We do not believe this would be feasible in the rural and frontier areas. There is not enough population to support two RCCOs. This would also cause problems in tracking and monitoring patients if they switched between RCCOs on a continual basis. Care coordination and service provision would prove difficult to monitor and ensure quality. This would also cause regional service providers to be involved in more than one RCCO and manage the reporting requirements for both that may be different or in conflict at times. Providers would need to split up patient populations and this would require administrative oversight and coordination. We think this would prove very difficult to manage in our area.

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

Not Applicable

34) What role should RCCOs play in attributing clients to their respective PCMPs?

Currently, care coordinators do this by providing education and coordination in getting patients attributed to or utilizing a PCMP. We believe RCCOs should support his by working with patients to attribute them to a provider that can meet their needs and serve them in their own community.

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

We do not know of any.

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

It is important to remember the ancillary services that impact the physical health of the patients in the RCCO. CDHS supports the use of funds to assist patients with their social/emotional needs. Supportive behavioral health services will need to maintain their funding to increase positive health outcomes for the patients who are in both systems. State level offices (HCPF and OBH) should work together to support the provision of comprehensive health care.

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

We believe that Medicaid is a large task for the RCCOs to manage and that if they were to work with other insurances, that should occur in the future, not in this current RFP.

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

If the decision is made to move to risk-based contracting, the Division of Insurance would need to be involved.

DORA will be instrumental in increasing the number of qualified behavioral health professionals entering Colorado. It would be helpful for the ACC program to look at the length of time it takes to have a license from another state transfer into Colorado. As integrated care becomes more prevalent and codes are increasing, DORA may need to consider how they will license integrated facilities.

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakehoider engagement with clients, clients' famiiies, and client advocates?

Similar to our belief about community engagement and understanding, the RCCOs need to address how they wiii engage stakeholders, but not be required to compiete a prescriptive process. It is important for the bidders to identify their strengths and weaknesses in this area as well as their plans for future invoivement. Each RCCO should identify how stakeholders will be engaged in a meaningful way that works for the iocal community and meets the needs of the providers as well as the patients.

40) What specific requirements shouid RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

Again, we do not believe there should be prescriptive requirements built in, but rather a process defined by the RCCO in order to meet the needs of the community.

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

Bidders need to Identify how they wiii work with the local community to increase communlty engagement. The bidders should be awarded in the RFP for Identifying current community involvement and measured on their pians for increasing the engagement.

42) How should the Department structure stakeholder engagement for the ACC as a whole?

Please see our answer to questibn 39.

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?
No

a. If no, what are the gaps?

- Access to specialty care in rural/frontier parts of Colorado is a problem. Home health care providers as well as non-medical providers are lacking in rural Colorado.

b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

- The elderly and home bound populations need more support in our communities. There is also a shortage of child psychiatrists.

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

a. What role should hospitals play in the next iteration of the ACC Program?
   - Hospitals need to ensure that care coordination and data sharing in real time occurs with the RCCOs. It is necessary to allow the care coordinators for the RCCO access to this information to reduce the length of hospital stays and costly services.

b. What role should pharmacies play in the next iteration of the ACC Program?

   - Pharmacies may be used to alert the RCCOs and/or PCMPs and care coordinators to suspicious prescribing activity or "doctor shopping."

c. What role should specialists play in the next iteration of the ACC Program?

   - Specialty care needs to be more accessible in rural/frontier counties. The ACC program should provide incentives to specialists to provide care in these areas. The expansion of tele-medicine should be strongly encouraged. If tele-medicine is encouraged and incentivized, there must be funding for marketing and education to the patients as there is still a mistrust of this practice in rural and frontier areas.

d. What role should home health play in the next iteration of the ACC Program?

   - Home health should be a central part of care planning. Hospitals should be required to work closely with home health agencies.

e. What role should hospice care play in the next iteration of the ACC Program?

   - Hospice care should be readily available to all patients in the ACC program.

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

   - These organizations should be required to work closely with ACC when patients are

transitioning care. It is necessary to have strong care coordination efforts with this population.

g. What role should counties play in the next iteration of the ACC Program?

- County agencies that set clients up with their benefits need to ensure that patients have the information needed to access health care and recognize they may be involved in multiple care provision systems, including DSS/DHS benefits. It is also imperative that the counties help clients transition their benefits to the appropriate county if a move or other transition occurs.

h. What role should local public health agencies play in the next iteration of the ACC Program?

- Public health agencies need to be an integral part of the referral resource for the ACC program. It should also be noted that they may have different care coordination requirements placed upon them and the systems that fund both public health and the RCCOs need to be coordinating requirements in these areas.

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

- RCCOs need to know the providers in the area and it should be noted that only organizations that can impact health outcomes should be tapped for the ACC program and it should be simple for the patients to access their care and not get overwhelmed by too many organizations providing similar services.

45) How can RCCOs help to support clients and families in making and keeping appointments?

It would be helpful to look at systems that have worked. Our MHC system has devised appointment outreach and support for our clients. It may be helpful to look at how the MHCs have increased appointment attendance and support for clients in this area. We work with the clients and their scheduling requirements rather than dictating when they must come back to see us. This is where a care coordinator could be helpful.

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

It will be important for the RCCOs to identify what solutions will work best in their community. Requiring such a prescriptive measure may not be beneficial for the systems that are already proving effective in communities.

47) **Community Health Worker reimbursement. Please use the table below to detail how Community Health Workers should be reimbursed:**

The RCCO should determine this in their bid for the RFP.

Reimbursement process	(Please check all that apply)
Independently bill	☐
On staff (salary) at Primary Care Medical Provider Clinic	☐
On staff (salary) at RCCO	☐
Per Member Per Month Payment	☐

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

Oral health is a primary component of health care. The RCCO should ensure this care is integrated in the overall health care for the members.

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you?
   - This means providing culturally responsive and appropriate services. It means meeting the patient and family "where they are" and guiding them through the health care system in a way that works for them and supports their overall health goals (even if they may be at odds with "traditional" methodologies).

b. What RCCO requirements would ensure cultural competency?
   - It is important for the RCCOs to identify how they meet this need in their communities. Requirements of this type that are too prescriptive do not lend themselves to the flexibility needed to be culturally responsive.

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?
   - Organizations must be able to demonstrate previous successes in this area as well as the desire to continually improve and meet the needs of the populations they are serving. Low health literacy is a concern, but can be met with culturally responsive organizations and values. It cannot be driven by mandates.

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

- It is important that every patient is treated with the respect and support s/he needs to be successful as s/he defines it. This may mean that sometimes cultural beliefs and necessary supports do not lead to the "health outcome" we (the dominant culture) have identified as a positive. It will be important for the RCCOs to identify health outcomes that increase population health, but also support community needs and beliefs.

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

The RCCOs should address what the needs are regionally. This should be part of how the bidders demonstrate their knowledge and support of their region. It will also differ depending on the urban or rural settings that are served.

51) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

Real-time data to provide better care coordination will be necessary to mitigate these costs.

52) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

Practice Support

53) **Support for practices.** Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☐	X	☐	☐
Network provider education	☐	X	☐	☐
Assistance with practice redesign	☐	X	☐	☐
Assistance with efficiency-enhancing activities	☐	X	☐	☐
Provide web-based resources and directories	☐	X	☐	☐
Provide practice-specific data reports	☐	X	☐	☐
Provide clinical care guidelines and best practices.	☐	X	☐	☐
Provide clinical screening tools	☐	X	☐	☐
Provide health and functioning questionnaires	☐	X	☐	☐
Provide chronic care templates	☐	X	☐	☐
Provide registries	☐	X	☐	☐
Offer client reminders	☐	X	☐	☐
Offer client self-management tools	☐	X	☐	☐
Offer educational materials about specific conditions	☐	X	☐	☐
Supply behavioral health surveys	☐	X	☐	☐
Supply other self-screening tools	☐	X	☐	☐
Administer behavioral health surveys	☐	X	☐	☐
Administer other self-screening tools	☐	X	☐	☐
Prepare client action plans	☐	X	☐	☐
Provide training on providing culturally-competent care	☐	X	☐	☐
Provide training to supporting staff	☐	X	☐	☐
Provide training on motivational interviewing	☐	X	☐	☐
Provide tools and software for phone call and appointment tracking	☐	X	☐	☐
Provide tools and resources for tracking labs, referrals, etc.	☐	X	☐	☐
Provide referral and transitions of care checklists	☐	X	☐	☐
Provide visit agendas or templates	☐	X	☐	☐
Provide standing pharmacy order templates	☐	X	☐	☐
Provide comprehensive directory of community resources	☐	X	☐	☐
Provide directory of other resources	☐	X	☐	☐
Provide materials regarding Nurse Advice Line	☐	X	☐	☐
Ensure all tools and resources are centrally located on RCCO-specific website	☐	X	☐	☐
Others	We do not believe the state should require any of these items, but instead leave them up to the RCCO to determine what best fits their regions' needs.			

54) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

N/A

55) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

RCCOs should identify their ideas about how best to do this in their region.

56) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

We believe a risk-based program will facilitate this.

57) Should the Department require that PCMPs utilize disease registries to manage the health of their population?

NO

58) Please share any other advice or suggestions about provider support in the ACC.

RCCOs need to be able to identify what will work/has worked in their region. We do not believe it is necessary to be prescriptive about how to accomplish the goals as long as the goals are agreed upon. The goal should be an overall increase in population health and decrease in costs. Let the RCCOs work with and in their communities to develop and present culturally responsive and adequate solutions to local needs.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?
A risk based contract should be considered. The PMPM could be managed against population health outcomes and lower costs.

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

We are not primary care providers but our BHO has operated for 18 years by having providers take risk. We think this system of financing providers can work for primary as well. Our success in using capitation leads us to believe this would be a successful model for primary care as well.

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

No they are not. The biggest barrier is the fee for service system of reimbursement. The medical system in place currently is set up to generate volume not value, a fact that is known to anyone who has worked to reform the health care system. The biggest barrier is that there are no incentives for providers to move to a system that is based on value. In fact providers are penalized if they focus on value. The infrastructure will not be developed until the incentives for producing value are aligned with the payment structure. This transformation can best be achieved by introducing risk contract to the RCCOs that reward value rather than volume. I hope this can be done in the next RCCO bid. It will be important to give providers who are currently used to a volume based fee for service model time to adjust to providing value for the services. It will also be important to define value in a way that can be measured appropriately. It cannot be based on the number of services provided, but must be based on quality of care outcomes and the elements that providers can influence.

62) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

N/A – we are part of a BHO that could potentially bid. Our BHO is licensed by the DOI and we are ready and able to acquire any needed license and the required reserves.

63) What role – if any – should the RCCOs play in the distribution of payments to providers?

We believe RCCOs should be entirely responsible for the distribution of payments to providers they manage and monitor.

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

Capitation payments (PMPM) with rate setting factors that reward quality.

66) Measuring Client experience. Please complete the table below to indicate how the Department should measure Client/patient experience:

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☒	☐	
SF-12 Health Survey	☐	☒	SLV has opted out of using the SF-12 as a pre and post measure.
Other types of client interviews / surveys	☒	☐	
Patient Activation Measure	☒	☐	
Focus groups	☒	☐	
Other	Please type your response here.		

67) Knowing that, at this time, the Department only has claims data, how should population health be measured?

Population health should be the responsibility of the RCCOs, but must be funded through the state system. There should be a change in claims data that shows health improvement trends. If population based screenings are implemented, this data can and also should be used.

68) How should quality and performance data be reported to the RCCOs, PCMPs, and the public?

Quality and performance should be easily accessible for anyone. It should be available via a website as well as by patient request and data should be included in our annual reports. The RCCO could define parameters to report on and we would be required to comply.

69) Measures for payment. Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	X
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

70) What percent of RCCO payments should be tied to measures or performance?

Percentage	
10-20%	X
21-30%	☐
31-40%	☐
41-50%	☐
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

71) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?

There should be a combination of KPIs for all RCCOs and some local indicators.

72) Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?

We think there could be a system to reimburse based on both performance & improvement.

73) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

The claims issue should not restrict payment. Systems can be instituted by the RCCOs to monitor progress outside of the claims data.

74) Incentive payment frequency. Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	X
Annually	☐
Other	☐

If you checked the "Other" box, please describe payment frequency below:

75) For potential offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

I don't know the fixed costs of operating a RCCO but I do know the fixed costs of operating a BHO which might have some similarities. The BHOs are required to have access standards for routine, emergent and emergency care along with access to providers within acceptable driving distances. In order to meet these standards we have to over staff. This is one example but there are many such requirements in our current contract that drive cost. RCCO RFP requirements will drive fixed costs. That state should evaluate very carefully the whether these requirements will generate value to the health care system.

76) For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

We are currently evaluated on 28 measures, but reimbursement is not tied to these. As a member of the BHO, we believe it is desirable to have these measures included in rate setting. If the state chooses to move toward risk-based contracts for the RCCOs, we believe quality measures should be tied to the rates.

Health information Technology (HIT)

77) **Types of communication.** For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	x
Text message	☐	x
Web portal	☐	x
Email	☐	x
Telemedicine / Video chat	☐	x
Face-to-face meeting	☐	x
Smartphone app	☐	x
Other:		

78) **HIT investments by organizations.** For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below:

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	☐	X
Digital care management tool	☐	x
Care transitions alerts	☐	X
Electronic Health Records (EHRs)	X	☐
Health risk assessment software	☐	X
Practice assessment tools	☐	X
Practice management tools (scheduling, billing)	X	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	X
Patient education/wellness tools	☐	X
Provider/case manager directory	☐	X
Shared decision-making tools	☐	☐
Telemedicine software	☐	X
Other:	☐	☐
Other:	☐	☐

79) Importance of technology by type. The Department is working to determine what technology is in place, what technology is needed, and what technology should be standardized. For RCCOs, providers, and other organizations, use the table below to answer what HIT infrastructure outside of the SDAC your organization would use to perform population health management activities. Tools are scored from 1-5, where 1 are those items least-likely to be used, and 5 are items most-likely to be used:

Tool	1 Least	2	3	4	5 Most
Population analytics / reporting / dashboard	☐	☐	☐	X	☐
Care management tool	☐	☐	☐	☐	X
Care transitions alerts	☐	☐	☐	☐	X
Electronic Health Records (EHRs)	☐	☐	☐	X	☐
Practice assessment tools	☐	X	☐	☐	☐
Health risk assessment software	☐	☐	X	☐	☐
Practice management tools (scheduling, billing)	☐		☐	X	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	X	☐	☐	☐
Patient education wellness tools	☐	☐	X	☐	☐
Provider/case manager directory	☐	☐	☐	X	☐
Shared decision-making tools	☐	☐	X	☐	☐
Telemedicine	☐	☐	☐	☐	X
Other:	☐	☐	☐	☐	☐

80) What are the primary barriers to RCCOs and providers increasing their use Health information Technology to improve the performance of Primary Care Practices?

One of our biggest barriers is our current EHR system. There is a lack of philosophical connection and understanding of the purpose of the tools and how they assist to manage or impact patient care.

Another barrier would be using multiple software tools for care coordination. It will be important to make sure the software requirements either fit into current systems or are completely separate (which is another barrier to quality care).

81) How can Health Information Technology support Behavioral Health integration?

In order to have true integration, the technology needs to be integrated as well. We need to figure out how to protect client information in a way that still allows care to be driven in one record.

As tele-medicine becomes more important in rural and frontier areas, care will need to be taken with how this is introduced and disseminated to patients. It will also be necessary to ensure the communities have the technological infrastructure to support web-based platforms. Currently, there is not consistent internet access throughout the San Luis Valley.

82) In the next iteration of the ACC, should there be a shared resource for data and analytics? Please describe the basic criteria for what a shared data and analytics platform needs to contain in order for it to be useful.

We believe the system should be shared. It must include the ability to report behavioral health data and physical health data. The data must be transferred to the state on a common platform, but it may be beneficial to allow the RCCOs to develop their own systems that meet the state requirements.

The RFP could require that RCCOs track cost of care; health outcomes and other health outcome measures and be able to transmit these data in a common platform.

83) Should there be a shared care management tool? Please describe the basic criteria for what a care management tool would need to contain in order for it to be useful.

Yes, we would endorse a shared care management tool, which should be fully integrated with the EHR, as well as have technology tools to support the patient.

84) Should there be a shared population health management tool? Please describe the basic criteria for what a population health management tool would need to contain in order for it to be useful.
Although the population health management tool should be the responsibility of the RCCO, the tool could be integrated into EHRs. This way, the information can be accessed by current providers.

The tool could look at the overall use of care by a population and identify duplicate and inappropriate care so that these trends can be addressed with the providers in the network.

85) Please describe the functionality that a common Medicaid provider directory would need to contain in order for it to be useful.
The Connect for Health Colorado resource guide is a good model. I would want to make sure that we move beyond thinking everyone has technology at their fingertips & have kiosks available in provider locations or distribute in a different fashion.

86) How can the RCCOs support providers' access to actionable and timely clinical data?

Transparency & ease of use, which is currently a barrier.

87) What are the HIT solutions that would benefit clients, providers, and RCCOs? Please comment on the parameters these tools or platforms would need to possess and the ways in which they could be used.

We believe a combined primary and behavioral health EHR that is easy to use and understandable to all providers. We should have access to all data in our RCCO in order to provide better care to our patients. We should not have to jump through hoops to get the data.

88) What technical assistance or resources related to HIT infrastructure should the RCCOs supply? This assistance or these resources could be for providers, social service organization, clients/families, or for others.

We would like to see a system that works across platforms that is as accessible to providers as it is to the patients. It is important for this data to be accessible and transparent to the users.

Right now, CORHIO can be "opted out" of by patients. In order for this system to work, there should be mandates about participation.

89) What role should health information exchange platforms like CORHIO or QHN play in the next iteration of the ACC?

it would make sense to have all provider members of the RCCO use CORHIO or QHN. Currently, not all of our partner organizations use CORHIO and this limits the data exchange we can have for our shared patients.

90) Please share any information, advice, and suggestions you have about health information technology in the ACC Program.

Currently providers like working with their own EHR and pulling data rather than dually documenting into different systems. With the information exchange systems we currently work with the information added to the exchange is limited and does not support comprehensive sharing of resources or health information.

Colorado Department of Health Care Policy and Financing

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Brad Young
Location: 3660 Wadsworth, wheat Ridge, CO 80033

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Rx Plus Pharmacies, Inc.
Location: Wheat Ridge, CO 80033
☒ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☐ Medical provider / PCMP / other provider
  i. Type or specialty: Click here to enter text.
  ii. Area of practice: Click here to enter text.
☒ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☐ Other (please describe): Click here to enter text.

Are you currently involved in the ACC program?

☐ Yes
☒ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☐ 3-4 years
☐ Since before the program was implemented.

How have you been involved in the ACC program and what interaction have you had with RCCOs:

Rx Plus arranged to have Joe Moose, a pharmacist from North Carolina who contracts with Community Care of North Carolina, make a presentation to the RCCOs concerning how community pharmacists can add value by helping patients increase adherence and by providing Comprehensive Medication Management for patients with complicated health problems.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:

Rx Plus has worked closely with Colorado Medicaid on the current pricing methodology for pharmacy. We also have communicated and lobbied on Medicaid issues impacting the Pharmacy program

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☒ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

Rx Plus, along with the chain pharmacies and the Colorado Pharmacists Society, has been advocating a more active role for pharmacists in the RCCOs for several years. We believe that since patients see

their pharmacists more regularly than other health care providers, community pharmacists are in a unique position to provide comprehensive medication management, which has been demonstrated to help with adherence, improve transitions of care, and provide patient education and counselling. We would like to play a more active role in that capacity. Many pharmacies are using newly developed telecommunication tools that are designed to assist in that role (suc as Prescribe Wellness). We continue to believe that pharmacists in all settings, including retail community pharmacists, can and should play a much more significant role in the RCCOs to help improve heal outcomes for patients.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?
2) What is not working well in the ACC Program?
3) What is working best in the Behavioral Health Organization (BHO) system right now?
4) What is not working well in the BHO system?
5) What is working well with RCCO and BHO collaboration right now?
6) What is not working well with RCCO and BHO collaboration right now?

