	☐	
Certified Addiction Councilors	☐	☐	
Certified Nurse Midwives	☐	☐

17) **Care coordination requirements for specific populations.** Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

The ACC should promote comprehensive care, including physical, behavioral, and oral health services, that is integrated or coordinated and easy for families to navigate.

Population	Specific	General	If specific, please describe
Newborns and infants	☐	☐	
Children	☐	☐	
Children who are healthy, but in socially-complex environments	☐	☐	
Children involved in the foster care system	☐	☐	
Children with a chronic illness	☐	☐	
Children with a serious emotional disturbance	☐	☐	
Children with medical complexity	☐	☐	
Children or youth with a behavioral health diagnosis or substance use disorder	☐	☐	
Transition-age adolescents	☐	☐	
Parents and families	☐	☐	
Pregnant women	☐	☐	
Adults	☐	☐	
Adults who are healthy, but in socially-complex situations	☐	☐	
Adults with a chronic illness	☐	☐	
Adults with a behavioral health diagnosis or substance use disorder	☐	☐	
Clients involved in the criminal justice system	☐	☐	
Clients with a disability	☐	☐	
Clients in a nursing facility	☐	☐	
Elderly clients	☐	☐	
Frail elderly clients	☐	☐	
Clients in palliative care	☐	☐	

Other populations, please comment: The ACC Program should recognize and address the complex care coordination needs of individuals with limited English proficiency, non-Spanish speaking immigrants, and newly arrived immigrant families unfamiliar with the health care system.

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

RCCOs should connect with and complement existing resources that support children today. There should not be duplication or replacement of existing structures.

19) How should care coordination be evaluated? How should its outcomes be measured?

Key Performance Indicators (KPIs) should continue to be used to evaluate outcomes. However, as evaluation and measurement continue to be topics of discussion, it is important to recognize that measuring pediatric priorities such as prevention, early identification, and early intervention will look very different from measuring adult priorities such as chronic disease management. Children have health care needs that are very different from adults and represent a significant enough portion of the Medicaid ACC population that evaluation models should be differentiated for children.

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

a. What is the PMPM cost for providing care coordination services?

b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

a. **Care coordinator to client ratios.** If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☐
51-100	☐
101-200	☐
201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐

More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

The Department should continue to utilize KPIs to demonstrate the effectiveness of care coordination.

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Whole family care is important, particularly for pregnant women and young children.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

27) Should the RCCO region maps change? Why or why not? If so, how?

28) Should the BHO region maps change? Why or why not? If so, how?

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

In order for patient-designated attribution to work better, Health*Colorodo*'s contract should include the following:

- Funding and accountability to assure efficient and accurate patient-designated attribution.
- The ability for clients to designate their PCMP on the Medicaid application, both on paper and through PEAK.
- Ability for all Medicaid clients, new and those previously enrolled, to submit PCMP selection and changes through a fax or online form, which receives a confirmation receipt for both the patient and selected PCMP.
- Appropriate call center staffing levels to minimize wait times to less than five minutes and a system implemented which allows patients to leave a number and be called back by a representative rather than remaining on hold.

The following waivers or State Plan Amendments (SPA) should be sought from the Centers for Medicare & Medicaid Services:

- SPA to utilize projected annual income for Medicaid and CHP+ determinations.
- Waiver to allow 12-month continuous eligibility for Medicaid and CHP+ adults in order to mitigate churn.

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

Case management is not included in the benefit structure, though it is often provided by PCMPs and reduces the overall cost of care. Adding case management to covered benefits would allow expansion of the service, ultimately decreasing the overall cost of caring for the population.

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

34) What role should RCCOs play in attributing clients to their respective PCMPs?

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

The state should take advantage of the state option to use projected annual income instead of monthly income for Medicaid and CHP+ so that income determinations are better aligned with marketplace income determinations. In addition, Medicaid and CHP+ adults should receive 12-month continuous eligibility. These two policies will reduce churn between programs and increase continuity of care for patients.

Until the necessary alignments can be accomplished, the ACC Program and Connect for Health Colorado should work closely to ensure that patients with eligibility changes and movement between programs have consistent access to primary care.

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

RCCOs should have a uniform governance structure, which requires at least two consumer representatives. These representatives should be clients, client family members, or client advocates.

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

See response to question 39.

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

See response to question 39.

42) How should the Department structure stakeholder engagement for the ACC as a whole?

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

a. If no, what are the gaps?

b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

a. What role should hospitals play in the next iteration of the ACC Program?

b. What role should pharmacies play in the next iteration of the ACC Program?

c. What role should specialists play in the next iteration of the ACC Program?

d. What role should home health play in the next iteration of the ACC Program?

e. What role should hospice care play in the next iteration of the ACC Program?

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

RCCOs should have community advisory boards that include representation from SEPs, CCBs, counties, local public health agencies, and other community-based organizations and nonprofits.

g. What role should counties play in the next iteration of the ACC Program?

See response to question 44f. In addition, many counties have existing Healthy Communities programs which help families understand their benefits and access care. The next iteration of the ACC Program should intentionally incorporate the expertise and resources that county Healthy Communities programs have developed, and build on the relationship with Healthy Communities for improved coordination.

h. What role should local public health agencies play in the next iteration of the ACC Program?

See response to question 44f.

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

See response to question 44f.

45) How can RCCOs help to support clients and families in making and keeping appointments?

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

The functions described should be included in each region's care coordination approach, but the specifics of job titles and the mix of providers should not be prescriptive. The focus should be on developing locally appropriate systems that fulfil the functions and meet identified outcomes.

47) **Community Health Worker reimbursement**. Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement process	(Please check all that apply)
Independently bill	☐
On staff (salary) at Primary Care Medical Provider Clinic	☐
On staff (salary) at RCCO	☐
Per Member Per Month Payment	☐

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you?

The National Committee for Quality Assurance defines cultural competency as not only having empathy, but expressing it toward patients regardless of the patient or provider's cultural background. In order to do so, clinical and non-clinical staff must have an adequate understanding of their patient population, including its diversity, health literacy, language needs, etc. With understanding of the patient population, providers are encouraged to utilize motivational interviewing as a technique to facilitate culturally competent conversations.

b. What RCCO requirements would ensure cultural competency?

All clinical staff should be trained in motivational interviewing and enroll in cultural competency trainings with continual follow up, both of which RCCOs can provide or facilitate connections to. RCCOs should also require practices to determine cultural competency standards and hold them accountable for training staff about and meeting those standards.

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?

See responses to questions 49a and 49b.

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

Bilingual or translation services, onsite staff with expertise in cultural competency, and ensuring that every patient completes a health literacy assessment are factors that contribute to enhanced cultural competency. In addition, RCCOs should develop educational materials and resources for individuals with limited English proficiency, non-Spanish speaking immigrants, and newly arrived immigrant families.

Lastly, skills learned during trainings would incorporate the ability to refrain from making assumptions and would ideally educate participants on what it means to have implicit and explicit biases.

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

51) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

52) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

The specialist network for Medicaid patients is highly limited. RCCOs should have the authority and charge to develop incentives to encourage specialist participation.

Practice Support

53) **Support for practices.** Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☐	☐	☐	☐
Network provider education	☐	☐	☐	☐
Assistance with practice redesign	☐	☐	☐	☐
Assistance with efficiency-enhancing activities	☐	☐	☐	☐
Provide web-based resources and directories	☐	☐	☐	☐
Provide practice-specific data reports	☐	☐	☐	☐
Provide clinical care guidelines and best practices.	☐	☐	☐	☐
Provide clinical screening tools	☐	☐	☐	☐
Provide health and functioning questionnaires	☐	☐	☐	☐
Provide chronic care templates	☐	☐	☐	☐
Provide registries	☐	☐	☐	☐
Offer client reminders	☐	☐	☐	☐
Offer client self-management tools	☐	☐	☐	☐
Offer educational materials about specific conditions	☐	☐	☐	☐
Supply behavioral health surveys	☐	☐	☐	☐
Supply other self-screening tools	☐	☐	☐	☐
Administer behavioral health surveys	☐	☐	☐	☐
Administer other self-screening tools	☐	☐	☐	☐
Prepare client action plans	☐	☐	☐	☐
Provide training on providing culturally-competent care	☐	☐	☐	☐
Provide training to supporting staff	☐	☐	☐	☐
Provide training on motivational interviewing	☐	☐	☐	☐
Provide tools and software for phone call and appointment tracking	☐	☐	☐	☐
Provide tools and resources for tracking labs, referrals, etc.	☐	☐	☐	☐
Provide referral and transitions of care checklists	☐	☐	☐	☐
Provide visit agendas or templates	☐	☐	☐	☐
Provide standing pharmacy order templates	☐	☐	☐	☐
Provide comprehensive directory of community resources	☐	☐	☐	☐
Provide directory of other resources	☐	☐	☐	☐
Provide materials regarding Nurse Advice Line	☐	☐	☐	☐
Ensure all tools and resources are centrally located on RCCO-specific website	☐	☐	☐	☐
Others				

54) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

55) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

56) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

57) Should the Department require that PCMPs utilize disease registries to manage the health of their population?

58) Please share any other advice or suggestions about provider support in the ACC.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

62) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

63) What role – if any – should the RCCOs play in the distribution of payments to providers?

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

66) **Measuring Client experience.** Please complete the table below to indicate how the Department should measure Client/patient experience:

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☐	☐	
SF-12 Health Survey	☐	☐	
Other types of client interviews / surveys	☐	☐	
Patient Activation Measure	☐	☒	This tool is not used for patient satisfaction; it is primarily a patient education tool.
Focus groups	☐	☐	
Other	The state should focus on patient satisfaction tools, not patient education tools, to measure client experience. Tools should not be prescriptive or require practices to duplicate efforts.		

67) Knowing that, at this time, the Department only has claims data, how should population health be measured?

68) How should quality and performance data be reported to the RCCOs, PCMPs, and the public?

69) **Measures for payment.** Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☐
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

70) What percent of RCCO payments should be tied to measures or performance?

Percentage	
10-20%	☐
21-30%	☐
31-40%	☐
41-50%	☐
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

71) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?

72) Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?

73) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

74) **Incentive payment frequency**. Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	☐
Annually	☐
Other	☐

If you checked the "Other" box, please describe payment frequency below:

75) For potential offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

76) For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

Health Information Technology (HIT)

77) **Types of communication.** For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	☐
Text message	☐	☐
Web portal	☐	☐
Email	☐	☐
Telemedicine / Video chat	☐	☐
Face-to-face meeting	☐	☐
Smartphone app	☐	☐
Other: Community-based organizations that help individuals and families apply for, understand, and use public assistance benefits frequently report that Medicaid and CHP+ clients would benefit from text message and email communication capabilities.		

Colorado Department of Health Care Policy and Financing

RFI Response Received and Recorded.

Accepted by: KJDW

Notes: Standard cover sheet added

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Platte Valley Medical Center (PVMC)
Location: Brighton, Adams County, CO

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Click here to enter text.
Location:
☐ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☒ Medical provider / PCMP / other provider
  i. Type or specialty: Hospital and hospital owned clinics
  ii. Area of practice: Click here to enter text.
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☐ Other (please describe): Click here to enter text.

Are you currently involved in the ACC program?

☒ Yes
☐ No

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☒ 3-4 years
☐ Since before the program was implemented.

How have you been involved in the ACC program and what interaction have you had with RCCOs:

- PVMC and its clinics are contracted with the RCCOs.
- PVMC also works closely with providers such as Salud on care coordination and transitions of care initiatives.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:

PVMC and its clinics are enrolled in Medicaid and treat Medicaid members. PVMC is also a CAAS site so it assists indigent patients in enrolling in Medicaid.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely
☒ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

- The program links patients (clients) up with a PCP that can provide the necessary follow-up care should the patient present in the ED.
- Although not the catalyst for this process, the ACC Program provided an additional incentive for PVMC to work more closely and creatively with Salud and other providers on transitions- of- care initiatives which has been a key driver of reducing length of stay and readmissions at PVMC.

2) What is not working well in the ACC Program?

- Patients may be assigned to a PCP they have never seen;
- The PMPM is not adequate to compensate PCPs for the resources needed or the time spent to manage and improve care, lower costs and meet KPIs;
- Eligibility data is not always accurate.

3) What is working best in the Behavioral Health Organization (BHO) system right now?

4) What is not working well in the BHO system?

- The fee schedules offered by BHOs do not cover the cost of services;
- BHOs operate M-F, 8-5 leaving hospitals with no access to case management to obtain the required authorizations or to request assistance with placements/transfers.
- BHO network is not adequate in the PVMC market; there are few providers willing to accept Medicaid patients or provide psych consults in the hospital;
- BHOs have no financial accountability;
- There's no standardization of processes, forms, requirements across BHOs;
- Eligibility information is often outdated; clients are assigned BHOs based on county of residence but clients often move frequently or live in areas where it's easier to access care in another County. The current system doesn't account for our increasingly mobile society.

5) What is working well with RCCO and BHO collaboration right now?

6) What is not working well with RCCO and BHO collaboration right now?

- Claims processing is hampered or delayed when the RCCO and BHO are not the same entity. Claims that are coded with co-occurring physical/behavioral health conditions often get held up and require more work to get paid. If the claim has a primary Dx of a medical condition but there are secondary or tertiary behavioral health codes on the claims, the RCCO may deny citing BHO responsibility; then the BHO will deny since the primary Dx is medical.

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☐	☐	
Community Behavioral Health Services Rule	☐	☐	
Covered diagnoses list	☐	☐	
Different behavioral / physical health reimbursement	☐	☐	
Institutions for Mental Diseases exclusion	☐	☐	
OBH rules, reporting, or financing (regulatory differences between agencies)	☐	☐	
PCMP financing structure	☐	☐	
Per-member per-month amount	☐	☐	
Physical space constraints	☐	☐	
Privacy Laws (HIPAA, 42 CFR)	☐	☐	
Professional / cultural divisions	☐	☐	
RCCO or BHO contracts	☐	☐	
Staff capacity	☐	☐	
State/Federal rules or reporting requirements	☐	☐	
Technical resources / data sharing	☐	☐	
Training	☐	☐	
Others	Please type your response here.		

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

10) Please share any other general advice or suggestions you may have about behavioral health integration.

- An integrated RCCO must be financially accountable and transparent to ensure clients receive all the appropriate care they need.
    - A medical loss ratio (MLR) requirement similar to what the ACA enacted for commercial payers would be ideal; including yearly publication of the RCCO's MLR.
    - A mechanism for establishing and evaluating the RCCO on the basis of quality similar to NCQA accreditation would also provide accountability and transparency and allow for an objective comparison among the RCCOs.
- Require RCCOs - especially for behavioral health services - to operate during the same business hours that they require providers to complete auths and transfers; or limit the penalties they are allowed to hand down-if the RCCO does not operate extended hours.
- Standardize all required forms and reporting requirements instead of allowing each RCCO to develop its own.
- Develop or require RCCOs to develop, resources for hard-to place clients such as those with a history of violence.
- Patient accountability and engagement strategies should be built into the RCCO requirements. PVMC implemented incentives with its own employees which is helping to reduce its health insurance expenditures.
- Require the RCCO to have the necessary IT infrastructure to:
    - Satisfy all HIPAA electronic transaction requirements (in force now and as may be developed; also be ICD10 complaint);
    - Offer an electronic patient portal;
    - Provide providers with an electronic means of benefits/eligibility checking; on-line pre-certs, and claims submission/status checking instead of relaying on telephonic systems.
    - Have the necessary analytics and reporting systems in place to support any performance-based contract with providers

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination?

b. How should RCCOs prioritize who receives care coordination first?

- Data should be analyzed as it will likely show that the higher-acuity patients utilize more resources and therefore, they should be targeted for priority in receiving care coordination. The analysis should reflect both medical and behavioral health services used; diagnosis, co-morbidities, and demographics.
- The data can be used to construct risk tiers that equate to level of priority.

c. How should RCCOs identify clients and families who need care coordination?

- Delegated care coordination - allow providers to identify who needs care coordination using the criteria established through the process under (b) but the RCCO should also allow room for flexibility based on the provider's judgment as they will have access to new information that may not be reflected in the existing claims data for that client.

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

- Whatever the decision, it should be a standardized process, preferably electronic.

12) What services should be coordinated and are there services that should not be a part of care coordination?

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today?

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

d. What are the gaps in care coordination across the continuum of care?

15) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	Should the RCCO have a role? Yes	No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma	☐	☐	☐	
Affordability (assistance with prescriptions or co-pays)	☐	☐	☐	
Daycare / childcare	☐	☐	☐	
Economic stability & employment	☐	☐	☐	
Education	☐	☐	☐	
Environment	☐	☐	☐	
Food access / nutrition	☐	☐	☐	
Health literacy	☐	☐	☐	
Housing	☐	☐	☐	
Language or translation services	☐	☐	☐	
Literacy	☐	☐	☐	

Transportation	☐	☐	☐	
Other	Please type your response here. Feel free to list as many non-medical factors as you want, and please explain how the RCCO should be involved.			

16) **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	Coordinate care? Yes	No	In what capacity should these individuals coordinate care in the ACC Program?
Advanced Practice (Registered) Nurses	☐	☐	
Certified Addiction Councilors	☐	☐	
Certified Nurse Midwives	☐	☐	
Community Health Workers	☐	☐	
Generalists (BA/BS/MA/MS)	☐	☐	
Health Coaches	☐	☐	
Licensed Clinical Social Workers	☐	☐	
Licensed Marriage and Family Therapist	☐	☐	
Licensed Mental Health Counselors	☐	☐	
Licensed Professional Counselor	☐	☐	
Masters of Public Health	☐	☐	
Medical Doctors / Doctors of Osteopathic Medicine	☐	☐	
Nurse Practitioners	☐	☐	
Patient Navigators	☐	☐	
Peer Advocates	☐	☐	
Promotoras	☐	☐	
Psychiatrists	☐	☐	

Psychologists	☐	☐	
Registered Nurses	☐	☐	
Social Workers	☐	☐	
Wraparound facilitators	☐	☐	
Other	Please type your response here.		

17) **Care coordination requirements for specific populations.** Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and infants	☐	☐	
Children	☐	☐	
Children who are healthy, but in socially-complex environments	☐	☐	
Children involved in the foster care system	☐	☐	
Children with a chronic illness	☐	☐	
Children with a serious emotional disturbance	☐	☐	
Children with medical complexity	☐	☐	
Children or youth with a behavioral health diagnosis or substance use disorder	☐	☐	
Transition-age adolescents	☐	☐	
Parents and families	☐	☐	
Pregnant women	☐	☐	
Adults	☐	☐	
Adults who are healthy, but in socially-complex situations	☐	☐	
Adults with a chronic illness	☐	☐	
Adults with a behavioral health diagnosis or substance use disorder	☐	☐	
Clients involved in the criminal justice system	☐	☐	
Clients with a disability	☐	☐	
Clients in a nursing facility	☐	☐	
Elderly clients	☐	☐	
Frail elderly clients	☐	☐	
Clients in palliative care	☐	☐	
Other populations, please comment:			

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

19) How should care coordination be evaluated? How should its outcomes be measured?

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

   a. What is the PMPM cost for providing care coordination services?

   b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

   a. **Care coordinator to client ratios.** If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☐
51-100	☐
101-200	☐
201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

- For hospitals, quality metrics around length of stay, HCAPS, readmissions and/or other nationally recognized metrics should be used. Using nationally recognized metrics/standards would also afford the Department comparable data.

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

- Providers must be part of the conversation and include in decision-making around metrics and processes for care-coordination. Often the RCCOs/BHOs make determinations based on proprietary (sometimes retrospective rather than current) info/data and without knowledge of the day- to- day challenges providers face which make compliance with their requirements unrealistic at times.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

27) Should the RCCO region maps change? Why or why not? If so, how?

28) Should the BHO region maps change? Why or why not? If so, how?

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

- RCCOs and BHOs must be required to have systems that comply with HIPAA transaction requirements and commercial payer industry standards around use of portals, real-time legibility and pre-cert information so that they can electronically interface with providers who have that ability.
- Rules should not prevent innovation among and between providers or RCCOs/BHOs who have the desire to pursue electronic integration to facilitate transitions of care and care coordination.

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

- Yes, RCCOs should compete like any other commercial payer. Clients should be allowed to choose and change plans based on the RCCOs performance rather than geographic area just like Medicare allows its beneficiaries to do.

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

34) What role should RCCOs play in attributing clients to their respective PCMPs?

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

- The RCCOs should have primary responsibility for stakeholder engagement and encouraging it among providers.
    - To help guide its efforts the RCCO may want to adopt a guiding philosophy such as the Planetree model. Planetree promotes patient-centered care through combining evidenced-based medicine, complementary healing arts, family engagement and education/information.
- RCCOs should develop communication strategies and resources for families including assisting with providing translators if necessary. The Medicare program offers some good examples – it provides numerous free brochures and checklists; an interactive patient-centered web site, and local counselors who work with community organizations to educate its beneficiaries.

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

- RCCOs should be required to provide resources that help stakeholders connect to one another or to facilitate access to each other; they should not rely on paper resources but should also adopt technology as well as regular face-to-face meetings.

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

42) How should the Department structure stakeholder engagement for the ACC as a whole?

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

a. If no, what are the gaps?

- Behavioral health, specialists

b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

a. What role should hospitals play in the next iteration of the ACC Program?

- Hospitals can assist with: identifying which needs are unmet for the Medicaid members in its community; where resources should be focused; and what provider types are most needed.
- Many PCPs are employed by hospitals so the ability to influence quality and cost-effective care is greatly increased by involving hospitals and including them in PCP incentive discussions.
- Hospitals also are extremely active in their communities so better know how to engage community stakeholders as well as know where gaps are. Many also already have active patient committees (i.e. the Patient's Voice/Council at PVMC) that could be utilized.

b. What role should pharmacies play in the next iteration of the ACC Program?

c. What role should specialists play in the next iteration of the ACC Program?

d. What role should home health play in the next iteration of the ACC Program?

e. What role should hospice care play in the next iteration of the ACC Program?

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

g. What role should counties play in the next iteration of the ACC Program?

h. What role should local public health agencies play in the next iteration of the ACC Program?

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

45) How can RCCOs help to support clients and families in making and keeping appointments?

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

47) **Community Health Worker reimbursement.** Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement process	(Please check all that apply)
Independently bill	☒
On staff (salary) at Primary Care Medical Provider Clinic	☒
On staff (salary) at RCCO	☐
Per Member Per Month Payment	☐

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you?

b. What RCCO requirements would ensure cultural competency?

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

51) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

- Require RCCOs to develop strategies to educate its clients about appropriate ER utilization and alternatives; develop incentives/penalties to reinforce patient responsibility such as increased copays for using the ER for a diagnosis that could be treated in a PCP office or urgent care setting.
- Engage physicians and hospitals in developing incentives that offset the losses hospitals would incur for reduced ER volumes and encourage more collaboration with local physicians. Incenting physicians only will not lower utilization.
- The ACC must recognize that hospitals have EMTALA obligations and they should not be penalized for following the law.

52) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

Practice Support

53) **Support for practices.** Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☐	☐	☐	☐
Network provider education	☐	☐	☐	☐
Assistance with practice redesign	☐	☐	☐	☐
Assistance with efficiency-enhancing activities	☐	☐	☐	☐
Provide web-based resources and directories	☐	☐	☐	☐
Provide practice-specific data reports	☐	☐	☐	☐
Provide clinical care guidelines and best practices.	☐	☐	☐	☐
Provide clinical screening tools	☐	☐	☐	☐
Provide health and functioning questionnaires	☐	☐	☐	☐
Provide chronic care templates	☐	☐	☐	☐
Provide registries	☐	☐	☐	☐
Offer client reminders	☐	☐	☐	☐
Offer client self-management tools	☐	☐	☐	☐
Offer educational materials about specific conditions	☐	☐	☐	☐
Supply behavioral health surveys	☐	☐	☐	☐
Supply other self-screening tools	☐	☐	☐	☐
Administer behavioral health surveys	☐	☐	☐	☐
Administer other self-screening tools	☐	☐	☐	☐
Prepare client action plans	☐	☐	☐	☐
Provide training on providing culturally-competent care	☐	☐	☐	☐
Provide training to supporting staff	☐	☐	☐	☐
Provide training on motivational interviewing	☐	☐	☐	☐
Provide tools and software for phone call and appointment tracking	☐	☐	☐	☐
Provide tools and resources for tracking labs, referrals, etc.	☐	☐	☐	☐
Provide referral and transitions of care checklists	☐	☐	☐	☐
Provide visit agendas or templates	☐	☐	☐	☐
Provide standing pharmacy order templates	☐	☐	☐	☐
Provide comprehensive directory of community resources	☐	☐	☐	☐
Provide directory of other resources	☐	☐	☐	☐
Provide materials regarding Nurse Advice Line	☐	☐	☐	☐
Ensure all tools and resources are centrally located on RCCO-specific website	☐	☐	☐	☐
Others				

54) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

55) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

56) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

57) Should the Department require that PCMPs utilize disease registries to manage the health of their population?

58) Please share any other advice or suggestions about provider support in the ACC.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

62) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

63) What role – if any – should the RCCOs play in the distribution of payments to providers?

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

66) **Measuring Client experience.** Please complete the table below to indicate how the Department should measure Client/patient experience:

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☐	☐	
SF-12 Health Survey	☐	☐	
Other types of client interviews / surveys	☐	☐	
Patient Activation Measure	☐	☐	
Focus groups	☐	☐	
Other	Please type your response here.		

67) Knowing that, at this time, the Department only has claims data, how should population health be measured?

68) How should quality and performance data be reported to the RCCOs, PCMPs, and the public?

69) **Measures for payment.** Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☐
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

70) What percent of RCCO payments should be tied to measures or performance?

Percentage	

10-20%	☐
21-30%	☐
31-40%	☐
41-50%	☐
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

71) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?

72) Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?

73) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

74) **Incentive payment frequency**. Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	☐
Annually	☐
Other	☐

If you checked the "Other" box, please describe payment frequency below:

75) For potential offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

76) For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

Health Information Technology (HIT)

77) **Types of communication.** For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	☐
Text message	☐	☐
Web portal	☐	☐
Email	☐	☐
Telemedicine / Video chat	☐	☐
Face-to-face meeting	☐	☐
Smartphone app	☐	☐
Other:		

78) **HIT investments by organizations.** For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below:

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	☐	☒
Digital care management tool	☒	☐
Care transitions alerts	☒	☐
Electronic Health Records (EHRs)	☒	☐
Health risk assessment software	☐	☒
Practice assessment tools	☐	☒
Practice management tools (scheduling, billing)	☒	☐
Client web portal for communicating care plan, services, benefit enrollment	☒	☐
Patient education/wellness tools	☒	☐
Provider/case manager directory	☐	☐
Shared decision-making tools	☐	☒
Telemedicine software	☐	☐
Other: Electronic security software/apps Patient Access software (integrated price-estimator/eligibility/registration system)	☐	☒

Financial Analytics Reporting		
Other:	☐	☐

79) **Importance of technology by type.** The Department is working to determine what technology is in place, what technology is needed, and what technology should be standardized. For RCCOs, providers, and other organizations, use the table below to answer what HIT infrastructure outside of the SDAC your organization would use to perform population health management activities. Tools are scored from 1-5, where 1 are those items least-likely to be used, and 5 are items most-likely to be used:

Tool	1 Least	2	3	4	5 Most
Population analytics / reporting / dashboard	☐	☐	☐	☒	☐
Care management tool	☐	☐	☐	☒	☐
Care transitions alerts	☐	☐	☐	☐	☒
Electronic Health Records (EHRs)	☐	☐	☐	☐	☒
Practice assessment tools	☐	☐	☒	☐	☐
Health risk assessment software	☐	☐	☒	☐	☐
Practice management tools (scheduling, billing)	☐	☐	☐	☒	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☐	☐	☐	☒
Patient education wellness tools	☐	☐	☐	☒	☐
Provider/case manager directory	☐	☐	☒	☐	☐
Shared decision-making tools	☐	☐	☐	☒	☐
Telemedicine	☒	☐	☐	☐	☐
Other:	☐	☐	☐	☐	☐

80) What are the primary barriers to RCCOs and providers increasing their use Health Information Technology to improve the performance of Primary Care Practices?

81) How can Health Information Technology support Behavioral Health Integration?

82) In the next iteration of the ACC, should there be a shared resource for data and analytics? Please describe the basic criteria for what a shared data and analytics platform needs to contain in order for it to be useful.

83) Should there be a shared care management tool? Please describe the basic criteria for what a care management tool would need to contain in order for it to be useful.

84) Should there be a shared population health management tool? Please describe the basic criteria for what a population health management tool would need to contain in order for it to be useful.

85) Please describe the functionality that a common Medicaid provider directory would need to contain in order for it to be useful.

86) How can the RCCOs support providers' access to actionable and timely clinical data?

87) What are the HIT solutions that would benefit clients, providers, and RCCOs? Please comment on the parameters these tools or platforms would need to possess and the ways in which they could be used.

88) What technical assistance or resources related to HIT infrastructure should the RCCOs supply? This assistance or these resources could be for providers, social service organization, clients/families, or for others.

89) What role should health information exchange platforms like CORHIO or QHN play in the next iteration of the ACC?

90) Please share any information, advice, and suggestions you have about health information technology in the ACC Program.

- Secure shared access to clinical information would be extremely helpful to hospital providers (primarily ER physicians and hospital case management). However, the ACC Program should strive to develop a "flexible" HIT infrastructure that can integrate with HIT that providers already own as well as serve as the primary tool/resource for those providers who have not yet been able to make the investment. In a time sensitive environment like the hospital ER, if a provider has to get into a separate system or launch a new application, they likely won't use it as it delays care.

Colorado Department of Health Care Policy and Financing

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Patrick Gordon
Location: 2775 Crossroads Blvd, Grand Junction, CO 81506

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Rocky Mountain Health Plans
Location: Grand Junction, Mesa County, Colorado

☒ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☐ Medical provider / PCMP / other provider
  i. Type or specialty: Click here to enter text.
  ii. Area of practice: Click here to enter text.
☐ Provider advocate (e.g. medical society)
☒ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☐ Other (please describe): Click here to enter text.

Are you currently involved in the ACC program?
X Yes

If you answered "yes" above, how long?
X Since before the program was implemented.

How have you been involved in the ACC program and what interaction have you had with RCCOs:
Rocky Mountain Health Plans (RMHP) is very honored to serve as the RCCO for ACC Region 1.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:
RMHP has supported the Colorado Medicaid program continuously since 1974. RMHP has supported Medicaid through a variety of contractual agreements, but our mission and strategy have been consistent: the creation of equity in a community system of health through the alignment of local leadership and resources. The ACC is structured on these principles and will produce results if it continues to adhere to them.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?
X Very likely
☐ Likely

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

Flexibility. Community leadership and accountability. A focus on outcomes rather than process. A very smart approach that is producing a powerful statewide network with limited, per capita investment.

2) What is not working well in the ACC Program?

Ongoing instability in budgeting and core operational functions. No specific targets for enrollment growth. No specific, prospective budget targets, cost accountability or shared savings framework for ACC participants.

What is working best in the Behavioral Health Organization (BHO) system right now?

A statewide network of safety-net providers is well sustained and healthy enough to contemplate a broader role in a community system of health.

3) What is not working well in the BHO system?

Capitated payments are still tied to volume-based encounter reporting, which significantly limit integration, community-oriented interventions and supports.

4) What is working well with RCCO and BHO collaboration right now?

There is significant progress toward shared prioritization, data sharing, gap closing between primary care providers and mental health centers, and measured performance. Advancements in all of these areas has been accelerated within the HB 12-1281 pilot through the creation of a global budget, a full risk transfer, distribution cost accountability and specific, transparent shared savings mechanisms.

5) What is not working well with RCCO and BHO collaboration right now?

The payment model for providers and programs in both systems is still based upon encounter volume.

Behavioral Health Integration

6) What should be the next steps in behavioral health integration in Colorado?[1]

Enhance payments directly to PCMPs, so that they can recruit, employ and integrate behavioral health providers within their own organizations and care teams. Likewise, PCMPs could contract externally for such services, if they choose to do so. The new payments should be made on a per member, per month basis, in the same manner that has been established for care coordination – not through a FFS process by 'turning on codes'. A payment increase of $1-$2 pmpm would make a very meaningful impact, in the very near term, in high volume Medicaid PCMP settings, for a large segment of the Medicaid population.

Accountability for the increased funding could be tied to 1) achievement of PCMP milestones of development within the entire model (e.g., Comprehensive Primary Care milestones), and 2) submission of a credible staff integration plan by the PCMP.

Likewise, to the extent that the implementation of these payments are linked to the promotion of multi-payer initiative in positive State action (e.g., SIM), substantial integration can occur (over a longer period of time) in PCMP settings where Medicaid is a smaller share of the payer mix.

This approach is the fastest and most actuarially-defensible path to creating the broadest possible impact in a short period of time.

We believe that a targeted increase to qualifying PCMPs can stand upon its own from a return on investment standpoint, but if need be, could be financed on a budget neutral basis through a redistribution of current RCCO payments, incentive funding and PCMP payments to lower tier practices.

[1] Many terms and definitions can be found in the Appendix at the end of this document.

7) **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	X	☐	The CMHCs may largely be "subcapitated" or reimbursed on a "percentage of premium" basis, but the BHO capitation itself method is still very much tied to encounter volume. Additionally, the underlying budget structure still largely reflects the utilization of services for the 'SPMI' population, which limits overall resources available for a broader array of community-based integration activities. (No changes should be made that compromise the existence of a functional safety net for this population.) Short of simply ending the carve out, the latter problem can be addressed through better, more closely structured partnerships among CMHCs, RCCOs and PCMPs (which are, in some cases, developing naturally with enlightened support from BHOs). The Department has tremendous leverage in this area and can take steps to promote functional partnerships. The former problem will likely necessitate reform at the federal level. Much to our disappointment, recent waivers to allow "alternative payment methods" may not be sufficient, as recent CMS communications with other states (e.g., Oregon) indicate. Collective, sustained action, advocacy, discipline, 'risk taking' and 'envelope pushing' by Colorado leaders will be necessary to push federal policy and state legacy operations from the current "volume-based capitation" model to authentic, value based budgeting and payment. Health information technology and data exchange creates many opportunities to measure productivity and the impact of population management activities *without* the need to generate a CPT-based, MMIS-adjudicated "encounter claim". There is much we can do to move

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

			forward, now, but we are going to need to push for sweeping modernization of CMS' Medicaid payment policies and our own state operating systems.
Community Behavioral Health Services Rule	☐	☐	
Covered diagnoses list	☐	☐	This is an artifact of the behavioral health carve out, which perpetuates a 'diagnosis-centric' mode of organization and service delivery. Short of simply ending the carve out, the creation of a regional global budget with shared cost accountability (or full risk where possible) for both the RCCO and BHO will shift the focus quickly from diagnoses to outcomes.
Different behavioral / physical health reimbursement	☐	☐	
Institutions for Mental Diseases exclusion	☐	☐	
OBH rules, reporting, or financing (regulatory differences between agencies)	☐	☐	
PCMP financing structure	☒	☐	"If it can't be coded and billed, it can't be sustained." Increases in primary care reimbursement are essential for the integration of behavioral health services. The form of reimbursement matters greatly, as well. "Turning on codes" will be a much less efficient use of the increased funding for the integration of behavioral health services than a non-volume, non-CPT, non-Dx oriented payment model. Relatively small pmpm payments to PCMPs for integrated behavioral health services could be a much more effective means of moving forward with BH integration (much like small pmpm payments within the ACC have been an effective means of moving forward to create a better statewide framework for care management). Small pmpm payments for BH services in primary care settings are readily justified with actuarial analysis. Moreover, to the extent new Medicaid payments are linked to broader state policies that promote multi-payer alignment, commensurate resources for BH integration will become available in settings with lower Medicaid volume – thereby maximizing the capacity for comprehensive primary care services statewide.

Per-member per-month amount	☐	☒	Big things can be accomplished with small PMPM payments – provided that substantial flexibility is maintained in how RCCOs, PCMPs, CMHCs and any other organization can use them to achieve state policy objectives and improvement targets. Big payments won't necessarily accelerate productive change or make those changes that do occur sustainable. Small payments with limited flexibility serve no purpose.
Physical space constraints	☐	☐	
Privacy Laws (HIPAA, 42 CFR)	☒	☐	There is a substantial opportunity in this area to distinguish the actual from perceived barriers – particularly regarding 42 CFR. We don't need to wait for SAMHSA. Proactive clarifications with the State's imprimatur about what information (in specific situations) is subject to 42 CFR protections, and which information is not, would be a low-cost, low-risk means of accelerating productive information sharing for more effective, better targeted, interventions and care coordination activities within the ACC.
Professional / cultural divisions	☐	☐	
RCCO or BHO contracts	☒	☐	A single contract for both scopes of services should be implemented – either with a single entity or a contractually integrated partnership.
Staff capacity	☐	☐	
State/Federal rules or reporting requirements	☐	☐	
Technical resources / data sharing	☐	☐	
Training	☐	☐	
Others	Please type your response here.		

8) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

These are generally evident in the core functions and competencies of comprehensive primary care. These characteristics include, but are not limited to: Active empanelment, prioritization and targeting processes, a focus on team based processes and competence with data driven process improvements; a willingness to develop and expand "non-encounter" oriented patient outreach, intervention and follow-up processes; the active use of patent and family feedback channels (e.g., "PFAC" processes) in addition to traditional "survey" approaches; and the inclusion of behavioral health providers on equal footing and in all team based processes – in the same manner that other "new" resources are included (e.g., care managers).

9) Please share any other general advice or suggestions you may have about behavioral health integration.

Behavioral health integration entails a wide scope of activities across a diverse range of needs within the population. That said, the most immediate opportunity in this area is tied to the development and expansion of the comprehensive primary care model. All elements of that model must be supported and optimized in order for investments in integrated behavioral health to generate returns – particularly the core concept of *teom bosed care*. Code based / CPT revenue oriented models may "sustain" the behavioral health clinician in these settings, but have limited impact if the role of the clinician is circumscribed by the scope of code-able activities. We are seeking *integrotion*, not FFS-driven co-location in this model.

The same can be true in some cases regarding "embedding" arrangements, in which the behavioral health provider functions as an employee of an external organization. Circumstances vary from site to site, but one is generally less likely to be included as a "team member" when his or her organizational accountability exists outside the clinic walls. The same phenomenon has occurred in traditional managed care settings, in which health plan "care managers" are embedded by an external third party in primary care settings.

To the greatest extent possible, primary care providers should have an opportunity to "own" their own personnel – as well as the measured outcomes they produce.

The same principle applies to the integration of primary care providers in mental health settings.

Aside from how the team is organized and operates within a primary setting, the integration of community services *outside the clinic wolls* is a tremendously important factor in the success of the model. Community integration is where CMHCs and numerous other entities have an opportunity to lead entirely new interventions that generate better outcomes – in addition to their ongoing role as a safety-net for the provision of specialty services (which can also be much more tightly integrated with primary care).

Community integration will occur fastest if and where: 1) specific global budget, cost accountability and shared savings targets are established, and 2) the Department works intentionally to create opportunities that are contingent upon demonstrable, authentic collaboration among Medicaid stakeholders – particularly traditional safety net interest groups.

Partnerships cannot be mandated. Rather, the Department should create opportunities for more advanced models and greater flexibility by 'testing integration' – i.e., written agreements with teeth and inclusive governance = new opportunities.

The ACC is not a zero sum game based upon "win/lose" decisions about where services are best provided or who should have an exclusive license to provide them.

Care Coordination

10) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination?

A comprehensive network, comprised of and sustained primarily through existing family and community resources, which wraps around in a timely, targeted manner to address the social, behavioral, cognitive, functional and health care needs of an individual.

"Care coordination" is not about hiring staff and attempting to perfect the ratio of 'managers' to clients. Care coordination about closing gaps and the creating an effective network of supports in each unique community.

b. How should RCCOs prioritize who receives care coordination first?

There are two, primary modes for care coordination: *longitudinol* and *episodic*. RCCOs (and any other entity engaged in 'care coordination' as a community process, defined above) must exchange and utilize wide array of quantitative and qualitative information to *respond* in a timely manner to the needs of clients when they arise – from "cold-spotters" and "non-utilizers" to highly vulnerable individuals with complex needs.

Longitudinal care coordination tends to focus on well-identified clients who require more extensive support, but care coordination activities for this population can also often be episodic in nature when circumstances change.

Less complex or "healthy" individuals require substantially less ongoing support, but community care coordination systems must still account for social and behavioral risk factors, and also respond rapidly to changes or events that create immediate or longer-term risks. For example, the "normal delivery" of a newborn by a young mother will not necessarily occur as a priority in a traditional "complex care management program", but nonetheless necessitates follow-up, coordination with community resources (e.g., nurse-family partnership) – as well as a comprehensive assessment of family needs and risks that are not evident in health care data about the new mom.

Accordingly, "prioritization" of care coordination activity occurs along two tracks within this model: *risk criteria* and *event triggers*, and must be supported with a process for comprehensive client risk assessment. Below is a high level summary of the risk factors that are essential in the identification of client needs and prioritization of care coordination activities:

- Cultural, linguistic, visual and hearing needs, preferences or limitations
- Health status and clinical history
- Substance use / abuse
- Activities of daily living
- Housing and/or caregiver status
- Mental health status and

- Cognitive function
- End of life preferences and planning
- Access to benefits and community resources
- Barriers to the fulfillment of an agreed care plan

Additionally, care coordination activities can be triggered by a wide array of encounters and transitions, which include (but are not limited to):

- Facility admissions and discharges
- Community-based transitions of care
- Eligibility changes and transitions
- Chronic and catastrophic disease diagnosis and progression

The resources present within any single organization (RCCO, PCMP, Hospital/Health System, LPHA, CMHC, LTSS Provider, BHO, managed care plan, county, CCB, SEP, other) are insufficient to execute this scope of prioritized care coordination on its own – regardless of funding, capital, expertise, sophistication or other attributes.

Community integrotion, in which a network of active communication pathways, prevention and response systems are developed among multiple independent organizations, is the only practical means of executing both the longitudinal and episodic components of an effective care coordination system. Narrow prioritization schemes that focus on a limited number of criteria or risk factors may help a small number of people, but generally contribute to ongoing population segmentation and fragmentation in the delivery of services, and do little to impact overall trends in health and cost.

c. How should RCCOs identify clients and families who need care coordination?

Timely identification and response to client and family needs entails a robust, multi-dimensional system that both incorporates discrete, quantitative data and qualitative, subjective, non-structured information from key sources within an integrated community framework.

The *clients themselves* are most effective source of information about needed care coordination supports. Patient reported data can be captures and structured in many ways, but a *client's own words* are often the most powerful means of prioritizing and organizing care coordination within an integrated community framework.

Of course, effective communication depends upon contact and the creation of a trusting relationship. Where no such relationship exists, there are numerous other means of identifying and initiating care coordination.

The ACC has enabled RCCOs and numerous other partners to access and act upon the essential data that is necessary (but not sufficient) for effective care coordination. This includes, but is not limited to: Client demographics, eligibility status for a variety of programs, location, diagnoses, screening results, health service and pharmacy utilization, client onboarding and ongoing risk assessment data, transition alerts, risk scores, predictive metrics and total costs.

However, qualitative judgments and structured referral processes among community partners are also a powerful means of identifying and responding to client risks. A simple, subjective stratification process can be used by clinical and non-clinical organizations to target community supports – e.g., "when I review my client (or patient) list, I think that it is highly likely that X number of people will be at risk for a" hospitalization, a loss of function, relapse, housing dislocation, etc. There is substantial evidence that qualitative, subjective assessments of risk and stratification techniques have predictive power and compliment methods that utilize administrative and clinical data. A value proposition must be present in order for most community organizations to participate in a community-wide assessment and targeting process, but the Department can play a critical role in setting direction, goals and targets to facilitate this process.

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

"Delegation" of a function does not mean "delegation" of ultimate responsibility for care coordination activities and outcomes within a community system of care. It's inconceivable that an accountable entity would "delegate" care coordination responsibility to another entity and then be unable to account for the activities and performance of the delegate.

Likewise, "top down" mandates regarding the use of standardized forms, tools, applications, labor intensive reporting processes, are usually a non-starter at any level, and inconsistent with the imperative to create an engaged community network. Regulation and delegation are two entirely different concepts.

Rather, it is incumbent upon the RCCO to:

- Promote implementation of consistent, comprehensive risk assessment and care planning elements (even though applications and tools vary);
- Facilitate open communication about roles, limitations, overlaps and gaps;
- Utilize the resources and flexibility granted by the Department to fill gaps where necessary;
- Provide the resources and labor necessary to collect and assimilate data from multiple sources and systems among community partners;
- Report care coordination activities and outcomes in a timely, integrated manner;
- Maintain full accountability for every enrolled client and every care coordination interaction, regardless of where it occurs or how it is documented.

In short, the RCCO should track care coordination – and provide all of the support required to do the tracking. RCCOs exist to integrate information from a diverse array of sources and function as the ultimate point of accountability. If RCCOs do not or cannot play these functions, it is unclear why they should exist.

11) What services should be coordinated and are there services that should not be a part of care coordination?

Internal clinical processes do not require coordination by an external entity. Again, "care coordination" is not about the creation of yet another new 'program', but rather a *high functioning community network* of independent clinical and human services organizations. HCPF should focus the *power of networks*, not on staffing ratios, the carving in, carving out or categorical assignment of various care coordination functions

for each individual entity. High functioning RCCOs are in the best position to foster the creation of collaborative networks. RCCOs that simply "staff up to manage care" will have a much more limited impact, and will contribute to the cacophony of fragmented 'care management' activity in already present in most communities.

12) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

The primary objective of care coordination is to promote the fullest possible "patient activation" and "self-management" capacity. Understanding the personal goals and life objectives of a client, organizing and describing the care plan as a means to achieving those goals while maintaining communication and trust are the most important aspects of an effective care coordination relationship.

13) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today?

A rapid proliferation of new services, provided by a wide array of entities in silos, most which are focused upon a narrow range of transitions within the health care system. This proliferation of activity is not necessarily reducing fragmentation or improving transitions of care.

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

The ACC is unique in a few, critically important regards:

1) The ACC is focused upon the vulnerable population that is most in need of support. Other care coordination programs tend to be focused upon "well-funded" populations, for which there is intense competition, an effort to create closer relationships with private insurers and employers, and other, more narrowly-defined corporate objectives.

2) The ACC is intentionally and actively working to create a community basis for care coordination, which is fundamentally distinct from corporate accountable care initiatives and entails a much broader scope of integration objectives – well outside the scope of traditional health care operations.

c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

Few, if any, other initiatives are focusing on this population, so the Department should frankly not be overly concerned about compounding the fragmentation that exists in other "accountable care " initiatives.

That said, to the extent that capitalized, corporate health care entities (non-profit and for-profit alike) step forward with bona fide, demonstrable commitments to assume *substontiol* responsibility for Medicaid (i.e., one that is financially and operationally commensurate with the *volume* of Medicaid eligibility and *demond for speciolty core ond other services* in the markets they serve), the ACC should afford those organizations greater consideration (and flexibility) in the alignment of program efforts with their individual accountable care initiatives. The lower the

financial and operational commitment by these systems to Medicaid, the less consideration should be given to them in program design and operations. A high bar should be set for corporate health care systems in this area.

A high bar should also be set for safety-net organizations and related entities that focus primarily on Medicaid. Failure to collaborate effectively among these entities is not acceptable. Demonstrable community integration among diverse, independent, Medicaid-oriented organizations should be a condition of receiving greater flexibility (and resources) within the ACC. Effective partnerships greatly reduce the potential for duplication and are necessary to achieve the objectives of the program. Where such partnerships don't exist or evolve within the ACC, the Department can impose more "standardization" from the top down to sort things out itself.

d. What are the gaps in care coordination across the continuum of care?

There are more people in need than can be served through traditional 'care management' models – at any level of funding or staffing, or through any corporate process.

There is a growing level of insight and evidence that a community process, in which an agreed, multi-party framework accounts for the social, functional and behavioral needs of individuals, can reverse the underlying drivers of adverse health and cost trends.

It is not possible for the Department (or any other system) to accelerate this process through the imposition of mandated forms, 'protocols', IT applications across multiple independent organizations – all of which operate on their own platforms and will continue to do so. RCCOs must themselves close the gaps and gulfs and work over the walls between systems for Medicaid clients.

The biggest gaps in resources, population impact and alignment of interventions with the underlying drivers of outcomes and costs can be closed if the Department focuses on the promotion of community networks and functional partnerships for information sharing, prioritization, loop closure and trusting, and effective communication with clients.

14) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	**Should the RCCO have a role?** Yes	No	**Should the RCCOs coordinate with community supports and services?** Yes	**Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?**
Abuse, neglect, and trauma	☐	☐	☒	
Affordability (assistance with	☐	☐	☒	

prescriptions or co-pays)				
Daycare / childcare	☐	☐	☒	
Economic stability & employment	☐	☐	☒	
Education	☐	☐	☒	
Environment	☐	☐	☒	
Food access / nutrition	☐	☐	☒	
Health literacy	☐	☐	☒	
Housing	☐	☐	☒	
Language or translation services	☒	☐	☐	
Literacy	☐	☐	☒	
Transportation	☒	☐	☐	
Other	All of these elements are essential to the success of the ACC. Coordination is achieved through integration of multiple services – not reshuffling duties, roles or budgets among various agencies.			

15) **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	**Coordinate care?** Yes	No	**In what capacity should these individuals coordinate care in the ACC Program?**
Advanced Practice (Registered) Nurses	☒	☐	
Certified Addiction Councilors	☒	☐	
Certified Nurse Midwives	☒	☐	
Community Health Workers	☒	☐	

Generalists (BA/BS/MA/MS)	☒	☐	
Health Coaches	☒	☐	
Licensed Clinical Social Workers	☒	☐	
Licensed Marriage and Family Therapist	☒	☐	
Licensed Mental Health Counselors	☒	☐	
Licensed Professional Counselor	☒	☐	
Masters of Public Health	☒	☐	
Medical Doctors / Doctors of Osteopathic Medicine	☒	☐

Promotoras	☒	☐	
Psychiatrists	☒	☐	
Psychologists	☒	☐	
Registered Nurses	☒	☐	
Social Workers	☒	☐	
Wraparound facilitators	☒	☐	
Other	This certainly is a comprehensive list of guilds, training, licensure, credentialing programs and new concepts in workforce development...Don't forget clinical pharmacists, though – they create tremendous value on care teams and in integrated systems. None of these disciplines should be excluded or granted special status in a community-based care coordination process. Highly trained and licensed professionals should be put in a position to practice as efficiently as possible. The 'hard part' often is that doing so means "letting go" of several functions that other individuals on the team can perform more efficiently, and "letting in" a wider variety of players in an organizatoinal process. Aptitudes and inter-personal skills often matter much more than training and licensure in a team-based model of care.		

16) **Care coordination requirements for specific populations.** Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and infants	☐	☒	
Children	☐	☒	
Children who are healthy, but in socially-complex environments	☐	☒	
Children involved in the foster care system	☐	☒	
Children with a chronic illness	☐	☒	
Children with a serious emotional disturbance	☐	☒	
Children with medical complexity	☐	☒	
Children or youth with a behavioral health diagnosis or substance use disorder	☐	☒	
Transition-age adolescents	☐	☒	
Parents and families	☐	☒	
Pregnant women	☐	☒	
Adults	☐	☒	
Adults who are healthy, but in socially-complex situations	☐	☒	
Adults with a chronic illness	☐	☒	
Adults with a behavioral health diagnosis or substance use disorder	☐	☒	
Clients involved in the criminal justice system	☐	☒	
Clients with a disability	☐	☒	
Clients in a nursing facility	☐	☒	
Elderly clients	☐	☒	
Frail elderly clients	☐	☒	
Clients in palliative care	☐	☒	
Other populations, please comment: Specialized focus, attention and resources are, of course, necessary in many of these areas. We responded "general" in all of the check boxes above, because the need for specialized focus often devolves into arguments for fragmentation, carve ins, carve outs, exclusivity, special contracts, program patches and funding silos. The ACC in general, and RCCOs in particular, must be accountable for every single client in every single population category enumerated above. Doing so is possible only through the creation of a high functioning, collaborative network.			

17) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

18) How should care coordination be evaluated? How should its outcomes be measured?

Penetration within the target population, rates of contact and follow-up, the comprehensiveness of risk assessment (all behavioral, social, functional and health determinants), client experience and feedback, provider experience and feedback, the extent to which existing community resources are incorporated in a community-based process (rather than a single organization's silo).

19) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

a. What is the PMPM cost for providing care coordination services?

In the current model, at the current volume of enrollment and scale of operations, a good benchmark is about $5-6 total RCCO funding.

b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

At this level average of funding, we do not believe that significant variation in the rate of reimbursement will produce better outcomes.

20) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

a. **Care coordinator to client ratios.** If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☐
51-100	☒
101-200	☐
201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

High functioning, "complex care management" programs can at best handle 50-75 clients per worker at any given time. A carefully managed balance between *longitudinal* and *episodic* client interactions is necessary to make a meaningful impact the most vulnerable populations – even at this low ratio.

Additionally, when the math is done at this staffing ratio, it is clear there is not and will never be enough funding (in the entire system) to maintain a traditional care management system that accounts for all near and long term drivers of outcomes and cost. As such, a *fundomentolly different approoch* to accounting for the entire population is necessary. A *network model*, in which multiple entities align their resources, define their roles and actively divide responsibilities efficiently (e.g., RCCOs and large PCMPs fulfilling broad, preventive "reminder and recall" functions), is the only means by which the stated objectives of the ACC can be achieved.

21) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

This is an area where "the basics" are (fortunately) the most effective means of assessing performance and impact – e.g., --

- How many people have you contacted and touched?
- How many declinations of your services have occurred, and why? Did you follow-up at a later interval?
- How are you targeting your resources and what are your doing to account for the populations that are not "prioritized" or fall outside your "current capacity"?
- Did you account for a discharge in a timely manner? Where you aware of it? If not, why?
- How do you become aware of other transitions, episodes and events, and respond to them?
- How do you anticipate social, program, family, caregiver or other disruptions and risks that can compromise client health, function and happiness?
- Was the "loop closed" on a referral or follow-up item timely? How do you know? Does every partner involved know the outcome?
- Did you update the care plan in a timely manner? How do you know whether a person's goals or circumstances have changed?
- Etc.

The current RCCO contract and "MME Addendum" are appropriately focused in these areas – all of which necessitate community integration. We encourage more of the same for the time being.

22) Please share any other general advice or suggestions you have about care coordination in the ACC.

The ACC is an incredibly powerful framework for effective, sustainable improvement within the Colorado Medicaid program.

In order for that to occur, it will need substantial time to evolve. Frequent changes in direction will be counterproductive.

Continue to focus on goals and targets – avoid the temptation to mandate too many processes from the top down.

A focus on core care coordination functions is OK. Elaborate outcome measures are few and far between; conventional process measures have limited utility.

Emphasize collaboration. Discourage stakeholder disputes. Excessive "competition" may be harmful. The ACC is not similar to "Coke vs. Pepsi". Greeley vs. Pueblo a fundamentally different dynamic.

Program Structure

23) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

Balance is the key in all of these areas.

Standardization can create efficiency and quality.

Standardization also can stifle creativity, impede innovation and problem solving, and result in requirements that are set at the lowest common denominator.

Even if RCCO processes are standardized, clinical processes and platforms will continue to vary significantly, thereby creating the potential for gaps that are counterproductive.

We encourage the Department to walk "a middle path" between the logic of standardization and the power of flexible, community-based solutions. There is a need for both within the program.

The ACC has grown and achieved early wins because the Department has been focused primarily on "the what" – not "the how". We understand how uncomfortable variation can be for a public agency and its stakeholders. We will continue to be accountable as an "assimilator" and community facilitator – both of which are much higher functions than that of a simple "administrator".

24) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

Written agreements, with meaningful accountability processes, checks and balances should be required for all "incumbent" organizations – as well as those submitted by longstanding Medicaid interest groups. The deeper the level of financial, data sharing, operational, clinical and community integration present in these arrangements, the higher they should be scored.

New entrants should be evaluated on: 1) the coherence and internal consistency of their proposals to work *outside* the walls of their own organization, with 'aligned partners' *and* competitors alike; 2) their willingness and ability to make capital investments and take on financial commitments that commensurate with the scope and volume of responsibility they propose to assume for Medicaid; 3) demonstrable success in other states and/or other Colorado programs, working within a similar, community-based framework; 4) the scope of and rapidity of impact that they can credibly make within the population.

Documented support from local leaders and key Colorado organizations should be weighted heavily in any scenario. The re-procurement timeline has been extended and is well-telegraphed. Existing contractors and new entrants alike have ample time to make arrangements in advance of the pending RFP.

25) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

We understand why this makes sense to some PCMP groups within the ACC.

There is likely no "conflict free" means of organizing the program.

There is zero sense, however, in any arrangement that results in multiple RCCOs operating within a single county.

26) Should the RCCO region maps change? Why or why not? If so, how?

We understand that there is great interest in aligning the 'BHO' and 'RCCO' maps.

We encourage the Department to focus more upon aligning the BHOs and RCCOs themselves.

Or better, eliminate the carve out policy that divides them.

27) Should the BHO region maps change? Why or why not? If so, how?

A better question is whether BHOs and RCCOs should continue to exist as separate enterprises at all.

Where they do, the best focus is how to promote deeper, more meaningful integration between BHOs, PCMPs, RCCOs and CMHCs.

Redrawing the lines will not be sufficient for that purpose, and may not even be necessary.

Redrawing the lines will (inevitably) cut across some organizational service area, disrupt some corporate zone of influence or market strategy, and make some leadership group unhappy.

Better partnership and community integration can (and must) occur regardless of where HCPF draws lines.

28) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

Transitions should not take more than 6 months.

Transitions among established Medicaid-oriented organizations in Colorado should move faster – the Department should set this expectation.

The 'victor' in such a transition should be responsible all, or nearly all, of the costs of transition – not the taxpayers or the departing entity.

29) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

State statutes generally aren't a barrier, and should be used very, very sparingly.

Department rulemaking is generally a clear, well-communicated and executed process.

Federal regulatory limitations (many of which can be waived) should be the primary focus of barrier busting among Colorado leaders and stakeholder organizations within ACC.

Solutions to fiscal dependence upon hospital fee revenues, which is generated exclusively on a FFS basis, and the 'encounter volume' basis of capitation in traditional Medicaid operations (which also institutionalizes FFS processes) are the two biggest policy barriers to a better ACC.

30) What are the limitations of the current benefit structure and what – if any – changes are needed?

The Medicaid benefit structure is comprehensive in comparison to most others. The problem is access to care that is attributable to differences in payment, the complexities and social disparities of the Medicaid population.

Many people advocate for higher copays on emergency department utilization. Higher copayments might have an impact upon reducing excessive utilization, but will do little to address the underlying social and behavioral drivers that give rise to it. Unpaid balances at hospitals may simply rise.

Some states have attempted to incorporate "responsibility", "personal accountability" and "behavior contract" requirements into their benefit structures. It is unclear that such policies have the intended impact upon behavior, adverse trends in obesity, addiction, depression, or improved self-management of co-morbid conditions. They also do little to address underlying social factors such as housing, nutrition, education, economic opportunity and healthy environments.

Of course, the demographic and demand characteristics of the expansion populations may be different at higher income levels, and some of these changes might be useful as a part of a more comprehensive policy strategy that addresses root causes of poor health and cost within the system.

Beneficiary incentive programs are one area in which state and federal policy changes may make a difference. Incentive programs for physicians and other health care providers are often touted as breakthrough innovations in payment and delivery system reform. Most outcomes are dependent upon decisions and changes made by the patient. Federal policies in this area (for legitimate reasons) severely curtail the scope and design of client incentive programs. Focus by the department upon the development of client incentive programs that are tied to specific, measured outcomes. RMHP has had some success in this area to date; greater focus and policy development would be worthwhile.

31) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

No. If the Department adopts a policy of multiple RCCOs per region, it should simply pursue an expansive, statewide program of mandatory Medicaid managed care.

The only practical difference between a "multi-RCCO-per-region" ACC program and a traditional Medicaid managed care program would be the lack of risk for financial outcomes in the former.

32) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

Not applicable to RMHP in our organizational capacity.

33) What role should RCCOs play in attributing clients to their respective PCMPs?

RCCOs can play a much more substantial role in facilitating and executing the client designation, or "patient choice" process, for PCMPs – in a manner that promotes a much simpler and positive client experience than is entailed through referrals to a third party call center.

RCCOs are designated as "PCCMs" themselves under the State Plan with CMS – in addition to PCMPs.

A documented client choice provided to the RCCO, independently verifiable and auditable, should be sufficient for clients to make *changes* to their PCMP attribution status – in addition to those who request PCMP attribution for the first time.

34) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

Promote closer collaboration between LPHAs, RCCOs and all other ACC participants. The decision item proposed for the SFY 2015-16 budget is a very positive step in the right direction.

The quality of CDPHE relationships with LPHAs will be a critical factor in this area.

RMHP is fortunate to work with very progressive and action oriented LPHA leaders within Region 1.

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

Promote closer collaboration between County DHS, ADRC and related programs. We feel that good progress is being made in many counties throughout Region 1.

36) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

There is an opportunity for deeper, intentional collaboration on continuity of care and coverage between C4 programs and the ACC. Proactive outreach to mitigate gaps associated with loss of Medicaid eligibility and "churn" between the programs is underway in pilot programs within Region 1; more can be done to optimize and scale these operations.

37) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

The Division of Insurance is best positioned to assess Risk Based Capital and other solvency-oriented operating requirements for any organizations that assume risk within the ACC – even if partial risk is transferred and/or new forms of licensure (beyond existing insurance carrier, HMO and LSLPN standards) are developed for the purpose of risk sharing within the Colorado Medicaid program.

Stakeholder Engagement

38) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

The RCCO must create multiple channels of contact and to generate productive connections with clients, their families and advocates.

Generally speaking, this means "going to the people" rather than expecting them to "come to us".

In addition to the 'governance' functions that are generally emphasized for the purpose of engagement, there should be several opportunities for the *design* of new processes and programs – not the oversight and advocacy role they are expected to play.

Formal structures should be supplemented with a variety of informal convenings, feedback sessions, community prioritization and feedback processes.

39) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

There is a tremendous need for a "network development" initiative in this area that is commensurate with the focus on the "PCMP network" that HCPF has prioritized in the initial years of the ACC.

A focus on information sharing, comprehensive assessment and community response systems are the specific action areas the development of closer relationships.

40) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

Business, municipalities and local civic organizations are important partners that are (generally) less involved in the ACC than they could be at this point. A focus on closer connections with public officials (outside the usual health and human services space) is also a key opportunity,

41) How should the Department structure stakeholder engagement for the ACC as a whole?

There is already a significant amount of structure in place for oversight of regular program operations, or major program changes.

Marketing and communication functions could be coordinated more closely to improve awareness and understanding of the ACC. The Department and RCCOs could work together to design to and execute annual communication plans and with specific targets.

Network Adequacy and Creating a Comprehensive System of Care

42) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

Providers participating in the Colorado Medicaid program do not currently operate as a network – at least in the same manner that health plan, health system, IPA and multi-specialty groups do in other payer arrangements.

Acknowledging the qualitative difference between the list of Medicaid providers with billing rights, and the characteristics of a contractually established, organized payer-provider network, is the first step in making improvements.

Creation of a functional network (beyond the scope of PCMPs) will entail significant, ongoing, methodical effort on the part of the part of the Department, RCCOs and leaders within multiple provider-based organizations. The next area of focus should be on the creation of more efficient PCMP-specialty partnerships.

a. If no, what are the gaps?

There are well understood and documented gaps in access for Medicaid to specialty care services – in both rural and urban areas, in all specialties, procedural and non-procedural. With few exceptions, there is little contractual or financial leverage within the current Colorado Medicaid delivery system that can be utilized to improve access to specialty care services.

b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

The most likely path forward to improved access to specialty expertise in the near future is through initiatives that promote better knowledge sharing, communication, coordination and co-management arrangements between PCMPs and specialty care providers on a practice-by-practice, market-by-market basis. The "Project Echo", "Doc-to-Doc" and telemedicine initiatives currently under development within the ACC are all worthwhile, practical approaches to making things better.

43) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

We will defer to the providers and agencies themselves, in each category below, for a response on this topic. Our view is that all of these groups have a fundamentally important, unique role to play within the ACC. We particularly emphasize the importance of LPHA, counties and community entities in the success of this model – well outside the scope of traditional health care operations.

a. What role should hospitals play in the next iteration of the ACC Program?

b. What role should pharmacies play in the next iteration of the ACC Program?

c. What role should specialists play in the next iteration of the ACC Program?

d. What role should home health play in the next iteration of the ACC Program?

e. What role should hospice care play in the next iteration of the ACC Program?

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

g. What role should counties play in the next iteration of the ACC Program?

h. What role should local public health agencies play in the next iteration of the ACC Program?

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

44) How can RCCOs help to support clients and families in making and keeping appointments?

RCCOs can promote improved appointment keeping through a variety of mechanisms – from integrated scheduling arrangements with advanced practices, to targeted 'accompaniment' and transportation initiatives for specific cohorts of clients.

In the former case, some Region 1 community care teams (LPHA-based, in some instances) have been granted EHR access and scheduling access by advanced PCMPs. This is a very powerful process for expediting access to care when necessary and managing available primary care capacity effectively.

In the later case, community health workers funded by RCCO 1 and employed by the CMHCs transport clients to appointments, and provide close support before, during and after encounters to improve the client experience and maintain access to the PCMP. Again, this intervention has proven effective

45) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

Encourage, yes. Require, no.

46) **Community Health Worker reimbursement.** Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement process	(Please check all that apply)
Independently bill	☐
On staff (salary) at Primary Care Medical Provider Clinic (OR CMHC)	☒
On staff (salary) at RCCO	☒

Per Member Per Month Payment	☒

47) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

Oral health is a major driver in health risks and outcomes across the entire demographic spectrum of Medicaid eligibility.

Dental pain is a significant driver of avoidable emergency department utilization.

RCCOs are not in a particularly strong position to create new dental access points where none currently exist. FQHCs, RHCs and other safety-net clinics are in a much better position to create meaningful access to dental care.

The recent implementation of the adult dental benefit and a third party administrator may help to generate new Medicaid dental access points in traditional dental clinic settings.

Integration of oral health outreach, prioritization and follow-up activities should be a core focus area within RCCO care coordination programs. The Department could consider requesting the development of an RCCO plan for integration of oral health management activities, coordination and scheduling processes with the new dental administrator.

48) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well being of clients and families.

    a. What does cultural competence mean to you?

Cultural competence is primarily about *understonding thot there is* o *difference* between mainstream, middle class norms and priorities and those of other groups. These differences are manifest in numerous areas, from communication styles, to decision-making, household 'budgeting', schedule keeping, community values and countless other dynamics.

Additionally, regardless of cultural, language and ethnic differences – *poverty* necessitates a focus by individuals and families upon day-to-day *survivol*.

Cultural competence entails an understanding that 1) *the differences ore OK*, and 2) o *different opprooch to connecting ond communicoting* is necessary to make the ACC work. Success is seldom achieved by grafting mainstream norms and expectations onto other groups within the Medicaid program.

Evidence of an opportunity for greater cultural competence is evident throughout the delivery system on a day-to-day basis – in provider and clinician complaints, failed connections and interventions. E.g., --

-- "I can't believe that this patient is on *Medicoid* but still has money for a fancy iPhone."

Culturally competent response: Thank goodness we have a valid phone number where we can text and call the patient when necessary.

-- "They must be spending at least $500 per month *on their truck*."

Culturally competent response: Thank goodness the family has transportation. It is more likely that they will make their referrals and keep their appointments.

-- "She did not show up for her appointment, so we fired her. She needs to learn that there are consequences for her actions".

Culturally competent response: I wonder why this patient keeps missing her appointments. It would be good to understand her barriers. Maybe the RCCO or someone else can help get her in on time. Maybe there is a way that we can go to her – she really needs help. If we don't solve this problem now, it will cost the system much more money in the long run.

b. What RCCO requirements would ensure cultural competency?

Our own cultural norms and biases are often invisible to us – they are like the air that we breathe. Education and training programs can be very effective in enabling all individuals within an organization to understand differences and respond differently when confronted with cultural differences. *Bridges out of poverty* has been a very effective training curriculum for both front line staff and senior executives within our organization. Disability awareness training and client feedback sessions (facilitated by the Colorado Cross Disability Coalition) have also been very valuable to RCCO 1 and partnering organizations.