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☐	☐	
Community Behavioral Health Services Rule	☐	☐	
Covered diagnoses list	☐	☐	
Different behavioral / physical health reimbursement	☐	☐	
Institutions for Mental Diseases exclusion	☐	☐	
OBH rules, reporting, or financing (regulatory differences between agencies)	☐	☐	
PCMP financing structure	☐	☐	
Per-member per-month amount	☐	☐	
Physical space constraints	☐	☐	
Privacy Laws (HIPAA, 42 CFR)	☐	☐	
Professional / cultural divisions	☐	☐	
RCCO or BHO contracts	☐	☐	
Staff capacity	☐	☐	
State/Federal rules or reporting requirements	☐	☐	
Technical resources / data sharing	☐	☐	
Training	☐	☐	
Others	Please type your response here.		

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

10) Please share any other general advice or suggestions you may have about behavioral health integration.

Care Coordination

11) Care coordination is an important part of the ACC Program.

   a. What is the best definition of care coordination?

   b. How should RCCOs prioritize who receives care coordination first?

   c. How should RCCOs identify clients and families who need care coordination?

   d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

12) What services should be coordinated and are there services that should not be a part of care coordination?

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

   a. What care coordination is going on today?

   b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

   c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

   d. What are the gaps in care coordination across the continuum of care?

15) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	Should the RCCO have a role? Yes	No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma	☐	☐	☐	
Affordability (assistance with prescriptions or co-pays)	☐	☐	☐	
Daycare / childcare	☐	☐	☐	
Economic stability & employment	☐	☐	☐	
Education	☐	☐	☐	
Environment	☐	☐	☐	
Food access / nutrition	☐	☐	☐	
Health literacy	☐	☐	☐	
Housing	☐	☐	☐	
Language or translation services	☐	☐	☐	
Literacy	☐	☐	☐	
Transportation	☐	☐	☐	
Other	Please type your response here. Feel free to list as many non-medical factors as you want, and please explain how the RCCO should be involved.			

16) **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	Coordinate care? Yes	No	In what capacity should these individuals coordinate care in the ACC Program?
Advanced Practice (Registered) Nurses	☐	☐	
Certified Addiction Councilors	☐	☐	
Certified Nurse Midwives	☐	☐	
Community Health Workers	☐	☐	
Generalists (BA/BS/MA/MS)	☐	☐	
Health Coaches	☐	☐	
Licensed Clinical Social Workers	☐	☐	
Licensed Marriage and Family Therapist	☐	☐	
Licensed Mental Health Counselors	☐	☐	
Licensed Professional Counselor	☐	☐	
Masters of Public Health	☐	☐	
Medical Doctors / Doctors of Osteopathic Medicine	☐	☐	
Nurse Practitioners	☐	☐	
Patient Navigators	☐	☐	
Peer Advocates	☐	☐	
Promotoras	☐	☐	
Psychiatrists	☐	☐	
Psychologists	☐	☐	
Registered Nurses	☐	☐	
Social Workers	☐	☐	
Wraparound facilitators	☐	☐	
Other	Pharmacists should play a role in coordination and transition of care.		

17) **Care coordination requirements for specific populations.** Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and infants	☐	☐	
Children	☐	☐	
Children who are healthy, but in socially-complex environments	☐	☐	
Children involved in the foster care system	☐	☐	
Children with a chronic illness	☐	☐	
Children with a serious emotional disturbance	☐	☐	
Children with medical complexity	☐	☐	
Children or youth with a behavioral health diagnosis or substance use disorder	☐	☐	
Transition-age adolescents	☐	☐	
Parents and families	☐	☐	
Pregnant women	☐	☐	
Adults	☐	☐	
Adults who are healthy, but in socially-complex situations	☐	☐	
Adults with a chronic illness	☐	☐	
Adults with a behavioral health diagnosis or substance use disorder	☐	☐	
Clients involved in the criminal justice system	☐	☐	
Clients with a disability	☐	☐	
Clients in a nursing facility	☐	☐	
Elderly clients	☐	☐	
Frail elderly clients	☐	☐	
Clients in palliative care	☐	☐	
Other populations, please comment:			

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

19) How should care coordination be evaluated? How should its outcomes be measured?

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

    a. What is the PMPM cost for providing care coordination services?

    b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

    a. **Care coordinator to client ratios.** If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☐
51-100	☐
101-200	☐
201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

27) Should the RCCO region maps change? Why or why not? If so, how?

28) Should the BHO region maps change? Why or why not? If so, how?

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

34) What role should RCCOs play in attributing clients to their respective PCMPs?

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

42) How should the Department structure stakeholder engagement for the ACC as a whole?

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

   a. If no, what are the gaps?

   b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

   a. What role should hospitals play in the next iteration of the ACC Program?

   b. What role should pharmacies play in the next iteration of the ACC Program?

Rx Plus, along with the chain pharmacies and the Colorado Pharmacists Society, has been advocating a more active role for pharmacists in the RCCOs for several years. We believe that since patients see their pharmacists more regularly than other health care providers, community pharmacists are in a unique position to provide comprehensive medication management, which has been demonstrated to help with adherence, improve transitions of care, and provide patient education and counselling. Many pharmacies are using newly developed telecommunication tools (such as Prescribe Wellness) that are designed to assist in that role. We continue to believe that pharmacists in all settings, including retail community pharmacists, can and should play a much more significant role in the RCCOs to help improve heal outcomes for patients. We look forward to discussing the possibilities with you.

   c. What role should specialists play in the next iteration of the ACC Program?

   d. What role should home health play in the next iteration of the ACC Program?

   e. What role should hospice care play in the next iteration of the ACC Program?

   f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

   g. What role should counties play in the next iteration of the ACC Program?

   h. What role should local public health agencies play in the next iteration of the ACC Program?

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

45) How can RCCOs help to support clients and families in making and keeping appointments?

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

47) **Community Health Worker reimbursement**. Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement process	(Please check all that apply)
Independently bill	☐
On staff (salary) at Primary Care Medical Provider Clinic	☐
On staff (salary) at RCCO	☐
Per Member Per Month Payment	☐

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you?

b. What RCCO requirements would ensure cultural competency?

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

51) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

52) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

Rx Plus sponsored Joe Moose, a pharmacist from North Carolina, to make a presentation to the RCCOs last March. Dr. Moose is available to work with the RCCOs and Colorado pharmacies to help integrate pharmacists from all settings into the coordination of care model. He has had extensive experience providing such services in North Carolina with their Medicaid program.

Colorado Department of Health Care Policy and Financing

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Louise Delgado, CEO
Location: Canon City, CO

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Solvista Health (Formerly West Central MHC)
Location: Southern CO
☒ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Individual
☐ Individual's family member
☐ Individual advocate
☒ Medical provider / PCMP / other provider
  i. Type or specialty: Behavioral Health
  ii. Area of practice: Mental health, health, substance use
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☐ Other (please describe): Click here to enter text.

Are you currently involved in the ACC program?

☒ Yes
☐ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☒ 2-3 years

How have you been involved in the ACC program and what interaction have you had with RCCOs:
We are in a partnership with our RCCO (ICHP) Region 4

Please briefly describe your involvement with Medicaid, either in Colorado or another state:
Behavioral health provider covering 4 rural and a frontier county in Southern Colorado.

If you are a individual, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☒ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

Please feel welcome to describe why or why not using the space below.

☐ 3-4 years
☒ Since before the program was implemented.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

   - We are local, comprehensive, community based health care staffed by professionals within our communities. We are familiar with the needs, barriers, and resources and can often assist in gaining access to care.

2) What is not working well in the ACC Program?

   - Complexity of systems and lack of knowledge across systems.
   - Data is vast and very diverse. Often untimely and irrelevant by the time we receive it.
   - Key partners are not provided incentives for being involved and helping us meet our KPI's that will impact triple aim.
   - Payment structure redefined or incentives aligned- individuals do not pay co-pay for emergency dept. vs. primary care.

3) What is working best in the Behavioral Health Organization (BHO) system right now?

   - Data is readily available and usable. The experience of the BHO is very helpful. BHO's have experience and work at controlling cost while being at risk.

4) What is not working well in the BHO system?

   - The feel of services being based on a more fee for service model- versus focusing on the full continuum of care we offer to all of our members.

5) What is working well with RCCO and BHO collaboration right now?

   - The joint RCCO – BHO meetings have been very productive as we are the most familiar with our communities and what we have already initiated through our work with the BHO. We work closely with our BHO and RCCO partnerships, often cross training to ensure all needs are being met.

   - Shared positions between RCCO and BHO has assisted in smooth transitions.
   - BHO experienced has been an added benefit in developing programs and partnerships and data gathering and sharing.

6) What is not working well with RCCO and BHO collaboration right now?

- Progress in data sharing between systems- being able to access SDAC on behavioral health side. .

  SDAC Data is very delayed data- often we are not aware of imminent concerns. Emergency visits, changes in medical needs, are not reported for 4 months.

- Additional Data is not being shared across systems that could be helpful. For example the BUS system through DHS maintains long-term care plans, HCBS applications, etc...

- Multiple assessments by different entities is difficult for the individuals. It is a duplication of services. Examples: DHS assessments, Service Coordination Plans (SCP's), long-term care plans, Developmental Disabilities plans.

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

- Integrate data and include behavioral health data.
- Increase primary care and dental providers within Colorado. Reward providers for higher levels of integration.
- Increase access to providers.
- Resources to address the social determinants such as housing, nutrition, transportation.
- Ensure that advocacy, patients and providers are at the table with policy makers.

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	Barrier? No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☐	☐	Ultimately, this comes down to how a service is coded which does not support the use of USCM. This is often reflective of a fee for service model versus
Community Behavioral Health Services Rule	☒	☐	USCM and the OBH regulations do not support this type of service.
Covered diagnoses list	☒	☐	Identifying how we can assist in coordination of individual's care- regardless of diagnosis.
Different behavioral / physical health reimbursement	☐	☒	The reimbursement model is impacting in regards to getting providers.
Institutions for Mental Diseases exclusion	☒	☐	
OBH rules, reporting, or financing (regulatory differences between agencies)	☒	☐	The OBH rules and USCM do not assist in integrated care. They are not focused integrated care.
PCMP financing structure	☒	☐	Format of payment could be improved. Through RCCO, the PCMP receives a single payment and have limited knowledge of the additional dollars. Do not understand roles and responsibilities. Differentiating the pay for them would assist.
Per-member per-month amount	☐	☒	
Physical space constraints	☒	☒	Smaller practices in rural areas is a very real concern as they are often working within very small spaces.
Privacy Laws (HIPAA, 42 CFR)	☒	☐	The enforcement is where it becomes difficult. The technological issues are a problem.
Professional / cultural divisions	☒	☐	This is one of the many challenges we have found. The BHO and MHCs have some very rich experience in this area. Mental/Behavioral health still carries a significant stigma- particularly in rural areas.
RCCO or BHO contracts	☐	☒	

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

Staff capacity	☒	☐	Staff capacity is an issue in every area of healthcare due to limited work force. .
State/Federal rules or reporting requirements	☒	☐	The reporting requirements need to be aligned.
Technical resources / data sharing	☒	☐	Up to date data and more access to data sharing.
Training	☐	☒	
Others	Please type your response here.		

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

Utilizing the 6 levels of integration as well as providing a "no wrong door" approach to overall care, the use of a shared record, holding each provider to the same level of accountability and incentives for care coordination. Finding integrated services is key.

10) Please share any other general advice or suggestions you may have about behavioral health integration.

In our rural locations, the PCMP's do not know the expectations and requirements. The BHO is further advanced in this and the value of outcomes for individuals.

Care Coordination

11) Care coordination is an important part of the ACC Program.

- What is the best definition of care coordination?

  Collaborating with the individual to improve quality of life, health outcomes, and reduce costs. A key goal would be to help the individual receive care coordination within their community.

- How should RCCOs prioritize who receives care coordination first?

  Due to resources and capacity it is necessary to prioritize care coordination services. In order to identify the population that care may be able to impact the most effectively- we have focused on individuals who have conditions we can influence via coordination and environmental factors. There is currently a focus on individuals in the middle of bell curve to prevent higher cost of services.
- How should RCCOs identify individuals and families who need care coordination?

  Care coordination is the most effective when it is occurring when someone enters *any* door for care and ensuring they are linked to appropriate levels of care- whether it be preventative, early intervention, or more complex. The individual should be allowed to identify or designate who they feel the most comfortable working with.

- How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

  The requirements should be standardized regardless of who is providing the service.

12) What services should be coordinated and are there services that should not be a part of care coordination?

- All services should be coordinated including services outside the medical visit, Social Services and Public Health.
- In addition the social determinants are also key to well-being. Health, lifestyle, education are key components.

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

- Real time data access to health care services including prescriptions and ER visits related to the individuals care.
- Accurate contact information- some information is years out of date on current lists.

14) Many individuals and their families have access to a number of different care coordinators. These coordinators often work in different systems.

- What care coordination is going on today?
- Medical, behavioral, referrals to specialty, including helping meet additional needs. .
- What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

  We work in coordination with our RCCO and within our system to ensure that an identified agency/person takes the lead to ensure individual has their care coordinated. We have established relationships with local providers (SEP's, DD,EPSDT, Waiver programs) as well as the RCCO and have been providing this level of care through our BHO contract. Our role has been to ensure on any level we must coordinate care for our individuals in our communities to prevent further risks and costs. Our role, as a BHO provider, has been key to ensuring the individual gets the care they require while reducing costs.

- How can the ACC avoid duplicating or disrupting current care coordination relationships?

  Improved ability to data share would result in a reduced duplication of work and reduce the duplicity for the individual. Centralizing care coordination through the RCCO would assist with this.

- What are the gaps in care coordination across the continuum of care?

  Currently, a lack of data sharing and access to the key data systems, such as SDAC, with real time data sharing would improve the efforts. The collaboration between providers and care coordinators would improve if we had access to real time data and actions taken on behalf of individuals. Due to complex needs, it can take 10-12 contacts to understand who all may be involved in individuals care as the data systems may be 3 months old.

COs' roles in addressing individuals' and their families' non-medical needs. Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	**Should the RCCO have a role?** Yes	No	**Should the RCCOs coordinate with community supports and services?** Yes	**Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?**

Abuse, neglect, and trauma	☐	☐	☒	
Affordability (assistance with prescriptions or co-pays)	☒	☐	☒	**We have a role in connecting individuals even if it is through PAP programs.
Daycare / childcare	☒	☐	☒	**Assist and link individuals to this.
Economic stability & employment	☐	☐	☒	**Always linking individuals to resources and accessing healthcare, including PEAK system.
Education	☐	☒	☒	**We link individuals to resources for GED, online schooling, etc...
Environment	☐	☐	☒	
Food access / nutrition	☐	☐	☒	
Health literacy	☒	☐	☐	
Housing	☐	☒	☐	
Language or translation services	☒	☐	☐	
Literacy	☒	☐	☐	
Transportation	☐	☒	☒	
Other	In providing individualized care, we address many of these needs- Maslow's hierarchy of needs must be addressed before a person can meet other needs including overall health care. This includes housing, transportation, education, and food.			

15) **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve Individuals and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	Coordinate care? Yes	No	In what capacity should these individuals coordinate care in the ACC Program?

Advanced Practice (Registered) Nurses	☐	☒	
Certified Addiction Councilors	☐	☒	
Certified Nurse Midwives	☐	☒	
Community Health Workers	☒	☐	Working within organization and community.
Generalists (BA/BS/MA/MS)	☒	☐	Working within organization and community.
Health Coaches	☒	☐	Working 6+within organization and community.
Licensed Clinical Social Workers	☒	☐	Provide a component of care or linkage as presented in care through BHO.
Licensed Marriage and Family Therapist	☒	☐	Provide a component of care or linkage as presented in care through BHO.
Licensed Mental Health Counselors	☒	☐	Provide a component of care or linkage as presented in care through BHO.
Licensed Professional Counselor	☒	☐	Provide a component of care or linkage as presented in care through BHO.
Masters of Public Health	☐	☒	
Medical Doctors / Doctors of Osteopathic Medicine	☐	☒	
Nurse Practitioners	☐	☒	
Patient Navigators	☒	☐	Working within organization and community.
Peer Advocates	☒	☐	Working within organization and community.
Promotoras	☒	☐	
Psychiatrists	☒	☒	
Psychologists	☒	☐	
Registered Nurses	☒	☐	This has been highly successful in knowing how to coordinate care and link to appropriate medical interventions.
Social Workers	☒	☐	Provide a component of care or linkage as presented in care through BHO.
Wraparound facilitators	☒	☐	Provide a component of care or linkage as presented in care through BHO.
Other	A wide variety of needs and backgrounds that may be added on to a team to help meet an individual's needs. Very similar to specialty care i.e. medically complex needs- RN may coordinate care. SPMI individuals may have a social worker or mental health professional, wraparound is also a way to help individuals voice their needs and reduce redundancy.		

16) **Care coordination requirements for specific populations.** Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and infants	☒	☐	
Children	☐	☒	
Children who are healthy, but in socially-complex environments	☐	☒	Care should be coordinated through BHO provider.
Children involved in the foster care system	☒	☐	
Children with a chronic illness	☒	☐	
Children with a serious emotional disturbance	☒	☐	Care should be coordinated by the BHO
Children with medical complexity	☒	☐	
Children or youth with a behavioral health diagnosis or substance use disorder	☒	☐	Care should be coordinated by the BHO
Transition-age adolescents	☐	☒	
Parents and families	☐	☒	
Pregnant women	☒	☐	We work closely building natural supports and follow up for pregnant women, including post-partum screenings through CMHC and Medical.
Adults	☐	☒	
Adults who are healthy, but in socially-complex situations	☐	☒	
Adults with a chronic illness	☐	☒	
Adults with a behavioral health diagnosis or substance use disorder	☒	☐	Care should be coordinated by the BHO
Individuals involved in the criminal justice system	☐	☒	
Individuals with a disability	☐	☒	
Individuals in a nursing facility	☐	☒	
Elderly individuals	☐	☒	
Frail elderly individuals	☐	☒	
Individuals in palliative care	☒	☐	Ensure needs are met and if care is needed outside of palliative care (return home, ACF, NF).
Other populations, please comment:			

17) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

- The RCCO would have a limited role working with agencies in meeting individualized specific needs but we are very familiar with working in this system on the BHO level as a team. A key component is utilization of ACES (Adverse Childhood Experiences Study) as we impact the ACES it reduces overall costs in later life related to health care, mental health, and substance use.

18) How should care coordination be evaluated? How should its outcomes be measured?

- Reduction of duplicated care and the resulting reduction in medical expenses.
- Ability to show impact in future due to reducing individual's risk factors and education/interventions at this time period.
- Connecting a person to care and early intervention and prevention reduces long term costs.
- Population health screens.
- The key components should help all of the healthcare integration systems align, including the RCCO, BHO and commercial insurance to help achieve goals of our State Health Innovation Plan.

19) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

- What is the PMPM cost for providing care coordination services?

  This is not a question we can answer.

- Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

  Same as above.

20) Should there be care coordinator to individual ratio requirements in the next RFP? How should this vary by individual acuity or population?

21) It needs to vary by population and clients identified within a caseload. If the requirements or complexity are high a lower caseload is necessary.

- Care coordinator to individual ratios. If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered individuals having disabilities, please estimate how many individuals one care coordinator can serve. Please use the table below for your response:

It would be better to not regulate, the higher the acuity the lower the caseload.

Individuals	
Fewer than 25	☐

26-50	☐
51-100	☐
101-200	☐
201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

- Cost of care – reduction in wasted care because of un-coordinated care. Cost only looks to today not future.
- Consumer input regarding cost, experience, quality of life.

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

The State needs to be aware of the social determinants and the cost of impacting the population and how would dollar amounts be identified.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

Care coordination standards as the resources are limited in rural and frontier communities. We often can't even identify PCMP's. Data reporting between RCCO's and State should be standardized as well as who shares what data within RCCO (i.e. some hospitals share data daily, some will only provide data to RCCO but not provider, etc...)

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

You can't force collaboration but having the bidder identify the formal and informal partnerships and how these are utilized is helpful.

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's individuals are enrolled. Please comment on this proposal.

I don't think this will work in rural and frontier areas of the state. We just don't have the population needed to make this work.

27) Should the RCCO region maps change? Why or why not? If so, how?

The State should consider going to fewer RCCO's and consider combining the RCCO's working between Colorado Springs Region(7) and Southern Colorado (Region 4).

28) Should the BHO region maps change? Why or why not? If so, how?

If we were going to integrate the programs into one this would work. Otherwise, it would require a new bid for the BHO to re-align regions. It is beneficial to build on the experience of the BHO's, the local partnering, and risk sharing.

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

If the vendors were familiar with our system, they would need approximately one year. During the transition period the local level partnerships would need to be addressed as this is where the work takes place. We had these relationships and worked effectively to partner and meet the needs of the individuals in our communities.

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

Identify ways to incentivize providers to assume/manage risk. This will assist in reducing and diverting from unnecessary higher levels of care.

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

We need to be able to account for our time services within integrated care and need the codes that support this.

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for individuals and providers. If so, why? If so, how many and where? What issues would this address?

I don't think this can work in rural /frontier Colorado, the population could not support two RCCOs.

33) If you or your practice provide services to individuals referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

N/A

34) What role should RCCOs play in attributing individuals to their respective PCMPs?

We have to work on this in order to provide intervention and prevention. This is a key role of care coordinators to help provide screenings, etc....This needs to be completely in a more efficient manner. Currently requires a telephone call with the individual and State. This creates a barrier for individuals.

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

CDPHE does provide some oversight/collaboration.

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

Mutual communication and collaboration.

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

Medicaid is a large task for the RCCOs, we should not put more on them. If credentialing and benefit packages should be streamlined within the marketplace it would be beneficial.

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

We do not need added regulatory requirements as we are sorting roles on this. Approval through DORA to be approved in this state is very difficult. It makes it difficult to recruit outside of our 5tate yet due to workplace shortages we must recruit outside of our state.

Stakeholder Engagement

39. What should be required of the RCCOs in terms of stakeholder engagement with individuals, individuals' families, and individual advocates?

We are the most familiar with our stakeholders and need to be able to identify who should be at the table, where, and the best way to meet the need and collect input. This includes allowing families and individuals to have voice and choice related to their care, health care choices, and limiting the regulatory items we must meet.

40. What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

The requirement should be that we are building support for the program and this level of care and that we are engaging stakeholders- the request should be that we are able to provide incentives for everyone coming together.

41. Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

- This can be accomplished through the RFP crediting bidders for community involvement and recognizing the role of historical success in engaging stakeholders within partnerships.

42. How should the Department structure stakeholder engagement for the ACC as a whole?

This should be completed at the community level and engaging individuals, advocates, and community stakeholders/members.

Network Adequacy and Creating a Comprehensive System of Care

43. Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

- No in general to PCMP's are limited, specialists are limited. Within behavioral health, the regulations limit how many we can serve due to meeting multiple documentation requirements.
  a. If no, what are the gaps?

     State and Federal regulations and requirements really impacts the amount of services we can provide.

- Access to specialty care in rural/frontier parts of Colorado is a problem.
- Access to primary care, oral health and payment options significantly impacts care.
- Local pharmacies are being lost due to mail order requirements through insurances. This impacts rural/frontier level of care. Local pharmacies are able to do a more individualized services- such as bubble packing, assisting in delivery, lock boxes.
- Hospitals- we are losing a hospital in a rural community and we will be limited in how these individuals will receive care and emergency services.

  b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

     - Children dental care- adults are limited in access to oral health.
     - Dual eligible individuals are often struggling to access care and their doughnut hole coverage.
     - Income barriers
     - Fewer providers accepting Medicaid
     - Insurance coverage through ACC (catastrophe insurance, high co-pays, limited providers)

44. ACC Individuals and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

    a. What role should hospitals play in the next iteration of the ACC Program?

Hospitals need to have identified roles and address competing interests (ER Utilization)

- Incentivize dollars for diverting away from hospitals.
- Incentivize providers for expanded hours.
- Rural hospitals are collapsing in our small communities, such as St. Vincent Hospital in Leadville. Communities need to come together to develop urgent/emergent care models and identify transportation dilemmas to assist our members when appropriately in need of inpatient care.

b. What role should pharmacies play in the next iteration of the ACC Program? Local pharmacies are being squeezed out by larger mail order companies where insurance companies receive a percentage cut with the prescriptions. Local pharmacies have assisted our smaller communities by providing a valuable information resource and customer service for medications being delivered to patient's homes. They also have assisted with medication packaging to assist in patients adherence for taking medications.

Pharmacy information/data is important.

c. What role should specialists play in the next iteration of the ACC Program?

Specialty care needs to be more accessible in rural/frontier counties. The ACC program should provide incentives to specialists to provide care in these areas.

d. What role should home health play in the next iteration of the ACC Program?

Home health should be a central part of care planning. Hospitals should be required to work closely with home health agencies and identifying requirements. Home health care supports care coordination but it is a separate entity and often supports an individual within the community. The ability to access, even short term, should be streamlined for efficiency.

e. What role should hospice care play in the next iteration of the ACC Program?

Hospice care should be readily available to all patients in the ACC program.

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

The role of SEP's and CCBs is very important. We should have partnerships in place to understand each entity's role and the expectations. Communication needs to occur across all system and data sharing that notes role person is playing.

g. What role should counties play in the next iteration of the ACC Program?

Develop community based programs to recruit/retain providers within community. Currently, on a local level we have long standing relationships with county entities including HB 14S1, Department of Human Services and Court programming.

h. What role should local public health agencies play in the next iteration of the ACC Program?

Public health agencies need to be an integral part of the referral resource for the ACC program. In addition, it would be important to have these programs align with the SIM grant and aligning with State for payment reform.

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

Important organizations including the home health providers, Senior care services, nursing facilities, and alternative holistic services are all key and allowing communities to offer solutions of who should be at the table.

45. How can RCCOs help to support individuals and families in making and keeping appointments?

a. Transportation, child care payments, subsidies, telecare options for rural/frontier. Extended hours.

46. Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

No, this should be an option proposed by the respondents to the RFP. HCPF should be careful not to be too prescriptive in how the RFP requirements are developed. Leaving room for communities to offer solutions should be a key theme of the RPF.

47. **Community Health Worker reimbursement.** Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement should be at the discretion of the RCCO and should not be prescribed by HCPF in the RFP.

Reimbursement process	(Please check all that apply)
Independently bill	☐
On staff (salary) at Primary Care Medical Provider Clinic	☐
On staff (salary) at RCCO	☐
Per Member Per Month Payment	☐

48. Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

    The RCCOs should have a role in coordinating oral health. Oral health need to be a part of overall health care and needs also be integrated.

49. Cultural competence among providers is important to ensure a Individual-centered, effective system that supports the health and well-being of individuals and families.

    a. What does cultural competence mean to you?

    Understanding your community and the individuals that make up your community or geographic area. For example, our community has a high level of poverty, low literacy rates, and limited employment opportunities.

    b. What RCCO requirements would ensure cultural competency?

    We are always addressing the unique qualities of our communities, that varies even between communities, families, and individuals. You can't lay out a plan that addresses this as it is beyond race, religion, or gender. This is the importance of knowing your community.

    c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Individuals/families including those with low health literacy?

    The skills must be driven by the values of the organization, the community, and meeting the needs of the population we are serving.

    Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. Getting individuals inside our doors or letting us in there door can be a problem. Access is a huge issue.

    What RCCO requirements would help address these and reduce inequality in health outcomes? I don't know if a RCCO can address this.

50. 5hould the next RFP allow for preferred networks for specialty, facility, or ancillary care?

    Availability and access becomes an issue.

51. Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

    There needs to be a major plan to provide incentives for individuals to not utilize the emergency room for routine care.

52. Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

Practice Support

53. **Support for practices.** Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☒	☐	☐	☐
Network provider education	☒	☐	☐	☐
Assistance with practice redesign	☐	☒	☐	☐
Assistance with efficiency-enhancing activities	☐	☒	☐	☐
Provide web-based resources and directories	☒	☐	☐	☐
Provide practice-specific data reports	☒	☐	☐	☐
Provide clinical care guidelines and best practices.	☐	☒	☐	☐
Provide clinical screening tools	☐	☒	☐	☐
Provide health and functioning questionnaires	☐	☒	☐	☐
Provide chronic care templates	☒	☐	☐	☐
Provide registries	☒	☐	☐	☐
Offer individual reminders	☒	☐	☐	☐
Offer individual self-management tools	☐	☒	☐	☐
Offer educational materials about specific conditions	☐	☒	☐	☐
Supply behavioral health surveys	☐	☒	☐	☐
Supply other self-screening tools	☐	☒	☐	☐
Administer behavioral health surveys	☒	☐	☐	☐
Administer other self-screening tools	☒	☐	☐	☐
Prepare individual action plans	☐	☒	☐	☐
Provide training on providing culturally-competent care	☐	☒	☐	☐
Provide training to supporting staff	☐	☒	☐	☐
Provide training on motivational interviewing	☐	☒	☐	☐
Provide tools and software for phone call and appointment tracking	☒	☐	☐	☐
Provide tools and resources for tracking labs, referrals, etc.	☒	☐	☐	☐
Provide referral and transitions of care checklists	☒	☐	☐	☐
Provide visit agendas or templates	☐	☒	☐	☐
Provide standing pharmacy order templates	☒	☐	☐	☐
Provide comprehensive directory of community resources	☒	☐	☐	☐
Provide directory of other resources	☒	☐	☐	☐
Provide materials regarding Nurse Advice Line	☒	☐	☐	☐
Ensure all tools and resources are centrally located on RCCO-specific website	☐	☒	☐	☐

Others	

54. If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

55. What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

    - Let us bid and offer solutions that may work within our communities.

56. What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a individual's medical home?

    Rates provided but with clear understanding of responsibilities.

57. Should the Department require that PCMPs utilize disease registries to manage the health of their population?

58. Please share any other advice or suggestions about provider support in the ACC.

Payment Structure and Quality Monitoring

59. Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

    Allowing the RCCO to have more financial control over how the distribute the financial incentives would allow us to meet our individual region/community needs more effectively.

60. If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

    N/A

61. Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

    The fee for service level of reimbursement does not promote cost saving but promotes service delivery.

62. The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

    N/A

63. What role – if any – should the RCCOs play in the distribution of payments to providers?

    RCCO's should play a more significant role in distribution of payments to providers.

64. Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

65. What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of individuals and providers, and health outcomes?

66. **Measuring Individual experience.** Please complete the table below to indicate how the Department should measure Individual/patient experience:

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☒	☐	All of these should be options for measuring quality.
SF-12 Health Survey	☐	☒	No- this is no longer a relevant form being utilized.
Other types of individual interviews / surveys	☒	☐	PHQ9
Patient Activation Measure	☒	☐	
Focus groups	☐	☒	Limited attendance and feedback.
Other	Depends on population health needs. Currently- would need to switch out where we require so many screens and tools- what would give.		

67. Knowing that, at this time, the Department only has claims data, how should population health be measured?

- We need to be able to screen individuals and account for the time and linkage we do as a result.

68. How should quality and performance data be reported to the RCCOs, PCMPs, and the public?

- Through data dashboards and public access.

69. **Measures for payment.** Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7 at most	☒
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐

51+	☐
None	☐

70. What percent of RCCO payments should be tied to measures or performance?

Percentage	
10-20%	☐
21-30%	☐
31-40%	☐
41-50%	☒
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

71. Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?

- It should be a combination. Overall KPIs should address population health but allow for local indictors to address community needs as well identifying social determinants and how to impact this area.

72. Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?

- Overall improvements.

73. Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

N/A

74. **Incentive payment frequency**. Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	☒
Annually	☐
Other	☐

If you checked the "Other" box, please describe payment frequency below:

N/A

75. For potential Offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

    Fixed costs include having care coordinators available emergently to assist in tracking and follow up for urgent/emergent individual needs, including monitoring emergency care and follow up. In addition, the required care plans and service coordination plans that must be completed every 6 months face to face. Transportation access to assist individuals in getting to the facilities, medical appts. Or to our location.

76. For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

    We are evaluated on 34 measures specific to this, but we also participate in multiple external and internal audits, peer reviews, coding audits, and Medicare audits. All of the services documented under the care coordination may be part of these additional audits as well. We also have multiple patient screens and key performance indicators we must meet.

Health Information Technology (HIT)

77. **Types of communication.** For individuals with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	☒
Text message	☐	☒
Web portal	☐	☒
Email	☐	☒
Telemedicine / Video chat	☐	☒
Face-to-face meeting	☐	☒
Smartphone app	☐	☒
Other: I would use if they could accept it.		

78. **HIT investments by organizations.** For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below:

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	☒	☐
Digital care management tool	☐	☒

Care transitions alerts	☐	☒
Electronic Health Records (EHRs)	☒	☐
Health risk assessment software	☒	☐
Practice assessment tools	☒	☐
Practice management tools (scheduling, billing)	☒	☐
Individual web portal for communicating care plan, services, benefit enrollment	☐	☒
Patient education/wellness tools	☐	☒
Provider/case manager directory	☐	☒
Shared decision-making tools	☒	☐
Telemedicine software	☒	☐
Other:	☐	☐
Other:	☐	☐

79. **Importance of technology by type.** The Department is working to determine what technology is in place, what technology is needed, and what technology should be standardized. For RCCOs, providers, and other organizations, use the table below to answer what HIT infrastructure outside of the SDAC your organization would use to perform population health management activities. Tools are scored from 1-S, where 1 are those items least-likely to be used, and 5 are items most-likely to be used:

Tool	1 Least	2	3	4	5 Most
Population analytics / reporting / dashboard	☐	☐	☐	☒	☐
Care management tool	☐	☐	☐	☐	☒
Care transitions alerts	☐	☐	☐	☒	☐
Electronic Health Records (EHRs)	☐	☐	☐	☒	☐
Practice assessment tools	☐	☒	☐	☐	☐
Health risk assessment software	☐	☐	☒	☐	☐
Practice management tools (scheduling, billing)	☐	☐	☒	☐	☐
Individual web portal for communicating care plan, services, benefit enrollment	☐	☐	☐	☐	☒
Patient education wellness tools	☐	☐	☒	☐	☐
Provider/case manager directory	☐	☐	☒	☐	☐
Shared decision-making tools	☐	☒	☐	☐	☐
Telemedicine	☐	☐	☐	☒	☐
Other:	☐	☐	☐	☐	☐

80. What are the primary barriers to RCCOs and providers increasing their use Health Information Technology to improve the performance of Primary Care Practices?

    Staff having access and being able to utilize information.

81. How can Health Information Technology support Behavioral Health Integration?

    HIT is key moving forward and sharing data in real time will benefit the client, reduce duplication in services, testing, or clients recall regarding services, tests etc...
    One significant challenge is finding an Electronic Health Record that meets the needs of behavioral health and medical/specialty care. We are in continuous discussions with major companies advocating for a record to meet our complex needs for true integration, including a patient portal.

82. In the next iteration of the ACC, should there be a shared resource for data and analytics? Please describe the basic criteria for what a shared data and analytics platform needs to contain in order for it to be useful.

    Yes there should be a shared resource- and shared with all providers not on one side of care. It should include cost of care, duplication in care, and health outcomes.

83. Should there be a shared care management tool? Please describe the basic criteria for what a care management tool would need to contain in order for it to be useful.

    Real time data is what is helpful- who is in the ER today or last night is key. Appointments, tests, schedules for follow up would help us reduce time trying to track all levels of care and ensuring needs are met. Care coordination usually occurs after the fact, often much later, and is ineffective.

84. Should there be a shared population health management tool? Please describe the basic criteria for what a population health management tool would need to contain in order for it to be useful.

    This task should be the responsibility of the RCCO and the providers. The tool could look at the overall use of care by a population and identify duplicate and inappropriate care so that these trends can be addressed with the providers within the RCCO and further education or explanation can be provided. If we identify a way to provide incentives for appropriate levels of care versus inefficiencies.

85. Please describe the functionality that a common Medicaid provider directory would need to contain in order for it to be useful.

    Any directory that is maintained should identify specialties and should be up to date and maintained.

86. How can the RCCOs support providers' access to actionable and timely clinical data?

    Any access for the providers would be an improvement of the make shift data we currently receive via multiple reports that do not match each other and are relying on old data and attribution.

87. What are the HIT solutions that would benefit individuals, providers, and RCCOs? Please comment on the parameters these tools or platforms would need to possess and the ways in which they could be used.

A joint EHR that also brings in outside data and works with CORHIO or QHN.

88. What technical assistance or resources related to HIT infrastructure should the RCCOs supply? This assistance or these resources could be for providers, social service organization, individuals/families, or for others.

Technical assistance should include a shared database so we can identify readily who is involved with multiple care providers, agencies, and requiring additional services or coordination versus the 12-15 phone calls to identify who is working with which agency or individual.

89. What role should health information exchange platforms like CORHIO or QHN play in the next iteration of the ACC?

They are key in making this successful.

90. Please share any information, advice, and suggestions you have about health information technology in the ACC Program.

Colorado Department of Health Care Policy and Financing

RFI Response Received and Recorded.

Serial Number: 060

Accepted by: KJDW

Notes:

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Bob Ward
Location: Arapahoe, Douglas County, City of Aurora

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Developmental Pathways, Inc.
Location: Englewood, CO
X Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☐ Medical provider / PCMP / other provider
  i. Type or specialty: Click here to enter text.
  ii. Area of practice: Click here to enter text.
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
X Another public or private program
☐ Legislator or elected official
☐ Other (please describe): Click here to enter text.

Are you currently involved in the ACC program?

☐ Yes
X No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☐ 3-4 years
☐ Since before the program was implemented.

How have you been involved in the ACC program and what interaction have you had with RCCOs:
Our organization share mutual clients with the RCCO and has been engaged in data sharing and discussions on how to work to together to achieve better outcomes for clients.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:
Community Centered Board providing Medicaid Waiver Case Management Services and Medicaid waiver services to the IDD population of Arapahoe, and Douglas counties and the City of Aurora.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely
X Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

Please feel welcome to describe why or why not using the space below.

We believe there is great opportunity for cooperation and/or delegation with our RCCO for the provision of care coordination services for individuals in IDD waiver services.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

The continued outreach to the medical neighborhood.

2) What is not working well in the ACC Program?

A lack of clarity on the ultimate role of the ACC and the future of Medicaid services in Colorado.

3) What is working best in the Behavioral Health Organization (BHO) system right now?

4) What is not working well in the BHO system?

The BHO system is generally not accessible to the IDD population resulting in significant personal hardship for individuals and families and tremendous inefficiencies in the provision of health care.

Strict and unreasonable adherence to the covered diagnosis list; a long standing culture of belief in the BHO system to exclude IDD clients; and a lack of expertise in the provider network all effect the lack of services and access for IDD individuals.

5) What is working well with RCCO and BHO collaboration right now?

6) What is not working well with RCCO and BHO collaboration right now?

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

The issues above need to be addressed. Designated points of contact for IDD individuals would be a start.