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?

Awareness and understanding are really the most important aptitudes. Language competencies, peer-based interventions, translation, transportation, smarter scheduling, community 'navigation' resources are all inputs to a culturally competent model, but of little use if deeper understanding about the nature of differences does not exist among system leaders and at the front lines in clinical and care management settings.

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

Of course, effective communication is more likely to occur when the communicator has a good working knowledge of a client's language and cultural context. Peers, promotoras, etc., are often the best means of reaching communities and creating broad based impact in this area. No RCCO should operate in this space without a solid strategy and commitment to developing partnerships and resources in this area.

Even when cultural gaps are bridged, individual *decision-making* and *behavior* remain the primary drivers of health disparities. Integration of behavioral resources, in both clinical and community settings, for a wider array of change objectives, is critical across the entire Medicaid population.

49) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

Yes – to the extent that they are actually be formed with the purpose of creating substantially better access to care.

This is more likely to happen if / where a capitalized, corporate health system commits a greater share of its specialty resources to serving a large volume of Medicaid clients – and is willing to take the financial hit or change in market position that is typically associated with doing so.

It is also more likely to happen if / where RCCOs can perform (or participate in) private payment functions to create leverage that generates better access to care – including multi-line and tiered network strategies that include incentives for serving the highest cost / most at risk populations.

Without these elements, a "preferred network" for Medicaid specialty care is an abstract concept, at best.

Limiting access to care in a system that self-limited due to a macro-economic shortage of supply makes little sense. Our time and focus will be better spent on other initiatives to expand access to specialty care.

50) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

This is a complex problem that requires a complex response. Focusing on the highest utilizers (where much of the excess utilization is concentrated) remains *a legitimate priority and focus area for the RCCOs*. Additionally, RCCOs and their partners are uniquely positioned to employ a wide variety of "non-health care" interventions that address the multi-faceted root of the problem.

Other changes, such as a "flat" (non-facility) based fee for Medicaid ED utilization, creating more powerful rewards for open scheduling and extend hours options in primary care, and (perhaps) the implementation of higher cost sharing for ED encounters are all worth considering. These changes are more likely to "treat the symptoms" of excessive ED utilization by the Medicaid population – not "cure" the underlying problem.

51) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

We think that the ACC is generally on the right path at this point – focused upon improvements that are achievable on a broad basis, not on abstract concepts or far flung changes that belie the macro-economic reality of the current Medicaid payment, regulatory and financing structure.

We can work on achievable changes now while advocating (and actively taking calculated risks) to develop more substantial improvements in the payment and delivery system model over time.

Practice Support

52) **Support for practices.** Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☐	☐	☐	☒
Network provider education	☒	☐	☐	☐
Assistance with practice redesign	☒	☐	☐	☐
Assistance with efficiency-enhancing activities	☒	☐	☐	☐
Provide web-based resources and directories	☒	☐	☐	☐
Provide practice-specific data reports	☒	☐	☐	☐
Provide clinical care guidelines and best practices.	☒	☐	☐	☐
Provide clinical screening tools	☒	☐	☐	☐
Provide health and functioning questionnaires	☒	☐	☐	☐
Provide chronic care templates	☒	☐	☐	☐
Provide registries	☒	☐	☐	☐
Offer client reminders	☒	☐	☐	☐
Offer client self-management tools	☒	☐	☐	☐
Offer educational materials about specific conditions	☒	☐	☐	☐
Supply behavioral health surveys	☒	☐	☐	☐
Supply other self-screening tools	☒	☐	☐	☐
Administer behavioral health surveys	☒	☐	☐	☐
Administer other self-screening tools	☒	☐	☐	☐
Prepare client action plans	☒	☐	☐	☐
Provide training on providing culturally-competent care	☒	☐	☐	☐
Provide training to supporting staff	☒	☐	☐	☐
Provide training on motivational interviewing	☒	☐	☐	☐
Provide tools and software for phone call and appointment tracking	☒	☐	☐	☐
Provide tools and resources for tracking labs, referrals, etc.	☒	☐	☐	☐
Provide referral and transitions of care checklists	☐	☐	☒	☐
Provide visit agendas or templates	☐	☒	☐	☐
Provide standing pharmacy order templates	☐	☒	☐	☐
Provide comprehensive directory of community resources	☒	☐	☐	☐
Provide directory of other resources	☒	☐	☐	☐
Provide materials regarding Nurse Advice Line	☒	☐	☐	☐
Ensure all tools and resources are centrally located on RCCO-specific website	☒	☐	☐	☐
Others				

53) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

We have adopted and recommend tools developed by the ACP and NCQA. These tools primarily provide coherent guidelines – not specific, inflexible mandates – for more effective communication, coordination and co-management relationships between primary and specialty care providers.

54) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

RCCO resources vary in these areas, and robust practice transformation services may be beyond the scope that some organizations can provide on their own. However, RCCOs have a critical role to play in working collaboratively within a statewide framework for more consistent delivery of practice transformation supports in every community.

55) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

Recognition is best achieved through a qualitative, ongoing, in-person relationship. "Accreditation" and formal recognitions programs (e.g., NCQA) are useful, but not necessarily a definitive, categorical indicator of "medical home-ness".

Non-FFS payments (e.g., "PMPM" arrangements) are the most practical way to promote and expand this model. "Care management codes", etc., are less consistent with the population and outcomes focused basis of the model – and drive the system back toward "billable activity" and volume.

56) Should the Department require that PCMPs utilize disease registries to manage the health of their population?

Encourage adoption of patient-centered registries (*without* regard to disease state)? Yes.

Require? No

57) Please share any other advice or suggestions about provider support in the ACC.

Providers can support themselves most effectively. The creation of 'natural' (not mandated, or forced) leadership and collaborative learning channels among practices statewide can be a very effective means of support. RCCOs (and other orgs) can facilitate these channels; mandating "attendance" and "credit" for participation is not recommended. Leaders lead, followers follow, and laggards lag – acknowledging this basic "distribution of transformative capacity" within the primary care base is the first step in developing resources and targeting efforts in a way that produces the greatest possible impact for the population.

Payment Structure and Quality Monitoring

58) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

The PMPM payments that are currently being made are consistent with the goals of the ACC, and the most practical way to operate given 1) the current fiscal and regulatory barriers to broader risk transfer within the program, and 2) the dearth of risk based capital among the small, not-for-profit organizations that have made commitments to advance the goals of the ACC.

In the short run, the Department should:

- Continue what you are currently doing. Make PMPM payments for critical inputs to the model – care coordination, data sharing, feedback analysis, the integration of community and behavioral health services. Afford RCCOs and their partners flexibility in determining how best to use the resources and close gaps wherever possible.

- Focus on creating a period of stability so that ACC partners and participants can solidify and capitalize upon the foundation for community integration that has been established since the first, incremental enrollments became effective 3 years ago.

- Balance focus on a basic set of quality metrics in key areas (e.g., well-child care) with progressively more sophisticated *structural* milestones of community integration among RCCOs and other ACC participants.

- Begin working intensively on waiver and/or any other federal authority necessary to address #1 above, as well as the need for an "alternative payment model" that does not regress to encounter volume.

59) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

We have developed some thoughts and insights in this area over the course of implementing our HB 12-1281 project. However, this question is not applicable to our organization. We defer to PCMP respondents.

60) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

"Infrastructure" is not necessarily a barrier to the adoption of smarter primary care payments. Enhanced, global payments for E&M and related services can be implemented for a wide range of PCMPs without substantial additional structure. RCCOs (in their current state) and the Department could reasonably accomplish this objective in the near term. The biggest barrier, in our view, is the encounter volume requirement that will persist absent an alternative payment waiver or similar reform.

61) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

Our organization is fully licensed. However, we encourage the Department explore additional forms of licensure or solvency certification to promote the broadest possible array of public-private risk sharing arrangements across community-based organizations within the ACC.

62) What role – if any – should the RCCOs play in the distribution of payments to providers?

RCCOs can perform an invaluable role in the distribution of payments to providers – even if they are not organizationally equipped with the operational platforms necessary for traditional payer functions.

The value of utilizing the RCCOs is inherent in their status as private organizations with direct accountability to the communities they serve. Unlike the government, RCCOs can:

- Contract very creatively and flexibly in a targeted manner;
- Tailor payment arrangements to meet specific needs and close individual gaps on an organization-by-organization basis;
- Make rapid cycle improvements and adjustments as circumstances change.

When government functions as a payer, the actions it takes are a matter of law and public policy, must be generally applicable on a broad basis, and are subject to substantial procurement constraints.

To the extent that RCCOs and/or private payers posses these characteristics and actively bridge gaps that the government can't fill, they should be actively encouraged to do so.

To the extent that RCCOS and/or private payers operate in a uniform, inflexible and bureaucratic manner, they add little value to the government payment process already exists. There is no need to layer private bureaucratic layers upon the underlying government bureaucracy.

We encourage the Department to understand and test differences among potential "payer partners" in this area.

63) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

Reforming payment, transferring risk and creating cost accountability are related, but distinct processes.

The greatest possible opportunity for improvement exists where are three elements can be brought together within a single agreement.

That said, it is possible to implement a variety of new payment models (and cost accountability structures) without a full transfer financial risk. Unless a large, new source of risk based capital materializes somewhere

within the program, full risk transfers are unlikely to occur on a broad basis within the state any time soon (even if waivers or other federal policy changes are adopted to facilitate a move away from FFS).

New payment models are likely to evolve in an accelerated manner to the extent that the RCCO (or similar entity) is utilized to promote them (per the response to Question 62) on a partial or non-risk basis. Striking a balance in this area, and cutting a path forward, is an essential next step in spurring broader payment reform across the Colorado Medicaid program – without compromising the community basis of the ACC (which is fundamental).

64) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

Guideline-based, process metrics are OK – whether they are generated with claims or clinical data. We think that the primary purpose of these measures is the development of basic quality improvement and data use competencies. Less is more with these measures (i.e., a list that is too long dilutes focus and can delay the development of core QI competencies in most settings and systems).

We have found, however, that there is much greater power in focusing on *structurol* measures of improvement. Milestones of transformation, operational care management metrics and reports that demonstrate the system is indeed accounting for people as it should are our primary focus at this point in time.

We are also excited to pilot sophisticated *outcomes oriented* measurement and payment initiatives, which capitalize upon extensive investments that we, partnering providers and community organizations have made over the years – such as the *Globol Outcomes Score ("GO Score")*. This pilot is comprehensive in scope, and includes RCCO enrollees along with all other patients served by advanced PCMPs. See: "NCQA, RMHP and the GO Score" – in the 2014 *Heolth Motters Report* published by the Colorado Business Group on Health www.cbghealth.org/pdfs/2014-HM_HealthPlans.pdf

A mix of structure and outcomes measures, in addition to contemporary process and "intermediate outcomes" measures that are available – is a critical balance that the Department must continue to strike in ACC efforts moving forward.

65) **Measuring Client experience**. Please complete the table below to indicate how the Department should measure Client/patient experience:

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☒	☐	This is a useful tool, but continued "mixing and matching" clinical and health plan CAHPS questions is not recommended, because doing so eliminates the potential value of national benchmarks, and (in the case of the "PCMH" and "CG" elements) are not actionable without attribution to a specific provider group.

SF-12 Health Survey	☐	☒	The SF-12 survey can be administered but is not as actionable as other tools – at least without significantly greater integration.
Other types of client interviews / surveys	☒	☐	
Patient Activation Measure	☒	☐	
Focus groups	☒	☐	Focus groups, Patient Family Advisory Committees, etc., are preferable to surveys as a means of generating actionable feedback on RCCO, PMCP and other ACC partner operations.
Other	Please type your response here.		

66) Knowing that, at this time, the Department only has claims data, how should population health be measured?

The administrative data is a powerful resource for population health management – don't discount it. It is useful primarily for population definitions, general targeting and aggregate feedback – both of which are critical in "population health measurement" functions.

The administrative data is far less useful for clinical decision-making and timely, front-line actions.

Understanding this difference is the key to making the right investments with administrative data, in tandem with other resources (e.g., real time alerts for timely response and follow-up, and clinical data aggregation that makes opportunities like the "GO Score" possible).

67) How should quality and performance data be reported to the RCCOs, PCMPs, and the public?

Publication of the "KPIs" is useful.

Progress on "structural" objectives (e.g., the number of assessments or follow-up actions completed) is also useful.

Maintaining open channels of communication about what is going on inside each RCCO and PCMP is essential, as well. In our experience, "KPIs" are important but seldom tell a complete story. We ourselves benefit greatly from close, in person contact with our providers, and deeper, qualitative understandings about "what is going on" in each site, over time. This process can be operationalized through the production of regular "narrative reports" (e.g., on a quarterly or semi-annual basis).

68) **Measures for payment.** Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	

1-7	☒
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-S0	☐
S1+	☐
None	☐

Less is more. See response to Question #64, above.

69) What percent of RCCO payments should be tied to measures or performance?

Percentage	
10-20%	☒
21-30%	☐
31-40%	☐
41-S0%	☐
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

We suggest a lower percentage not because we are opposed to "accountability for performance" in any way, but because per capita funding in the ACC is extremely limited, and should be directed at the development of long-term foundations and community systems

70) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?

Generally, yes. However, RCCO and PCMP development milestones vary somewhat. Provided the focus is upon the development of new systems, structure and process measures (e.g., the number and timeliness of "SCPs" completed within the new MME demo) can be very appropriately used as the basis of incentives.

Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?

Generally speaking, longitudinal improvement is a priority. However, national benchmarks (to the extent they exist) should be used to creative incentives for "maintenance" once performance has largely been optimized.

71) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

72) **Incentive payment frequency.** Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	☐
Annually	☐
Other	☒

If you checked the "Other" box, please describe payment frequency below:

"Other" makes the most sense because measures of performance vary significantly from metric to metric, and require substantial differences in observation time. Generally speaking, more frequent payments (e.g., quarterly) are preferable to less frequent payments – but the frequency of payment should not be an end in itself. The validity and value of the measurement is of far greater importance.

73) For potential offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

The fixed costs present within RCCOs are common to any enterprise:

- Physical space, operating equipment, rent, utilities and other overhead expenses
- HR, personnel, legal, accounting, and related business process expenses.
- Compliance support for all federal, state, regulatory, contractual and operational reporting requirements (which are extensive)
- Enrollment, call center, IT services and security, laptop, telephone and similar operational expenses
- Audit, site visit and public reporting expenses support
- Leadership, governance and accountability related expenses.

74) For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

This question is not directed toward our organization.

Health Information Technology (HIT)

75) **Types of communication.** For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	☐
Text message	☐	☐
Web portal	☐	☐
Email	☐	☐
Telemedicine / Video chat	☐	☐
Face-to-face meeting	☐	☐
Smartphone app	☐	☐
Other:		

76) **HIT investments by organizations.** For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below:

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	☒	☐
Digital care management tool	☒	☐
Care transitions alerts	☒	☐
Electronic Health Records (EHRs)	☐	☐
Health risk assessment software	☒	☐
Practice assessment tools	☒	☐
Practice management tools (scheduling, billing)	☐	☒
Client web portal for communicating care plan, services, benefit enrollment	☒	☐
Patient education/wellness tools	☒	☐
Provider/case manager directory	☒	☐
Shared decision-making tools	☒	☐
Telemedicine software	☐	☒
Other: Patient activation analysis and tools that support "coaching for activation",	☒	☐

Other:	☐	☐

77) **Importance of technology by type.** The Department is working to determine what technology is in place, what technology is needed, and what technology should be standardized. For RCCOs, providers, and other organizations, use the table below to answer what HIT infrastructure outside of the SDAC your organization would use to perform population health management activities. Tools are scored from 1-5, where 1 are those items least-likely to be used, and 5 are items most-likely to be used:

Tool	1 Least	2	3	4	5 Most
Population analytics / reporting / dashboard	☐	☐	☐	☐	☒
Care management tool	☐	☐	☐	☐	☒
Care transitions alerts	☐	☐	☐	☐	☒
Electronic Health Records (EHRs)	☐	☐	☒	☐	☐
Practice assessment tools	☐	☒	☐	☐	☐
Health risk assessment software	☐	☐	☒	☐	☐
Practice management tools (scheduling, billing)	☐	☐	☒	☐	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☒	☐	☐	☐
Patient education wellness tools	☐	☐	☒	☐	☐
Provider/case manager directory	☐	☐	☒	☐	☐
Shared decision-making tools	☐	☐	☐	☒	☐
Telemedicine	☐	☐	☐	☐	☒
Other:	☐	☐	☐	☐	☐

78) What are the primary barriers to RCCOs and providers increasing their use Health Information Technology to improve the performance of Primary Care Practices?

Individual EHR vendor constraints, vendor timelines, upgrade, module and reporting costs are the largest barrier.

The creation of more efficient clinical processes for consistency in data capture, understanding of existing EHR and related application supports, and the relationship between internal business intelligence and quality improvement.

79) How can Health Information Technology support Behavioral Health Integration?

There are a variety of techniques, templates and charting processes that can be adopted by a practice (particularly when it 'owns' the BH resource directly) to document patient needs, track provider impact and

'productivity' (without reverting to FFS coding, develop and execute care plans and track referrals for more extended therapies and interventions.

The challenge of using HIT to support integration increases to the extent that two different "systems" must be maintained (e.g., encounter and regulatory reporting for the CMHC vs. the PCMP function), or when the organizational identity of an individual employee is split – thereby raising questions about rights, roles, confidentiality and consent that are not otherwise present when a single organization performs all functions.

80) In the next iteration of the ACC, should there be a shared resource for data and analytics? Please describe the basic criteria for what a shared data and analytics platform needs to contain in order for it to be useful.

The Department is well served to focus on the development of core infrastructure for data sharing and collection – not on individual applications and tools.

RCCOs and their partners can develop natural partnerships and application sharing arrangements much more nimbly on their own. The Department does not need to wade into the application space.

Even if the Department sponsors, controls through approval processes or mandates the use of specific applications or tools, all ACC partners will continue to develop and operate primarily within their own platforms.

We will all be better off if we accept that the creation of *networks and bridges* among multiple systems is the primary focus of our HIT strategy, not the creation of a "universal hub" or "single statewide platform".

81) Should there be a shared care management tool? Please describe the basic criteria for what a care management tool would need to contain in order for it to be useful.

See the response to # 80 above.

The key elements of an effective, community care management tool are:

- Designed with a robust, inter-organizational, rights and roles based architecture that can be configured at the lowest level possible within a community system without extensive technical support;
- A focus on the patient and his or her immediate needs – not the needs of individual provider groups or agencies, disease states, program categorizations or other common drivers in health IT platforms;
- A focus on the current status and activity around a patient, and clarity about "who is on first" for a specific social, behavioral, functional, family/caregiver or health care need.
- A "timeline" or "feed" function that contains information most pertinent to action – not the entire "clinical record" or history.
- The ability to integrate clinical data, administrative data, patient report data and alerts from other sources, as necessary and desirable – *without being dependent upon them or eloborote interfocing supports.*

In our experience to date, there are (surprisingly) few tools in the market that are designed with these features and use case concepts in mind. Most tools in this space are either payer or EHR centric, focus heavily on clinical functions, measurement reporting, guideline engines and "gaps in care" functions.

82) Should there be a shared population health management tool? Please describe the basic criteria for what a population health management tool would need to contain in order for it to be useful.

As with our response to the previous question, the needs for a shared population health management tool should be dependent upon the needs of particular communities, regions, or networked providers. A one size fits all, or a single shared resource, will not be optimal in many circumstances. Organizations participating in ACC activities must interact with organizations outside of the ACC. This interaction will vary dependent upon the needs and capabilities of the community, region, or network to which the organization belongs.

In the next iteration of the ACC, resources should be provided that facilitate shared population health management tools and align with the community, region, or network capabilities to which the organization belongs. The shared population health management tool efforts should not hinder or otherwise confound activities that are already occurring in communities, regions, or networks.

Basic criteria for population heath tools include the following:

- Identify patients with prevention, acute or chronic care needs, track gaps in care, evidence based care delivery
- Supports patient and family engagement tools
- Create feedback mechanisms for providers, practice teams and patients.
- Alerts can be provided to both patient and provider
- Care summaries are created and can be provided to the patient at time of visit and electronically
- Track multiple patient conditions or co-morbidities and presents pertinent patient data in summary flow sheet formats, can be queried in full detail
- Facilitate and document the production of a proactive care plan for a team or teams of collaborating clinicians
- Encompass the point of care support and reporting outputs needed to allow disparate providers to collaborate on the care of patients across multiple points of care and episodes of care or interventions
- Patient centered whole person oriented care form the basic foundations for population management
- Supply appropriate Community level quality metric reporting with such reporting able to address the needs of multiple stakeholders including but not limited to HIE's, payors, communities, geo-political areas, hospitals, IPA's and/or PHO's, individual practices, providers, and patients.
-

83) Please describe the functionality that a common Medicaid provider directory would need to contain in order for it to be useful.

Simple, searchable, designed with "mobile-first" use cases in mind – with simple click-to-call (text or IM) design features that makes the directory as actionable for the client as possible.

The biggest challenge in deploying an effective directory is not the technology or user interface. It is the maintenance of accurate data, much of which is very detailed and can change without notice (e.g., panel status, operating hours, languages spoken, etc.).

84) How can the RCCOs support providers' access to actionable and timely clinical data?

RCCOs can do two things accelerate progress: 1) Create focus on specific measures and application use cases, in which the scope of critical data elements can be narrowed for productive purposes, and 2) promote and

sustain active feedback channels, which have the effect of improving data quality as well as the overall level of system performance.

85) What are the HIT solutions that would benefit clients, providers, and RCCOs? Please comment on the parameters these tools or platforms would need to possess and the ways in which they could be used.

86) What technical assistance or resources related to HIT infrastructure should the RCCOs supply? This assistance or these resources could be for providers, social service organization, clients/families, or for others.

RCCOs can support use case development, data collection, data mapping and matching functions, application deployment, training, data quality and exchange standards development.

87) What role should health information exchange platforms like CORHIO or QHN play in the next iteration of the ACC?

Health information exchanges (HIE) like QHN can play a crucial role in an effective ACC. Because QHN has real time and historical access to data from all connected sources, use cases such as the following can be facilitated:

- Real time emergency department (ED/ER) admit notifications and inpatient admit/discharge notifications
- Supports care coordination/management/utilization and cost reduction programs
- Patient matching and patient subscription services can further enhance notifications regardless of provider relationship indicated at patient registration in hospital
- Notifications can be provisioned in a number of formats (Direct/secure email, sFTP PDF delivery, HL7, etc.) to fulfill individual provider technical or workflow needs
- Longitudinal access to the clinical data the HIE has collected from all sources over time
- Allows providers to see the complete picture of the patient regardless of if the patient switches providers or presents at a new provider
- Allows for HIPAA compliant access to data including advanced consent and privacy
- Can include behavioral health data with appropriate privacy and security safeguards
- Includes data from hospitals, laboratories, primary care, specialties, long term care, acute care, radiology and others
- Data provisioning for advanced value added applications and analytics
- The HIE can support data matching and normalization to facilitate population health, registry/wellness, risk stratification, patient engagement, care management and other HIT applications
- The longitudinal data the HIE stores can supplement the datasets required for advanced value added applications
- The HIE has relationships with the sources of data and works with those sources to obtain quality data for given use cases
- Results delivery to provider EHR systems
- HIEs standardize and consolidate the delivery of electronic clinical information to provider systems
- Efficient delivery of patient data to providers systems enhances providers access to data at the point of care
- Patient grouping and patient subscriptions

- Support providers creating patient groups or patient subscriptions that allow them to be notified in real time as data is received by the HIE
- Supports care coordination/management/utilization and cost reduction programs
- Patient groups/subscriptions creation can be manual or automated
- Community or regional provider "address books" and directories
- The HIE has relationships with providers within a community or a region and understands where data should go for a particular provider, and perhaps more importantly understands how that provider wants to receive data
- The HIE can facilitate senders and sources of data working with recipients of that data so that the data delivery works efficiently and is of maximum value to both

88) Please share any information, advice, and suggestions you have about health information technology in the ACC Program.

Focus on broader based data sharing, data quality, data acquisition resources and interoperability standards. Avoid an "app centric" strategy. Private partners are in a better position to develop and test applications, which will come, go and change frequently over time. The biggest (unmet) need is the core infrastructure and processes for a statewide health information network.

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Kandi Buckland
Location: Colorado Springs, El Paso, CO

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Peak Vista Community Health Centers
Location: Colorado Springs, El Paso, Colorado
☒ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☒ Medical provider / PCMP / other provider
  i. Type or specialty: Family Medicine, Pediatrics, OB/GYN
  ii. Area of practice: Primary Care
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Educational or research institution
☐ Another public or private program
☐ Other (please describe): Click here to enter text.

Are you currently involved in the ACC program?

☒ Yes
☐ No

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☐ 3-4 years
☒ Since before the program was implemented.

How have you been involved in the ACC program and what interaction have you had with RCCOs:
PCMP, Delegated Care Management, Numerous RCCO Committees, Board of Directors for RCCO organization, Past RCCO Medical Director.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:
Medicaid provider of primary care for 40+ years.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☒ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

   a) The State's Medicaid expansion, enabling more underserved to have better access to health care.
   b) Funding for Care Management services enables patient access to this support.
   c) Integration of primary care and behavioral health.

2) What is not working well in the ACC Program?

   a) The lack of aligned financial incentives between physical and behavioral health care providers.
   b) The lack of timely financial data from the SDAC to identify and better address the health care of those patients who are high utilizers of inappropriate health care services. Difficult to obtain timely data, from any source, to effectively identify issues, needed changes in process, or patients to be served.
   c) The large number of RCCO members who remain unassigned to a PCMP.
   d) The current fragmentation of services that serve to make it difficult to achieve the Triple Aim.
   e) Lack of recognition of existing patient referral patterns in current RCCO regions.
   f) Differing regions for RCCO and BHO's makes it difficult to establish partnerships with one Behavioral Health practice.
   g) Differing goals, policies/procedures between RCCO's and BHO's make it difficult to coordinate care and utilize best practices for the patient.
   h) Lack of focus/funding on prevention especially for patients who are in a 'rising risk' category.
   i) Incentive methodology requires the entire RCCO to reach KPI's. PCMP's who are meet the KPI's for their population are not able to receive the financial incentive.

3) What is working best in the Behavioral Health Organization (BHO) system right now?

   a) Their recognized need to work collaboratively with physical health providers in primary care practices.

4) What is not working well in the BHO system?

   a) Their perception that they need to be in the financial driver's seat due to the State's SIM initiative
   b) The lack of aligned incentives between physical and mental health providers
   c) Their lack of an adequate number of prescribers to provide timely services to their clients
   d) The lack of congruence of RCCO and BHO regions
   e) The State's continued requirement for use of the CCAR, a tool that is not an evidence-based, nor a patient directed validated outcome measure that is overly cumbersome and time consuming to complete
   f) The fact that the State allows the flow of State Medicaid funds to be diverted from patient care services to private corporation's shareholders, i.e., allowing for-profit entities to be paid by Medicaid dollars
   g) Inability to utilize health and wellness codes.
   h) Fragmented care coordination services.

5) What is working well with RCCO and BHO collaboration right now?

a) The fact that we are finding ways to work together.
b) Potential future incentives (SIM) that encourage collaboration and partnership.
c) Future payment reform is an incentives to increase collaboration.

6) What is not working well with RCCO and BHO collaboration right now?

a) The lack of aligned incentives between physical and mental health providers.
b) Lack of joint goals and processes.
c) Differing regulations on who is eligible for services and payment methodology.
d) Differing requirements for coding.

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

a) The State should abandon use of the CCAR and adopt an evidence-based outcome measuring tool, such as the SAMHSA approved Partners for Change Outcome Management System (PCOMS), or at a minimum, the Outcome Rating Scale component of PCOMS.
b) The State should align the BHO and RCCO regions in such a manner so as to better recognize existing practice referral patterns. Require the same functions as though they are one organization.
c) The state should require timelier reporting of billing data by the SDAC.
d) Open the health and wellness codes.
e) Consider focusing care coordination for both behavioral health and physical health through primary care as this is where the client is most frequently seen. Assure a smooth transition process from integrated behavioral/primary health to mental health services to serve complex mental health issues.
f) Payment reform to allow for integration or at a minimum, bridge funding assisting local providers to move in this direction.

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☒	☐	BHO and RCCO financing should be better aligned. Assure ongoing funding stream for chronically mentally ill.
Community Behavioral Health Services Rule	☐	☐	
Covered diagnoses list	☒	☐	Need to open Health and Wellness codes. Review all codes from an integrated perspective
Different behavioral / physical health reimbursement	☒	☐	Need to have one system of payment, i.e. all (BH/Medical) capitated, fee for services, or a blend of both but not different payment systems.
Institutions for Mental Diseases exclusion	☐	☐	
OBH rules, reporting, or financing (regulatory differences between agencies)	☒	☐	Need consistency between agencies. Review/revise based on an integrated model.
PCMP financing structure	☒	☐	Specialty care payment is inadequate which limits ability to refer clients to specialty services.
Per-member per-month amount	☒	☐	Needs to cover costs of required services.
Physical space constraints	☒	☐	Need to be able to reconfigure physical space in order to accommodate an integrated model with BH and other care team members. This will require assistance with construction costs.
Privacy Laws (HIPAA, 42 CFR)	☐	☒	
Professional / cultural divisions	☒	☐	Language/terms used by the Behavioral/mental health system differ from physical health system. Creates confusion, misunderstanding, and errors. Need to be able to align this for an integrated model. For instance, a 'Care Plan' for physical health system is an outline of what is needed for the client. It is easy to create without numerous requirements on content. 'Care Plan' for Behavioral/mental health system contains numerous requirements and extremely time intensive. Having a

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

			similar Care Plan will ensure coordinate care. Differences in financing create differences in the number of clients to be served. Primary care (FFS) is able to see as many patients as possible where BH (capitated) can serve only (x number) of patients or they exceed the capitated amount. Historic differences in encounter time (scheduling patients) create barriers. Primary care historically sees one patient every 15-20 minutes. Behavioral Health schedules one patient per hour. Thus in an integrated model the ability to work within a fast paced model is difficult. Need to change expectations as to what is provided in an integrated model as opposed to mental health model.
RCCO or BHO contracts	☒	☐	Need to be reflective of an integrated model with similar or same expectations.
Staff capacity	☒	☐	Effective care coordination takes time and requires adequate staffing. This will save money in the future but is costly in the current environment. There isn't adequate numbers of mental health staff who are able to prescribe medications and it takes months for a client to reach someone who can prescribe meds.
State/Federal rules or reporting requirements	☒	☐	Need to eliminate the CCAR requirement and utilize PCOMS tools. Align physical health and behavioral health reporting requirements.
Technical resources / data sharing	☒	☐	Issues with multiple IT systems; CORHIO doesn't have data warehouse capacity which requires additional costs for purchasing other systems. There is a competitive feeling that whoever holds the data has control which is not effective to integrated care.
Training	☒	☐	Most professional staff has not been trained in an integrated model thus there are numerous ideas on what is/isn't included in such a model. Consistent definitions and services need to be developed with specific training provided.
Others	Attribution process is a huge barrier. In our RCCO there is a 30% unattributed rate which is unacceptable. The process for attribution is flawed, cumbersome, and needs to be user friendly. Frequent attribution changes from provider to provider further fragments care and increases confusion for PMCP's and clients.		

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

Clinics should meet generally recognized standards such as those in place for AAAHC, JCAHO, and NCQA.

A system which provides a holistic approach to healthcare in which they are able to identify and treat all aspects of a person's health, to include but not limited to, physical, behavioral, oral, financial. The patient is truly the "center" of their healthcare and the patient dictates their needs with the support of the multidisciplinary teams. Shared information is seamless between the providers, patients, and care givers.

10) Please share any other general advice or suggestions you may have about behavioral health integration.

There needs to be a better understanding of what is meant by "integrated care". As previous stated, there are multiple definitions and practices but how does Colorado define this? Include clarity around what types of services are best provided in a primary care office as opposed to a warm hand off to mental health for complex cases. There is not a smooth transition of care process at this point which further delays care, creates confusion, and promotes fragmentation.

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination?

b. How should RCCOs prioritize who receives care coordination first?

RCCO's need to work closely with PCMP's to identify patients in need of care coordination. This should be done through review/analysis of population data, cost data, patient engagement, health status, and care. The RCCO should not make this determination independently and dictate/require care coordination for specific patients or diagnosis.

We need to remember that this is a new direction and process in Colorado so locking care coordination into specific areas will kill creativity and innovative approaches to care coordination. It is premature to mandate this.

We cannot forgot the importance of keep care coordination patient centered. Giving RCCO's the authority to determine what the patient needs and when is in direct opposition of assuring services are patient centered. While many talk about patient centered care, few actually provide services in this manner. We need more focus on what this means and how to work when care is truly patient centered.

RCCO's should spend their efforts in reviewing data and providing timely information to PCMP. PCMP should determine who needs care coordination and when.

c. How should RCCOs identify clients and families who need care coordination?

As HCPF stated in earlier sections of this document: *"Toking steps towords integration ar better coordinotion of physicol ond behoviorol heolth care for Medicaid clients is o primory gool of the next RFP. Behoviorol heolth care refers to oll services to treot heolth conditions thot primorily present os olterotions in thinking, mood or behavior ond chonges in emotional (mood), psychologicol (thinking), or sociol well-being (behavior) and conditians reloted to addictions."* Medical diagnoses and rising risk along with the clients ability to adapt and be engaged in their health also dictates who may need care coordination.

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

   Through standardized reporting of the number of clients receiving care coordination. Suggest support for care coordination and population based software such as Crimson.

12) What services should be coordinated and are there services that should not be a part of care coordination?

We need to work further 'upstream' to identify clients at risk or are demonstrating rising risk and intervene with care coordination at that point. Waiting and only working with the highest utilizers is very shortsighted and will not have the long term, cost saving results. Encouraging RCCO's, BHO's, and PCMP's to work further upstream and incentivizing work in this area will move us towards the triple aim much faster with long term savings.

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today?

   It seems that everyone is providing care coordination which has created further fragmentation, confusion, and to some level, distrust in the system. Clients receive calls from "care coordination" staff in hospitals, payers, PCP's, specialist, Behavioral Health, Fire Departments, Home Health and other agencies. Information is kept within the specific system, rarely shared as it is extremely difficult to share (time, processes) and thus we see increase fragmentation, duplication of services and solicitation of information from the client, and as a result, confusion/distrust.

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

   Not sure that it is different. Each as a special niche based on the type of organization but we still miss the fundamental objective of care coordination is the overall responsibility to help the patient with multiple providers, services, and social issues. The current system doesn't help the client

coordinate their care; it simply coordinates the needs of that specific system's needs with the patient. Many times RCCO are increasing this confusion by the multiple "pilot" projects to expand care coordination versus working with the PCMP to truly coordinate the client's care.

c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

d. What are the gaps in care coordination across the continuum of care?

15) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	Should the RCCO have a role? Yes	No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma	☐	☐	☐	
Affordability (assistance with prescriptions or co-pays)	☐	☐	☐	
Daycare / childcare	☐	☐	☐	
Economic stability & employment	☐	☐	☐	
Education	☐	☐	☐	
Environment	☐	☐	☐	
Food access / nutrition	☐	☐	☐	
Health literacy	☐	☐	☐	
Housing	☐	☐	☐	

Language or translation services	☐	☐	☐	
Literacy	☐	☐	☐	
Transportation	☐	☐	☐	
Other	This chart is difficult to complete as clarification is needed to identify if we believe RCCO's should work at the systems level with these agencies or on specific patient centered issues with these agencies. We believe RCCO's should work at a systems level, along with public health, to assure the systems are in place to assist all clients in need, not just those with a specific fund sources. RCCO's should not work on individual client issues as this is the role for the PCMP's care coordination staff based on the needs of the client.			

16) **Requirements about who should be doing care coordination**. Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	**Coordinate care?** Yes	No	**In what capacity should these individuals coordinate care in the ACC Program?**
Advanced Practice (Registered) Nurses	☐	☐	
Certified Addiction Councilors	☐	☐	
Certified Nurse Midwives	☐	☐	
Community Health Workers	☐	☐	
Generalists (BA/BS/MA/MS)	☐	☐	
\Health Coaches	☐	☐	
Licensed Clinical Social Workers	☐	☐	
Licensed Marriage and Family Therapist	☐	☐	
Licensed Mental Health Counselors	☐	☐	
Licensed Professional Counselor	☐	☐	
Masters of Public Health	☐	☐	

Medical Doctors / Doctors of Osteopathic Medicine	☐	☐	
Nurse Practitioners	☐	☐	
Patient Navigators	☐	☐	
Peer Advocates	☐	☐	
Promotoras	☐	☐	
Psychiatrists	☐	☐	
Psychologists	☐	☐	
Registered Nurses	☐	☐	
Social Workers	☐	☐	
Wraparound facilitators	☐	☐	
Other	Colorado should not specific who should/shouldn't be a part of care coordination as it will be very client specific based on the clients health, psychosocial, and environmental needs as well as who the client relates the best with and who they trust.		

17) **Care coordination requirements for specific populations.** Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and infants	☐	☐	
Children	☐	☐	
Children who are healthy, but in socially-complex environments	☐	☐	
Children involved in the foster care system	☐	☐	
Children with a chronic illness	☐	☐	
Children with a serious emotional disturbance	☐	☐	
Children with medical complexity	☐	☐	
Children or youth with a behavioral health diagnosis or substance use disorder	☐	☐	
Transition-age adolescents	☐	☐	
Parents and families	☐	☐	
Pregnant women	☐	☐	
Adults	☐	☐	

Adults who are healthy, but in socially-complex situations	☐	☐	
Adults with a chronic illness	☐	☐	
Adults with a behavioral health diagnosis or substance use disorder	☐	☐	
Clients involved in the criminal justice system	☐	☐	
Clients with a disability	☐	☐	
Clients in a nursing facility	☐	☐	
Elderly clients	☐	☐	
Frail elderly clients	☐	☐	
Clients in palliative care	☐	☐	
It is likely that clients from all the above populations may need care coordination at any given time. Utilizing appropriate standards of care for all the populations is required. By using the standards of care it will become apparent what adjustments would be needed to meet the unique needs of the client as a result. In addition, it's essential that a robust system of specialty services be available to address unique patient needs like HIV, cardiology, etc and be coordinated to the PCP. This meets medical home model standards.			

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

This could be a slippery slope as it's important to not confuse/conflict with the DHS system in Colorado. All children receive care from a PCMP and thus would receive care coordination services as warranted for their condition/social/emotional issues.

19) How should care coordination be evaluated? How should its outcomes be measured?

Colorado should agree to specific outcome measurements (Healthy People, NCQA, as examples). RCCO's should work with PCMP to identified any locally unique or specific measurements that should be measured.

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

a. What is the PMPM cost for providing care coordination services?

b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

Not at this time. It would create more complexity in a new system and there is not have enough experience with this to adequately assess the differences.

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

There should not be a client ratio requirement for care coordination. This needs to be determined by the PCMP providing the care based on the client's needs and level of care coordination required.

a. **Care coordinator to client ratios.** If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☐
51-100	☐
101-200	☐
201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

Should be evaluated based on movement towards the Triple Aim.

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

Consistent data reporting from RCCO's to PCMP's and from PCMP's to the RCCO would be helpful. It is extremely difficult to determine utilization and services in the current model.

RCCO offices should be in the region they serve.

RCCO contractors should be non-profit or capped at a certain percentage for shareholders.

Care Coordination should always be delegated unless a practice is unable to perform this service.

Reporting should be consistent to the RCCO's and from RCCO's to PMCPs.

RCCO should be responsible for accurate and timely attribution of patients.

RCCO incentives should reward individual movement on KPI's as well as RCCO-wide incentives.

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

27) Should the RCCO region maps change? Why or why not? If so, how?

Yes – RCCO and BHO region maps should be the same. Change BHO regions to RCCO regions.

28) Should the BHO region maps change? Why or why not? If so, how? – see above 27.

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

One RCCO per region would be preferred assuming the region is based on custom referral and service practices.

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

34) What role should RCCOs play in attributing clients to their respective PCMPs?

RCCO's should have an active, performance based role in assure patients within their region are attributed. However, the entire attribution system needs to be review and revised to assure that the RCCO's have access to appropriate timely data and the attribution process is user friendly.

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

42) How should the Department structure stakeholder engagement for the ACC as a whole?

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population? - NO

a. If no, what are the gaps? Many do not accept Medicaid patients or limit their practice. While this may be needed from a practice perspective, there needs to be incentives to those practices who serve mostly Medicaid patients (FQHC's) and there needs to be incentives/payment to encourage adequate specialty care access.

b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

a. What role should hospitals play in the next iteration of the ACC Program?

b. What role should pharmacies play in the next iteration of the ACC Program?

c. What role should specialists play in the next iteration of the ACC Program?

d. What role should home health play in the next iteration of the ACC Program?

e. What role should hospice care play in the next iteration of the ACC Program?

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

g. What role should counties play in the next iteration of the ACC Program?

h. What role should local public health agencies play in the next iteration of the ACC Program?

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

45) How can RCCOs help to support clients and families in making and keeping appointments?

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

If PCMP's are responsible for care coordination then adding a requirement to RCCO's for navigators or community health workers does not appear needed. While both offer support, this can be done through the PCMP system based on need not a mandate.

47) **Community Health Worker reimbursement.** Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement process	(Please check all that apply)
Independently bill	☐
On staff (salary) at Primary Care Medical Provider Clinic	☐
On staff (salary) at RCCO	☐
Per Member Per Month Payment	☐

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you?

b. What RCCO requirements would ensure cultural competency?

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

51) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

52) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

Practice Support

53) **Support for practices.** Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☐	☐	☐	☐
Network provider education	☐	☐	☐	☐
Assistance with practice redesign	☐	☐	☐	☐
Assistance with efficiency-enhancing activities	☐	☐	☐	☐
Provide web-based resources and directories	☐	☐	☐	☐
Provide practice-specific data reports	☐	☐	☐	☐
Provide clinical care guidelines and best practices.	☐	☐	☐	☐
Provide clinical screening tools	☐	☐	☐	☐
Provide health and functioning questionnaires	☐	☐	☐	☐
Provide chronic care templates	☐	☐	☐	☐
Provide registries	☐	☐	☐	☐
Offer client reminders	☐	☐	☐	☐
Offer client self-management tools	☐	☐	☐	☐
Offer educational materials about specific conditions	☐	☐	☐	☐
Supply behavioral health surveys	☐	☐	☐	☐
Supply other self-screening tools	☐	☐	☐	☐
Administer behavioral health surveys	☐	☐	☐	☐
Administer other self-screening tools	☐	☐	☐	☐
Prepare client action plans	☐	☐	☐	☐
Provide training on providing culturally-competent care	☐	☐	☐	☐
Provide training to supporting staff	☐	☐	☐	☐
Provide training on motivational interviewing	☐	☐	☐	☐
Provide tools and software for phone call and appointment tracking	☐	☐	☐	☐
Provide tools and resources for tracking labs, referrals, etc.	☐	☐	☐	☐
Provide referral and transitions of care checklists	☐	☐	☐	☐
Provide visit agendas or templates	☐	☐	☐	☐
Provide standing pharmacy order templates	☐	☐	☐	☐
Provide comprehensive directory of community resources	☐	☐	☐	☐
Provide directory of other resources	☐	☐	☐	☐
Provide materials regarding Nurse Advice Line	☐	☐	☐	☐
Ensure all tools and resources are centrally located on RCCO-specific website	☐	☐	☐	☐
Others				

54) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

55) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

56) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

57) Should the Department require that PCMPs utilize disease registries to manage the health of their population?

58) Please share any other advice or suggestions about provider support in the ACC.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

62) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

63) What role – if any – should the RCCOs play in the distribution of payments to providers?

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

66) **Measuring Client experience.** Please complete the table below to indicate how the Department should measure Client/patient experience:

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☒	☐	Utilized may many agencies as the tool to measure client satisfaction and experience.
SF-12 Health Survey	☐	☐	
Other types of client interviews / surveys	☐	☐	
Patient Activation Measure	☐	☐	
Focus groups	☐	☐	
Other	The State should abandon use of the CCAR and adopt an evidence-based outcome measuring tool, such as the SAMHSA approved evidence-based practice Partners for Change Outcome Management System (PCOMS), or at a minimum, the Outcome Rating Scale component of PCOMS. This tool measures a patient's perception of their own distress in four life domains, individual, interpersonal/family, social, and overall. Note that this tool is atheoretical and applicable to any and all diagnostic categories, and therefore well suited to address "all services to treat health conditions that primarily present as alterations in thinking, mood or behavior and changes in emotional (mood), psychological (thinking), or social well-being (behavior) and conditions related to addictions."		

67) Knowing that, at this time, the Department only has claims data, how should population health be measured?

68) How should quality and performance data be reported to the RCCOs, PCMPs, and the public?

69) **Measures for payment.** Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	

1-7	☐
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

70) What percent of RCCO payments should be tied to measures or performance?

Percentage	
10-20%	☐
21-30%	☐
31-40%	☐
41-50%	☐
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

71) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?

72) Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?

73) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

74) **Incentive payment frequency**. Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	☐
Annually	☐
Other	☐

If you checked the "Other" box, please describe payment frequency below:

75) For potential offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

76) For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

Health Information Technology (HIT)

77) **Types of communication.** For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	☐
Text message	☐	☐
Web portal	☐	☐
Email	☐	☐
Telemedicine / Video chat	☐	☐
Face-to-face meeting	☐	☐
Smartphone app	☐	☐
Other:		

78) **HIT investments by organizations.** For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below:

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	☒	☐
Digital care management tool	☒	☐
Care transitions alerts	☐	☐
Electronic Health Records (EHRs)	☒	☐
Health risk assessment software	☒	☐
Practice assessment tools	☐	☐
Practice management tools (scheduling, billing)	☒	☐
Client web portal for communicating care plan, services, benefit enrollment	☒	☐
Patient education/wellness tools	☒	☐
Provider/case manager directory	☐	☐
Shared decision-making tools	☐	☐
Telemedicine software	☐	☐
Other:	☐	☐
Other:	☐	☐

79) **Importance of technology by type.** The Department is working to determine what technology is in place, what technology is needed, and what technology should be standardized. For RCCOs, providers, and other organizations, use the table below to answer what HIT infrastructure outside of the 5DAC your organization would use to perform population health management activities. Tools are scored from 1-5, where 1 are those items least-likely to be used, and 5 are items most-likely to be used:

Tool	1 Least	2	3	4	5 Most
Population analytics / reporting / dashboard	☐	☐	☐	☐	☒
Care management tool	☐	☐	☐	☐	☒
Care transitions alerts	☐	☐	☐	☐	☒
Electronic Health Records (EHRs)	☐	☐	☐	☐	☒
Practice assessment tools	☐	☐	☐	☒	☐
Health risk assessment software	☐	☐	☐	☐	☒
Practice management tools (scheduling, billing)	☐	☐	☐	☐	☒
Client web portal for communicating care plan, services, benefit enrollment	☐	☐	☐	☐	☒
Patient education wellness tools	☐	☐	☐	☐	☒
Provider/case manager directory	☐	☐	☒	☐	☐
Shared decision-making tools	☐	☐	☐	☒	☐
Telemedicine	☐	☐	☒	☐	☐
Other:	☐	☐	☐	☐	☐

80) What are the primary barriers to RCCOs and providers increasing their use Health Information Technology to improve the performance of Primary Care Practices?

Cost; issues with software integration

Colorado Department of Health Care Policy and Financing

THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

ACC Request for Information

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Stephen R. Thompson, LCSW
Location: Fort Collins, Larimer County, CO

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: University of Colorado Health (aka Poudre Valley Health System): Community Health Improvement department, AND the Northern Larimer County Medicaid Accountable Care Oversight Committee
Location: Fort Collins; Larimer County, CO

☐ Please check if you are answering on behalf of this entity – Yes on behalf of the Oversight Committee; no as an official answer from UCHealth.

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☒ Client advocate
☒ Medical provider / PCMP / other provider
  i. Type or specialty: care coordination
  ii. Area of practice: community health
☒ Provider advocate (e.g. medical society)
☒ Other (please describe): Program Mgr. for the Fort Collins 'Medicaid ACC' team: provide direct care coordination services to ACC members in this area

Are you currently involved in the ACC program?

☒ Yes

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☒ 3-4 years
☐ Since before the program was implemented.

How have you been involved in the ACC program and what interaction have you had with RCCOs:

The Fort Collins' 'MACC' team has contracted with the RCCO in Region 1 (Rocky Mtn Health Plans) to provide moderately-intensive to intensive care coordination services to ACC members with complex needs or high costs. MACC works closely with RMHP to serve the Region 1 population, and delineates clientele based on geographic location and clinical and psych-social complexity. The MACC team is an interdisciplinary group comprised of clinical social workers, behaviorists, RN's, an NP, and several 'generalist' case managers.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:

As an 'extension' of RCCO Region 1, MACC is very familiar with HCPF and CO Medicaid.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☒ Very likely

Since early 2012, MACC has made significant impact with very complex ACC members who have participated in our program, including adults, children, and families, which include improved health outcomes and reduced Medicaid costs (esp. ED utilization). We are also integrated into the three main family practice clinics, which are considered medical homes, in Fort Collins.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

In the Fort Collins community, local leadership has been able to work with the RCCO for Region 1 (Rocky Mtn. Health Plans) to develop a model to best meet the needs of the local ACC Medicaid population in need of care coordination. RMHP has been a wonderful partner in the evolution of our community's 'MACC' (Medicaid Accountable Care Collaborative) program, which is housed in the Community Health Improvement dept. of UCHealth / Poudre Valley Health System. Key stakeholders in our community have been very vested in this program since its inception in 2011, including: Touchstone Health Partners (local mental health provider), the Health District, UCHealth/PVHS, and three major clinics which are considered PCMH's locally (Family Medicine Center, Salud Family Clinic, and Associates in Family Medicine). Each entity has leadership representation on MACC's 'Oversight Committee', which has helped to develop strategies for targeting and prioritizing, client outreach and engagement, and ongoing care coordination services to ACC clients who participate in the MACC program.

The MACC team uses a combination of focused, internal targeting of ACC members who are considered 'super-users' of hospital services (including the local Emerg. Dept's), while also receiving external referrals from local providers and behavioral health staff at our partnering clinics. RMHP is able to provide sophisticated, organized Medicaid claims data on a monthly basis to the MACC team for use in targeting ACC members with extreme use of the ED, significantly high costs, multiple chronic medical / mental health conditions, and/or high potentially avoidable costs. MACC has also done an extensive amount of community outreach to foster relationships with agencies which there is a lot of overlap in clientele, such as: Foothills Gateway (community-centered board), Touchstone staff (mental health); clinic staff, Adult and Child Protection dept's (Larimer County entities), Larimer County Dept. of Health, and other local agencies (such as housing, dental, workforce center, etc.). Since the MACC team is part of UCHealth, the staff (now up to 10.3 FTE) is fully integrated with UCHealth, including Poudre Valley Hospital in Fort Collins and Medical Center of the Rockies in Loveland. We are able to monitor these hospital's admissions for any MACC client who presents to the ED or is admitted to the hospital to provide support for such transitions of care.

Given the nature of this interdisciplinary team, its integration with key community stakeholders and the local hospital / healthcare system, and the level of investment with local clinic leadership, and the excellent relationship that have been developed with the RCCO RMHP, the strong recommendation of our local MACC Oversight Committee is for the next iteration of the ACC to recognize that the relationship between a local team such as MACC Fort Collins and the RCCO is of high importance, and this should be preserved at all costs so that all of the work and development of a highly-functioning local model of service delivery is not lost. The MACC program has a lot of positive momentum at this point, and has a very talented team that is serving some of the most challenging, clinically complex clients in this community with patient centered, high-quality services.

To date, the local MACC team has served nearly 650 ACC clients (adults, children, families), usually with highly complex needs. The team uses a program model with dynamic caseloads, and clients are able to move through the program at varying timelines depending on their specific needs. For each client that is 'opened' in the MACC program, a comprehensive intake assessment is completed, and a plan of care is developed in conjunction with the client/family, the primary care provider, and incorporates input gleaned by the clinician or care coordinator on the MACC team based on intake information.

MACC did an initial analysis in early summer 2014 of reduction of ED utilization for some of the program's highest users of the ED (i.e., we see many clients with >30 or 40 ED visits in a 12-month period). Initial pre/post comparison showed a reduction of approximately 24% for a sample of about 80 high-utilizer clients. In addition to such quantitative outcomes, the MACC team has impacted countless numbers of local high-needs, high-risk, or high-complexity clients or families through its services to local ACC members in the Fort Collins area.

2) What is not working well in the ACC Program?

We have noticed some issues with SDAC data recently, where Medicaid claims have not been captured on a large number of ACC members since ~May of 2014. The MACC team relies on such information for its internal targeting efforts, and we believe that RMHP is working with HCPF and the SDAC to address the flow of data.

We would also mention that we have had countless struggles with the transportation vendor, formerly First Transit, now Total Transit as of Nov. 2014. Our clients rely on this service, and it can be very distressing for them when a scheduled ride does not show up, the vendor will not approve reimbursement, or the vendor states they did not receive paperwork or authorization after we have sent it to the appropriate contact at the vendor.

Finally, we have noticed many issues with attributions, including incorrect attributions. We have worked with HealthCO to try to update these attribution errors as we catch them, but are not have great success rates thus far with getting attributions corrected.

3) What is working best in the Behavioral Health Organization (BHO) system right now?

At the local level, MACC is fully integrated with the local mental health provider, which is Touchstone Health Partners in Fort Collins. The MACC team now has 4.0 FTE contracted staff embedded in the team, who are Touchstone employees. This gives the team capacity to provide direct mental health services (such as intakes, facilitation to engaging in tx, or direct provision or BH tx in extenuating circumstances) for clients who have or perceive barriers to accessing MH tx via a traditional or agency route. MACC does not have a lot of interface with the BHO on a regional level, but interface nearly daily with the local MH agency (THP) that provides direct services in this community.

4) What is not working well in the BHO system?

No input here – at the local level, we have a very established and close working relationship with Touchstone Health Partners (formerly 'Larimer Center for Mental Health'). Of note, we have estimated that a majority of our program clientele (upwards of 70-80%, even) do have a mental health component to their care (includes non 'major-mental illness' dx's, as well as severe and persistent MMI dx's).

5) What is working well with RCCO and BHO collaboration right now?

Within our local model, Touchstone Health Partners has been a key stakeholder since the MACC team's inception in late 2011. Touchstone has leadership personnel participating in the MACC program's monthly steering committee meetings, and as noted above, now has 4.0 FTE staff (including two LCSW Behavioral Health Specialists) embedded in the MACC team.

6) What is not working well with RCCO and BHO collaboration right now?

Not aware of any problems.

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

Further development of services and more flexible funding that supports local agencies and programs designed to serve individuals with severe and persistent mental illness, substance use disorders, and/or co-occurring disorders (SPMI and substance abuse), would be of immense value locally.

It is essential that Colorado finds ways to reduce the funding barriers and information-gathering and sharing barriers to locating mental health services within primary care.

Full parity for a full continuum of evidence-based substance use disorders (including intensive outpatient and residential treatment) may be the most important tool Colorado could develop to interrupt the cycle of very poor outcomes and high costs for those with the most complex needs. We consistently find that the majority of high utilizers of care have significant behavioral health issues, and there is only so much that care coordination can do to impact those issues.

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☒	☐	The structure would likely work better if it were true capitation – with full flexibility, rather than a FFS/capitation hybrid that only allows funding for certain services.
Community Behavioral Health Services Rule	☐	☐	Unable to comment
Covered diagnoses list	☐	☐	Unable to comment
Different behavioral / physical health reimbursement	☐	☐	Unable to comment
Institutions for Mental Diseases exclusion	☐	☐	Unable to comment
OBH rules, reporting, or financing (regulatory differences between agencies)	☒	☐	Need to be streamlined considerably
PCMP financing structure	☐	☐	Unable to comment
Per-member per-month amount	☐	☐	Unable to comment
Physical space constraints	☐	☐	Unable to comment
Privacy Laws (HIPAA, 42 CFR)	☒	☐	May be time to change 42CFR in order to achieve the objectives of integrated care. Also, organizations need consistent guidance in understanding the possibilities for their organizations – a lot of resources are being wasted by the lack of clarity.
Professional / cultural divisions	☐	☐	Unable to comment
RCCO or BHO contracts	☐	☐	Unable to comment
Staff capacity	☒	☐	Behavioral health funding in CO does not allow for a full continuum of evidence-based practices, and focuses most resources on SPMI.

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

State/Federal rules or reporting requirements	☐	☐	Unable to comment
Technical resources / data sharing	☐	☐	Unable to comment
Training	☐	☐	Unable to comment
Others	Please type your response here.		

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

A clinic that truly understands and practices a model of 'primary care medical home' (or primary care medical neighborhood), employs a patient-centered approach, and is able to effectively collaborate and partner with whatever entity or resource may address behavioral health care, should be recognized as providing whole-family care. Additionally, clinics and/or providers who are willing to partner with resources that operate outside of clinic walls (such as the MACC team) may have better success and outcomes in addressing the multiplicity of determinants that may influence overall wellness.

10) Please share any other general advice or suggestions you may have about behavioral health integration.

Ongoing education to medical providers, and identifying local resources that can facilitate fostering relationships, information sharing, and open communication between medical and behavioral providers, would be of value. Oftentimes, I have seen in my experience that medical and mental health services are somewhat separate and distinct, and medical providers perceive some challenges at times in getting information from mental health providers due to stringencies around information sharing of mental health or substance abuse related interventions.

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination? Locally, the MACC team generally defines care coordination as a targeted, focused, client-centered approach that provides overall coordination of health and mental health care directly to the client, while also considering other community resources that may be useful of beneficial to the client/family. Client needs and problems are prioritized by urgency with the help of a care coordinator, incorporating input from the client and provider directly. Using a standardized intake assessment for the MACC program, staff are able to develop a care plan that sets out realistic goals which are prioritized by clinical, psych, or social urgency, and this becomes the 'body of work' that is implemented with an active program client. The Care Plan is revisited periodically to measure outcomes, successes, ongoing barriers/problems, and also to incorporate new goals as situations change.

b. How should RCCOs prioritize who receives care coordination first? This is a great question. Not all high-needs clients will reflect high utilization or high cost data, as many social needs can be very significant barriers for a client or family to have their health/mental health care needs met adequately. MACC tends to use a comprehensive 'bio-psych-social' model when sizing up who needs services the most. It can be limiting to only consider one or two data points (such as ED utilization, or cost) – although that approach certainly has value in targeting a select sub-set of the population who likely is incurring a majority of cost. Our suggestion is that programs across the state develop a baseline 'client mix' when prioritizing who should receive services. For example, our local MACC's target client mix has been developed to be roughly ~50% super-users of the system (for example, people who have had 3 or more ED visits and $3,000 or more in PPE (potentially preventable events) or10 or more ED visits in a one-year period). For the remaining 50%, we anticipate that 1/3 of them will be people from the ACC MMP program, 1/3 will be clients with chronic conditions for which evidence exists that intervention is effective (for example, asthma, post-acute stroke patients, complex frail elderly living independently and high risk/high cost medication management), and the remaining 1/3 we reserve to be responsive to providers who are asking for help with their most challenging or difficult patients. Please note these groups are never completely mutually exclusive, and caseloads must remain dynamic as goals are met so clients can discharge from the program and new clients can be enrolled.

c. How should RCCOs identify clients and families who need care coordination?

In addition to the criteria used above, the MACC team and RMHP have implemented a tiered 'level of acuity' system to create very general categories / levels of needs. For example, we have tiers 1 – 5, where the lower the tier, the less complex the client's health/mental health care needs are. The MACC team is designed to get

involved locally with the higher-complexity subset of the ACC population – high level 3, level 4, and level 5. RMHP, our RCCO, generally provides any coordination needed at the lower levels.

As a point of reference for example, a 'level 4' patient in this tiered model would typically be a person who has multiple chronic conditions that are not well controlled, may have a concurrent underlying mental health dx that impacts that pt's ability to manage the condition(s) (i.e. diabetes, HTN, heart failure, etc), has social determinants that impact their healthcare (i.e. transportation issues, or cannot afford co-pays), has not historically done well with medical compliance, follow-through, or maintained consistent involvement with their PCMH, and may use the ED much more frequently than the rest of the ACC population.

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider? Our suggestion would be to develop a basic reporting tool that can track a few key elements of care coordination. The MACC team tracks and reports on program clients regularly (i.e.: how many ACC clients are currently 'open' and active in MACC; outbound referrals made; how many clients have been targetedor have been offered services but have refused), and communicates closely with providers and PCMH's to collaborate on care plans.

12) What services should be coordinated and are there services that should not be a part of care coordination? Services of primary importance are: facilitation of a consistent connection to a PCMH; ensuring referrals to specialists are completed when indicated; screening for mental health needs and connection to appropriate resources when indicated; screening for other general community resources (such as housing, dental, in-home 'unskilled' services, transportation); chronic disease management and education; medications support and reconciliation; hands-on facilitation and support through any transition of care (when admitted, or after presenting to an ED); and direct discussions with clients around inappropriate use of the emergency dept. for 'super-users' of the system, to education on other options such as acute visits at clinics, urgent care, 24/7 Nurse hotline, etc.

Services that may be outside the realm of medical care coordination sometimes include: non-medical related goals or issues that a client wants to pursue (i.e. 'I'd like to learn how to fly-fish', or 'I signed on for this car loan but now I can't afford the payments'). It is important to note that such goals should not be diminished or ignored in the scope of CC work – but rather our role would be to identify other resources that may be useful in helping the client to attain such goals or receive help with issues that fall outside the scope of a medical care coordination model.

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs? MACC process for screening new referrals and client needs always includes a comprehensive chart review to understand all available clinical information and hx. A client's medical and mental health diagnoses and related treatment should be understood. Additionally, understanding who or which agencies may already be involved with the client is important – MACC is not trying to reinvent the wheel for all needs, but rather collaborates with other resources to meet a client's

comprehensive needs. Social needs or barriers should also be understood. System utilization should be considered; medications should be reviewed, and assessment of a client's compliance and baseline understanding of their med's should be conducted. A bio-psych-social assessment is imperative for developing a plan to meet the client's healthcare needs, and incorporating input from the client and provider(s) helps to ensure a well-rounded care plan is implemented.

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today? MACC makes every effort to understand which services or organizations are involved with the client (such as: single-entry points; mental health; home care; community centered boards;) and communicates and collaborates with these resources to deliver efficient comprehensive services that are not duplicated. Working across systems, and helping clients navigate these large, cumbersome systems, is essential. Identifying gaps in services is part of our assessment process; these gaps are addressed through community resource brokerage and hands-on facilitation of outbound referrals.

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different? Clients may receive varying levels of CC services from non-RCCO entities. We have found that oftentimes the level of intensity of such services is lesser than what our team is able to provide; however, fostering a working relationship with outside entities is necessary and part of our process. The needs of the client must be weighed against what is already in place, and an assessment of how well current services are meeting client needs is conducted. Based on this information, MACC can proceed with efforts to augment or complement services as needed.

c. How can the ACC avoid duplicating or disrupting current care coordination relationships? Approaching other agencies / services with a good-faith effort to understand the culture of that system, and communicating a respect for what is already being done, is a good start. Any client receiving CC through the RCCO or a local RCCO-contracted care team such as MACC in Fort Collins should be assessed to determine who is already involved, at what level of intensity is the service being provided at, and is the current matrix of services adequate for the client's needs.

d. What are the gaps in care coordination across the continuum of care? It is going to be a challeng to provide the level of care coordination needed for all patients who need moderately intensive to intensive care coordination, particularly with the addition of the ACC MMP program. Regarding other gaps in services that make care coordination difficult: earlier in MACC's work, dental needs for adults was very challenging – although this has improved with recent Medicaid expansion to provide dental coverage for adults. We still struggle with transportation needs, and the prior (and so far, current) HCPF NEMT vendors were not considered entirely reliable. Finally, some specialists are hard to locate and get appointments for, and sometimes the only option for such specialists

(i.e.: Neuro-Psychological evaluations; pediatric Hematology, etc.) are only available in Denver, well-outside the Fort Collins community. We need to develop an understanding from the NEMT vendor that these are appropriate consultations for clients, and the resource is not available locally – therefore we should not be running into significant challenges when attempting to schedule rides for such appointments.

15) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	Should the RCCO have a role? Yes	No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma	☐	☐	☒	Resources exist locally – RCCO does not have to re-invent programs/resources, but rather should foster working relationships with agencies such as local DHS, adult/child protection; child advocacy centers, etc.
Affordability (assistance with prescriptions or co-pays)	☒	☐	☒	Prescription assistance programs exist in our community, and I am sure in many others. Also, within our local model, we were able to approve a discretionary 'client assistance fund' which has been invaluable for us to access for such client needs as Rx copays, clinic copays, urgent transportation needs, etc.
Daycare / childcare	☐	☐	☒	This is often a social need that can impact an adult's ability to access their own healthcare needs; efforts to identify resources / information by local community could be undertaken – RCCO could act as an informational resource by region
Economic stability & employment	☐	☐	☒	Same as above
Education	☐	☐	☒	Same as above
Environment	☐	☐	☒	Same as above
Food access / nutrition	☐	☐	☒	This is a basic need; many communities have food banks, but implementation of diet/exercise education as they may impact a chronic condition (diabetes; obesity) could be valuable and should be incorporated into a client's care plan when appropriate

Health literacy	☒	☐	☒	RCCO's and local care teams should absolutely be working to educate the client on chronic disease mgmt. and medications compliance
Housing	☐	☐	☒	Again, a basic need – but many communities have their own resources. Housing is a very difficult resource to access on a short-timeline; many of our 'super-users' of the ED are homeless
Language or translation services	☒	☐	☒	RCCO's and care teams should be able to access interpretation services as needed, so a non-English speaking client or family does not go without services solely due to a language barrier
Literacy	☐	☐	☒	RCCO may be able to provide community-specific information on local resources that address literacy; coordination with local resources would be useful for the client
Transportation	☒	☐	☒	Yes please – anything the State or the RCCO can do to improve the HCPF-contracted NEMT vendor's services would be greatly appreciated. This resource is common to many of our clients, and tends to be unreliable and difficult/time-consuming to access
Other	Please type your response here. Feel free to list as many non-medical factors as you want, and please explain how the RCCO should be involved.			

16) **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	Coordinate care? Yes	No	In what capacity should these individuals coordinate care in the ACC Program?
Advanced Practice (Registered) Nurses	☒	☐	Chronic disease education and management; medications education and management; collaboration with PCP's to address medications concerns or duplicative med's;
Certified Addiction Councilors	☒	☐	Addictions is a common theme across MACC clientele; employing clinicians who can meet clients where they are at, and encourage movement along a change continuum, are very valuable resources on our care team
Certified Nurse Midwives	☒	☐	MACC has not had this discipline as part of the care team previously, however it could be useful for a small % of the population. We use RN's that do home visits for newborn Medicaid infants to provide lactation support, screen for issues (jaundice, weight gain), and ensure f/u for WCC's with PCP's
Community Health Workers	☒	☐	Generalist 'care coordinators' or 'case managers' can work with a variety of clients who have primarily social or care coordination needs
Generalists (BA/BS/MA/MS)	☒	☐	Same as above
Health Coaches	☒	☐	Generalist roles
Licensed Clinical Social Workers	☒	☐	MACC has three LCSW's on staff (including myself as the Manager of CC Programs). I feel that this level of clinical expertise, a knowledge of working across systems, and an ability to meet clients where they are at when starting to work with them, is essential.
Licensed Marriage and Family Therapist	☒	☐	LCSW's can provide this type of intervention; this need has not come up for us very much, at least to a level that could not be managed by an LCSW
Licensed Mental Health Counselors	☒	☐	Focus on SPMI and clients with significant substance abuse challenges
Licensed Professional Counselor	☒	☐	Same as above
Masters of Public Health	☒	☐	Could be useful when looking at population health mgmt

Medical Doctors / Doctors of Osteopathic Medicine	☒	☐	May not need to be a direct part of care team, but close connection and communication with providers is essential
Nurse Practitioners	☒	☐	Chronic disease education and management; medications education and management; collaboration with PCP's to address medications concerns or duplicative med's;
Patient Navigators	☒	☐	Useful for navigating inpatient admissions, or specialty care (Cancer Center, etc.)
Peer Advocates	☒	☐	Local resources exist for which clients can be referred out
Promotoras	☒	☐	Same as above
Psychiatrists	☒	☐	Access to consultants when needed is useful
Psychologists	☒	☐	We have seen the most need for Neuro-Psych evals for out clientele (for both children and adults)
Registered Nurses	☒	☐	Chronic disease education and management; medications support
Social Workers	☒	☐	Generalist approach for client-centered work;
Wraparound facilitators	☒	☐	Could be met by above disciplines
Other	All of the fields listed above can be useful, but configuration should depend on community needs. At the very least, we have found CACs, LCSWs or other behavioral professionals, nurse practitioners, and Case Aides/Community Health Workers to be essential.		