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☐	☐	
Community Behavioral Health Services Rule	☐	☐	
Covered diagnoses list	X	☐	**To narrowly interpreted for IDD individuals.**
Different behavioral / physical health reimbursement	☐	☐	
Institutions for Mental Diseases exclusion	X	☐	**IDD individuals cannot access**
OBH rules, reporting, or financing (regulatory differences between agencies)	☐	☐	
PCMP financing structure	☐	☐	
Per-member per-month amount	☐	☐	
Physical space constraints	☐	☐	
Privacy Laws (HIPAA, 42 CFR)	☐	☐	
Professional / cultural divisions	☐	☐	
RCCO or BHO contracts	☐	☐	
Staff capacity	X	☐	**Lack of expertise in the IDD field.**
State/Federal rules or reporting requirements	X	☐	**Programs and funding sources are too siloed. Overall lack of funding in all systems**
Technical resources / data sharing	X	☐	**See above**
Training	X	☐	**See above**

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

Others	Please type your response here.

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

10) Please share any other general advice or suggestions you may have about behavioral health integration.

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination?

Care coordination should be flexible and individualized. Service definitions for reimbursable care coordination and services should also be flexible to allow creative problem solving and reduce overall bureaucratic inefficiencies.

b. How should RCCOs prioritize who receives care coordination first?

c. How should RCCOs identify clients and families who need care coordination?

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

12) What services should be coordinated and are there services that should not be a part of care coordination?

Long term care coordination should be integrated with physical and behavioral health. Such coordination should be delegated at the most effective level. In the IDD system the most significant barrier is behavioral health.

In looking to the future, the emphasis should be on leveraging successful existing models rather than dismantling and rebuilding. There is a significant concern that the current IDD system expertise and experience will be sacrificed to overall system uniformity.

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

An individually assigned care coordinator with the adequate time and resources to craft an individualized plan to address a person's desires and needs.

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today?

Care coordination in the IDD system is very successful. There is opportunity to expand such coordination in the physical and behavioral health areas.

What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

See above.

b. How can the ACC avoid duplicating or disrupting current care coordination relationships?

The ACC should cooperate with or delegate too existing care coordination in the IDD system to avoid duplication or disruption to individual services and reduce complexity in the system. The future ACC contract structure should allow ACC's flexibility to build upon existing systems including but not limited to contracting or subcontracting with existing providers.

c. What are the gaps in care coordination across the continuum of care?

Substantial gaps remain in the behavioral health area.

15) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	Should the RCCO have a role? Yes	No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma	☐	☐	☐	
Affordability (assistance with prescriptions or co-pays)	☐	☐	☐	
Daycare / childcare	☐	☐	☐	
Economic stability & employment	☐	☐	☐	
Education	☐	☐	☐	
Environment	☐	☐	☐	
Food access / nutrition	☐	☐	☐	
Health literacy	☐	☐	☐	
Housing	☐	☐	☐	

Language or translation services	☐	☐	☐	
Literacy	☐	☐	☐	
Transportation	☐	☐	☐	
Other	Please type your response here. Feel free to list as many non-medical factors as you want, and please explain how the RCCO should be involved.			

16) **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	**Coordinate care?** Yes	No	**In what capacity should these individuals coordinate care in the ACC Program?**
Advanced Practice (Registered) Nurses	☐	☐	
Certified Addiction Councilors	☐	☐	
Certified Nurse Midwives	☐	☐	
Community Health Workers	☐	☐	
Generalists (BA/BS/MA/MS)	☐	☐	
Health Coaches	☐	☐	
Licensed Clinical Social Workers	☐	☐	
Licensed Marriage and Family Therapist	☐	☐	
Licensed Mental Health Counselors	☐	☐	
Licensed Professional Counselor	☐	☐	
Masters of Public Health	☐	☐	
Medical Doctors / Doctors of Osteopathic Medicine	☐	☐	
Nurse Practitioners	☐	☐	
Patient Navigators	☐	☐	

Peer Advocates	☐	☐	
Promotoras	☐	☐	
Psychiatrists	☐	☐	
Psychologists	☐	☐	
Registered Nurses	☐	☐	
Social Workers	☐	☐	
Wraparound facilitators	☐	☐	
Other	**Community Centered Boards (CCBs) have been doing successful care coordination for IDD individuals in their communities for many years.**		

17) **Care coordination requirements for specific populations.** Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and infants	☐	☐	
Children	☐	☐	
Children who are healthy, but in socially-complex environments	☐	☐	
Children involved in the foster care system	☐	☐	
Children with a chronic illness	☐	☐	
Children with a serious emotional disturbance	☐	☐	
Children with medical complexity	☐	☐	
Children or youth with a behavioral health diagnosis or substance use disorder	☐	☐	
Transition-age adolescents	☐	☐	
Parents and families	☐	☐	
Pregnant women	☐	☐	
Adults	☐	☐	
Adults who are healthy, but in socially-complex situations	☐	☐	
Adults with a chronic illness	☐	☐	
Adults with a behavioral health diagnosis or substance use disorder	☐	☐	
Clients involved in the criminal justice system	☐	☐	

Clients with a disability	X	☐	Individuals with IDD present unique challenges and vulnerabilities.
Clients in a nursing facility	☐	☐	
Elderly clients	☐	☐	
Frail elderly clients	☐	☐	
Clients in palliative care	☐	☐	
Other populations, please comment:			

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

19)

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

a. What is the PMPM cost for providing care coordination services?

To achieve meaningful care coordination, especially with complex populations, funding must be adequate and recognize the skill set required for successful care coordination. In addition, funding should be flexible and not overly rigid in definition or application.

b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

Yes

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

No – allow the contracting entities to manage.

a. **Care coordinator to client ratios.** If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☐
51-100	☐
101-200	☐

201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

Keep the metrics simple and attainable.

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

27) Should the RCCO region maps change? Why or why not? If so, how?

28) Should the BHO region maps change? Why or why not? If so, how?

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

34) What role should RCCOs play in attributing clients to their respective PCMPs?

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

42) How should the Department structure stakeholder engagement for the ACC as a whole?

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

a. If no, what are the gaps?

b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

a. What role should hospitals play in the next iteration of the ACC Program?

b. What role should pharmacies play in the next iteration of the ACC Program?

c. What role should specialists play in the next iteration of the ACC Program?

d. What role should home health play in the next iteration of the ACC Program?

e. What role should hospice care play in the next iteration of the ACC Program?

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

CCB have years of experience in care coordination/case management and in networking within their communities. Substantial expertise has also been developed relative to the IDD population in the state and community resources. The ACC program should look to leverage CCB assets in an integrated health care model. The state should encourage cooperation and provide flexibility for greater CCB/ACC leveraging of resources via informal and formal mechanisms.

g. What role should counties play in the next iteration of the ACC Program?

h. What role should local public health agencies play in the next iteration of the ACC Program?

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

Colorado Department of Health Care Policy and Financing

RFI Response Received and Recorded.

Accepted by: KJDW

Notes:

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Cynthia T Weinmann
Location: White Plains, Westchester County, New York

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: APS Healthcare
Location: White Plains, Westchester County, New York
☒ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☐ Medical provider / PCMP / other provider
  i. Type or specialty: Click here to enter text.
  ii. Area of practice: Click here to enter text.
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☒ Other (please describe): Care Management Vendor

Are you currently involved in the ACC program?

☒ Yes
☐ No
☐ I don't know

If you answered "yes" above, how long?

☒ 3-4 years ??

How have you been involved in the ACC program and what interaction have you had with RCCOs:

APS is the current Colorado Medicaid UM Program vendor, and interact with RCCOs as part of this role through our administration of the Client Over-Utilization Program (COUP).

Please briefly describe your involvement with Medicaid, either in Colorado or another state:

APS provides UM/CM/DM services to State Medicaid agencies in California, Colorado, Georgia, Maine, Oregon, Vermont, and West Virginia. This includes utilization review, care coordination, technical assistance to providers, actionable analyses of system and provider performance on access, quality of care, and cost patterns and trends.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely
☐ Likely need to unclick this one
☒ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

2) **What is not working well in the ACC Program?**

Inconsistency between RCCOs leads to variability in performance, and presents barriers to performance evaluation and improvement. In our experience, regional Care Coordination Organizations (CCOs) operate most effectively and efficiently when there is a strong component of systems, tools, technical assistance, and metrics that are common to all organizations, including the following elements:

- An integrated and comprehensive person-centered database to support analytics, reporting, and care coordination
- Stratification of the population to identify and prioritize care coordination interventions
- Functional assessments of high-risk, high-cost Clients that are independently conducted to avoid conflict of interest with the outcomes of the assessments. These assessments identify care coordination and care management needs to prioritize intervention strategies, including if needed, a lock-in program such as the Department's Client Over-utilization Program (COUP)
- System tools including outreach queues, care/service plans, provider rosters, and gaps in care report
- Performance metrics that can be used to equitably evaluate RCCO performance
- Technical assistance to RCCOs and providers to use common tools

Without these common infrastructure elements, significant variation between RCCOs prevents evaluation of RCCO performance, and just as importantly, interferes with sharing lessons learned and best practices across RCCOs. Further, smaller RCCOs may not be able to implement sophisticated care tools and systems. Providing basic population health management tools can create a level baseline among RCCOs, and allows the Department greater choice among organizations. This opportunity is especially important if the Department intends to select more than one RCCO per region.

3) What is working best in the Behavioral Health Organization (BHO) system right now?

4) What is not working well in the BHO system?

5) What is working well with RCCO and BHO collaboration right now?

6) What is not working well with RCCO and BHO collaboration right now?

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

Organizations, agencies, and the State are committed to the delivery of integrated care, and have made great strides to increase the integration of behavioral health (including substance use services) into primary care. We suggest several opportunities to evolve integrated healthcare for Medicaid Clients in Colorado:

- Move to eliminate the carve-out of behavioral health services. By definition, "carved out" services are not integrated into a unified medical and behavioral health delivery system. Separate networks, billing and management systems, and administrative infrastructure add cost and contribute to disconnected care.

- Develop a bi-directional model to integrate primary care services into community-based behavioral health to accommodate individuals with serious mental illness. Literature suggests these individuals experience additional barriers to primary care, and may prefer receiving services through a specialty provider.

- Continue payment reform that supports integration, including, for example:

    - Allowing billing of primary care and behavioral health services to the same person on the same day

    - Develop and administer benefit packages that encourage "bundled" medical and behavioral health services, such as services for diabetes and schizophrenia or behavioral health services and smoking cessation.

- Develop a Service Plan model for Clients with co-occurring conditions that provides a framework for integrated service delivery, with defined roles for the Client and Integrated Service Team

    - The Medicare Model of Care for Dual eligible and the Medicare/Medicaid demonstrations suggests such a framework

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☐	☐	
Community Behavioral Health Services Rule	☐	☐	
Covered diagnoses list	☐	☐	
Different behavioral / physical health reimbursement	☒	☐	
Institutions for Mental Diseases exclusion	☐	☐	
OBH rules, reporting, or financing (regulatory differences between agencies)	☐	☐	
PCMP financing structure	☒	☐	PCMP financing in general needs to should support the need on the part of physicians and office staff to spend time with individuals who present with co-occurring conditions.
Per-member per-month amount	☒	☐	Current PMPMs for RCCOs (stated in the Q&A as between $8.43 and $9.00) seem inadequate to address the intensive and potentially long-term services required for individuals with serious mental illness and substance use disorders
Physical space constraints	☐	☐	
Privacy Laws (HIPAA, 42 CFR)	☒	☐	These laws limit sharing of information that promotes integration
Professional / cultural divisions	☒	☐	Basic understanding of the purpose of services differs greatly between medical and behavioral health – e.g., curing vs recovery, medication vs therapy, etc. Additionally, behavioral health providers may be concerned by the apparent shift of service delivery from specialty settings to primary care settings as the most appropriate service setting for Clients with serious mental illness; primary care providers may be similarly concerned at the presence of individuals with

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

			behavioral health and/or substance use disorders in their primary care settings. Cultural and professional issues can be resolved by training and practice; bi-directional integration helps to address concerns about the setting of care.
RCCO or BHO contracts	☒	☐	Please see our comments above concerning a carved out behavioral health system.
Staff capacity	☐	☐	
State/Federal rules or reporting requirements	☐	☐	
Technical resources / data sharing	☒	☐	Data integration is a foundational tool for service integration and care coordination, and technical resources should include risk adjustment that factors in the presence of chronic illness; behavioral health issues; and substance use disorders so that RCCOs can identify appropriate staffing models (e.g., a combination of behavioral health professionals and medical professionals for care coordination) and prioritize Clients appropriately. Additionally, variations in practice among RCCOs contribute to a lack of consistency between CCOs, and may limit the Department's ability to evaluate the full impact of RCCO interventions. One way to address this issue is to develop baseline requirements; another is to implement processes through a statewide vendor. For example, the SDAC can provide risk-adjusted financial and other risk-adjusted impact reports.
Training	☒	☐	A serious need is training for "first responders" (emergency medical personnel, police, school personnel, and clergy, for example) to understand and recognize symptoms of behavioral health crisis and be able to respond appropriately.
Others	Care coordination tools that support integration, through development of an integrated Service Plan and information sharing among an Integrated Service Team, including the Client.		

9) **What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?**

- A complement of relevant personnel, including primary care, behavioral health, and substance use disorder professionals to provide parity in access to medical and behavioral health services
- The ability to offer expanded hours to adults with behavioral health issues and/or separate waiting areas. For example, the Commonwealth of Puerto Rico does not allow adults and children to use the same waiting room to receive behavioral health services.

10) **Please share any other general advice or suggestions you may have about behavioral health integration.**

Consider allowing behavioral health providers/clinics/systems to serve as RCCOs with integrated primary care into behavioral health settings.

Care Coordination

11) **Care coordination is an important part of the ACC Program.**

a. What is the best definition of care coordination?

As defined in a publication from the Agency for Healthcare Research and Quality, and widely adopted by other organizations such as Dr. Ed Wagner and colleagues at the McColl Institute for Healthcare Innovation:

Care coordination is 'the deliberate organization of patient care activities between two or more participants involved in a patient's care to facilitate the appropriate delivery of health care services." [3]

We understand "participants" to include medical, behavioral health, and home and community-based providers and other members of an integrated service team, including pharmacists, for example, as well as the individual whose care is being coordinated.

b. **How should RCCOs prioritize who receives care coordination first?**

There are very sound metrics that quantify indicators of "uncoordinated care" that can be applied at the individual level, such as admissions for ambulatory care-sensitive conditions, emergent and non-emergent visits to the emergency department, lack of engagement with a usual source of care, etc. Additionally, evidence suggests that multiple and/or co-occurring conditions increase the likelihood that individuals will experience uncoordinated care, especially in combination with indicators such as those mentioned here. These metrics, together with diagnostic information, can be applied to claims retrospectively and assessment data prospectively to prioritize individuals for care coordination.

An important point is that this approach should be consistent from RCCO to RCCO since variation in selection of metrics, application to the population, ability to produce analytics and reports will undermine the Department's ability to evaluate the program as a whole and usefully compare RCCOs to state results and to each other.

c. **How should RCCOs identify clients and families who need care coordination?**

By using indicators such as those discussed in item 11)b to quantify the extent to which Clients and families have characteristics of uncoordinated care.

d. **How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?**

[3] McDonald KM, Sundaram V, Bravata DM, et al. Closing the Quality Gap: A Critical Analysis of Quality Improvement Strategies, Volume 7—Care Coordination. Rockville, MD: Agency for Healthcare Research and Quality, U.S. Department of Health and Human Services; June 2007. [link]

We strongly recommend data integration that brings together assessments, clinical, claims, and home-and-community-based services data to create a person-centered database that is centralized and consistent between RCCO regions. This information can be compiled automatically through feeds from RCCO and provider systems as well as from the MMIS. The person-centered data system can then be used to calculate indicators of uncoordinated care at the individual level as well as acuity and risk factors. When shared with RCCOs and providers, the data can also form the basis for integrated service plans.

12) **What services should be coordinated and are there services that should not be a part of care coordination?**

For individuals who need care coordination, such as Clients with multiple co-occurring conditions or individuals who need access to home and community-based services (HCBS) to avoid institutionalization, most services should be part of an integrated care plan and coordinated among providers. These services would include, for example, medical, behavioral health, HCBS, meals, transportation, and medication; they could also include supported employment and housing for certain individuals, as well as linkages to community-based resources such as WIC, assistance with utilities, food pantries, etc.

13) **What pieces of information are most important to have about someone in order to know what care coordination he or she needs?**

Functional status, living/support resources, and diagnoses are key pieces of information.

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today?

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

A very special situation is that the Statewide UM Contractor provides limited care coordination for individuals who are enrolled in the Client Over-utilization Program and are not affiliated with a RCCO. The coordination is focused on changing Client behaviors that are linked to over-utilization, and services coordinated are limited to specific primary care, facility, and pharmacy providers.

c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

Consumer direction for care coordination would enable clients to select among qualified care coordinators depending on their needs and existing relationships.

d. What are the gaps in care coordination across the continuum of care?

15) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	Should the RCCO have a role? Yes	No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma	☒	☐	☒	Providing specialized, trauma-informed services through medical and behavioral health providers
Affordability (assistance with prescriptions or co-pays)	☒	☐	☐	
Daycare / childcare	☒	☐	☐	
Economic stability & employment	☒	☐	☒	For individuals with supported employment, some oversight of the supported employment provider should be a RCCO role
Education	☒	☐	☒	Related to school-based behavioral health and primary care, RCCOs should include these entities in their networks
Environment	☒	☐	☒	Relative to environmental modifications that may be required for certain Clients, to have oversight of the provider network and authorization for the service
Food access / nutrition	☒	☐	☒	For HCBS services, RCCOs should have the ability to oversee and authorize services as part of a comprehensive service plan
Health literacy	☒	☐	☒	RCCOs should be aware of health literacy issues in their populations, and be able to arrange for programming to improve it.
Housing	☒	☐	☒	For HCBS services, RCCOs should have the ability to oversee and authorize services as part of a comprehensive service plan
Language or translation services	☒	☐	☒	RCCOs should be able to know if providers are arranging for needed language or translation services and facilitate access for their enrolled Clients
Literacy	☒	☐	☐	
Transportation	☒	☐	☐	
Other	Please type your response here. Feel free to list as many non-medical factors as you want, and please explain how the RCCO should be involved.			

16) **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	Coordinate care? Yes	No	In what capacity should these individuals coordinate care in the ACC Program?
Advanced Practice (Registered) Nurses	☒	☐	Field-based and telephonic coordination of more intensive services related to their practice specialty as part of a multi-disciplinary team
Certified Addiction Councilors	☒	☐	Field-based and telephonic coordination of substance use disorder services as part of a multi-disciplinary team
Certified Nurse Midwives	☒	☐	Office and practice-based coordination of pregnancy services as part of a multi-disciplinary team
Community Health Workers	☒	☐	Access to HCBS, again as part of a multi-disciplinary team
Generalists (BA/BS/MA/MS)	☒	☐	Generalists can coordinate non-clinical services as part of a multi-disciplinary team
Health Coaches	☒	☐	Delivery and coordination of health education and self-management skill training
Licensed Clinical Social Workers	☒	☐	Field-based and telephonic care coordination of HCBS services and clinical behavioral health, medical, and substance use disorder (SUD) services
Licensed Marriage and Family Therapist	☒	☐	Field-based and telephonic care coordination of HCBS services and clinical behavioral health and SUD services
Licensed Mental Health Counselors	☒	☐	Field-based and telephonic care coordination of HCBS services and clinical behavioral health and SUD services
Licensed Professional Counselor	☒	☐	Field-based and telephonic care coordination of HCBS services and clinical behavioral health and SUD services
Masters of Public Health	☒	☐	MPHs can coordinate non-clinical services as part of a multi-disciplinary team and may also be able to deliver health education if that was part of their MPH
Medical Doctors / Doctors of Osteopathic Medicine	☒	☐	Office- and facility-based coordination of medical services
Nurse Practitioners	☒	☐	Field-based and telephonic coordination of more intensive services related to their practice specialty as part of a multi-disciplinary team
Patient Navigators	☒	☐	Facilitation of access to services and assistance with resolving barriers to care

Peer Advocates	☒	☐	Facilitation of access to services and assistance with resolving barriers to care, coordinate and attend office visits and other services as needed
Promotoras	☒	☐	Facilitation of access to services and assistance with resolving barriers to care, coordinate and attend office visits and other services as needed
Psychiatrists	☒	☐	Office- and facility-based coordination of medical services, with an emphasis of medication reconciliation for psychotropic medications
Psychologists	☒	☐	Field-based and telephonic care coordination of clinical behavioral health and SUD services, especially for individuals with serious mental illness and co-occurring conditions (assumes PhD)
Registered Nurses	☒	☐	Field-based and telephonic coordination of services as part of a multi-disciplinary team
Social Workers	☒	☐	Field-based and telephonic coordination of services as part of a multi-disciplinary team
Wraparound facilitators	☒	☐	Facilitation of integrated care plan and assistance with resolving barriers to care, coordinate office visits and other services as needed
Other	Please type your response here.		

17) **Care coordination requirements for specific populations.** Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and infants	☒	☐	Access to NICU specialists post-discharge for low birth-weight babies
Children	☐	☒	
Children who are healthy, but in socially-complex environments	☒	☐	Include coordination of services for the family as well as access to pediatric specialties and subspecialties
Children involved in the foster care system	☒	☐	Focus on continuity of care coordination across foster families as well as access to related social services
Children with a chronic illness	☒	☐	Specialty/pharmacy coordination and access to behavioral health supports for child and family; coordination of home care and other community-based services; coordination with school (e.g., IEP)

Children with a serious emotional disturbance	☒	☐	Specialty/pharmacy coordination and access to behavioral health supports for child and family; coordination of home care and other community-based services; coordination with school (e.g., IEP)
Children with medical complexity	☒	☐	Specialty/pharmacy coordination and access to behavioral health supports for child and family; coordination of home care and other community-based services; coordination with school (e.g., IEP)
Children or youth with a behavioral health diagnosis or substance use disorder	☒	☐	Specialty/pharmacy coordination and access to behavioral health supports for child and family, including coordination that is trauma-informed and familiar with the juvenile justice system; coordination of home care and other community-based services; coordination with school (e.g., IEP)
Transition-age adolescents	☒	☐	Should include Peer Supports to facilitate transition from pediatric to adult providers as well as support to transition to more limited benefit package
Parents and families	☐	☒	
Pregnant women	☐	☒	
Adults	☐	☒	
Adults who are healthy, but in socially-complex situations	☒	☐	Include coordination of services for the family as well as access to social services
Adults with a chronic illness	☒	☐	Specialty/pharmacy coordination and access to behavioral health supports for Client and family
Adults with a behavioral health diagnosis or substance use disorder	☒	☐	Specialty/pharmacy coordination and access to behavioral health supports for Client and family
Clients involved in the criminal justice system	☒	☐	Coordination of legal services and medical/behavioral health services to promote access to timely care and prevent inappropriate incarcerations
Clients with a disability	☒	☐	Coordination of HCBS with medical/behavioral
Clients in a nursing facility	☒	☐	Coordination of primary care services to prevent avoidable admissions for conditions such as dehydration, for example

Elderly clients	☐	☒	
Frail elderly clients	☒	☐	Coordination of primary care services to prevent avoidable admissions for conditions such as dehydration, for example. Also, coordination of HCBS such as home modifications, Personal emergency response systems, etc.
Clients in palliative care	☒	☐	Coordination of support for Client and families
Other populations, please comment:			

18) **How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?**

Representatives of the child-serving agencies, such as Case Workers, should be considered part of the Integrated Care Team and be involved with the Integrated Service Plan.

19) **How should care coordination be evaluated? How should its outcomes be measured?**

Applying the Triple Aim – cost, health status, and Client experience – helps to define how care coordination can be evaluated:

- Cost: tracking utilization of uncoordinated care (avoidable admissions, readmissions, and emergency room visits, for example) per person, adjusted for acuity
- Status: Including community tenure, functional status, and ability to engage in community activities, including school and work. Individual status can also be measured by tools such as the Patient Activation Measure (PAM).
- Client experience – using CAHPS or another survey tool

Again, apply these measures and activities consistently to individual RCCOs helps to ensure that the evaluation can be used to improve care coordination and hold RCCOs accountable in an equitable way.

20) **Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.**

a. What is the PMPM cost for providing care coordination services?

b. **Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?**

An escalation factor should be applied depending on several factors:

- Individual acuity – how intensive is the individual's coordination needs?

- Population acuity – how intensive/acute is the RCCO's overall population?

Please note – for this factor to avoid "gaming," it is important that Clients receive what CMS calls a "conflict-free assessment," that is, an assessment that is conducted by a party that is free from any conflict of interest regarding the results of the assessment

21) **Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?**

No. RCCOs should be able to vary the workload according to the location, Client acuity, type of condition(s), etc. The requirement should be accountability to expected outcomes, regardless of the model used.

a. **Care coordinator to client ratios.** If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☐
51-100	☐
101-200	☐
201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

22) **How should care coordination outcomes be evaluated by the Department? Which metrics are most important?**

We use claims-based indicators of uncoordinated care to evaluate outcomes:

- Admissions per 1,000 Clients (lower is generally better)
- Admissions for ambulatory care-sensitive conditions (lower is better)
- Readmission rate (lower is better)
- Visits per 1,000 Clients to the Emergency Room (lower is better)
- Emergency room visits for non-emergent care per 1,000 Clients (lower is better)
- Engagement with a usual source of primary care, measured by frequency of visits to PCP and/or use of non-institutional providers for primary care (higher is better)

The benefit of these measures is that they can be efficiently applied to the total population on a monthly, quarterly, and annual basis to establish baselines and then track improvements. They are also helpful in identifying best practices among high performing providers, groups, and RCCOs, and share these best practices across the system to improve performance at the statewide level.

Additionally, tools such as the Patient Activation Measure (PAM) published by InsigniaHealth provide quantitative results on engagement of Clients with their health and healthcare, and development of self-management skills.

23) **Please share any other general advice or suggestions you have about care coordination in the ACC.**

We suggest that the Department consider a statewide vendor contracted by the RCCOs that provides comprehensive and standardized support to the RCCOs and their providers, and integrated with the statewide UM functions. Responsibilities of this vendor should include:

- Electronic data interchange with RCCOs, providers, CORHIO, QHN, and MMIS to provide a comprehensive, person-centered data system including medical, behavioral, HCBS, and pharmacy claims as well as clinical information such as lab values
- Identification and Stratification processes to continuously identify high-risk, high-cost Clients and prioritize them for RCCO and provider interventions
- Conflict-free assessment of high-risk, high-cost individuals to support comprehensive care planning
- A web-based and standardized care coordination tool that automates service plans for each Client, and generates care planning data and reports such as gaps in care reports and provider registries. The care coordination tool should be accessible to RCCO and Provider for interactive use as desired and interfaced with RCCO and provider systems to avoid duplication of systems and level of effort at the local level
- Assistance with integration and care coordination to support RCCOs and providers for the highest cost/risk clients who may present difficulties for RCCOs
- Specialized initiatives, such as emergency department diversion
- Nurse Advice Line and crisis line

Additionally, Care coordination activities should be team-based, with physicians, nurses, social workers, peer facilitators, pharmacists, and others as part of the Integrated Care Team. Care Coordinators should be part of this team and have the ability to interact with all other members. Care coordination includes a combination of field-based, face-to-face and telephonic support, and should be based on a comprehensive individual service plan that integrates services. The service plan should be based on a conflict-free assessment that documents Client needs and status.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

Process and outcome measures should be standardized across RCCOs.

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

Documentation of existing relationships or letters of intent/memorandum of understanding to work with the prospective RCCO.

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

This only makes sense if there is more than one RCCO per region.

27) Should the RCCO region maps change? Why or why not? If so, how?

28) Should the BHO region maps change? Why or why not? If so, how?

Yes, behavioral health should be integrated into the RCCO, so the regional map would be the same.

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

32) **Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?**

Having more than one RCCO per region, promotes choice, just as many states have more than one managed care organization per region for that same reason. Currently, Clients that are unhappy with their RCCO have the option of leaving the program – that is, withdrawing from care coordination. If there were more than one RCCO, Clients would have a choice and RCCOs would have incentives for good performance. This approach might then be more successful at promoting good performance than additional funding.

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

34) **What role should RCCOs play in attributing clients to their respective PCMPs?**

None. This attribution should be conducted by an independent statewide vendor.

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

There are very good opportunities to collaborate on public health initiatives – improving rates for preventive services, regional and/or seasonal campaigns for vaccinations, wellness initiatives, etc.

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

Extensive collaboration around the children with special needs, children in foster care, and children in the juvenile justice system, including integrating DHS Case Managers into the integrated care team.

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

Collaboration to facilitate the transition of individuals between Medicaid and health exchange eligibility.

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

Collaboration and coordination around regulatory and licensing requirements.

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

42) How should the Department structure stakeholder engagement for the ACC as a whole?

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

a. If no, what are the gaps?

b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

a. What role should hospitals play in the next iteration of the ACC Program?

b. What role should pharmacies play in the next iteration of the ACC Program?

c. What role should specialists play in the next iteration of the ACC Program?

d. What role should home health play in the next iteration of the ACC Program?

e. What role should hospice care play in the next iteration of the ACC Program?

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

g. What role should counties play in the next iteration of the ACC Program?

h. What role should local public health agencies play in the next iteration of the ACC Program?

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

45) How can RCCOs help to support clients and families in making and keeping appointments?

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

47) **Community Health Worker reimbursement.** Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement process	(Please check all that apply)
Independently bill	☐
On staff (salary) at Primary Care Medical Provider Clinic	☐
On staff (salary) at RCCO	☒
Per Member Per Month Payment	☐

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you?

b. What RCCO requirements would ensure cultural competency?

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

51) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

52) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

Practice Support

53) **Support for practices.** Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☐	☐	☐	☐
Network provider education	☐	☐	☐	☐
Assistance with practice redesign	☐	☐	☐	☐
Assistance with efficiency-enhancing activities	☐	☐	☐	☐
Provide web-based resources and directories	☒	☐	☐	☒
Provide practice-specific data reports	☒	☐	☐	☒
Provide clinical care guidelines and best practices.	☒	☐	☐	☒
Provide clinical screening tools	☒	☐	☐	☒
Provide health and functioning questionnaires	☒	☐	☐	☒
Provide chronic care templates	☒	☐	☐	☒
Provide registries	☒	☐	☐	☒
Offer client reminders	☐	☐	☐	☐
Offer client self-management tools	☐	☐	☐	☐
Offer educational materials about specific conditions	☐	☐	☐	☐
Supply behavioral health surveys	☐	☐	☐	☐
Supply other self-screening tools	☐	☐	☐	☐
Administer behavioral health surveys	☒	☐	☐	☒
Administer other self-screening tools	☐	☐	☐	☐
Prepare client action plans	☐	☐	☐	☐
Provide training on providing culturally-competent care	☐	☐	☐	☐
Provide training to supporting staff	☐	☐	☐	☐
Provide training on motivational interviewing	☐	☐	☐	☐
Provide tools and software for phone call and appointment tracking	☐	☐	☐	☐
Provide tools and resources for tracking labs, referrals, etc.	☒	☐	☐	☒
Provide referral and transitions of care checklists	☒	☐	☐	☐
Provide visit agendas or templates	☐	☐	☐	☐
Provide standing pharmacy order templates	☐	☐	☐	☐
Provide comprehensive directory of community resources	☐	☐	☐	☐
Provide directory of other resources	☐	☐	☐	☐
Provide materials regarding Nurse Advice Line	☒	☐	☐	☒
Ensure all tools and resources are centrally located on RCCO-specific website	☐	☐	☐	☐
Others				

54) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

55) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

56) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

57) Should the Department require that PCMPs utilize disease registries to manage the health of their population?

58) Please share any other advice or suggestions about provider support in the ACC.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

61) **Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?**

No. Providers do not have access to timely data about Client health status, services, and utilization to prioritize patients and manage populations efficiently. Additionally, other system components that relate to value are not under the control of providers yet would affect their performance.

62) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

63) What role – if any – should the RCCOs play in the distribution of payments to providers?

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

66) **Measuring Client experience.** Please complete the table below to indicate how the Department should measure Client/patient experience:

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☒	☐	
SF-12 Health Survey	☒	☐	Integrated into care coordination tool
Other types of client interviews / surveys	☐	☐	
Patient Activation Measure	☒	☐	For high-risk, high cost Clients to evaluate their baseline engagement ability and track progress of interventions
Focus groups	☐	☐	
Other	Please type your response here. Functional and risk assessments		

67) **Knowing that, at this time, the Department only has claims data, how should population health be measured?**

Two basic methods:

1) Access to and utilization of specific primary and preventive care services
2) Uncoordinated care indicators

68) **How should quality and performance data be reported to the RCCOs, PCMPs, and the public?**

Performance measures should be selected based on relevance and feasibility, adjusted to reflect population acuity and other factors accurately, and reported publicly through user-friendly report cards.

69) **Measures for payment.** Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☐
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐

51+	☐
None	☐

70) What percent of RCCO payments should be tied to measures or performance?

Percentage	
10-20%	☐
21-30%	☐
31-40%	☐
41-50%	☐
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

71) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?

72) **Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?**

Both. Larger RCCOs are better able to afford to fund infrastructure and staffing, and might therefore perform better on measures tied to national standards. For these RCCOs, a ceiling effect would disincentive them from making large improvements. Smaller RCCOs might not be able to meet national standards but could improve performance over their own baselines. Using both approaches helps to ensure that RCCOs have incentives to achieve standards, and continue incrementally improving.

73) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

74) **Incentive payment frequency**. Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	☐
Annually	☐
Other	☐

If you checked the "Other" box, please describe payment frequency below:

75) For potential 27fferors and other similar organizations: please describe the fixed costs of operating a RCCO.

76) For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

Health Information Technology (HIT)

77) **Types of communication.** For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	☐
Text message	☐	☐
Web portal	☐	☐
Email	☐	☐
Telemedicine / Video chat	☐	☐
Face-to-face meeting	☐	☐
Smartphone app	☐	☐
Other:		

78) **HIT investments by organizations.** For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below:

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	☒	☐
Digital care management tool	☒	☐
Care transitions alerts	☒	☐
Electronic Health Records (EHRs)	☒	☐
Health risk assessment software	☒	☐
Practice assessment tools	☒	☐
Practice management tools (scheduling, billing)	☐	☐

Client web portal for communicating care plan, services, benefit enrollment	☒	☐
Patient education/wellness tools	☒	☐
Provider/case manager directory	☒	☐
Shared decision-making tools	☐	☐
Telemedicine software	☐	☐
Other: Gaps in Care reporting, provider registries, health status assessments	☒	☐
Other:	☐	☐

79) **Importance of technology by type.** The Department is working to determine what technology is in place, what technology is needed, and what technology should be standardized. For RCCOs, providers, and other organizations, use the table below to answer what HIT infrastructure outside of the SDAC your organization would use to perform population health management activities. Tools are scored from 1-S, where 1 are those items least-likely to be used, and S are items most-likely to be used:

Tool	1 Least	2	3	4	5 Most
Population analytics / reporting / dashboard	☐	☐	☐	☐	☒
Care management tool	☐	☐	☐	☐	☒
Care transitions alerts	☐	☐	☐	☐	☒
Electronic Health Records (EHRs)	☐	☐	☐	☒	☐
Practice assessment tools	☐	☐	☒	☐	☐
Health risk assessment software	☐	☐	☐	☐	☒
Practice management tools (scheduling, billing)	☐	☐	☒	☐	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☐	☐	☒	☐
Patient education wellness tools	☐	☐	☐	☒	☐
Provider/case manager directory	☐	☐	☐	☒	☐
Shared decision-making tools	☐	☐	☐	☒	☐
Telemedicine	☐	☐	☒	☐	☐
Other:	☐	☐	☐	☐	☐

80) What are the primary barriers to RCCOs and providers increasing their use Health Information Technology to improve the performance of Primary Care Practices?

81) **How can Health Information Technology support Behavioral Health Integration?**

Through data integration as described in 11)d – the development of a comprehensive and integrated person-centered database that includes claims, assessments, eligibility, and other information about Clients. This integrated database can then support the development of integrated service plans to support the Client and an integrated service team.

82) **In the next iteration of the ACC, should there be a shared resource for data and analytics? Please describe the basic criteria for what a shared data and analytics platform needs to contain in order for it to be useful.**

Yes. There should be a statewide data/analytic and care management system that integrates eligibility, claims, and health status to create a model, automated service plan that is accessible to RCCOs and providers. Information should be organized by Client, include risk/acuity assessment, service plans, and care coordination tools. This resource should be web-based and accessible to stakeholders through a secure web portal.

As a method to promote consistency and appropriate standardization across RCCOs, this system would then incorporate needed tools and exchange data with RCCO, state, and provider systems.

83) **Should there be a shared care management tool? Please describe the basic criteria for what a care management tool would need to contain in order for it to be useful.**

Yes. This tool should be integrated with the data and analytics tool to allow Care Coordinators to facilitate management of the Integrated Service Plan across providers and systems, including non-clinical services. The Care Management tool should include:

- Auto-generated Service Plan based on data integration and risk modeling that can be modified and maintained by the Integrated Service Team (IST).
- Background of utilization and services, including medical, behavioral healthcare, dental, pharmacy, and HCBS services
- Assessment tools and results
- Integrated risk adjustment/status tools such as Chronic Illness and Disability Payment System (CDPS) and the Patient Activation Measure (PAM)
- Tracking and communication tools to monitor the service plan and communicate between members of the IST.
- Ability to generate provider registries and gaps in care reports, as well as uncoordinated care indicator reports

84) **Should there be a shared population health management tool? Please describe the basic criteria for what a population health management tool would need to contain in order for it to be useful.**

Please note, we define population health management (PHM) as the process of strategically and proactively managing clinical and financial opportunities to improve health outcomes, strengthen patient engagement with their providers, and reduce avoidable costs of care. A population health management tool should be a system, combining features of data management and analysis and care coordination tools to provide comprehensive support for program operation. Criteria for a PHM tool therefore include:

- **Identification and Stratification**

The system/tool should be able to accommodate custom definitions of the target population, and be able to stratify them according to utilization, status, and risk characteristics. The tool should also allow updates and changes to the definitions and stratification to align with program evolution.

- **Evidence Based Care Plan**
  An evidence-based care plan should be developed by the system as a modifiable template based on applying identification and stratification algorithms. This "model" care plan can then be managed by members of the care team as a continuous road map for integrated, comprehensive care.

- **Coordination and Engagement**
  Additional important criteria for the PHM tool is to help the care team prioritize interventions, coordinate care, and engage the Client and each other. How the tool would support these activities is by continuously refreshing the individual Client's record with new UM and other data, creating outreach listings and provider registries (for example), and providing the means to document and update the Client's care plan to reflect these activities.

- **Analytics and Reporting**
  Information that the system generates includes, for example:

  - Key Performance Indicators (KPIs) selected by the program, by population group, RCCO, provider type, individual provider, Client demographics, etc.
  - Gaps in care such as health and wellness services
  - Indicators of uncoordinated care
  - Provider registries and profiles
  - Client risk and utilization reporting, including stratifying Clients as candidates for the Client Over Utilization Program

85) Please describe the functionality that a common Medicaid provider directory would need to contain in order for it to be useful.