17) **Care coordination requirements for specific populations.** Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and infants	☒	☐	MACC has a 'Nurse Home Visit' program embedded in its team that sees solely newborns/infants – can be referred to other staff if ongoing needs are present
Children	☒	☐	MACC has a 'Healthy Harbors' program embedded into its team, that serves high-risk children who have DHS/CPS involvement
Children who are healthy, but in socially-complex environments	☒	☐	Yes – within the MACC team, Healthy Harbors addresses and serves this population – a family systems perspective here is imperative
Children involved in the foster care system	☒	☐	Yes – within the MACC team, Healthy Harbors addresses and serves this population
Children with a chronic illness	☒	☐	Yes – within the MACC team, Healthy Harbors addresses and serves this population
Children with a serious emotional disturbance	☒	☐	Yes – within the MACC team, Healthy Harbors addresses and serves this population
Children with medical complexity	☐	☐	MACC serves both children and adults with high medical complexity
Children or youth with a behavioral health diagnosis or substance use disorder	☒	☐	Yes – within the MACC team, Healthy Harbors addresses and serves this population
Transition-age adolescents	☒	☐	Yes – within the MACC team, Healthy Harbors addresses and serves this population
Parents and families	☒	☐	Although MACC will have a primary 'identified client', consideration must be given to the family system and the environment
Pregnant women	☒	☐	Esp. high-risk pregnancies
Adults	☒	☐	MACC focuses on high-complexity, high-risk, high-acuity adults
Adults who are healthy, but in socially-complex situations	☒	☐	MACC focuses on high-complexity, high-risk, high-acuity adults

Adults with a chronic illness	☒	☐	MACC focuses on high-complexity, high-risk, high-acuity adults – focus on managing chronic conditions is a priority for our program
Adults with a behavioral health diagnosis or substance use disorder	☒	☐	MACC focuses on high-complexity, high-risk, high-acuity adults – BH or substance use disorders are common in our clientele
Clients involved in the criminal justice system	☒	☐	Inter-systems navigation needed
Clients with a disability	☒	☐	Many ACC members have disability determinations
Clients in a nursing facility	☐	☒	This has been a group that had been excluded in passive enrollment in the ACC – generally, the facilities are responsible for management of the pt
Elderly clients	☒	☐	If the patient has medical / mental health needs, or multiple conditions for which they need support
Frail elderly clients	☒	☐	If the patient has medical / mental health needs, or multiple conditions for which they need support
Clients in palliative care	☐	☒	Possibly – although many Hospice and Palliative care agencies provide comprehensive services
Other populations, please comment:			

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system? Locally, we have significant focus on this population through our "Healthy Harbors" program which is embedded on the MACC team. In general, the RCCO continuing to develop relationships with county DHS offices that serve this population would be beneficial. Also, considering this population as equally high-priority for services from a preventative perspective would be prudent. Many foster children tend to have poorer health or behavioral outcomes than the mainstream child population – so early intervention and prevention could prove to be a cost saver in the long run.

19) How should care coordination be evaluated? How should its outcomes be measured?

Both quantitatively (i.e. ED or utilization reduction; cost reduction; avoidable cost reduction, etc.), and also qualitatively (client feedback – how did program participation positively impact the client's situation or ability to manage their conditions, access to resources, etc.).

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

a. What is the PMPM cost for providing care coordination services? unknown

b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population? Perhaps there should not be 'requirements'; 'guidelines' may be more useful. Some clients have extreme, long-term needs, while others have resource-related or shorter term needs. Clients with significant behavioral issues often have long-standing habits that are difficult to impact over time, and merit longer-term involvement. There is no 'one size fits all' staff to client ratio that works – it is depending on a staff's caseload mix by client acuity or level of need.

a. **Care coordinator to client ratios.** If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

MACC target caseload is approximately 50-60 clients per 1 staff; however, effective management of this caseload size is completely dependent on the level of need for each client. In contrast, we have a community program that serves co-occuring dual-disorder clients (with mental illness concurrent with substance abuse; that caseload ration is 12:1). For 'moderately intensive' to 'intensive' CC services, a target of about 50 clients has felt like a very full load. Also, clients require more work on the front end of their involvement in the MACC program, until situations stabilize or new resources are in place. In our initial research in creating this program, ratios above 1:80 were considered to be far less effective than ratios under 1:80 for moderately intensive to intensive care coordination.

Clients

More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important? Connection to other meaningful resources; stabilization of situations; reduction of inappropriate ED and other health services utilization (and related reductions in inappropriate costs); health improvement; client feedback regarding their experience and what has mattered most to them.

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

See above

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

At minimum, a RCCO should be required to meet with the local oversight committee for MACC on a regular basis (at least quarterly), and to work directly with them on improving the approach and services for the community.

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

Although this proposal might seem helpful for systems that cross RCCOs because it could help standardize their interactions (and therefore our input here diverges from that of one of our Oversight Committee members), we believe it could have very significant negative impacts. Here are the concerns raised by our Oversight Committee: It is possible that, if different players choose different RCCO's, it could eliminate the combined, coordinated approach that has worked very well in our community: the development of a highly-skilled transdisciplinary care coordination team (both embedded in our key clinics but also able to go anywhere needed) that includes significant capacity of carefully trained health, behavioral health, and social work professionals. As a community, we would experience an enormous loss if we are forced to lose the relationship we have with our current RCCO (Region 1: RMHP); hundreds (if not thousands) of hours have been spent in developing a model that is geared to the specific needs of this community and it would be a big blow to all participants to have to start over with another RCCO. It is important to recognize that our local primary care clinics have put a lot of time into figuring out a model that can work well (jointly) for them – they have agreed to pool their dollars specifically so that our impact can be greater than anything they could do alone. A local approach really needs their enthusiastic support, and it will be burdensome to them to change that model every few years. We are concerned in particular that constant change might lower the interest of the private clinics in participating in the project – and we desperately need every PCP willing to participate in Medicaid to participate. We are also concerned that this sort of change could result in PCPs choosing the RCCO that gives the most funding rather than the best overall approach, and that RCCOs would be forced to expend their resources competing for PCPs rather than developing excellent models of care. It seems that it would be nearly impossible for RCCOs to budget for such a scenario, because there would be a constant chicken-and-egg problem of not knowing how many lives they would have, yet having to tell providers what they are offering. Finally, we are concerned that such an approach would be highly likely to seriously fragment community approaches, which we believe have the best potential for providing effective overall

community care coordination. It is rare that any clinic is large enough to gain enough PMPM to provide the diversity of specialized assistance that we are able to provide on our team using pooled dollars, and we believe it would be an enormous loss to lose that. If we end up with more than one RCCO in a region, it is very hard to figure out how any sort of a community coordinated care coordination system could ever work. Our concern is that fragmented approaches in a variety of clinics may never achieve the potential of a well-organized community coordinated care coordination system.

27) Should the RCCO region maps change? Why or why not? If so, how?

NO - see above. In any change consideration, it's important that regional maps align with patient patterns in accessing care, and build upon natural partnerships. However, what that means in action differs according to the patient's needs, and there are no perfect boundaries. For example, in Larimer County, this project has evolved differently in northern Larimer County than in southern Larimer County, due to how patients access care, different hospital systems, and how the partners negotiated working together. While at first it seemed strange to separate Larimer County from Weld County, in the end, in order to be effective, our approaches needed to be adapted to the particular needs of the local community – which in our case, was smaller than a county, and has worked well in a community with a significant population.

28) Should the BHO region maps change? Why or why not? If so, how?

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

While we don't know the exact number of months, we know that any transition, if it's a change in RCCO, will require very significant work locally, and hope that you allow a LONG transition time if we will be faced with change.

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

Changes clearly allowing information-sharing

Adequate levels of a complete continuum of evidence-based substance use disorder treatment

Reduction in barriers to providing mental health services in primary care clinics

31) What are the limitations of the current benefit structure and what – if any – changes are needed? Medicaid has made great strides in coverage, including oral health care. However, we need to squarely address the need for parity in substance abuse services – including offering a full continuum of evidence-based treatment for substance use disorders (including intensive outpatient services and residential services).

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address? NO – please see our answer on #26. We believe this would only create a fragmented, duplicative response, confuse patients and providers and local care teams (not just Medicaid care coordinators, but all care coordinators), and create multiple / duplicative reporting structures that would be burdensome on local resources. Resources should continue to be focused on client services.

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

34) What role should RCCOs play in attributing clients to their respective PCMPs? Allow for RCCO's to provide batch corrections / updates for client attributions and bypass the cumbersome HealthCO process

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services? Further development or working relationships with local DHS to serve high risk children

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado? Refer clients who are no longer eligible for Medicaid to Connect for Health Colorado and its assistance sites for help finding other health insurance in order to stay consistently covered.

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC? Including all local organizations that have a stake in serving the Medicaid ACC population in planning and coordination efforts.

42) How should the Department structure stakeholder engagement for the ACC as a whole? Be inclusive, proactive with agencies serving this population

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population? No

a. If no, what are the gaps? There are clearly shortages of psychiatric providers, which is a significant problem for this project. Both psychiatrists and psychiatric nurse practitioners are very much needed. Child psychiatric providers are needed, but so are adult providers. In our community, we need more PCMPs willing to accept Medicaid, more dental capacity, and there are often challenges accessing specialists.

b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

a. What role should hospitals play in the next iteration of the ACC Program? Develop reporting on admits / ER visits for ACC members

b. What role should pharmacies play in the next iteration of the ACC Program?

c. What role should specialists play in the next iteration of the ACC Program? Serve more Medicaid patients – they are very much needed.

d. What role should home health play in the next iteration of the ACC Program? Education re: ACC enrollment and local care teams

e. What role should hospice care play in the next iteration of the ACC Program? Same as above

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program? They need to be integrally involved in the ACC MMP; that program can't succeed without their cooperation.

g. What role should counties play in the next iteration of the ACC Program?

h. What role should local public health agencies play in the next iteration of the ACC Program? Same as above (education)

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past? Same as above (education)

45) How can RCCOs help to support clients and families in making and keeping appointments?

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP? Should not require, but could facilitate development of this.

47) **Community Health Worker reimbursement.** Please use the table below to detail how Community Health Workers should be reimbursed [you left out the option of "on staff at community care teams"

Reimbursement process	(Please check all that apply)
Independently bill	☐
On staff (salary) at Primary Care Medical Provider Clinic	☒
On staff (salary) at RCCO	☒

Per Member Per Month Payment	☐

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

If you were going to require this, you would probably need to compensate RCCOs (and dentists) more – that is a tall order.

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you? (Sorry; have run out of time to answer this well)

b. What RCCO requirements would ensure cultural competency? Trainings, etc.

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?

Bi-lingual staff, interpreters, culturally competent staff, staff with time to interpret complex health instructions, nurse health educators, etc.

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

51) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

Target super-users as MACC is doing; address the root causes of severe behavioral health issues, including addictions.

52) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

Practice Support

53) **Support for practices.** Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support: deferred

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☐	☐	☐	☐
Network provider education	☐	☐	☐	☐
Assistance with practice redesign	☐	☐	☐	☐
Assistance with efficiency-enhancing activities	☐	☐	☐	☐
Provide web-based resources and directories	☐	☐	☐	☐
Provide practice-specific data reports	☒	☐	☐	☐
Provide clinical care guidelines and best practices.	☐	☐	☐	☐
Provide clinical screening tools	☐	☐	☐	☐
Provide health and functioning questionnaires	☐	☐	☐	☐
Provide chronic care templates	☐	☐	☐	☐
Provide registries	☐	☐	☐	☐
Offer client reminders	☐	☐	☐	☐
Offer client self-management tools	☐	☐	☐	☐
Offer educational materials about specific conditions	☐	☐	☐	☐
Supply behavioral health surveys	☐	☐	☐	☐
Supply other self-screening tools	☐	☐	☐	☐
Administer behavioral health surveys	☐	☐	☐	☐
Administer other self-screening tools	☐	☐	☐	☐
Prepare client action plans	☐	☐	☐	☐
Provide training on providing culturally-competent care	☐	☐	☐	☐
Provide training to supporting staff	☐	☐	☐	☐
Provide training on motivational interviewing	☐	☐	☐	☐
Provide tools and software for phone call and appointment tracking	☐	☐	☐	☐
Provide tools and resources for tracking labs, referrals, etc.	☐	☐	☐	☐
Provide referral and transitions of care checklists	☐	☐	☐	☐
Provide visit agendas or templates	☐	☐	☐	☐
Provide standing pharmacy order templates	☐	☐	☐	☐
Provide comprehensive directory of community resources	☐	☐	☐	☐
Provide directory of other resources	☐	☐	☐	☐
Provide materials regarding Nurse Advice Line	☐	☐	☐	☐
Ensure all tools and resources are centrally located on RCCO-specific website	☐	☐	☐	☐
Others				

54) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

55) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

56) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

57) Should the Department require that PCMPs utilize disease registries to manage the health of their population?

58) Please share any other advice or suggestions about provider support in the ACC.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

Moving towards global payment (real global payment, where there is flexibility to address the biggest local needs differently) and away from FFS seems promising. Change the BHO capitated/FFS model to a real capitated model, or include allowable claims for care coordination, substance abuse, psychiatric or therapist consultations without the patient present, telehealth, etc. Pay for adequate levels of substance abuse treatment.

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

62) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

63) What role – if any – should the RCCOs play in the distribution of payments to providers?

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

66) **Measuring Client experience.** Please complete the table below to indicate how the Department should measure Client/patient experience: qualitative interviews / surveys

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☐	☐	
SF-12 Health Survey	☐	☐	
Other types of client interviews / surveys	☒	☐	
Patient Activation Measure	☐	☐	
Focus groups	☐	☐	
Other	Please type your response here.		

67) Knowing that, at this time, the Department only has claims data, how should population health be measured?

Not clear if you mean the whole population, or the Medicaid Population. You could utilize BRFS or BRFS-like random sample surveys of Medicaid clients, adding appropriate questions for the biggest needs for intervention. Locally, you could use BRFS data, or local community assessments (we have some comprehensive ones). Thank you for recognizing that you can't adequately measure population health through claims data!

68) How should quality and performance data be reported to the RCCOs, PCMPs, and the public? To the RCCOs and PCMPS, with targeted charts and reports. To the public, through public meetings, press, etc.

69) **Measures for payment.** Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible. deferred

Measures	
1-7	☒
8-10	☐
11-20	☐
21-30	☐

31-40	☐
41-50	☐
51+	☐
None	☐

70) What percent of RCCO payments should be tied to measures or performance?

Percentage	
10-20%	☐
21-30%	☐
31-40%	☐
41-50%	☐
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

71) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?

Probably should use the same KPIs. However, KPI development shouldn't change every year, and needs PCP buy-in: to make real differences in KPIs can often take serious practice transformation.

72) Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?

73) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

74) **Incentive payment frequency**. Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	☐

Annually	☐
Other	☐

If you checked the "Other" box, please describe payment frequency below:

75) For potential offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

76) For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

Health Information Technology (HIT)

77) **Types of communication.** For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO: deferred

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	☐
Text message	☐	☐
Web portal	☐	☐
Email	☐	☐
Telemedicine / Video chat	☐	☐
Face-to-face meeting	☐	☐
Smartphone app	☐	☐
Other:		

78) **HIT investments by organizations.** For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below: deferred

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	☐	☐
Digital care management tool	☐	☐
Care transitions alerts	☐	☐
Electronic Health Records (EHRs)	☐	☐
Health risk assessment software	☐	☐
Practice assessment tools	☐	☐
Practice management tools (scheduling, billing)	☐	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☐
Patient education/wellness tools	☐	☐
Provider/case manager directory	☐	☐
Shared decision-making tools	☐	☐
Telemedicine software	☐	☐
Other:	☐	☐
Other:	☐	☐

79) **Importance of technology by type.** The Department is working to determine what technology is in place, what technology is needed, and what technology should be standardized. For RCCOs, providers, and other organizations, use the table below to answer what HIT infrastructure outside of the SDAC your organization would use to perform population health management activities. Tools are scored from 1-5, where 1 are those items least-likely to be used, and 5 are items most-likely to be used:

Tool	1 Least	2	3	4	5 Most
Population analytics / reporting / dashboard	☐	☐	☐	☐	☒
Care management tool	☐	☐	☐	☐	☒
Care transitions alerts	☐	☐	☐	☐	☒
Electronic Health Records (EHRs)	☐	☐	☐	☐	☒
Practice assessment tools	☐	☐	☐	☐	☐
Health risk assessment software	☐	☐	☐	☐	☐
Practice management tools (scheduling, billing)	☐	☐	☐	☐	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☐	☐	☐	☐
Patient education wellness tools	☐	☐	☐	☐	☐
Provider/case manager directory	☐	☐	☐	☐	☐
Shared decision-making tools	☐	☐	☐	☐	☐
Telemedicine	☐	☐	☐	☐	☐
Other:	☐	☐	☐	☐	☐

80) What are the primary barriers to RCCOs and providers increasing their use Health Information Technology to improve the performance of Primary Care Practices?

In our community, the practices find that they need the help of a population health analysis to help them boil the information they are receiving down into sound bites that they can act on.

81) How can Health Information Technology support Behavioral Health Integration?

82) In the next iteration of the ACC, should there be a shared resource for data and analytics? Please describe the basic criteria for what a shared data and analytics platform needs to contain in order for it to be useful. There should definitely be the continuation of a service such as SDAC.

83) Should there be a shared care management tool? Please describe the basic criteria for what a care management tool would need to contain in order for it to be useful. We have found that there are many basic elements that need to be included, but that it is hard to require a shared tool due to the multiplicity of HIT systems used by different clinics.

84) Should there be a shared population health management tool? Please describe the basic criteria for what a population health management tool would need to contain in order for it to be useful.

85) Please describe the functionality that a common Medicaid provider directory would need to contain in order for it to be useful.

FREQUENT updates; notice of who is currently open to new clients; easy to use; not confusing; helps sort out relevant providers (location, specialty, ages accepted, etc.) with ease. Significantly improving your current directory would be an awesome help statewide (and you might be able to get grants to do it!).

86) How can the RCCOs support providers' access to actionable and timely clinical data?

In our case, RMHP has developed monthly reports that are wildly helpful. They need access to VERY timely claims data in order for it to be helpful for our actions.

87) What are the HIT solutions that would benefit clients, providers, and RCCOs? Please comment on the parameters these tools or platforms would need to possess and the ways in which they could be used. Wonder if it would be possible to create a comparison of services used/costs over time for individuals, practices, and communities?

88) What technical assistance or resources related to HIT infrastructure should the RCCOs supply? This assistance or these resources could be for providers, social service organization, clients/families, or for others.

Our practices have requested a population health analyst. Our RCCO is also very good about running specific requests for data when needed.

89) What role should health information exchange platforms like CORHIO or QHN play in the next iteration of the ACC?

90) Please share any information, advice, and suggestions you have about health information technology in the ACC Program.

Colorado Department of Health Care Policy and Financing

RFI Response Received and Recorded.

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Ayelet Talmi
Location: Denver CO

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Children's Hospital Colorado
Location: Aurora, CO
☐ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☒ Medical provider / PCMP / other provider
  i. Type or specialty: Integrated behavioral health provider
  ii. Area of practice: psychology
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Other (please describe): Click here to enter text.

Are you currently involved in the ACC program?

☒ Yes
☐ No

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☐ 3-4 years
☒ Since before the program was implemented.

How have you been involved in the ACC program and what interaction have you had with RCCOs:
Involvement as a provider in a system of care; practicing integrated behavioral health within primary care

Please briefly describe your involvement with Medicaid, either in Colorado or another state:
Mental health providers; serving on committees and advisory groups to improve access and quality of services to children and families within the Medicaid system in CO.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☒ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

My institution will seek to participate because we serve a high number of children with public insurance. My population of interest is children and families with public insurance and as a result, I will practice within an organization that aims to serve that population.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

Opportunities for integration of physical and mental/behavioral health in the context of primary care settings.

2) What is not working well in the ACC Program?

Capitation of mental health services that make providing preventative and health promotion services to children and families seen in primary care settings impossible. Lack of reimbursement for health and behavior codes that can be used to serve children with complex health needs whose behavioral health issues impact their ability to manage disease processes.

3) What is working best in the Behavioral Health Organization (BHO) system right now?

Some BHO have integrated behavioral health services.

4) What is not working well in the BHO system?

a. No payment for prevention and health promotion activities
b. Diagnostic driven system that eliminates access to care for babies, young children and their families if there is no corresponding mental health diagnosis that allows for billing
c. Requirement to have pre-authorization before providing services
d. Referral form is long, cumbersome and way too complicated and convoluted to be completed in a primary care setting
e. Primary care providers get no information back from BHO/Community Mental Health Centers when our patients have evaluations or get services without a ROI. At the very least, some form of communication that a patient "arrived" in the mental health system would be essential to improve communication and care.
f. Community mental health centers with walk-in intake processes present a huge barrier to care for some of the families that require their services

5) What is working well with RCCO and BHO collaboration right now?

Some RCCOs have found ways to share data so that physical health and mental health records present a full picture of a person's well-being.

6) What is not working well with RCCO and BHO collaboration right now?

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

Colorado should have universal access to integrated behavioral health services in pediatric and family medicine settings. Integrated behavioral health clinicians need to be trained in working not just with pediatric populations, but with infants and young children and their families. We need to maximize the potential to provide prevention and health promotion services. We also need practice innovations that will allow us to provide multi-generation services in the context of pediatric primary care without needing to enroll adult caregivers or bill on their insurance for services rendered to support families in creating and maintaining safe and supportive environments in which their children can grown and thrive. Provide funding for integrated behavioral health services that offer consultation and support to primary care health professionals in meeting the comprehensive health needs of the patients they see. This includes being able to utilize health and behavior CPT codes to bill when providing behavioral health services related to physical health issues (e.g., obesity). CO needs a workforce capacity development plan to ensure that we have well-trained, highly-qualified behavioral health professionals who can function well in primary care settings. Integrated behavioral health services have the promise and potential to expand the continuum of behavioral health services to create universal access to comprehensive, high quality health homes.

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☒	☐	
Community Behavioral Health Services Rule	☒	☐	
Covered diagnoses list	☒	☐	No prevention or health promotion services are funded
Different behavioral / physical health reimbursement	☐	☐	
Institutions for Mental Diseases exclusion	☐	☐	
OBH rules, reporting, or financing (regulatory differences between agencies)	☒	☐	
PCMP financing structure	☒	☐	Not enough funding to employ integrated behavioral health clinicians
Per-member per-month amount	☒	☐	Too little money to incentivize PCPs to engage in the full range of behavioral health screenings and supports needed in a health home
Physical space constraints	☐	☐	
Privacy Laws (HIPAA, 42 CFR)	☐	☐	
Professional / cultural divisions	☒	☐	Need to develop a competent workforces
RCCO or BHO contracts	☒	☐	Primary care settings see patients across BHO lines; credentialing; authorization; contracting variabilities
Staff capacity	☒	☐	Need more trained integrated behavioral health clinicians – not more co-located mental health providers
State/Federal rules or reporting requirements	☐	☐	

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

Technical resources / data sharing	☒	☐	Need behavioral and physical health data to be compatible in order to track outcomes over time
Training	☒	☐	Too few trained integrated clinicians
Others	Please type your response here.		

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

A clinic that provides Integrated behavioral health services that are comprehensive is providing screening, identification, triage, consultation, referral, and brief treatment services to a patient and her/his identified caregivers. The services are universally accessible and not driven by diagnoses. Preauthorization is not required. Behavioral health clinicians are a part of the care team, engaging in treatment planning and decisions, providing care, and supporting primary care professional in managing patient care. The services are not co-located. Co-located services replicate outpatient mental health services and essentially significantly limit the bandwith of integrated clinicians to provide care. With co-location, behavioral health clinicians have set appointments, work out of an office space that may or my not be a primary care settings, and do some sharing of patients but provide traditional mental health services.

10) Please share any other general advice or suggestions you may have about behavioral health integration.

There are model programs around the State that are providing high quality integrated care. These programs could benefit from funding and attention that will enable them to expand their capacity to disseminate.

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination?

b. How should RCCOs prioritize who receives care coordination first?

A tiered approach, like the one used in public health services, would be ideal. All families should be entitled to basic care coordination resources with higher levels of need dictating more intensive care coordination.

c. How should RCCOs identify clients and families who need care coordination?

Having a statewide, accepted system for identifying client needs for care coordination would enhance the ability of RCCOs to provide targeted levels of care coordination to clients with varying degrees of need. Functional impairment, behavioral functioning, quality of life, and existing resources and supports should all factor in to the assessment of care coordination needs.

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

Shared data systems and strategic use of information technology should aid with tracking care coordination practices. Alternatively, billing codes for care coordination could be leveraged to track effort.

12) What services should be coordinated and are there services that should not be a part of care coordination?

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today?

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

d. What are the gaps in care coordination across the continuum of care?

15) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	Should the RCCO have a role? Yes	No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma	☒	☐	☒	Provide services that span prevention, health promotion and intervention
Affordability (assistance with prescriptions or co-pays)	☒	☐	☒	Coordinate and help to centralize information and resources in the community; direct clients to the right access point
Daycare / childcare	☒	☐	☒	Coordinate and help to centralize information and resources in the community; direct clients to the right access point
Economic stability & employment	☒	☐	☒	Coordinate and help to centralize information and resources in the community; direct clients to the right access point
Education	☒	☐	☒	Coordinate and help to centralize information and resources in the community; direct clients to the right access point
Environment	☒	☐	☒	Coordinate and help to centralize information and resources in the community; direct clients to the right access point
Food access / nutrition	☒	☐	☒	Coordinate and help to centralize information and resources in the community; direct clients to the right access point
Health literacy	☒	☐	☒	Provide training to clients and to providers around health literacy matters
Housing	☐	☐	☐	Coordinate and help to centralize information and resources in the community; direct clients to the right access point
Language or translation services	☒	☐	☒	All clients should have access to care and information in their language of choice

Literacy	☒	☐	☒	Coordinate and help to centralize information and resources in the community; direct clients to the right access point
Transportation	☒	☐	☒	Coordinate and help to centralize information and resources in the community; direct clients to the right access point
Other	Please type your response here. Feel free to list as many non-medical factors as you want, and please explain how the RCCO should be involved.			

16) **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	Coordinate care? Yes	No	In what capacity should these individuals coordinate care in the ACC Program?
Advanced Practice (Registered) Nurses	☒	☐	
Certified Addiction Councilors	☒	☐	
Certified Nurse Midwives	☒	☐	
Community Health Workers	☒	☐	
Generalists (BA/BS/MA/MS)	☒	☐	
Health Coaches	☒	☐	
Licensed Clinical Social Workers	☒	☐	
Licensed Marriage and Family Therapist	☒	☐	
Licensed Mental Health Counselors	☒	☐	
Licensed Professional Counselor	☒	☐	
Masters of Public Health	☒	☐	
Medical Doctors / Doctors of Osteopathic Medicine	☒	☐	
Nurse Practitioners	☒	☐	
Patient Navigators	☒	☐	
Peer Advocates	☒	☐	

Promotoras	☒	☐	
Psychiatrists	☒	☐	
Psychologists	☒	☐	
Registered Nurses	☒	☐	
Social Workers	☒	☐	
Wraparound facilitators	☒	☐	
Other	Please type your response here.		

17) **Care coordination requirements for specific populations.** Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and infants	☒	☒	Prevention and health promotion services; understanding their environments and coordinating care for their caregivers
Children	☐	☒	
Children who are healthy, but in socially-complex environments	☒	☒	
Children involved in the foster care system	☒	☒	
Children with a chronic illness	☒	☒	
Children with a serious emotional disturbance	☒	☒	
Children with medical complexity	☒	☒	
Children or youth with a behavioral health diagnosis or substance use disorder	☒	☒	
Transition-age adolescents	☒	☒	
Parents and families	☒	☒	
Pregnant women	☒	☒	
Adults	☐	☒	
Adults who are healthy, but in socially-complex situations	☒	☒	
Adults with a chronic illness	☒	☒	
Adults with a behavioral health diagnosis or substance use disorder	☒	☒	
Clients involved in the criminal justice system	☒	☒	
Clients with a disability	☒	☒	

Clients in a nursing facility	☐	☒	
Elderly clients	☐	☒	
Frail elderly clients	☒	☒	
Clients in palliative care	☒	☒	
Other populations, please comment:			

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

19) How should care coordination be evaluated? How should its outcomes be measured?

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

a. What is the PMPM cost for providing care coordination services?

b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

a. **Care coordinator to client ratios**. If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☐
51-100	☐
101-200	☐
201-500	☐
501-1,000	☐
1,001-1,500	☐

1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

Universal screening processes that include screening, identification, and triage based on identification

Data reporting to providers regarding client outcomes and, in particular, data sharing around behavioral health service uptake in the community.

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

PCMP are best suited to determine which RCCOs they want their clients to enroll with as these providers know their communities of practice best and are best-suited to determining what services and supports their clients require.

27) Should the RCCO region maps change? Why or why not? If so, how?

28) Should the BHO region maps change? Why or why not? If so, how?

The BHO regions should mirror the RCCO regions and should have the flexibility to accommodate care across regions (e.g., care that is provided in the context of an integrated behavioral health services program).

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

34) What role should RCCOs play in attributing clients to their respective PCMPs?

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

At a minimum, RCCOs should have mandatory advisory board with representation from the above in their region. Depending on the region and population being served, the provider/community advisory board composition will differ. The advisory board should have decision-making power and significant influence in how the RCCO choose to implement programs and services.

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

42) How should the Department structure stakeholder engagement for the ACC as a whole?

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

a. If no, what are the gaps?

No. Huge mental/behavioral health gaps and service needs and a lack of continuum of care in behavioral health – no attention to health promotion and prevention efforts and inadequate attention to early childhood needs.

b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

a. What role should hospitals play in the next iteration of the ACC Program?

b. What role should pharmacies play in the next iteration of the ACC Program?

c. What role should specialists play in the next iteration of the ACC Program?

d. What role should home health play in the next iteration of the ACC Program?

e. What role should hospice care play in the next iteration of the ACC Program?

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

g. What role should counties play in the next iteration of the ACC Program?

h. What role should local public health agencies play in the next iteration of the ACC Program?

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

45) How can RCCOs help to support clients and families in making and keeping appointments?

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

Yes. CHW and PN are essential service providers in a system of care that seeks to impact the comprehensive health and well being of a population.

47) **Community Health Worker reimbursement**. Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement process	(Please check all that apply)
Independently bill	☐
On staff (salary) at Primary Care Medical Provider Clinic	☐
On staff (salary) at RCCO	☒
Per Member Per Month Payment	☐

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you?

b. What RCCO requirements would ensure cultural competency?

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

Provider and member training and resources around Health Literacy.

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

51) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

52) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

Practice Support

53) **Support for practices.** Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☒	☐	☐	☐
Network provider education	☒	☐	☐	☐
Assistance with practice redesign	☒	☐	☐	☐
Assistance with efficiency-enhancing activities	☒	☐	☐	☐
Provide web-based resources and directories	☒	☐	☐	☒
Provide practice-specific data reports	☒	☐	☐	☐
Provide clinical care guidelines and best practices.	☒	☐	☐	☒
Provide clinical screening tools	☒	☐	☒	☐
Provide health and functioning questionnaires	☒	☐	☐	☐
Provide chronic care templates	☒	☐	☐	☒
Provide registries	☒	☐	☐	☒
Offer client reminders	☒	☐	☐	☐
Offer client self-management tools	☒	☐	☐	☐
Offer educational materials about specific conditions	☒	☐	☐	☐
Supply behavioral health surveys	☒	☐	☒	☐
Supply other self-screening tools	☒	☐	☒	☐
Administer behavioral health surveys	☒	☐	☐	☐
Administer other self-screening tools	☒	☐	☐	☐
Prepare client action plans	☒	☐	☐	☐
Provide training on providing culturally-competent care	☒	☐	☐	☒
Provide training to supporting staff	☒	☐	☐	☒
Provide training on motivational interviewing	☒	☐	☐	☐
Provide tools and software for phone call and appointment tracking	☒	☐	☐	☒
Provide tools and resources for tracking labs, referrals, etc.	☒	☐	☐	☒
Provide referral and transitions of care checklists	☒	☐	☐	☐
Provide visit agendas or templates	☒	☐	☐	☒
Provide standing pharmacy order templates	☒	☐	☐	☒
Provide comprehensive directory of community resources	☒	☐	☐	☒
Provide directory of other resources	☒	☐	☐	☒
Provide materials regarding Nurse Advice Line	☒	☐	☐	☐
Ensure all tools and resources are centrally located on RCCO-specific website	☒	☐	☐	☒
Others				

54) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

55) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

56) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

57) Should the Department require that PCMPs utilize disease registries to manage the health of their population?

no

58) Please share any other advice or suggestions about provider support in the ACC.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

62) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

63) What role – if any – should the RCCOs play in the distribution of payments to providers?

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

66) **Measuring Client experience.** Please complete the table below to indicate how the Department should measure Client/patient experience:

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☐	☐	
SF-12 Health Survey	☐	☐	
Other types of client interviews / surveys	☐	☐	
Patient Activation Measure	☐	☐	
Focus groups	☐	☐	
Other	Please type your response here.		

67) Knowing that, at this time, the Department only has claims data, how should population health be measured?

68) How should quality and performance data be reported to the RCCOs, PCMPs, and the public?

69) **Measures for payment.** Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☒
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

70) What percent of RCCO payments should be tied to measures or performance?

Percentage	
10-20%	☐
21-30%	☐
31-40%	☐
41-50%	☒
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

71) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?

Yes.

72) Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?

Yes if the national standards take into account local implementation.

73) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

74) **Incentive payment frequency.** Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	☐
Annually	☐
Other	☐

If you checked the "Other" box, please describe payment frequency below:

75) For potential offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

76) For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

Health Information Technology (HIT)

77) **Types of communication.** For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	☐
Text message	☐	☐
Web portal	☐	☐
Email	☐	☐
Telemedicine / Video chat	☐	☐
Face-to-face meeting	☐	☐
Smartphone app	☐	☐
Other:		

78) **HIT investments by organizations.** For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below:

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	☐	☐
Digital care management tool	☐	☐
Care transitions alerts	☐	☐
Electronic Health Records (EHRs)	☒	☐
Health risk assessment software	☐	☐
Practice assessment tools	☐	☐
Practice management tools (scheduling, billing)	☒	☐
Client web portal for communicating care plan, services, benefit enrollment	☒	☐
Patient education/wellness tools	☒	☐
Provider/case manager directory	☒	☐
Shared decision-making tools	☐	☐
Telemedicine software	☒	☐
Other:	☐	☐
Other:	☐	☐

79) **Importance of technology by type.** The Department is working to determine what technology is in place, what technology is needed, and what technology should be standardized. For RCCOs, providers, and other organizations, use the table below to answer what HIT infrastructure outside of the SDAC your organization would use to perform population health management activities. Tools are scored from 1-5, where 1 are those items least-likely to be used, and 5 are items most-likely to be used:

Tool	1 Least	2	3	4	5 Most
Population analytics / reporting / dashboard	☐	☐	☐	☒	☐
Care management tool	☐	☐	☐	☐	☒
Care transitions alerts	☐	☐	☐	☐	☒
Electronic Health Records (EHRs)	☐	☐	☐	☐	☒
Practice assessment tools	☐	☐	☒	☐	☐
Health risk assessment software	☐	☐	☐	☒	☐
Practice management tools (scheduling, billing)	☐	☐	☐	☒	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☐	☐	☒	☐
Patient education wellness tools	☐	☐	☐	☒	☐
Provider/case manager directory	☐	☐	☒	☐	☐
Shared decision-making tools	☐	☐	☒	☐	☐
Telemedicine	☐	☐	☒	☐	☐
Other:	☐	☐	☐	☐	☐

80) What are the primary barriers to RCCOs and providers increasing their use Health Information Technology to improve the performance of Primary Care Practices?

Costs and inability to share across systems

Colorado Department of Health Care Policy and Financing

RFI Response Received and Recorded.

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Jordana Ash
Location: Denver, Co

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: CO Dept of Human Services/Office of Early Childhood
Location: Denver, CO
☐ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☐ Medical provider / PCMP / other provider
  i. Type or specialty: Click here to enter text.
  ii. Area of practice: Click here to enter text.
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☒ Another public or private program
☐ Legislator or elected official
☐ Other (please describe): Click here to enter text.

Are you currently involved in the ACC program?

☐ Yes
☒ No

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☐ 3-4 years
☐ Since before the program was implemented.

How have you been involved in the ACC program and what interaction have you had with RCCOs:
I previously worked at a mental health center & we interacted with the RCCO in our area

Please briefly describe your involvement with Medicaid, either in Colorado or another state:
I oversee the Early Childhood Mental Health Specialists program & those positions are located within the Community Mental Health Centers which provide services to Medicaid clients.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☒ N/A

Please feel welcome to describe why or why not using the space below.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

2) What is not working well in the ACC Program?

3) What is working best in the Behavioral Health Organization (BHO) system right now?

   Some BHOs are supporting extensive child teams that have a combination of clinic and community based services. We should look to those BHOs as examples of what a continuum of care can look like for child & families.

4) What is not working well in the BHO system?

5) What is working well with RCCO and BHO collaboration right now?

6) What is not working well with RCCO and BHO collaboration right now?

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

Behavioral health services should be widely available at all primary health care clinics. Provision of behavioral health care, including routine screenings for mental health & developmental issues should be provided at the universal level, with care coordination and other forms of intervention available as needed. Family centered care will require strategic thinking about policies & financing that reflects the care being provided, but is our best approach to ensuring healthy development of all children, which in turn will reduce long term physical and behavioral health costs to adults.

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☒	☐	CMHC do not currently have mechanisms to pay for prevention services, which are critical when concerning early childhood mental health.
Community Behavioral Health Services Rule	☐	☐	
Covered diagnoses list	☒	☐	Mental health services for young children need to include a primary caregiver and thus we need family or relationship diagnosis to be developed & covered.
Different behavioral / physical health reimbursement	☒	☐	Behavioral health, i.e. strong mental health & wellbeing are inextricable from physical health. We know that there are physical health implications for those with behavior health problems and thus we need parity in terms of reimbursements.
Institutions for Mental Diseases exclusion	☐	☐	
OBH rules, reporting, or financing (regulatory differences between agencies)	☐	☐	
PCMP financing structure	☐	☐	
Per-member per-month amount	☐	☐	
Physical space constraints	☒	☐	This barrier can impede the introduction & delivery of integrated behavior health services in primary care facilities.
Privacy Laws (HIPAA, 42 CFR)	☒	☐	HIPAA considerations are of utmost importance but can be addressed so that care coordination can be achieved in a more efficient, effective manner.
Professional / cultural divisions	☒	☐	Stigma continues to surround mental health issues. Clients will benefit from understanding that routine care involves care & consideration of these issues. If this question relates to a professional divide between physical & mental health providers, there are numerous examples to draw on to show the added benefits of having behavioral health services readily available in practices.

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

RCCO or BHO contracts	☒	☐	Even with fee for service options, the BHO system is not readily set up to understand the mental health needs of young children whose issues need to be considered in the context of relationships. Whole family care is critical.
Staff capacity	☒	☐	We need more investment in building a workforce ready to serve behavioral health needs in physical health settings. Early/ young child mental health is a specialty & we need to devote resources so that practitioners have the skills they need to assist families competently.
State/Federal rules or reporting requirements	☐	☐	
Technical resources / data sharing	☒	☐	Data sharing is a complicated, multi-faceted issue and will take concentrated planning and commitment to a solution.
Training	☐	☐	
Others	Please type your response here.		

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

10) Please share any other general advice or suggestions you may have about behavioral health integration.

- Recognize the focus needs to be on health/mental health prevention, promotion & early identification of problems, not disease model treatment
- Whole family meets practice transformation to recognize child & parent each influence the well-being of the other
- Metrics needs to be aligned with family well- being.
- Practice change to recognize psychosocial factors impact on health outcomes

Care Coordination

11) Care coordination is an important part of the ACC Program.

   a. What is the best definition of care coordination?

   b. How should RCCOs prioritize who receives care coordination first?

   c. How should RCCOs identify clients and families who need care coordination?

   d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

12) What services should be coordinated and are there services that should not be a part of care coordination?

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

   a. What care coordination is going on today?

   b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

   c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

   d. What are the gaps in care coordination across the continuum of care?

15) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	Should the RCCO have a role? Yes	No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma	☒	☐	☒	These children are especially vulnerable & at risk for long term physical & mental health issues. Ensuring proper developmental and mental health screenings are completed at recommended intervals is critical.
Affordability (assistance with prescriptions or co-pays)	☒	☐	☒	Navigation to other resources or direct assistance will ensure lower population costs as patient will more likely be successfully treated if cost barriers are removed.
Daycare / childcare	☒	☐	☐	If not a direct support role, understanding the role child care as a protective factor or a risk factor (poor quality, long hours, risk of expulsion) is important to overall health & wellbeing
Economic stability & employment	☒	☐	☐	As above, understanding stress and risk associated with family status is an important aspect of care
Education	☒	☐	☐	As above
Environment	☒	☐	☐	As above with special consideration to advent of toxic stress on development
Food access / nutrition	☒	☐	☐	Absolutely
Health literacy	☒	☐	☐	First level population health activity
Housing	☒	☐	☐	Potential risk
Language or translation services	☒	☐	☐	Health care is culturally bound. Beyond translation, we need cultural brokers to genuinely achieve health equity & family centered care.
Literacy	☒	☐	☐	Another universal activity best delivered where patients come.
Transportation	☒	☐	☐	Health equity issue. Care coordination can cover this issue

Other	Please type your response here. Feel free to list as many non-medical factors as you want, and please explain how the RCCO should be involved.

16) **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	Coordinate care? Yes	No	In what capacity should these individuals coordinate care in the ACC Program?
Advanced Practice (Registered) Nurses	☐	☐	
Certified Addiction Councilors	☐	☐	
Certified Nurse Midwives	☐	☐	
Community Health Workers	☐	☐	
Generalists (BA/BS/MA/MS)	☐	☐	
Health Coaches	☐	☐	
Licensed Clinical Social Workers	☐	☐	
Licensed Marriage and Family Therapist	☐	☐	
Licensed Mental Health Counselors	☐	☐	
Licensed Professional Counselor	☐	☐	
Masters of Public Health	☐	☐	
Medical Doctors / Doctors of Osteopathic Medicine	☐	☐	
Nurse Practitioners	☐	☐	
Patient Navigators	☐	☐	
Peer Advocates	☐	☐	
Promotoras	☐	☐	
Psychiatrists	☐	☐	
Psychologists	☐	☐	
Registered Nurses	☐	☐	
Social Workers	☐	☐	
Wraparound facilitators	☐	☐	
Other	Please type your response here.		

17) **Care coordination requirements for specific populations.** Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and infants	☒	☐	
Children	☒	☐	
Children who are healthy, but in socially-complex environments	☒	☐	
Children involved in the foster care system	☒	☐	
Children with a chronic illness	☒	☐	
Children with a serious emotional disturbance	☒	☐	
Children with medical complexity	☒	☐	
Children or youth with a behavioral health diagnosis or substance use disorder	☒	☐	
Transition-age adolescents	☒	☐	
Parents and families	☒	☐	
Pregnant women	☒	☐	
Adults	☐	☐	
Adults who are healthy, but in socially-complex situations	☒	☐	
Adults with a chronic illness	☒	☐	
Adults with a behavioral health diagnosis or substance use disorder	☒	☐	
Clients involved in the criminal justice system	☒	☐	
Clients with a disability	☒	☐	
Clients in a nursing facility	☒	☐	
Elderly clients	☒	☐	
Frail elderly clients	☒	☐	
Clients in palliative care	☒	☐	
Other populations, please comment: It seems to me that each of these populations will need to be served by a generalist with a good command of navigation, resources, and the interplay of health & mental health. Each sub-specialty will also require a depth of knowledge about the unique issues to be considered when providing coordination. Pregnant women, and infants/young children do require special knowledge and attention to the incredible development that is underway in this time period.			

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

19) How should care coordination be evaluated? How should its outcomes be measured?

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

    a. What is the PMPM cost for providing care coordination services?

    b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

    a. **Care coordinator to client ratios.** If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☐
51-100	☐
101-200	☐
201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

27) Should the RCCO region maps change? Why or why not? If so, how?

28) Should the BHO region maps change? Why or why not? If so, how?

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

34) What role should RCCOs play in attributing clients to their respective PCMPs?

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

The ACC program should continue to work with CDHS to stay informed of our programs & priorities. In this manner, opportunities for collaboration, shared programming, and greater outreach to clients can occur routinely.

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

42) How should the Department structure stakeholder engagement for the ACC as a whole?

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

   a. If no, what are the gaps?

   b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

   a. What role should hospitals play in the next iteration of the ACC Program?

   b. What role should pharmacies play in the next iteration of the ACC Program?

   c. What role should specialists play in the next iteration of the ACC Program?

   d. What role should home health play in the next iteration of the ACC Program?

   e. What role should hospice care play in the next iteration of the ACC Program?

   f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

   g. What role should counties play in the next iteration of the ACC Program?

   h. What role should local public health agencies play in the next iteration of the ACC Program?

   i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

45) How can RCCOs help to support clients and families in making and keeping appointments?

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

47) **Community Health Worker reimbursement.** Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement process	(Please check all that apply)
Independently bill	☐
On staff (salary) at Primary Care Medical Provider Clinic	☒
On staff (salary) at RCCO	☐
Per Member Per Month Payment	☐

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you?

b. What RCCO requirements would ensure cultural competency?

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

Workforce development & support of training to increase capacity of navigators as part of care team.

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

51) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

52) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

Practice Support

53) **Support for practices.** Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☐	☐	☐	☐
Network provider education	☐	☐	☐	☐
Assistance with practice redesign	☐	☐	☐	☐
Assistance with efficiency-enhancing activities	☐	☐	☐	☐
Provide web-based resources and directories	☐	☐	☐	☐
Provide practice-specific data reports	☐	☐	☐	☐
Provide clinical care guidelines and best practices.	☐	☐	☐	☐
Provide clinical screening tools	☒	☐	☒	☐
Provide health and functioning questionnaires	☒	☐	☒	☐
Provide chronic care templates	☐	☐	☐	☐
Provide registries	☐	☐	☐	☐
Offer client reminders	☐	☐	☐	☐
Offer client self-management tools	☐	☐	☐	☐
Offer educational materials about specific conditions	☐	☐	☐	☐
Supply behavioral health surveys	☒	☐	☒	☒
Supply other self-screening tools	☐	☐	☐	☐
Administer behavioral health surveys	☐	☐	☐	☐

54) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

When there is a desired for consistency across the state in terms of survey/consumer experience information that is being collected, the state should provide these types of surveys.

55) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

56) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

57) Should the Department require that PCMPs utilize disease registries to manage the health of their population?

58) Please share any other advice or suggestions about provider support in the ACC.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

62) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

63) What role – if any – should the RCCOs play in the distribution of payments to providers?

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

66) **Measuring Client experience**. Please complete the table below to indicate how the Department should measure Client/patient experience:

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☐	☐	
SF-12 Health Survey	☐	☐	
Other types of client interviews / surveys	☐	☐	
Patient Activation Measure	☐	☐	
Focus groups	☐	☐	
Other	Please type your response here. Not familiar enough with all those surveys to comment		

67) Knowing that, at this time, the Department only has claims data, how should population health be measured?

68) How should quality and performance data be reported to the RCCOs, PCMPs, and the public?

69) **Measures for payment**. Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☐
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

70) What percent of RCCO payments should be tied to measures or performance?

Percentage	

10-20%	☐
21-30%	☐
31-40%	☐
41-50%	☐
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

71) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?

72) Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?

73) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

74) **Incentive payment frequency**. Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	☒
Annually	☐
Other	☐

If you checked the "Other" box, please describe payment frequency below:

75) For potential offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

76) For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

Health Information Technology (HIT)

77) **Types of communication.** For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	☐
Text message	☐	☐
Web portal	☐	☐
Email	☐	☐
Telemedicine / Video chat	☐	☐
Face-to-face meeting	☐	☐
Smartphone app	☐	☐
Other:		

78) **HIT investments by organizations.** For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below:

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	☐	☒
Digital care management tool	☐	☐
Care transitions alerts	☐	☒
Electronic Health Records (EHRs)	☐	☐
Health risk assessment software	☐	☐
Practice assessment tools	☐	☒
Practice management tools (scheduling, billing)	☐	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☐
Patient education/wellness tools	☐	☒
Provider/case manager directory	☐	☒
Shared decision-making tools	☐	☐
Telemedicine software	☐	☐
Other:	☐	☐
Other:	☐	☐

79) **Importance of technology by type.** The Department is working to determine what technology is in place, what technology is needed, and what technology should be standardized. For RCCOs, providers, and other organizations, use the table below to answer what HIT infrastructure outside of the 5DAC your organization would use to perform population health management activities. Tools are scored from 1-5, where 1 are those items least-likely to be used, and 5 are items most-likely to be used:

Tool	1 Least	2	3	4	5 Most
Population analytics / reporting / dashboard	☐	☐	☐	☐	☒
Care management tool	☐	☒	☐	☐	☐
Care transitions alerts	☐	☐	☐	☒	☐
Electronic Health Records (EHRs)	☐	☐	☐	☐	☐

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Kathi Wells & Bill Betts
Location: Statewide

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Program to integrate healthcare for children in foster care
Location: Statewide
☒ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☒ Medical provider / PCMP / other provider
  i. Type or specialty: Pediatrics
  ii. Area of practice: Foster Care
☒ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☐ Other (please describe): Click here to enter text.

Are you currently involved in the ACC program?
☒ No

If you answered "yes" above, how long?
☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☐ 3-4 years
☐ Since before the program was implemented.

How have you been involved in the ACC program and what interaction have you had with RCCOs:
Developing healthcare services for children in foster care all of whom are enrolled in RCCO

Please briefly describe your involvement with Medicaid, either in Colorado or another state:
Historically majority of services are paid through Medicaid fee for service. Have integrated behavioral health services into practice but experiencing barriers to behavioral health funding that are not seen for physical healthcare.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?
☒ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

We have no choice if we are going to serve this population.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

Historically, children foster care have frequent moves between healthcare providers with inadequate sharing of healthcare information. It was mandated that the RCCOs specifically address the healthcare needs of children in foster care. Therefore the promise of RCCOs, is that they can ensure children in foster care receive the specialized healthcare services that need, which the RCCOs can demonstrate through data on outcomes. RCCOs can assist in the development of a consistent medical home for these children, who have complex healthcare needs because have the ability to coordinate and direct where children in foster care receive services. However, it is currently unclear whether this potential is being realized consistently across the state.

In general, reimbursement (mostly due to the Federal ACA) is fairer now.

The decision to make the well child visit one of the KPIs was a very good decision in behalf of children, but unfortunately attribution is still flawed and the SDAC data is delayed and often inaccurate. So, it is difficult to create an effective QI process to improve the KPI, but this is a good start. **Additionally, the American Academy of Pediatrics has recommended an accelerated schedule well child visits for children in foster care which is not captured by the current KPI's.**

The decision to focus on integrated behavioral health in medical homes is a wonderful decision to improve health outcomes for people covered by Medicaid **especially for children in foster care**. Thank you.

The ACC Program is a great opportunity to do what is needed for the majority of Medicaid recipients. The majority of Medicaid recipients in Colorado are children and adolescents; they should not be considered one of the subgroups. **Additionally it provides an opportunity to create a system which can ensure that children in foster care receive the level of care that they need.** The following principles should be incorporated into the core objectives of the ACC:

- Children's health care needs are very different than adults. For adults, the focus is on managing chronic disease more effectively. For children, it is about preventing the development of those chronic diseases. **This is especially important for children in foster care that often have not previously received necessary well child care and often have greater risk for untreated/unidentified health (physical and behavioral) problems.**
- Provided the ACC Program's desire to focus on health and wellness, the greatest opportunity is with the children (the majority of Medicaid recipients). By focusing on preventive care, early screening and early intervention for children, there will be big savings; unfortunately those savings may not occur for many years or decades in the future, but the investment will eventually be worth it.
- The ACC will need to invest in children to the extent possible now even though the savings come much later. We support the concept that a portion of short-term savings that occurs due to chronic disease management in adults in the ACC be invested back into preventive care for children.
- **Generally, it is difficult to help children unless assistance is provided to the family. This becomes even more complex for children and youth in the foster care system as DHS plays a role in**

assuring their care but does not have the resources or knowledge to address the healthcare needs of these children. For these reasons, care coordination is more involved for children since it includes care coordination of the parents/guardians/family.

- There is increased recognition that behavioral health is a part of overall health and should be accessible within a pediatric medical home. However, the current mental health system must have policies, procedures, and resources that support integrated behavioral health activities at the practice level.

2) What is not working well in the ACC Program?

It is unclear whether the ACC has provided guidance to the RCCOs on how to manage the unique healthcare needs for children in foster care. Many times there are a number of individuals (foster parent, child welfare case worker, guardian ad litem/courts) that have a role in ensuring that children get the healthcare that they need. Often RCCOs lack the infrastructure to ensure all parties are provided with the information that they need. While the RCCOs have care coordinators, these individuals are sometimes unaware of how the child welfare system functions and which individuals need to be contacted under specific situations. In addition some parts of the state, specialized services have been developed for children in foster care however the attributing process is often unaware of these services. Therefore, children foster care are not able to benefit from these resources. Also, some children in foster care experience frequent moves. The ACC system is not well designed to address information sharing when children move between providers and/or RCCOs.

Attribution continues to attribute patients to the wrong medical home and the process of getting patients reassigned to the correct medical home is onerous for the patient and family. The attribution process does not work at all for children in foster care as children are attributed to a medical home that no longer reflect their situation and that attribution is not adequately communicated to DHS or the foster parent. Additionally, the attribution process often limits access to necessary services to children in foster placement.

The health care data through the SDAC is based on claims so it is delayed and is incomplete (particularly for children). Therefore, it is not very useful in helping medical homes improve outcomes for children.

Each RCCO does things very differently, which is confusing for medical homes with patients in several RCCOs as well as DHS/the child welfare system and foster parents of children and youth served by the ACC Program. RCCOs are inconsistent in how they respond to requests for care coordination (quite variable depending on whom you reach at the RCCO). So the new RFP should ask how RCCOs will develop policies and procedures to make their methods and responses to requests for help more consistent, both within the RCCO and among all RCCOs.

If a patient lives in one region and goes to a medical home in another region, and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from the patient's region RCCO. Additionally, this is particularly challenging if a child in foster care is from one region but is placed in a foster home in another region or is moved between regions. This is particularly true in the Denver metro area. <u>There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients. **Additionally, there should be consideration of one RCCO for all children and youth in foster care.**</u>

The "incentives" now are actually disincentives, especially the requirement that the RCCO must meet its KPIs before a high performing medical home can be rewarded for meeting its KPIs. The concept behind this approach is not consistent with how health care systems (and "medical neighborhoods") work.

The geography of the 7 regions does not reflect the natural geography of health care systems and referral patterns. Larimer County should be in Region 2.

RCCOs are not providing the level of care coordination that Medicaid patients need, **including for children in the child welfare system. Most DHS workers/foster parents know nothing/very little about the ACC program including how to benefit from any level of care coordination. Additionally, the RCCOs seem to know very little about the child welfare system/needs of children in foster care.** The level of commitment that patients and families need in general is difficult to find, unless care coordination is provided at the medical home level or the community level.

Most medical homes are not working closely with RCCOs and are not receiving much support. The RFP should ask how RCCOs intend to work more closely with medical homes.

Feedback from RCCOs to the medical home regarding patients referred to the RCCO for care coordination is spotty. In the new RFP, it is important to address how RCCOs will consistently provide feedback and communication to the medical home regarding what was done for the patients and whether there was improvement.

The current system does not take into account the movement of patients on and off Medicaid and movement between RCCOs as **well as movement of children and youth into and out of the foster care system as well as between different RCCO's while in the foster care system.** Whether for KPIs or future shared savings incentives, practices need to be evaluated on established patients who have been in a practice for a minimum of six months. This allows the medical home to actually have time to make an impact on the child's care. Otherwise, it is a substantial disincentive for practices to be open to the more complex and challenging patients, those that likely need access the most. **While foster children are clearly complex and in some ways may need these services the most, they are rarely cared for within the same practice for a long period of time and it is difficult to support and incentivize practices to provide the necessary level of care that they so greatly need.**

Currently, there is very little communication and alignment between BHO's and RCCO's. In order for integrated behavioral health to be successful at the practice and community level, the BHO's and RCCO's must have similar goals, policies/procedures that are aligned, payment structures that are aligned with movement toward integration and ongoing close communication with one another. The RFP should ask how they intend to do this.

3) What is working best in the Behavioral Health Organization (BHO) system right now?

This varies between BHOs. For example Access Behavioral Health makes it easy to contract for behavioral health services.

4) What is not working well in the BHO system?

In some areas it is difficult to contract for services (especially for specialized care- which is often needed for children in foster care). In some areas this means developing a single case agreement which can take up to 3-4 weeks. In other areas, BHOs refuse to contract for services. This is especially problematic for children in

the child welfare system since they may enter the system in one area and get placed in a foster home in another. This means that which BHO is responsible can be difficult to determine.

5) What is working well with RCCO and BHO collaboration right now?

It is not clear what is working well. This does not mean that nothing is working, just that it is not clear to providers in the community.

6) What is not working well with RCCO and BHO collaboration right now?

Since medication is managed by one system and psychotherapy is managed by another, there is often a disconnect between these two closely related services. Additionally, the BHO and RCCO areas are different. This is further complicated by the fact that they do not overlap with areas for other parts of the system (such as judicial districts). This causes difficulty and confusion when trying to determine which agency to contact.

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

The decision to focus on integrated behavioral health in medical homes is a wonderful decision to improve health outcomes for people covered by Medicaid. Thank you.

To effectively promote the integration of behavioral and physical (medical) health care in Colorado, then the RCCOs and BHOs should be integrated. This would mean they should have the same regions and function as though they are one organization. This would reduce duplication of efforts and have better alignment of incentives and payments that support integrated care. **This is especially important for children in the child welfare system that are often receiving physical and behavioral health services in different regions creating even more complexity for already confused DHS workers and foster parents.**

The behavioral health and wellness codes (96150 – 96155) need to be opened as son as possible as this will encourage integration immediately and enable medical homes to start now the process of evolving toward full integration.

Care coordination for both behavioral health and medical care should be done in the primary care setting. **This is also aligned with recommendations for the best healthcare of children in foster care.** Either the RCCO and/or the BHO should delegate the responsibility to do care coordination and a pmpm to cover the expense to the medical home as part of the payment reform process. Behavioral health care coordination and medical care coordination needs to be fully reimbursed and the BHO and the RCCO will need to have information and care coordinators to assist medical homes to handle uncommon or very complex issues **such as for children in foster care.**

We recommend providing an infrastructure and funding for data collection and management to support integrated behavioral health in the medical home as well as the care coordination that would have to be part of that. Utilizing 5DAC data is just one way to understand the activities within a medical home. 5DAC data is delayed and does not include enough information to support behavioral health care coordination in the medical home. Other methods and technologies are needed. There will need to be an investment in the

[1] Many terms and definitions can be found in the Appendix at the end of this document.

development of new technologies and methods to do behavioral screening, track referrals, document treatment and collect data on the whole care coordination process at the medical home level. This will require adequate reimbursement to cover the cost of starting up new care coordination programs in the medical home and start up technologies to improve screening, intervention and care coordination with follow through in the medical home.

The C-PACK program developed by CBHC is a very good program, particularly the following:

a. Assistance with finding a behavioral health provider for patients
b. Telephone consultation by a child psychiatrist to primary care providers

We recommend that BHOs be required to provide the 2 components above as part of their new contracts.

8) **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☐	☐	
Community Behavioral Health Services Rule	☐	☐	
Covered diagnoses list	☐	☐	
Different behavioral / physical health reimbursement	☐	☐	
Institutions for Mental Diseases exclusion	☐	☐	
OBH rules, reporting, or financing (regulatory differences between agencies)	☐	☐	
PCMP financing structure	☐	☐	
Per-member per-month amount	☐	☐	
Physical space constraints	☐	☐	
Privacy Laws (HIPAA, 42 CFR)	☐	☐	
Professional / cultural divisions	☐	☐	
RCCO or BHO contracts	☐	☐	
Staff capacity	☐	☐	
State/Federal rules or reporting requirements	☐	☐	
Technical resources / data sharing	☐	☐	
Training	☐	☐	
Others	Please type your response here.		

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

10) Please share any other general advice or suggestions you may have about behavioral health integration.

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination?

b. How should RCCOs prioritize who receives care coordination first?

c. How should RCCOs identify clients and families who need care coordination?

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

12) What services should be coordinated and are there services that should not be a part of care coordination?

One of the most difficult services to provide in the medical home is home visits. Support from the larger system is needed.

Services that can be provided in a pediatric or family medical home are: complex medical coordination including logistics/travel, ancillary services (PT/OT/home health services, ...), collaboration with mental/behavioral health, collaboration regarding school needs, referrals to early intervention services and Child Find, referral to other agencies (rehab, hospice, ...), **collaboration with foster care and DHS system (there may need to be support outside the medical home, though, to assist in information sharing of foster children that are being moved from placement to placement).** RCCOs need to help medical homes with needs like assistance with housing, food, parental employment, child care, in which case the RCCO can help families connect with other agencies that provide these services.

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today?

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

d. What are the gaps in care coordination across the continuum of care?

15) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	Should the RCCO have a role? Yes	No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma	☐	☐	☐	
Affordability (assistance with prescriptions or co-pays)	☐	☐	☐	
Daycare / childcare	☐	☐	☐	
Economic stability & employment	☐	☐	☐	
Education	☐	☐	☐	
Environment	☐	☐	☐	
Food access / nutrition	☐	☐	☐	
Health literacy	☐	☐	☐	
Housing	☐	☐	☐	

Language or translation services	☐	☐	☐	
Literacy	☐	☐	☐	
Transportation	☐	☐	☐	
Other	Please type your response here. Feel free to list as many non-medical factors as you want, and please explain how the RCCO should be involved.			

16) **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	**Coordinate care?** **Yes**	**No**	**In what capacity should these individuals coordinate care in the ACC Program?**
Advanced Practice (Registered) Nurses	☐	☐	
Certified Addiction Councilors	☐	☐	
Certified Nurse Midwives	☐	☐	
Community Health Workers	☐	☐	
Generalists (BA/BS/MA/MS)	☐	☐	
Health Coaches	☐	☐	
Licensed Clinical Social Workers	☐	☐	
Licensed Marriage and Family Therapist	☐	☐	
Licensed Mental Health Counselors	☐	☐	
Licensed Professional Counselor	☐	☐	
Masters of Public Health	☐	☐	
Medical Doctors / Doctors of Osteopathic Medicine	☐	☐	
Nurse Practitioners	☐	☐

Psychiatrists	☐	☐	
Psychologists	☐	☐	
Registered Nurses	☐	☐	
Social Workers	☐	☐	
Wraparound facilitators	☐	☐	
Other	Please type your response here.		

17) **Care coordination requirements for specific populations**. Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and infants	☐	☐	
Children	☐	☐	
Children who are healthy, but in socially-complex environments	☐	☐	
Children involved in the foster care system	☐	☐	
Children with a chronic illness	☐	☐	
Children with a serious emotional disturbance	☐	☐	
Children with medical complexity	☐	☐	
Children or youth with a behavioral health diagnosis or substance use disorder	☐	☐	
Transition-age adolescents	☐	☐	
Parents and families	☐	☐	
Pregnant women	☐	☐	
Adults	☐	☐	
Adults who are healthy, but in socially-complex situations	☐	☐	
Adults with a chronic illness	☐	☐	
Adults with a behavioral health diagnosis or substance use disorder	☐	☐	
Clients involved in the criminal justice system	☐	☐	
Clients with a disability	☐	☐	
Clients in a nursing facility	☐	☐	
Elderly clients	☐	☐	

Frail elderly clients	☐	☐	
Clients in palliative care	☐	☐	
Other populations, please comment:			

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

Regarding children in the foster care system, RCCOs need to understand the complexities of the child welfare system and address the challenges of creating a medical home for these children while they are in placement. This needs to include assisting in the collection and sharing of critical health information on these children. There should be some consideration of an additional pmpm reimbursement for those providers willing to understand the unique needs of these children and take on their care.

19) How should care coordination be evaluated? How should its outcomes be measured?

A care coordination program should initially be measured by having good processes, not measured by outcomes, until solid data exists on outcomes that are risk adjusted and accurate for children. Initially all measures need to be quite separated from outcomes that are highly tied to patient/parent/caregiver behavior, or practices will again be less likely to serve those with highest risk. **This is especially challenging for children in the foster care system who often enter the system with inadequate health care, that may move from location to location and from foster home to foster home with an already overburdened child welfare system as the responsible custodian to collect and share information. This puts an additional burden on the healthcare provider to be able to show their effectiveness under the current strategies and may deter them from caring for these challenging children who need the consistent care the most. The effectiveness of the medical homes willing to care for children in foster care should be measured by good practices, such as those that can be defined by elements already established (AAP and Child Welfare League of America). Adherence to these elements could be used to evaluate the effectiveness of these practices in caring for this population.**

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

a. What is the PMPM cost for providing care coordination services?

b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

a. **Care coordinator to client ratios.** If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☐
51-100	☐
101-200	☐
201-500	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Many medical homes **(including those caring for foster children)** relate to multiple RCCOs and want to be delegated to do care coordination. If all RCCOs allowed medical homes to be delegated to do care coordination, and could receive a pmpm from all of them, which would enable them to afford to hire enough care coordinators to meet the needs of all of ACC patients.

Where should care coordination be done? Care coordination is best done in the medical home. Medical homes are generally willing to do care coordination (it is part of general medical care), because they usually have a relationship with their patients who trust them. **This is somewhat challenging for children in foster care, though, and additional support for care coordination of these children may be needed.**

If care coordination cannot be done in the medical home, then it is best done by community-based organizations. The least effective, least well-received, least trusted is care coordination done from a call center in an RCCO. The role of the RCCO should be to help the medical home-based care coordination staff access resources for families.

The majority of practices are willing to provide Care Coordination, if they can get financial support (PMPM) for providing the service. **Again, due to the additional complexities of children in foster care, there may need to be consideration of either outside support or an additional PMPM support for practices willing to and capable of addressing this issue internally.**

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

All RCCOs should have their offices in the region served, should be non-profits, be a Medicaid provider and be incorporated only in Colorado.

All RCCOs should offer to delegate care coordination to medical homes willing to accept that responsibility and the RCCO should share a portion of the RCCO pmpm with the medical home that accepts delegation.

All RCCOs should use the same criteria for delegation and for the amount that is paid for delegated services of care coordination. By doing this, services can reach a standard across the state. A patient would have access to similar services no matter where they moved across Colorado.

RCCOs should all agree on how they will effectively communicate to medical homes regarding any contact the RCCO has with patients attributed to the medical home. They should include PCMPs in developing those criteria.

All RCCOs should help (or contract with an organization to help) medical homes understand how to access their SDAC data, understand their data and use it to develop rapid cycle QI projects to improve health outcomes and meet KPIs.

All RCCOs should agree to provide uniform support for medical homes when a medical home asks for help with care coordination, even when the medical home is in another region (and contracted with another RCCO) but the patient is in the first RCCO's region.

RCCOs should be required to allow medical homes to give the RCCO a list of patients the medical home feels is their patients and receive help from the RCCO to understand why certain patients have been attributed to another medical home. If the patient is determined to be more appropriately attributed to the inquiring medical home, then the RCCO should help re-attribute the patient to the correct medical home.

RCCOs should share on a regular basis the RCCO's performance on KPIs and share savings incentives and share with the medical home how their own performance compares with other medical homes.

There should be consideration of a single RCCO serving all Colorado children in foster care OR a clear plan outlined in the RFP by the RCCO regarding how they would manage this population including collection of health history, attribution that takes into account the unique circumstances and a plan for communication of medical information between PCMPs and RCCOs/BHOs when children and youth move in placement. Also, there needs to be a clear plan for the child's healthcare when they leave placement and potentially leave the ACC Program.

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

This is particularly applicable to the Denver metro area. There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients. For many expectations/requirements and ways of doing things the RCCOs are so different from one another that it requires significant extra work for medical homes to adapt to the differences. In addition, if a patient lives in one region and goes to a medical home in another region, and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from that first region. **This may also need to apply to DFS and children in the foster care system. Children are often from one region and then placed in another region or are moved between regions and therefore are having barriers and delays to timely and necessary healthcare services.**

27) Should the RCCO region maps change? Why or why not? If so, how?

Yes. There are two changes we recommend:

- Larimer County should be included in Region 2, since the medical community and the support organizations of Larimer County and very closely linked to Weld County
- In the Metro Denver area, the boundary issues are so difficult that we recommend one RCCO be responsible for the whole metro area or that medical homes be allowed to choose one RCCO for all of their patients.

Again there needs to be special consideration for children in foster care, potentially one RCCO for all children in foster care in Colorado.

28) Should the BHO region maps change? Why or why not? If so, how?

To seriously promote the integration of behavioral and physical (medical) health care, then the RCCOs and BHOs should be integrated so that the regions are the same and function as though they are one organization. They should share incentives that are aligned around successful integration of behavioral and medical services and outcomes. Therefore, the BHO maps/regions should conform to the RCCO regions/maps.

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients. There are certain expectations/requirements and ways of doing things that are so different from one RCCO to another that it requires significant extra work to adapt to the differences. If a patient lives in one region and goes to a medical home in another region and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from that first region. This is particularly true in the Denver metro area and for children in the foster care system.

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

34) What role should RCCOs play in attributing clients to their respective PCMPs?

For children in foster care, they are attributed to their previous provider but then may be placed in another area or be expected to see a healthcare provider with special services targeted toward children in foster care but may have significant delays getting these services initiated due to the attribution process. For other children, RCCOs should be required to allow medical homes to give the RCCO a list of patients the medical home feels are their patients and receive help from the RCCO to understand why certain patients are attributed to another medical home. If the patient is determined to be more appropriately attributed to the inquiring medical home, then the RCCO should help re-attribute the patient to the correct medical home. There may also need to be a process for county DHS to provide such a list to the RCCOs for children in their custody.

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

There needs to be significant training for both agencies and better established policies and procedures to work to address the needs of children in foster care. There have been some efforts in this area, but there is still a significant level of confusion on both sides of this issue. Additionally, foster parents remain very confused.

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

Foster parents, the courts and guardian ad litems need to be included in the stakeholder process for children in the foster care system.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Moe Keller
Location: City, County, State.

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Mental Health America of Colorado
Location: City, County, State.
☐ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☐ Medical provider / PCMP / other provider
  i. Type or specialty: Click here to enter text.
  ii. Area of practice: Click here to enter text.
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☐ Other (please describe): Click here to enter text.

Are you currently involved in the ACC program?

☐ Yes
☐ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years

How have you been involved in the ACC program and what interaction have you had with RCCOs:
Click here to enter text.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:
Click here to enter text.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

Please feel welcome to describe why or why not using the space below.

☐ 3-4 years
☐ Since before the program was implemented.

General Questions

Page 14 mentioned specific populations, including individuals who have contact with the criminal justice system. I would like to see more opportunities for diversion programs, which could reduce the times and costs of an individual with mental health or substance use disorders within the jail or potentially prison system.

Judges have expressed frustration that there are not enough, or any, community programs for which a person eligible for diversion can attend and comply. Any way that these treatment programs can be folded in to the RCCOs would be a great benefit to all.

CAAP

Colorado Association of Addiction Professionals

If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

Understand the exact nature and treatment of the OP SUD & MH services, which provides them, and how to engage those resources. I have seen scant evidence of PCP/PCMP awareness of this, and thus high reluctance to "integrate" a provider into their patients' treatment.

Please share any other general advice or suggestions you may have about behavioral health integration.

Heavy medical orientation, with "What IS behavioral healthcare" being the dominant theme, legitimately. I've now spoken with 45 PCMP's and the overwhelming questions they ask are:

1. *What is your scope of practice?*
2. *What are your treatment modalities?*
3. *How do I find the right provider? Condition, culture, location, services...*
4. *How do I engage a BH provider?*
5. *How is case management and privacy issues addressed?*

Every one of these represents a barrier to benefits being utilized by beneficiaries.

What are the limitations of the current benefit structure and what – if any – changes are needed?

Overwhelming orientation toward "We will remove every possible way you could misuse funds from your business, and if there's anything left, you can use it for treatment" in some carriers' and BHO's policies.

Desiroble chonge would be to odopt o poyment policy on the order of "We trust to you try to treot your clients occording to your degrees, certificotions, licenses, ond experience ond will not second-guess your treotment recommendations nor put procedural controls in ploce before diagnosed treatments."

The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

While in theory it sounds like o good ideo, the odministrotion and poyment of provider claims is a very significant saurce of unexpected and unbudgeted odministrative costs, omplified by much confusion over the existing model. To offer o different program – independent of its foce volue – would likely drive the costs of odministering the progroms even higher, with commensurote unintended consequences.

Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

Provide o statistic trocking mechonism, implemented ot the service provider level, ond coptured by EHR/PC ond EHR/BH systems. My compony is reody to support those meosurements todoy.

Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, behavioral health, or hospitals.

In oddition to oll above, there is not o cleor picture of the significont difference between the treatment protocols of primory core and of behoviorol heolthcore. This is reflected in the ossumption thot o "good EHR" will copture the case ond treotment monogement informotion for both. This is not the cose. Behovioral heolthcore hos mony porometers which ore not recorded, onolyzed, nor reported. Exomple would be "attendance level:" The foct thot o potient/client ottends "obove o 90% ottendance rote (for exomple)" is o mojor foctor in treotment efficocy.

What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

The educotion ond engogement model enumeroted above for PCMP's ond BHO's.

Please share any other advice or suggestions about provider support in the ACC.

Poy ottention to who provides treotment for ALL citizens, not just metro oreo and community clinics.

Additional comments from the Addiction Counselors.

What should be the next steps in behavioral health integration in Colorado? The powers that be need to expand the targets of integration. More individuals are seen by small providers than are seen at the community mental health centers. Right now the funding is focused upon community mental health and the big organizations. Small practices all over the State of Colorado should be brought to the table.

What care coordination is going on today? The focus is almost entirely upon the community mental health centers as I said and all the big players who are part of COPA. This is not the true voice of the provider community.

If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies). I have been to many RCCO meetings but so far I have seen little of what they do. After all the meetings I went to, they still didn't recommend my agency to someone I was already working with. That particular facility South Federal Family Clinic was actively visited by the local RCCO who did not mention us despite the fact that we are across the alley from that practice.

Please share any other general advice or suggestions you may have about behavioral health integration.

Widen the net of who is included in this process. Right now it is only the big agencies.

What are the limitations of the current benefit structure and what – if any – changes are needed?

Two local BHOs ABC and BHI are doing well. They are responsive to our needs and have an open dialogue with providers no matter how small. They are close to what OBH is asking and requiring of us and they honor our licensing provisions. They allow the clients and patients to get the treatment they need. They are good for the community.

Value Options (Foothills in Jefferson County) in the other hand tends to micro-manage, they parse out benefits and limit treatment based upon what appears to be financial criteria rather than what is best practices. They are almost impossible to communicate with and do not acknowledge our OBH licensing levels. They are not approving a full range of treatment levels despite the agencies being approved for higher levels of treatment. It took a full nine months to get approved by them as an agency and the work load associated with their payment is easily 3 times that of the other BHOs. They are out of touch in regard to what substance abuse benefits are and do not understand dual diagnosis or co-occurring disorders.

Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

a. If no, what are the gaps? *The clients are having to wait up to 3-months for community mental health and the current network does not know about the smaller providers.*

b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend? We need more behavioral healthcare intervention..

Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, behavioral health, or hospitals.

Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals? *Finonciol incentives go to big practices, ond to the physicions. Behoviorol Heolth core workers do not see this money.*

☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☐ Other (please describe): Click here to enter text.

Are you currently involved in the ACC program?

☒ **Yes**
☐ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years

How have you been involved in the ACC program and what interaction have you had with RCCOs:

Denver Health is a PCMP for 4 RCCO regions, with an enrollment of approximately $20,000 RCCO members.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:

Denver Health is an integrated safety net delivery system and the largest Medicaid provide in Denver and all of Colorado. (See question #1 for more details on Denver Health's organizational structure and our patient population.)

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☒ **Very likely**
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

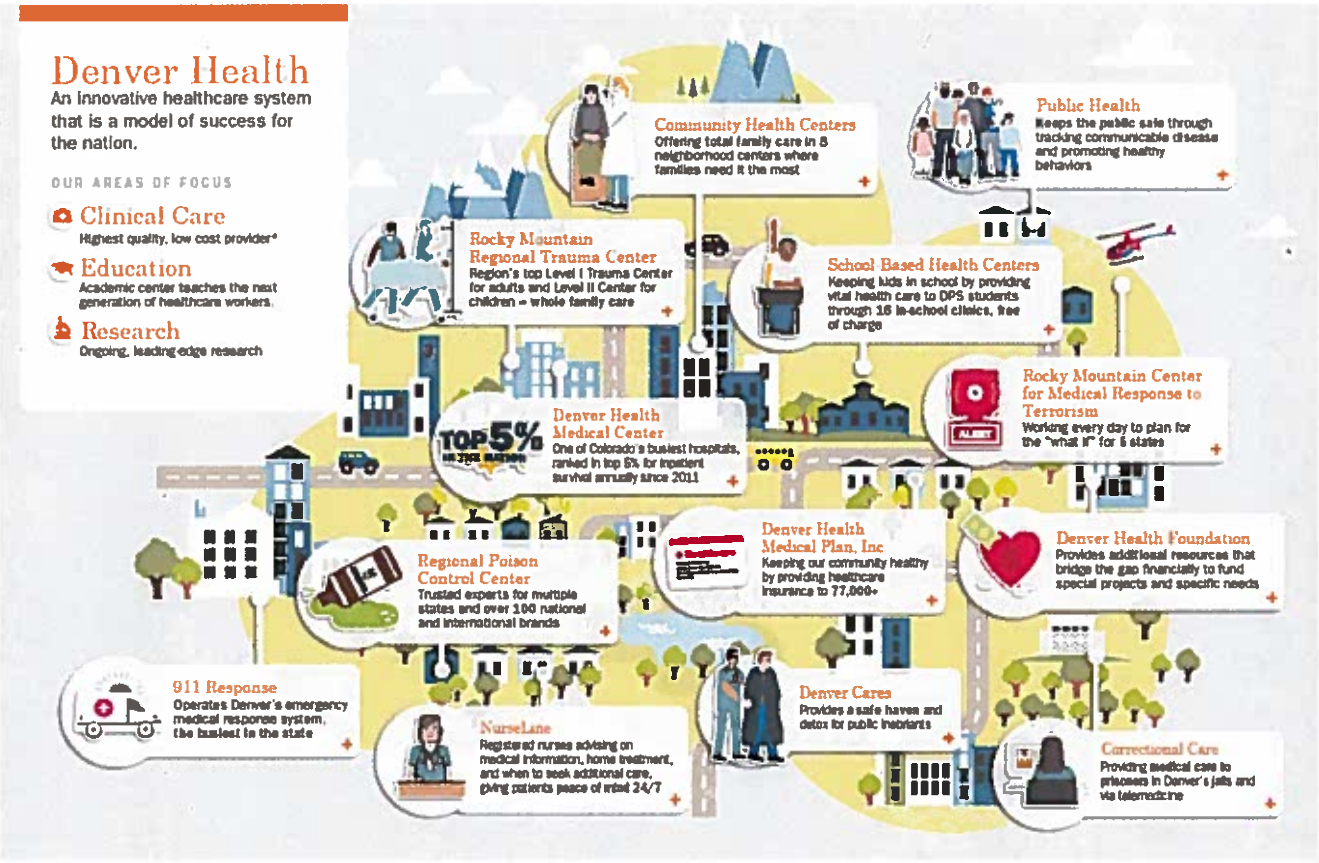
Please feel welcome to describe why or why not using the space below.

☒ 2-3 years
☐ 3-4 years
☐ Since before the program was implemented.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

Denver Health (DH) welcomes this opportunity to respond to the Health Care Policy and Financing (HCPF) Accountable Care Collaborative (ACC) Request for Information (RFI). DH is an integrated, safety net delivery system with a long track record of using Toyota Lean process improvement methodology to innovate.[i],[ii] DH is a medical neighborhood comprised of eight federally qualified community health centers; 16 school-based health centers; an ambulatory specialty care center; a 500-bed acute care hospital with a Level I trauma center; a 100-bed non-medical detoxification facility; the 911 emergency medical response system for Denver; a poison control center; a multi-lingual nurse line; correctional care services; an HMO that serves commercial, Medicaid, CHIP, Medicare and Medicare Special Needs patients; and Denver's public health department.



DH integrates components which are separate entities in most cities, meeting Halfon's criteria for a "community integrated health care system" and McClellan's criteria for an "advanced accountable care organization."[iii],[iv] The Commonwealth Fund has specifically identified DH as a "high performing public health care system", calling it a learning laboratory that has "succeeded at providing coordinated care to the community, promoting a culture of continuous quality improvement, adopting new technology and incorporating it into everyday practice, taking risks and making mid-course corrections, and providing leadership and support -- and accepting accountability -- both at the top and throughout the organization."[v] Across its diverse components, DH served nearly 186,000 individuals in 2013 (one third of Denver's population); delivered 37% of Denver's babies; and cared for 40% of Denver's children.

DH is also the single largest PCMP in RCCO Region 5. DH participates in four RCCO (Regions 2,3,5,6) with approximately 20,000 attributed RCCO members. Our RCCO membership combined with our Medicaid managed care plan (Medicaid Choice) membership of 24,000 adults and 41,000 children renders us the largest Medicaid provider in Denver and statewide.

The original ACC program (ACC 1.0) strengths are its focus on **medical home development and clinical integration** as well as **capacity building** for **population health and population-based payment.** The ACC 1.0 program design blended concepts drawn from the accountable care organization and medical home literatures to promote primary care practice transformation through improved care coordination and medical management, provider support services, as well as provider-level performance data. The RCCOs have successfully focused statewide attention on high risk/high utilizer patients. Colorado Access (RCCO Regions 2,3,5), in particular, has also been an effective convener, providing useful forums for PCMPs and other community providers to come together to discuss issues and best practices related to, for example, managing high utilizers, achieving behavioral health integration, and leveraging data available through the State Data Assistance Center (5DAC.) Most importantly from a DH perspective, the ACC has provided financial support for DH to further develop and refine both its primary care-based and centralized care coordination/management programs.

DH's participation in the ACC as a PCMP was coincident in time and strategically aligned with DH's $20 million CM5 Health Care Innovation Award to design and implement a population health approach to the delivery of ambulatory care services, called 21st Century Care (21cc). Briefly, 21cc explicitly defines an accountable population of 130,000 patients for which DH is -- or should be – providing comprehensive, patient-centered, primary care-based services. Using a combination of clinical and financial criteria, DH dynamically stratifies this population and identifies four broad categories (tiers) of care needs for adults and children. A graduated set of enhanced clinical and HIT services are matched to each risk tier and allocated according to individual patient needs within tiers, with more and higher intensity services reserved for higher tier patients. Services range from text message appointment reminders, to integrated behavioral health services, to complex care coordination and care transition support, to specialized, high-risk clinics for super-utilizers and children with special health care needs. Within its first year of implementation, 21cc has already demonstrated downstream cost avoidance.

Centralized care coordination/care management services are also available through our division of managed care and complement primary care-based services. Specific services include: complex case management, health coaching, peer support services, in-person and telephonic counseling services, ED diversion programs, and patient education/support groups. Many services are provided by telephone or in group settings. Managed care has established several intensive case management programs focused on individuals with complex needs and or who are making care transitions. It is common for the centralized and primary care based program staff to collaborate to provide care for the highest risk patients who often have a broad array of medical, behavioral, and social risk factors needing simultaneous attention. RCCO PCMP and care management delegation payments have been and will continue to be an important source of financing.

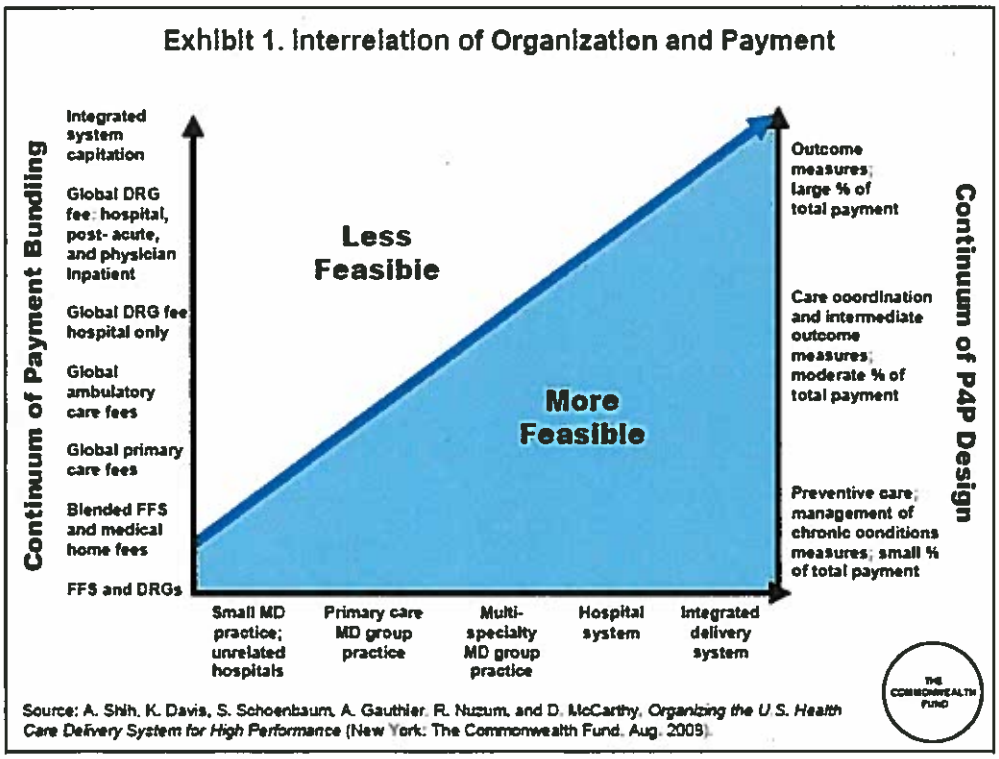
DH enthusiastically supports the vision for next RCCO RFP that emphasizes transforming from a medical model to a more comprehensive population health approach that provides whole-person/whole-family care, is responsive to community needs, and leverages unique community assets. Furthermore, we are pleased to see

the emphasis on exploring new payment models as we believe that the FFS payment model is the single greatest barrier to aligning financial incentives with our 21st Century Care population health vision.

2) **What is not working well in the ACC Program?**

As detailed in the RFI, the ACC has "expanded focus from the medical home to the whole neighborhood of providers, such as specialists" and seeks in the new RFP to achieve "deeper integration, new payment reforms, and the promotion of whole-person/whole-family health" that considers the social determinants of health as well as medical care. This expanded vision is music to the ears of an integrated delivery system (IDS) that directly incorporates public health and variety of social services under its umbrella. DH believes that the current ACC one-size-fits-all, fee-for-service (FFS) provider payment model limits the ability to fully leverage both existing IDS's and any that would be newly developed under this expanded ACC scope. Additionally, DH has experienced certain challenges related to RCCO and BHO maps, delegated care coordination payments, attribution models, and timely data.

Payment Model: Specifically, the current ACC payment model has created misaligned financial incentives within Medicaid medical neighborhoods, incentivizing PCMPs (paid on value) differently than specialists and hospitals (paid on volume). Payment reform expert Harold Miller would locate the current ACC payment model (blended FFS and medical home fees) on the lower end of the payment continuum and well-suited for small practices and unrelated hospitals, which are common in Colorado. (See Exhibit 1 from Shih et al.)



Under this payment model, preventive service receipt and chronic care management should improve -- as they have in CO -- but savings may not be optimized without the active participation of other parts of the medical

neighborhood. For example, strategies to reduce potentially avoidable hospitalization are best achieved when the entire medical neighborhood and it partners are working collaboratively on this shared goal.

Miller argues (and the IDS literature confirms) that as "true" clinical integration increases – meaning integration at the level of clinical care, not mere contractual relationships -- the payment model must transition to more population-based payment methodologies to achieve maximum patient benefit and reduced costs.[vi] Furthermore, and relevant to ACC design considerations, Miller argues that moving from FFS to advanced payment models can be achieved incrementally, by matching payment models to variable delivery system readiness. A tailored payment approach would enable HCPF to benefit fully from advanced clinical integration and infrastructure where it already exists in systems and communities throughout Colorado. DH is aware of multiple organizations that are ready now for full or partial capitation, for example.

RCCO Maps: A second challenge of the current ACC program is that the current regional definitions of the RCCOs do not reflect current patient care seeking behavior nor provider practice and referral relationships and, as a result, many large PCMPs serve multiple RCCO regions. DH has currently enrolled RCCO patients from four RCCO regions, many of whom were previously established DH patients. This has meant redundant administrative requirements, reporting infrastructures, and conflicting priorities, adding complexity without any discernable patient value. Particularly challenging are very proscriptive requirements about specific care coordination processes (e.g., required use of specific tools) that do not consider established work flows that accomplish the same function. DH recommends holding RCCOs/PCMPs accountable to outcomes and functions (not specific processes) and revising RCCO boundaries to conform more closely to "natural referral networks", as recommended by original ACO architects, Fischer and McClellan. [vii] The latter is an especially important consideration as HCPF considers payment reform. A similar challenge exists with BHO maps, see questions #4-S.

Delegated Payments: The third major challenge with the current ACC model relates to the level and distribution of RCCO delegated care coordination payments. The institution of delegated payments recognized that RCCO-delivered practice transformation support needs vary widely especially between large and small PCMPs and, as such, is an important first step in tailoring payment models to delivery system sophistication. However, RCCOs retain an overhead of 33% or more in delegated care coordination contracts, and as a result, a large proportion of dollars meant for care coordination do not reach patients. We recommend that the state cap administrative fees for RCCO services to no more than 10%. This ensures that incentives are aligned with the care management process. We recommend that the state cap administrative fees for RCCO services to no more than 10%. This ensures that incentives are aligned with the care management process.

Attribution: A fourth major challenge relates to patient attribution. In some RCCOs, patients remain unattributed for long periods of time, up to several months. State PCMP attribution algorithms appropriately consider established patient/PCMP relationships as their foremost consideration. However, unattributed patients who do not have established relationship with a PCMP and who do not articulate a preference are not assigned in timely or transparent ways. In particular, no state guidelines exist for RCCOs to direct patients to high-performing systems, even though this has the potential to improve outcomes.

Finally, while the FFS SDAC data and dashboards have been very useful to analysis and performance monitoring, the timeliness of the data limits their utility for care coordination purposes. DH has near real-time access ED visits and hospitalizations that occur at our hospital, and we make this information available to providers and care coordinators at the point of care. It is part of DH standard work, for example, to prompt care coordinators to visit our highest risk adult patients while they are still hospitalized to assess their appropriateness for referral to our intensive outreach clinic (IOC). We have made similar information available through daily lists to RCCO Regions 2,3,5 for any of their members that visit the urgent care, emergency department (ED) or hospital at DH, so the RCCO may inform their non-DH PCMPs. We receive daily lists from our RCCO about our patients seen in Banner Hospitals and would like to receive similar near-real time information about DH RCCO members that are seen in all area hospitals or EDs. Lack of timely information is particularly problematic for the DH clinics located near the Denver County boundary, as their RCCO members are more likely than average to use non-DH hospitals and EDs.

In summary, to accelerate progress toward the population health transformation envisioned by HCPF, DH recommends that the next ACC RFP include an option for alternative payment models, including population-based payment models with gain-sharing provisions. Our response to individual questions in this RFI provides several related recommendations.

3) **What is working best in the Behavioral Health Organization (BHO) system right now?**

Due to funding limitations – Colorado ranks in the bottom half of state for mental health funding per capita[viii] -- BHOs primarily fund community mental health centers and cover specialized treatment of major mental disorders, especially for severe and persistent mental illness (SPMI), as well as related support services (i.e., case management, medication management, individual therapy, group therapy and skills-based classes, vocational services, etc.). Where the BHO system is working well is where there are strong partnerships at the clinical level, e.g., between PCMPs and community mental health centers. In Denver, DH and the Mental Health Center of Denver (MHCD) have a strong working relationship, and MHCD has been a key partner in co-managing the care of high-utilizing patients with severe and persistent mental illness who are treated in DH facilities.

In an attempt to address what the Denver Post has termed a "mental health crisis" in Colorado, some BHOs have been progressive in looking for opportunities to meet unmet demand for mental health services, especially for lower-acuity patients at-risk for their conditions worsening.[ix] For example, BHOs have begun to pay for "same day" behavioral health visits in primary care clinics, which is where most people receive their health care. Same day billing for behavioral health visits has allowed Denver Health to expand capacity to much better meet the mental health and behavioral needs of our patients. While same day billing is an important first step to financial alignment, further integration of funding is required. More integrated funding would continue to push towards whole person care rather than diagnosis-based and county-based care.

4) **What is not working well in the BHO system?**

As with RCCO regions, BHO regions do not always reflect patient care seeking or provider practice patterns. DH works with patients who are served by multiple BHOs. Alignment of RCCO/BHO definitions ("maps") that reflect clinical patterns on the ground is necessary for similar reasons as outlined in question #2. Substance abuse treatment services are also separately financed, which creates similar clinical integration challenges.

The onus is on patients with SPMI to schedule appointments in different systems and follow through, which is often very challenging given the nature of their conditions. Care delivery can be significantly compromised due to the complex delivery and financing arrangements.

Providers as well as patients are confused and frustrated with having care divided up in seemingly arbitrary ways across different systems that are subject to different rules. All of this is made worse if patients move during their treatment (which is common.) A DH patient experience is illustrative. An apartment fire caused a DH patient to temporarily move to another county. Although she had long-standing relationships with behavioral health providers at DH, she had to change mental health providers because she was no longer living in Denver. This change in providers was especially ill-timed given that she was in the midst of a personal crisis. She was (fortunately) able to continue her medical care at DH. However, it was difficult for the DH primary care provider to offer her "bridge" care while she got re-established in a new mental health system, due to the separate challenges associated with sharing patient health information across three sites of care. The financing system should not disrupt existing clinical relationships.

Additionally, the widely acknowledged under-financing of mental health and behavioral health services in Colorado relative to other states must be addressed.[x] It is important that all stakeholders recognize that long-term improvement will require expanding of provider capacity to meet the vast, unmet demand. This expansion will require collaboration from all stakeholders to ensure patient needs are met. Waitlists to enter care and the statewide shortage of mental health professionals are the predictable artifact of under-financing, as are the many recent, highly-publicized tragedies resulting from individuals with known mental health conditions whose families reported difficulty in finding adequate treatment for them.

5) **What is working well with RCCO and BHO collaboration right now?**

For the majority of DH RCCO/BHO patients, Colorado Access serves as both the RCCO and the BHO for a majority of our patients, which likely creates some administrative synergies that we are not well-positioned to comment on.

DH can speak more knowledgably about clinical collaborations between PCMP/BHO mental health providers. Under our CMS HCIA award (21st Century Care), DH formalized an on-going collaboration with the Mental Health Center of Denver (MHCD). MHCD is the largest community mental health center in the Rocky Mountain region and the nationally recognized leader in recovery focused services.[xi] Together, DH and MHCD care for more than three-quarters of Denver's Medicaid enrollees. MHCD has worked closely with DH in developing models for integrated behavioral health, and many of the new behavioral health consultants practicing in DH's primary care clinics were originally contracted from MHCD. Through the HCIA award, DH and MHCD have collaborated on implementing a High Intensity Team (HIT) that is based at MHCD and focuses on caring for patients with complex mental illness and high utilization of hospital services.

DH's primary care based behavioral health consultants provide support to primary care providers when behavioral health issues surface in the course of regular primary care. They refer patients as necessary to MHCD for more extensive follow-up. In addition, DH has implemented standard work to refer patients with significant mental health diagnoses and frequent hospitalizations to the MHCD-based HIT program.

6) **What is not working well with RCCO and BHO collaboration right now?**

As discussed in detail in question #2, BHO engagement and similar specialty network development efforts are limited under the current payment model. Even for many of the patients where the RCCO and BHO is the same, the underlying program design differences remain. Physical and mental health providers caring for the same patient cannot easily exchange medical records and test results nor can they readily collaborate on a coordinated medication management strategy. Duplication of laboratory and diagnostic testing is common. Voluntary efforts -- such as those undertaken at DH and described in #5 are no doubt taking place -- but many of the more care-disruptive and intractable issues relate to payment models. The most recent BHO contract required BHOs to promote integrated care but no new funding was provided to do so. As noted, some BHOs have begun to pay for same day integrated care services, there is much more that should be done but probably will not happen without additional funding.

Behavioral Health Integration

7) **What should be the next steps in behavioral health integration in Colorado?**[1]

Beyond payment models, the primary frontier for behavioral health integration relates to clinical implementation of evidence-based practices for the delivery of behavioral health services in primary care settings. However, the state can play an important role by assisting and facilitating capacity building, training, dissemination of best practices, and evaluation. Again, it will be important that these efforts are outcome-oriented and evidence-based. Primary care practices should be given some latitude to experiment with which evidence-based model works best with their population and practice model.

Capacity Building: As covered in previous questions, additional capacity and financing are needed to address Colorado's mental health crisis. Although adding behavioral health providers to the primary care team is a good first step, it does not necessarily lead to a change in outcomes alone. Other team members can play important supportive roles. For example, nurses/clinical pharmacists can help improve medication adherence and patient navigators/community health workers can assist with scheduling, transportation and increasing patients' engagement in care. Innovative uses of screening and low-cost automated tools (e.g., myStrength) are also warranted to identify patient education needs and to link patients to on-line or community resources.

Training: Focus should continue on increasing primary care-based behavioral health providers' knowledge, expertise, capacity as well as on understanding where primary care-based services fit within the entire care continuum. For behavioral health providers to be successful in fast-paced primary care environments with brief visits, they not only have to be trained to be comfortable in this setting, but they have to be supported in working in a more problem-focused manner, prioritizing brief intervention and therapy. Behavioral health concerns should be identified early, and there should be facilitation of communication, collaboration and treatment between providers. Ongoing encouragement for physical health providers to use the expertise of trained behavioral health specialists is warranted and will likely improve patient education and satisfaction. Reciprocally, primary care providers need training to become more skilled in addressing certain behavioral health concerns directly through, for example, training in motivational interviewing and behavior change. (A recent randomized study conducted at DH demonstrated that patients seen by PCPs who had received MI training had better depression outcomes at 36 weeks than patients seen by PCPs who had not received MI training.) Psychiatrists must be trained and supported to be able to help patients through a brief consultative model.

Dissemination: As noted, Denver Health has already committed significant resources to clinical integration and established strong collaborative relationships with the Mental Health Center of Denver (MHCD). We believe we have lessons learned and best practices to share from this experience. We would also like to benefit from the lessons learned from others that have implemented integrated behavioral health models. The SIM grant committee structure provides a great infrastructure for this dialogue.

Evaluation: There is a need to ensure that structured, evidenced based interventions are implemented along with systems to track outcomes. Evaluation of strategies around screening, patient engagement in treatment, medication adherence, and behavior change are key areas. Additionally, it continues to be important to

[1] Many terms and definitions can be found in the Appendix at the end of this document.

evaluate strategies for coordinating care for people with severe and complex psychosocial needs as well as severe and persistent mental illness and substance use.

8) **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Nearly all of the factors listed here are barriers to the clinical provision of care and have been covered in our previous answers.

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to

9) **What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?**

DH believes the state should focus on functions and outcomes, rather than detailed requirements related to care models and process (e.g. requiring specific tools). With that caveat, we recommend that recognition for providing integrated care be based on a combination of factors. First, practices should score at least a level 4 on the Proposed Standard Framework for Levels of Integrated Healthcare scale. This means that there is close onsite collaboration between PCPs and Behavioral Health Clinicians and some system integration. It is important to recognize that this level of integration by itself will not guarantee improved health outcomes unless there are resources and protocols in place to manage common behavioral health problems.

Therefore, a second criterion should be that practices have established evidence-based protocols for common behavioral health conditions. However, these protocols should not be dictated by the state or RCCO. Qualified primary care practices (see above) should be given some latitude to experiment with which evidence-based protocols work best with their population and practice model, as there are numerous models and not clear evidence. The SIM grant presents a unique opportunity to test and evaluate alternate models, and the state should cast as wide as possible a net.

For example, DH has been working on implementing the evidence-based Collaborative Care Model for depression. The key components of this model are the following: patient education to inform and encourage patients to actively participate in decisions about their care, availability of brief evidence based therapies, ongoing monitoring of adherence to treatment with strategies to reengage patients who have stopped taking their medications or dropped out of therapy, ongoing monitoring of treatment outcomes with feedback reports of these results to both patients and providers, access to in-person and/or by phone or email consultations with psychiatry regarding medication management issues, coordinated protocol driven stepped care for patients who are not improving as expected. Other models exist and should also be explored.

Programs with these two broad features should be able to attend to the comprehensive needs of the patient including physical health, mental health, behavioral health, substance use disorders, and psychosocial issues with focus on both chronic disease management as well as prevention. Qualified programs should directly provide or have established referral relationships for specialty treatment, case management, disease management as well as health coaching for wellness/prevention and health behavior change counseling. Given the range of PCMPs that might seek to pursue this designation – large and small-- it may not be possible to require a common electronic health record with decision support, but that would be highly desirable. Similarly, access to telehealth services to reach patients who are unable to attend an appointment physically and/or to reduce other access to care barriers would also be desirable.

http://www.hpoe.org/Reports-HPOE/Behavioral%20health%20FINAL.pdf

10) **Please share any other general advice or suggestions you may have about behavioral health integration.**

Significant capacity-building for substance abuse treatment statewide will need to be undertaken to realize the full benefits of behavioral health integration.

Care Coordination

11) **Care coordination is an important part of the ACC Program.**

a. What is the best definition of care coordination?

While DH sees value in defining care coordination for the purposes of the ACC RFP, this is best understood as conceptual framework rather than a list of benefits. Specific care coordination models should not be dictated by the state or RCCO. Focus should be placed on broad care coordination functions and outcomes, not on allowed providers, required documentation, specific services or workflow processes. DH believes that there are a number of good definitions of care coordination developed by national organizations with content expertise that the state could use. A key feature of these definitions is consideration of service needs broader than just health care services. A few examples are listed below.

The Agency for HealthCare Research and Quality (AHRQ) define care coordination as "deliberately organized patient care activities and sharing information among all participants concerned with a patients care to achieve safe and more effective care' and offer examples of broad approaches (ie: include team work, care management, medication management, health information technology, PCMH) and activities (ie: communicating/sharing information, assessing patient needs and goals, creating a care plan, monitoring and follow up as needs change, linking to community resources, supporting self-management goals)."

The Safety Net Medical Home Initiative definition of care coordination is: "linking patients with community resources to facilitate referrals and respond to social service needs; integrate behavioral health and specialty care into care delivery through co-location or referral agreements; track and support patients when they obtain services outside the practice; follow-up with patients within a few days of emergency room visit or hospital discharge; and communicate test results and care plans to patients/families."

Lastly, the National Committee for Quality Assurance (NCQA) defines care coordination as "a function that facilitates information-sharing across providers, patients, types and levels of service, sites and time frames." It also provide tools to measure the implementation of care management in a practice (PCMH recognition).

b. How should RCCOs prioritize who receives care coordination first?

Care coordination should be given first to patients who are at the highest risk for poor health outcomes, those with complex conditions, and those with a history of potentially avoidable utilization.

c. How should RCCOs identify clients and families who need care coordination?

Within broad parameters (e.g., required focus on patients at risk for hospitalization), high-performing PCMPs should be able to tailor their operational definitions to existing identification methodologies and workflows. For example, DH uses a formal risk stratification ("tiering") process developed under

its CMS HCIA award (21st Century Care). RCCO members are stratified according to care needs into 4 risk groups for all adults and children. All patients who have used services at Denver Health are 'tiered' monthly and high-utilizers are identified daily. The primary building block of the tiers employs a predictive modeling tool/diagnosis group, a 3M product called Clinical Risk Groups (CRGs). CRGs are used for initial sorting of patients into the 4 risk tiers. CRGs consist of 9 mutually exclusive and clinically coherent groups (and corresponding subgroups) that are ranked according to financial risk. More specifically:

- CRG status 1 includes the set of individual CRGs that correspond to health individuals.
- CRG 2 includes those with acute issues only
- CRGs 3-7 are reserved for those with an increasing number and severity of chronic diseases
- CRG 8 corresponds to metastatic cancers, and
- CRG 9 is for catastrophic events, including trauma.

More than 90% of attributed patients are assigned to tiers based on their CRG. However, approximately 10% of patients are promoted to a higher tier due to concerning utilization patterns or children with special needs registry status. Unusually high utilization is often a marker for unmet social needs and/or behavioral health concerns.

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

As recommended throughout this section, DH does not recommend a prescriptive approach to care coordination as such requirements are often pushed down to the PCMP, often without regard to the PCMP's system of care. Monitoring should focus on broad care coordination functions and outcomes, and any documentation requirements should be adapted to PCMP workflows not RCCO workflows. In an ideal world, RCCOs should have electronic communication interfaces with PCMPs so that recent utilization information and care plans can be easily shared and consolidated.

12) **What services should be coordinated and are there services that should not be a part of care coordination?**

No service should be explicitly excluded from care coordination. All healthcare and healthcare support services should be coordinated. This includes barriers to care and barrier resolutions—including such matters as housing, transportation, social service intervention (psychosocial, mental health), and transitional care. In order to provide a holistic, patient-centered care approach to care coordination, it would be necessary to assess and intervene in most all areas identified that prevent patients from receiving comprehensive care.

As such, it will be necessary for each PCMP to prioritize the care coordination services they feel will most benefit their patients and reduce unnecessary costs. Some common examples follow. Skilled Nursing Facility (SNF) and hospital to home transitions are likely to be a high priority for most PCMP's. Multiple hospitalization and/or ED visits, especially those with significant chronic conditions, also represent an

important opportunity for care coordination. DH has found that care coordination is especially important for patients who are leaving the criminal justice system and need to reestablish care in the community.

13) **What pieces of information are most important to have about someone in order to know what care coordination he or she needs?**

While it is efficient for RCCOs/PCMPs to use automated methods to identify potentially high-risk patients, self-reported information often remains the most effective way to identify patient-centered opportunities to coordinate care. Psychosocial information such as living situations, finances, education, behavioral health and substance abuse remain of utmost importance in determining how to coordinate services for an individual. This social/behavioral information along with access to health and medical information is essential to understanding all the issues necessary to identify actionable opportunities to mitigate risk for ED and hospital utilization. Some of the broad categories to consider are health behaviors, illness beliefs, social and functional needs, gaps in care and patient's preferences for addressing their possible needs.

PCMP (team) evaluation and care plan development should include a behavioral health and bio-psycho-social intake, patient/family goals, identified barriers to care with plans for barrier resolution, current/accurate contact information for the patient/family, best means of contact, and documentation of patient's readiness (activation) to participate in program. In many cases, it is the psychosocial issues that present the barriers to care and coordination.

14) **Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.**

a. **What care coordination is going on today?**

As described, within Denver Health, there is care coordination for RCCO members occurring in two main areas of the system – the divisions of managed care and ambulatory care services (ACS). Limited hospital based care coordination services also exist. Simplified, managed care offers centralized and typically telephone-based services, whereas ACS offers more face-to-face, primary care-based services, with additional telephone follow-up. As noted, the DH ACS and managed care staff often share information and resources to coordinate care for the most complex RCCO patients. Varying models of care coordination are employed and each area uses staff differently.

Within ACS, all patients are offered text message reminders about appointments and recommended preventive services. For lower risk patients, this low-touch support may be sufficient to support their good health. However, higher risk patients often need more frequent and/or more comprehensive follow-up care as well as substantial social/behavioral health support. 77% of DH Division of Medicine patients that readmit after discharge have a psychiatric or substance abuse history or both.[xii] Narrowly defined interventions have had little impact on utilization patterns for complex patients.[xiii]

DH expanded its primary care staffing model to include new team members to optimize clinical visits and support complex patients between visits. This enhanced care team includes patient navigators and clinical pharmacists for adults, pediatric nurse care coordinators, as well as social workers and behavioral health consultants. The staffing model varies by clinic type (pediatric, family medicine, and

general internal medicine) and patient population profile. Standard work has been defined for all team roles, and the primary point person for a patient is defined by patient need. Protocols exist at all clinics for outreaching to high risk/high cost patients for complex care coordination as well as following up with patients post-hospital discharge.

ACS also operates/funds three specialized clinics with small patient panels that focus exclusively on high-risk populations: CSHCN, medically complex adults, and adults with significant mental health diagnoses. All high-risk models provide tailored "wrap-around services" that focus on coordinating care for complex patients and addressing unmet social and behavioral needs. They also facilitate access to specialty care and community-based services ranging from development disability services, school-based services, substance abuse treatment, supported housing, supported employment, peer support, and residential treatment.

DH division of managed care provides centralized case management. Services range from a care support line for appointment scheduling or transportation needs, to telephonic health behavior coaching and counseling for patients with anxiety or depression, to chronic disease prevention and management programs, to complex case management programs. The latter programs offer intensive hospital discharge and other support services to high risk/high cost patients that are often provided in collaboration with primary care-based services that target the same population. Managed care staffing is similar to primary care staffing, consisting of patient navigators, health coaches, pharmacists and behavioral health counselors, but the central provision of services helps fill important gaps in primary care based services. For example, currently, only large ACS clinics have a dedicated clinical pharmacist. DH providers may refer RCCO patients to any of these programs and receive regular feedback reports on their patients. Managed care has also collaborated with the Denver Health Nurse Advice Line to develop centralized ED diversion strategies that include protocols to prescribe medications for many of the common problems that patients would otherwise result in an ED visit.

Finally, both ACS and managed care have implemented automated methods to identify and outreach to patients as well as to track care coordination activities. However, a true consolidated and shared electronic care plan awaits the completion of DH's transition to an EPIC electronic health record in 2015.

Additional detail on DH's centralized and primary care based programs is provided in question #1.

b. **What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?**

As described, DH collaborates with many different health and social services organizations on behalf of clients. Many of these organizations have their own case managers, all focusing on different aspects of managing care for an individual. The goal or purpose of intervening differs depending on the agency and the funding for intervention. Some programs use case managers to determine program eligibility and/or authorize services, so patients may not access services without their involvement. Although DH makes an effort to identify, especially for high-risk patients, any external case managers that can assist

with patient-centered care, care coordinators outside the RCCO or ACC may not be known and/or exchange information.

c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

It is important to recognize that care coordination is often accomplished by individuals with a variety of titles and training. Furthermore, similar titles, such as "case manager" or "care coordinator" often provide very different services, depending on organizational context. In exploring what is in place in a community, it important to look beyond titles and focus on function.

Furthermore, the patients of central ACC interest – the high-cost patients with high and potentially avoidable utilization -- often have many, many challenges that span medical, mental health, behavioral, and social domains. Patient "Hendricks" in Atul Gawande's famous New Yorker article is illustrative of the complex patient profile. (See below.)

THE HOTSPOTTERS

by Atul Gawande JANUARY 24, 2011

"Hendricks" had severe congestive heart failure, chronic asthma, uncontrolled diabetes, hypothyroidism, gout, and a history of smoking and alcohol abuse. He weighed five hundred and sixty pounds. In the previous three years, he had spent as much time in hospitals as out. ... A toxic combination of poor health, Johnnie Walker Red, and, it emerged, cocaine addiction had left him unreliably employed, uninsured, and living in a welfare motel. He had no consistent set of doctors, and almost no prospects for turning his situation around.

Like the Gawande-profiled program, DH has found that it is indeed possible to change the cost trajectory of even patients like Hendricks, but it often requires the concerted efforts of a multidisciplinary team of people – medical personnel, social workers, behavioral health consultants, clinical pharmacists, patient navigators, and others -- patching together a complex set of community resources from multiple organizations. A simple post-discharge phone call is not at all sufficient.

It may be possible to reduce some aspects of care coordination complexity by integrating the actual services, which has long been DH's philosophy as an integrated delivery system. However, even in our system that provides primary care, specialty care, behavioral health services, public health programs,

and certain social services as well as ED care, hospital care under a single administrative roof, we have found value in providing both primary care based and centralized service.

Given the inherent complexity of multidisciplinary teamwork, communication (early and often) is key both to good service and avoiding duplicated effort. It is important to discern who is doing what and why. It is often helpful to designate a 'primary' point of contact for the patient, which often works best if the patient selects this person. A consolidated care plan (electronic or otherwise) shared amongst all providers/payers is ideal, but often limited by privacy rules and lack of supportive systems.

d. What are the gaps in care coordination across the continuum of care?

Access to information on real-time patient care and cost information is an important gap that could be addressed in the forthcoming ACC RFP. Determining which patients would best benefit from care coordination remains a challenge and additional information to feed into PCMP risk profiling strategies can only help.

Additionally, in Denver, there are few programs that currently conduct home visits to assess patients within their environment. The literature has shown that home visits for high risk patients can be an important means to identify risk factors that might otherwise be missed and understanding the magnitude of needs that individuals may have. However, home visits are expensive and require qualified and highly trained staff and appropriate financing.

Also see 14 c about communication gaps due to the complexity of multidisciplinary team work.

15) **RCCOs' roles in addressing clients' and their families' non-medical needs. Please complete the table below, keeping in mind adults, children, and families:**

The areas identified in the table below are functions that the organization providing care coordination should be providing, as they relate to a RCCO member's health.

Non-medical need:	Should the RCCO have a role? Yes	No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma	☐	☐	☐

16) **Requirements about who should be doing care coordination. Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:**

Care coordination models or care coordination titles should not be dictated by the state or RCCO. Focus should be placed on the outcomes desired, not on restricting or defining providers or provider teams. RCCOs and PCMPs with care coordination delegation should have flexibility to define a system that works for their population in achieving those outcomes. However, it is reasonable to require RCCOs/PCMPs to provide transparency in describing their care model as well as team composition, roles and responsibilities. Real care coordination is not achieved by titles, but by high functioning proactive teams dedicated to excellent care, working in systems with good tools. DH-specific examples are provided below.

Consistent with the above recommendation to focus on functions not titles, DH has distinguished the following titles as to whether they typically serve as care team leaders (primary care providers), provide advanced care coordination, or provide basic care coordination. We would be happy to share more detailed standard work specific to the DH implementation of these roles, upon request.

Type:	Coordinate care? Yes	No	In what capacity should these individuals coordinate care in the ACC Program?
Advanced Practice (Registered) Nurses	☒	☐	Part of DH's primary care based enhance care team, advanced coordination
Certified Addiction Councilors	☒	☐	Identifying resources, referrals
Certified Nurse Midwives	☐	☒	Function as primary care providers (may do some care coordination as well)
Community Health Workers	☒	☐	Basic coordination – transportation, appt scheduling and reminders, access to care
Generalists (BA/BS/MA/MS)	☒	☐	Advanced coordination (based on experience) – identifying needs and connecting to services/programs and resources
Health Coaches	☒	☐	Communicate with PCPs
Licensed Clinical Social Workers	☒	☐	Advance coordination including case management – ongoing assistance and follow up. Either providing or using other staff for basic coordination needs. Communicating with providers, coordinating all activities. Main/central point of contact for patients.
Licensed Marriage and Family Therapist	☐	☒	
Licensed Mental Health Counselors	☐	☒	
Licensed Professional Counselor	☐	☒	
Masters of Public Health	☒	☐	Advanced coordination (based on experience)
Medical Doctors / Doctors of Osteopathic Medicine	☐	☒	Function as primary care providers (may do some care coordination as well)
Nurse Practitioners	☐	☒	Function as primary care providers (may do some care coordination as well)

Patient Navigators	☒	☐	Basic coordination, more population management than individual management. More of a connector. Helps with logistics with guidance from clinical staff.
Peer Advocates	☒	☐	Basic coordination, more population management than individual management. More of a connector. Helps with logistics with guidance from clinical staff.
Promotoras	☒	☐	Basic coordination, more population management than individual management. More of a connector. Helps with logistics with guidance from clinical staff.
Psychiatrists	☐	☒	Communication with PCPs
Psychologists	☐	☒	Communication with PCPs
Registered Nurses	☒	☐	Advance coordination including case management (if their role included this). This would not include a direct practice nurse. Provides ongoing assistance and follow up for disease/clinical issues. May provide basic care coordination or use other non-clinical supports to assist. Communicate with providers, patient education, medication monitoring, coordinating all activities. Main/central point of contact for patients.
Social Workers	☒	☐	Advance coordination including case management – ongoing assistance and follow up. Either providing or using other staff for basic coordination needs. Communicating with providers, coordinating all activities. Main/central point of contact for patients.
Wraparound facilitators	☐	☐	
Other	Within a RCCO or PCMP with delegated care coordination, care team member roles and responsibilities should defined and communicated. Although there may be cross-over amongst roles, the team must communicate effectively to integrate care. The team must ensure that the physical, behavioral, long-term care, social and other services are continuous and comprehensive. All providers must communicate with one another to effectively coordinate care.		

17) **Care coordination requirements for specific populations**. Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe

Newborns and infants	☐	☒	
Children	☐	☒	
Children who are healthy, but in socially-complex environments	☐	☒	
Children involved in the foster care system	☒	☐	
Children with a chronic illness	☒	☐	
Children with a serious emotional disturbance	☒	☐	
Children with medical complexity	☒	☐	
Children or youth with a behavioral health diagnosis or substance use disorder	☒	☐	
Transition-age adolescents	☐	☒	
Parents and families	☐	☒	
Pregnant women	☒	☐	Obvious risk groups – risk factors for low birth rate, adverse pregnancy outcomes
Adults	☐	☒	
Adults who are healthy, but in socially-complex situations	☐	☒	
Adults with a chronic illness	☒	☐	
Adults with a behavioral health diagnosis or substance use disorder	☒	☐	
Clients involved in the criminal justice system	☒	☐	When transitioning out of the correctional system, connecting to CBO's for resources and support
Clients with a disability	☒	☐	
Clients in a nursing facility	☒	☐	
Elderly clients	☐	☒	
Frail elderly clients	☒	☐	
Clients in palliative care	☐	☒	
Other populations, please comment:			

18) **How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?**

The RCCOs or PCMPs with delegation should be responsible for screening and the initial assessment and care plan. The RCCO can help facilitate access to these community based services and care coordination.

19) **How should care coordination be evaluated? How should its outcomes be measured?**

KPIs should continue to be used to evaluate ACC/RCCO outcomes. RCCOs and PCMPs with delegation will also need to establish productivity and other process measures. While these process measures should not be centrally defined, they could be shared. Larger PCMPs (e.g., those with delegation) may wish to establish additional measures for internal performance monitoring, including outcomes for specific populations (eg: children with special needs). DH has experimented, for example, with total cost of care, admissions for ambulatory care sensitive conditions, readmissions, ED visits for pediatric asthma, as well as patient satisfaction. The specific set of outcomes used will depend on the population being evaluated and should not be required.

20) **Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.**

a. **What is the PMPM cost for providing care coordination services?**

The current RCCO care coordination model relies on an infrastructure originally established for DH's managed care populations and greatly enhanced by a $20 million CM5 innovation grant. It is impossible to disentangle services that have been made available by virtue of the RCCO PMPM payments versus these previous and concurrent investments. However, given these prior investments, we believe the state is getting excellent value for its care coordination outlays in the form of downstream cost avoidance that we HAVE been able to quantify.

b. **Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?**

Yes, but only if the variation in PMPM is actuarially derived, ideally with some provision for known social risk factors (e.g., foster care status, immigration status, homelessness, etc.).

21) **Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?**

Since a variety of types of providers can perform different aspects of care coordination it not feasible to define a one-size-fits-all "care coordination to client ratio." RCCOs and PCMPs should have the flexibility to determine the type and number of staff needed to meet the needs of their population. Rather than focusing on staffing ratios, we believe it makes more sense to focus on functions and desired outcomes. However, RCCOs/PCMPs with delegation could be required to disclose the staffing ratios they have implemented along with a rationale of why this makes sense for their population and clinical practice setting.

a. **Care coordinator to client ratios.** If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☐

51-100	☐
101-200	☐
201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

22) **How should care coordination outcomes be evaluated by the Department? Which metrics are most important?**

The Department should continue to utilize KPIs.

23) **Please share any other general advice or suggestions you have about care coordination in the ACC.**

Care coordination models should not be dictated by the state or RCCO. Focus should be placed on the outcomes desired, not on the allowed providers or provider team requirements.

Program Structure

24) **If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).**

This answer depends on if RCCO regions and functions remain largely the same as they are today: care coordination, practice transformation support, patient attribution and reporting, with no provider payment function. In this instance, it would be important to standardize RCCO care coordination delegation financing by capping administrative fees and to facilitate RCCO access to timely data.

However, HCPF's interest in moving toward advanced payment models has implications for RCCO design and functions that go well beyond these areas. DH recommends one of two options for implementing payment reform:

- **Permit multiple RCCOs per region with population-based payment**: allow one or more RCCOs -- defined by patient care seeking/provider practice patterns rather than patient residence -- to exist in regions, like Denver, *where doing so would enable more rapid achievement population health goals and population-based payment models*

- **Retain a single, regional RCCO with PCMP-level payment reform:** have HCPF retain its provider payment function (as today) and negotiate advanced payment models with IDSs and other PCMPs that are ready for them

DH recognizes the option one is a departure from how RCCO service areas are currently determined. Defining a RCCO's population according to patient *core preferences* rather their residence remains a population health-oriented approach, and arguably a more patient-centered one. Low-income populations are known to be mobile. In mapping its patient population, for example, DH has discovered that some patients are willing to travel long distances to access to DH services, especially Spanish-speaking patients and immigrants. Particularly in dense urban areas, regions defined by geography will result in arbitrary boundaries and resulting barriers to care and care provision at the patient-level.

Defining RCCO's by care seeking patterns is consistent with the ACOs envisioned by Fischer and McClellan and represents further consolidation of the RCCO and PCMP roles already begun under the current ACC model through delegated care coordination contracts. Merging RCCO/PCMP roles and functions in this way should be allowed *ONLY for delivery systems that can commit to partial- or full-capitation or similar population-based payments*. Regional RCCOs would likely continue to be needed to provide care coordination support to smaller PCMPs and nurture them along the payment reform continuum and possibly for patient attribution and regional planning purposes. This option address many of the concerns listed in #2 related to the FFS payment model, high administrative loads on delegated care coordination agreements, delayed attribution, and large PCMPs serving multiple RCCO regions.

The second option is for HCPF to retain a single, regional RCCO design and to work directly with integrated delivery systems and other larger PCMPs on advanced payment models. In this case, significant thought will still need to be devoted to redrawing RCCO boundaries to better observe patient care seeking and provider practice patterns. But, even if improved, any geographic definition of RCCOs is going to pose problems for patient care. Today, large PCMPs with delegated care coordination contracts with multiple RCCOs – DH works with two RCCOs in four regions -- face redundant administrative requirements, reporting infrastructures, and conflicting priorities. This places disproportionate burdens on the highest-performing parts of the ACC provider network. The state should cap at 10% overhead on delegated care coordination contracts and should also consider allowing PCMPs to elect (optionally) to affiliate with a single RCCO. Finally, the RFP should clearly articulate how a regional RCCO will provide value to all network participants, large and small alike.

DH does not recommend that RCCOs become regional payers without acknowledging this is a sweeping change to the RCCO role and function, effectively turning them into regional managed care plans, with different federal authority requirements, organizational and financial requirements, UM and billing data systems, and staff expertise. Not all current RCCOs meet these requirements. DH has successfully operated the only fully capitated Medicaid plan in the state for more than a decade. If the state wishes to transition the RCCO program to managed care model, DH is willing to share its experience and provide detailed thoughts and options.

25) **What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?**

RCCOs should be required to collaborate closely with local departments of public health on community needs assessments to share with PCMPs. It should have a demonstrated track record for improving the clinical collaboration between providers of different types and working effectively with a wide variety of community-based social, mental health, and housing programs and services.

26) **The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.**

Yes, see # 24.

27) **Should the RCCO region maps change? Why or why not? If so, how?**

Yes, they should reflect patient care patterns and provider practice patterns. Ideally, RCCO boundaries would be defined by patient care preferences not geography. Integrated delivery systems and other large PCMPs that are willing to commit to full- or partial-capitation should be allowed to form their own RCCOs. See #24.

28) **Should the BHO region maps change? Why or why not? If so, how?**

Yes, they match RCCO regions and both should reflect patient care patterns and provider practice patterns.

29) **Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?**

It would depend on the nature of the new RCCO role and the successful RCCO bidders.

30) **What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?**

The HealthColorado contract should better ensure efficient and accurate patient attribution as well as ensure retroactive payment to PCMPs. DH agrees with several of the technical suggestions offered by the CCHN response to the ACC RFI in this area. Additionally, special attention and outreach should be provided for recent immigrants who are more likely to encounter problems with current attribution methods.

Payment reform will also likely require state plan amendments (SPAs) or waivers to implement key program design features. Areas for regulatory investigation relate to upper payment limits, patient assignment provisions, and 12 months continuous eligibility requirements (to increase enrollment stability and reduce churn.) Suggested changes to the RCCO contract have been outlined in Question 24.

31) **What are the limitations of the current benefit structure and what – if any – changes are needed?**

The Medicaid adult dental benefit cap is too low. Substance abuse coverage and mental health financing is inadequate. Both contribute to a dearth of providers in these key areas.

32) **Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?**

Yes, in Denver. See #24 for a detailed rationale.

33) **If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?**

DH is a Medicaid provider.

34) **What role should RCCOs play in attributing clients to their respective PCMPs?**

RCCOs should be responsible for ensuring that everyone selects a PCMP within the first three months of enrollment. As enforcement of this responsibility, RCCOs could lose PMPM entirely for those that remain unattributed after three months.

35) **What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?**

The RCCOs should collaborate closely with CDPHE and local public health departments for regional planning purposes. See # 25. Also, the local health department should provide a letter of support to RCCO bidder.

36) **What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?**

The ACC and DHS should, at a minimum, compare goals to ensure alignment. This would be best accomplished at the Governor's Cabinet level.

37) **What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?**

The two programs should align eligibility determination methods and rules, including those related to income requirements and 12 months continuous eligibility. The latter is particularly important to reduce churning between Medicaid and the Exchange. Additionally, HCPF should provide real-time information to RCCOs/PCMPs, about members who will lose Medicaid eligibility at the end of the month due to excess income to reduce gaps in coverage and/or churn.

38) **What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?**

The ACC program should collaborate with DOI to ensure that the Medicaid definition of an Essential Community Provider is consider with the private insurance definition. This encourages consistent networks across public and private programs.

Stakeholder Engagement

39) **What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?**

The RCCOs should be required to form stakeholder workgroups consisting of advocates, state and local agency representatives, providers and other stakeholders. These workgroups can provide direction and feedback to the state regarding what does and does not work in existing programs. HCPF should require RCCOs to have consumer representation on its governance structure.

40) **What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?**

Workgroups should ideally meet at regular intervals and include representatives who can go back to their constituencies to relay meeting information and discuss solutions.

41) **Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?**

The location of the workgroups should occur in the various local communities being served by the ACC program. Consumer input will be especially valuable here.

42) **How should the Department structure stakeholder engagement for the ACC as a whole?**

HCPF should continue to host one or two regional stakeholder meetings per year. It is important for HCPF leadership and ACC staff to have a presence in each region at least once a year. Agendas and meeting materials should be posted at least two business days in advance of meetings. Agendas should clearly include opportunities for public input. Finally, HCPF must use technology that allows stakeholders outside of Denver, or those who cannot easily travel to meetings, to participate remotely.

Network Adequacy and Creating a Comprehensive System of Care

43) **Does the current network of PCMPs, specialist, behavioral health providers, hospitals, pharmacies, dental, home health and non-medical providers adequately serve the ACC population?**

   a. **If no, what are the gaps?**

   b. **Please address gaps for the population as a whole, and for specific subpopulations such ase children/families and individuals with disabilities.**

The Medicaid expansion has increased revenues for DH that we have been able to reinvest into expanded primary care, behavioral health, and specialist care access. Waiting lists are greatly reduced although persist in some areas, such as orthopedics and dental. DH has implemented an aggressive initiative to dramatically improve specialty care access in 2015 to project and meet the increased community demand, prompted by the coverage expansion.

44) **ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.**

   a. **What role should hospitals play in the next iteration of the ACC Program?** RCCOs/PCMPs should create a care transition system that includes specialists, hospitals, pharmacies, home health, hospice SEPs, CCBs, and PCMPs. Provisions for a shared care plan should be addressed. Additionally, hospitals should provide real-time admission/ED data to PCMPs and collaborate with them on strategies to avoid preventable utilization and to assess risk for readmission. This can be incentivized through the payment model.

      Specifically, DH has engaged with our affiliated hospital in the following areas/roles: transitions of care, reporting of recent ED visits, and proactive identification of patients for palliative/hospice care. DH is also investigating options for ED-based interventions to redirect care that does not require emergency room intervention. Active interventions are provided in the hospital for high-risk patients including patient education, case management, and assessment for intensive primary care services in our Intensive Outpatient Clinic (IOC). We would like to collaborate with other area hospitals in a similar fashion.

   b. **What role should pharmacies play in the next iteration of the ACC Program?** RCCOs/PCMPs should create a care transition system that includes specialists, hospitals, pharmacies, home health, hospice SEPs, CCBs, and PCMPs. Provisions for a shared care plan should be addressed.

      DH has found pharmacists to be key team members in both inpatient and outpatient settings. Medicine reconciliation is a common care gap and is often best addressed by a pharmacist. Pharmacists should be responsible for counseling patients who are receiving a first prescription for medication that they will need to take on a chronic basis and for enrolling patients in programs to

promote medication adherence such as refill reminder, late refill notification, and adherence/side effect monitoring.

c. **What role should specialists play in the next iteration of the ACC Program?** RCCOs/PCMPs should create a care transition system that includes specialists, hospitals, pharmacies, home health, hospice, SEPs, CCBs, and PCMPs. Provisions for a shared care plan should be addressed. Specialists can play a key role in treatment planning and patient education, especially for patients with poorly controlled chronic diseases.

d. **What role should home health play in the next iteration of the ACC Program?** RCCOs/PCMPs should create a care transition system that includes specialists, hospitals, pharmacies, home health, hospice SEPs, CCBs, and PCMPs. Provisions for a shared care plan should be addressed. DH believes home health agencies could be more active in conducting in-home post discharge assessments and working to develop strategies to reduce down-stream costs (e.g. readmissions).

e. **What role should hospice care play in the next iteration of the ACC Program?** RCCOs/PCMPs should create a care transition system that includes specialists, hospitals, pharmacies, home health, hospice, SEPs, CCBs,and PCMPs. Provisions for a shared care plan should be addressed. Palliative care programs are often underdeveloped, and providers may need additional training to identify appropriate patients for palliative and hospice care.

f. **What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?** RCCOs/PCMPs should create a care transition system that includes specialists, hospitals, pharmacies, home health, hospice, SEPs, CCBs, and PCMPs.

g. **What role should counties play in the next iteration of the ACC Program?** The integration of public health and primary care is important in terms of population health, disease prevention and health behavior change. Counties need to work with the health care system to address important social determinants of health such as housing and healthy food availability.

h. **What role should local public health agencies play in the next iteration of the ACC Program?** See #g (above) and #35.

i. **What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?**

This was covered in many of our previous responses. Collaboration with a wide array of community-based organization is critical.

45) **How can RCCOs help to support clients and families in making and keeping appointments?**

This is better handled at the PCMP-level as appointment practices vary. However, PCPMs could use no show rates to identify patients potentially in need of care management. DH triggers certain care coordination/care management activities if a patient is out-of-care for a defined period of time.

Most PCMPs, like DH, have appointment reminder protocols (phone calls, texting, letters, etc.) in place and often know those patients who have trouble keeping appointments.

RCCOs (or in DH's case, managed care "centralized services") could support PCMPs by communicating/collaborating with the primary care team—especially for those patients with known problems or barriers. Additionally, RCCOs can help ensuring adequate access to services so patients are able to receive needed care. If access is a problem (i.e. time to appointment is unacceptably long), RCCOs could advocate on behalf of the patient who may be reticent to complain directly to the clinic. RCCOs could also hold contracted transportation services more accountable for their performance (communications, on time pick -up and delivery, etc.) Finally, and importantly, RCCOs and PCMPs should empower patients to take a more active role in their health care, including how to make and keep appointments.

46) **Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?**

HCPF should not impose its staffing model preferences on RCCOs/PCMPs, but hold them accountable for functions and outcomes. One key function is that CHWs/PNs should be patient-centered not disease or condition focused. Disease focused navigation results in multiple navigators for complex patients that serves to replicate fragmentation rather than address it.

However, DH has found that patient navigators can play an important role in providing care coordination and/or helping patients navigate the system. In fact, we have successfully implemented PN in both our community health clinics and managed care/insurance settings. DH Navigators help patients by identifying transportation, scheduling, and other barriers to care and assisting patients/families with barrier resolutions. Access challenges and system complexity make PNs and CHWs important non-clinical team members for patients/families to be successful in their healthcare.

If we are referring to CHW and PN as lay persons, we must also ensure they are adequately trained to provide care coordination and help patients navigate complicated systems while understanding their limitations and when/why to use clinically trained colleagues for needs involving that level of intervention. While there is training offered through the University of Colorado, there are no accepted standards that validate an individual's training, qualifications or experience to be a 'patient navigator' in Colorado (although this is in the works).

47) **Community Health Worker reimbursement**. Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement process	(Please check all that apply)
Independently bill	☐
On staff (salary) at Primary Care Medical Provider Clinic	☒
On staff (salary) at RCCO	☒
Per Member Per Month Payment	☒

48) **Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?** RCCOs should coordinate dental services as part of the overall healthcare for a patient. However, the current problem is less a coordination issue than an access one due to low/no reimbursement rates. It may be difficult for the RCCOs to address this issue without addressing the reimbursement for this service.

49) **Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.**

a. **What does cultural competence mean to you?**

The National Committee for Quality Assurance defines cultural competency as not only having empathy, but expressing it towards patients regardless of the patient or provider's culture background. In order to do so, clinical and non-clinical staff must have an adequate understanding of the patient population including its diverse health literacy, language and cultural needs. In practice, cultural competence is about 'asking the right question' which might include asking questions like what is your understanding of your illness?, what does this illness mean to you?, what are your concerns about it?, what are your goals?, are there any specific things you would like me to do to help you with this problem today? It requires understanding health conditions from the patient's perspective. Cultural competence is a set of congruent behaviors, attitudes and policies that come together in a system or amongst professionals and enable that system or team to work effectively in cross-cultural situations. It is a developmental process that evolves over time.

b. **What RCCO requirements would ensure cultural competency?**

All clinical staff should be trained in cultural competence with periodic follow-up to ensure providers have the skills to evaluate patient's perception of illness including their concerns, goals and preferences. Ideally, providers could then modify/alter/consider different approaches or recommendations with patient preferences and perceptions in mind. RCCOS should require that

providers/organizations have policies and procedures in place that: value diversity, have capacity for cultural self-assessment, are conscious of dynamics inherent when cultures interact, have institutionalized cultural knowledge, and have developed adaptations to service delivery reflecting an understanding of cultural diversity. Availability of interpreting and translation services is also critical. RCCOs could assist in developing patient education materials for use in some of the more common language and cultural groups.

c. **What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?**

RCCOs should ensure providers and practices have access to interpreting and translation services and materials that reflect the population served to ensure patients are communicated with in their preferred language. For example, the vast majority of DH PCMP-based providers are bilingual English and Spanish speakers and all have access to the "language line" to provide translation services by phone in any language. As well, DH requires that written communication be at literacy level that is reflective of the population they serve (ie: 6th grade for Medicare).

d. **Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?**

The SDAC and practices should be encouraged to analyze key outcome data to determine if there are any ethnic or racial disparities among RCCO populations for specific focus. RCCOs should provide support for developing QI interventions to address any identified disparities. RCCOs could require providers and organizations to have the skills, policies and system components outlined in b and c above.