86) How can the RCCOs support providers' access to actionable and timely clinical data?

87) What are the HIT solutions that would benefit clients, providers, and RCCOs? Please comment on the parameters these tools or platforms would need to possess and the ways in which they could be used.

88) What technical assistance or resources related to HIT infrastructure should the RCCOs supply? This assistance or these resources could be for providers, social service organization, clients/families, or for others.

89) What role should health information exchange platforms like CORHIO or QHN play in the next iteration of the ACC?

90) **Please share any information, advice, and suggestions you have about health information technology in the ACC Program.**

In this response, we suggested several ways for the Department to promote consistency of systems, tools, and other factors between RCCOs to support their ability to deliver care coordination interventions and the ability of the Department to evaluate RCCO performance against national standards such as HEDIS as well as compare RCCOs equitably to each other.

APS Healthcare provides such a common systematic approach, and welcomes the opportunity to provide a live web-based demonstration of this system so that the Department can see an example of how tools and systems can support RCCOs and providers. Our contact information is included with submission of this response.

RE: Request for Information (RFI UHAA 2015000017) Accountable Care Collaborative

Dear Mr. Dunlevy-Wilson:

Deloitte Consulting LLP (Deloitte), a professional services firm, is pleased to submit a response to the RFI related to Colorado's Accountable Care Collaborative (ACC) initiative.

As requested, we included a response to the basic information about the respondent template. While the current timing of this RFI did not allow us to respond to as many topical areas as we would have preferred, we have provided some comments related to the Payment Structure and Quality Monitoring section. In our response, Deloitte incorporated information gained through supporting clients across the health care market with similar efforts. Our client support includes working with both commercial accountable care organizations (ACOs) as well as states implementing ACO and other value based care initiatives into their Medicaid programs. We have included information from a diverse background of resources including, clinicians, data specialists, actuaries, health program professionals, and information system specialists.

We are excited to be able to provide insight to Colorado and hope our submission provides helpful information for this important initiative. Given our national experience with various Accountable Care Organization initiatives we would like to extend an offer to the Department to help further shape the direction for the design of various components of the ACC program, such as the Payment Structure and Quality Monitoring, Behavioral Integration and Health Information Technology. Please let us know a good time to discuss potential next steps.

Should you have any questions, please feel free to contact me at 612-659-2595 or tsteiner@deloitte.com.

Sincerely,

Deloitte Consulting LLP

Thomas J. Steiner

By:
Thomas J. Steiner, ASA, MAAA

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Tom Steiner
Location: Minneapolis, Hennepin County, Minnesota

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Deloitte Consulting LLP (Deloitte)
Location: Minneapolis, MN
☒ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☐ Medical provider / PCMP / other provider
  i. Type or specialty: Click here to enter text.
  ii. Area of practice: Click here to enter text.
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☒ Another public or private program
☐ Legislator or elected official
☐ Other (please describe): Click here to enter text.

Are you currently involved in the ACC program?

☐ Yes
☒ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☐ 3-4 years
☐ Since before the program was implemented.

How have you been involved in the ACC program and what interaction have you had with RCCOs:
We have no direct involvement with the ACC program at this time.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:
Please see the following page for a description of our involvement with Medicaid programs across the nation.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes

☐ Will not seek to participate
☒ N/A

Deloitte works with the State of Colorado on a variety of initiatives; we understand the value of a good working relationship. We are willing to invest in this initiative to further our relationship and position Deloitte to work with you to further implement various components of the ACC initiative.

Response to Payment Structure and Quality Monitoring

As mentioned in the introductory letter, we have provided some comments related to the Payment Structure and Quality Monitoring section. While the ACC is a leading-edge state Medicaid program, we trust that our national experience with ACO programs is helpful in your goal to make bolder, more-comprehensive changes to the ACC through deeper integration, new payment reforms, and the promotion of whole-person/whole-family health.

In addition to our ACO payment structure experience we have helped our national clients with the following tasks, helping them to move from the design phase and through program implementation:

- Designing ACO operations and governance
- Determining ACO core capabilities
- Defining ACO services
- Identifying performance measures and measuring quality
- Assessing data collection capabilities and developing the appropriate system to gather data
- Developing data analytic tools and reporting capabilities

RFI

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

Our response contains more general comments around payment structure that we have garnered from our national experience with both state Medicaid programs and commercial ACO programs. Therefore, we have classified our response under question #64 of the RFI. This response includes the following:

- Considerations on program and payment design parameters
- Considerations in the level of risk to include in ACC payments
- Considerations on determining services to include in payment reform
- Considerations on RCCO payment distribution

Considerations on program and payment design parameters

While Colorado will be able to leverage the existing program and payment design when reforming the ACC program, the State should consider reassessing the core design parameters to verify that the structure is appropriate for any additional populations, services, provider types, etc.

Colorado should considered reviewing and reassessing the following aspects during the reform process:

- **Attribution** – An open group attribution methodology has been utilized by various states, such as Minnesota and Maine. An attribution process should be conducted during both the benchmark and performance periods to provide consistency in the population included for both periods. The existing

ACC attribution process may not be valid if new services or populations are added. Populations with specialized needs may require services not currently part of the attribution process that should be considered when attributing them.

- **Excluded Services** – Other states have considered services as excludable if that service isn't an alternate option for a covered service. In other words, if a covered service could shift costs to an excluded service

  to create artificial savings then that service should be included. We supported the State of Maine in assessing the services utilized by participating members. Maine then identified specific "core" services that were required to include in the program and "optional" services that participating ACOs could elect to include in their risk sharing arrangement.

- **Risk Sharing** – Other states have included a two-sided (i.e. shared savings as well as shared losses) risk sharing feature in their ACO programs to further provide incentives to the providers. The risk sharing considerations are further discussed in the following section.

- **Quality Metrics** – Based on the population being served quality metrics should be reassessed to make sure that they tie to the shared savings/losses payments and are appropriate for the covered populations to improve care quality.

- **Benchmark Setting** – Other states have implemented retrospective trend adjustments when setting the benchmark to avoid artificial savings/losses that are driven by inaccurate trends. This is consistent with the MSSP and Pioneer ACO programs, as well as a CMS recommended approach.

- **Catastrophic Claims** – Some states cap the benchmark and performance period member total cost of care at various thresholds to reduce variation from catastrophic claims. CMS typically requires an assessment of catastrophic claims and it's also important to protect ACOs from the risk of catastrophic claims.

- **Risk Adjustment** – Risk adjusting the ACC benchmark to be on the risk level of the performance to account for shifts in population health for more accurate shared savings/losses calculation is important as the ACC program expands.

- **Payment Model** – The payment model for ACO program varies across states and should be tailored for Colorado. As the ACC program is reformed, the payments for populations not currently included in the ACC program should be considered and potentially carried forward as a starting point to minimize service disruption.

- **Program Parameters** – ACO program parameters should reflect state-specific experience, goals, and population covered. We recommend performing analyses based on Colorado specific data to determine the appropriate program parameters for the covered population and services.

- **Covered Services** – The population included in the ACC program as well as the program goals and desired outcomes will help determine what services should be covered. Colorado should perform an

assessment of the population to be added and the services utilized by those individuals to help identify the appropriate services to be covered.

Considerations in the level of risk to include in ACC payments

To truly drive change, the ACC model should attribute some risk to the providers. Models in which providers do not have any downside risk have been found ineffective in driving change. While we have observed this in our own experience with providers and health plans, we point to the position purported in the May 2013 SOA Health Watch stating "*it was essential that the providers take downside risk as part of our ACO agreements, as incentive plans that use both 'carrots' and 'sticks' are more effective in engaging providers to work toward desired outcomes*" describing the successful implementation of ACOs by Blue Cross Blue Shield.

The next questions are the form in which risk transferred and the amount of risk. It is appropriate to limit the amount of risk transferred to providers.

- Limiting downside risk will likely be necessary to encourage participation early on (e.g. since this is new territory, anecdotal evidence such as Dean Health's adverse experience with Medicare Shared Savings Program may bias providers).

- Limiting overall risk may be fiscally appropriate as few providers have the expertise in assessing risk exposure and may serve to protect providers from adverse outcomes (a la statutory regulations with insurance companies and health plans) and the longevity of the program. As an ACO matures, providers should be encouraged to build out their expertise in risk analysis by partnering with health plans or engaging in those practices; with this, the State may allow providers to take on more risk.

- Some risk limitations will serve as protections for the providers while some may enhance an ACO's focus on improving utilization and quality of care.

In order to transfer an appropriate amount of risk to providers, a minimum and maximum level of risk should be implemented within the ACC program. We would recommend performing a statistical analysis to analyze the Minimum Savings Rate (MSR) and Maximum Savings/Loss Rate for the payment design structure based on Colorado Medicaid specific data. The statistical analysis will help the State understand the MSR needed for the population size and services included in the program design. The MSR risk measure ensures that the program is generating real savings due to delivery system improvement and better care coordination rather than random volatility of the data. The statistical analysis also places a boundary on catastrophic risk by putting an upper boundary on savings and loss payments for each ACC.

In addition to a MSR and Maximum Savings/Loss rate, the ACC can consider claim caps which will further encourage providers to participate by limiting their downside risk. This can vary with enrollment.

Considerations on determining services to include in payment reform

As the ACC program looks to further promote whole-person/whole-family health, the services incorporated into the payment methodology and risk sharing should be considered. There is not a specific list of services which we would recommend to be included or excluded from a risk-based reimbursement. The services to include depend on the population being served, the prevalence of the services for the covered population, the demographics of that population and the program goals.

Such considerations include (but are not limited to):

- **Overall program goals** – the included services should align with the goals that the State is trying to achieve and populations that the State is looking to include
- **Prevalence of service** – services that account for a majority of the expenses may want to be included in risk-based reimbursement due to largest opportunities presented
- **Overlapping services** – the State may want to consider excluding services that have already been managed via other Colorado Medicaid initiative programs
- **Potential for cost-shifting** – the State may want to consider the potential for cost-shifting especially if only some services are included in the risk-based reimbursement. For instance, providers may push more hospital care to long-term home and community based care if hospital care is included in riskbased reimbursement while the latter is not. The shifted cost should be taken into account when measuring the "actual" savings
- **Administrative expenses** – the State may want to consider if expenses which do not directly relate to the care delivered but improve the quality of care and operational efficiencies, such as care coordination, service monitoring, etc., should be reflected in the risk-based reimbursement
- **ACO willingness and capability to take on risks** – the State may want to consider if the services to be included in risk-based reimbursement would present unreasonable financial risk to the participating ACOs
- **Impact on quality and access** – ultimately, the list of services to be included or excluded from a riskbased reimbursement should not negatively affect the quality of care and patient access

Considerations on RCCO payment distribution

The RCCO should provide payments and any shared savings payment to (or recoup shared loss payments from) the ACC Lead Entity within each ACC. The ACC Lead Entity would be responsible for ensuring the provision of locating, coordinating and monitoring activities. Any subsequent payments to network providers will depend on agreements between the lead and other network providers.

If a FFS payment methodology is utilized, all ACC network providers would be paid FFS for the covered services that are incurred during the performance year. At the end of the performance year, total costs of care for the covered services incurred by assigned patients would be calculated and compared to the benchmark cost, and shared savings/losses can then be calculated and distributed amongst the RCCO and ACC Lead Entities.

If a capitation payment methodology is utilized, capitation payments would be made to ACC Lead Entities. Depending on the ACC program design, bonus payments or withholds from the capitation payment arrangements will also be made between the State and ACC Lead Entities.

We have observed some struggles from prospective payment arrangements (for example, bundled payments) in value based care implementation, which makes the FFS payment methodology more appealing. However, an

appropriate payment methodology should be chosen to best fit the goals of the ACC program and the current state of the Medicaid program.

Additional Background on Deloitte Consulting LLP (Deloitte)

Deloitte is the largest global consulting firm with over 100 offices across the nation, including a local Denver office in Colorado.

Leading Health Care Practice

As one of the leading health care consulting service providers in the country, Deloitte provides services through a broad network of practitioners to our state health, federal health, and commercial health care clients. Our professionals include, but not limited to, health actuaries, project managers, CPAs, data experts, risk adjustments rate experts, systems experts, data specialists, nurses, physicians, pharmacists, CMS policy authorities, health program professionals and claims specialists.

The following table highlights the breadth and depth of Deloitte's role and experience in the health care system:

Function Overview	Highlights
Consulting Practice	• More than 44,000 consulting practitioners serving over 150 countries/locations • Serves over 80% of Fortune 500 companies
Life Sciences and Health Care Practice	• A Life Sciences and Health Care practice that is among the largest in the world: 3,900 professionals in the United States • Life Sciences & Health Care experience of more than 70 years
Public Sector and State Government Consulting	• More than 10,000 practitioners supporting the Public Sector industry, having served 47 of 50 states, including the District of Columbia, Puerto Rico, and Guam • More than 3,000 practitioners supporting the state government sector with offices in 22 state capitals • More than 2,000 practitioners focused on health care and human services
Health Actuarial Consulting	• One of the largest health actuarial practices in the U.S. with over 120 health actuarial professionals • Knowledge with the State of Colorado programs
Clinical, Policy and Program Experts	• Physicians, clinicians, pharmacists, nurses and policy professionals • Deloitte resources who have served as CMS Policy Authorities

More specifically, for our value-based care clients, including ACOs, we provide services with our multidisciplinary team of health care professionals with a focus on executable strategy that is co-led by four senior professionals in the following disciplines: medicine, health plans, actuarial services and health information technology and analytics.

Deloitte has spent the last five years in focused work on accountable care enterprises across all stakeholders in the health care eco-system: health systems, physician practices, health plans, third party administrators, pharmacy benefit management companies, life sciences companies, state and local governments, employers, and federal health providers.

Vast Public Sector and Specific Medicaid Program Experience

Deloitte has a consistent nearly 50 year record of service on Medicaid and public health management issues. We have also worked with several states in planning major Medicaid waiver initiatives to facilitate program expansion and assessing program design to transform Medicaid delivery and reimbursement.

Our consultancy includes more than 1,000 public sector professionals dedicated exclusively to government programs, initiatives, and clients

- *44 of the 50 U.S. states*
- *15 of the 20 largest U.S. cities*
- *12 of the 20 largest U.S. counties*
- *30 agencies in the U.S. Federal government*
- *More than 30 higher education institutions in the U.S.*
- *More than 20 of the largest school districts in the U.S.*

Specifically with the State of Colorado Medicaid program, members of the Deloitte team have worked with Department of Health Care Policy and Financing on a number of initiatives related to physical health, behavioral health, PACE, and Children's PRTF. The services provided include:

- Certified capitation rates for each program
- Reviewed State's rate-setting methodology
- Provided support/defense for any future issues that may arise regarding calculations made by the contractor
- Calculated an all-inclusive per diem rate for Psychiatric Residential Treatment Facilities

Representative ACO Experience - MaineCare Accountable Communities Initiative

The State of Maine Department of Health and Human Services ("DHHS") received a SIM Testing grant and is pursuing implementation of an Accountable Communities program for their Medicaid population. The goals of the program are to strengthen access to primary care, increase transparency of cost and quality and reward providers for their performance.

Deloitte Consulting provided the State of Maine DHHS with actuarial analysis to assist DHHS in obtaining approval from CMS for their program. Deloitte performed the following key work steps to achieve these results:

- Performed reasonability checks on the data and verified reliability with aggregate State financial reports
- Warehoused three years of historical FFS Medicaid claims and enrollment data, added additional data fields and cleansed the data for duplicate or invalid data
- Performed sensitivity analysis on program parameters to assist DHHS in obtaining program approval from CMS
- Provided assistance on program design including member attribution and program parameters
- Provided insights into and performed member attribution for all Accountable Communities

- Calculated benchmark PMPMs for all Accountable Communities after normalizing, trending, risk adjusting, and performing other data adjustments
- Conducted various webinars to share program details, attribution methodology, and benchmark PMPM methodology with Accountable Care providers

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Colorado Community Health Alliance
Location: Denver, Denver County, CO

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Click here to enter text.
Location: City, County, State.
☐ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☐ Medical provider / PCMP / other provider
  i. Type or specialty: Click here to enter text.
  ii. Area of practice: Click here to enter text.
☐ Provider advocate (e.g. medical society)
☒ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☐ Other (please describe): Click here to enter text.

Are you currently involved in the ACC program?

☒ Yes
☐ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☐ 3-4 years
☒ Since before the program was implemented.

How have you been involved in the ACC program and what interaction have you had with RCCOs:

CCHA is currently the RCCO for Region 6 serving Boulder, Broomfield, Clear Creek, Gilpin and Jefferson counties

Please briefly describe your involvement with Medicaid, either in Colorado or another state:

Current RCCO for Region 6

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☒ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

Please feel welcome to describe why or why not using the space below.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

There are several things that CCHA feels are currently working well in the ACC. For one, the Department has a non-prescriptive approach on how RCCOs utilize per member per month and Key Performance Indicator funds, which is allowing different models to emerge and be tested. Also, the ACC appropriately places an emphasis on primary care and has allocated some funding to help practices successfully move towards the medical home model. In addition, the ACC is encouraging providers across care settings and other community partners to begin collaborating in new ways that benefit the Medicaid clients and overall health care system.

2) What is not working well in the ACC Program?

The following are the primary areas we've identified with the ACC Program and Medicaid in general that cause confusion for providers and clients and could be improved upon.

Currently there are more than 20 quality/performance metrics that impact ACC providers. Our experience is that this is causing some providers to feel overwhelmed and unclear about the goals and direction of the ACC Program. Some efforts have been initiated to make metrics as similar as possible among all payers for Medicaid, Medicare and commercial contracts. Continued strides need to be made to move in this direction, rather than creating additional metrics that vary across programs/plans.

In addition, there are a number of primary care medical providers with patient rosters that include Medicaid ACC clients from multiple RCCOs as well as Medicaid clients not enrolled in the ACC program. This can cause additional confusion, as each option provides different levels of support services and reimbursement rates. We believe it would be beneficial to better align PCMPs with RCCOs and all Medicaid recipients in the ACC program.

3) What is working best in the Behavioral Health Organization (BHO) system right now?

Having a dedicated entity, such as a BHO, that focuses on providing and expanding behavioral health care services to Medicaid clients is a good thing. Program oversight from the Department ensures the BHOs are performing at an acceptable level with regard to quality outcomes and standards for access to care. The mandated Performance Improvement Plan (PIP) helps promote continued innovation with care delivery for clients with behavioral health needs.

4) What is not working well in the BHO system?

Delivering behavioral health care services to Medicaid clients is complex and requires system flexibility. Unfortunately, there is little to no flexibility in the current BHO system. There needs to be more support for movement towards whole person health that recognizes the importance of integrating behavioral and physical health care, as not all disease states fit perfectly into defined buckets. There are diagnoses such as substance abuse that can fall between or cross over the responsibility of the mental health provider and PCMP. As a result, it can be very challenging to coordinate care and obtain authorization for treatment. And the current

payment structure can cause conflict as to which provider is responsible for care. To help alleviate this, the Department should finalize its efforts to integrate substance abuse with mental health funding.

5) What is working well with RCCO and BHO collaboration right now?

In Region 6, serving Boulder, Broomfield, Clear Creek, Gilpin and Jefferson counties, there is an exact overlap of the RCCO and BHO boundaries. This is highly beneficial and has allowed CCHA to focus collaborative efforts on a single BHO. Once a relationship was established with the BHO, Foothills Behavioral Health Partners, it became clear that we all had similar values and goals and sharing data was a logical next step. After all necessary business associate agreements were in place to allow for sharing of data in compliance with HIPAA rules and regulations, we were able to combine the physical and behavioral data for targeted care coordination of clients and initiatives to improve population health.

6) What is not working well with RCCO and BHO collaboration right now?

CCHA has established a relationship with Foothills Behavioral Health Partners that fosters collaboration for integrated behavioral and physical health care, and our partnership is working well at this time.

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

Separate funding streams have historically prevented meaningful integration of behavioral and physical health care. Specific to Medicaid, capitated behavioral health payments to the BHOs and fee-for-service payments for most hospitals as well as professional and ancillary services creates different incentives, lower outcomes than should be expected, and a higher total cost of care. One of the next steps toward a shift in focus to whole person care should include efforts toward a shift in payment models that provides more consistent incentive for delivering value based care. As the ACC continues to mature, the Department should look for RCCO candidates that are able to manage a blended behavioral and physical payment.

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services. Using the table below, please explain which issues are barriers, and how they can be addressed:**

All of the factors listed below are barriers to a degree, but from our experience Privacy Laws (HIPAA, 42 CFR) and Different Behavioral/Physical Health Reimbursements are of the most concern.

Factor:	Barrier? Yes	Barrier? No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☐	☒	
Community Behavioral Health Services Rule	☐	☒	
Covered diagnoses list	☐	☒	
Different behavioral / physical health reimbursement	☒	☐	Different reimbursements for behavioral and physical care create different incentives among different providers. We believe a positive next step would be to develop a payment model that drives value-based care and rewards providers across the health care system for delivering appropriate, cost-effective services.
Institutions for Mental Diseases exclusion	☐	☒	
OBH rules, reporting, or financing (regulatory differences between agencies)	☐	☒	
PCMP financing structure	☒	☐	In the current fee-for-service payment environment it is nearly impossible for a PCMP to collect enough revenue to cover the costs of providing behavioral health services.
Per-member per-month amount	☒	☐	The current $4 PCMP PMPM is not sufficient to cover the costs of providing behavioral health services.
Physical space constraints	☒	☐	Some PCMPs have space constraints that would prevent them from providing behavioral health services at their practices.
Privacy Laws (HIPAA, 42 CFR)	☒	☐	While privacy laws are a necessity, they are also a barrier because they lead providers to be overly cautious and concerned about not being in compliance. As a result, there is valuable information that is not being shared between providers

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

			(such as PCMPs and behavioral health providers), which impacts quality of care. This issue can be addressed in part by legislative action to redraft prohibitive sections of the laws and also by continued dialogue in the community regarding appropriate and legal ways to share patient information.
Professional / cultural divisions	☐	☒	
RCCO or BHO contracts	☒	☐	A combined RCCO/BHO contract would further encourage behavioral health integration into new setting.
Staff capacity	☒	☐	Without adequate funding, it impossible for PCMPs to appropriately staff.
State/Federal rules or reporting requirements	☐	☒	
Technical resources / data sharing	☐	☒	The rules surrounding sharing of behavioral and substance abuse data are not well understood and limit appropriate and necessary data sharing. Simplification and clarification of the rules would be beneficial to providers and would ultimately result in increased data sharing.
Training	☐	☒	
Others			

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

There are different characteristics depending on whether the initial provider location is a primary care office or a community mental health center.

Assuming the provider location is a community mental health center, they would need to have a primary care provider on site, available, and interacting with the other team members to arrange for all the clients' basic primary care needs.

Regarding a primary care office, it is not a yes or no question but rather labeling different degrees of integration around the relationship to the behavioral health specialist. The most basic characteristic is the ability of a primary care office to make a referral to a behavioral health specialist and get meaningful information returned to them. The next higher or more advanced characteristic of integration is the presence of a co-located behavioral health specialist at the primary care office. In this scenario, the behavioral health specialist is typically employed by another agency and that agency does all billing for their services, which protects the primary care practice from financial losses. The final and most telling characteristic of a truly integrated primary care practice is the presence of a full-time behavioral health specialist that is employed by the primary care office and whose services are billed by the primary care practice.

10) Please share any other general advice or suggestions you may have about behavioral health integration.

For a truly integrated model that includes behavioral health staff employed by and physically located at the PCMP practice, reimbursement to the PCMP must be considered first and foremost in any behavioral health integration discussion. If reimbursement is not set appropriately, there will be no incentive for providers to adopt change. All payers must equally support integration and align policies as much as possible to minimize confusion and different expectations by payer type.

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination?

Care coordination should be patient-centered and focused on the whole person. This includes continuous collaboration with PCMPs, specialists, hospitals, urgent care centers, and behavioral health providers to more closely integrate care, improve bi-directional communication, and focus on the whole person to address their physical, behavioral and social health needs. By having a better picture of a client's overall health needs across care settings, we can provide more efficient, coordinated care – reducing hospital admissions/ER visits and avoiding unnecessary or redundant testing and procedures. This includes:

- Collaboration with providers within the medical neighborhood, as well as the State Data Analytics Contractor (SDAC) and Colorado Regional Health Information Organization (CORHIO), to implement processes and systems for sharing of client data across settings
- Analysis and utilization of shared data to more effectively manage the health of our clients, reduce unnecessary or inappropriate utilization, and ultimately lower total cost of care
- Identification of clients with chronic illness, or other high risk factors, through use of SDAC data and evidence-based criteria to initiate proactive client outreach, engagement, education, and care coordination
- Integration of physical and behavioral health through a diverse network of engaged providers, predictive modeling to hot-spot clients with significant medical and mental health needs and apply enhanced levels of care support, and co-location of services
- Continued care coordination and quality improvement services to help PCMP practices fully align with the patient-centered medical home model, operate more efficiently, achieve performance goals, and enhance client experience with care received
- Collaboration with county agency divisions that serve the ACC Medicaid population to determine how we can work together and best serve our clients' needs

b. How should RCCOs prioritize who receives care coordination first?

Care coordination should be based on client acuity, and then clients should be targeted into the right programs and level of intervention accordingly. Acuity can be evaluated based on factors such as:

- Complexity of physical health needs including single or multiple chronic conditions and/or co-morbidities
- Acuity and urgency of the care coordination needs
- Disease vs. social care coordination needs
- Activation of clients in making changes to their health care as based on the Patient Activation Measure (PAM)

c. How should RCCOs identify clients and families who need care coordination?

RCCOs should use various data sources to identify clients and families for care coordination support. These should include SDAC, internal analytics, utilization data and referrals from PCMPs, hospitals, specialists, community resources, government agencies, stakeholders, and client self-referral. RCCOs should also work

collaboratively with PCMP practices to identify clients that may need care coordination or additional services. Once identified, a complex health assessment should be conducted to determine the appropriate program/services.

d. **How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?**

To begin with, delegated medical providers should have sufficient systems in place to provide care coordination, including the ability to meet basic care coordination programs and functions provided by the RCCO for non-delegated providers. Examples include:

- Transitions of Care program
- Identification and outreach to high utilizers, specifically emergency department utilization
- Community care coordination (away from the provider's office)
- Proactive identification and outreach of high-risk clients
- Coordination and assistance with obtaining community and government resources
- Reporting of care coordination activities

The RCCO should monitor and track the delegated provider's care coordination activities via methods such as:

- Initial regularly scheduled meeting to discuss progress, barriers, etc., with new programs
- Monthly reporting from the delegated provider showing engagement efforts and success
- Quarterly analysis by the RCCO of delegate's Key Performance Indicators and other initiatives with feedback and corrective action as needed
- Annual on-site reviews

12) What services should be coordinated and are there services that should not be a part of care coordination?

Care coordination should be person-centered and services provided should be based on the needs as identified by the client and/or caregivers, their providers, and the appropriate care coordinators/ managers. In determining potential care coordination services, assessment should include but not be limited to clinical, functional, social, behavioral health, and financial status and needs.

These services should be identified using established care coordination techniques such as motivational interviewing and/or health coaching. Once services have been identified, the care coordinator should work with the client and provider to determine the appropriate person to assist with coordination. This would include identifying services the client and/or caregiver can coordinate, services other care coordinators in the community are providing, and services the RCCO should provide. The RCCO should be responsible for ensuring all services have been addressed during engagement with care coordination.

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

To assess for care coordination needs, all information available from the client and/or data should be utilized to assist in identifying the care coordination needs. Data should be accurate and as close to "real time" as possible. Information should be obtained not only from electronic resources such as the SDAC or claims, but

also from the clients, caregivers, providers, and other care coordinators. Examples of information should include:

- Demographic data
- Clinical history
- Claims data
- Care plans from county/government agencies
- Real-time utilization data
- Community support system
- Psychological/social support

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today?

Care coordination takes place in multiple systems, with varying levels of intensity and different focuses. These systems include government and county agencies, hospital systems, community agencies, support systems, and providers and health care agencies.

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

Care coordination provided outside the RCCO varies in services coordinated and differentiation in coordination. Some care coordination is focused on a specific clinical need or service, such as a transition of care program from a hospital, while others are more broadly focused on social or community needs. These care coordinators have various levels of expertise in the care coordination they provide. While some have broad understanding of the Medicaid system, most have a limited understanding. While the specific care coordination provided can be very successful in meeting specific care coordination goals, most care coordinators outside the RCCO or ACC do not have the whole-person approach delivered by the RCCO.

c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

An essential part of care coordination provided within the ACC Program should be to assess for other care coordinators and relationships with the clients. This assessment should occur at both the data level and through engagement with the client. The ACC should provide RCCOs with access to other county and government programs that are providing care coordination. Those clients should be identified in the data provided to include contact information for the care coordinators. In addition, care coordinators with the RCCOs should be working with the clients, caregivers, providers, etc., to identify care coordinators that have been working directly with the clients. Once additional care coordinators have been identified, the RCCO care coordinator should work with the client as the lead coordinator. The lead coordinator would be responsible for coordinating the services being provided by other coordinators and filling in the gaps to meet the clients' overall needs.

d. What are the gaps in care coordination across the continuum of care?

As stated in previous responses, care coordination happens at a multitude of levels, from a multitude of systems but varying organizations and people. Gaps in care coordination occur at an individual level based on the services, care coordinators and support systems to which each person has access.

While gaps are individualized at a member level, there are some barriers associated with providing care coordination. These barriers usually exist due to a lack of knowledge of available services, how to access services, and a state-wide understanding of the ACC, county services and community services that are available. In an attempt to understand these available care coordination services, we are compromised by differing HIPAA rules and access to real-time information. These barriers can then create unnecessary gaps in care coordination.

15) RCCOs' roles in addressing clients' and their families' non-medical needs. Please complete the table below, keeping in mind adults, children, and families:

During care coordination, the RCCO care coordinators should be assessing and working with the client to address all needs, including non-medical needs, that impact a client's overall health. All the needs listed below should be part of the comprehensive patient-centered care coordination assessment. The care coordinator should then work with the client to identify barriers, set goals and assist with providing referrals to resources to meet those goals. These referrals should include both community support and services and also knowledge of additional services available to the clients.

In working with community support and services provided by the Department and other government and county agencies, the RCCO should also have the ability to work directly with the agency to meet the needs of the highest risk clients. An example would be to work directly with Colorado Non-Emergency Medical Transportation (NEMT) to provide last-minute transportation to a provider's office if it will avoid an unnecessary emergency room visit.

Non-medical need:	Should the RCCO have a role? Yes	No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?

16) Requirements about who should be doing care coordination. Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

While everyone across the care continuum who is involved in a client's health care has a role in care coordination, CCHA feels there are two primary roles:

Providers – including PCMPs, specialists, etc.: Their role is to provide direct clinical services to clients to meet their physical and behavioral needs. While providing clinical services, they should be identifying potential care coordination needs and referring to care coordinators for support.

Care Coordinators – including patient navigators, health coaches, etc.: Their role is to provide care coordination for the clients as appropriate based on the position they hold. As care coordinators, they should be collaborating with the clients, providers, other care coordinators, and others involved with their health to identify goals and interventions, and also be communicating across the care spectrum.

Type:	Coordinate care? Yes	No	In what capacity should these individuals coordinate care in the ACC Program?
Advanced Practice (Registered) Nurses	☒	☒	Their role with care coordination will vary depending on whether they are employed in the capacity of a clinical provider or a care coordinator as defined above.

17) Care coordination requirements for specific populations. Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Care coordination programs should provide both general and specific care management interventions to all populations as needed. Based on the results of complex assessment of both clinical and non-clinical needs, clients may fall into either a specific or general care management program.

General care management programs: While these programs are not based on a specific evidence-based program, they are specific to the client and involve comprehensive assessment and person-centered goals and interventions. Level of engagement is based on client need and complexity of clinical and non-clinical needs.

Specific care management programs: Various evidence-based, specific care management programs can be used that target populations using data, best practices and nationally accepted guidelines.

Population	Specific	General	If specific, please describe
Newborns and infants	☒	☒	
Children	☒	☒	
Children who are healthy, but in socially-complex environments	☒	☒	
Children involved in the foster care system	☒	☒	
Children with a chronic illness	☒	☒	
Children with a serious emotional disturbance	☒	☒	
Children with medical complexity	☒	☒

Pregnant women	☒	☒	
Adults	☒	☒	
Adults who are healthy, but in socially-complex situations	☒	☒	
Adults with a chronic illness	☒	☒	
Adults with a behavioral health diagnosis or substance use disorder	☒	☒	
Clients involved in the criminal justice system	☒	☒	
Clients with a disability	☒	☒	
Clients in a nursing facility	☒	☒	
Elderly clients	☒	☒	
Frail elderly clients	☒	☒	
Clients in palliative care	☒	☒	

Other populations, please comment:

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

RCCOs should work with both foster care systems and other child-serving agencies such as Healthy Communities to proactively identify shared clients. Once clients are identified, care coordinators with the RCCOs and agencies should collaborate to identify client-needed services and coordinate to fill any gaps. There should also be cross-education about each other's programs, and Business Associate Agreements should be obtained to allow for ease of coordination and communication.

19) How should care coordination be evaluated? How should its outcomes be measured?

In addition to utilizing claims based or clinical data, care coordination evaluation needs to incorporate client feedback in assessing the quality and effectiveness of the care coordination. This should encompass whether we actually met the patient's health goals, as well as any non-medical needs such as housing or special services. Care plan creation and coordination across the health care system is very important in helping clients meet their health outcome goals. Examples of patient-reported measures we could evaluate include experience of care, functional status, and outcomes.

In addition, measures that are designed to reflect the varying strengths and needs within each community would strengthen the medical neighborhood concept. Quality and safety measures such as readmission, medication reconciliation, and care coordination that drive costs in the system should also be evaluated.

We would recommend narrowing the patient population to measures that are tied to incentives payments, such as coordination measures that are tied to managing chronic conditions.

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

a. What is the PMPM cost for providing care coordination services?

Over the past three years, the RCCO PMPM payment has decreased by approximately 35% while the required scope of work has expanded. Nearly the entire $8-$9 PMPM is required to provide the necessary care coordination services for the enrolled ACC Medicaid members.

b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

No, it is generally not advisable to have the PMPM vary by specific populations, as these assumptions frequently underestimate or overestimate the level of need for a given population. An exception may be varying the PMPM for extreme known differences in level of care required for populations such as children and persons with disabilities and/or chronic disease. If the level of care is known to consistently be significant, varying PMPM could be valuable. For populations that fall in the middle, there is more room for variations in level of care within these groups. Conducting the ongoing necessary analysis for all populations adds

unnecessary administrative cost. Ease of administration should be considered so RCCOs can focus their efforts on activities that impact the ACC clients.

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

CCHA does not recommend setting specific care coordinator to client ratio requirements for several reasons. First, simply setting ratios will not necessarily provide meaningful measurement of program results and/or activity of care coordination programs. To achieve positive results in patient outcomes, cost and/or client satisfaction, we believe it is important to first assess whether the "right" clients are selected to receive care coordination services. A successful care coordination model begins by targeting appropriate clients for care management. Although it is always desirable to be able to serve all clients with services, any program will have limited resources to fund these services. By working closely with the provider community and patient groups, using data to target those clients most appropriate for care coordination services is necessary.

A second factor that influences care coordination ratios is the type of care coordination model that is most appropriate for the client's needs and acuity. For the highest acuity, it is often necessary to have numerous face-to-face visits in the client's home environment or health care settings such as provider offices or hospitals. In some segments of the ACC client population, telephonic outreach and monitoring can be effective.

The client work load varies vastly in each of these models. CCHA is committed to working with the Department to provide meaningful information on how we target, outreach and measure activity and results for all programs. Through our long history of providing care coordination services, it is our experience that blanket ratios do not accurately tell the story for the reasons listed above.

a. **Care coordinator to client ratios. If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:**

As stated in response to the previous question, CCHA does not recommend that care coordinator to client ratios be part of the next RFP.

Clients	
Fewer than 25	☐
26-50	☐
51-100	☐
101-200	☐
201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

The Department should focus on metrics that aim to improve care coordination across the overall health care system and achieve an improvement in the health status of individuals, families and communities. CCHA recommends utilizing both process and outcome measures to assess the effectiveness of care coordination across the system.

We understand that there are very few care coordination metrics that are developed to measures across the system but recommend that the Department utilize nationally endorsed care coordination measures as much as possible from organizations like National Quality Forum (NQF), National Committee for Quality Assurance (NCQA), or Agency for Healthcare Research and Quality (AHRQ).

Sample RCCO Level Process Measures:

- Number and level of participation of organizations involved in the care coordination
- Number of clients receiving services from a care coordinator
- Number of clients enrolled in a care management program

Sample Provider Process Measures:

- Number of duplicated/unduplicated encounters
- Number of clients referred
- Number of referrals to care coordinators
- Number of case managed clients who have had X number of visits with their provider during a particular time period
- Number of participants who have a self-management plan

Sample Patient Outcome Measures:

- Changes in biometric measures including weight, waist circumference, body mass index, blood glucose levels, etc.
- Changes in ability to self-manage, including activities of daily living
- Changes in healthy behaviors
- Changes in knowledge
- Changes in transportation costs (e.g., streamlining visits with specialty providers)
- Perceptions
- Health outcomes

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

CCHA recommends that as the ACC continues, the RCCOs are able to continue to innovate and not only create new care coordination programs to address client-specific clinical and non-clinical needs, but also work with their community partners to pilot ideas. Two such ideas that we are currently piloting include working with the Jefferson County Hotspotting Alliance to address high emergency department utilization and with Clear Creek County to address transportation disparities in this rural area.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

Requiring RCCOs to implement certain functions in the same way goes against one of the main principles of the ACC, which is to test different RCCO models. We believe a more beneficial structure would be to align PCMPs with only one RCCO, as this would help minimize confusion for all parties involved in care delivery for ACC clients – including the clients themselves and the Department.

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

Familiarity with the local providers and community is essential for RCCO success. A bidder for a RCCO region should be able to produce numerous letters of support from different community entities and providers in the region, articulating their familiarity and support for the bidder based on past experience with the bidder.

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

In the Medicare Shared Savings Program, primary care physicians are only permitted to participate in one Accountable Care Organization (ACO) per contract period and all of their attributed clients are aligned to that ACO. Our recommendation would be that the ACC follow this model and better align RCCOs (hopefully which will become ACOs in the coming years) and PCMPs.

Initially, PCMPs and all of their attributed ACC clients would be enrolled with one RCCO, based on location of the practice and client address. Because different RCCOs offer different support services, we encourage alignment with a single RCCO to help alleviate confusion that occurs with the current model where a PCMP may be aligned with multiple RCCOs. From there, mechanisms could be put in place that would allow for PCMPs to choose which RCCO they want to align with, within boundaries that make sense (e.g., counties with neighboring borders).

Concepts can be borrowed from the Medicare Advantage plans where plans are incented to receive "5 star" quality rankings to allow Medicare beneficiaries to select them throughout the year instead of the limited two months of open enrollment. The Department could assign "stars" to the RCCOs based on similar quality and performance metrics that would allow a PCMP from outside the RCCO's county boundaries to select them as their aligned RCCO. We realize that operationalizing this proposal may be challenging but recommend that the Department consider a shift in this direction.