50) **Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?**

In the context of health plan network design, well-designed preferred networks that focus on high performing providers have been shown to provide comparable quality at a better price as compared to broad networks. However, without significant movement along the payment reform continuum, RCCOs will not have the ability to develop or enforce such networks.

51) **Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?**

A multi-pronged strategy that focuses on payment as well as patient and provider behavior is required to reduce ED rates. DH believes the State should examine how payment reform can align financial incentives with more appropriate ED use, especially for use related to non-emergent conditions. Additionally, patients need education and real-time support in determining when to use the emergency room as well as alternative home-based strategies, for example, around the home management of common ambulatory problems such as upper respiratory infections, cough, abdominal pain, especially in children.

Provider-level solutions should focus on alternatives to ED use in the evenings and the weekend, such as DH's nurse advice lines, telephonic and/or email communication with physicians, and after hours care. Phone or email protocols to manage common ambulatory conditions that frequently result in ED use should be available. Post-ED follow up for patients seen in the ED for high-risk conditions should be provided. ACC must work with providers and emergency departments to coordinate care in real-time to facilitate transition of patient/family to most appropriate place of care.

Longer-term solutions require re-examining care delivery models. For example, DH has co-located its urgent care and emergency services, triaging patients as they arrive. It also created a 100-bed alcohol detox unit (Denver Cares) to divert inebriated, but otherwise healthy, patients from the ED. Given that many area hospitals advertise their ED wait times, payment model changes may be required to incentivize these types of care delivery innovations.

52) **Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.**

During 2014, the process of getting a primary care appointment has been dramatically improved at Denver Health. Since the economic challenges of 2008, known as the Great Recession, existing primary care capacity was exceeded and a waitlist was created to provide an orderly waiting process and to use the data to improve performance. The waitlist peaked at just over 10,000 in October 2013 and by November of 2014 the backlog was eliminated and the waitlist is now zero. The delay from time of request of appointment to providing the appointment is reduced to under 30 days, similar to private sector wait times to appointment for new patients.

Practice Support

53) **Support for practices.** Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

Specific tools should not be required.

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☒	☐	☐	☐
Network provider education	☒	☐	☐	☐
Assistance with practice redesign	☒	☐	☐	☐
Assistance with efficiency-enhancing activities	☒	☐	☐	☐

Provide comprehensive directory of community resources	☒	☐	☐	☐
Provide directory of other resources	☒	☐	☐	☐
Provide materials regarding Nurse Advice Line	☒	☐	☐	☐

Ensure all tools and resources are centrally located on RCCO-specific website	☒	☐	☐	☐
Others				

54) **If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.**

No specific tool should be required. PCMPs should select tools that meet ACC program goals and outcomes and work well within their system and work flows.

55) **What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?**

RCCOs should provide resources and support as requested by practices, but they should not be prescriptive For example, formal practice coaching such as that provided by Health Teamworks should be made available to practices that desire this type of support.

56) **What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?**

Practices should receive additional PMPM reimbursement based on their level of NCQA certification and meeting CMS requirements for Health Homes. Under population based payment models, down-stream cost avoidance should be reinvested in comprehensive primary care programs.

57) **Should the Department require that PCMPs utilize disease registries to manage the health of their population?**

All PCMPs should utilize a registry or electronic health record to produce population health management reports for care coordination purposes. For example, DH generates daily care coordinator worklists of people recently discharged from the hospital or visiting the ED as well as a variety of preventive service reminder lists and "gaps in care" lists for individuals with chronic conditions. Supplemental data provided by the SDAC may also be useful, if it is timely.

58) **Please share any other advice or suggestions about provider support in the ACC.**

The RCCOs should provide the basic infrastructure, as needed, that would enable PCMPs to perform and evaluate meaningful QI interventions.

Payment Structure and Quality Monitoring

59) **Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?**

The stated goals of the ACC include providing the Colorado Medicaid program with a client and family centered, whole person approach that improves health outcomes and ensures savings, with a focus on clinically effective and cost-effective utilization of services while identifying and using local resources to meet client needs.

While the current structure has shown some positive results with respect to quality and cost effective utilization of services, our view is that the current payment structure does not maximize savings because of payment to providers remains a fee-for-service reimbursement. It also discourages specialists and hospitals from being active participants in a population health model that threatens their financial viability under current business models. We recommend a movement toward capitation or other population-based reimbursement, at least for primary care services, and at least in regions where there are providers or RCCOs who are prepared for such a migration. Risk corridors or other variations on shared savings should be considered in order to encourage participation.

DH has made significant investments in population health tools (like EPIC and patient text messaging) and care models (like 21st Century Care) to help us migrate fully from a medical model to an outpatient-oriented, patient-centered, population health model. We worry that if the payment model does not align in time, we will lose ground and achieving our shared population health vision for Denver will be set back a number of years.

60) **If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?**

Yes, DH would be open to capitation payments rather than fee-for-service. Ideally all three elements of integrated, whole person care (physicial, behavioral and oral) health would be included. DH provides a broad range of services through its FQHC clinics. As an initial step toward full capitation, we envision that the FQHC-related primary care services could be included in a primary care capitation, including physician services, non-E&M PCMP services, and OP Labs/Pathology as these are services handled by PCMPs. In later years, the program could expand to cover additional services such as diagnostic imaging, PT/OT/SP, certain DME, and OP Radiology (professional services). Assuming upper payment limit (UPL) issues could be resolved to mutual satisfaction, an even broader set of DH medical neighborhood services could be provided, inclusive of hospital services.

61) **Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?**

No, many of them do not, and some small rural providers may never have this capacity. However, many larger providers, such as DH, do have capacity, and as argued in question #2, we believe the payment model should be matched to provider readiness for advanced payment. In general, value-based payments are best handled by providers with a large patient population, that offer a broad array of services, with an evidenced-based staffing model (e.g., PCMH, integrated behavioral health care, team-based care coordination), and IT resources for population health activities such as monitoring health needs, identifying high risk patients, and assessing performance. The major barriers are provider size and access to capital/reserves. The following is a list of characteristics that we believe demonstrate DH's readiness for payment reform and could be similarly used to assess whether other providers have the requisite infrastructure.

DHHA("the Authority") operates an HMO which is a separate S01(c) 4 corporation but a wholly owned subsidiary of the Authority, Denver Health Medical Plan (DHMP). Under a direct contract with HCPF, DHHA has also operated the state's only fully capitated Medicaid managed care plan (Medicaid Choice) for more than a decade, producing higher quality for members than FFS programs on most HEDIS quality metrics and at a lower price.

In addition to its experience with capitation, DH has or is developing infrastructure to effectively operate under other forms of value-based payment. As discussed, our integrated system provides a solid foundation for this payment model as we control nearly the full continuum of care, including primary care, specialty care, behavioral health, ED/urgent care/inpatient services, a 24-hour nurse line, Denver's 911 system, and even public health services. We offer both centralized and primary care-based care coordination services with focused initiatives for high-risk patients. In 201S, we will upgrade our electronic health record to the EPIC system. A highly functional electronic health record (EHR) is essential for future success under value based payment, and EPIC is the EHR of choice for nearly every other large hospital based system in Denver and nationally.

Historically, a barrier to success under value-based payment has been ensuring adequate access to DH's primary and specialty care. The issue of access to specialty care for Medicaid and underserved populations is not unique to DH. However, with Medicaid expansion revenues, DH has made significant progress toward matching primary care access with community demand, with near-elimination of the waitlist for appointments. DH is undertaking a similar effort in 201S to improve specialty care access. However, DH projects that an expanded network of contracted providers would be needed in order to adequately provide access to specialty care. DH believes it could play an important role in increasing the overall level of specialty care services to Medicaid members under a value-based payment model.

62) **The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?**

DHHA ("the Authority") operates an HMO that is a separate S01(c) 4 corporation but a wholly owned subsidiary of the Authority, Denver Health Medical Plan (DHMP). This entity is licensed by the DOI. DH also operates DH Medicaid Choice, a risk-based capitated plan under the Authority's direct contract with the State

Health Care Policy and Financing agency; this plan is not licensed by the DOI but maintains all necessary reserve requirements as if it were and these reserves are recommended and approved by outside actuaries and determined by be adequate by our independent auditors. The requirement regarding an HMO license would not preclude DH from bidding as if this were a requirement it would be handled through the DHMP. However, as we have demonstrated success in managing reserves through DH Medicaid Choice, and since DHMP provides care management and claims payment services to the Authority under an operating agreement, we effectively meet all DOI requirements. We would prefer the flexibility to operate as a RCCO through the Authority. This too is consistent with an ACO model in which providers receive direct payment.

63) **What role – if any – should the RCCOs play in the distribution of payments to providers?**

As discussed in question # 24, payments should be distributed directly to PCMPs (or RCCOs that are redefined as delivery systems.) Additional layers of administrative entities generally dilute/reduce the dollars directly allocated to the provision of health care services. There is not value added by having the RCCO act as a third party for payment purposes, and it adds complexity.

64) **Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.**

As discussed in question #24, we recommend that HCPF consider more than one RCCO in Denver County. Given the large population in metro Denver area, the large number of Medicaid users that access DH, DH's unique population health-oriented, integrated delivery system, and DH's readiness for an alternate payment model, a DH-specific RCCO could be dedicated to the DH population. This would eliminate unnecessary administrative overhead and duplication of effort that occurs under the current system, freeing up additional dollars for patient care. Using patient preference to define RCCO regions (rather than geography) is consistent with the literature and potentially extensible to a handful of other, high performing PCMPs.

We also applaud and encourage the State's efforts to combine physical and mental health under a single reimbursement structure to promote whole person care.

Under any scenario, rates paid to providers need to be adequate to reimburse the legitimately demonstrated cost of care provided, in order to maintain provider participation, support essential community providers, and ensure choice for patients. In order to encourage cost efficiency, shared savings models and risk corridors should be continued/developed. A model that capitates primary care, incorporating behavioral health, is a good start toward moving to the next level of payment reform in the ACC program. Structuring the payment model in this way also preserves the Upper Payment Limit (UPL) reimbursements on which many hospitals, including DH, are dependent in order to continue to cover the cost of the remaining uninsured population. At DH, the percentage of patients who are uninsured is still 13% which approximately 3 times the average for Colorado hospitals. Provider subsidy supports for hospitals for serving the uninsured will begin phasing out in 2016, so the window of opportunity to change the payment model is closing.

65) **What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?**

Measures should align with managed care HEDIS and CAHPS measure and/or already established PCMP metrics, to reduce PCMP/RCCO data burden. RCCO performance may be benchmarked to managed care performance.

66) **Measuring Client experience.** Please complete the table below to indicate how the Department should measure Client/patient experience:

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and 5ystems (CAHP5)	☒	☐	In 2012, CCHN worked with its members, including DH, to establish patient satisfaction measures that would meet the NCQA PCMH requirements. The full CAHPS survey is composed of 52 questions and the administration of it in entirety was felt to be too administratively difficult to implement. CHCs did agree to utilize and report on 5 questions from CAHP5, and we would advocate considering this shortened version to evaluate patient satisfaction: 1. In the last 12 months, how many days did you usually have to wait for an appointment when you needed care right away? (a. Same day, b. 1 day, c. 2 to 3 days, d. 4 to 7 days, e. More than 7 days) 2. In the last 12 months, how often did this provider explain things in a way that was easy to understand? (a. Never, b. Sometimes, c. Usually, d. Always) 3. In the last 12 months, did anyone in this provider's office talk with you about specific goals for your health? (a. Yes, b. No) 4. Specialists are doctors like surgeons, heart doctors, allergy doctors, skin doctors, and other doctors who specialize in one area of health care. In the last 12 months, did you see a specialist for a particular health problem? (a. Yes, b. No – if no, skip question 5) 5. In the last 12 months, how often did your provider seem informed and up-to-date about the care you got from specialists? (a. Never, b. Sometimes, c. Usually, d. Always)
5F-12 Health Survey	☒	☐	This tool is not used by DH at this time, so while we have no objection to it being an option, it should not be the only tool available.
Other types of client interviews / surveys	☒	☐	
Patient Activation Measure	☐	☒	The tool is not used for assessing patient engagement. DH's managed care department has not found it to be predictive of readmissions.

Focus groups	☒	☐
Other	The state should focus on patient satisfaction tools, not patient education tools. Additionally, as referenced in other questions, tools should not be prescriptive and requiring practices to implement duplicative efforts.	

67) **Knowing that, at this time, the Department only has claims data, how should population health be measured?**
HCPF should look beyond claims data to other partnerships that could be provided to develop data on population health, in particular through partnership with the Department of Public Health and Environment. Claims data, lab and pharmacy data, CDPHE's health survey data, and outside data sources such as the Colorado Health Access Survey could be utilized to measure population health until more robust and timely data tracking and measurement tools are in place. Sample size will be a known limitation here. In developing ways to measure population health the Department should not develop prescriptive tools for implementation in PCMPs, but should look for ways to mine data from what is already tracked by PCMPs.

Aligning performance metrics with managed care and or FQHC UDS performance metrics, some of which are claims based, would allow HCPF to compare RCCO performance to managed care performance for similar populations in Denver.

68) **How should quality and performance data be reported to the RCCOs, PCMPs, and the public?**

PCMPs should be included in the development of reporting models in order to ensure transparency in how their data is utilized and that reports are presented in a way that can be utilized to facilitate further improvements in their system. To address these concerns, a review system should be established to create and maintain transparency and integrity of data, and large PCMP systems, such as DH and other FQHCs, should have representation in that system.

Quality and performance data should be reported to PCMPs consistently across RCCOs so that those who serve patients across multiple regions can better understand their impact on their patient population. Additionally, this data should be provided on a regular basis and should include comparison information demonstrating not only how the PCMP is performing in relation to itself, but also in relation to comparable practices and the region as a whole. Presenting comparison data is the only way to know who the top performers are and identify ways to learn from their system to achieve the triple aim.

Aligning performance metrics with managed care performance metrics allows the additional comparison in Denver across delivery system design/payment models.

69) **Measures for payment. Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.**

Measures	
1-7	☒
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

HCPF has had a tendency to change measures frequently. Impact cannot be measured over time if the measures do not remain consistent. Over time it would be feasible to add additional measures, but it would be preferable to identify a set of core measures that will be maintained.

70) **What percent of RCCO payments should be tied to measures or performance?**

Percentage	
10-20%	☒
21-30%	☐
31-40%	☐
41-50%	☐
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

The percentage should start low and perhaps increase over the period of the contract as policies and reporting systems need to be established in order to tie payment to performance. As noted, DH is interested in the development of models with capitation and risk corridors, but in developing those models we are opposed to a fixed formula regarding the percentage of payment tied to performance. The question should be regarding how to accelerate payment to high performing PCMPs

71) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?

Yes, all regions should have the same KPIs, and RCCOs and providers should be working toward the same statewide goals. This is necessary because to achieve KPI performance, large PCMP systems, such as DH, must adopt organization-wide quality initiatives which will impact patients across multiple RCCO regions (under the current, regional RCCO model.)

72) Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?

Reimbursement should be based on progress toward meeting national quality standards, with ongoing rewards for those who meet or beat the standards. While it might be necessary to create incentives that are based on individual improvement to encourage movement towards national standards, payment systems should more heavily reward those that have met and continue to beat national standards for comparable patient populations. Risk adjustment is critical here.

73) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

Yes

74) **Incentive payment frequency.** Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	☒
Annually	☐
Other	☐

If you checked the "Other" box, please describe payment frequency below:

However, incentive payment frequency may depend on the measures we are being incented for but whenever possible quarterly would be ideal.

75) For potential offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

Increased transparency, as discussed in several questions, is necessary to strengthen PCMP relationships with RCCOs as it is not clear that funding is being sufficiently invested in care and the care system. To address this, RCCOs should have a ten percent administrative cost threshold. Additionally, a medical loss ratio standard should be established and RCCOs should have reporting requirements regarding funds spent and unspent.

76) For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

The primary care delivery system portion of DH is an FQHC (CHC). CHCs monitor and report performance publicly via the Uniform Data System and small amounts of funding are increasingly tied to quality payments, including:

- Performance in Medicare Advantage
- Meaningful Use has paid practices based on meeting quality outcomes with HIT PCMH attainment

CHCs are increasingly seeking and occasionally receiving reimbursement for performance on patient satisfaction, provider satisfaction, services and screening rates, and access and availability measures.

Additionally, DH produces HEDIS data for its Medicaid Choice members.

Health Information Technology (HIT)

77) **Types of communication.** For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	☒
Text message	☐	☒
Web portal	☐	☒
Email	☐	☒
Telemedicine / Video chat	☐	☐
Face-to-face meeting	☐	☒
Smartphone app	☐	☒
Other: Under its CMS HCIA grant, DH has innovated in the area of electronic communication with patient, especially via text messaging.		

78) **HIT investments by organizations.** For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below:

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	☒	☐
Digital care management tool	☒	☐
Care transitions alerts	☒	☐
Electronic Health Records (EHRs)	☒	☐
Health risk assessment software	☒	☐
Practice assessment tools	☐	☐
Practice management tools (scheduling, billing)	☒	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☒
Patient education/wellness tools	☒	☐

Provider/case manager directory	☒	☐
Shared decision-making tools	☒	☐
Telemedicine software	☐	☐
Other:	☐	☐
Other:	☐	☐

79) **Importance of technology by type.** The Department is working to determine what technology is in place, what technology is needed, and what technology should be standardized. For RCCOs, providers, and other organizations, use the table below to answer what HIT infrastructure outside of the SDAC your organization would use to perform population health management activities. Tools are scored from 1-5, where 1 are those items least-likely to be used, and 5 are items most-likely to be used:

Tool	1 Least	2	3	4	5 Most
Population analytics / reporting / dashboard	☐	☐	☐	☒	☐
Care management tool	☐	☐	☐	☐	☒
Care transitions alerts	☐	☐	☐	☒	☐
Electronic Health Records (EHRs)	☐	☐	☐	☐	☒
Practice assessment tools	☐	☐	☒	☐	☐
Health risk assessment software	☐	☐	☒	☐	☐
Practice management tools (scheduling, billing)	☐	☐	☐	☐	☒
Client web portal for communicating care plan, services, benefit enrollment	☐	☐	☐	☒	☐
Patient education wellness tools	☐	☐	☐	☒	☐
Provider/case manager directory	☐	☐	☒	☐	☐
Shared decision-making tools	☐	☐	☐	☒	☐
Telemedicine	☒	☐	☐	☐	☐
Other:	☐	☐	☐	☐	☐

80) **What are the primary barriers to RCCOs and providers increasing their use Health Information Technology to improve the performance of Primary Care Practices?**

Cost and patient access to the technology (ie: computers and smart phones), PHI concerns, having a data base that has patient email addresses and phone numbers.

81) How can Health Information Technology support Behavioral Health Integration?

DH managed care is currently using My Strength to support behavioral health integration; an online emotional wellbeing website. Both primary care providers and behavioral health providers can offer My Strength to their patients. We are integrating specific videos from My Strength into our telephonic counseling program for depression and anxiety.

We have also developed an effective telephonic counseling program for patients with anxiety and/or depression. This program consists of a comprehensive psychiatric assessment followed by up to 10 therapy sessions. Patients may select the types of therapies they feel will be most helpful for them from a menu of 14 different therapy modules. These telephonic therapy sessions are supplemented with technology facilitated between visit outreach communications in which patients may view related videos from the MyStrength website, hear stories from other patients who have successfully completed the program and report on their medication adherence, mood and progress in completing their homework assignments. After completing the program patients are asked at regular intervals to complete a PHQ9 and those whose scores have begun to increase are offered the opportunity to reenroll in the program for booster sessions. Participating PCPs receive regular reports on their patients PHQ9 scores the therapy modules they have worked on and protocol driven recommendations on how to adjust antidepressant medications and reinforce the skills learned in therapy.

82) In the next iteration of the ACC, should there be a shared resource for data and analytics? Please describe the basic criteria for what a shared data and analytics platform needs to contain in order for it to be useful.

Yes. Key requirements include clear and detailed data dictionary defining the data sources and measure definition (at the level of pseudo computer code) for all variable metrics. Transparency can be further established by ensuring the ability to see raw data being compiled and a vendor that is responsive to questions.

The analytical platform should operate as a data cube, enabling power users to manipulate and download data. With appropriate permissions, a RCCO/PCMP should be able to access identified data to permit person-level analyses that link RCCO data to other provider data. In addition, canned reports should be available that address overall program goals and permit performance benchmarking.

Care coordinators need real-time data.

83) Should there be a shared care management tool? Please describe the basic criteria for what a care management tool would need to contain in order for it to be useful.

While it would be ideal for there to be a care management tool that was shared by the RCCO and its affiliated PCMPs, it should not be required. The tool would be more likely to be adopted by PCMPs if it was easily integrated into the practice workflows and electronic health record and contained the following

functionality: easy ability to load scripting tools and assessments, care planning and goal setting, outcome tracking, report generation, and to be able to upload claims data, pharmacy data as well as clinical data, identify gaps and care assessment.

84) **Should there be a shared population health management tool? Please describe the basic criteria for what a population health management tool would need to contain in order for it to be useful.**

Again, these should be PCMP specific, not RCCO or ACC imposed. DH has found that it is very useful to have electronic communication tools to engage the RCCOs population and has experimented with text messaging, email, and IVR technology. Both the RCCO and its affiliated practices should be able to use a variety of tools to outreach to populations of patients for specific types of activities. The population health tools should be able to capture data in a PHI compliant environment and provide dashboard reports and alerts to the appropriate providers.

85) **Please describe the functionality that a common Medicaid provider directory would need to contain in order for it to be useful.**

Provide easy look-up of providers by specialty and geographic location. The provider directory should be searchable by provider, specialty, site, and/or entity; contain information about if they are accepting new enrollees; and contain accessibility information such as hours of operation and languages spoken. If HCFP adopts our recommendation to attribute patients preferentially to high performing health systems, this status should also be noted. Brief descriptions of specialized services provided would also be useful.

The provider interface should have a way to easily update information, contain provider contact information, and contain information regarding making referrals to the practice.

86) **How can the RCCOs support providers' access to actionable and timely clinical data?**

RCCO should facilitate PCMP access to actionable, real-time data by working collaboratively with providers, hospitals, specialists and PCMPs. A change in payment models would accelerate this work, as sharing this information is currently voluntary, technically complex to implement, and potentially not in the current financial interests of fee-for-service providers.

RCCOs could also be supportive of efforts to join CORHIO. RCCOs could also check in regularly with PCMPS re: their satisfaction with the referral and communication process within their specialty networks. Opportunities for improvement should be identified and addressed.

87) **What are the HIT solutions that would benefit clients, providers, and RCCOs? Please comment on the parameters these tools or platforms would need to possess and the ways in which they could be used.**

There are many HIT solutions that would provide benefits to clients, providers, and RCCOs, including web portals, text messaging, interactive videos and telemedicine.

DH has successfully used text messaging to remind patients of appointments, with a demonstrated reductionin no show rates. Text messaging has both been used push out information to patients as well as to capture important information from the patient. Additionally, DH has experience with telemedicine (for

rural access to specialty consultation) and interactive videos. These latter two technologies are helpful to reducing barriers associated with long travel distances and low health literacy.

88) What technical assistance or resources related to HIT infrastructure should the RCCOs supply? This assistance or these resources could be for providers, social service organization, clients/families, or for others.

RCCOs could contract with communication technology vendors and provide assistance to PCMPs on how to use the services provided through the vendors.

89) What role should health information exchange platforms like CORHIO or QHN play in the next iteration of the ACC?

RCCOs should encourage participation in CORHIO to ensure the flow of meaningful information in standardize formats between organizations.

90) Please share any information, advice, and suggestions you have about health information technology in the ACC Program.

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Michelle Trujillo
Location: Grand Junction, Mesa, Colorado

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Mesa County Department of Human Services
Location: Grand Junction, Mesa, Colorado
XX Please check if you are answering on behalf of this entity

---

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☐ Medical provider / PCMP / other provider
  i. Type or specialty: Click here to enter text.
  ii. Area of practice: Click here to enter text.
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
XX Another public or private program
☐ Legislator or elected official
☐ Other (please describe): Click here to enter text.

Are you currently involved in the ACC program?

☐ Yes
XX No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years

How have you been involved in the ACC program and what interaction have you had with RCCOs:
Recipient of data- high level demographics related to ACC participation

Please briefly describe your involvement with Medicaid, either in Colorado or another state:
Local Administration of Medicaid Eligibility Determination- Mesa County

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
XX N/A

Please feel welcome to describe why or why not using the space below.

☐ 3-4 years
☐ Since before the program was implemented.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

2) What is not working well in the ACC Program?

3) What is working best in the Behavioral Health Organization (BHO) system right now?

4) What is not working well in the BHO system?

5) What is working well with RCCO and BHO collaboration right now?

6) What is not working well with RCCO and BHO collaboration right now?

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

Connection with local departments of human services, as well as other community providers of services that assist individuals with meeting basic needs, in addition to medical services. A full assessment of the laws and rules governing sharing information between behavioral health providers and other service providers to assure protection of confidentiality and allow for better case management.

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☐	☐	
Community Behavioral Health Services Rule	☐	☐	
Covered diagnoses list	☐	☐	
Different behavioral / physical health reimbursement	☐	☐	
Institutions for Mental Diseases exclusion	☐	☐	
OBH rules, reporting, or financing (regulatory differences between agencies)	☐	☐	
PCMP financing structure	☐	☐	
Per-member per-month amount	☐	☐	
Physical space constraints	☐	☐	
Privacy Laws (HIPAA, 42 CFR)	XX	☐	
Professional / cultural divisions	☐	☐	
RCCO or BHO contracts	☐	☐	
Staff capacity	☐	☐	
State/Federal rules or reporting requirements	☐	☐	
Technical resources / data sharing	☐	☐	
Training	☐	☐	
Others	Please type your response here.		

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

10) Please share any other general advice or suggestions you may have about behavioral health integration.

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination?

http://www.ahrq.gov/professionals/prevention-chronic-care/improve/coordination/

Care coordination in the primary care practice involves deliberately organizing patient care activities and sharing information among all of the participants concerned with a patient's care to achieve safer and more effective care.

This means that the patient's needs and preferences are known and communicated at the right time to the right people, and that this information is used to guide the delivery of safe, appropriate, and effective care.

Timely communication is important. Coordination and communication takes work, but many times a client's health condition requires expedient communication and coordination, so emphasizing timeliness is important.

b. How should RCCOs prioritize who receives care coordination first?

Through Medicaid reports, if it is possible to see customers who are accessing medical services through multiple care providers with a regular frequency over a certain period of time, these might be the best folks to start with.

A person who only sees a provider once a year may not need to be a high priority.

We encourage priority attention to clients receiving crisis or other high-level behavioral health services.

c. How should RCCOs identify clients and families who need care coordination?

Same as above.

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

Using an electronic tracking system would be ideal. I imagine shared information systems for medical providers like QHN locally are helpful.

12) What services should be coordinated and are there services that should not be a part of care coordination? Connecting potentially eligible people to basic needs resources like Food Assistance/SNAP and shelter/housing, in addition to Medicaid, is valuable. Whether or not basic needs are met contributes to an individual's overall health. Second, coordination with behavioral health providers is very important.

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs? Health history, history of medical providers seen where records may exist, current assessment of medical needs. Also, history of behavioral health diagnoses and treatments/medications.

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

    a. What care coordination is going on today?

    Depending on the client, various case management functions in the Human Services arena provide assistance to clients to coordinate care. This happens primarily in the Single Entry Point (Options for Long Term Care) and Adult Protection areas, where case managers work with elderly individuals and/or individuals with disabilities. In rare cases, a human services agency/county will act as guardian for an individual.

    b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

    Routine care coordination can occur at the case manager level, with some communication with the RCCO. In complex and/or crisis situations, the RCCO is at the table.

    c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

    Actively involve the human services disciplines in the design of programs and their rules. Work to assure that new programs and/or rules don't set the client up to be in the middle of a conflict between two agencies/organizations. Understand that in many communities, many of the highest cost situations have some level of human services system involvement.

    d. What are the gaps in care coordination across the continuum of care?

    The largest gap we see is ineffective, incomplete or non-existent communication with the behavioral health system.

15) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	Should the RCCO have a role? Yes	No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma	XX	☐	XX	
Affordability (assistance with prescriptions or co-pays)	XX	☐	XX	There may not be local supports for this one. Possibly if the RCCO's can work with pharmaceutical companies for programs to offer regional discounts for participating members?
Daycare / childcare	☐	XX	☐	
Economic stability & employment	☐	XX	☐	
Education	☐	XX	☐	
Environment	XX	☐	XX	
Food access / nutrition	XX	☐	XX	
Health literacy	XX	☐	XX	
Housing	XX	☐	XX	
Language or translation services	XX	☐	XX	
Literacy	☐	XX	☐	
Transportation	☐	XX	☐	
Other	Please type your response here. Feel free to list as many non-medical factors as you want, and please explain how the RCCO should be involved.			

16) **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	Coordinate care? Yes	No	In what capacity should these individuals coordinate care in the ACC Program?
Advanced Practice (Registered) Nurses	XX	☐	Any provider that bills Medicaid for services should be required to coordinate care in the ACC Program.
Certified Addiction Councilors	XX	☐	Any provider that bills Medicaid for services should be required to coordinate care in the ACC Program.
Certified Nurse Midwives	XX	☐	Any provider that bills Medicaid for services should be required to coordinate care in the ACC Program.
Community Health Workers	XX	☐	
Generalists (BA/BS/MA/MS)	XX	☐	Any provider that bills Medicaid for services should be required to coordinate care in the ACC Program.
Health Coaches	XX	☐	
Licensed Clinical Social Workers	XX	☐	
Licensed Marriage and Family Therapist	XX	☐	Any provider that bills Medicaid for services should be required to coordinate care in the ACC Program.
Licensed Mental Health Counselors	XX	☐	Any provider that bills Medicaid for services should be required to coordinate care in the ACC Program.
Licensed Professional Counselor	XX	☐	Any provider that bills Medicaid for services should be required to coordinate care in the ACC Program.
Masters of Public Health	XX	☐	
Medical Doctors / Doctors of Osteopathic Medicine	XX	☐	Any provider that bills Medicaid for services should be required to coordinate care in the ACC Program.
Nurse Practitioners	XX	☐	Any provider that bills Medicaid for services should be required to coordinate care in the ACC Program.
Patient Navigators	XX	☐	
Peer Advocates	☐	XX	
Promotoras	☐	☐	
Psychiatrists	XX	☐	Any provider that bills Medicaid for services should be required to coordinate care in the ACC Program.
Psychologists	XX	☐	Any provider that bills Medicaid for services should be required to coordinate care in the ACC Program.

Registered Nurses	XX	☐	Any provider that bills Medicaid for services should be required to coordinate care in the ACC Program.
Social Workers	XX	☐	
Wraparound facilitators	XX	☐	
Other	Please type your response here.		

17) **Care coordination requirements for specific populations.** Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and infants	XX	☐	
Children	☐	XX	
Children who are healthy, but in socially-complex environments	☐	XX	
Children involved in the foster care system	XX	☐	
Children with a chronic illness	XX	☐	
Children with a serious emotional disturbance	XX	☐	
Children with medical complexity	XX	☐	
Children or youth with a behavioral health diagnosis or substance use disorder	XX	☐	
Transition-age adolescents	☐	XX	
Parents and families	☐	XX	
Pregnant women	XX	☐	
Adults	☐	XX	
Adults who are healthy, but in socially-complex situations	☐	XX	
Adults with a chronic illness	XX	☐	
Adults with a behavioral health diagnosis or substance use disorder	XX	☐	
Clients involved in the criminal justice system	XX	☐	
Clients with a disability	XX	☐	
Clients in a nursing facility	XX	☐	
Elderly clients	☐	XX	
Frail elderly clients	XX	☐	
Clients in palliative care	XX	☐	
Other populations, please comment:			

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

All parties involved need to be able to communicate openly with each other regarding the needs of these individuals without barriers, such as HIPAA and FERPA, so that the best possible coordination of services can take place.

19) How should care coordination be evaluated? How should its outcomes be measured?

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

    a. What is the PMPM cost for providing care coordination services?

    b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

    a. **Care coordinator to client ratios.** If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☐
51-100	☐
101-200	☐
201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

All of the above seem like logical first steps at creating consistency in delivery of care coordination across the State.

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs? Minimum of quarterly meetings with community entities.

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

Interesting idea, but if I live in Mesa County, and one of my providers is in one RCCO, and my child's provider is in another RCCO, I can see that this could lead to less coordinated care for the family as a whole. If providers are asking for this option, then that leads me to believe that some level of consistency among the RCCO's would be preferable.

27) Should the RCCO region maps change? Why or why not? If so, how?

28) Should the BHO region maps change? Why or why not? If so, how?

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

34) What role should RCCOs play in attributing clients to their respective PCMPs?

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment? Any medical service delivery should be coordinated.

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services? From a case management perspective (for example in Child Welfare), there should be coordination just as there would amongst other medical providers. From an Assistance Program perspective, referrals can be made to DHS to encourage individuals to enroll in programs they may be eligible for. Ideally providers would be able to know if an individual is participating in Food Assistance/SNAP as well as Medicaid, so they have an idea where a family or individual is at with their nutrition/food stability.

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region? Quarterly meetings

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC? Quarterly meetings

42) How should the Department structure stakeholder engagement for the ACC as a whole?

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

   a. If no, what are the gaps?

   b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

   a. What role should hospitals play in the next iteration of the ACC Program?

   b. What role should pharmacies play in the next iteration of the ACC Program?

   c. What role should specialists play in the next iteration of the ACC Program?

   d. What role should home health play in the next iteration of the ACC Program?

   e. What role should hospice care play in the next iteration of the ACC Program?

   f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

   g. What role should counties play in the next iteration of the ACC Program?

   h. What role should local public health agencies play in the next iteration of the ACC Program?

   i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

45) How can RCCOs help to support clients and families in making and keeping appointments?

For many Medicaid participants, future time is a concept that can't always be set in stone, because the next crisis in their life could change their plans very quickly. I would recommend not scheduling appointments out more than three days in advance, and doing a reminder call either the day before or the day of the appointment. Transportation is a common barrier, so discuss with the individual at the time the appointment is scheduled what their plans are for how they will get to the appointment, so they are thinking about it then and not 30 minutes before the appointment.

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP? This would be beneficial.

47) **Community Health Worker reimbursement**. Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement process	(Please check all that apply)
Independently bill	☐
On staff (salary) at Primary Care Medical Provider Clinic	☐
On staff (salary) at RCCO	☐
Per Member Per Month Payment	☐

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers? Oral health should be coordinated in the same way as any other health care need.

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you?

b. What RCCO requirements would ensure cultural competency?

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care? Yes

51) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend? Counseling with these individuals at the time of service in the emergency room on what alternative options they could have accessed instead of the ER. Interview these individuals to determine why they chose the ER over the alternative options. From what I have heard from individuals is that the ER is fast and accessible. Getting into a doc requires an appointment, and many people are solidly in the mindset of the present and don't want to wait or feel they can't wait. That is a tough one to overcome. Some folks also want to stay off the radar to the degree that they don't want a "record" with Medicaid or a Primary Care Provider, so they just show up to the ER when care is needed to avoid what they perceive to be a "record".

52) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

Practice Support

53) **Support for practices.** Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☐	☐	☐	☐
Network provider education	☐	☐	☐	☐
Assistance with practice redesign	☐	☐	☐	☐
Assistance with efficiency-enhancing activities	☐	☐	☐	☐
Provide web-based resources and directories	☐	☐	☐	☐
Provide practice-specific data reports	☐	☐	☐	☐
Provide clinical care guidelines and best practices.	☐	☐	☐	☐
Provide clinical screening tools	☐	☐	☐	☐
Provide health and functioning questionnaires	☐	☐	☐	☐
Provide chronic care templates	☐	☐	☐	☐
Provide registries	☐	☐	☐	☐
Offer client reminders	☐	☐	☐	☐
Offer client self-management tools	☐	☐	☐	☐
Offer educational materials about specific conditions	☐	☐	☐	☐
Supply behavioral health surveys	☐	☐	☐	☐
Supply other self-screening tools	☐	☐	☐	☐
Administer behavioral health surveys	☐	☐	☐	☐
Administer other self-screening tools	☐	☐	☐	☐
Prepare client action plans	☐	☐	☐	☐
Provide training on providing culturally-competent care	☐	☐	☐	☐
Provide training to supporting staff	☐	☐	☐	☐
Provide training on motivational interviewing	☐	☐	☐	☐
Provide tools and software for phone call and appointment tracking	☐	☐	☐	☐
Provide tools and resources for tracking labs, referrals, etc.	☐	☐	☐	☐
Provide referral and transitions of care checklists	☐	☐	☐	☐
Provide visit agendas or templates	☐	☐	☐	☐
Provide standing pharmacy order templates	☐	☐	☐	☐
Provide comprehensive directory of community resources	☐	☐	☐	☐
Provide directory of other resources	☐	☐	☐	☐
Provide materials regarding Nurse Advice Line	☐	☐	☐	☐
Ensure all tools and resources are centrally located on RCCO-specific website	☐	☐	☐	☐
Others				

54) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

55) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

56) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

57) Should the Department require that PCMPs utilize disease registries to manage the health of their population?

58) Please share any other advice or suggestions about provider support in the ACC.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

62) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

63) What role – if any – should the RCCOs play in the distribution of payments to providers?

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

66) **Measuring Client experience.** Please complete the table below to indicate how the Department should measure Client/patient experience:

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☐	☐	
SF-12 Health Survey	☐	☐	
Other types of client interviews / surveys	☐	☐	
Patient Activation Measure	☐	☐	
Focus groups	☐	☐	
Other	Please type your response here.		

67) Knowing that, at this time, the Department only has claims data, how should population health be measured? Possibly create an electronic assessment that providers can complete at the time of each visit. Something that would be consistent across all providers.

68) How should quality and performance data be reported to the RCCOs, PCMPs, and the public?

69) **Measures for payment.** Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☐
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

70) What percent of RCCO payments should be tied to measures or performance?

Percentage	
10-20%	☐
21-30%	☐
31-40%	☐
41-50%	☐
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

71) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?

72) Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?

73) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

74) **Incentive payment frequency.** Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	☐
Annually	☐
Other	☐

If you checked the "Other" box, please describe payment frequency below:

75) For potential offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

76) For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

Health Information Technology (HIT)

77) **Types of communication.** For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	☐
Text message	☐	☐
Web portal	☐	☐
Email	☐	☐
Telemedicine / Video chat	☐	☐
Face-to-face meeting	☐	☐
Smartphone app	☐	☐
Other:		

78) **HIT investments by organizations.** For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below:

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	☐	☐
Digital care management tool	☐	☐
Care transitions alerts	☐	☐
Electronic Health Records (EHRs)	☐	☐
Health risk assessment software	☐	☐
Practice assessment tools	☐	☐
Practice management tools (scheduling, billing)	☐	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☐
Patient education/wellness tools	☐	☐
Provider/case manager directory	☐	☐
Shared decision-making tools	☐	☐
Telemedicine software	☐	☐
Other:	☐	☐
Other:	☐	☐

79) **Importance of technology by type.** The Department is working to determine what technology is in place, what technology is needed, and what technology should be standardized. For RCCOs, providers, and other organizations, use the table below to answer what HIT infrastructure outside of the SDAC your organization would use to perform population health management activities. Tools are scored from 1-5, where 1 are those items least-likely to be used, and 5 are items most-likely to be used:

Tool	1 Least	2	3	4	5 Most
Population analytics / reporting / dashboard	☐	☐	☐	☐	☐
Care management tool	☐	☐	☐	☐	☐
Care transitions alerts	☐	☐	☐	☐	☐
Electronic Health Records (EHRs)	☐	☐	☐	☐	☐
Practice assessment tools	☐	☐	☐	☐	☐
Health risk assessment software	☐	☐	☐	☐	☐
Practice management tools (scheduling, billing)	☐	☐	☐	☐	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☐	☐	☐	XX
Patient education wellness tools	☐	☐	☐	☐	☐
Provider/case manager directory	☐	☐	☐	☐	☐
Shared decision-making tools	☐	☐	☐	☐	☐
Telemedicine	☐	☐	☐	☐	☐
Other:	☐	☐	☐	☐	☐

Colorado Department of Health Care Policy and Financing

RFI Response Received and Recorded.

Serial Number: 111

Accepted by: KJDW

Notes:

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Valerie L. Corzine, Esq.
Location: Centennial, CO 80122

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Orchid Mental Health Legal Advocacy of Colorado, Inc.
Location: Centennial, CO 80122
☒ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☒ Client advocate
☐ Medical provider / PCMP / other provider
  i. Type or specialty: Click here to enter text.
  ii. Area of practice: Click here to enter text.
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☐ Other (please describe): Click here to enter text.

Are you currently involved in the ACC program?

☐ Yes
☒ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☐ 3-4 years

How have you been involved in the ACC program and what interaction have you had with RCCOs:
No I have not been involved. I have been involved with people with mental illness who are homeless, as well as the many who are incarcerated.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:
Involvement as an attorney/advocate for individuals with "mental illness" who are homeless or incarcerated.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☒ N/A

Please feel welcome to describe why or why not using the space below.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

2) What is not working well in the ACC Program?

   The biggest problem is that critical "Social Determinants of Health" such as housing are not adequately covered.

3) What is working best in the Behavioral Health Organization (BHO) system right now?

4) What is not working well in the BHO system?

   Shortage of access to Assertive Community Treatment (ACT) and the critical "Social Determinant of Health" – housing.

5) What is working well with RCCO and BHO collaboration right now?

6) What is not working well with RCCO and BHO collaboration right now?

   See above.

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

Recognition and full funding of the essential "Social Determinant of Health" -- housing

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☐	☐	
Community Behavioral Health Services Rule	☐	☐	
Covered diagnoses list	☐	☐	
Different behavioral / physical health reimbursement	☐	☐	
Institutions for Mental Diseases exclusion	☐	☐	
OBH rules, reporting, or financing (regulatory differences between agencies)	☐	☐	
PCMP financing structure	☐	☐	
Per-member per-month amount	☒	☐	The social determinant of health – housing as well as assertive community treatment are not cheap AND they are ESSENTIAL
Physical space constraints	☐	☐	
Privacy Laws (HIPAA, 42 CFR)	☐	☐	
Professional / cultural divisions	☐	☐	
RCCO or BHO contracts	☒	☐	Assertive Community Treatment must be available to all where it is reasonably medically necessary & NOT artificially restricted.
Staff capacity	☒	☐	People who are coming out of incarceration or at risk of incarceration or homeless may have significant supervision needs, although they do not need to be hospitalized. That is beyond a training issue although it is important – it requires significant greater number of FTEs than the system currently has.

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

State/Federal rules or reporting requirements	☐	☐	
Technical resources / data sharing	☐	☐	
Training	☒	☐	Staff need to be trained in the Finnish model of "Open Dialogue" which has a proven record of reducing medication use and hospitalizations. Univ. of Massachusetts, Dept. of Psychiatry, recently completed project to adapt "Open Dialogue" to the US.
Others	Please type your response here.		

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

Able to provide critical & essential "Social Determinants of Health" – most importantly, housing.

10) Please share any other general advice or suggestions you may have about behavioral health integration.

Need holistic approach:

1. Best Science from the Nat'l Institute of Mental Health as well as SAMHSA

2. Reduce time that evidenced based practices get to mental health individuals – average now is 17 yrs.

3. Person directed recovery

5. Peer Run Services

6. Intensive Services such as Assertive Community Treatment (ACT) to prevent homelessness or institutionalization, including incarceration.

7. Make access to critical "Social Determinants of Health" such as housing – easy. Make it a one-stop shop

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination?

Ideally physical and mental health provided in same clinics with mental health experts providing mental health care and physical medicine experts providing that care.

b. How should RCCOs prioritize who receives care coordination first?

c. How should RCCOs identify clients and families who need care coordination?

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

12) What services should be coordinated and are there services that should not be a part of care coordination?

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today?

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

d. What are the gaps in care coordination across the continuum of care?

15) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	Should the RCCO have a role? Yes	No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma	☒	☐	☐	I would refer to all "non medical needs" as "Social Determinants of Health" as recognized by the World Health Organization (WHO) and the Centers for Disease Control (CDC).
Affordability (assistance with prescriptions or co-pays)	☒	☐	☐	
Daycare / childcare	☒	☐	☐	
Economic stability & employment	☒	☐	☐	
Education	☒	☐	☐	
Environment	☒	☐	☐	
Food access / nutrition	☒	☐	☐	
Health literacy	☒	☐	☐	
Housing	☒	☐	☐	
Language or translation services	☒	☐	☐	
Literacy	☒	☐	☐	
Transportation	☒	☐	☐	

Other	Please type your response here. Feel free to list as many non-medical factors as you want, and please explain how the RCCO should be involved.

16) **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	Coordinate care? Yes	No	In what capacity should these individuals coordinate care in the ACC Program?
Advanced Practice (Registered) Nurses	☐	☐	
Certified Addiction Councilors	☐	☐	
Certified Nurse Midwives	☐	☐	
Community Health Workers	☐	☐	
Generalists (BA/BS/MA/MS)	☐	☐	
Health Coaches	☐	☐	
Licensed Clinical Social Workers	☐	☐	
Licensed Marriage and Family Therapist	☐	☐	
Licensed Mental Health Counselors	☐	☐	
Licensed Professional Counselor	☐	☐	
Masters of Public Health	☐	☐	
Medical Doctors / Doctors of Osteopathic Medicine	☐	☐	
Nurse Practitioners	☐	☐	
Patient Navigators	☐	☐	
Peer Advocates	☐	☐	
Promotoras	☐	☐	
Psychiatrists	☐	☐	
Psychologists	☐	☐	
Registered Nurses	☐	☐	
Social Workers	☐	☐	

Wraparound facilitators	☐	☐	
Other	Please type your response here.		

17) **Care coordination requirements for specific populations**. Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and infants	☐	☐	
Children	☐	☐	
Children who are healthy, but in socially-complex environments	☐	☐	
Children involved in the foster care system	☐	☐	
Children with a chronic illness	☐	☐	
Children with a serious emotional disturbance	☐	☐	
Children with medical complexity	☐	☐	
Children or youth with a behavioral health diagnosis or substance use disorder	☐	☐	
Transition-age adolescents	☐	☐	
Parents and families	☐	☐	
Pregnant women	☐	☐	
Adults	☐	☐	
Adults who are healthy, but in socially-complex situations	☐	☐	
Adults with a chronic illness	☐	☐	
Adults with a behavioral health diagnosis or substance use disorder	☐	☐	
Clients involved in the criminal justice system	☐	☐	
Clients with a disability	☐	☐	
Clients in a nursing facility	☐	☐	
Elderly clients	☐	☐	
Frail elderly clients	☐	☐	
Clients in palliative care	☐	☐	
Other populations, please comment:			

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

19) How should care coordination be evaluated? How should its outcomes be measured?

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

    a. What is the PMPM cost for providing care coordination services?

    b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

    a. **Care coordinator to client ratios.** If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☒
26-50	☐
51-100	☐
101-200	☐
201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

27) Should the RCCO region maps change? Why or why not? If so, how?

28) Should the BHO region maps change? Why or why not? If so, how?

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

34) What role should RCCOs play in attributing clients to their respective PCMPs?

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

42) How should the Department structure stakeholder engagement for the ACC as a whole?

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

a. If no, what are the gaps?

Social Determinants of Health – especially Housing

Intensive Supervision short of institutionalization – ACT – Assertive Community Treatment

b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

a. What role should hospitals play in the next iteration of the ACC Program?

Hospitals should arrange housing for homeless clients such as in Minnesota.

b. What role should pharmacies play in the next iteration of the ACC Program?

c. What role should specialists play in the next iteration of the ACC Program?

d. What role should home health play in the next iteration of the ACC Program?

e. What role should hospice care play in the next iteration of the ACC Program?

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

g. What role should counties play in the next iteration of the ACC Program?

h. What role should local public health agencies play in the next iteration of the ACC Program?

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

45) How can RCCOs help to support clients and families in making and keeping appointments?

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

47) **Community Health Worker reimbursement**. Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement process	(Please check all that apply)
Independently bill	☐
On staff (salary) at Primary Care Medical Provider Clinic	☐
On staff (salary) at RCCO	☐
Per Member Per Month Payment	☐

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you?

b. What RCCO requirements would ensure cultural competency?

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

51) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

52) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

Practice Support

53) **Support for practices.** Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☒	☐	☒	☒
Network provider education	☒	☐	☒	☒
Assistance with practice redesign	☒	☐	☒	☒
Assistance with efficiency-enhancing activities	☒	☐	☒	☒
Provide web-based resources and directories	☒	☐	☒	☒
Provide practice-specific data reports	☒	☐	☒	☒
Provide clinical care guidelines and best practices.	☒	☐	☒	☒
Provide clinical screening tools	☒	☐	☒	☒
Provide health and functioning questionnaires	☒	☐	☒	☒
Provide chronic care templates	☒	☐	☒	☒
Provide registries	☒	☐	☒	☒
Offer client reminders	☒	☐	☒	☒
Offer client self-management tools	☒	☐	☒	☒
Offer educational materials about specific conditions	☒	☐	☒	☒
Supply behavioral health surveys	☒	☐	☒	☒
Supply other self-screening tools	☒	☐	☒	☒
Administer behavioral health surveys	☒	☐	☒	☒
Administer other self-screening tools	☒	☐	☒	☒
Prepare client action plans	☒	☐	☒	☒
Provide training on providing culturally-competent care	☒	☐	☒	☒
Provide training to supporting staff	☒	☐	☒	☒
Provide training on motivational interviewing	☒	☐	☒	☒
Provide tools and software for phone call and appointment tracking	☒	☐	☒	☒
Provide tools and resources for tracking labs, referrals, etc.	☒	☐	☒	☒
Provide referral and transitions of care checklists	☒	☐	☒	☒
Provide visit agendas or templates	☒	☐	☒	☒
Provide standing pharmacy order templates	☒	☐	☒	☒
Provide comprehensive directory of community resources	☒	☐	☒	☒
Provide directory of other resources	☒	☐	☒	☒
Provide materials regarding Nurse Advice Line	☒	☐	☒	☒
Ensure all tools and resources are centrally located on RCCO-specific website	☒	☐	☒	☒
Others				

54) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

55) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

56) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

57) Should the Department require that PCMPs utilize disease registries to manage the health of their population?

58) Please share any other advice or suggestions about provider support in the ACC.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

62) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

63) What role – if any – should the RCCOs play in the distribution of payments to providers?

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

66) **Measuring Client experience.** Please complete the table below to indicate how the Department should measure Client/patient experience:

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☒	☐	
SF-12 Health Survey	☒	☐	
Other types of client interviews / surveys	☒	☐	
Patient Activation Measure	☒	☐	
Focus groups	☒	☐	
Other	Please type your response here.

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Jason L. Herndon, Ph.D.
Location: Denver, Denver County, CO

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Click here to enter text.
Location: City, County, State.
☐ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☐ Medical provider / PCMP / other provider
  i. Type or specialty: Clinical Psychology
  ii. Area of practice: Primary Care
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☐ Other (please describe): Click here to enter text.

Are you currently involved in the ACC program?

☐ Yes
☐ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☐ 3-4 years
☐ Since before the program was implemented.

How have you been involved in the ACC program and what interaction have you had with RCCOs:
Click here to enter text.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:
Click here to enter text.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

Please feel welcome to describe why or why not using the space below.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?
2) What is not working well in the ACC Program?
3) What is working best in the Behavioral Health Organization (BHO) system right now?
4) What is not working well in the BHO system?
5) What is working well with RCCO and BHO collaboration right now?
6) What is not working well with RCCO and BHO collaboration right now?

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

The next step should be addressing the significant challenges related to billing for integrated behavioral health services within primary care settings. Because the services that I am able to bill Medicaid for are so limited and specific, it makes sustainability difficult to attain. It seems that the ACC agrees that behavioral health integration is important, yet financial sustainability aspect of these services has yet to be adequately addressed. Appropriately addressing the billing challenges associated with these services will then make it possible to scale these services to community practices across the state.

Related to the challenge of billing are the challenges associated with the use of various screening measures within these settings. Screening and early identification of a variety of types of developmental and behavioral health concerns is essential to effective practice in integrate behavioral health. While some important screeners are billable, most are not, which requires providers (both medical and behavioral) and practices to choose between identifying concerns and being reimbursed for their time. Expanding the list of covered screening tools to include broad-based measures of emotional well-being and psychosocial needs is an integral next step in behavioral health integration.

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☐	☐	
Community Behavioral Health Services Rule	☐	☐	
Covered diagnoses list	☒	☐	
Different behavioral / physical health reimbursement	☒	☐	
Institutions for Mental Diseases exclusion	☐	☐	
OBH rules, reporting, or financing (regulatory differences between agencies)	☐	☐	
PCMP financing structure	☐	☐	
Per-member per-month amount	☐	☐	
Physical space constraints	☒	☐	
Privacy Laws (HIPAA, 42 CFR)	☐	☐	
Professional / cultural divisions	☐	☐	
RCCO or BHO contracts	☐	☐	
Staff capacity	☐	☐	
State/Federal rules or reporting requirements	☐	☐	
Technical resources / data sharing	☒	☐	
Training	☐	☐	
Others	Please type your response here.		

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

The minimum requirements for a clinic to be recognized should be the presence of an on-site mental health professional that is appropriately-trained and educated to provide integrated behavioral health services. While there are a variety of models, as outlined in HRSA's Six-Level Framework for providing these integrated services, ideally clinics will have a plan in place to transition to a more fully integrated model of service delivery over time. Often, the co-located model takes the form of providing traditional mental health services in a primary care setting. This is not the goal of integrated behavioral health care. While co-located care certainly has significant benefit to clinics and patients, ultimately a fully integrated system has the greatest chance of meeting whole-person/whole-family physical and behavioral health care.

10) Please share any other general advice or suggestions you may have about behavioral health integration.

Accountable Care Collaborative Request for Information

Response from Colorado Children's Campaign

November 24, 2014

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Cody Belzley
Location: Denver, Denver, CO

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Colorado Children's Campaign
Location: Denver, Denver, CO
☒ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☐ Medical provider / PCMP / other provider
  i. Type or specialty: Click here to enter text.
  ii. Area of practice: Click here to enter text.
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☒ Other (please describe): statewide, non-profit, non-partisan child advocacy organization

Are you currently involved in the ACC program?

☐ Yes
☒ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☐ 3-4 years

How have you been involved in the ACC program and what interaction have you had with RCCOs:
The Colorado Children's Campaign has had no direct involvement with the ACC program. We work with RCCOs in advocacy efforts.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:
The Colorado Children's Campaign has long advocated to expand, strengthen and improve operations of public health insurance programs in Colorado, including Medicaid.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☒ Will not seek to participate
☐ N/A

We are not a direct service provider, nor do we seek to be.

General Questions

What is working best in the Accountable Care Collaborative (ACC) right now?

We are pleased that Colorado has implemented the Accountable Care Collaborative (ACC) program. Fee-for-service health care delivery is an inefficient and ineffective model and there are many challenges with a fully-capitated managed care model. The ACC approach is an appropriate solution. We are pleased that the State is taking such a thoughtful approach to how to strengthen and improve the program. *Thonk you for seeking stokeholder input prior to developing ond releosing the request for proposols to prospective controctors.*

It makes sense to take a regional approach that recognizes variations in population, culture and health care delivery systems and patterns across Colorado. We appreciate that the current Regional Care Collaborative Organizations (RCCOs) are Colorado-based companies and collaboratives. It is much easier to work with and learn from them when they are already embedded in our communities, connected with provider and consumer groups and have executives with decision-making authority here in Colorado.

We appreciate that the Key Performance Indicators (KPIs) are clearly identified and consistent across the program. While we don't believe it is sufficient, we do appreciate that well-child visit is included in the KPI set.

What is not working well in the ACC Program?

Our chief concern is that the ACC program is primarily oriented towards health care for adults and the intervention and management of chronic conditions. This is true despite the fact that more than half of Medicaid clients and ACC enrollees are children and adolescents. Given the demographic make-up of the program's population, children should not be considered a "subgroup" population. Rather, children should be considered a primary population and a new pediatric-specific strategy should be implemented. The principles underlying the pediatric strategy should include:

- Focus on prevention. For most children, health care services focus on preventing the development of chronic conditions, not management chronic conditions. Where prevention is not possible, early identification and intervention is essential.
- Ensure family-centered care. The vast majority of children do not operate independently of their adult care-givers. Patient-centered care in a pediatric context must include care coordination and support for the family unit (recognizing that family will be defined differently in differing contexts). This is particularly true for infants, toddlers and young children who are deeply impacts by the health and stability of their family unit.
- Connect with community. Many children and families have strong connections to community-based programs and services, including early care and education providers and the K-12 education system. The ACC program, through the RCCO contractors, should be closely connected to community programs, supports and services for low-income children and families. Examples of these include but are not limited to:
    - Maternal, infant and early childhood home visitation programs
    - Early Childhood Councils
    - Child care health consultants, as managed by Healthy Child Care Colorado, a program of Qualistar

  - School-based health centers
- Take the long and broad view on evaluation. The provision of prevention services requires up-front investment. The return on that investment can take years, even decades, to materialize. Further, health prevention services for children delivered in a medical setting can produce savings across multiple systems and settings. The State will need to be committed to this work over the long term and develop sophisticated evaluation metrics to measure impact.

While allowing for regional variation is a strength of the ACC program, the current ACC / RCCO map is problematic. It is not well-aligned with natural health care system and referral patterns, nor aligned with Behavioral Health Organization regions, Managed Service Organization regions or Local Public Health Agencies. The map should be redrawn to ensure greater alignment with other program service areas and support more streamlined service delivery to families.

As a data-driven policy organization, we would be very pleased to see more reliable and easy-to-access data and information coming out of the ACC program. Our understanding is that the data systems in place today are flawed, producing delayed and often inaccurate data. This makes it difficult for health care providers to improve service to clients and difficult to evaluate the effectiveness of the program. The Children's Campaign would support the Department of Health Care Policy and Financing (HCPF) in asking the State for additional resources to strengthen the data collection capacity for this program.

The ACC's current exclusive focus on physical health is a concern. We applaud HCPF for using this RFI to collect information on behavioral health integration. We are also committed to advancing access to oral health care services for children and hope that the integration conversation at HCPF will be inclusive of mental, oral and physical health care services.

What is working best in the Behavioral Health Organization (BHO) system right now?

Our sense is that the Behavioral Health Organization (BHO) system works best today for those with serious mental illness, whose primary health care concern is their mental health condition. Having a separated behavioral health system, with separate management and financing, is not beneficial to the vast majority of children served by Medicaid.

Behavioral Health Integration

What should be the next steps in behavioral health integration in Colorado?

We are very pleased that HCPF is carefully considering next steps for behavioral health integration in Colorado and specifically with the Medicaid population. We see tremendous opportunity in behavioral health integration to improve health outcomes and program efficiency.

The next steps for behavioral health integration in Colorado must include:

- Financing and payment reform.
- Practice transformation support.
- Data collection.

Much of this work has been outlined in Colorado's State Innovation Model (SIM) grant proposal. We urge HCPF to continue being a thought leader in the SIM work and using Medicaid to move other payers toward integration. Ensuring alignment between Medicaid and private payers in their payment reform, practice transformation and data collection efforts is essential to having a broader impact on Colorado's population.

Care Coordination

RCCOs' roles in addressing clients' and their families' non-medical needs. Please complete the table below, keeping in mind adults, children, and families:

RCCOs should help health care providers connect to community-based supports and services, not duplicate or replace them.

Non-medical need:	Should the RCCO have a role? Yes	No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma	☐	☐	☒

Stakeholder Engagement

What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

As a general rule, client, client family and client advocate engagement should happen as close to the community level as possible. RCCOs should support health care practices in providing higher quality care, inclusive of robust client engagement. The role of the RCCO should be in supporting clients when their provider has failed to do so.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Barbara J Martin
Location: Denver, Colorado

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: The Colorado Department of Public Health and Environment
Location: Denver, Denver, Colorado
X Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☐ Medical provider / PCMP / other provider
  i. Type or specialty: Click here to enter text.
  ii. Area of practice: Click here to enter text.
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
X Another public or private program
☐ Legislator or elected official
☐ Other (please describe): Click here to enter text.

Are you currently involved in the ACC program?

X Yes
☐ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☐ 3-4 years
X Since before the program was implemented.

How have you been involved in the ACC program and what interaction have you had with RCCOs:

The Colorado Department of public Health and Environment (CDPHE) is a strong supporter of the ACC/RCCO program and encourages program staff to seek opportunities to maximize the program.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:

CDPHE and Health Care Policy and Finance are sister agencies under the Governor's Office.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

Please feel welcome to describe why or why not using the space below.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

The Accountable Care Collaborative program supports community based care that can best respond to the needs of the clients. In addition, the designated resources for data analysis and care coordination services are transforming how care is experienced in Colorado. Ensuring care coordination for at-risk and vulnerable populations is a key component of the ACC program, and one that support the patient-centered medical home approach.

The inclusion of the key Performance Indicators and the upcoming shared savings component of the ACC model will support the delivery of quality care that is patient-focused and focused on improved health outcomes.

2) What is not working well in the ACC Program?

a. CDPHE would encourage the RCCOs to implement and promote evidence-based population health programs to improve the health of their clients. The RCCO service areas create mini-populations that can be served with population-based and evidence-based programs like the Diabetes Prevention Program, Diabetes Self Management and Education, tobacco cessation services (including the Colorado QuitLine), home blood pressure monitoring programs, and RCCO-wide medication therapy management programs. Rather than creating their own programs we encourage the implementation of evidence-based programs. RCCOs can provide education and promotion of evidence-based services and Medicaid benefits for tobacco cessation directly to Medicaid clients and providers.

b. CDPHE would encourage the development of communities of care that employ a multi-disciplinary team, both within the clinic and community settings, to reduce barriers to care for vulnerable and disparate populations. This may include nurses or pharmacists who can target individuals with multiple chronic diseases for effective medication therapy management, lay patient navigators who can help address barriers to care within the health systems and community setting and/or focus on high utliziers, in addition to the inclusion of more traditional members of the team such as nurse and social workers. Often, Local Public Health Agencies can provide resources and would be an effective partner in developing communities of care.

A good example of how RCCOs can support this is by ensuring that tobacco use and exposure screening is incorporated into clinic settings and referral and benefits promotion to Colorado QuitLine or other community cessation resources can be done via patient navigation or community health workers.

c. CDPHE supports the conversation around data sharing across systems of care while keeping the individual's health information protected. One of the areas most in need of improved communication and sharing of real time data is between the pharmacy and clinic setting. Ideally, data exchange would be real-time, so that, for example, a provider could see when a client picks up a prescription from a pharmacist and a pharmacist would be able to see relevant patient notes (i.e., care plans, behavior modification recommendations, etc.) so that both the provider and pharmacist could reinforce recommendations. Encouraging secure messaging between all care team members is one way to address this.
d. Colorado Department of Public Health and Environment has developed a strong Social Determinants of Health model that incorporates key aspects that contribute to overall population health. RCCOs should be encouraged to pursue policy efforts that enhance the health and well-being of their clients – for example, working with the community on an overall strategy to increase bicycling or walking or with the Local Public Health Agency on its public health improvement plan which may include many policy-related elements.
e. CDPHE supports data driven quality improvement and would like a more robust process for benchmarking and quality improvement among primary care medical providers in a RCCO region. Although there are many ongoing QI initiatives, there is not consistent understanding to the stakeholder community on what this process looks like and what support practices receive from the RCCOs.

Special Population Considerations:

f. CDPHE is focused on older adults risk for falls. Older adults at risk for falls may not be getting adequate assessment, treatment and referral to effective community-based programs that are evidence-based to reduce falls and fall risk factors. CDPHE can provide resources and expertise to support the RCCOs in assessing and serving this population.
g. Lack of any KPIs for oral health limits care coordination to a dental home. A KPI regarding a diagnostic visit to a dentist would help track access to dental home (CMS 416 report, 12 e).
h. CDPHE is focused on tobacco cessation and secondhand smoke (SHS) exposure prevention for pregnant and postpartum women. RCCOs can play a role in promoting evidence-based cessation services specially tailored for pregnant women available through the Colorado QuitLine and Baby and Me, Tobacco Free Program. In-home environmental assessments and asthma interventions for children with asthma which include tobacco/SHS screening is an area of interest for developing reimbursement opportunities. Once home environmental assessment reimbursement is adopted, RCCOs have the opportunity to play a role in disseminating information to Medicaid clients, health care providers and community health service providers. CDPHE can provide resources and expertise to support the RCCOs in increasing tobacco cessation and SHS exposure reduction in this population.

3) What is working best in the Behavioral Health Organization (BHO) system right now?

The Behavioral Health Organizations have developed networks of care delivery for individuals requiring behavioral health services.

4) What is not working well in the BHO system?

The current mechanism of paying for behavioral health services in Colorado may create barriers to accessing care for vulnerable populations and provide a disincentive for physical and behavioral health providers to work together to support patient-centered health outcomes. Evidence supports the integration of physical and behavioral health care which may be impeded by the presence of a mental health carve out. CDPHE supports the State Innovation Model grant application and proposed integration of behavioral health with primary care.

Special Population considerations:

In the current BHO structure, there is minimal access to providers with maternal mental health expertise. Services for pregnant and postpartum women are offered on the adult side of care in community mental health centers while services for infants and children are offered on the family side – creates a disconnect when trying to provide services to a woman in the context of being a new mother. This approach does not support two-generation approaches to mental health care.

In the current BHO structure, children with intellectual and developmental disabilities often have a dual diagnosis of a mental health condition. Because the diagnose are paid for separately, the care is often fragmented and siloed, leading to gaps in care for this population.

5) What is working well with RCCO and BHO collaboration right now?

   The RCCOs have formed close working relationships with the BHOs that serve their region in an effort to address some of the barriers to care that arise from different funding mechanisms. Some of the RCCOs and BHOs are able to share data about clients requiring physical and behavioral health care needs. In the case of Colorado Access, they are the BHO for two of their regions which allows for a more efficient process of identifying patients who may have need of coordination across systems.

6) What is not working well with RCCO and BHO collaboration right now?

   Although there are guidelines and benefits to collaborating, the structure as it is currently in place does not effectively serve all individuals needing physical and behavioral health care. The geographic boundaries of the BHOs do not align with the RCCO boundaries, which adds complexity to the process of collaboration. In addition, the financial disincentives to coordinating care create barriers to the two entities fully collaborating.

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

CDPHE supports the State Innovation Model grant application which focuses on integrating behavioral health and primary care to ensure comprehensive, patient-driven care. We recommend assessing and aligning the geographic regions. An additional consideration may be to consider carving in the mental health carve out which would eliminate the disincentive to collaborate.

Special Population Considerations

We recommend exploring how to integrate services for pregnant women, infants and young children and not just the adult population.

We support the Systems of Care grant work that is evaluating wrap around care management for high risk behavioral health adolescents.

We strongly urge evaluation of the continuity of care for children and adults with a dual diagnosis of intellectual or developmental disability and a mental health diagnosis.

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☐	☐	
Community Behavioral Health Services Rule	☐	☐	
Covered diagnoses list	X	☐	Dental does not currently use diagnosis codes making outcome measures challenging
Different behavioral / physical health reimbursement	X	☐	If HCPF continues to use FFS for most procedures, make sure all CPT oral surgery codes have been adjusted to 75% of Medicare rates.
Institutions for Mental Diseases exclusion	☐	☐	
OBH rules, reporting, or financing (regulatory differences between agencies)	☐	☐	
PCMP financing structure	☐	☐	
Per-member per-month amount	☐	☐	
Physical space constraints	☐	☐	
Privacy Laws (HIPAA, 42 CFR)	X	☐	
Professional / cultural divisions	☐	☐	
RCCO or BHO contracts	X	☐	
Staff capacity	☐	☐	
State/Federal rules or reporting requirements	☐	☐	

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

Technical resources / data sharing	X	☐	APCD will include dental claims. Since SDAC does not include dental codes, it is very difficult to evaluate the oral health needs at a community level.
Training	☐	☐	
Others	Please type your response here.		

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

CDPHE supports the principles in place to support a medical home approach for Primary Care Medical Providers (PCMPs). We recommend a standard system of assessing competency to meet the identified standards. We support the advance primary care standards and feel that there is an opportunity in the next RCCO re-bid process to assess feasibility of further defining levels of medical home to ensure high quality care for our Medicaid clients. The State Innovation Model grant has provided a framework for integration and is currently developing a process for assessing practices—it will be beneficial to align the ACC model with this work.

Special Population Considerations

- PCMPs should have a process in place for referral to a dental home for at-risk clients
- Community Mental health Centers may serve as a health home for individuals with serious mental health illness.
- School-based health Centers serve many of Colorado's most vulnerable populations in geographic regions with health disparities; they provide mental and dental health to the populations they serve, and should be considered within the context of the ACC program as a PCMP if they meet the requirements.

10) Please share any other general advice or suggestions you may have about behavioral health integration.

In particular for the pregnant and postpartum population, accessing behavioral health services at a mental health center is a significant barrier in itself. The waiting room environment is often cited as not welcoming for a young mother and her baby, and getting out of the home for an extra office visit when there is a small infant at home takes a high level of motivation and organization, which mothers who are depressed often do not have. Often new mothers will not seek out medical care for themselves beyond 2-6 weeks postpartum, but will access the health care system through well child checks for their baby. What are the opportunities for integrating behavioral health into pediatric offices in a way that would allow for support for the mother if she appeared to be having mental health problems? This would go beyond just infant/child therapy, but could be provided in conjunction with it.

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination?

Care coordination delivers health benefits to those with multiple needs by assisting individuals in identifying health goals, supporting healthy decisions and coordinating services and providers to meet those goals. Patient navigation services are provided to assist clients in reducing barriers to health care access including, but not limited to health insurance coverage, screening services, system navigation and behavior change.

b. How should RCCOs prioritize who receives care coordination first?

- There who are high system users (ER or other)
- Clients who have multiple or complex chronic and/or behavioral conditions
- Clients who have complex social needs or cross more than one system of care
- Clients who are on multiple medications;
- Clients who have expressed a need for care coordination
- Clients who do not seek services and care due to social barriers to care, i.e., monolingual or English as a second language populations, residing in food desert areas, transportation issues, high perceptions of ethnic/racial discrimination in healthcare settings
- A tiered care coordination program that includes a focus on prevention, and health promotion: Utilize claims data to determine lapses in well-care, immunizations, and preventive screening, and develop outreach protocols

c. How should RCCOs identify clients and families who need care coordination?

- Claims data and risk stratification tools
- Health Risk Assessment
- Client request
- Newly diagnosed or acute exacerbation of a chronic disease such as COPD, diabetes, cancer, cardiovascular disease
- Utilization across systems
- Transitions in Care (Hospital discharge, discharge from behavioral health or substance abuse facility, youth with special health care need transitioning to adulthood, transition out of correctional system)

Special Population Considerations

All older adults age 65+ would benefit from fall risk assessment and then a specific plan of care if needed (2+ falls or any fall with injury). Older adults not requiring a plan of care would benefit from a discussion/education session (emphasizing patient activation) on reducing risk of falls and referrals to community resources such as evidence-based fall prevention programs.

For older adults, the transition from hospital/health facility discharge or emergency room visit back to the home is a time of increase risk for falls. This could be a flag for care coordination.

Pregnant women with Medicaid are almost three times as likely as those with other insurance to smoke and are at high risk for postpartum relapse. Tobacco use and secondhand smoke exposure screening, referral to cessation services such as the Colorado QuitLine and promotion of Medicaid cessation benefits should be prioritized at all encounters and at all points of care for women during pregnancy and postpartum periods.

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

   Tracking and evaluation of care coordination are two essential components necessary for the evolution of the ACC model. A shared care plan is often identified as a solution and much harder to implement. We nonetheless suggest working towards a patient-centered solution that supports sharing information across systems. NQF published a summary document identifying the different measures that might be considered within the realm of care coordination:

   http://www.qualityforum.org/News_And_Resources/Endorsement_Summaries/Care_Coordination_Endorsement_Summary.aspx

   Establishing a dummy code to track care coordination is one method that might track care coordination, however given the constraints of the system and the transition to a new platform we are not sure of the feasibility of this. We do recommend that the ACC model support a singular platform for care coordination documentation across the state.

12) What services should be coordinated and are there services that should not be a part of care coordination?

The following services should be coordinated:

- Referrals to community based prevention and management programs (i.e. Colorado QuitLine , Baby and Me Tobacco Free Program, Diabetes Prevention Program)
- Comprehensive age and risk appropriate preventive services management, including follow-up to treatment/specialty care when needed (i.e. cancer screening and connection to treatment)
- Medication therapy management and collaborative drug therapy management

- Behavioral health care services, particularly amongst those with high need but underutilization of services
- Social services, including transportation, housing, and community resources
- For adults with a concurrent medical condition/diagnosis-particularly diabetes and heart disease, care should be taken to coordinate services between the medical specialist and dental provider.
- Preventive oral health services between medical and dental providers.
- RCCOs include Cavity Free at Three messaging in provider communications. RCCOs encourage primary care providers, including family practice physicians, pediatricians, ob/gyns, physician assistances and nurse practitioners, to contact CDPHE for Cavity Free at Three training. (Medicaid and CHP+ requires certification to bill for Cavity Free at Three medical services)
- Add Medicaid dental providers to RCCO communications. Encourage dental providers to receive Cavity Free at Three training.

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

It is important to identify the psychosocial, housing and food security risk factors and barriers to care in additional to health indicators. Emotional and financial resources to support the management of an illness often appear to be the drivers for success more so than the medical care itself.

A comprehensive health risk assessment could capture the above information in addition to medical conditions (to determine complexity of conditions, i.e., multiple chronic conditions, cancer survivorship); preferred language; perceptions of ethnic and racial discrimination as barriers to engagement and social support networks. This assessment should also identify gaps in care, preventive services (screenings, immunizations, family planning, etc), or untreated dental needs that may need to be addressed.

For older adults it is a history of falls and self-assessment done by patient of their falls risks. One example of this is from the CDC STEADI toolkit
http://www.cdc.gov/HomeandRecreationalSafety/pdf/steadi/stay_independent.pdf

For children, additional information about the needs of the family or caregiver, the home environment, as well as potential gaps in access to well care and preventive care as well as untreated dental needs

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

    a. What care coordination is going on today?

CDPHE has multiple programs that provide or support care coordination and management. We would like to communicate to the RCCOs about these programs and provide support and resources for the special populations identified.

The Women's Wellness Connection (WWC) program at CDPHE has initiated a care coordination program for breast and cervical cancer screening and diagnostics for eligible insured (including Medicaid) women. WWC has offered these services to eligible uninsured women for many years.

CDPHE's Tuberculosis Program is tasked by statute with oversight of all TB prevention and control activities throughout Colorado. The TB Team has the expertise to support case management topics including: proper drug treatment; drug susceptibility testing; diagnostics including chest x-rays, collecting sputa, and skin or blood tests for TB infection; capacity building and training of new staff tasked with TB care and treatment; and contact investigations, to name a few.

The CDPHE Tuberculosis (TB) Program is particularly interested in coordinated care for those with co-morbid conditions including HIV, diabetes mellitus, and Hepatitis C along with behavioral/lifestyle conditions including smoking, chronic alcohol use, illicit drug use, homelessness, and incarceration. We have the resources and knowhow to support RCCOs in all these areas and more. We also coordinate care for recent foreign-born arrivals and Class Bs with indications of current or prior exposure to TB.

The CDPHE Viral hepatitis Program (VHP) utilizes case managers. The USPSTF strongly recommends screening for hepatitis B virus infection in pregnant women at their first prenatal visit (Grade A). The ACIP recommends hepatitis B vaccination at birth and recommends vaccination of all household and sexual contacts of a person with hepatitis B infection. The VHP assures that pregnant women are screened and that the woman, her newborn, and any household or sexual contacts are educated, counseled, tested and offered vaccine as needed.

The VHP includes 2 case managers and a nurse educator (shared with Immunization Program). Each year, the case managers serve 140-150 women with newly identified pregnancies and their newborns. More than half of these women were born in endemic countries, primarily Asia and Africa. These women need language interpretation services. A similar proportion receive Medicaid or are Medicaid eligible.

In addition to testing and vaccination services, the case managers provide coordination of care and education. As needed or requested by the woman, CDPHE can send a case manager to the home or send the client to a LabCorps or Quest for hepatitis blood draws. The case managers also work with local health departments to assure that infants and contacts can be vaccinated.

The nurse educator promotes the birth dose to hospitals around the state. Working with the program manager, the program identifies facilities that are not administering a birth dose of hepatitis B or are administering it to <90% of their birth cohort. These hospitals are prioritized, and the nurse manager arranges visits with the leaders at the facility to discuss their ranking, their challenges, and opportunities.

The Colorado Department of Public Health and Environment Health Care Program for Children and Youth with Special Health Care Needs is a community-based care coordination program for the children and youth in Colorado. HCP supports families to manage a wide range of questions, concerns and services for their child with special health care needs through:

- Information and resources
- Individualized care coordination
- Access to specialty care for children and youth statewide by helping families get referrals to and from specialized care and hosting specialty clinics in rural locations
- Supporting a medical home approach/local systems building
- HCP consults with providers and local organizations that have questions about children and youth with special health care needs.

WIC provides nutrition education, breastfeeding support and food benefits to pregnant and postpartum women and children 0-5. WIC also screens and refers for other common health issues.

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

Prenatal Plus and Nurse-Family Partnership:
Care coordination for pregnant women occurs through programs such as Prenatal Plus and Nurse-Family Partnership; however the level of intensity is significantly different. These programs meet in person with each participant on at least a monthly basis or more often throughout the pregnancy and discuss a variety of issues related to health, substance use, mental health and nutrition. The providers are trained in working specifically with this population. The challenge is that not all women receive this level of services.

Colorado Heart Healthy Solutions:
Many systems employ or contract with community-based organizations to provide community health worker services, however the services may be different from contract to contract based on needs, payment models or other circumstances. Systems like Colorado Heart Healthy Solutions track referrals, risks for cardiovascular disease, and biometric data for clients across the state. Hospital systems and clinic networks, like Metro Community Provider Network, hire patient navigators for specific diseases like assisting patients after cancer diagnoses to ensure they can access system and community services.

Tri-County Health Network:
Patient Health Navigators (PHNs) educate and follow-up with patients at-risk for cardiovascular disease and diabetes, or diagnosed with COPD to improve patient's chronic disease self-management. "Lay-leaders" (PHN and community health workers embedded in the partner clinics provide the Chronic Disease Self-Management Program (CDSMP) six week course throughout the region.

c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

The Colorado care Coordination collaborative (4C), a partnership between HCPF, Colorado Access, CDPHE, and Tri-County Health Department is piloting a project to identify policy and systems change interventions to improve communication and coordination across care coordination programs serving the children and youth population. This model pilot may be replicable across different RCCO regions.

If a woman is eligible and interested in receiving the more intense level of care coordination through one of the dedicated prenatal programs, the best thing the ACC can do is provide a referral to the program and follow-up to ensure the woman is connected to services. If a woman is already involved in this level of care coordination, the best way the ACC can help is to ensure coordination between the service providers (e.g. Is the medical provider connected to the Prenatal Plus provider and aware that the woman is participating in these services and is there an opportunity to maintain communication between the two providers?)

d. What are the gaps in care coordination across the continuum of care?

There is currently no mechanisms to determine who is receiving care coordination, what the intervention is (information and referral, a more complex family-centered goal to connect to social resources and coordinate with the school) and if it is effective.

For older adults, the transition from hospital/health facility discharge or emergency room visit back to the home is a time of increase risk for falls. Hospital discharge planners may address some of the needs, but there may be unidentified needs such as home safety, medication management, addressing balance and strength, etc. that may need to be transferred to the PCMP care coordination.

There is no consistency across the state about follow-up with postpartum women when they are discharged from the hospital.

15) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	Should the RCCO have a role? Yes	No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma	X	☐	X	Educating providers about mandated requirements and processes to report abuse and neglect
Affordability (assistance with prescriptions or co-pays)	X	☐	X	
Daycare / childcare	X	X	☐	
Economic stability & employment	☐	☐	☐	
Education	☐	☐	☐	Coordination and/or provision of Chronic Disease Self-Management training or DPP classes particularly for vulnerable populations Cultural Responsiveness Training for Healthcare Providers and clinic staff
Environment	X	☐	X	For older adults the home environment may include fall risks. RCCOs could provide referrals, and possible reimbursement for assessment and home safety equipment. For children with asthma at high risk for ER or hospitalization a home environmental assessment
Food access / nutrition	X	☐	X	Referral and counseling as appropriate, to include lactation support; provision of recommended preventive services; use of community health workers to support culturally appropriate health behavior change; referrals to WIC for pregnant/postpartum women and children ages 0-5.

Health literacy	X	☐	X	This is an essential component of support access to care, prevention and health promotions
Housing	X	☐	X	Collaborate with housing and human services for at-risk populations; potential to implement community health worker in areas of high disparities that could be housed within the housing infrastructure.
Language or translation services	X	☐	X	Support use of designated translated or translator services that do not use a family member or friend to translate.
Literacy	☐	☐	☐	
Transportation	X	☐	X	Identified as the number one barrier to care in our recent statewide Maternal Child Health needs assessment.

Other	Please type your response here. Feel free to list as many non-medical factors as you want, and please explain how the RCCO should be involved. Community based programs that address older adult fall prevention are evidence-based to result in decreased falls, decreased fear of falling, and increased quality of life. RCCOS should have a role in referrals to evidence-based community programs. The ideal role would be to assist older adults in locating and enrolling in these programs and feedback to PCMP on enrollment and completion by the patient of these programs. Supporting Dentists, dental hygienists within the medical neighborhood and as the dental home when appropriate. Cross-training of role of medical and dental providers in maximizing prevention and dental care for vulnerable populations. Support population based strategies in collaboration with CDPHE and the LPHAs.

16) **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	Coordinate care? Yes	No	In what capacity should these individuals coordinate care in the ACC Program?
Advanced Practice (Registered) Nurses	X	☐	Provide clinical care, order and interpret lab and diagnostic tests, make recommendations based on evidenced based practice. Oversee clinical aspects of care, especially abnormal values. Initiate and follow-up on referrals, provide complex care management to at-risk clients.
Certified Addiction Councilors	X	☐	Within behavioral health setting
Certified Nurse Midwives	X	☐	Provide clinical care, order and interpret lab and diagnostic tests, make recommendations based on evidenced based practice. Oversee clinical aspects of care, especially abnormal values. Imitate and follow-up on referrals, provide complex care management to at-risk clients.
Community Health Workers		X	Note: we do not believe that community health workers have the knowledge and skills to provide care coordination and ask that you refer to these individuals as patient navigators. Community Health Workers work in community settings and Patient Navigators are related to health systems.
Generalists (BA/BS/MA/MS)	☐	☐	
Health Coaches	X	☐	Coaches should be trained on the risk of falls for older adults and the understanding that fear of falling impacts with older adults' independence, lack of mobility and reluctance to participate in fall prevention programs, as well as chronic disease prevention and nutrition and physical activity promotion programs. They could also be trained in Healthy Eating Active Living support. Motivational Interviewing, connect to resources to support health behavior change. Example: Motivational Interviewing with tobacco user to increase readiness to quit and willingness to participate in evidence-based cessation practices and services.
Licensed Clinical Social Workers	X	☐	Care management and coordination across complex systems of care, work within behavioral health setting may be as primary therapist.

Licensed Marriage and Family Therapist	☐	☐	
Licensed Mental Health Counselors	☐	☐	
Licensed Professional Counselor	☐	☐	
Masters of Public Health	☐	☐	
Medical Doctors / Doctors of Osteopathic Medicine	X	☐	Can direct and provide all aspects of medical care. Support team-based care approach.
Nurse Practitioners	X	☐	See above for APN
Patient Navigators	X	☐	Serve to remove barriers to care for vulnerable populations and assist in navigating complex health systems and link to community resources. Can coordinate referrals to evidence-based prevention and management programs and connections to other needed services like transportation, child care, housing, food, etc.
Peer Advocates	X	☐	For those with behavioral health needs
Promotoras	X	☐	Can coordinate referrals to evidence-based prevention and management programs and connections to other needed services like transportation, child care, housing, food, etc. These community based workers can assist patients in locating and enrolling in evidence-based older adult fall prevention programs, and can individually assist in overcoming the barriers older adults have to enrolling in these programs. Health promotion, including obesity prevention. Referrals to Healthy Eating, Active Living programs, WIC. Connect to health care services, connect to community resources.
Psychiatrists	☐	☐	
Psychologists	☐	☐	
Registered Nurses	X	☐	Complex patient navigation, care coordination and case management
Social Workers	X	☐	Especially for individuals and families with complex psycho-social needs and or crossing systems of care.
Wraparound facilitators	X	☐	For those at highest risk for complex behavioral health or social needs, or in crisis.
Other	Please type your response here.		

17) **Care coordination requirements for specific populations.** Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and infants	X	☐	Newborn hearing screening follow-up, well-check within 3-5 days of birth.
Children	X	☐	Developmental and social-emotional screening follow-up (if screened, did they make it to the evaluation agency)
Children who are healthy, but in socially-complex environments	X	☐	WIC referrals for ALL children and ALL pregnant women; comprehensive needs assessment; The Healthy Lifestyle Screening tool developed by HealthTeamWorks would be very useful.
Children involved in the foster care system	x	☐	Higher intensity care coordination
Children with a chronic illness	X	x	Family-centered approach to care coordination across systems of care including coordination with MH, the school system
Children with a serious emotional disturbance	X	☐	
Children with medical complexity	☐	X	
Children or youth with a behavioral health diagnosis or substance use disorder	X	☐	Higher intensity care coordination and consideration of CM and wraparound services.
Transition-age adolescents	☐	☐	Those with special health care needs need higher intensity CC and a multi-disciplinary transition plan.
Parents and families	☐	☐	
Pregnant women	☐	X	Pregnancy-related depression screening follow-up, smoking cessation services, substance abuse programs (i.e. Special Connections), referrals to appropriate home visitation or prenatal care coordination programs, family planning postpartum, lactation support postpartum, WIC referrals.
Adults	☐	☐	
Adults who are healthy, but in socially-complex situations	X	☐	May require care connection to systems outside of the medical arena including social services, detention,
Adults with a chronic illness		X	May require care connections to pharmacy, specialty care providers,

			community-based prevention and/or management programs
Adults with a behavioral health diagnosis or substance use disorder	X	☐	May require extensive pharmacy coordination services; care coordination across systems of care with a shared care plan
Clients involved in the criminal justice system	X	☐	May require extensive pharmacy coordination services; care coordination across systems of care with a shared care plan
Clients with a disability	☐	X	May require extensive pharmacy coordination services; care coordination across systems of care with a shared care plan
Clients in a nursing facility	X	☐	Along with clients utilizing home care services, clients in nursing facilities may require complex pharmacy coordination services, connection to community-based chronic disease prevention or management services, and/or social supports
Elderly clients	X	☐	May require complex pharmacy coordination services, connection to community-based chronic disease prevention or management services, and social supports Older adults over age 65 should be assessed for fall risks, and treated and referred for medical conditions, as needed, and counseled about fall risk prevention options, including community fall prevention programs.
Frail elderly clients	X	☐	May require complex pharmacy coordination services, connection to community-based chronic disease prevention or management services, social supports, community education efforts (fall prevention) Frail older adults over age 65 should be assessed for fall risks, and have a falls plan of care, including home or facility based physical therapy or community fall pre3vneiotn programs.
Clients in palliative care	X	☐	
Other populations, please comment:			

Clients for whom English is a second language; immigrant clients, clients with complex pharmacy needs;
Families of clients who are high utilizers, including families of children requiring operating room dentistry to manage dental disease.
Ethnic/Racial populations and self-identified LGBTQI individuals with perceptions/experiences of discrimination in healthcare settings.

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

There needs to be a communication loop that can help ensure wrap around services are being provided when necessary. Consider braided or blended funding for medically or socially complex children or those in the foster systems so that different payer sources do not become a barrier. Identify one lead agency to coordinate care and assess a shared care plan. The Systems of Care grant is an opportunity to explore how this might look in practice.

19) How should care coordination be evaluated? How should its outcomes be measured?

NQF has a summary of endorsed measures:
http://www.qualityforum.org/News_And_Resources/Endorsement_Summaries/Care_Coordination_Endorsement_Summary.aspx

Should align with the State Innovation Model grant.

Successful connection to services and notification using referral loops to indicate the client participated in referred service.

Measure the care coordination intervention and outcome to assess whether a change in health statues, barrier reduction, etc. are achieved. The care plan or action plan needs to have clearly articulated goals and outcome to ensure the impact is measureable.

Measurements may include overall reduction in disease state or increase in disease management, medication adherence, completion of chronic disease prevention or management program, behavior change, client engagement and activation (many tools exist to measure this), increased quality of transitions of care (care plans created, etc.)

Example outcome measure: Increased # of women identified with pregnancy-related depression receive treatment

For older adult fall prevention, documentation using CPTII codes, and/or G codes that fall risk assessment was completed and falls plan of care was developed and implemented, if needed based on the falls risk assessment.

May consider tying care coordination effectiveness or outcomes to some type of incentive or payment.

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

    a. What is the PMPM cost for providing care coordination services?

This depends on what kind of care coordination is being done. For medically or socially complex clients the cost PMPM may be much higher. Tiered systems based on assessment and data may allow a stratification of patients to different levels of care coordination based on need.

For Women's Wellness Connection, the reimbursement is $30 per body part (not per month) for patient navigation and $60 for case management for breast or cervical screening and diagnosis. Both also include the administrative fee.

Medicare will start reimbursing for care coordination at $41.00 PMPM for medically complex patients. There is wide variety.

    b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

    The PMPM should vary by complexity and assessment of need for the individual based on a standard assessment process. Within this context, certain high risk populations may be specially identified as requiring the highest, or lowest, level of care coordination.

    Pregnant women who are accessing the health care system frequently during the 9 months of pregnancy and couple months postpartum likely require a higher intensity of contact and the rate might be too low – would depend on if they are receiving additional services though through one of the more intensive prenatal programs. Infants also need to access the health care system frequently in the first six months of life.

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

    Maintaining monthly contact with clients on a face-to-face basis requires a lower caseload (no more than 51-100 clients). If care coordination is primarily by phone and contact is not as frequent a caseload of up to 200-500 might be manageable. This would depend on the client acuity though as well, and again the frequency with which they need to access care. There should be a comprehensive plan in place for the RCCO to receive support If the PMPM or ration is insufficient to provide for the comprehensive care coordination required in contract language.

a. Care coordinator to client ratios. If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☐
51-100	☐
101-200	☐
201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

Access to care, preventive care received, referral feedback loop, patient engagement and satisfaction, health outcomes such as emergency department utilization and hospital admissions. (5ee question 19).

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Track and monitor timely completion of recommended health care services and appropriate follow-up. Monitor and track the preventive services that are recommended, and track percentage who are up to date on screening. 5upport the use of health information technology and clinical quality measurement using standard data sources such as NQF Measures (for example to track diabetes or control of hypertension, NQF Measured 59 and 18). Utilizing data to improve clinical processes will positively impact health outcomes.

A component of care coordination is supporting and referring to self-management and disease management programs. CDPHE support evidence-based programs such as the Diabetes Prevention program, the Diabetes 5elf Management and Education Program, the Colorado QuitLine, and home blood pressure monitoring. For older adults, fall prevention programs should be combined or bundled with other chronic disease self-management programs. Reimbursement for evidence-based falls prevention programs should follow the model of chronic disease prevention programs reimbursements.

CDPHE support a medical home approach that maximizes the use of all team members to improve health outcomes for the population served. The inclusion of lay patient navigators, community health workers,

and promotoras to help reduce social and system barriers is essential and will allow licensed and or clinical staff to focus on medically or behaviorally complex clients. Consistent with the Chronic Care Model, clarity of roles and responsibilities, and using the above mentioned roles to focus on barrier reduction, is crucial to the success of team-based care.

Inclusion of coordination with a dental home is essential to ensure the overall health of the client.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

Data reporting should be consistent if we are going to understand the impact of the model statewide. Align clinical quality measurement requirements to the CPC initiative as well as the State Innovation Model grant. Support practices in developing capacity to capture and report clinical quality measures at the state level.

Availability or connection to evidence-based chronic disease prevention and management programs across the state rather than relying on each RCCO to develop their own self-management and disease prevention interventions.

Care coordination client identification, risk assessment, and tracking and evaluating should be done consistently across the state so that we can assess impact and outcomes and ensure a standard process in place.

Development of medical neighborhoods and protocols to support access to specialty care should be statewide.

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

It is essential that the next iteration of the ACC bolster community-RCCO partnerships and provide structure to support community-based clinical and public health interventions. RCCOs should start by identifying key community stakeholders it already has relationships with, or plans to form relationships with. Key partners include the local public health agencies. RCCOs should have an understanding of the community needs assessment completed in their community and knowledge of public health improvement plans in the various counties that are served. A description of gaps in services in the communities served and which partners are working to address those gaps, if any should also be developed.

a. Partnership with local public health agencies to ensure strong prevention and management programs are promoted. We recommend the following steps to support this community-based partnership:
    i. Require a letter of commitment from all LPHAs within the RCCO geographic region in support of a partnership between the LPHA and the RCCO and clearly identified expected activity:
    ii. The RFP should require that this partnership identify the programmatic or population-based areas of focus that they will focus on. An MOU or business agreement should be strongly encouraged to ensure this partnership has an impact on the population. The following domains of expertise for the LPHAs in Colorado may be considered by the RCCO depending on the needs of the community:

1. Public Education and Health Promotion
2. Population health management, including dissemination of evidence-based programs
3. Outreach and enrollment
4. Data sharing and evaluation

iii. The RCCO/LPHA should also identify performance metrics and an evaluation plan to guide the partnership and provide an opportunity for evaluation and quality improvement.

b. Cultural relevance, including training of health systems staff and plans for addressing activation of clients in specific subgroups (for example, a culturally relevant plan for ensuring African Americans who have the highest rates of cardiovascular disease are actively involved in the prevention and management of their condition.)

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

There is value in identifying the RCCO at a geographic level, as many health conditions are at least, in part, due to physical location (food deserts, rural, specific type of economic disadvantage, etc.) and resources are usually more easily coordinated at a geographic level. Without a compelling argument to support this there does not seem to be an advantage to this approach at this time as it would disrupt the community support and access to local resources.

27) Should the RCCO region maps change? Why or why not? If so, how?

The geographic regions should align across RCCOs and BHOs and consider the LPHA region as well. There should be one system for regionalization of RCCOs, BHOs and public health initiatives. We should align "regional" maps to the extent possible across all services – that may not be possible, but the local communities express frustration over the # of different regions they belong to based on the program. Aligning the BHO and RCCO regions would be a first step – the one who changes should be the one who least aligns with other regional divisions (ex: Health Statistics Regions or LPHA service regions, etc.)

28) Should the BHO region maps change? Why or why not? If so, how?

Yes. See above.

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

The current benefits structure provides coverage of preventive services without cost sharing. However there are evidence-based interventions that are not covered thus hindering impact on chronic disease prevention and management. For example, the current benefit structure does not allow for reimbursement of pharmacists, nor does it allow for reimbursement for provision of evidence-based prevention programs like the Diabetes Prevention Program or the Diabetes Self Management and Education program.

Although tobacco cessation is covered there are barriers to maximizing the benefit for Medicaid clients. We recommend removing the Prior Authorization Request requirement. We recommend updating the pharmacotherapy benefit to allow for two covered mediations to be prescribed at the same time per the latest evidence based research. We recommend at least 4 sessions of counseling (at least 10 minutes per session) per quit attempt, and at least two quit attempts per year.

There is lack of clarity around reimbursement for lactation support, including equipment and counseling. The system is very restrictive and women need to access these services immediately in order to maintain breastfeeding.

Breastfeeding/lactation office visits are covered using Evaluation and Management (E±M) procedure codes for problem-specific care. *(The coding isn't cleor for oll conditions for which o boord certified loctotion consultont referrol or pump might be used.)* Most E+M require services to be rendered by a physician, physician assistant, or advanced practice nurse. There are a small number of E±M codes that allow services to be provided by a registered nurse. Lactation consultants are not currently able to enroll as Colorado Medicaid providers. *This is o borrier in thot MDs, Pos, ond APNs ore not typicolly troined in loctotion monogement to the extent of on Internotionol Boord Certified Loctotion Consultonts (IBCLC) - the loctotion expert. This often leods to the wrong pump being ordered which creotes o borrier to breostfeeding.* Manual breast pumps are a covered benefit and do not require prior authorization. Electric breast pumps must be prior authorized."

In order for mom and baby to be successful with breastfeeding they require:

- Timely access to support and equipment *(prior outhorizotion for hospitol grode pumps is not timely)*
- Lactation support often gets included within the hospital fee but mothers report not receiving lactation support. How do we know if the lactation services are happening? While not all families require the lactation expert, community-based IBCLC counseling and support options can be very cost effective but are not currently reimbursed.
- Equipment: The type of breast pump provided is subject to insurers' "reasonable medical management" practices. Medicaid and some plans have opted to provide only manual breast pumps which do not meet all/most women's needs unless truly occasional use.

Recommendation:

- Access: Identify local sources of DME as this will allow quicker access to pumps; large providers are not stocked.
- Approval: Ensure that the onus of decision about the type of pump that is authorized is appropriate and easily accessible. Pump recommendations made by an IBCLC or licensed provider.
- The International Board Certified Lactation Consultant Workforce in Colorado recommendations are 2 IBCLC/1000 births. Colorado has 273 IBCLCs for 65,000 births or approximately 4/1000. Some plans will not reimburse IBCLCs if they are not under a physician.
- Place IBCLCs within the category of "nursing service related providers" and specify the nature of care they provide so they can be reimbursed without being registered nurses.
- Develop a state licensure of lactation consultants.
- Renegotiate hospital contracts so that lactation is reimbursed.

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

There should not be more than one. This would add additional barriers to access for vulnerable populations for whom the system is already complex and difficult to navigate.

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

34) What role should RCCOs play in attributing clients to their respective PCMPs?

CDPHE supports the strong work that HCPF and the ACC team are doing to promote timely and client-driven attribution. As a regular participant of the PIAC and its' sub-committees we applaud the transparent conversations that lead to meaningful improvement in the program structure. We recognize the importance of attribution and the need to maintain client autonomy and choice. It is especially important to focus on vulnerable or high-risk populations and ensure that they have coverage and access to a provider in a timely manner. Individuals transitioning out of the correctional systems and high-risk pregnant women are two populations that may benefit from active and facilitated attribution , or at least connection to a RCCO care coordinator to ensure that there is a warm hand-off (from Health Communities, the correctional facility, the hospital).

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

The state public health department (CDPHE) has a strong interest in the success and vitality of Colorado's RCCOs and ACC system. This initiative has the promise to advance the conversion of a system that delivers medical care to one that promotes health outcomes throughout the lifespan for all participants. The ACC initiative can do this in a number of ways.

1) Include a representative from CDPHE on the ACC oversight and steering committee (the PIAC and sub-committees. CDPHE Health Systems staff currently attend all committees and could provide a valuable public health perspective.

2) Require RCCOs to connect with CDPHE to discuss ways that state grant funds could be utilized by them to advance chronic disease prevention and promotion activities. CDPHE has three grant funds in particular which can be used to improve the health of Coloradans - The Cancer, Cardiovascular, and Pulmonary Disease Grants Program, the Tobacco Prevention and Education Grants Program, and the Office of Health Equity Grants Program. RCCOs could use these funds to establish systems of care coordination, enlist patient navigators or community health workers in patient care, deploy innovating benefits such as the diabetes prevention program or test a complete range of cessation tools as covered benefits for Medicaid members.

3) Consult with CDPHE to integrate strategies for chronic disease management and prevention from the state's chronic disease state plan. This plan advances several initiatives to build new systems of care and coordination within the health system and strategies to improve the quality of care. It would improve chronic disease prevention and management in Colorado and save the Medicaid program countless dollars if RCCOs looked closely at these strategies and advanced the state's ability to implement them.

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

CDPHE supports active collaboration between HCPF and CDHS. Often, RCCOs identify the foster child population as one of the most difficult to provide a comprehensive medical home due to their high needs and geographic instability. We applaud the work that the Systems of Care grant is undertaking. Creating a common fund of braided or blended funding for high risk populations is paramount to improving their experience of care and health outcomes.

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

CDPHE applauds the strong collaboration between the ACC and Connect for Health Colorado.

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

With the introduction of new payment methodologies that may require the primary care clinic or system to take on financial risk we recommend close collaboration and communication with the DOI to ensure that sound business decisions are being made that will not negatively impact the provider or the client.

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

- Understand that stakeholder engagement is not uniformed nor static, but rather is a commitment on three distinct levels - the care experience, community level education/involvement and policy development.

- Stakeholder engagement should be reflected in budgets at the state and local level. It is not reasonable to assume that meaningful, consistent and deep stakeholder engagement is a no-cost effort. However, It is an investment that will likely lead to cost savings for the system broadly. (Example: We know that informed and empowered healthcare consumers leads to better system navigation and leads to fewer duplication and lower ER utilization.)

- Stakeholder engagement efforts should include meaningful recruitment and outreach that reflects the community. Evidence based recruitment and outreach strategies such as utilizing Cultural Brokers should be considered. (Similar to peer to peer support and outreach.)

- When Family/Youth Advisors are placed on a committee that meets consistently, compensation should be consistent with industry-standard consultative rates.

- Care Coordination services provided by the RCCO's should be flexible and inclusive to include input and implementation from trained community members (Family Leaders, Parent Navigators) Licensed health professionals, such as licensed nurses, PA's, etc... can be complemented by the systems knowledge held by families and youth who consistently navigate the systems. (Consider the end user as Subject Matter Experts, especially for children and youth with special health care needs.)

- Knowledge and leadership toward successful integration of mental health services.

- Knowledge and leadership for successful care and coordination of children and youth with special health care needs. Refer to the recently published "Standards of Care for Children and Youth with Special Health Care Needs" published by AMCHP and NASHP 2014.

- Training/Integration of concepts and strategies that entail a holistic approach to promoting healthy youth development. These trainings should include:

- youth-adult partnerships to reinforce the connections between caring adults/healthy relationships and positive health outcomes
- a strengths-based and inclusive approach to create and maintain welcoming and youth-friendly environments
- collaborative and sustainable practices that promote and support the integration of a positive youth development approach into the policies and practices of the RCCO's and the clinics they are connected to.

RCCO's should also be engaged in Colorado 9to25 (our statewide youth system that serves all young people across the state) and integrate their best practices into their work (such as youth-engagement standards and working towards a formal Colorado 9to25 endorsement.

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

They should be required to reach out to their LPHAs, family resource centers and early childhood councils to learn about services provided in support of populations health and for targeted populations such as those with multiple chronic conditions, health disparities, pregnant women and young children and youth, especially those with special health care needs, in the community.

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

The local public health agencies could be more intentionally involved in conversations with the ACC and understanding the roles/responsibilities of the RCCOs in their region and exploring how each partner can be mutually contributing and benefiting from the relationship. This can be supported by requiring a more formal relationship between the RCCO and the LPHA. (See question 25)

42) How should the Department structure stakeholder engagement for the ACC as a whole?

We feel that the current ACC PIAC structure provides an opportunity for on-going stakeholder engagement and support continued transparency and inclusion of stakeholders.

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

No.

a. If no, what are the gaps?

Gaps should be systematically assessed by region and provider type.

There are not nearly enough behavioral health providers equipped to manage maternal mental health problems, particularly in rural communities.

Inadequate number of dental specialties for both adults and children, especially oral maxillofacial surgeons, periodontists, endodontists and pediatric dentists.

Not enough lactation experts for the initial assessment within 3-5 days of life.

b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

Educate dental providers, specialists included, about Medicaid program.

Facilitate provider trainings to expand patient panel to include people with disabilities.

Educate healthcare providers and staff on cultural responsiveness for increased effectiveness in meeting the needs of ethnic/racial and LGBTQI populations with high perceptions of discrimination/distrust of healthcare systems.

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

All of the following organizations have a role in developing and implementing older adult fall prevention activities and programs.

a. What role should hospitals play in the next iteration of the ACC Program?

Medical neighborhoods should be developed with the inclusion of hospital and hospital systems. Hospitals should provide real-time notification of admissions and discharges to the RCCOs. Hospitals should

provide linkages to community programs upon discharge or link to the RCCO care coordinator to ensure continuity of care during transitions. Hospitals should be encouraged to utilize their community benefits requirements when developing these RCCO and community partnerships.

b. What role should pharmacies play in the next iteration of the ACC Program?

c. What role should specialists play in the next iteration of the ACC Program?

d. What role should home health play in the next iteration of the ACC Program?

e. What role should hospice care play in the next iteration of the ACC Program?

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

g. What role should counties play in the next iteration of the ACC Program?

RCCOs should be required to connect with each of the Local Health Agencies in their Region. RCCOs should be required to submit, as part of their bid, a letter of commitment from a local health agency indicating that they have communicated with that entity, are aware of the local health goals being advanced by that community through the local public health improvement plans and have a plan in place to develop an MOU or BA to advance those community-based improvement goals. (See question 2S) Several health departments have sought funds to implement chronic disease prevention strategies in tobacco, cancer control, obesity control, cardiovascular disease and pulmonary disease. Many of these efforts will be directed toward the same individuals being enrolled by RCCOs. The care received by such individuals would be improved if the efforts being coordinated at the local health agency level were coordinated with the efforts being initiated by the RCCOs bidding for the Medicaid contracts. Additionally, since many of these efforts are being underwritten by state tax dollars, they are fully match able with Federal Medicaid dollars if the state can pursue a state plan amendment with CMS. The more integrated RCCOs with initiatives that use state dollars the larger the Federal match can be.

h. What role should local public health agencies play in the next iteration of the ACC Program? (Please see question 25)

LPHAs that offer direct clinical services (family planning, breast and cervical cancer screening, immunizations) should be a referral source for care of ACC clients.

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

Non-profit primary care clinics that meet the requirement should be part of the RCCO network to serve as a patient centered medical home for ACC clients. Non-profit clinics that do not offer primary care but offer other preventive services (family planning, breast and cervical cancer screening) should be referral sources for clients.

45) How can RCCOs help to support clients and families in making and keeping appointments?

Lay patient navigators can be utilized to support clients and remove barriers to accessing care. Same day appointment availability extended hours, patient portals. Evidence-based client reminder systems can be implemented.

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

Yes, BOTH patient navigators and community health workers are essential team members to reduce barriers to care for vulnerable and disparate population and provide culturally competent care.
We would be happy to support the development of a process for including both in the next RFP. We recommend differentiating CHWs from PNs as they are not interchangeable in terms of knowledge, skills and workplace. CHWs are community based, and do not usually interface with health care providers and systems, while PNs reduce barriers to health care access and follow-through, primarily within health systems.

47) **Community Health Worker reimbursement**. Please use the table below to detail how Community Health Workers should be reimbursed:

If you mean patient navigators, they could be on staff at primary care or RCCO or covered by PMPM.

Reimbursement process	(Please check all that apply)
Independently bill	☐
On staff (salary) at Primary Care Medical Provider Clinic	X
On staff (salary) at RCCO	X
Per Member Per Month Payment	☐

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

Coordinate with DentaQuest's outreach coordinators to evaluate priority communities lacking dental providers, including specialists. Support DentaQuest and Colorado Dental Association dental provider recruitment efforts. As virtual dental home evolves, support policies that reimburse for Teledentistry services and provide care coordination.

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you?

For providers, the National Institutes of Health definition: how personal identification, language, thoughts, communications, actions, customs, beliefs, values, and institutions that are often specific to ethnic, racial, religious, geographic, or social groups influence beliefs and belief systems surrounding health, healing, wellness, illness, disease, and delivery of health services. Cultural competency enables providers to deliver services that are respectful of and responsive to the health beliefs, practices and cultural and linguistic needs of diverse patients.

In the broader context, cultural competence is the lifelong development of skills demonstrated by a set of behaviors, values, and policies enabling an individual or agency/organization to work effectively and inclusively across diverse cultural situations. Criteria for assessing cultural competence include: whether agency board members, staff, interns and volunteers reflect the community to be served; the availability of ongoing professional development for all of the previously mentioned groups: and opportunities for dialog and feedback from culturally diverse clients in the community.

b. What RCCO requirements would ensure cultural competency?

Assess availability of Culturally and Linguistically Appropriate Services (CLAS) standards at points of services. Facilitate support to implement CLAS standards where necessary. Ensure community representation throughout care delivery, management, and leadership process. Include family advocates, peer specialists, community health workers in the team to ensure team-based care is based on connections to the community served.

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?

See HHS Office of Minority Health's *Think Cultural Health* provider trainings.

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

Care coordinators, PCMPs and other clinical staff should be required to take either on-line or classroom based cultural competency and low literacy training. The RCCOs could require that print and web materials meet standards for health literacy (reading level, checklists for material view, guidelines for material production) and encourage the use of video and other educational methods such as teach back.

Culturally appropriate care coordination, including recruitment of lay patient navigators, community health workers and/or promotoras from local communities. Note however, that having CHWs or PNs on staff does not replace the need for translation services unless the staff members are certified for translation.

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

51) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

Extended hours, same-day appointments, incentivize to seek appropriate care.

Greater emphasis on preventive services and care, including assessment of preventive service adherence within primary care settings and implementation of evidence-based clinical interventions to increase adherence. This can apply to any USPSTF A/B recommendation, ACIP recommendations.

For older adults a significant part of emergency room fare is due to falls, and an older adult discharged from the ED for a fall is at risk for another fall. RCCOs could be alerted to ED visits and provide care coordination for fall risk assessments, and treatment and referrals (including to community–based fall prevention programs) as needed.

Home-based multi-trigger, multi-component interventions with an environmental focus for children and. Reimbursement for in-home environmental assessments and dissemination of information to Medicaid adolescents with asthma are effective in reducing ED visits, hospital days, ICU admissions and unscheduled Dr. visits clients, health care providers and community health service providers should be supported by the ACC.

52) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

Practice Support

53) **Support for practices.** Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☐	☐	☐	☐
Network provider education	X	☐	☐	☐
Assistance with practice redesign	X	☐	X	X
Assistance with efficiency-enhancing activities	☐	☐	☐	☐
Provide web-based resources and directories	☐	☐	☐	☐
Provide practice-specific data reports	☐	☐	☐	☐
Provide clinical care guidelines and best practices (for older adult fall prevention).	X	☐	☐	X
Provide clinical screening tools	X	☐	X	X
Provide health and functioning questionnaires	☐	☐	☐	☐
Provide chronic care templates	☐	☐	☐	☐
Provide registries	☐	☐	☐	☐
Offer client reminders	☐	☐	☐	☐
Offer client self-management tools	☐	☐	☐	☐
Offer educational materials about specific conditions	☐	☐	☐	☐
Supply behavioral health surveys	☐	☐	☐	☐
Supply other self-screening tools	☐	☐	☐	☐
Administer behavioral health surveys	☐	☐	☐	☐
Administer other self-screening tools	☐	☐	☐	☐
Prepare client action plans	☐	☐	☐	☐
Provide training on providing culturally-competent care	☐	☐	☐	☐
Provide training to supporting staff	☐	☐	☐	☐
Provide training on motivational interviewing	☐	☐	☐	☐
Provide tools and software for phone call and appointment tracking	☐	☐	☐	☐
Provide tools and resources for tracking labs, referrals, etc.	☐	☐	☐	☐
Provide referral and transitions of care checklists	☐	☐	☐	☐
Provide visit agendas or templates	☐	☐	☐	☐
Provide standing pharmacy order templates	☐	☐	☐	☐
Provide comprehensive directory of community resources	☐	☐	☐	☐
Provide directory of other resources	☐	☐	☐	☐
Provide materials regarding Nurse Advice Line	☐	☐	☐	☐
Ensure all tools and resources are centrally located on RCCO-specific website	☐	☐	☐	☐
Others				

54) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

For screening tools – where these are available and standardized, the RCCO network could help with dissemination and encouraging a standard process. Example for pregnancy-related depression: Edinburgh Postnatal Depression Scale (first choice) or PHQ-9 (second choice). Example for developmental screening in young children: Ages & Stages Questionnaire (ASQ).

For older adult fall prevention, reference the Prevention of Falls in Community-Dwelling Older Adults by the U.S. Preventive Services Task Force (http://www.uspreventiveservicestaskforce.org/uspstf/uspsfalls.htm) and the Updated American Geriatrics Society/British Geriatrics Society Clinical Practice Guideline for Prevention of Falls in Older Persons (http://www.americangeriatrics.org/health_care_professionals/clinical_practice/clinical_guidelines_recommendations/prevention_of_falls_summary_of_recommendations)

RCCOs on an ongoing basis should identify and communicate with clients who are coming due or are overdue for age and risk appropriate preventive screenings and immunizations. This reduces the likelihood preventable diseases. Further, Colorado Immunization Information System (CIIS), managed by the Colorado Department of Public Health and Environment, should be the centralized registry that houses all immunization data for RCCO clients and forecasts the immunizations clients are due/coming due for based on the client's age, immunization history and any documented contraindications.

55) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

Clinical guidance has been developed for management of a variety of conditions. Making sure providers know about the evidence-based resource would be helpful. We don't have a mechanism for distributing the guidelines to all providers because we don't have a comprehensive list, but RCCOs do.

56) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

Support new payment models that encourage comprehensive, patient and family centered care, health care value, and improved health outcomes, providing sufficient support to allow practices to transform.

57) Should the Department require that PCMPs utilize disease registries to manage the health of their population?

For certain disease states and populations, supporting providers in the development of registries is essential.

58) Please share any other advice or suggestions about provider support in the ACC.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

CDPHE supports a transition to value-based payment with provider support to transition. Essential components to support a payment glide path are practice infrastructure support, care coordination payments, and payer alignment. We applaud Colorado Medicaid's efforts to support this. In addition, it is necessary that the support is sufficient to enable true transformation. One of the most difficult transitions for practices is to "between" payment methodologies—expected to perform within a context of value but still reimbursed based on volume. We would recommended (as noted above) a more substantial amount be paid for care coordination. This can be accomplished through a tiered approach that utilizes a care coordination team to provide services and functions along the continuum of care coordination.

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

Difficulty with this model is the fact that the cost savings of prevention and appropriate care are often born out within the specialty or hospital payment –how can PCMPs be rewarded for saving outside of primary care setting? What is risk to provider?

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

Practice transformation, sufficient payment for comprehensive care coordination and payment of non-medical and social services are essential components necessary to accept new payment methodologies. We strongly support the work of SIM and other practice transformation efforts in supporting true transformation.

62) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

63) What role – if any – should the RCCOs play in the distribution of payments to providers?

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

CDPHE applauds the transparent process that HCPF uses to determine the KPIs and other potential measures that will be used, such as shared savings. We also support measure alignment with other programs, payers, and initiatives to ensure that undue burden is not being placed on the provider or clinic system. We recognize that even with measurement alignment this is not sufficient to provide a comprehensive picture of outcomes or client and provider engagement and satisfaction.

We strongly support the transition from claims-based measures to those that measure clinical quality and experience of care and recognize that this will require practice support to ensure accurate and actionable data that the provider and payer can trust to act on.

66) **Measuring Client experience.** Please complete the table below to indicate how the Department should measure Client/patient experience:

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	X	☐	
SF-12 Health Survey	☐	☐	
Other types of client interviews / surveys	☐	☐	
Patient Activation Measure	X	☐	
Focus groups	X	☐	
Other	Please type your response here.		

67) Knowing that, at this time, the Department only has claims data, how should population health be measured?

There are several groups convening to discuss how best to link clinical care and community interventions to measure true population health impact. An important consideration is the dimension of the population under consideration—is the RCCO region considered a population or the entire state? This is necessary in order to start baseline measurement and benchmarking, which will allow targeted clinical and community-based interventions. Population health measures are made more difficult by the fact that many payers who can influence (or help pay for) population health interventions cannot pay for community-based interventions that touch clients not enrolled in their program. True population health should cross payers.

With the current constraints of claims based data, the following are potential measures:

- Many preventive services can be tracked by claims data—at the practice or RCCO level, the population-based measure of preventive services received provides an opportunity to intervene to improve screening and prevention rates. CDPHE has expertise in supporting prevention and screening and could provide technical assistance during the writing of the RFP on how best to capture preventive services as population health measures.
- # of screens completed (Pregnancy-related Depression and & Developmental Screening) – in the case of PRD, the claims data has the ability to tell us if the screen was positive or negative – this would at least tell us if things are being standardized and a more accurate measure of prevalence of depressive symptoms in the population. If the screening code is connected to a behavioral health service code, we could begin to understand if women identified with depressive symptoms are accessing services for treatment.
- Utilization of preventive versus emergency services. Community and family level "hot spotting" of high utilizers.

68) How should quality and performance data be reported to the RCCOs, PCMPs, and the public?

Dash-boarding is an effective tool to present complex data in a digestible format. We support transparency if data in a structured process that allows the end users to understand the data and how it impacts their population's health. GIS maps for KPIs and quarterly data reports on access to preventive services versus emergency services may be useful information to provide to the public.

69) **Measures for payment.** Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	X
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

70) What percent of RCCO payments should be tied to measures or performance?

Percentage	
10-20%	☐
21-30%	☐
31-40%	☐
41-50%	☐
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

71) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs? Yes.

72) Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?

Glide path from improvement to national standards. Need to include comparison to national standards and comparison to other state Medicaid programs to allow an opportunity for benchmarking. This comparison will encourage the RCCO to seek QI interventions to improve their processes and support their PCMPs.

73) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

We support the development of processes to extract real-time clinical data. Focus should be on developing capacity at the practice level to input clinical quality measurement data and extract data for reporting and QI purposes. SIM may help with this. Monthly reporting may be too burdensome unless a data extraction process or connection to HIE can allow seamless reporting. Many practices are still doing manual or custom pulls which may require significant staff time. Progress needs to be made within the context of practice transformation.

74) **Incentive payment frequency.** Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	☐
Annually	☐
Other	☐

If you checked the "Other" box, please describe payment frequency below:

75) For potential offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

76) For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

Health Information Technology (HIT)

77) **Types of communication**. For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	☐
Text message	☐	☐
Web portal	☐	☐
Email	☐	☐
Telemedicine / Video chat	☐	☐
Face-to-face meeting	☐	☐
Smartphone app	☐	☐
Other:		

78) **HIT investments by organizations.** For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below:

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	X	☐
Digital care management tool	☐	☐
Care transitions alerts	☐	☐
Electronic Health Records (EHRs)	☐	☐
Health risk assessment software	☐	☐
Practice assessment tools	☐	☐
Practice management tools (scheduling, billing)	☐	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☐
Patient education/wellness tools	☐	☐
Provider/case manager directory	☐	☐
Shared decision-making tools	☐	☐
Telemedicine software	☐	☐
Other:	☐	☐
Other:	☐	☐

79) **Importance of technology by type.** The Department is working to determine what technology is in place, what technology is needed, and what technology should be standardized. For RCCOs, providers, and other organizations, use the table below to answer what HIT infrastructure outside of the SDAC your organization would use to perform population health management activities. Tools are scored from 1-5, where 1 are those items least-likely to be used, and 5 are items most-likely to be used:

Tool	1 Least	2	3	4	5 Most
Population analytics / reporting / dashboard	☐	☐	☐	☐	X
Care management tool	☐	☐	☐	☐	X
Care transitions alerts	☐	☐	☐	☐	X
Electronic Health Records (EHRs)	☐	☐	☐	☐	X
Practice assessment tools	☐	☐	☐	X	☐
Health risk assessment software	☐	☐	☐	☐	X
Practice management tools (scheduling, billing)	☐	☐	☐	☐	X
Client web portal for communicating care plan, services, benefit enrollment	☐	☐	☐	☐	X
Patient education wellness tools	☐	☐	☐	☐	x
Provider/case manager directory	☐	☐	☐	☐	x
Shared decision-making tools	☐	☐	☐	☐	x
Telemedicine	☐	☐	☐	☐	X
Other:	☐	☐	☐	☐	☐

80) What are the primary barriers to RCCOs and providers increasing their use Health Information Technology to improve the performance of Primary Care Practices?

Many providers lack expertise or capacity to fully implement their HIT capacity. CDPHE convened many community leaders and state and national experts on HIT last spring to discuss barriers and opportunities in Colorado. The following subjects were identified:

- Focus on Reliable and Actionable Clinical Data
  During the Health IT Summit, panelists and roundtable participants explained concerns about the reliability of clinical data contained in an EHR. Participants discussed three components to reliable data including inputting data accurately, extracting and analyzing data, and responding to the data. Input and extraction challenges were provided during the Summit, such as an EHR that provided reports on 3,000 year-old people. In addition to concerns about extracting clinical data for reporting and measuring purposes, many attendees also expressed a continued need for system standardization and EHR vendor engagement to improve the process. Providers and participants also explained that with clinical quality measurement reporting requirements, data often is not returned in an actionable format that allows for providers or practices to meet a benchmark or compare their measures to others. During the Summit, an individual remarked that within the federal Meaningful Use program, one missing link is benchmarking which can be a helpful tool in targeting and monitoring improvements within a practice. As a result, some practices may

not see the value nor have the ability to use this data in quality improvement activities. Some attendees recommended increased feedback loops between providers and the organizations requiring clinical quality reporting. Some organizations are able to provide predictive modeling and benchmarking, but this can be cost-prohibitive for smaller practices.

- Support data aggregation and data analytics
  Attendees implementing EHR systems made the case that this effort has created new "data silos" as practitioners and others work to make sense of patients' clinical data within the confines of their own practices. Moreover, there are noticeable gaps in data aggregation and data analytics in the state. Many discussed the need for data aggregation in order to truly understand and measure population health. Recognizing that data aggregation is expensive and difficult, many participants nonetheless expressed interest in a central data hub capable of aggregating and validating clinical data. The RCCOs can provide support to practices and encourage connection to CORHIO as well as engage practices in the State Innovation Model grant opportunities.
- Concentrate on clinical quality measure simplification
  Throughout the Health IT Summit, various stakeholders articulated concerns about misalignment of clinical quality measures across payers and systems. One speaker remarked that with so many measures, it can be difficult for providers to prioritize and target workflow improvements or other quality improvement initiatives. As a result, there are often inefficient and burdensome requirements placed upon providers and health systems staff to report measures to both public and private payers. The Comprehensive Primary Care Initiative, the multi-payer initiative being implemented in more than 70 practices across the state, is an example of the potential for clinical quality measure agreement among payers. There was also a great deal of attention paid to payment reform and the clear connections to clinical quality measurement in helping to inform value-based purchasing of health care. As new payment models are implemented, this could shift behaviors as providers see a greater value proposition in quality measurement, and thus payment reform will help advance health information technology.
- Increase patient engagement
  Patients often are not sufficiently engaged in discussions about quality of care, consumer experience and the ability of consumers to use their own health information data. Participants recommended that patient engagement become an integral component of health information technology for improved care management. Patient engagement and patient portal requirements in Stage Two of Meaningful Use are good steps forward, though the technical infrastructure must be built to make this effort successful. An additional example of improved patient engagement was the inclusion of patient-reported health outcomes.
- Support resource and workforce development:
  One participant remarked that EHRs do not improve care, but the people using EHRs can improve care. Many roundtables discussed the gap between workforce capabilities and expectations within highly sophisticated technological systems. Some participants discussed learning collaboratives as a solution created by multiple practices with the Regional Extension Center partner agencies. The intent of these learning collaboratives has been to develop staff capacity and the potential for providing technical assistance across similar EHR systems. Of course, the amount of financial and staff resources it takes to fully implement, train and maintain health information technology systems can be a major barrier to sustainable implementation. Attendees explained that in rural areas there is a crucial need for hiring knowledgeable health information technology staff because there is often a lack of direct technical assistance from vendors.

There are multiple EHR vendors and the vendors may vary in what fields or assessment packages they provide. For many screening and preventive services, such as older adult fall prevention, if falls risk assessment, treatment option and referrals, including referrals to community-based fall prevention programs, are not included in the vendor package, the clinicians will not b prompted to address this important health care concern.

Providing telehealth services for mental health consultation in areas where there is limited access to maternal mental health expertise would be tremendous. Also, professional mental health consultants who could help a physical health provider in a rural community make accurate and appropriate decisions around medication management would increase the likelihood that a physical health provider would even address a mental health issue.

81) How can Health Information Technology support Behavioral Health Integration?

The adoption of health information technology communication and transport standards are crucial to behavioral health integration. The adoption of these standards will enable interoperability between Health Information Technology systems. In addition, behavioral health integration is dependent on shared data and a single charting system with a shared care plan. Developing infrastructure to support this will be essential for successful integration.

82) In the next iteration of the ACC, should there be a shared resource for data and analytics? Please describe the basic criteria for what a shared data and analytics platform needs to contain in order for it to be useful.

Yes, we agree that there should be a shared resource for data and analytics. In the next iteration of the ACC, we will rely on advanced analytics to gain important insights from rapidly growing datasets and to make faster, more informed decisions. The platform should be able to efficiently process large volumes of data from diverse sources that is needed to drive these decisions. The shared data and analytics platform should contain the service to provide robust storage and analytics capabilities on semi-structured and unstructured datasets, and allow for integration with other platforms with complex datasets. The platform should be scalable in both performance and capacity, and cost effective over time.

83) Should there be a shared care management tool? Please describe the basic criteria for what a care management tool would need to contain in order for it to be useful.

Shared care management tools are an effective mechanism to ensure effective-real-time sharing of information and data. These tools can support coordination and continuity of care, team-based care, and effective feedback loops for referral. They are difficult to implement across systems due to the barriers with data sharing and perceived HIPAA barriers. The HCPF FBMME demonstration which utilizes a shared care plan will provide important insight on best practice in Colorado. A shared care management and or notification systems is crucial during times of transition. Another consideration is shared care management tool with pharmacies in the community. In order to be useful a care management tool would need to be accessible by all providers, both in clinical and community settings who are working with the individual or family. In addition it would need to clearly delineate the "lead" care coordinator as well as provide real-time information. Other

essential components in order to be useful this tool should identify the patient demographics, how best to contact, patient-centered goals and an action plan on how to achieve these goals. Ideally, the patient assessment with identified barriers to care is included which captures both physical and social barriers.

84) Should there be a shared population health management tool? Please describe the basic criteria for what a population health management tool would need to contain in order for it to be useful.

85) Please describe the functionality that a common Medicaid provider directory would need to contain in order for it to be useful.

Although HCPF has done a tremendous job of identifying providers that accept Medicaid, often the information is incomplete and the provider may have a long waiting list or not accept new patients. A mechanism to update this list so that clients, the Medicaid outreach workers, healthy communities, and RCCO team members are able to refer clients with some confidence that the client will be seen in a timely manner would be tremendously valuable.

86) How can the RCCOs support providers' access to actionable and timely clinical data?

Actionable and timely clinical data, or clinical quality measures, are essential components of a medical home approach. Practices are often required to report clinical data to multiple payers, yet they do not always have the capacity to use this data for benchmarking or quality improvement purposes (see above). The Comprehensive Primary Care initiative and the State Innovation Model grant have provided us with a roadmap to measurement alignment that will provide health information technology support to practices. RCCOs can help support this and provide an opportunity for providers to benchmark their data against other providers serving like populations to prove an opportunity for improvement. For smaller practices this may be more difficult to achieve and they may need practice support and intensive health IT TA to develop the capacity.

87) What are the HIT solutions that would benefit clients, providers, and RCCOs? Please comment on the parameters these tools or platforms would need to possess and the ways in which they could be used.

CDPHE supports the adoption of meaningful use and connectivity to a health information exchange as essential vehicles for improving how we provide clinical care. Additional support can be provided to ensure that practices are able to develop capacity to maximize utilization of their EHR. This will help transform how a practice is able to deliver care and support a true medical home approach to care. HIT can help a provider understand who their patient panel is, develop registries to track screening, preventive services, and disease management, as well as implement point of care decision support, patient portals and secure messaging. Developing capacity to input, extract, report and use data that is accurate and actionable is paramount. In addition, connection to a heath information exchange communication across systems with CORHIO or QHN is essential

88) What technical assistance or resources related to HIT infrastructure should the RCCOs supply? This assistance or these resources could be for providers, social service organization, clients/families, or for others.

Technical assistance should be provided along the continuum of health information technology implementation. For those practices without an EHR, they will need vendor support, workforce training, and workflow and process redesign. These are expensive efforts but essential to drive true practice transformation.

89) What role should health information exchange platforms like CORHIO or QHN play in the next iteration of the ACC?

Health Information Exchange (HIE) systems enable providers, hospitals, laboratories and other health care organizations to use approved standards to securely submit clinical information to various health systems and programs. As the ACC requires and adopts standardized electronic reporting, HIE should be the gateway for this electronic data exchange.

90) Please share any information, advice, and suggestions you have about health information technology in the ACC Program.

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: *Banner Health*
Location: *7251 W. 4th St., Greeley, CO 80634*

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Click here to enter text.
Location: City, County, State.
☐ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☒ Medical provider / PCMP / other provider
  i. Type or specialty: *Hospital, Primary Care, Multispecialty*
  ii. Area of practice: All
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☐ Other (please describe): Click here to enter text.

Are you currently involved in the ACC program?

☒ Yes
☐ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☒ 3-4 years

How have you been involved in the ACC program and what interaction have you had with RCCOs:

Banner Health warks with bath Calarada Access (Regian 2) and Racky Mauntain Health Plan (Regian 1) ta implement the PCMP care delivery madel ta imprave the health af the Medicaid papulatian and decrease the cast af care. We meet manthly with bath RCCOs ta identify and address care delivery appartunities.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:

Praviding care acrass care cantinuum bath in haspital and ambulatary settings and we're experienced with in athers states with Medicaid managed care and/ar ather fee far service madels.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☒ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

Banner Health is suppartive af the ACC pragram and will cantinue ta participate. In arder ta ensure the success af the pragram, recammend the fallawing enhancements:
1) Active PCP assignment vs. current attributian

☐ Since before the program was implemented.

model

2) Longer term eligibility periad for Medicoid enrollees vs. manth-to-manth

3) Access ta 100 percent af claims data far all attributed members.

4) Benefit structure to actively steer to PCP rother than ED.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now? *The program has brought health leaders together to identify ways to improve the health and wellbeing of the Medicaid population. We have seen success with some members of that population.*

2) What is not working well in the ACC Program? *The possive ottribution progrom is not working well. It does not creote the necessory olignment between the PCP ond the member. The inobility to shore potient dota due to risk of PHI liobility. Current benefit structure does not support member engagement ond accountability.*

3) What is working best in the Behavioral Health Organization (BHO) system right now? *Having co-located traditional therapist with PCP has improved number of Medicaid patients receiving mental health services and better treatment initiation and compliance than before co-located therapy started.*

4) What is not working well in the BHO system? *The BHO is doing traditional therapy and not truly integrated care with PCP. It would be preferential to have integrated care where BHO supports a model of care in which therapy is integrated into routine office visits and access to Electronic Medical Record (EHR) that the clinic uses. There is a disconnect of documentation and care.*

5) What is working well with RCCO and BHO collaboration right now? *The local "hot spotter" groups allow for networking of all care disciplines in one place at one time to discuss high cost utilizers and potients with unique care coordination problems. This occurs twice a month and de-identified potients are discussed.*

6) What is not working well with RCCO and BHO collaboration right now? *Lack of information transmission between BHO and primary core offices.*

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1] *We need to break silos and integrate behavioral health into the medical treatment arena. We need to eliminate barriers that result in fragmentation (ie state laws, HCPF departmental structure, reimbursement, sharing data).*

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☒	☐	By creating separate financing, this continues to encourage silo mentality.
Community Behavioral Health Services Rule	☒	☐	Multiple and conflicting roles only add to fragmentation of payment and services
Covered diagnoses list	☒	☐	List is too exclusive, marital conflict not billable, certain abuse diagnosis not billable, substance abuse as primary diagnosis is not billable, no "V" codes are billable.
Different behavioral / physical health reimbursement	☒	☐	Management of behavioral health needs to be part of the overall health plan for the patient. Separating the reimbursement continue to fragment the care
Institutions for Mental Diseases exclusion	☐	☐	
OBH rules, reporting, or financing (regulatory differences between agencies)	☒	☐	Separate OBH oversight only adds to the fragmentation between individuals physical and behavioral health needs. Ideally oversight and rules would be structured to look across the entire care continuum (consistent with the health model vision articulated for the next RCCO)
PCMP financing structure	☐	☒	
Per-member per-month amount	☐	☒	
Physical space constraints	☒	☐	Not all clinics would have a space available for a mental health provider, and volume of patients may not support a full time mental health specialist on clinic site
Privacy Laws (HIPAA, 42 CFR)	☒	☐	We have to create a balance between protecting PHI while supporting active care coordination across the care continuum.
Professional / cultural divisions	☒	☐	Silos created due to financial structure.

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

RCCO or BHO contracts	☒	☐	All members of the RCCO should have the same contracts with BHO for true integration
Staff capacity	☒	☐	Scheduling and admin employees of PCP and BHO currently not able to share information between each other for non-clinical and non-counseling purposes
State/Federal rules or reporting requirements	☒	☐	No consistency for information sharing. Disparity for substance abuse treatment, State deals with mental health and Federal is substance abuse diagnosis
Technical resources / data sharing	☒	☐	Addressing privacy laws that restrict care (ie State provide a waiver for sharing PHI to improve integration and care within non-clinical teams to help address economic or social issues that may be contributing to the medial/behavioral conditions)
Training	☒	☐	To establish agreement on the common goals and objectives on the population.
Others	Please type your response here.		

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

Having therapist that are team based, free infarmatian sharing, caardinated treatment plans between PCP and therapist, documenting mental health in the PCP medical recard, ability far PCP ta see mental health diagnasis and care plan, but nat therapy nates ta ensure care caardinatian.

10) Please share any other general advice or suggestians you may have abaut behavioral health integratian.

Behaviaral health praviders need ta be campensated far integrated care. Currently na mechanism far billing when therapist sees patient with PCP far care caardinatian, discussian af treatment gaals, etc. Only traditianal psychatherapy is billable event.

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination? *Actively plonning ond onticipoting potentiol ond octual barriers in moving patients through the care continuum.*

b. How should RCCOs prioritize who receives care coordination first? *First driver should be high utilizers ond the second should be potients in the highest risk stroto bosed on multiple co-morbid conditions.*

c. How should RCCOs identify clients and families who need care coordination? *Will find that in yaur high utilizers. Cultural behaviors taught within families.*

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider? *It should be trocked consistently ocross the stote bosed on outcomes. It should o set target rather than a rate of improvement.*

12) What services should be coordinated and are there services that should not be a part of care coordination? *If it's o borrier, it needs to be coordinoted (ie tronspirotion, sociol, behoviorol heolth, economic issues).*

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs? *Need to know their sociol economic stotus, how mony dependents, ond if there is o known behoviorol component.*

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today? *Care coordination occurring at Dept. of Social Services area (protecting child and protective adult); case managers that are embedded in community to address financial and social issues; case managers with within the school system; case managers for impaired adults; case managers embedded in the physicians' offices.*

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different? *School system, county level, ot-risk adult populotion. Differences: These hove occess to voucher progroms within the stote Medicaid system that can increose resources for these patients.*

c. How can the ACC avoid duplicating or disrupting current care coordination relationships? *Core coordinotion relotionships must be centrolly coordinated. Who needs to house ond mointoin thot informotion? Need o centrolized depository.*

d. What are the gaps in care coordination across the continuum of care? *Data, issue with behaviaral health and privacy, issue of na farmal chain of cannectivity far coardinatars thraughaut cammunity system.*

15) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	Should the RCCO have a role? Yes	Should the RCCO have a role? No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma	☒	☐	☒	
Affordability (assistance with prescriptions or co-pays)	☒	☐	☒	
Daycare / childcare	☐	☒	☒	
Economic stability & employment	☐	☒	☒	
Education	☒	☐	☒	
Environment	☐	☒	☒	
Food access / nutrition	☐	☒	☒	

Health literacy	☐	☒	☒	
Housing	☐	☒	☒	
Language or translation services	☒	☐	☒	
Literacy	☒	☐	☒	
Transportation	☒	☐	☒	
Other	Please type your response here. Feel free to list as many non-medical factors as you want, and please explain how the RCCO should be involved.			

16) **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	Coordinate care? Yes	No	In what capacity should these individuals coordinate care in the ACC Program?
Advanced Practice (Registered) Nurses	☒	☐	
Certified Addiction Councilors	☒	☐	
Certified Nurse Midwives	☒	☐	
Community Health Workers	☒	☐	
Generalists (BA/BS/MA/MS)	☒	☐	
Health Coaches	☒	☐	
Licensed Clinical Social Workers	☒	☐	
Licensed Marriage and Family Therapist	☒	☐	
Licensed Mental Health Counselors	☒	☐	
Licensed Professional Counselor	☒	☐	
Masters of Public Health	☐	☒	
Medical Doctors / Doctors of Osteopathic Medicine	☒	☐	

Nurse Practitioners	☒	☐	
Patient Navigators	☒	☐	
Peer Advocates	☒	☐	
Promotoras	☒	☐	
Psychiatrists	☒	☐	
Psychologists	☒	☐	
Registered Nurses	☒	☐	
Social Workers	☒	☐	
Wraparound facilitators	☒	☐	
Other	Please type your response here.		

17) **Care coordination requirements for specific populations.** Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and infants	☒	☐	Specialty care for pre-term and high-risk infants.
Children	☒	☐	Specialty care for children with high-risk conditions or high needs.
Children who are healthy, but in socially-complex environments	☐	☒	
Children involved in the foster care system	☐	☒	
Children with a chronic illness	☒	☐	specialty pathways to coordinate with pediatric specialists
Children with a serious emotional disturbance	☒	☐	Specialty care for children with high-risk conditions or high needs.
Children with medical complexity	☒	☐	Specialty care for children with high-risk conditions or high needs.
Children or youth with a behavioral health diagnosis or substance use disorder	☒	☐	Specialty care for children with high-risk conditions or high needs.
Transition-age adolescents	☐	☒	
Parents and families	☐	☒	
Pregnant women	☒	☐	specialty care for high-risk specialty
Adults	☐	☒	
Adults who are healthy, but in socially-complex situations	☐	☒	

Adults with a chronic illness	☒	☐	Specialty care for adults with high-risk conditions or needs.
Adults with a behavioral health diagnosis or substance use disorder	☒	☐	specialty care for adults with high-risk conditions
Clients involved in the criminal justice system	☐	☒	
Clients with a disability	☒	☐	specialty care for adults with high-risk conditions
Clients in a nursing facility	☐	☒	
Elderly clients	☐	☒	
Frail elderly clients	☒	☐	specialty care for adults with high-risk conditions
Clients in palliative care	☒	☐	specialty care for adults with high-risk conditions
Other populations, please comment:			

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

Integroted care and registries of foster children to query for at minimum annual well visits or more frequently based on medical and mental health issues. Medicolly complex would be the same but with registry according to a chronic diagnosis – would likely need to qualify what diagnosis groups would be included in this type registry. Social complexity would be more difficult to stratify – this is a very broad group/statement. Would suggest o unique identifier as part of their Medicaid number that would make these types of patients easily identifiable without access to their medicol records.

19) How should care coordination be evaluated? How should its outcomes be measured?

Benchmorks according to diognosis – depression would be improvement in PHQ9 or A scores, diobetes would be improvement of HgbA1c, etc. Also on improvement of potient's perception of their diognosis or chronic illness or improvement in self monogement skills ond obility to occess community resources.

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

a. What is the PMPM cost for providing care coordination services? *$4-5 depending on scope of services ie, behoviorol heolth, educotion ond phormocy.*

b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population? *Risk strotificotion model similor to Medicore tied to PMPM distributions would more occurotely tie reimbursements to core of the populotion.*

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population? *No.*

a. **Care coordinator to client ratios.** If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☐
51-100	☐
101-200	☐
201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important? *Utilizotion – ED, Reodmission Rotes ond overoll cost of core*

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies). *Core coordinotion requirements.*

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs? *The bidder needs to reside in the community where it wishes to provide services. Connot odequotely do so as on outside resource.*

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal. *It might be helpful only if there is o specialized need for core monagement thot expertise moy be in one region and not onother, otherwise* ***probobly not o good ideo.***

27) Should the RCCO region maps change? Why or why not? If so, how? *Yes, the medicol communities between Larimer ond Weld counties routinely work closely to monoge populotians and while the RCCOs in Regions 1 ond 2 work well together, would suggest these two counties be in the some regions.*

28) Should the BHO region maps change? Why or why not? If so, how?

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition? *18 months. 6 months to estoblish boseline doto, 12 full months to estoblish o trend of improvement.*

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective? *Removing borriers to integroted core with informotion shoring ond occess to clinic EHR for BHO employees thot ore co-monoging one potient.*

31) What are the limitations of the current benefit structure and what – if any – changes are needed? *In current benefit structure, no steeroge to finoncially encouroge members to occess lower cost levels of care before occessing higher costs of core. Would recommend chonges in the financiol steeroge structure. For*

exomple no incentive to see PCP for non-urgent or emergent medicol conditions, octuolly cheoper ond more convenient to go to Urgent Core or ER for services. $2 copoy ot PCP office ond no copoy ot ER!

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address? *No. One of the chollenges with this potient populotion, is they move from provider to provider so odding RCCO ployer would increose confusion with coring for torgeted populotion.*

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not? *N/A*

34) What role should RCCOs play in attributing clients to their respective PCMPs? *The RCCOs should be empowered and allowed to work with the medical communities and PCMPs (that are accepting new clients) to assign clients that ore unattributed..*

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment? *Direct communicotion to the ACC when patients have repartable conditions that have not been treated yet would be helpful. Would this be the entity that could build and maintain registries that could be queried by PCMPs for different medical or behavioral health conditions for care monagement and follow-up purposes?*

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services? *Again accessible registry for at risk individuals. It would also be great to be able to report as a mandatory report through an electronic medium rather than placing phone calls and waiting for return phone calls.*

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado? *The obility for providers/hospitols to know if o potient hos up to dote insuronce – "poid to dote" visible. Heolth core providers ore ot risk for providing services ond procedures to potients thot hove not poid their premiums but it is not visible to these providers.*

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates? *Transparency to all enrolled patients of what case management services are available in their region's RCCO and outcomes reporting on KPIs. Disclosure and capture of all stakeholder demographic information and release of privacy liability if sharing PHI to stakeholders.*

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region? *The same as above. More training to community organizations, social service providers and other care professionals in the region on exactly what RCCO is, and what their services are in their region and other regions of the state if they differ.*

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC? *More frequent outreach perhaps in the form of public service announcements, television and radio time, newspaper articles about what RCCO is and who they serve.*

42) How should the Department structure stakeholder engagement for the ACC as a whole? *Active assignment of the client to the PCP and develop material that stresses the importance to coordinate all care through the PCMP.*

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population? *No*

a. If no, what are the gaps? *Behavioral health and dental care are very lacking in numbers af praviders campared ta numbers af patients needing these services. Specialists are less likely ta take Medicaid papulatian if nat farmally referred by a PCP.*

b. Please address gaps far the papulation as a whale, and far specific subpopulatians such as children/families and individuals with disabilities. *Children af all ages with PT, OT and speech therapy needs can't get enaugh services. Elderly and disable have prablems with medical transpartatian if they can't drive and dan't have family that can drive (significant issue that results in delayed care and higher ED utilizatian). Childcare services far patients during their medical ar mental health visits ar graup visits.*

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

a. What role should hospitals play in the next iteration of the ACC Program? *Co-locoted ER ond Urgent cores in focilities when spoce ollows to more appropriately trioge high cost vs low cost medicol visits.*

b. What role should pharmacies play in the next iteration of the ACC Program? *More options for delivery of medications for potients with tronsportotion problems (significont issue). The obility to repart to PCP medicotions written/dispensed from other providers including poin medicotions. Foster ovoilobility of utilizotion ond fill doto on prescriptions. It needs to be ovoilable in on eosily query such os the PDMP dotobose of opioids.*

c. What role should specialists play in the next iteration of the ACC Program? *Tronsporency from specialties an who tokes Medicoid ond how mony potients per month or percentoge of ponel they will occept in their proctices.*

d. What role should home health play in the next iteration of the ACC Program?

e. What role should hospice care play in the next iteration of the ACC Program?

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program? *Increased funding for CCBs and more availability of day programs and workshops for disabled patients and developmentally disabled patients. Increase the number of single entry points*

g. What role should counties play in the next iteration of the ACC Program?

h. What role should local public health agencies play in the next iteration of the ACC Program?

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? *Are there potential partnerships with these organizations which have been overlooked in the past? Educational programs for patients and for communities on diseases, community resources, integrated core principles, partnerships for funding for indoor exercise facilities in every community – not fancy, but a place to safely walk.*

45) How can RCCOs help to support clients and families in making and keeping appointments? *Provide transportation when needed and reminder calls and text messages. Accountability that is enforceable for patients that willingly don't show up for appointments.*

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP? *No, it should be up to the individual RCCO according to community need.*

47) **Community Health Worker reimbursement.** Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement process	(Please check all that apply)
Independently bill	☐

On staff (salary) at Primary Care Medical Provider Clinic	☐
On staff (salary) at RCCO	☐
Per Member Per Month Payment	☒

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you? *The knowledge of potients belief systems regarding ethnicity, religion, fomily, medical beliefs, heolth norms, etc. Not oll culturol issues ore religious or ethnicolly bosed.*

b. What RCCO requirements would ensure cultural competency? *Online or print educotion regording the most common cultures thot certoin communities encounter.*

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy? *Understand what is the mast predaminant culture in that cammunity – staff should just have a gaad resaurce available to study/cansult with when encauntering a new culture ar language. Interpreter services shauld be in every clinic if nat already. Health Literacy evaluotians shauld be dane annually but nat anly ot a pravider's affice, this could be thraugh ACC enrollment and re-enrallment os part af their intakes.*

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes? *Providing eosy to odminister literocy tools ond troinings to clinics ond community providers.*

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care? *No. It again causes more fragmentation.*

51) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend? *Copoyments ot time of ER if not odmitted, ond these should be higher thon copoyments to see their PCP. This would moke non-emergent ER visits less utilized*.

52) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals. *Reimbursement for oll ospects of integroted core*.

Practice Support

53) **Support for practices.** Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☐	☐	☐	☐
Network provider education	☒	☐	☐	☐
Assistance with practice redesign	☐	☐	☐	☐
Assistance with efficiency-enhancing activities	☐	☐	☐	☐
Provide web-based resources and directories	☒	☐	☐	☐
Provide practice-specific data reports	☒	☐	☐	☐
Provide clinical care guidelines and best practices.	☒	☐	☐	☐
Provide clinical screening tools	☐	☐	☐	☐
Provide health and functioning questionnaires	☒	☐	☐	☐
Provide chronic care templates	☐	☐	☐	☐
Provide registries	☒	☐	☒	☒
Offer client reminders	☒	☐	☐	☐
Offer client self-management tools	☒	☐	☐	☐
Offer educational materials about specific conditions	☐	☐	☐	☐
Supply behavioral health surveys	☒	☐	☐	☐
Supply other self-screening tools	☒	☐	☐	☐
Administer behavioral health surveys	☒	☐	☐	☐
Administer other self-screening tools	☐	☐	☐	☐
Prepare client action plans	☐	☐	☐	☐
Provide training on providing culturally-competent care	☐	☐	☐	☐
Provide training to supporting staff	☐	☐	☐	☐
Provide training on motivational interviewing	☐	☐	☐	☐
Provide tools and software for phone call and appointment tracking	☐	☐	☐	☐
Provide tools and resources for tracking labs, referrals, etc.	☒	☐	☐	☐
Provide referral and transitions of care checklists	☐	☐	☐	☐
Provide visit agendas or templates	☐	☐	☐	☐
Provide standing pharmacy order templates	☒	☐	☐	☐
Provide comprehensive directory of community resources	☒	☐	☒	☒
Provide directory of other resources	☐	☐	☐	☐
Provide materials regarding Nurse Advice Line	☐	☐	☐	☐
Ensure all tools and resources are centrally located on RCCO-specific website	☒	☐	☒	☒
Others	*Seomless ond comprehensive tronsportotion for follow-up core, phormocy, etc.*			

54) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

55) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes? *Improved and rapid access to claims data and prescription utilization data.*

56) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home? *Additional funding for PCMPs specifically to support patient registry.*

57) Should the Department require that PCMPs utilize disease registries to manage the health of their population? Yes if integrated and interoperable with PCMPs EMR. *No. A lot of systems have built and are using registries already, to mandate them could negatively impact their existing workflows – they would be great to be able to access but not "mandated".*

58) Please share any other advice or suggestions about provider support in the ACC.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals? *No. Some of the KPIs from last year were negatively impacted to enrollment of new members. For example, many new patients were enrolled in Medicaid in our region, and they did not have a medical home, but went to ER for services and imaging, negatively affecting our KPI performonce.*

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation? *There is interest in exploring PCMP capitation with the requirement that clients are assigned to a PCMP and benefits are structured that all care is directed by the PCMP and there is on overoll shared sovings if PCMP is successful.*

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure? *Pay for performance is more likely to be bosed on potient's willingness and ability to self monage their problems. It should not negatively affect reimbursement for providers when potients ore unwilling to be part of their care teom.*

62) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

63) What role – if any – should the RCCOs play in the distribution of payments to providers?

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes? *Meosures should include potient complionce os well os provider use of evidence bosed proctices. Not meeting quolity meosures does not*

mean praviders are not daing their jabs appraprіately; it needs ta be evoluoted fram patient compliance perspective as well.

66) **Measuring Client experience.** Please complete the table below to indicate how the Department should measure Client/patient experience:

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☐	☒	
SF-12 Health Survey	☐	☒	
Other types of client interviews / surveys	☐	☐	
Patient Activation Measure	☒	☐	
Focus groups	☒	☐	
Other	Please type your response here.		

67) Knowing that, at this time, the Department only has claims data, how should population health be measured? *Build registries with health care recommendations by age and gender for query. If services were performed at different entity, the date and name of entity should be in the registry for record retrieval from current PCP or provider's office.*

68) How should quality and performance data be reported to the RCCOs, PCMPs, and the public? *Availability an internet through state website.*

69) **Measures for payment.** Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☒
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐

None	☐

70) What percent of RCCO payments should be tied to measures or performance?

Percentage	
10-20%	☐
21-30%	☒
31-40%	☐
41-50%	☐
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

71) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs? *No*.

72) Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement? No. Many patients will not show improvement even through their quality of life may be better and their disease more stable.

73) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures. *No*

74) **Incentive payment frequency**. Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	☒
Annually	☐
Other	☐

If you checked the "Other" box, please describe payment frequency below:

75) For potential offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

76) For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures? *Monitoring registries of ER visits, hospitol odmission ond dischorge doto for core coordinotion needs ond office follow-up needs. Registries of chronic illnesses including depression for follow-up core, pre-visit counseling, obtoining lobs before oppointment with providers. Depression screening ond referrol to on site mentol heolth speciolists for counseling services when identified ond potients ore willing. Monitoring potient sotisfoction through Heolthstreom telephone surveys.*

Health Information Technology (HIT)

77) **Types of communication.** For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	☒
Text message	☐	☒
Web portal	☐	☒
Email	☐	☒
Telemedicine / Video chat	☐	☒
Face-to-face meeting	☐	☒
Smartphone app	☐	☒
Other:		

78) **HIT investments by organizations.** For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below:

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	☒	☐
Digital care management tool	☒	☐
Care transitions alerts	☐	☒
Electronic Health Records (EHRs)	☒	☐
Health risk assessment software	☐	☐
Practice assessment tools	☐	☐
Practice management tools (scheduling, billing)	☒	☐
Client web portal for communicating care plan, services, benefit enrollment	☒	☐
Patient education/wellness tools	☒	☐
Provider/case manager directory	☐	☐
Shared decision-making tools	☐	☒
Telemedicine software	☒	☐
Other:	☐	☐
Other:	☐	☐

79) **Importance of technology by type.** The Department is working to determine what technology is in place, what technology is needed, and what technology should be standardized. For RCCOs, providers, and other organizations, use the table below to answer what HIT infrastructure outside of the SDAC your organization would use to perform population health management activities. Tools are scored from 1-5, where 1 are those items least-likely to be used, and 5 are items most-likely to be used:

Tool	1 Least	2	3	4	5 Most
Population analytics / reporting / dashboard	☐	☐	☐	☐	☒
Care management tool	☐	☐	☒	☐	☐
Care transitions alerts	☐	☐	☐	☐	☒
Electronic Health Records (EHRs)	☐	☐	☐	☐	☒
Practice assessment tools	☐	☐	☒	☐	☐
Health risk assessment software	☐	☐	☒	☐	☐
Practice management tools (scheduling, billing)	☐	☐	☐	☐	☒
Client web portal for communicating care plan, services, benefit enrollment	☐	☐	☒	☐	☐
Patient education wellness tools	☐	☐	☐	☒	☐
Provider/case manager directory	☐	☐	☐	☒	☐
Shared decision-making tools	☐	☐	☐	☒	☐
Telemedicine	☒	☐	☒	☐	☐
Other:	☐	☐	☐	☐	☐

80) What are the primary barriers to RCCOs and providers increasing their use Health Information Technology to improve the performance of Primary Care Practices? *Problems finding claims data for services provided elsewhere, slow EHR that prevents providers from utilizing data reol time during affice visits in many cases, difficulty having reports built for population monagement, excessive time needed to appropriately docment in current EHR for meaningful use and PCMH documentation requirements.*

81) How can Health Information Technology support Behavioral Health Integration? *One EHR. Need to have all of a patient's care and diagnosis relevant to their care visible to behavioral health AND medical providers. Mental health diagnosis and medications as well as substance abuse issues often change how care is provided, what medications are prescribed, and how much care coordination is needed.*

82) In the next iteration of the ACC, should there be a shared resource for data and analytics? *Yes.* Please describe the basic criteria for what a shared data and analytics platform needs to contain in order for it to be useful. *Procedure ond medicotion claims ond utilization doto including the performing or filling entity,*

diagnosis codes, visit reosons, locations ond dotes, immunization dato or link to CIIS, listings of all praviders the potient hos seen in state or out of state.

83) Should there be a shared care management tool? No. Without standard EHR platform it would require double documentation for providers, and they don't have time to do this. Please describe the basic criteria for what a care management tool would need to contain in order for it to be useful.

84) Should there be a shared population health management tool? No. Please describe the basic criteria for what a population health management tool would need to contain in order for it to be useful.

85) Please describe the functionality that a common Medicaid provider directory would need to contain in order for it to be useful. *Percentoge or number of Medicoid/Medicore potients ollowed in proctice, oll services offered by eoch of the providers, hours of aperotion, credentials*

86) How can the RCCOs support providers' access to actionable and timely clinical data? *Cloims doto is toa old to be meoningful in most circumstonces. Admission ond discharge notificotions and ER utilization is needed for clinics to core coordinote within 24 haurs of o visit, not 3 months later. A woy to notify the PCMP thot a potient hos been in a facility in o timely bosis. Also notificotian for PCP of potient visit to any other facility thot is not their PCMP clinic.*

87) What are the HIT solutions that would benefit clients, providers, and RCCOs? Please comment on the parameters these tools or platforms would need to possess and the ways in which they could be used. *This would be difficult given that many different base EHR and scheduling/billing systems exist. Asking clinics and praviders to dacument or review other portals adds another layer of IT frustratian that may not impact autcames or care very well.*

88) What technical assistance or resources related to HIT infrastructure should the RCCOs supply? This assistance or these resources could be for providers, social service organization, clients/families, or for others.

89) What role should health information exchange platforms like CORHIO or QHN play in the next iteration of the ACC?

90) Please share any information, advice, and suggestions you have about health information technology in the ACC Program. *Any HIT thot moy be deemed necessory should be developed in colloborotion with the end users before ond ofter development ond implementotion. Engineers ond providers don't think olike. Insuronce ond cloims needs ore different from query ond documentotion needs in clinics.*

Colorado Department of
Health Care Policy and Financing

Serial #117

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Kristen Dixion, MA,LPC & Jacquelyn Cully
Location: 3738 W Princeton Circle Denver, CO 80236

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: University of Colorado-Denver Addiction Research and Treatment Services (ARTS)
Location: 3738 W Princeton Circle Denver, CO 80236

☒ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

- ☐ Client
- ☐ Client's family member
- ☐ Client advocate
- ☐ Medical provider / PCMP / other provider
  - i. Type or specialty:
  - ii. Area of practice:
- ☐ Provider advocate (e.g. medical society)
- ☐ Potential bidder for RCCO contract
- ☐ Behavioral Health Organization
- ☐ Data or HIT entity
- ☐ Foundation
- ☐ Educational or research institution
- ☐ Another public or private program
- ☐ Legislator or elected official
- ☒ Other (please describe): Provider of co-occurring substance use and mental health disorders. *It would be helpful if the Department identified behavioral health providers as a discrete provider type, instead of "other."

How have you been involved in the ACC program and what interaction have you had with RCCOs:

Patients who are enrolled in a RCCO and BHO have significant difficulty getting their BHO benefits covered. Their claims are repeatedly denied as "bill to RCCO." RCCO denies claims as bill to MCO.Neither have been able to provide an adequate solution for these patient

Please briefly describe your involvement with Medicaid, either in Colorado or another state:

ARTS provides weekly feedback to contracted BHOs in order to assist with claims processing. The BHOs all struggle with processing claims for patients who have dual diagnoses

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

- ☒ Very likely
- ☐ Likely
- ☐ Reserved (waiting to see the RFP)
- ☐ Unlikely without significant changes
- ☐ Will not seek to participate
- ☐ N/A

Are you currently involved in the ACC program?

- ☒ Yes ARTS is a contracted BHO provider and by delegation of our responsibilities under the BHO system, we ars indirectly involved with the ACC program. Unfortunately, substance use disorder providers sre not represented to the ACC in the same way as PCMPs or specialty medical providers.
- ☐ No
- ☐ I don't know

If you answered "yes" above, how long?

- ☐ Less than one year
- ☐ 1-2 years
- ☒ 2-3 years
- ☐ 3-4 years
- ☐ Since before the program was implemented.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

The ACC has helped all providers impetus to coordinate behavioral health and primary care services for improved health outcomes and adherence to treatment objectives. The Department's outreach to organizations like COPA (CO Provider's Association). The Department's willingness to listen to providers when code set issues arise.

2) What is not working well in the ACC Program?

(1) ARTS Billing Department must hire more staff to meet the work demands of Medicaid billing. It is time consuming and fraught with denials due to the misunderstanding of how substance use disorder treatment and services are delivered. ARTS has to hire more billing staff to follow-up on denials, partial payments, authorizations and re-authorizations. This was a significant unforeseen problem with Medicaid expansion.

(2) The BHO's all operate independently and it is challenging to navigate these new systems in order to get reimbursed for services. There are services that ARTS has not been reimbursed for since January 2014. This is unacceptable. Substance use disorder treatment is an underfunded system and the populations we serve are in great need of behavioral health services. Providers do not have the resources to continue to provide services while waiting for reimbursements and covering costs that are not reimbursable based on the appropriate delivery of substance use disorder services.

(3) There is a significant workforce development issue due to the disparity in the reimbursement rates for the Medicaid behavioral health benefit. Substance use disorder programs are licensed by OBH and credentialed by other governing entities and identify CAC's as an essential and required component to SUD treatment. CAC's have been providing effective SUD services for many years and SUD programs' infrastructure reflects this. CAC's have specialty addictions training and are crucial to our programs; however, their services are reimbursed at at lesser rate than a LPC or LCSW. This is a significant problem. Based on the current Medicaid credentialing requirements, substance use disorder providers will need to hire higher level staff (i.e., LCSW, LPC, etc.). This is a huge cost to providers and changes the SUD infrastructure dramatically.

Additionally, there is a lot of focus on recovery based services and well as recovery models and the benefits they have for individuals with substance use disorders. ARTS has staff that are in recovery and have the necessary credentials to provide excellent substance use disorder treatment (i.e., Certified Addiction Counselor - CAC). These counselors have a wealth of knowledge and experience and are tremendously effective with others that are working towards or in recovery. However, it is difficult to find higher credentialed staff with recovery experience. This area of disparity needs further exploration and discussion.

3) What is working best in the Behavioral Health Organization (BHO) system right now?

The BHOs are doing as much as they can to create greater access to care for substance abuse patients. Patients with dual mental health and behavioral health diagnoses often have to attain a prior authorization, when in the past prior auths were not required

4) What is not working well in the BHO system?

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

The BHOs seem to have issues with the merger of the SUD and BH code sets. There are issues with the way that claims have to reflect different diagnoses based on which code set you are billing.
BH providers are still narrowly restricted to billing either the SUD code set or BH code set.
Some BHOs require prior authorization for care that is routinely provided, such as MAT in an OMAT clinic.

In section 1.4.1.2.2. you requested input on "how the BHO or RCCO maps or functions could be adjusted to create better alignment," and the issues in order of primacy are:
(1) "Integration" customarily means that behavioral health services are being included in a primary care delivery model. The Department's use of the word "integration" to describe their objective of coordinated physical and behavioral health is appropriate; however, this objective does not resonate with patients who have already decided which provider types they need to establish care with based on their most pressing health needs. The majority of our patients fail to establish care with a PCP, and patients cannot access PCPs and CMHC services in a timely manner. How will the Department assist patients with establishing care with a PCP?
(2) How will the different behavioral health provider types integrate with each other? When a patient is referred and care is established, will there be input from behavioral health providers on the minimum documentation that is necessary? Does the Department have a method for implementing shared documentation for care management? If by "integrated" the Department means that all Medicaid patients will receive their referrals for behavioral health services from their PCMP, and CMHCs will refer patients to more specialized behavioral health treatment, then that system does not appear to be working. The way the integration is working for patients at ARTS is as follows: (1) Patients make contact with the provider who treats their most pressing health needs; (2) patients who need psychiatric services are referred to CMHCs, but are waiting on average 11-14 days before their first treatment contact and some patients have reported waiting 43 days; 3) Medicaid patients experience on average greater exposure to endemic poverty, lack of resources, and less motivation to attain a PCP in the RCCO system until they have a serious health event.
(3) In section 1.4.1.2.3. the Department proposes developing treatment objectives specific to the different Medicaid "subpopulations" (children, adults, elderly, those involved in the criminal justice system). Will the delineations for subpopulations include the criteria for priority populations? The priority populations established by Signal MSO and OBH, are IDU, pregnant women with substance abuse issues, adolescent IDU,..... Signal MSO provides indigent funding for priority population patients who are without insurance or insurance has refused to cover their behavioral health services. It would seem appropriate for the Department to incorporate the established priority populations. Will the treatment objectives for each population be established by the Department or the BHOs? Will the Department implement a uniform practice amongst all RCCO providers that elevates/expedites the treatment for priority populations?
(4) In the RFI there was little mention of the Departments efforts to collect data relevant to the parity imperative. What efforts will be made to counteract the ongoing financial behavior that marginalizes certain types of treatment, namely substance abuse disorder?
(5) The special connections population is Will the MSO's (Signal) be responsible for providing OBH with DACODS data in timelier manner? Providers are only able to be reimbursed for services provided to the Special Connections population when OBH receives demographic data from DACODS. The administrative efficiency will need to be addressed regarding this issue as it is directly related to the treatment of priority populations.

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☒	☐	CMHCs are provided a per member per month rate, but other providers who support entire Medicaid populations are not provided this rate. The CMHCs have been slow to respond to the growing needs and demands of the burgeoning Medicaid population.
Community Behavioral Health Services Rule	☐	☐	
Covered diagnoses list	☐	☐	
Different behavioral / physical health reimbursement	☒	☐	What will be the mechanisms to ensure parity?
Institutions for Mental Diseases exclusion	☐	☒	
OBH rules, reporting, or financing (regulatory differences between agencies)	☒	☐	This is a significant barrier. Departments have misunderstandings about the impact of ACC on providers. There are also conflicting policies.
PCMP financing structure	☐	☐	
Per-member per-month amount	☒	☐	
Physical space constraints	☒	☐	
Privacy Laws (HIPAA, 42 CFR)	☑	☐	This is complicated and a solution needs to be identified.
Professional / cultural divisions	☐	☒	
RCCO or BHO contracts	☒	☐	
Staff capacity	☒	☐	
State/Federal rules or reporting requirements	☒	☐	
Technical resources / data sharing	☒	☐	
Training	☑	☐	
Others	Please type your response here.		

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

10) Please share any other general advice or suggestions you may have about behavioral health integration.

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination?

b. How should RCCOs prioritize who receives care coordination first?

c. How should RCCOs identify clients and families who need care coordination?

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

12) What services should be coordinated and are there services that should not be a part of care coordination?

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today?

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

d. What are the gaps in care coordination across the continuum of care?

15) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	Should the RCCO have a role? Yes	No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma	☒	☐	☐	
Affordability (assistance with prescriptions or co-pays)	☒	☐	☐	
Daycare / childcare	☐	☒	☐	
Economic stability & employment	☒	☐	☐	
Education	☐	☒	☐	
Environment	☒	☐	☐	
Food access / nutrition	☒	☐	☐	
Health literacy	☒	☐	☐	
Housing	☐	☒	☐	
Language or translation services	☒	☐	☐	
Literacy	☒	☐	☐	
Transportation	☒	☐	☐	
Other	Please type your response here. Feel free to list as many non-medical factors as you want, and please explain how the RCCO should be involved.			

16) **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	Coordinate care? Yes	No	In what capacity should these individuals coordinate care in the ACC Program?
Advanced Practice (Registered) Nurses	☐	☐	
Certified Addiction Councilors	☐	☐	
Certified Nurse Midwives	☐	☐	
Community Health Workers	☐	☐	
Generalists (BA/BS/MA/MS)	☐	☐	
Health Coaches	☐	☐	
Licensed Clinical Social Workers	☐	☐	
Licensed Marriage and Family Therapist	☐	☐	
Licensed Mental Health Counselors	☐	☐	
Licensed Professional Counselor	☐	☐	
Masters of Public Health	☐	☐	
Medical Doctors / Doctors of Osteopathic Medicine	☐	☐	
Nurse Practitioners	☐	☐	
Patient Navigators	☒	☐	
Peer Advocates	☐	☐	
Promotoras	☐	☐	
Psychiatrists	☐	☐	
Psychologists	☐	☐	
Registered Nurses	☒	☐	
Social Workers	☐	☐	
Wraparound facilitators	☒	☐	
Other	Please type your response here.		

17) **Care coordination requirements for specific populations**. Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and infants	☐	☐	
Children	☐	☐	
Children who are healthy, but in socially-complex environments	☐	☐	
Children involved in the foster care system	☐	☐	
Children with a chronic illness	☐	☐	
Children with a serious emotional disturbance	☐	☐	
Children with medical complexity	☐	☐	
Children or youth with a behavioral health diagnosis or substance use disorder	☒	☐	
Transition-age adolescents	☒	☐	
Parents and families	☐	☐	
Pregnant women	☐	☐	
Adults	☐	☐	
Adults who are healthy, but in socially-complex situations	☒	☐	
Adults with a chronic illness	☐	☐	
Adults with a behavioral health diagnosis or substance use disorder	☒	☐	
Clients involved in the criminal justice system	☒	☐	
Clients with a disability	☐	☐	
Clients in a nursing facility	☐	☐	
Elderly clients	☐	☐	
Frail elderly clients	☐	☐	
Clients in palliative care	☐	☐	
Other populations, please comment:			

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

19) How should care coordination be evaluated? How should its outcomes be measured?

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

a. What is the PMPM cost for providing care coordination services?

b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

a. **Care coordinator to client ratios.** If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☐
51-100	☐
101-200	☐
201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

Encounter data from CMHCs inform the Medicaid covered code set. Encounter data are also used by OBH to get reimbursed based on CCAR data and client level service data. These data are also used for OBH's C-Stat engagement measure (4 services in 45 days). SUD providers need access to a more expansive code set to accurately reflect their scope of services. The per client payment that FQHCs and CMHCs receive put specialty providers at great risk. SUD provider data is not included throughout the service level data utilized by the Department.

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

(1) Analysis of treatment needs which includes input from providers of each treatment modality.
(2) Assign a provider liaison based on patient volume
(3) Do not overlook SUD providers

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal. N/A

27) Should the RCCO region maps change? Why or why not? If so, how?

The RCCO maps need to be illustrated with a more legible font and the coloration of the different regions needs to be far more distinctive. It is impossible to use the RCCO map to educate other staff or patients.

28) Should the BHO region maps change? Why or why not? If so, how?

It is not as easy to find a BHO region map, so it would be helpful if it were made more available on the Department's website.

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

Expenses: The cost to the provider will be most dependent upon the volume of patients served, and the need for continuous care. Substance use disorders are chronic diseases that require continuous support. Providers have to hire care coordinators or peer specialists to assist patients with establishing care with a PCMP.

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

SUD providers should be allowed to provide pharmacologic therapies with the medications SAMHSA has identified as part of the Medication Assisted Treatment modality. Currently, only Methadone is covered in an OMAT clinic, and that leaves the population of SUD patients with fragmented treatment options. OMAT providers are federally accredited by SAMHSA and state licensed by OBH implement the most efficient and evidence-based methods for MAT. Since SUD providers have been overlooked, our cost-efficiencies have been overlooked.

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

For SUD providers, the code set remains limited. For example, code S9445 for urinalysis (U/A) is only reimbursable for the completion of three distinct services: (1) the collection of the sample, which has to be monitored by staff; (2) the analysis of the sample itself, which requires that the provider contract with a lab service and pay for the packaging and delivery of the sample; and (3) the review of the results with the patient lasting 15 mins (or >8.5 mins), which is most appropriately done in the patient's individual counseling session, but does not reimburse at the same rate as a 15 min counseling session. The code S9445 reimburses around $13.50, and the provider's cost of providing this service is around $18. U/A monitoring is mandated by OBH and SAMHSA. All other codes in the BHO contracts that require a compound service including delivering a test and interpreting the results with the patient, like 96116 or 96118, reimburse at a much higher level ($78-$150) and other types of providers have access to a code specifically for the interpretation of test results, 90887, which reimburses at $40 per encounter. SUD providers are at a disadvantage.

Will the department start advocating for Medicaid coverage for patients who are in residential/inpatient substance use disorder treatment?
ARTS' Peer I, substance use disorder residential treatment program has high success rates, low relapse rates, and yet are still considered part of the same treatment domain, that is community corrections, as halfway houses. Halfway houses do not provide treatment. These patients are involved in the criminal justice community, which the Department highlighted as a subpopulation with unique needs. There needs to be a policy change related to "inmate status" to allow these individuals to be eligible for Medicaid.

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not? N/A

34) What role should RCCOs play in attributing clients to their respective PCMPs?
RCCOs should employ care-coordinators that specialize in the different patient populations so that SUD clients who struggle with establishing care are treated with greater sensitivity to their treatment needs.

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?
Signal, OBH, and the BHOs all require data reporting on evidence-based practices, encounter data, access data, and data on priority populations and any duplication should be eliminated.
The ACC should work with OMAT clinics who employ addiction medicine doctors who are more well-versed in the administration of pharmacological therapies for MAT.

37) What types of collaboration should exist between the ACC Program and the Insurance marketplace / Connect for Health Colorado? N/A

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance? N/A

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

42) How should the Department structure stakeholder engagement for the ACC as a whole?

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

It is imperative to expand evidence-based and promising practices coverage. The following are potential areas of Medicaid benefit expansion that could bridge specific gaps:

- Adolescent SUD treatment and home-based treatment (i.e. multi-systemic family therapy) is identified by SAMHSA as one of the most successful evidenced-based practices for the treatment of co-occurring disorders but are largely underfunded based on current rates.
- The provision of services under ACT and ACRA treatment models should be available to both adults and adolescents with co-occurring disorders.
- In Colorado, the services provided by doula's are not reimbursed. There is a lot of research on the benefits of the integration of doula care and residential SUD women.
- The utilization of therapeutic communities for pregnant women struggling with SUD.

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

a. What role should hospitals play in the next iteration of the ACC Program? N/A

b. What role should pharmacies play in the next iteration of the ACC Program?
340 B pricing should be a priority.

c. What role should specialists play in the next iteration of the ACC Program?
Specialists like SUD providers, like ARTS, have not been able to provide input.
MAT services and outpatient SUD services for co-occurring disorders for adolescents and adults are most cost effective when provided in specialty SUD clinics, and least cost-effective when provided by unspecialized mental health providers.

d. What role should home health play in the next iteration of the ACC Program?
N/A

e. What role should hospice care play in the next iteration of the ACC Program?
N/A

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?
SUD providers should be included.

g. What role should counties play in the next iteration of the ACC Program?
Counties should work with the ACC to develop more streamlined methods for assisting patients with Medicaid and PCMP assignment. We get many referrals from counties who depend on us enrolling their patients into Medicaid. We have no access to funding to support this service.

h. What role should local public health agencies play in the next iteration of the ACC Program?
N/A

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past? N/A

45) How can RCCOs help to support clients and families in making and keeping appointments?
Reimbursement for reminder calls (i.e., robo calling) and assisting patients and providers with transportation costs.

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP? Yes.

47) **Community Health Worker reimbursement**. Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement process	(Please check all that apply)
Independently bill	☐
On staff (salary) at Primary Care Medical Provider Clinic	☐
On staff (salary) at RCCO	☒
Per Member Per Month Payment	☐

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?
N/A

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you? All providers of BHOs must meet cultural competency standards. ARTS, as an entity within the University of Colorado, provides training on cultural competency.

b. What RCCO requirements would ensure cultural competency? N/A

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy? N/A

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes? N/A

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?
The idea of implementing preferred networks before the specialty providers have been identified and provided with an opportunity to educate the RCCOs and ACCs about their service provision is presumptuous and would further entrench misunderstanding and misinformation about specialty providers.

51) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend? N/A

52) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals. N/A

Practice Support

53) **Support for practices.** Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☒	☐	☐	☐
Network provider education	☒	☐	☒	☐
Assistance with practice redesign	☐	☒	☐	☐
Assistance with efficiency-enhancing activities	☒	☐	☒	☐
Provide web-based resources and directories	☒	☐	☐	☒
Provide practice-specific data reports	☒	☐	☒	☐
Provide clinical care guidelines and best practices.	☒	☐	☒	☐
Provide clinical screening tools	☒	☐	☒	☐
Provide health and functioning questionnaires	☒	☐	☒	☐
Provide chronic care templates	☐	☒	☐	☐
Provide registries	☒	☐	☐	☒
Offer client reminders	☒	☐	☒	☐
Offer client self-management tools	☒	☐	☒	☐
Offer educational materials about specific conditions	☒	☐	☒	☐
Supply behavioral health surveys	☒	☐	☒	☐
Supply other self-screening tools	☒	☐	☒	☐
Administer behavioral health surveys	☒	☐	☒	☐
Administer other self-screening tools	☒	☐	☒	☐
Prepare client action plans	☐	☒	☐	☐
Provide training on providing culturally-competent care	☒	☐	☒	☐
Provide training to supporting staff	☒	☐	☒	☐
Provide training on motivational interviewing	☒	☐	☒	☐
Provide tools and software for phone call and appointment tracking	☒	☐	☒	☐
Provide tools and resources for tracking labs, referrals, etc.	☒	☐	☒	☐
Provide referral and transitions of care checklists	☒	☐	☒	☐
Provide visit agendas or templates	☒	☐	☒	☐
Provide standing pharmacy order templates	☒	☐	☒	☐
Provide comprehensive directory of community resources	☒	☐	☐	☒
Provide directory of other resources	☒	☐	☒	☐
Provide materials regarding Nurse Advice Line	☒	☐	☒	☐
Ensure all tools and resources are centrally located on RCCO-specific website	☒	☐	☒	☐
Others				

54) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.
The tools should be part of the HIT initiative and provide resources for other providers, such as SUD providers. The information could be extremely useful if it reflected population statistics and included metrics for measuring results.

55) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?
Referral tracking, and standardization of referral documentation

56) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home? N/A

57) Should the Department require that PCMPs utilize disease registries to manage the health of their population? N/A

58) Please share any other advice or suggestions about provider support in the ACC.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals? N/A

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation? N/A

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure? N/A

62) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding? N/A

63) What role – if any – should the RCCOs play in the distribution of payments to providers?
It would be very damaging for RCCOs to be involved in payment based on referrals.
What potential criteria could be used to distribute payments?

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

66) **Measuring Client experience.** Please complete the table below to indicate how the Department should measure Client/patient experience: N/A

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☐	☐	
SF-12 Health Survey	☐	☐	
Other types of client interviews / surveys	☐	☐	
Patient Activation Measure	☐	☐	
Focus groups	☐	☐	
Other	Please type your response here.		

67) Knowing that, at this time, the Department only has claims data, how should population health be measured? Based off of population metrics, and regions where illness is more heavily concentrated so resources can be directed appropriately.

68) How should quality and performance data be reported to the RCCOs, PCMPs, and the public? N/A

69) **Measures for payment.** Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☐
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-S0	☐
S1+	☐
None	☐

70) What percent of RCCO payments should be tied to measures or performance? N/A

Percentage	
10-20%	☐
21-30%	☐
31-40%	☐
41-S0%	☐
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

71) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs? No, the key performance indicators should likely be very narrowly tailored to the needs of the region and the patients that they serve.

72) Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement? N/A

73) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures. N/A

74) **Incentive payment frequency.** Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	☐
Annually	☐
Other	☐

If you checked the "Other" box, please describe payment frequency below:

75) For potential offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

N/A

76) For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

Health Information Technology (HIT)

77) **Types of communication.** For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	☒
Text message	☐	☒
Web portal	☐	☒
Email	☐	☒
Telemedicine / Video chat	☐	☒
Face-to-face meeting	☒	☐
Smartphone app	☐	☒
Other: These types of communication should have a rank order or some way to show preference. I think any way the Department is able to utilize new technology to create efficiency, such as text message or app, should be used.		

78) **HIT investments by organizations.** For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below: N/A

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	☐	☐
Digital care management tool	☐	☐
Care transitions alerts	☐	☐
Electronic Health Records (EHRs)	☑	☑
Health risk assessment software	☐	☐
Practice assessment tools	☐	☐
Practice management tools (scheduling, billing)	☑	☑
Client web portal for communicating care plan, services, benefit enrollment	☐	☐
Patient education/wellness tools	☐	☐
Provider/case manager directory	☐	☐
Shared decision-making tools	☐	☐
Telemedicine software	☑	☑
Other:	☐	☐
Other:	☐	☐

79) **Importance of technology by type**. The Department is working to determine what technology is in place, what technology is needed, and what technology should be standardized. For RCCOs, providers, and other organizations, use the table below to answer what HIT infrastructure outside of the SDAC your organization would use to perform population health management activities. Tools are scored from 1-5, where 1 are those items least-likely to be used, and 5 are items most-likely to be used:

Tool	1 Least	2	3	4	5 Most
Population analytics / reporting / dashboard	☐	☐	☒	☐	☐
Care management tool	☐	☐	☐	☐	☒
Care transitions alerts	☐	☐	☐	☐	☒
Electronic Health Records (EHRs)	☐	☐	☐	☐	☐
Practice assessment tools	☒	☐	☐	☐	☐
Health risk assessment software	☐	☐	☒	☐	☐
Practice management tools (scheduling, billing)	☒	☐	☐	☐	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☐	☐	☐	☒
Patient education wellness tools	☐	☐	☒	☐	☐
Provider/case manager directory	☐	☐	☐	☐	☒
Shared decision-making tools	☐	☐	☐	☐	☒
Telemedicine	☐	☐	☒	☐	☐
Other:	☐	☐	☐	☐	☐

80) What are the primary barriers to RCCOs and providers increasing their use Health Information Technology to improve the performance of Primary Care Practices? N/A

81) How can Health Information Technology support Behavioral Health Integration?
HIT could help BH Integration by identifying the specialty provider types, capacity, type of population served, and scope of services. HIT could expedite the transfer of DACOD and CCAR data.

82) In the next iteration of the ACC, should there be a shared resource for data and analytics? Please describe the basic criteria for what a shared data and analytics platform needs to contain in order for it to be useful.

83) Should there be a shared care management tool? Please describe the basic criteria for what a care management tool would need to contain in order for it to be useful.
*Diagnostic criteria that was met
*Diagnoses and expected treatment or prognosis
*Assessments, screens, survey results
*If diagnosed with a chronic disease then chronic disease management information

84) Should there be a shared population health management tool? Please describe the basic criteria for what a population health management tool would need to contain in order for it to be useful.
N/A

85) Please describe the functionality that a common Medicaid provider directory would need to contain in order for it to be useful.

86) How can the RCCOs support providers' access to actionable and timely clinical data?

87) What are the HIT solutions that would benefit clients, providers, and RCCOs? Please comment on the parameters these tools or platforms would need to possess and the ways in which they could be used.

88) What technical assistance or resources related to HIT infrastructure should the RCCOs supply? This assistance or these resources could be for providers, social service organization, clients/families, or for others.

89) What role should health information exchange platforms like CORHIO or QHN play in the next iteration of the ACC?

90) Please share any information, advice, and suggestions you have about health information technology in the ACC Program.

The Department needs to aware of the significant cost for providers to make any changes to their EHR. Providers have to work with the vendor and within their current contract. User fees and contract costs continue to rise significantly every year. In order for substance use disorder providers to be successful with ACA expansion, they will need to have an EHR. This is a huge cost and something very new to a lot of SUD providers. Medicaid reimbursements need to keep up with the cost of doing business.

Colorado Department of
Health Care Policy and Financing

Serial #118

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
TH
IS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: John L. Bender, MD
Location: Fort Collins, CO

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Bender Medical Group Inc, dba Miramont Family Medicine
Location: Fort Collins, CO
☒ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☒ Medical provider / PCMP / other provider
  i. Type or specialty: Family Medicine
  ii. Area of practice: Fort Collins, Loveland, Wellington, Parker and Glendale
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official

How have you been involved in the ACC program and what interaction have you had with RCCOs:
Currently contracted with 4 of the RCCO's, regular interactions with various RCCO staff as part of the CPC Initiative. Largest book of business is with Rocky Mountain Health Plans, followed by Colorado Access and others.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:
Miramont Family Medicine is 38% Medicaid by revenues, serving over 5,000 Medicaid beneficiaries. We also have had contracts with Wyoming and Nebraska Medicaid due to our proximity to the border in the North.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☒ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)

☐ Other (please describe): Click here to enter text.

Are you currently involved in the ACC program?

☒ Yes
☐ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☐ 3-4 years
☒ Since before the program was implemented.

☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

Please feel welcome to describe why or why not using the space below.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

The best working part of the ACC is the additional financial incentives for the primary care providers. By offering not only the additional reimbursement to make us par to Medicare payments, but also with enhanced Care Coordination payments (paid as Per Member Per Month payments via an attribution method).

2) What is not working well in the ACC Program?

Paying the Medicaid "bump" up to 90 days in arrears creates cash flow problems, as it is essentially a "withhold" (our information is this will be corrected 1/1/2015). Shared savings in the CPC Initiative are being pooled, which means physician directed efforts that reduce costs could end up subsidizing hospital led efforts if they do not also create shared savings. Currently the PMPM fees are paid on the same Explanation of

benefits that regular claims are paid and as individual line items, thus creating considerable extra work for office billing staff to post these payments.

SDAC data is not available on a statewide basis, providers working more than one region must sign into each RCCO in order to retrieve fragmented provider data.

Attribution is an ongoing issue. For example, in Fort Collins many Medicaid enrollees choose another primary care provider, only to learn that provider cannot see them timely. Because Miramont offers after hours, Saturday and open access appointments, we may actually be the ones coordinating their care, but unable to claim the PMPM.

What is working best in the Behavioral Health Organization (BHO) system right now?

We were not able to create a functional model using the BHO system.

3) What is not working well in the BHO system?

We do not use the BHO's for our Medicaid population due to a lack of available appointments with wait times up to 6 weeks for a psychiatry consultation. Communication from BHO staff to our providers is difficult and rare. Billing the BHO for payment is incredibly cumbersome and paper based.

Instead, we have built our own in-house behavioral health services including a psychiatrist, three psychologists and a licensed clinical social worker. Historically, we have admitted many of our acute behavioral health patients to the neurology ward due to lack of local inpatient services. We conduct our own online psychiatric testing and provide multiple therapies, including EMDR.

4) What is working well with RCCO and BHO collaboration right now?

We have not seen any collaboration for our private sector ambulatory Medicaid population.

Behavioral Health Integration

5) What should be the next steps in behavioral health integration in Colorado?[1]

The BHO's can be dissolved and all behavioral health services brought into primary care offices using integrated care teams, medical records and payment model. Payment parity must exist for behavioral health (If Fee For Service is maintained) or an enhanced capitation payment (if ACO type payment is used).

The C-CARS forms are cumbersome, and need to be phased out.

6) Barriers to the integration of behavioral health and physical health services. Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	Barrier? No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☒	☐	Yes, does not allow for integration between primary care and behavioral health in ambulatory care.
Community Behavioral Health Services Rule	☒	☐	C-CARS forms are cumbersome
Covered diagnoses list	☒	☐	All behavioral health diagnosis's should be covered
Different behavioral / physical health reimbursement	☒	☐	Does not allow for integration
Institutions for Mental Diseases exclusion	☒	☐	
OBH rules, reporting, or financing (regulatory differences between agencies)	☒	☐	
PCMP financing structure	☐	☒	As long as enhanced payment includes Behavioral Health and is paid monthly
Per-member per-month amount	☒	☐	Does not cover the cost of care coordination and behavioral health integration
Physical space constraints	☐	☒	We have room for behavioral health in our organization

[1] Many terms and definitions can be found in the Appendix at the end of this document.

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

Privacy Laws (HIPAA, 42 CFR)	☐	☒	Integrated EHRs allow for privacy protection
Professional / cultural divisions	☐	☒	We have an integrated provider staff with many disciplines
RCCO or BHO contracts	☒	☐	HCPF must consider direct contracting with physician led ACO's as is occurring in Medicare.
Staff capacity	☐	☒	We allow staff to practice at the top of their scope.
State/Federal rules or reporting requirements	☐	☒	
Technical resources / data sharing	☒	☐	SDAC segregated by RCCO, no global enterprise information available
Training	☐	☒	
Others	Please type your response here.		

7) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

   A. Behavioral Health providers on staff and collocated with physical health providers
   B. Open access appointments for behavioral health and physical health
   C. Integrated electronic health record
   D. After hours on-call services for both behavioral health and physical health.

8) Please share any other general advice or suggestions you may have about behavioral health integration.

   A. Allow behavioral health providers to become part of "medical" provider networks and process payment for behavioral health and physical health with the same method.

   B. Report consolidated medical and behavioral health registries and claims data to identify patients with greater comorbidities and treatment needs.

   C. Allow for behavioral health telehealth visits statewide.

   D. Incentivize providers to match the level of behavioral health professional expertise to the clinical needs of the patient and to escalate behavioral health treatment intensity when improvement fails to occur.

   E. Propose behavioral health population metrics for desired behavioral health outcomes and incentivize progress towards these goals as pay for performance.

   F. Incentivize providers to apply evidence-based treatment algorithms and protocols as standard behavioral health interventions.

   G. Incentivize providers to use care coordinators trained in cross-disciplinary medical and behavioral support to create an integrated, comprehensive, whole-person personal care plan – to help patients with high health complexity overcome clinical and non-clinical barriers to improvement.

Care Coordination

9) What is the best definition of care coordination?

Care Coordination is the proactive implementation of the care plan between office visits that ensures patient and family engagement, as well and care plan completion across multiple providers and institution

10) How should RCCOs prioritize who receives care coordination first?

RCCO's must allocate care coordination services based on the twin inputs of cost drivers (SDAC reporting, claims data analysis) AND specific provider and beneficiary requests aware of emergent needs on a case-by-case basis.

a. How should RCCOs identify clients and families who need care coordination?

By asking the providers for regular feedback, and analysis of claims data and aggregate SDAC reporting.

b. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

Delegated care coordination can be reported monthly by the providers to HCPF. The reporting might include case number, resource referrals utilized, endpoints for care coordination.

11) What services should be coordinated and are there services that should not be a part of care coordination?

Services that <u>should</u> be coordinated include: Transitions of Care, specialty and diagnostic testing scheduling and transportation, community resource referrals, telehealth services, self-management and patient engagement education, updates to the care plan, and population health risk assessments.

Services that <u>should not</u> be coordinated include: Physical health and behavioral health as they must be collocated and integrated such that care coordination is not even necessary.

12) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

Information needed includes: Finances, legal issues, living arrangements, religious preferences, cultural preferences, and access to extended support systems (family, charity, etc.).

13) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today?

In our communities, our patients are receiving care coordination from the providers, hospitals, insurance companies, dental offices, cancer clinics, nursing home, hospice, and community care coordinators. Often, these coordinators are working separate agenda's with no communication with each other.

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

Ultimately, all in-state care coordination should take place outside of the RCCO, at the provider level. We need to serve the patients at point of care. Patients already have an established relationship with the providers and their care coordination teams.

c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

It would be helpful for the ACC to provide resources for care coordinators to turn to for assistance, but not be directly involved in coordination of care with patients.

d. What are the gaps in care coordination across the continuum of care?

Transportation, lack of statewide health information exchange (no SNF, no Home Health on CORHIO for example), no home monitoring and telehealth tools widely adopted in the Medicaid program.

14) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	Should the RCCO have a role? Yes	No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma	☒	☐	☒	RCCO's – should be a resource to Care Coordinators in the field
Affordability (assistance with prescriptions or co-pays)	☒	☐	☒	Bundled payments to physician led ACOs would allow for in house solutions to copay and prescription assistance issues as no increased cost to HCPF.
Daycare / childcare	☒	☐	☒	RCCO should act as a resource to the provider offices
Economic stability & employment	☒	☐	☒	RCCO should act as a resource to the provider offices

Education	☒	☐	☒	RCCO should act as a resource to the provider offices
Environment	☒	☐	☒	RCCO should act as a resource to the provider offices
Food access / nutrition	☒	☐	☒	RCCO should act as a resource to the provider offices
Health literacy	☒	☐	☒	RCCO should act as a resource to the provider offices
Housing	☒	☐	☒	RCCO should act as a resource to the provider offices
Language or translation services	☒	☐	☒	RCCO could accommodate translation services remotely.
Literacy	☒	☐	☒	RCCO should act as a resource to the provider offices
Transportation	☒	☐	☒	RCCO could invest in vehicles and drivers
Other	Please type your response here. Feel free to list as many non-medical factors as you want, and please explain how the RCCO should be involved.			

15) **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	**Coordinate care?** Yes	No	**In what capacity should these individuals coordinate care in the ACC Program?**
Advanced Practice (Registered) Nurses	☒	☐	Setting Actionable Care Plans, Support Self-Management Goals, Eliminating Barriers to Care, Providing Educational Resources
Certified Addiction Councilors	☒	☐	Setting Actionable Care Plans, Support Self-Management Goals, Eliminating Barriers to Care, Providing Educational Resources
Certified Nurse Midwives	☒	☐	Setting Actionable Care Plans, Support Self-Management Goals, Eliminating Barriers to Care, Providing Educational Resources
Community Health Workers	☒	☐	Eliminate Barriers to Care, Link to Community Resources, Provide Educational Resources
Generalists (BA/BS/MA/MS)	☒	☐	Facilitate Transitions of Care, Support Self-Management Goals, Team Coaching, Provide Educational Resources

Health Coaches	☒	☐	Support/Track Progress of Self-Management Goals, Provide Educational Resources
Licensed Clinical Social Workers	☒	☐	Eliminate Barriers to Care, Link to Community Resources, Provide Educational Resources
Licensed Marriage and Family Therapist	☒	☐	Setting Actionable Care Plans, Support Self-Management Goals, Eliminating Barriers to Care, Providing Educational Resources
Licensed Mental Health Counselors	☒	☐	Setting Actionable Care Plans, Support Self-Management Goals, Eliminating Barriers to Care, Providing Educational Resources
Licensed Professional Counselor	☒	☐	Setting Actionable Care Plans, Support Self-Management Goals, Eliminating Barriers to Care, Providing Educational Resources
Masters of Public Health	☒	☐	Setting Actionable Care Plans, Support Self-Management Goals, Eliminating Barriers to Care, Providing Educational Resources
Medical Doctors / Doctors of Osteopathic Medicine	☒	☐	Setting Actionable Care Plans, Support Self-Management Goals, Eliminating Barriers to Care, Providing Educational Resources
Nurse Practitioners	☒	☐	Setting Actionable Care Plans, Support Self-Management Goals, Eliminating Barriers to Care, Providing Educational Resources
Patient Navigators	☒	☐	Setting Actionable Care Plans, Support Self-Management Goals, Eliminating Barriers to Care, Providing Educational Resources
Peer Advocates	☒	☐	Setting Actionable Care Plans, Support Self-Management Goals, Eliminating Barriers to Care, Providing Educational Resources
Promotoras	☒	☐	Setting Actionable Care Plans, Support Self-Management Goals, Eliminating Barriers to Care, Providing Educational Resources
Psychiatrists	☒	☐	Setting Actionable Care Plans, Support Self-Management Goals, Eliminating Barriers to Care, Providing Educational Resources
Psychologists	☒	☐	Setting Actionable Care Plans, Support Self-Management Goals, Eliminating Barriers to Care, Providing Educational Resources
Registered Nurses	☒	☐	Setting Actionable Care Plans, Support Self-Management Goals, Eliminating Barriers to Care, Providing Educational Resources

Social Workers	☒	☐	Setting Actionable Care Plans, Support Self-Management Goals, Eliminating Barriers to Care, Providing Educational Resources
Wraparound facilitators	☒	☐	Setting Actionable Care Plans, Support Self-Management Goals, Eliminating Barriers to Care, Providing Educational Resources
Other	Please type your response here.		

16) Care coordination requirements for specific populations. Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and infants	☒	☐	Transition of Care, Breast Feeding, connecting with community resources
Children	☐	☒	
Children who are healthy, but in socially-complex environments	☒	☐	Connecting with community resources
Children involved in the foster care system	☒	☐	Connecting with community resources and medical assistance
Children with a chronic illness	☒	☐	Transitions of Care, physician collaboration of care
Children with a serious emotional disturbance	☒	☐	Physician collaboration of care and behavioral health resources
Children with medical complexity	☒	☐	Transitions of Care, collaboration of care with physicians
Children or youth with a behavioral health diagnosis or substance use disorder	☒	☐	Collaboration of care with physicians and behavioral health
Transition-age adolescents	☒	☐	Connection with community resources, Education
Parents and families	☐	☒	
Pregnant women	☒	☐	Connection with community resources, collaboration of care with physicians
Adults	☐	☒	
Adults who are healthy, but in socially-complex situations	☒	☐	Connection with community resources
Adults with a chronic illness	☒	☐	Transitions of Care and collaboration of care with physicians
Adults with a behavioral health diagnosis or substance use disorder	☒	☐	Collaboration of care with physicians and behavioral health, residential programs

Clients involved in the criminal justice system	☒	☐	Connection to community resources, probation officers, district attorneys
Clients with a disability	☒	☐	Connection to community resources
Clients in a nursing facility	☒	☐	Coordination with Skilled Nursing Facility, Families, Ombudsman.
Elderly clients	☒	☐	Connection to community resources
Frail elderly clients	☒	☐	Connection to community resources and collaboration of care with physicians
Clients in palliative care	☒	☐	Connection to community resources, Hospice and collaboration of care
Other populations, please comment:			

17) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

The RCCOs can facilitate conversations between the agencies themselves and the Patient Centered Medical Home. Alternatively, a physician directed ACO might assume this role.

18) How should care coordination be evaluated? How should its outcomes be measured?

At the aggregate practice level with reduced global costs of care, improved outcomes and improved patient satisfaction.

19) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

a. What is the PMPM cost for providing care coordination services?

According the American Academy of Pediatrics the cost of coordination of care for patients is $22.00 - $33.00 per member per month. Miramont believes it can continue to deliver care coordination at a much lower cost of only $6-$7 per member per month to HCPF. Currently Miramont receives no PMPM from the RCCO's for care coordination, but uses offsets from other programs (CPC Initiative) to fund care coordination. These offsets are going away in 2015, so other sources of the payment need to be determined in the RFP.

b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

Yes, utilize the same methodology that Medicare (Risk Adjustment Scores) uses to identify health risk. The higher the comorbidity of the patient, the higher the PMPM.

20) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population? Yes, and can be weighted by Risk Adjustment Factor scores

21) **Care coordinator to client ratios.** If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☐
51-100	☐
101-200	☒
201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

Care Coordination can be assessed at the organization level by number of attributed lives, reductions in global health care costs over time, and patient satisfaction scores. Surrogate markers might also include reduction in ER utilizations, reductions in readmission rates, reductions in missed specialty and diagnostic testing appointments.

22) Please share any other general advice or suggestions you have about care coordination in the ACC.

There is a future role for community paramedicine here as well, directed at the provider led ACO level.

Program Structure

23) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

Payment methodologies and attribution are priority, along with statewide, aggregate claims data reporting such that organizations spanning more than one RCCO can see their composite data.

24) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

Marketplace size and penetrance, Medicaid attribution, provider network size, current contracts in place.

25) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

If the providers are not allowed to directly contract with HCPF as a Medicaid ACO, then then next best step is to allow the provider group to contract with only one RCCO and enroll all of its attributed lives to that RCCO.

26) Should the RCCO region maps change? Why or why not? If so, how?

The RCCO service areas need to compete across the state and not be granted exclusively to territories.

27) Should the BHO region maps change? Why or why not? If so, how?

The BHO's need to be folded into the RCCOs and not be separate in the first place.

28) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

The transition needs to start 6 months before a set "Go Live" date that corresponds to the fiscal year for the state.

29) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

HCPF needs to accommodate physician dispensing to Medicaid beneficiaries by removing the "twenty five mile" DORA restriction and recognize that in the future, all patients will need their clinical services and prescription services co-located for best compliance. Physician dispensing is safe, legal and potentially less costly than current models. HCPF has heard testimony as to the benefits and risks, and is aware of the proposed changes to the rule:

8.800.5.B. Dispensing Physicians ~~whose offices or sites of practice are located more than 25 miles from the nearest participating pharmacy~~ may be reimbursed for drugs that are dispensed from their offices and that shall be self-administered by the client

What are the limitations of the current benefit structure and what – if any – changes are needed?

Integrating the BHOs with the RCCOs is the most important immediate step for payment reform, administrative simplification and improved health care access and quality.

30) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

The RCCO service areas need to compete across the state and not be granted exclusively to certain territories. Competition will drive costs down and lead to standardization of services by the RCCO's/

31) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

N/A

32) What role should RCCOs play in attributing clients to their respective PCMPs?

The RCCO's can help match a monthly provider report against an attribution report and then report back to the provider discrepancies (patients attributed but not being seen, and patients being seen but no attributed).

33) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

Eventually certain public health services need to be integrated into the ACC as well, especially immunizations.

34) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

It would help providers and beneficiaries tremendously if newly eligible Medicaid are added as soon as possible to the ACC program. We do have new patients turned to collections only because of this delay, and it is difficult to re-instate patients once they are in collections.

35) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

Keep the website for enrollment integrated, this works well. Reduce churn by continuing to facilitate seamless coverage between payers.

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

Large integrated care delivery models demonstrating higher quality care at a lower cost need reductions in oversight for scope and less restraint of trade in all areas of health care delivery. DORA was designed to protect the public from what were historically cottage-industry health care delivery models. Clinically

integrated models that externally report population health metrics and are collaborating in the RCCO need less oversight for scope issues.

Stakeholder Engagement

37) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

A commitment to see they are attributed to a PCMH or ACO within their network.

38) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

RCCO's must be willing to delegate care coordination to providers and assist those care coordinators in brokering relationships with community organizations, social service providers and others.

39) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

Community leaders must be educated about the value a coordinated care experience brings to their Medicaid population and community in general as a poverty and waste reduction strategy.

40) How should the Department structure stakeholder engagement for the ACC as a whole?

Shared savings to stakeholders will create a winning incentive that will lead to best practices that can be shared by the department in learning collaboratives for stakeholder groups.

Network Adequacy and Creating a Comprehensive System of Care

41) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

a. If no, what are the gaps?

We currently have gaps in specialty care providers, some dental care, and non-medical providers. Pharmaceutical dispensing needs to include physician dispensing to shore up the remaining compliance gaps.

Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

Maternity services are rationed at the hospital owned clinic level. Many of our obstetrics patients travel out of town for care.

42) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

a. What role should hospitals play in the next iteration of the ACC Program?

The must be compelled to accept all Medicaid, and deny outpatient services.

b. What role should pharmacies play in the next iteration of the ACC Program?

Bundled payments to ACO's will help reduce pharmacy costs.

c. What role should specialists play in the next iteration of the ACC Program?

Bundled payments to ACOs will help reduce specialist costs and increase specialist participation

d. What role should home health play in the next iteration of the ACC Program?

Home health needs to be integrated into Health Information Exchange, CORHIO, and shared savings at the ACO level.

e. What role should hospice care play in the next iteration of the ACC Program?

Hospice needs to be integrated into Health Information Exchange, CORHIO, and shared savings at the ACO level.

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

g. What role should counties play in the next iteration of the ACC Program?

h. What role should local public health agencies play in the next iteration of the ACC Program?

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

43) How can RCCOs help to support clients and families in making and keeping appointments?

Support the care coordinators working at the PCMH provider level. We know who misses their appointments and why, and need resources to dispatch for transportation, interpretation, and chaperoning.

44) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

Not necessarily, we already provide this service as part of our PCMH

45) **Community Health Worker reimbursement.** Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement process	(Please check all that apply)
Independently bill	☒
On staff (salary) at Primary Care Medical Provider Clinic	☒
On staff (salary) at RCCO	☐
Per Member Per Month Payment	☒

46) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

Miramont Family Medicine has recently received a grant from the Delta Dental Foundation to integrate a dental hygienist into our primary care practice. Our hygienist is licensed to do consultations, x-rays, cleanings, root-scaling, and to oversee our Cavity Free by Three program. Our hygienist will be working with our dental community to ensure care of all our patients dental needs. Where we need assistance is ensuring that we have places to refer our patients if they have significant dental needs that are beyond the scope of our dental hygienist.

47) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you?

It means reducing health disparities and provider optimal care to patients regardless of their race, ethnic background, native languages spoken, and religious or cultural beliefs.

b. What RCCO requirements would ensure cultural competency?

The RCCO's can require provider not discriminate or disparage a patient's cultural or religious heritage.

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?

Clinics will need to be respectful and be able to communicate with patient on their level of understanding. This can be achieved by either providing staff trained in the culture or in the language needed or by providing access to needed personnel or services.

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

Training program that aim at enhancing the cultural competence of healthcare providers by teaching and developing cross-cultural communication skills.

48) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

The preferred network must support "Fair Trade" primary care, meaning that if the preferred network reduces its own costs only by creating a new burden of transaction costs on the PCMH, then over time the PCMH will not be sustainable and global costs will rise.

A much better alternative is a provider directed ACO payment model wherein there are shared savings to ACOs that improve care and lower costs by incentives.

49) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

Incentivize PCMHs to stay open late and perform urgent care type services, like Xray, lab and I therapy. DO this with payments par to Medicare, timely payment of claims without quarterly withholds (as they are paid now), enhanced PMPM that includes care coordination fees of $6-$7 per month to the PCMH, and a pathway to a physician directed ACO payment standard that includes shared savings allocated by clinic or organization.

50) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

Gaps are regional. We have no children's hospital in Larimer County, they all go to Children's ER in Aurora when sick, no direct admission unfortunately. We do have new access to Dental, pain management and behavioral health at Miramont but much of this we built internally.

Practice Support

51) **Support for practices.** Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☒	☐	☒	☒
Network provider education	☒	☐	☐	☐
Assistance with practice redesign	☒	☐	☐	☐
Assistance with efficiency-enhancing activities	☒	☐	☐	☐
Provide web-based resources and directories	☒	☐	☒	☒
Provide practice-specific data reports	☒	☐	☒	☐
Provide clinical care guidelines and best practices.	☐	☐	☒	☒
Provide clinical screening tools	☐	☒	☐	☐
Provide health and functioning questionnaires	☐	☐	☒	☒
Provide chronic care templates	☐	☒	☐	☐
Provide registries	☐	☒	☐	☐
Offer client reminders	☐	☒	☐	☐
Offer client self-management tools	☐	☒	☐	☐
Offer educational materials about specific conditions	☐	☒	☐	☐
Supply behavioral health surveys	☐	☒	☐	☐
Supply other self-screening tools	☐	☒	☐	☐
Administer behavioral health surveys	☐	☒	☐	☐
Administer other self-screening tools	☐	☒	☐	☐
Prepare client action plans	☐	☒	☐	☐
Provide training on providing culturally-competent care	☒	☐	☐	☐
Provide training to supporting staff	☒	☐	☐	☐
Provide training on motivational interviewing	☒	☐	☐	☐
Provide tools and software for phone call and appointment tracking	☐	☒	☐	☐
Provide tools and resources for tracking labs, referrals, etc.	☐	☒	☐	☐
Provide referral and transitions of care checklists	☐	☒	☐	☐
Provide visit agendas or templates	☐	☒	☐	☐
Provide standing pharmacy order templates	☐	☒	☐	☐
Provide comprehensive directory of community resources	☒	☐	☒	☒
Provide directory of other resources	☒	☐	☒	☒
Provide materials regarding Nurse Advice Line	☒	☐	☐	☐
Ensure all tools and resources are centrally located on RCCO-specific website	☒	☐	☒	☒
Others				

52) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

Basically web based (Cloud) and if at the state level, to ensure that the RCCOs all have the same standards for best practices etc.

53) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

A coach will be needed order to help build robust, efficient and to become patient centered medical homes. A outside of practice coach, keeps the team centered, focused and moving forward by setting goals for the practice to meet NCQA standards.

54) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

Fee for Service is dead. Reimbursement must be quality based. Per Member Per Month payments based on the patient's health risk, NCQA Patient Medical Home Recognition Level, Shared Savings, and patient outcomes, is how providers should be reimbursed in the future.

A provider directed ACO payment model with payments par to Medicare, timely payment of claims without quarterly withholds (as they are paid now), enhanced PMPM that includes care coordination fees of $6-$7 per month to the PCMH, and a pathway to this physician directed ACO payment standard that includes shared savings allocated by clinic or organization.

55) Should the Department require that PCMPs utilize disease registries to manage the health of their population?

Yes, and bi-directional interfaces need to be built. CIIS has promised this for years, still no deliverable.

56) Please share any other advice or suggestions about provider support in the ACC.

Payment Structure and Quality Monitoring

57) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

Only partially. We need ongoing payments par to Medicare, timely payment of claims without quarterly withholds (as they are paid now), enhanced PMPM that includes care coordination fees of $6-$7 per month to the PCMH, and a pathway to a physician directed ACO payment standard that includes shared savings allocated by clinic or organization.

58) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

Absolutely, we are willing to accept capitation payments under a shared saving model. We would be willing to take primary care, specialty care and prescription medication downside and upside risk (we would add our Medicaid patients to our stop loss insurance).

59) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

CORHIO remains clunky for health information exchange, and CIVCH has payment but not quality data for reporting value. It will largely depend on the size of the physician organization. Solo providers will need to align with a RCCO, IPA or ACO. Larger groups, like ACO's and some IPAs are already doing this for Medicare Part C, and commercial payers.

60) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

We do not currently hold and LSLPN or HMO license with the DOI, but are certainly willing to obtain if required.

61) What role – if any – should the RCCOs play in the distribution of payments to providers?

If the payment methodology remains per member per month, then the state can administer the payment as they currently do. If the shared savings are outside of an ACO model, then the RCCO's will be heavily involved. Monthly meeting would be necessary with the providers to assess metrics and goals.

62) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

A provider directed ACO payment model, moving past payments made par to Medicare, timely payment of claims without quarterly withholds (as they are paid now), enhanced PMPM that includes care coordination fees of $6-$7 per month to the PCMH, and a pathway to a physician directed ACO payment standard that includes shared savings allocated by clinic or organization.

63) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

Quality metrics (CQMs) should mirror other initiatives like PQRS and the CPC Initiative. They should include chronic care metrics for diabetes and cardiovascular disease and prevention, patient satisfaction survey scores, and reduction in global care costs.

64) **Measuring Client experience.** Please complete the table below to indicate how the Department should measure Client/patient experience:

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☒	☒	Depends. It is expensive and patients do not always respond to the surveys. Perhaps as an annual measure?
SF-12 Health Survey	☐	☒	
Other types of client interviews / surveys	☒	☐	In clinic survey monkey type surveys, low cost and higher participation rates.
Patient Activation Measure	☒	☐	
Focus groups	☒	☐	
Other	Please type your response here.		

65) Knowing that, at this time, the Department only has claims data, how should population health be measured?

Allow the providers to externally report their population health in the meantime.

66) How should quality and performance data be reported to the RCCOs, PCMPs, and the public?

Choose a convener like Health Team Works that does this well already.

67) **Measures for payment.** Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☐
8-10	☒
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

68) What percent of RCCO payments should be tied to measures or performance?

Percentage	
10-20%	☒
21-30%	☐
31-40%	☐
41-50%	☐
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

69) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?

Yes and yes

70) Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?

Start with improvement, and move towards national standards.

71) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

Yes, it needs to be monthly in order for practices to understand whether their interventions are impacting care delivery.

72) Incentive payment frequency. Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☒
Quarterly	☐
Annually	☐
Other	☐

If you checked the "Other" box, please describe payment frequency below:

73) For potential offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

I believe many of the fixed transaction cost of operating a RCCO will disappear in a direct payment to provider lead ACO model.

74) For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

Yes, we participate in CQM's' for PQRS, Bridges to Excellence, external reporting for the CPC Initiative, internal measurements with a digital tool called CINA, and we receive HEDIS bonus payments from some commercial payers.

Health Information Technology (HIT)

75) **Types of communication.** For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	☒
Text message	☐	☒
Web portal	☐	☒
Email	☐	☒
Telemedicine / Video chat	☐	☒
Face-to-face meeting	☐	☒
Smartphone app	☐	☒
Other: The more tools the more we can build (If the only tool is a hammer, we eventually start hammering screws.....).		

76) **HIT investments by organizations.** For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below:

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	☒	☐
Digital care management tool	☒	☐
Care transitions alerts	☒	☐
Electronic Health Records (EHRs)	☒	☐
Health risk assessment software	☐	☒
Practice assessment tools	☒	☐
Practice management tools (scheduling, billing)	☒	☐
Client web portal for communicating care plan, services, benefit enrollment	☒	☐
Patient education/wellness tools	☒	☐
Provider/case manager directory	☐	☒
Shared decision-making tools	☒	☐
Telemedicine software	☒	☐
Other: Smart phone apps for patient monitoring	☐	☒
Other:	☐	☐

77) **Importance of technology by type**. The Department is working to determine what technology is in place, what technology is needed, and what technology should be standardized. For RCCOs, providers, and other organizations, use the table below to answer what HIT infrastructure outside of the SDAC your organization would use to perform population health management activities. Tools are scored from 1-5, where 1 are those items least-likely to be used, and S are items most-likely to be used:

Tool	1 Least	2	3	4	5 Most
Population analytics / reporting / dashboard	☐	☐	☐	☐	☒
Care management tool	☐	☐	☐	☐	☒
Care transitions alerts	☐	☐	☐	☒	☐
Electronic Health Records (EHRs)	☐	☐	☐	☐	☒
Practice assessment tools	☐	☐	☐	☐	☒
Health risk assessment software	☐	☐	☐	☒	☐
Practice management tools (scheduling, billing)	☐	☐	☐	☐	☒
Client web portal for communicating care plan, services, benefit enrollment	☐	☐	☐	☐	☒
Patient education wellness tools	☐	☐	☐	☐	☒
Provider/case manager directory	☐	☐	☐	☒	☐
Shared decision-making tools	☐	☐	☐	☒	☐
Telemedicine	☐	☐	☐	☐	☒
Other: Smart phone apps with patient ambulatory monitoring	☐	☐	☐	☐	☒

78) What are the primary barriers to RCCOs and providers increasing their use Health Information Technology to improve the performance of Primary Care Practices?

Cost to obtain and maintain hardware/software and low payment for telemedicine services.

79) How can Health Information Technology support Behavioral Health Integration?

Sharing of electronic health records, singular billing and revenue cycle management.

80) In the next iteration of the ACC, should there be a shared resource for data and analytics? Please describe the basic criteria for what a shared data and analytics platform needs to contain in order for it to be useful.

Must allow easy filtering of data and allow for trending data over time. Must be statewide, not segregate providers by RCCO or region when the provider works more than one contract.

81) Should there be a shared care management tool? Please describe the basic criteria for what a care management tool would need to contain in order for it to be useful.

Smart phone app to track patient choices and provider feedback, allow for dialogue.

82) Should there be a shared population health management tool? Please describe the basic criteria for what a population health management tool would need to contain in order for it to be useful.

Ideally would have access by all care managers, providers the RCCO and the PCMH.

83) Please describe the functionality that a common Medicaid provider directory would need to contain in order for it to be useful.

Specialty, procedures, affiliated hospital or ASC, hours of operation, wait time.

84) How can the RCCOs support providers' access to actionable and timely clinical data?

Monthly push reports that rank "hot-spotters" by cost centers, copy to the physicians care coordinator.

85) What are the HIT solutions that would benefit clients, providers, and RCCOs? Please comment on the parameters these tools or platforms would need to possess and the ways in which they could be used.

Patient smart phone and iPad/Tablet apps that link to biosensors and allow for remote patient monitoring at home and ambulatory. Must integrate with CORHIO and EHR.

86) What technical assistance or resources related to HIT infrastructure should the RCCOs supply? This assistance or these resources could be for providers, social service organization, clients/families, or for others.

Ongoing training for SDAC.

87) What role should health information exchange platforms like CORHIO or QHN play in the next iteration of the ACC?

CORHIO must be built, it is too fragmented and glitchy.

88) Please share any information, advice, and suggestions you have about health information technology in the ACC Program.

CLOUD based, smart phone accessible if to be relevant in 2020.

Colorado Department of Health Care Policy and Financing

RFI Response Received and Recorded.

Accepted by: KJDW

Notes: Formatting standardized

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Manthan Bhatt
Location: Denver, CO 80210

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Colorado Academy of Family Physicians
Location: Aurora, CO80014
☒ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☐ Medical provider / PCMP / other provider
  i. Type or specialty: Click here to enter text.
  ii. Area of practice: Click here to enter text.
☒ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☐ Other (please describe): Click here to enter text.

Are you currently involved in the ACC program?

☒ Yes
☐ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☐ 3-4 years
☒ Since before the program was implemented.

How have you been involved in the ACC program and what interaction have you had with RCCOs:

The Colorado Academy of Family Physicians advocated for the creation of the RCCO's and the ACC program before it was implemented. We worked on the original RFI and our members have seen the great benefits of the ACC program and the RCCOs.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:

The Colorado Academy of Family Physicians is the largest organization devoted to primary care in Colorado. We serve as the champion for Colorado's Family Physicians with over 2,200 members. The CAFP and our physicians sit on numerous Medicaid committees and we work to optimize the provider relationship with the department. The CAFP supports the ACC program through communications and marketing efforts.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☒ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

Please feel welcome to describe why or why not using the space below.

General Questions

1) **What is working best in the Accountable Care Collaborative (ACC) right now?**

The ACC has been successful in its efforts to create a strong provider network. It has also been successful in recruiting new physicians to meet the increasing demand that the Affordable Care Act has placed on the Medicaid program. The Regional Care Collaboratives (RCCOs) have helped enable care coordination for both providers and Medicaid beneficiaries. The program's is both accountable and transparent which allows the public to accurately measure the savings it has secured. The program has been successful in not only seeking provider feedback but implementing their suggested changes.

2) **What is not working well in the ACC Program?**

A major problem providers continue to face in the ACC program is that a practice's population falls under multiple RCCOs and the provider is forced to bring different care to different clients. Attributing providers to a single RCCO could help expand the ability for a provider to maximize RCCO services.

A provider contract that fully implements payment reform with global capitation and global risk has been talked about but not implemented. Primary care physicians are in a unique position to slow the cost of health care while, at the same time, expanding care. A global capitation and global risk contract could help attract high-functioning PCMHs and medical homes into the program because those contracts incentivize and reward work already being done. Unless a fair global risk contract can be created, PCMPs should receive their income from 3 sources, adequate FFS, a higher PMPM and bonuses for hitting quality measures.

The current key performance indicators (KPI's) are insufficient in assessing the quality of most practices as they are financially driven, not medically driven. High functioning primary care offices should be able to bring data about their diabetic populations (percent of beneficiaries with diabetes HbA1c in poor control), their hypertension populations (percent of beneficiaries with hypertension whose blood pressure is in poor control), percentage of population receiving depression screening, percent of elderly population receiving a screening for fall risk, tobacco use for population, high LDL population, etc. These KPIs, and the payments connected to them, should be voluntary but encouraged via shared savings.

Our providers have found that the rate increase process the Department of Health Care Policy and Financing plans for are retroactive which discourages long term planning. In order to secure more providers, the department could create long term plans for the determination of rate increases.

We need to hold Medicaid patient's accountable. Currently providers are not allowed to charge for "No Show Appointments". We understand that these people qualify for Medicaid because they meet the Federal Government Poverty Guidelines, but we need some accountability from the patients. An important way to ensure patient accountability is to incentivize them through financial accountability.

3) What is working best in the Behavioral Health Organization (BHO) system right now?

Large FQs and Medicaid offices are co-locating BHO staff which encourages warm handoffs between primary care physicians and the behavioral health team.

4) What is not working well in the BHO system?

The BHOs need to contract with the RCCOs and receive o combined PMPM poyment in order to simplify HCPF occounting ond make possible ony risk contracting in the future. Encouraging the co-locotion of BHO stoff ot large Medicold offices or FQ's would be ideol. For smoller offices, partnering with BHO orgonizations in their community to refer oll clientele could help in encouraging referrals to BHOs.

The current limitotions in Medicold's behaviorol heolth program could be mitigoted by ollowing privote practice behoviorol heolth professionols to contract directly with Medicoid, outside of the BHO. This could ollow PCMPs to codify current practices. For instance, we've heord clinics offering counseling for pay which many of their potients will do ot leost short term due to the issues with Medicaid counselling.

On the nationol level, HIPPA must be chonged to ollow the needed communicotion between BHO ond medicol offices. HCPF ond the ACC progrom should look into the process of receiving o woiver to enhance the collaboration between PCMPs ond BHOs.

Currently for PCMPs with Medicaid cliental have to go through o lengthy ond burdensome process to get any counselling help which hos coused many of our potients to not seek counseling, give up, or refuse to ever go bock because the process was so onerous. For many of these potients, getting a hondle on their behovioral health would dromaticolly affect their physicol heolth outcomes.

5) What is working well with RCCO and BHO collaboration right now?

6) What is not working well with RCCO and BHO collaboration right now?

Behavioral Health Integration

7) **What should be the next steps in behavioral health integration in Colorado?**[1]

The HCPF department should move away from providing crisis management or short term counselling, like what is currently being offered at many FQHCs, and move to having an-sight, long term behavioral health counseling with rotating psychiatrists. Currently, our providers will offer counseling outside of Medicaid at a heavily discounted price due to issues with Medicaid's burdensome process to get counseling. Behavioral health, for many, is directly connected to physical health. For many of these patients getting a handle on their anxiety, PTSD, depression, etc would drastically alter their health outcomes.

Integrating the BHO regions with the current RCCO regions will help Medicaid beneficiaries navigate the system while also integrating the work RCCOs do with what BHOs. In order to integrate behavioral health with physical health, the department should consider contracting with the RCCOs to do both mental and physical health. In essence, one contract to ensure integration.

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☒	☐	Allow BHOs to contract with RCCOs to receive combined PMPM payment
Community Behavioral Health Services Rule	☐	☐	
Covered diagnoses list	☐	☐	
Different behavioral / physical health reimbursement	☐	☐	
Institutions for Mental Diseases exclusion	☐	☐	
OBH rules, reporting, or financing (regulatory differences between agencies)	☒	☐	
PCMP financing structure	☒	☐	Global risk contracts could encourage the management of chronic and behavioral health diseases.
Per-member per-month amount	☒	☐	Our providers still see Medicaid patients at a loss, integrating behavioral health will require higher PMPMs.
Physical space constraints	☒	☐	Many small practices will never fully integrate with behavioral health because of space constraints. Having strong referral networks that follow up with patients could help mitigate the lack of in-office behavioral health support.
Privacy Laws (HIPAA, 42 CFR)	☒	☐	HIPPA must be changed to allow the needed communication between BHO and medical offices
Professional / cultural divisions	☒	☐	
RCCO or BHO contracts	☒	☐	In order to integrate behavioral health with physical health, the department should consider contracting with the RCCOs to do both mental and physical health. In essence, one contract to ensure integration.

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

Staff capacity	☐	☐	
State/Federal rules or reporting requirements	☐	☐	
Technical resources / data sharing	☐	☐	
Training	☐	☐	
Others	Please type your response here.		

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

10) Please share any other general advice or suggestions you may have about behavioral health integration.

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination?

Care coordination is the management and coordination of complex medical cases to ensure quality and efficient use of health care resources. Care coordination is greatly enhanced in the Patient Centered medical Home because it anticipates that family physicians and their team will provide care coordination services. Family physicians already utilize their team for coordination of services for their patients and assuring that appropriate testing and medication compliance occurs in a patient's treatment plan. Family Physicians should appropriately be paid for these services.

b. How should RCCOs prioritize who receives care coordination first?

Complex patients that are either pregnant or are children should receive care coordination services first. Top priority should also be given to those with mental illness, diabetes, a chronic illness and those with degenerative diseases.

c. How should RCCOs identify clients and families who need care coordination?

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

12) What services should be coordinated and are there services that should not be a part of care coordination?

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today?

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

d. What are the gaps in care coordination across the continuum of care?

15) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	Should the RCCO have a role? Yes	No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma	☐	☐	☐	
Affordability (assistance with prescriptions or co-pays)	☐	☐	☐	
Daycare / childcare	☐	☐	☐	
Economic stability & employment	☐	☐	☐	
Education	☐	☐	☐	
Environment	☐	☐	☐	
Food access / nutrition	☐	☐	☐	
Health literacy	☐	☐	☐	
Housing	☐	☐	☐	
Language or translation services	☐	☐	☐	
Literacy	☐	☐	☐	
Transportation	☐	☐	☐	

Other	Please type your response here. Feel free to list as many non-medical factors as you want, and please explain how the RCCO should be involved.

16) **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	Coordinate care? Yes	Coordinate care? No	In what capacity should these individuals coordinate care in the ACC Program?
Advanced Practice (Registered) Nurses	☒	☐	
Certified Addiction Councilors	☒	☐	
Certified Nurse Midwives	☐	☐	
Community Health Workers	☒	☐	
Generalists (BA/BS/MA/MS)	☒	☐	
Health Coaches	☐	☐	
Licensed Clinical Social Workers	☒	☐	
Licensed Marriage and Family Therapist	☒	☐	
Licensed Mental Health Counselors	☒	☐	
Licensed Professional Counselor	☒	☐	
Masters of Public Health	☐	☐	
Medical Doctors / Doctors of Osteopathic Medicine	☒	☐	
Nurse Practitioners	☒	☐	
Patient Navigators	☒	☐	
Peer Advocates	☐	☐	
Promotoras	☒	☐	
Psychiatrists	☒	☐	
Psychologists	☒	☐	
Registered Nurses	☒	☐	
Social Workers	☒	☐	

Wraparound facilitators	☐	☐	
Other	Please type your response here.		

17) **Care coordination requirements for specific populations.** Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and infants	☒	☐	
Children	☐	☒	
Children who are healthy, but in socially-complex environments	☒	☐	
Children involved in the foster care system	☒	☐	
Children with a chronic illness	☒	☐	
Children with a serious emotional disturbance	☒	☐	
Children with medical complexity	☒	☐	
Children or youth with a behavioral health diagnosis or substance use disorder	☒	☐	
Transition-age adolescents	☐	☒	
Parents and families	☐	☒	
Pregnant women	☒	☐	
Adults	☐	☒	
Adults who are healthy, but in socially-complex situations	☒	☐	Care coordination is needed for domestic violence victims. They are in a unique position that requires support.
Adults with a chronic illness	☒	☐	
Adults with a behavioral health diagnosis or substance use disorder	☒	☐	
Clients involved in the criminal justice system	☒	☐	
Clients with a disability	☒	☐	
Clients in a nursing facility	☒	☐	
Elderly clients	☒	☐	
Frail elderly clients	☒	☐	
Clients in palliative care	☒	☐	
Other populations, please comment:			

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

19) How should care coordination be evaluated? How should its outcomes be measured?

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

a. What is the PMPM cost for providing care coordination services?

b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

a. **Care coordinator to client ratios.** If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☐
51-100	☐
101-200	☐
201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

This problem could be easily fixed if PCMP's would be allowed to choose the RCCO they wish to belong to, not based on the county of residency of the member.

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

27) Should the RCCO region maps change? Why or why not? If so, how?

Don't change the maps as such but allow PCMP's to pick the RCCO that best fits their needs for their members.

28) Should the BHO region maps change? Why or why not? If so, how?

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

34) What role should RCCOs play in attributing clients to their respective PCMPs?

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

42) How should the Department structure stakeholder engagement for the ACC as a whole?

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

No, we see gaps in specialty care, dental care, behavioral health and non-medical providers. Payment to specialists must be increased in order to assure adequate specialty networks for this population. Pharmacies in physician offices should be compensated in order to lessen the logistical burdens of obtaining prescriptions.

a. If no, what are the gaps?

There are not enough specialist within the ACC program. Adequate payment to specialists could help our PCMPs in referring complex patients out.

b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

a. What role should hospitals play in the next iteration of the ACC Program?

b. What role should pharmacies play in the next iteration of the ACC Program?

c. What role should specialists play in the next iteration of the ACC Program?

d. What role should home health play in the next iteration of the ACC Program?

e. What role should hospice care play in the next iteration of the ACC Program?

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

g. What role should counties play in the next iteration of the ACC Program?

h. What role should local public health agencies play in the next iteration of the ACC Program?

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

45) How can RCCOs help to support clients and families in making and keeping appointments?

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

47) **Community Health Worker reimbursement.** Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement process	(Please check all that apply)
Independently bill	☐
On staff (salary) at Primary Care Medical Provider Clinic	☐
On staff (salary) at RCCO	☐
Per Member Per Month Payment	☐

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you?

b. What RCCO requirements would ensure cultural competency?

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

51) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

52) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

Practice Support

53) **Support for practices.** Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☐	☐	☐	☐
Network provider education	☐	☐	☐	☐
Assistance with practice redesign	☐	☐	☐	☐
Assistance with efficiency-enhancing activities	☐	☐	☐	☐
Provide web-based resources and directories	☐	☐	☐	☐
Provide practice-specific data reports	☒	☐	☒	☐
Provide clinical care guidelines and best practices.	☐	☐	☐	☐
Provide clinical screening tools	☐	☐	☐	☐
Provide health and functioning questionnaires	☐	☐	☐	☐
Provide chronic care templates	☐	☐	☐	☐
Provide registries	☒	☐	☒	☐
Offer client reminders	☒	☐	☐	☐
Offer client self-management tools	☒	☐	☐	☐
Offer educational materials about specific conditions	☐	☐	☐	☐
Supply behavioral health surveys	☐	☐	☐	☐
Supply other self-screening tools	☐	☐	☐	☐
Administer behavioral health surveys	☐	☐	☐	☐
Administer other self-screening tools	☐	☐	☐	☐
Prepare client action plans	☐	☐	☐	☐
Provide training on providing culturally-competent care	☐	☐	☐	☐
Provide training to supporting staff	☐	☐	☐	☐
Provide training on motivational interviewing	☐	☐	☐	☐
Provide tools and software for phone call and appointment tracking	☐	☐	☐	☐
Provide tools and resources for tracking labs, referrals, etc.	☐	☐	☐	☐
Provide referral and transitions of care checklists	☐	☐	☐	☐
Provide visit agendas or templates	☐	☐	☐	☐
Provide standing pharmacy order templates	☐	☐	☐	☐
Provide comprehensive directory of community resources	☐	☐	☐	☐
Provide directory of other resources	☒	☐	☐	☐
Provide materials regarding Nurse Advice Line	☐	☐	☐	☐
Ensure all tools and resources are centrally located on RCCO-specific website	☒	☐	☒	☐
Others				

54) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

Claims data can be a powerful tool to anticipate needs of a community. RCCOs should make use of current data and help PCMPs identify the needs of their population.

A registry of all Medicaid patients assigned to a PCMP so they know their populations.

For many small practices, seeing a Medicaid patient is unique. The RCCOs need to provide a directory of their resources and the overall resources available in the ACC program.

55) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

Yes, RCCOs are in a unique and financial position to support practices in practice transformation.

56) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

57) Should the Department require that PCMPs utilize disease registries to manage the health of their population?

Disease registries are not necessary for chronic disease management, and are not incorporated in many EMR platforms. Using outside registries would require double data entry. Medical offices have quickly adopted EMRs but this is not a Medicaid requirement, yet.

58) Please share any other advice or suggestions about provider support in the ACC.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

We know of many large and mid-size primary care practices that would be interested in participating in capitation payments under a shared savings model.

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

Practices are at various stages of development. Most of our physicians, a little over 2/3rds according to our last census report, have an EHR. This is the first step to allow a provider to receive global payments. EHRs also require a registry function to receive these payments. Leadership and the commitment to quality based care and the ability to train support staff around that commitment is a barrier.

62) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

63) What role – if any – should the RCCOs play in the distribution of payments to providers?

If the department is going to continue paying on a per member per month basis, then the state can administer the payments as they currently do. Under a global risk contract, the RCCOs will most likely be required to measure shared savings.

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

Quality metrics should include, chronic care metrics for diabetes and cardiovascular disease and prevention, patient satisfaction survey scores, and reduction in global care costs.

66) **Measuring Client experience.** Please complete the table below to indicate how the Department should measure Client/patient experience:

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☐	☒	Too expensive and patients do not respond to the surveys.
SF-12 Health Survey	☐	☐	
Other types of client interviews / surveys	☐	☐	
Patient Activation Measure	☐	☐	
Focus groups	☐	☐	
Other	Please type your response here.		

67) Knowing that, at this time, the Department only has claims data, how should population health be measured?

By physician quality data and reduction in global costs.

68) How should quality and performance data be reported to the RCCOs, PCMPs, and the public?

State registry like SDAC, but allow for provider uploads of quality data.

69) **Measures for payment.** Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☒
8-10	☒
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

70) What percent of RCCO payments should be tied to measures or performance?

Percentage	
10-20%	☐
21-30%	☐
31-40%	☐
41-50%	☐
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

71) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?

Yes

72) Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?

Yes

73) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

Yes

74) **Incentive payment frequency**. Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	☒
Annually	☐
Other	☐

If you checked the "Other" box, please describe payment frequency below:

75) For potential offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

76) For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

Many practices and community providers get bonus HEDIS payments from commercial payers.

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

ACC Request for Information

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Colorado Department of Human Services
Location: Denver, CO

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: **Office of Behavioral Health**
Location: Denver, CO
☒ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☐ Medical provider / PCMP / other provider
  i. Type or specialty: Click here to enter text.
  ii. Area of practice: Click here to enter text.
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☒ Other (please describe): state government agency

Are you currently involved in the ACC program?

☐ Yes
☐ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☐ 3-4 years
☐ Since before the program was implemented.

How have you been involved in the ACC program and what interaction have you had with RCCOs:

Click here to enter text.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:

Click here to enter text.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☒ N/A

Please feel welcome to describe why or why not using the space below.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

The ACC program has been able to effectively use data to drive outcomes. The creative use of financial incentives appears to be successful. The use of a health home model is a useful construct.

2) What is not working well in the ACC Program?

To date it appears that care coordination has been focused on acute episodes and is not comprehensive enough for clients with chronic conditions and multiple issues. In addition, Child Welfare has not understood the value of enrolling children in the ACC program.

3) What is working best in the Behavioral Health Organization (BHO) system right now?

There have been improvements in understanding payment responsibilities between the BHOs and the child welfare system.

4) What is not working well in the BHO system?

Many people who require intensive care are not receiving it. Persons with co-occurring disorders i.e. developmental disabilities, TBI and autism have a difficult time accessing care. In rural areas we hear many complaints about people being able to access care. There are not enough appointment times to allow clients especially those with severe needs to obtain appointments at the appropriate frequency. There are not clear outcomes for success and limited monitoring of outcomes and quality care. The BHOs have very limited oversight. Many SUD providers have not been able to access BHO reimbursement.

There is also a problem working across BHO regions. In some cases there may be a need to change BHOs in the middle of care and eligibility and continuity of care may be interrupted.

In addition, some BHOs are making level of care decisions for children without any face to face assessments.

Medical necessity is not uniformly applied across the system and is not well understood. This sometimes results in the premature interruption of evidence based programs.

5) What is working well with RCCO and BHO collaboration right now?

6) What is not working well with RCCO and BHO collaboration right now?

There needs to be more coordination across physical and behavioral health. There is a lack of data sharing and disorders that cross over domains are inadequately addressed such as TBI, autism etc.

Continuity of care is often weak such as when a person may leave the institutes. In addition, there needs to be a seamless system when clients must cross over RCCO or BHO regions.

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

Geographic regions between BHOS and RCCOS should be aligned and one administrative structure should be developed. However, it is important that behavioral health knowledge be kept in the system. The work of the SIM planning grant should be utilized in moving this forward. It is recommended that the definitions of integrated healthcare developed by Center for Integrated Health Solutions be utilized and that the system be encouraged to stretch beyond collaboration to integration. (A Standard Framework for Levels of Integrated Healthcare, SAMHSA-HRSA April 2013) Steps that would be helpful in moving this work forward are as follows:

1) Align geographical areas of BHOs and RCCOs

2) Develop outcomes, quality of care standards, evidence based practices and shared performance measures that address physical health, mental health and substance abuse.

3) Address coding issues so that behavioral health workforce such as peer specialists can bill in physical health settings

4) Identify workforce needs and identify workforce shortages. Address workforce shortages by providing incentives, reasonable reimbursement rates and ensuring that the various disciplines work to the top of their credential which means for example that doctors may not be appropriate to serve as case managers.

S) Identify a common definition of medical necessity that is uniformly applied across the state. This would include criteria and standard tools and processes to determine level of care and ways to appeal when decisions are questioned.

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services. Using the table below, please explain which issues are barriers, and how they can be addressed:**

Factor:	Barrier? Yes	Barrier? No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☒	☐	Should work with OBH to most effectively target block grant dollars to address gaps in funding. OBH and HCPF can align incentives.
Community Behavioral Health Services Rule	☐	☒	Although this may be a perceived barrier there are no rules that are a barrier to integrated care.
Covered diagnoses list	☒	☐	If care is integrated this should be less of a barrier but now many are denied behavioral health care because of this issue. Even when care is integrated effective ways of addressing conditions like autism and developmental disability have to be developed.
Different behavioral / physical health reimbursement	☒	☐	The difference between fee for service and capitation provides different incentives. The integrated financing structure should be aligned with incentives that support positive outcomes. There are also differences in credentialing in both systems and limitations as far as what health and behavioral health codes can be accessed in what setting
Institutions for Mental Diseases exclusion	☐	☐	
OBH rules, reporting, or financing (regulatory differences between agencies)	☐	☐	In many cases this is a perceived barrier. Reporting may be an issue with current data processes. However, OBH is in the middle of a system redesign which will address some of these processes.
PCMP financing structure	☐	☐	
Per-member per-month amount	☒	☐	Needs to be a differential amount based on acuity
Physical space constraints	☐	☐	
Privacy Laws (HIPAA, 42 CFR)	☒	☐	Need to make sure we have clear information on what is perceived and what is a real barrier. Can use Qualified Service Organization Agreement. Also support the federal work happening to restructure HIPPA and 42 CRF.

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

Professional / cultural divisions	☒	☐	
RCCO or BHO contracts	☒	☐	Should be one contract.
Staff capacity	☐	☐	
State/Federal rules or reporting requirements	☒	☐	Mental Health Block Grant requires the collection of certain data
Technical resources / data sharing	☒	☐	Would be helpful to use electronic health record as platform but need for all providers to have easy access both to put in information and to have back any relevant information. Costs for technical solutions are also very expensive. Having a statewide strategy for vendor management could be helpful in reducing costs.
Training	☐	☐	
Others	Please type your response here.		

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

Meet the criteria in *A Stondord Fromework for Levels of Integroted Heolthcore* cited in question 7 and...

1) Provide regular behavioral health screening questions in an overall health questionnaire and with secondary or more in depth screens for positive responses or high risk populations;
    a. Should include at a minimum depression, trauma, SBIRT, developmental screening
2) Easy access to behavioral health staff
3) A trauma informed setting
4) Co- training for staff at all levels
5) Services provided in a team based approach
6) Care coordination that matches the level of acuity of the person's need and goes beyond health concerns to address related issues such as economic security and housing.
7) Address the use and monitoring of psychotropic medications
8) Clear shared outcomes and performance and quality measures
9) Access to wellness education, activities and resources

Suggest thot stotuory outhority be sought for oversight of these clinics including o role for OBH in monitoring quolity behoviorol heolth services

10) Please share any other general advice or suggestions you may have about behavioral health integration.

Address the need of smaller providers for example substance abuse providers in being able to be certified in electronic healthcare records

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination?

An individualized process often team based that identifies the individual's or family's needs and works to access and mobilize resources needed to address those needs. The most comprehensive care coordination process works across life domains and seeks to build on the individual's strengths and seeks to develop skills for the individual/family to subsequently meet their own needs.

b. How should RCCOs prioritize who receives care coordination first?

High Utilizers and individuals transitioning from hospital or residential level of care would be top priorities as well as those who have a chronic conditions including behavioral health.

c. How should RCCOs identify clients and families who need care coordination?

Certain high risk populations could be identified using data. In addition the health providers in the network could screen their patients to identify those in need of care coordination using agreed upon criteria. Those without adequate support, and or those with complex social situations would be prime candidates for care coordination. Clients should also have the opportunity to self-identify. They should be given information about the benefit and have a mechanism to request it.

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

All care coordination activities should be entered into a common database that is monitored by the RCCO. Standards/guidelines should be developed for various levels of care coordination.

12) What services should be coordinated and are there services that should not be a part of care coordination?

All services necessary to meet the needs identified by the client and that are part of the care plan should be a part of care coordination.

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

What systems is the person involved with, housing situation, what are the current pressing needs, how successful has the person been in the past addressing similar issues. Level of functioning-severity of symptoms is likely the most important criteria.

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today?

Child welfare, developmental disabilities, Part C, some mental health centers, criminal justice, and transition specialists funded through OBH for clients leaving the institutes

What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

All of the above. It is usually related to a particular system need and often does not address the individual or family comprehensively.

b. How can the ACC avoid duplicating or disrupting current care coordination relationships?

If the current relationships are working the ACC can simply add the access to health services if needed and if the coordination is not effective in helping the individual meet his or her needs the ACC can serve as a super care coordinator and convene the other coordinators to ensure a coordinated plan and clear accountability.

c. What are the gaps in care coordination across the continuum of care?

Individuals/families with complex needs and those with co-occurring disorders and transition age youth. Services are also not organized for families.

15) RCCOs' roles in addressing clients' and their families' non-medical needs. Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	Should the RCCO have a role? Yes	No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma	☒	☐	☐	Assure access to trauma assessments and trauma treatments-assure providers in network are trauma informed
Affordability (assistance with prescriptions or co-pays)	☒	☐	☐	RCCOs should actively address these issues as they may be direct barriers to care.
Daycare / childcare	☒	☐	☒	This may be a barrier to client's accessing care so the RCCO should make connections in the community that can address this as well as perhaps provide some childcare on site.
Economic stability & employment	☒	☐	☒	
Education	☒	☐	☒	
Environment	☒	☐	☒	
Food access / nutrition	☒	☐	☐	
Health literacy	☒	☐	☐	
Housing	☒	☐	☐	Although this will take coordination with existing resources this is an important barrier to health so should be actively addressed by RCCO care coordination

Language or translation services	☒	☐	☐	
Literacy	☐	☐	☒	
Transportation	☒	☐	☐	Mobile Services, Tele-medicine and having system interfaces that are compatible with mobile devices is crucial to meet needs of rural clients.
Other	Please type your response here. Feel free to list as many non-medical factors as you want, and please explain how the RCCO should be involved.			

16) **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	Coordinate care? Yes	No	In what capacity should these individuals coordinate care in the ACC Program?
Advanced Practice (Registered) Nurses	☒	☐	
Certified Addiction Councilors	☒	☐	
Certified Nurse Midwives	☒	☐	
Community Health Workers	☒	☐	
Generalists (BA/BS/MA/MS)	☒	☐	
Health Coaches	☒	☐	
Licensed Clinical Social Workers	☒	☐	
Licensed Marriage and Family Therapist	☒	☐	
Licensed Mental Health Counselors	☒	☐	
Licensed Professional Counselor	☒	☐	
Masters of Public Health	☒	☐	
Medical Doctors / Doctors of Osteopathic Medicine	☒	☐	
Nurse Practitioners	☒	☐	

Patient Navigators	☒	☐	
Peer Advocates	☒	☐	
Promotoras	☒	☐	
Psychiatrists	☒	☐	
Psychologists	☒	☐	
Registered Nurses	☒	☐	
Social Workers	☒	☐	
Wraparound facilitators	☒	☐	For complex children with issues across systems
Other	Any of the people listed could serve as a care coordinator or as a member of the team. In order to address workforce shortages it is important to utilize people to the top of their credential allowing some tasks to be provided by others in a team approach.		

17) **Care coordination requirements for specific populations.** Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and infants	☒	☐	
Children	☒	☐	
Children who are healthy, but in socially-complex environments	☒	☐	
Children involved in the foster care system	☒	☐	
Children with a chronic illness	☒	☐	
Children with a serious emotional disturbance	☒	☐	
Children with medical complexity	☒	☐	
Children or youth with a behavioral health diagnosis or substance use disorder	☒	☐	
Transition-age adolescents	☒	☐	
Parents and families	☒	☐	
Pregnant women	☒	☐	
Adults	☐	☐	
Adults who are healthy, but in socially-complex situations	☒	☐	
Adults with a chronic illness	☒	☐	
Adults with a behavioral health diagnosis or substance use disorder	☒	☐	

Clients involved in the criminal justice system	☒	☐	
Clients with a disability	☒	☐	
Clients in a nursing facility	☒	☐	
Elderly clients	☒	☐	
Frail elderly clients	☒	☐	Provided by OBRA/PASRR and PACE program
Clients in palliative care	☒	☐	
Other populations, please comment: transgender populations. All of the listed populations require specialized knowledge of developmental needs. In addition for those that cross systems it is necessary to have a thorough understanding of the various systems involved and the resources available.			

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

The RCCO might have a special unit or a delegated specialty care coordination agency or in fact there may be specialty RCCOs for the populations described above. The RCCO through one of the arrangements described above may serve as a super coordinator ensuring that plans are coordinated and that progress is being made.

19) How should care coordination be evaluated? How should its outcomes be measured?

The goals in the plan should be met. The person or family is able to address their own needs.

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

a. What is the PMPM cost for providing care coordination services?

b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

Yes for populations needing intensive services the care coordination ration should be 1 to 10. Populations or individuals with high acuity, complex situations, and multi-system involved and high utilizers should be targeted for intensive care coordination.

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

Yes. For high acuity the ratio should be fewer than 25.

a. **Care coordinator to client ratios.** If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☐
51-100	☐
101-200	☐
201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

Quality of care as experienced by the consumer, consumer outcomes achieved, person stable in physical health and or behavioral health regime (medication adherence, monitoring of symptoms and action plans etc.,) and social needs such as housing or employment are met.

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

As stated in other questions the level of care coordination should be directly related to the acuity of the client's needs defined not only by the health condition but the level of complexity due to social factors and other system involvement.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

27) Should the RCCO region maps change? Why or why not? If so, how?

28) Should the BHO region maps change? Why or why not? If so, how?

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

34) What role should RCCOs play in attributing clients to their respective PCMPs?

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

The Office of Behavioral Health should be involved in selecting behavioral health tools, designing integrated practice, selecting outcomes and sharing data and monitoring practice. The ACC Program should coordinate with the new crisis system and work with OBH to develop community capacity for start-up of new programs and training. The Office of Early Childhood should play a role in determining screenings and best practices with young children. Child Welfare should be involved to create more integration between systems.

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

42) How should the Department structure stakeholder engagement for the ACC as a whole?

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

No. Persons with complex behavioral health issues are not able to see psychiatrists frequently enough. Not enough 24 hour care. Not enough SUD credentialed providers, overall shortage of behavioral health staff.

There is also a lack of providers with deep trauma knowledge and ability to work with child welfare clients. There is a lack of providers trained in co-occurring issues and a lack of providers that can work with transition age youth. Through OBH data we have learned that engagement is weakest with transition age youth.

a. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

b. What is the role of regional centers. Huge gap besides those mentioned elsewhere in this document are DD/MI or any co-occurring disorders

See above.

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

b. What role should hospitals play in the next iteration of the ACC Program?

c. What role should pharmacies play in the next iteration of the ACC Program?

d. What role should specialists play in the next iteration of the ACC Program?

e. What role should home health play in the next iteration of the ACC Program?

f. What role should hospice care play in the next iteration of the ACC Program?

g. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

h. What role should counties play in the next iteration of the ACC Program?

i. What role should local public health agencies play in the next iteration of the ACC Program?

j. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

45) How can RCCOs help to support clients and families in making and keeping appointments?

Reminders such as phone calls or text messages or letters in the mail as a routine part of business would be helpful. Assuring appointment times after school and work. Support the use of techniques that have been demonstrated to be effective such as an incentive program developed by the state of Iowa. Increase the use of mobile services and telehealth.

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

47) **Community Health Worker reimbursement**. Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement process	(Please check all that apply)
Independently bill	☐
On staff (salary) at Primary Care Medical Provider Clinic	☐
On staff (salary) at RCCO	☐
Per Member Per Month Payment	☐

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

k. What does cultural competence mean to you?

The ability to understand the client in the context of their culture. Cultural competence requires that organizations:

- have a defined set of values and principles, and demonstrate behaviors, attitudes, policies and structures that enable them to work effectively cross-culturally.
- have the capacity to (1) value diversity, (2) conduct self-assessment, (3) manage the dynamics of difference, (4) acquire and institutionalize cultural knowledge and (5) adapt to diversity and the cultural contexts of the communities they serve.
- incorporate the above in all aspects of policy making, administration, practice, service delivery and involve systematically consumers, key stakeholders and communities.

Cultural competence is a developmental process that evolves over an extended period. Both individuals and organizations are at various levels of awareness, knowledge and skills along the cultural competence continuum. (adapted from Cross et al., 1989)

Move away from concept of competence since it is never fully achieved but move towards idea of cultural responsiveness.

l. What RCCO requirements would ensure cultural competency?

All providers in the system should have skills in cultural responsiveness. Culture should be a broad definition including such issues as sexuality like transgender etc.

m.

n. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?

We have a shortage of staff that are qualified to meet the needs of our deaf/hard of hearing clients.

o. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

This might be the area where community health workers and promotoras could be especially helpful. The RCCOS should have goals related to serving the demographics of their population.

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

51) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

52) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

Practice Support

53) **Support for practices.** Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☐	☐	☐	☐
Network provider education	☐	☐	☐	☐
Assistance with practice redesign	☐	☐	☐	☐
Assistance with efficiency-enhancing activities	☐	☐	☐	☐
Provide web-based resources and directories	☐	☐	☐	☐
Provide practice-specific data reports	☐	☐	☐	☐
Provide clinical care guidelines and best practices.	☐	☐	☐	☐
Provide clinical screening tools	☒	☐	☒	☒
Provide health and functioning questionnaires	☒	☐	☒	☒
Provide chronic care templates	☐	☐	☐	☐
Provide registries	☒	☐	☐	☐
Offer client reminders	☐	☐	☐	☐
Offer client self-management tools	☐	☐	☐	☐
Offer educational materials about specific conditions	☐	☐	☐	☐
Supply behavioral health surveys	☒	☐	☒	☒
Supply other self-screening tools	☐	☐	☐	☐
Administer behavioral health surveys	☒	☐	☒	☐
Administer other self-screening tools	☐	☐	☐	☐
Prepare client action plans	☐	☐	☐	☐
Provide training on providing culturally-competent care	☒	☐	☐	☐
Provide training to supporting staff	☐	☐	☐	☐
Provide training on motivational interviewing	☒	☐	☐	☐
Provide tools and software for phone call and appointment tracking	☐	☐	☐	☐
Provide tools and resources for tracking labs, referrals, etc.	☐	☐	☐	☐
Provide referral and transitions of care checklists	☐	☐	☐	☐
Provide visit agendas or templates	☐	☐	☐	☐
Provide standing pharmacy order templates	☐	☐	☐	☐
Provide comprehensive directory of community resources	☐	☐	☐	☐
Provide directory of other resources	☐	☐	☐	☐
Provide materials regarding Nurse Advice Line	☐	☐	☐	☐
Ensure all tools and resources are centrally located on RCCO-specific website	☒	☐	☐	☐
Others	Should have common tools or a short list of tools in order to collect comparable data. Some suggestions include SBIRT; depression tools, trauma screening, developmental screens. Tools should be evidence based but allow room for additional questions or issues that might be a local			

Concern. Might be helpful to have behavioral health registries that could assist with care across providers such as prescription drug registry to prevent "doctor shopping" etc.

54) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

55) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

56) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

57) Should the Department require that PCMPs utilize disease registries to manage the health of their population?

58) Please share any other advice or suggestions about provider support in the ACC.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

62) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

63) What role – if any – should the RCCOs play in the distribution of payments to providers?

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

66) **Measuring Client experience.** Please complete the table below to indicate how the Department should measure Client/patient experience:

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☐	☐	
SF-12 Health Survey	☐	☐	
Other types of client interviews / surveys	☐	☐	
Patient Activation Measure	☐	☐	
Focus groups	☐	☐	
Other	Please type your response here.		

67) Knowing that, at this time, the Department only has claims data, how should population health be measured?

68) How should quality and performance data be reported to the RCCOs, PCMPs, and the public?

69) **Measures for payment.** Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☐
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

70) What percent of RCCO payments should be tied to measures or performance?

Percentage	
10-20%	☐
21-30%	☐
31-40%	☐
41-50%	☐
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

71) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?

72) Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?

73) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

74) **Incentive payment frequency.** Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	☐
Annually	☐
Other	☐

If you checked the "Other" box, please describe payment frequency below:

75) For potential offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

76) For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

Health Information Technology (HIT)

77) **Types of communication.** For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	☐
Text message	☐	☐
Web portal	☐	☐
Email	☐	☐
Telemedicine / Video chat	☐	☐
Face-to-face meeting	☐	☐
Smartphone app	☐	☐

Other:	☐	☐

79) **Importance of technology by type.** The Department is working to determine what technology is in place, what technology is needed, and what technology should be standardized. For RCCOs, providers, and other organizations, use the table below to answer what HIT infrastructure outside of the SDAC your organization would use to perform population health management activities. Tools are scored from 1-5, where 1 are those items least-likely to be used, and 5 are items most-likely to be used:

Tool	1 Least	2	3	4	5 Most
Population analytics / reporting / dashboard	☐	☐	☐	☐	☒
Care management tool	☐	☐	☐	☐	☒

80) What are the primary barriers to RCCOs and providers increasing their use Health Information Technology to improve the performance of Primary Care Practices?

Technology costs and data standards.

81) How can Health Information Technology support Behavioral Health Integration?

OBH is currently revising their data system. The new system will be supportive of integration because it will comply with national data standards so that the system can be interoperable with provider electronic health records and other state systems. In addition the system is a modular one which allows for more flexibility in the information collected as well as the ability to review information in real time.

Some small providers especially SUD providers need incentives and help to upgrade their systems so they can participate with the electronic health records. There should be one set of metrics across systems.

82) In the next iteration of the ACC, should there be a shared resource for data and analytics? Please describe the basic criteria for what a shared data and analytics platform needs to contain in order for it to be useful.

Shared resources could be aided by an agreement on common tools, measures, and data standards. Common modules could be developed to capture information into one system or distribute common electronic information between separate systems. A single analytic tool working with a comprehensive statewide data warehouse would be an ideal solution for improved and timely information.

83) Should there be a shared care management tool? Please describe the basic criteria for what a care management tool would need to contain in order for it to be useful.

Yes-Ability to track client specific goals, ability to collect data from other systems; ability to connect to electronic health record; ability for multiple providers to enter data. The care management tool would need to track and properly measure mental health, substance use disorder and physical health needs and outcomes. The tool would also need to be flexible to adapt to the needs of different demographic groups, a primary example of this being various age groups. The most likely solution could be a set of shared management tools rather than just one tool for everyone.

84) Should there be a shared population health management tool? Please describe the basic criteria for what a population health management tool would need to contain in order for it to be useful.

A shared population health management tool must have a strong emphasis on prevention.

85) Please describe the functionality that a common Medicaid provider directory would need to contain in order for it to be useful.

It should include behavioral health providers, information about track record in treating specific conditions and specialty areas as commonly defined.

86) How can the RCCOs support providers' access to actionable and timely clinical data?

87) What are the HIT solutions that would benefit clients, providers, and RCCOs? Please comment on the parameters these tools or platforms would need to possess and the ways in which they could be used.

88) What technical assistance or resources related to HIT infrastructure should the RCCOs supply? This assistance or these resources could be for providers, social service organization, clients/families, or for others.

89) What role should health information exchange platforms like CORHIO or QHN play in the next iteration of the ACC?

CORHIO and QHN can be extremely useful by being a conduit of information for improving continuity of care across agencies and providing behavioral health providers critical health information such as hospital admissions, emergency department visits and prescription drug information. CORHIO also can play a vital role in patient identification for improved statewide episode of care tracking.

90) Please share any information, advice, and suggestions you have about health information technology in the ACC Program.

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Michael Whistler

Location: Grand Junction, CO

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Western Colorado Pediatric Associates

Location: Grand Junction

☐ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☒ Medical provider / PCMP / other provider
  i. Type or specialty:
  ii. Area of practice: General Pediatrics
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☒ Other (please describe): Advocate for children on Medicaid

How have you been involved in the ACC program and what interaction have you had with RCCOs:

Several years

Please briefly describe your involvement with Medicaid, either in Colorado or another state:

In Grand Junction, we were fortunate for several years to get Medicaid through RMHP. We were paid a very competitive rate. Over the last few years, the RMHP program has decrease the reimbursement for Medicaid, then just this last month RMHP Medicaid has been phased out completely. We have been accepting RCCO Medicaid since its inception.

Are you currently involved in the ACC program?

☒ Yes
☐ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☒ 3-4 years
☐ Since before the program was implemented.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☒ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

Our group is committed to caring for the Medicaid population, and to payment reform. We are ready to embrace any change that will allow us to continue to practice pediatrics.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

- Reimbursement (mostly due to the Federal ACA) is fairer now.
- The decision to make the well child visit one of the KPIs was a very good decision in behalf of children, but unfortunately attribution is still flawed and the SDAC data is delayed and often inaccurate. So, it is difficult to create an effective QI process to improve the KPI, but this is a good start.
- The decision to focus on integrated behavioral health in medical homes is a wonderful decision to improve health outcomes for people covered by Medicaid. Thank you.
- You have a great opportunity to do what is needed for the majority of Medicaid recipients. The majority of Medicaid recipients in Colorado are children and adolescents; they should

not be considered one of the subgroups. The following principles should be incorporated into the core objectives of the ACC:

- Children's health care needs are very different than adults. For adults, the focus is on managing chronic disease more effectively. For children, it is about preventing the development of those chronic diseases.
- If the ACC really wants to focus on health and wellness, the greatest opportunity is with the children (the majority of Medicaid recipients). By focusing on preventive care, early screening and early intervention for children, there will be big savings; unfortunately those savings may not occur for many years or decades in the future, but the investment will eventually be worth it.
- So, the ACC will need to invest in children to the extent possible now even though the savings come much later. We recommend that a portion of short-term savings that occurs due to chronic disease management in adults in the ACC be invested back into preventive care for children.
- Children are part of families and you can't help the child unless you help the family. So, care coordination is more involved for children since it includes care coordination of the parents/family.
- There is increased recognition that behavioral health is a part of overall health and should be accessible within a pediatric medical home. However, the current mental health system must have policies, procedures, and resources that support integrated behavioral health activities at the practice level. Barriers to paying mental health providers for seeing Medicaid patients should be decreased or eliminated.

2) What is not working well in the ACC Program?

- Attribution continues to attribute patients to the wrong medical home and the process of getting patients reassigned to the correct medical home is onerous for the patient and family.

- The health care data through the SDAC is based on claims so it is delayed and is incomplete (particularly for children). Therefore, it is not very useful in helping medical homes improve outcomes for children.

- Each RCCO does things very differently, which is confusing for medical homes with patients in several RCCOs. RCCOs are inconsistent in how they respond to requests for care coordination (quite variable depending on whom you reach at the RCCO). So the new RFP should ask how RCCOs will develop policies and procedures to make their methods and responses to requests for help more consistent, both within the RCCO and among all RCCOs.

- There are certain expectations/requirements and ways of doing things that are so different from one RCCO to another that it requires significant extra work for the medical home to adapt to the differences. To deal with this. So, the RFP should ask how RCCOs intend to

communicate and at least make an attempt at uniformity.

- If a patient lives in one region and goes to a medical home in another region, and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from the patient's region RCCO. This is particularly true in the Denver metro area. There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients.

- The "incentives" now are actually disincentives, especially the requirement that the RCCO must meet its KPIs before a high performing medical home can be rewarded for meeting its KPIs. The concept behind this approach is not consistent with how health care systems (and "medical neighborhoods") work.

- The geography of the 7 regions does not reflect the natural geography of health care systems and referral patterns. Larimer County should be in Region 2.

- RCCOs are not providing the level of care coordination that Medicaid patients need. We have had RCCO "care coordinators" just tell us to call 211. The level of commitment that patients and families need is difficult to find, unless care coordination is provided at the medical home level or the community level.

- Both family practices and pediatric practices report that the SDAC does not reflect their own data that the practice can obtain from their EHR or their own claims data. This is particularly true regarding data on health care screening. The RFP should ask how RCCOs and HCPF should take advantage of this practice-based data.

- Most medical homes are not working closely with RCCOs and are not receiving much support. The RFP should ask how RCCOs intend to work more closely with medical homes.

- Feedback from RCCOs to the medical home regarding patients referred to the RCCO for care coordination is spotty. How will RCCOs consistently provide feedback and communication to the medical home regarding what was done for the patients and whether there was improvement?

- There has been difficulty with communication from the state level through the RCCOs down to the individual practice/provider level. Providers feel as though they are not well informed from HCPF or RCCOs. We are grateful that CCHAP keeps us informed.

- The current system does not take into account the movement of patients on and off Medicaid and movement between RCCOs. Whether for KPIs or future shared savings incentives, practices need to be evaluated on established patients who have been in a practice for a minimum of six months. This allows the medical home to actually have time to make an impact on the child's care. Otherwise, it is a substantial disincentive for practices

to be open to the more complex and challenging patients, those that likely need access the most.

- Currently, there is very little communication and alignment between BHO's and RCCO's. In order for integrated behavioral health to be successful at the practice and community level, the BHO's and RCCO's must have similar goals, policies/procedures that are aligned, payment structures that are aligned with movement toward integration and ongoing close communication with one another. The RFP should ask how they intend to do this.

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

- The decision to focus on integrated behavioral health in medical homes is a wonderful decision to improve health outcomes for people covered by Medicaid. Thank you.

- If Colorado is serious about promoting integration of behavioral and physical (medical) health care, then the RCCOs and BHOs should be integrated. This would mean they should have the same regions and function as though they are one organization. This would reduce duplication of efforts and have better alignment of incentives and payments that support integrated care.

- Open the behavioral health and wellness codes (96150 – 96155) now. Don't wait. This will encourage integration immediately and enable medical homes to start now the process of evolving toward full integration.

- Care coordination for both behavioral health and medical care should be done in the primary care setting. And either the RCCO and/or the BHO should delegate the responsibility to do care coordination and a pmpm to cover the expense to the medical home as part of the payment reform process. And behavioral health care coordination and medical care coordination needs to be fully reimbursed. In addition, the BHO and the RCCO will need to have information and care coordinators to assist medical homes to handle uncommon or very complex issues.

- If possible, funds to allow BHO and physicians to share an electroinc medical record should be made available.

- Provide infrastructure and funding for data collection and management to support integrated behavioral health in the medical home and the care coordination that will have to be part of that. Utilizing SDAC data is just one way to understand the activities within a medical home. SDAC data is delayed and does not include enough information to support behavioral health care coordination in the medical home. Other methods and technologies are needed. There will need to be an investment in the development of new technologies and methods to do behavioral screening, track referrals, document treatment and collect data on the whole care coordination process at the medical home level. This will require adequate reimbursement to cover the cost of starting up new care coordination programs in the medical home and start up technologies to improve screening, intervention and care coordination with follow through in the medical home.

- The CPACK program developed by CBHC is a very good program, particularly the following:
  a. Assistance with finding a behavioral health provider for patients
  b. Telephone consultation by a child psychiatrist to primary care providers
  We recommend that BHOs be required to provide the 2 components above as part of their new contracts.

- Payment options for integrated behavioral health (not just co-location) need to be clear and understandable to providers and practices. In order for the integrated model to be sustainable, there need to be ways to access understandable billing rules/policies.

Care Caordinatian

Question 12) What needs far children/families shauld be caardinated in medical hames and are there services that shauld nat be a part af care caardinatian by the pediatric and family medical hame

One of the most difficult services to provide in the medical home is home visits. Support from the larger system is needed.

Services that can be provided in a pediatric or family medical home are: complex medical coordination including logistics/travel, ancillary services (PT/OT/home health services, ...), collaboration with mental/behavioral health, collaboration regarding school needs, referrals to early intervention services and Child Find, referral to other agencies (rehab, hospice, ...), collaboration with foster care and DHS system. RCCOs need to help medical homes with needs like assistance with housing, food, parental employment, child care, in which case the RCCO can help families connect with other agencies that provide these services.

Question 19: How should care coordination program be evaluated? How should its outcomes be measured?

A care coordination program should initially be measured by having good processes, not measured by outcomes, until solid data exists on outcomes that are risk adjusted and accurate for children. Initially all measures need to be quite separated from outcomes that are highly tied to patient behavior, or practices will again be less likely to serve those with highest risk.

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

For those medical homes that relate to multiple RCCOs should be delegated to do care coordination. If all RCCOs allowed medical homes to be delegated to do care coordination, we could receive a pmpm from all of them, which would enable us to afford to hire enough care coordinators to meet the needs of all of our ACC patients.

Where should care coordination be done? Care coordination is best done in the medical home. We are willing to do care coordination, because we have a relationship with our patients and they trust us and we recognize that coordinating complex medical care is essential for good care and for cost savings. Also, the primary care provider is best positioned to have a long term relationship with the patient, and therefore know and understand other aspects of the patient's life and how important those non-medical factors are on the patient's health and health issues.

If care coordination cannot be done in the medical home, then it is best done by community-based organizations. The least effective, least well-received, least trusted is care coordination done from a call center in an RCCO. The role of the RCCO should be to help the medical home-based care coordination staff access resources for families.

The majority of practices are willing to provide Care Coordination, if they can get financial support (PMPM) for providing the service.

Should you be doing care coordination for certain patient populations e.g. children with asthma or special needs children? Or for your entire Medicaid population healthy or chronically ill? The overall goal of Colorado Medicaid should be to provide care coordination services for ALL patients in the Medicaid population (for some patients it may be very minimal, others extensive). This is the essence of preventive care. A care coordinator that is based in the medical home is in the best position to help identify risk factors proactively, as early as possible before they impact a patient's health and cause illness. Children with special healthcare needs (complex, complicated) require a higher level of care coordination, so the pmpm attached to their care coordination needs to be risk adjusted.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The

Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

- All RCCOs should have their offices in the region served, should be non-profits, be a Medicaid provider and be incorporated only in Colorado.

- All RCCOs should offer to delegate care coordination to medical homes willing to accept that responsibility and the RCCO should share a portion of the RCCO pmpm with the medical home that accepts delegation.

- All RCCOs should use the same criteria for delegation and for the amount that is paid for delegated services of care coordination. By doing this, services can reach a standard across the state. A patient would have access to similar services no matter where they moved across Colorado.

- RCCOs should all agree on how they will effectively communicate to medical homes regarding any contact the RCCO has with patients attributed to the medical home. They should include PCMPs in developing those criteria.

- All RCCOs should help (or contract with an organization to help) medical homes understand how to access their SDAC data, understand their data and use it to develop rapid cycle QI projects to improve health outcomes and meet KPIs.

- All RCCOs should agree to provide uniform support for medical homes when a medical home asks for help with care coordination, even when the medical home is in another region (and contracted with another RCCO) but the patient is in the first RCCO's region.

- RCCOs should be required to allow medical homes to give the RCCO a list of patients the medical home feels is their patients and receive help from the RCCO to understand why certain patients have been attributed to another medical home. If the patient is determined to be more appropriately attributed to the inquiring medical home, then the RCCO should help re-attribute the patient to the correct medical home.

- RCCOs should share on a regular basis the RCCO's performance on KPIs and share savings incentives and share with the medical home how their own performance compares with other medical homes.

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

This is particularly applicable to the Denver metro area. In our Region, it does not make sense to include Larimer county.

27) Should the RCCO region maps change? Why or why not? If so, how?

Yes. There are two changes we recommend:

- Larimer County should be included in Region 2, since the medical community and the support organizations of Larimer County and very closely linked to Weld County
- In the Metro Denver area, the boundary issues are so difficult that we recommend one RCCO be responsible for the whole metro area or that medical homes be allowed to choose one RCCO for all of their patients.

28) Should the BHO region maps change? Why or why not? If so, how?

If Colorado is serious about promoting integration of behavioral and physical (medical) health care, then the RCCOs and BHOs should be integrated. This would mean they should have the same regions and function as though they are one organization. They should share incentives that are aligned around successful integration of behavioral and medical services and outcomes. So the BHO maps/regions should conform to the RCCO regions/maps.

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients. There are certain expectations/requirements and ways of doing things that are so different from one RCCO to another that it requires significant extra work to adapt to the differences. If a patient lives in one region and goes to a medical home in another region and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from that first region. This is particularly true in the Denver metro area.

Another alternative: When a practice contracts with a RCCO currently they "belong" to one RCCO. Change that and have them only contract with the state and have that contract extend to all RCCOS. This way RCCOS would be more accountable to standardization through out all of Colorado, and the services provided to patients/families would be more uniform.

34) What role should RCCOs play in attributing clients to their respective PCMPs?

The attribution system is quite flawed still. RCCOs should be required to allow medical homes to give the RCCO a list of patients the medical home feels are their patients and receive help from the RCCO to understand why certain patients are attributed to another medical home. If the patient is determined to be more appropriately attributed to the inquiring medical home, then the RCCO should help re-attribute the patient to the correct medical home.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

- The payment structure absolutely does not support the ACC goals. A medical home does not receive incentives for KPIs unless the RCCO meets its KPI. This becomes a disincentive, because many medical homes meet their performance targets, but do not get rewarded because the RCCO did not meet its targets. So the medical home has no incentive to maintain the performance. The philosophy that HCPF has espoused (that the high performing medical home should encourage or help the low performing medical home) is not realistic and is not how the real world works. There is no time for that, plus the high performing medical home has no way of knowing who is low performing. This idea shows a lack of understanding of the world where health cares is delivered. Medical homes need to receive full incentives when they meet their KPI targets, no matter what happens in the RCCO.

- The incentives are too low to change much. Also, the KPIs need to remain focused on process, not outcomes, until the data is more sophisticated to accurately attribute patients and account for risk factors.

- Many medical homes have the ability to collect REAL-TIME data from their EHR and their claims database, which can be used to measure performance more accurately than the SDAC. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and providers to develop a vetting process that will enable HCPF and RCCOs to trust the medical home self-reported real-time data.

- Since children are the majority and give the best chance of truly improving health and wellness, KPIs need to be more child-focused. And since the potential cost savings for children's health care are so far in the future, KPIs need to be intermediate, process outcomes.

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

<u>There is very little of the infrastructure in the state in place at the present time to enable capitation to be implemented successfully.</u> Here are just some of the changes that would need to be in place before it would be fair or prudent to implement capitation:

- The state would need to already be paying fair amounts for all aspects of the care needed by Medicaid recipients before it could effectively move to capitation. In other words, codes for things that HCPF wants done under capitation should be opened and reimbursement adequately now. This would encourage medical homes to already be doing these things before the change to capitation. It would also give HCPF and medical homes experience regarding what the actual costs are for providing the desired services and determine a fair capitation. It will be difficult to change behavior to include new activities under capitation among providers, if you continue to hold codes closed now for things you want done under capitation. You have to help the medical homes create the habits you want before the switch to capitation.

- All providers would have to be reliably involved in the ACC: primary care, all of the various adult and child specialists, the hospitals, the therapies, dentists, mental health providers, etc. Access to specialty care is vital, but could be included in a global payment structure.

- The data system would have to be able to report real time data and be far, far more accurate than it is now.

- The attribution system is flawed. That would have to be improved and provide accurate, real-time attribution data before capitation should be instituted.

- You will have to change a variety of policies that are barriers to population management.

- Capitation has to be combined with significant incentives to implement processes and improve outcomes. So, you will need to have the incentive system very well developed and viewed by providers as motivating before implementing capitation

- Healthcare for children focuses on prevention, early detection and early intervention, which require initial increased investment to reduce potential expenses many years and decades down the line. Other ACO programs have shown that savings on children are difficult to show early on. So, incentives in the care of children will initially be for intermediate outcomes (or for process outcomes) and need to be direct incentives rather than incentives in the form of shared savings.

- Early in the transition from pre-ACC payment methods to ACC payment structure (2012), some medical homes were asked to return money to Medicaid. Transitions like that (for example the transition to capitation) have to avoid this. Primary care medical homes have such narrow margins that this can be very difficult financially on a medical home

- Many medical homes have the ability to collect from their EHR and their claims database REAL-TIME data with which performance can be measured. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a

timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and providers to develop a vetting process that will enable HCPF and RCCOs to trust that medical home self-reported real-time data is trustworthy.

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

Many medical homes have the capability and infrastructure to adapt to payment tied to value. What is missing is the state, HCPF, RCCO, BHO infrastructure. See all of the infrastructure elements HCPF needs to have in place listed in question 60

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

- The HCPF Payment Reform Committee should meet at a time when providers and practice managers can actually attend. Monday afternoons is probably the worst time to actually enable providers or practice managers to attend. Once you select an appropriate time, then actively recruit participation.

- Make sure that your efforts are statewide. Views are different in the various regions of the state.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

- Many medical homes have the ability to collect from their EHR and their claims database REAL-TIME data with which performance can be measured. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and provider from medical homes to develop a vetting process that will enable HCPF and RCCOs to trust medical home self-reported real-time data.

- The measures for children can be drawn from HEDIS measures or CHIPRA measures or from the Pediatric Measurement Proposal that HCPF did in 2010 with the help of Jim Todd. Appropriate child health measures could be selected from the following measures :
  - Well child visits appropriate for age
  - Developmental screening by three years of age
  - Teen depression screening
  - Complete immunization status by age two

- Post-partum depression screening rate for mothers of newborns by age 4 months
- Appropriate antibiotic use in URI and strep pharyngitis

- Medical homes could also be measured on:
  - Patient (or family) satisfaction ratings
  - Documentation of QI projects

Screening should be part of KPIs, but you need to do more than just create a KPI. If you are going to have KPIs, then you need to track not only the number of times a screening was done, but also track the v-codes (or some way to track positives) and make them available in the SDAC so medical homes can track them. And the SDAC needs to track referrals (or intervention). Otherwise it is not worth measuring the number of screenings.

- The PCMP or medical home should receive real-time data (less than a month since date of service) with data that will allow them to compare their performance with performance of similar type of medical home.

- Healthcare for children focuses on prevention, early detection and early intervention, which require initial increased investment to reduce potential expenses many years and decades down the line. Other ACO programs have shown that savings on children are difficult to show early on. So, incentives in the care of children will initially be for intermediate outcomes (or for process outcomes) and need to be direct incentives rather than incentives in the form of shared savings.

69) Measures for payment. Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☒
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐

None	☐

We only need 2-4 KPIs. Any more will dilute the effect. What we really want is good data, so we can improve our outcomes by doing a quality improvement project. Since children are the majority of Medicaid recipients and give you the best chance of truly improving health and wellness in the long term, KPIs need to be more child-focused. And since the savings are so far in the future, KPIs need to be intermediate, process outcomes.