27) Should the RCCO region maps change? Why or why not? If so, how?

In areas of the state where the RCCO and BHO boundaries are not the same, one of them has to conform to the other. Among other things, it creates unnecessary artificial boundaries and additional administrative hurdles when the boundaries are not aligned.

28) Should the BHO region maps change? Why or why not? If so, how?

See our response to question 27 above.

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

Transitioning a RCCO's current scope of work to a new vendor would require at least six months to become operational and approximately nine months to become relatively effective. The learning curve and timeline would be longer for an organization that has not previously been a RCCO. There are efficiencies with transition between existing RCCOs.

At a high level the transition of work can be categorized into three buckets of activity to include care coordination, PCMP transition, and establishing relationships with community resources. For care coordination, all client cases would need to be transitioned and the new vendor would need to establish contacts and embed care coordinators in PCMP practices. For PCMP transition, the re-contracting process would probably be most time consuming. For community resources, it would take time for the new vendor and community agencies to build new relationships and collaborative partnerships. All three buckets would involve efforts such as fostering new relationships, remarketing and educating regarding services available through the new RCCO, establishing and implementing processes, and orientation to new systems.

The expenses involved with a transition would be significant and include operationalizing the above three buckets of work. The transition timeline and relative expense would be dependent on the size and number of enrolled ACC clients.

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

The rising total cost of Medicaid expenditures is an issue for Colorado and the nation. One of the contributing factors is over utilization of hospital emergency rooms and the downstream consequences. We believe that one way to help reduce non-emergent visits to the ER is to implement a client co-payment of $20. The intent of the ER copay is to add a layer of financial responsibility for the clients that will lead them to reconsider going to the ER instead of their PCMP for non-emergent care. Over time this would have the added benefit of increasing primary care utilization assuming appropriate capacity. Implementation of a co-pay would need to run parallel with increased PCMP accessibility and expansion of PCMP participation in the ACC. Such an effort to implement an ER co-pay for Medicaid clients would be unprecedented and require cooperation from almost all stakeholders including hospitals as well as state and local government agencies.

Also, there are currently not enough specialists accepting Medicaid referrals in Colorado. Many Medicaid clients are not able to access specialist care and often end up in the emergency room or receive surgery or other procedures that could have been avoided. Specialist participation in the Medicaid program is limited by many factors but low financial reimbursement seems to be the most significant. Assuming the Department cannot reimburse specialists the equivalent of Medicare reimbursement, legislative action is required to increase specialist participation because accepting Medicaid is currently a competitive disadvantage in a competitive health care market. Increased participation could be achieved by mandating that any specialist in Colorado must have at least 5% of their total visits comprise of Medicaid clients in order to maintain a Colorado medical license. With this mandate, no single entity would be disadvantaged by seeing Medicaid

clients. And we believe that top medical talent will continue to flood to Colorado regardless of such a mandate.

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

The current Medicaid benefit structure is adequate. However, we recommend that the month-to-month eligibility determination for adult Medicaid clients be changed to an annual benefit. Expanding to a one-year coverage period would provide additional stability for the Medicaid client, reduce administrative efforts placed on continually re-determining eligibility, and allow the RCCO and primary care medical provider more time to establish a relationship with the client before potentially dropping out of Medicaid.

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

No. In our experience, there should only be one RCCO per region. The potential benefits from RCCO competition within a region do not outweigh the guaranteed added confusion to the many social resources, clients, PCMPs, and other providers.

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

Not applicable for a RCCO respondent.

34) What role should RCCOs play in attributing clients to their respective PCMPs?

RCCOs should have the ability to attribute enrolled ACC clients to contracted PCMPs. If the RCCOs are engaged in a shared risk or shared savings program with the Department for this population, it is in their best financial effort to make a meaningful PCMP attribution to increase primary care utilization and decrease less appropriate utilization.

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

The Colorado Department of Public Health and Environment (CDPHE) often engages in numerous projects and pilots that are directly related to the care of clients in the ACC Program. However, as an organization it feels as though they have not been engaged in ACC operations. There needs to be better alignment of program implementation and the goals of the ACC. For example, the Vaccines for Children program, though well intended, has created access issues for many Medicaid clients. The RCCOs could very much benefit from CDPHE collaboration in this matter.

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

The RCCOs often connect clients with services administered by the Colorado Department of Human Services (CDHS). It would be nice to have a tie with CDHS to ensure up-to-date information on any program changes or

new programs available to ACC clients. It would also be a worthwhile exercise to learn more about how CDHS views their outcomes and if the ACC can align with their efforts.

37) What types of collaboration should exist between the ACC Program and the insurance marketplace/ Connect for Health Colorado?

The link between the ACC Program and Connect for Health Colorado is only applicable for those clients able to transition out of Medicaid. Medicaid clients with disabilities and clients who are currently not above the Federal Poverty Level will likely remain covered under the Medicaid program. The clients who transition out of Medicaid and into a commercial plan would be prime clients for a state and RCCO sponsored plan. Assuming this is true, the Department should consider creating a Qualified Health Plan as an option for this population.

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

The types of collaboration between the ACC Program, Division of Insurance, and Department of Regulatory Agencies depend on the RCCO scope of work and compensation methodology. If a RCCO assumed substantial financial risk, it would need to collaborate with the DOI and DORA. Assuming no substantial financial risk, collaboration may not be necessary.

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

Clinical delivery of our programs and especially cultural competency should include feedback from clients, clients' families, and client advocates. The inclusion of a format that provides and solicits feedback from the stated categories on clinical delivery is supported by CCHA. As it pertains to RCCO operations, CCHA would recommend that stakeholder engagement be limited.

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

Engagement with providers, community organizations and social services is key to program performance. CCHA would hesitate to mandate such engagement, as we are limited by the other entities' interest in participation. Outreach and availability should be the requirement, not actual engagement.

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

Given the tremendous variety of local community groups providing client services, being informed of these entities is the first key step. The RCCOs can benefit from continued support from the Department on identifying and connecting with community entities.

42) How should the Department structure stakeholder engagement for the ACC as a whole?

The current structure provides good insight, but it appears that only a portion of stakeholders statewide actually participate. While input from participating stakeholders is appreciated and helpful, currently they do not represent the state as a whole. A mechanism that solicits engagement statewide and maintains statewide perspective would be advised.

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

CCHA has not had an issue to date with finding a PCMP for clients that inquire. We are also not aware of any issues with clients finding and accessing hospitals, pharmacies, or home health services.

a. **If no, what are the gaps?**

There is a shortage of specialists in Region 6 who accept Medicaid referrals, primarily in the specialty areas of orthopedics, neurology, urology, and pain management. With regard to dental, CCHA is assisting DentaQuest with a dental recruitment project in Region 6. Our assumption is that there is a shortage of dentists due to the lack of historical adult benefits, but the extent of the gap is not yet known.

b. **Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.**

The Vaccines for Children (VFC) program continues to be a barrier in providing vaccinations for children. CCHA has been unable to obtain a VFC provider list to help direct clients, and we have had numerous complaints from pediatricians concerning the VFC program.

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

a. **What role should hospitals play in the next iteration of the ACC Program?**

The need for real-time hospital utilization data continues to be a need. In addition, hospitals should be more engaged in the stakeholder process. Most hospitals in the state are engaged in the ACC program to some degree, but hospitals should be more engaged in the stakeholder process. In the next iteration of the ACC, hospitals should be measured on ACC engagement and their Medicaid reimbursement should be tied to it much like the current Medicare hospital payment initiatives. Potential metrics could gauge data sharing or care coordination collaboration. RCCOs also need to be aware of hospital perspective and financial motivations.

b. **What role should pharmacies play in the next iteration of the ACC Program?**

Pharmacy participation has yet to be explored. However, partnerships centered on high opioid users should be a consideration.

c. **What role should specialists play in the next iteration of the ACC Program?**

At this point, specialists have been minimally engaged in the ACC program. A means to incentivize participation must be discussed.

d. What role should home health play in the next iteration of the ACC Program?

We would recommend considering the possibility of a limited network of home health agencies that are vetted by each RCCO.

e. What role should hospice care play in the next iteration of the ACC Program?

Per the Medicare-Medicaid Program protocols, RCCOs need to build relationships with local hospice providers. We would recommend waiting for results of these efforts before speculating on potential collaborations.

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

The relationship between SEPs, CCBs and RCCOs is necessary to avoid duplicative services. All RCCOs have made some attempt to collaborate with the SEPS and CCBs. In any cases where this attempt hasn't worked, the resistance has come from SEPs and/or CCBs. We would recommend considering alteration to SEP and CCB contracts to mandate participation in the ACC.

g. What role should counties play in the next iteration of the ACC Program?

County agencies provide vital client services to many ACC clients. The RCCOs need to be familiar with programs and services available in order to route clients effectively.

h. What role should local public health agencies play in the next iteration of the ACC Program?

The ACC should align programmatic efforts with public health campaigns as much as possible to leverage our joint efforts.

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

We don't currently have enough information on these entities to formulate an opinion.

45) How can RCCOs help to support clients and families in making and keeping appointments?

RCCOs should assist their clients with making and keeping both clinical and non-clinical appointments, with the level of assistance being based on the clients' needs. The goal is to ensure that clients and their families have access to the needed resources and understand the importance of keeping those appointments.

For higher functioning clients, RCCOs can provide information on needed providers and transportation resources, and clients can schedule and attend appointments. For lower-functioning clients, RCCOs can provide a higher level of assistance to include actively making the appointments, arranging transportation, providing reminders, and if needed, attending appointments with the clients. We have found that the biggest barrier with making and keeping appointments is transportation and feel this is an area of opportunity to pilot innovative solutions for alternate transportation options based on assessment of clients' needs.

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

CCHA believes that to provide successful care coordination, it should be tailored to the client's acuity and needs. Requiring a specific type of care coordinator or health coach may not result in improving care coordination or client outcomes. CCHA supports collaboration with already existing care coordinators, including community health workers and would continue to collaborate to meet the client's needs. However, we do not recommend creating mandatory requirements for utilizing community health workers and patient navigators. The current format has yet to incorporate principles that align with non-grant funded entities. While community health workers and patient navigators provide necessary client services that should be supported, the outcomes of this work are most beneficial to reducing uncompensated hospital care. Inclusion into the RCCO contracts would create an unnecessary burden. We believe there are potential solutions outside of the RCCO contracts.

47) Community Health Worker reimbursement. Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement process	(Please check all that apply)
Independently bill	☐
On staff (salary) at Primary Care Medical Provider Clinic	☐
On staff (salary) at RCCO	☐
Per Member Per Month Payment	☐

We do not believe any of the presented options are sustainable for the following reasons:

Independent Bill: Billing community health worker services to Medicaid would require Medicaid to produce coding and budgeting to operationalize an independent billing scenario. This would create substantial administrative burden to Medicaid. However, if Medicaid is willing to undertake the efforts to support independent billing, we support this reimbursement method.

On staff (salary) PCMP Clinic: While some providers may have the ability to staff community health workers, many lack the infrastructure to support this type of employment. The decision to staff a community health worker would need to be done provider by provider. In addition, the work performed by community health workers staffed by PCMP practices would be duplicative of the work done by RCCO care coordinators co-located at practices.

On staff (salary) at RCCO: This option does offer some potential, given certain criteria. However, each RCCO must be free to make that decision based on parameters that take into account regional need, finances, population analytics, and business structure.

PMPM Payment: A PMPM payment structure is simply a type of payment methodology like contingent payments or fee schedule payments. Sustainability of this option would be dependent on whether Medicaid, PCMPs, or RCCOs would be paying the PMPM amount. Our responses above would apply accordingly.

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

A client's oral health has down-stream effects on physical health and in some cases drives avoidable emergency room utilization. RCCOs should play a role in coordinating client oral health needs and work in collaboration with DentaQuest to identify network gaps and support dental provider recruitment efforts.

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you?

Cultural competence is the ability to provide care to clients with diverse values, beliefs and behaviors and the ability to tailor program delivery to meet clients' social, cultural and linguistic needs.

b. What RCCO requirements would ensure cultural competency?

Cultural competency training based on National Standards for Culturally and Linguistically Appropriate Services in Health and Health Care (CLAS) should be mandatory for RCCO employees as well as employees of delegated entities. This training may not fully ensure cultural competency but will provide a core, consistent understanding and skills to more effectively ensure patients are getting access to health information and care based on their needs.

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?

There is no one strategy to combat low health literacy. Clients must be given a variety of opportunities to ask questions in a non-threatening environment. Providers and staff should be focused on delivering person-centered health information and services. This requires them to be sensitive to patients' cultural beliefs and practices and convey respect through the way they communicate and deliver care. In some cases providers and staff may need to get assistance from other staff members or external resources that are familiar with the patient's language, lifestyle, and beliefs or values. Providers and staff should be trained to ask appropriate questions to help them understand the circumstances of the particular patient and/or family rather than apply any preconceived ideas or cultural stereotypes they may have. CLAS training would be beneficial for developing core knowledge and skills that are useful in cross-cultural interactions. This training should be mandatory for delegated entities.

d. **Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?**

The RCCOs may be able to function as a health literacy resource either through client materials as feasible or possible client service call centers. While Medicaid currently staffs a client call center, the call volume arguably precludes their ability to function as a repository of health information. If the RCCOs could function in a capacity to support some of the general client service needs, we could help Medicaid caste a broader net. This function may also result in increased care coordination.

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

A preferred network inherently means a limited provider network, which is traditionally good when managing insurance risk but does not facilitate patient access and choice. The current Medicaid managed care plans in Colorado have preferred networks. If the next ACC RFP allows a RCCO to take significant financial risk on a defined population, then the RCCO should be permitted to create and utilize a preferred network for specialty, facility, and ancillary care.

51) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

As described in more detail in our response to question 30, the ACC should support implementation of a $20 client co-pay for emergency room services to help address the rising utilization for non-emergent needs. This would allow clients to receive the care they need for emergencies but encourage utilization of their PCMP rather than the ER for non-emergent medical concerns.

There also needs to be more consistent messaging and education around appropriate use of the ER and access to urgent appointments with primary care medical providers or after hours options other than the ER. Currently there is conflicting messaging regarding where to go for care. In order to implement initiatives to change the trend of high ER utilization, there will need to be collaboration and participation from various stakeholders within the health care community as well as state and local government agencies.

Also, as mentioned previously in our response to question 30, there needs to be strategy for increasing the number of specialists that accept Medicaid referrals. With the lack of specialist participation, Medicaid clients often unnecessarily end up in the emergency room instead.

52) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

We can't begin to address the actual shortages in services until there is a clearly defined and calculable statewide understanding of network adequacy.

Practice Support

S3) Support for practices. Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☒	☐	☐	☐
Network provider education	☒	☐	☐	☐
Assistance with practice redesign	☒	☐	☐	☐
Assistance with efficiency-enhancing activities	☒	☐	☐	☐
Provide web-based resources and directories	☒	☐	☐	☒
Provide practice-specific data reports	☒	☐	☐	☐
Provide clinical care guidelines and best practices.	☒	☐	☐	☐
Provide clinical screening tools	☒	☐	☐	☐
Provide health and functioning questionnaires	☒	☐	☐	☐
Provide chronic care templates	☒	☐	☐	☐
Provide registries	☒	☐	☐	☒
Offer client reminders	☒	☐	☐	☐
Offer client self-management tools	☒	☐	☐	☐
Offer educational materials about specific conditions	☒	☐	☐	☐
Supply behavioral health surveys	☒	☐	☐	☐
Supply other self-screening tools	☒	☐	☐	☐
Administer behavioral health surveys	☒	☐	☐	☐
Administer other self-screening tools	☒	☐	☐	☐
Prepare client action plans	☒	☐	☐	☐
Provide training on providing culturally-competent care	☒	☐	☐	☐
Provide training to supporting staff	☒	☐	☐	☐
Provide training on motivational interviewing	☒	☐	☐	☐
Provide tools and software for phone call and appointment tracking	☒	☐	☐	☐
Provide tools and resources for tracking labs, referrals, etc.	☒	☐	☐	☐
Provide referral and transitions of care checklists	☒	☐	☐	☐
Provide visit agendas or templates	☒	☐	☐	☐
Provide standing pharmacy order templates	☒	☐	☐	☐
Provide comprehensive directory of community resources	☒	☐	☐	☒
Provide directory of other resources	☒	☐	☐	☒
Provide materials regarding Nurse Advice Line	☒	☐	☐	☐
Ensure all tools and resources are centrally located on RCCO-specific website	☒	☐	☐	☐
Others				

54) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

We do not recommend that specific tools be required for the practice and provider support categories listed above. Our experience working with a variety of systems, tools and software programs is that there are benefits as well as some trade-offs with all.

CCHA believes that the role of the RCCO/practice transformation team is to help ensure primary care provider practices have access to a variety of options. This allows them to decide which tools are the best fit for their unique needs, while effectively supporting their efforts to meet the goals of the Triple Aim. Many practices, RCCOs and other organizations have already invested a lot of financial and physical resources into implementing systems such as electronic health records and care management software to support coordinated care across health care providers. Requiring specific systems or tools such as these at this stage in the program would not be a feasible solution. However, the Department should consider identifying certain functionalities or outputs that are expected as an outcome of practice support. For example, rather than requiring a specific care management system, require that the system being utilized has certain functionality and ability to capture and produce necessary data. We also recommend leveraging CORHIO and any other health information exchange systems.

55) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

The goal of PCMPs is to see patients and help them manage their health. Through the Affordable Care Act (ACA) and the Accountable Care Collaborative (ACC), new requirements, deliverables, programs, and initiatives are continuously being implemented. PCMPs are being required to not only understand their role as part of the ACA/ACC Program, but are also needing to implement electronic health records, build medical neighborhoods, and understand the different requirements of payers and programs.

We believe that RCCOs should assume the role of project managers for the ACC program to help PCMP practices understand the ACC Program and expectations of practices and how they align to other initiatives.

To support practices in achieving these goals, RCCOs should be required to provide the following:

Practice Coaching Support:

- Streamline ACC initiatives and help practices prioritize based on what is needed for the ACC Program as a whole but also balance with available practice resources
- Guide practices with implementing population management strategies
- Help ensure that great ideas are actually implemented instead of dying down because of lack of time or follow through, and that once processes or strategies are implemented they are sustainable over time
- Connect practices to other practices that have implemented similar strategies or processes so they can learn from each other and avoid recreating the wheel

Learning Collaborative/Roundtable Events:

- Organize periodic events for primary care practice providers and staff, as well as other partners and stakeholders within the community, with the goal of:
    - Sharing best practices and lessons learned
    - Discussing and brainstorming solutions for things that aren't working
    - Sharing tools and resources available for practices

56) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

We recommend that recognition for meeting qualifications of a medical home should align as much as possible with definitions that are already in place nationally. If a PCMP has gone through a national recognition process, the Department should allow them to use that national recognition towards the ACC Program.

The RCCOs and/or the Department should create a medical home score card that aligns with the goals of the Triple Aim and incorporates measures that other health plans or other national programs are using. Ideally the score card would include measures of success with highest ratings for things the PCMPs have control over and can realistically achieve. If RCCOs are going to make a positive impact on the system, incentives also need to be in place for other non-PCMP practices (e.g., emergency departments need to have an incentive or disincentive to help assure the health care system reduces preventable ER visit costs).

57) Should the Department require that PCMPs utilize disease registries to manage the health of their population?

No, the Department should not require that PCMPs utilize disease registries. However, the Department should make a registry available and offer it to PCMPs. One option may be providing a system where providers can access a registry through their electronic health records (EHR) system. The Department is already incentivizing PCMP adoption of an EHR system through Meaningful Use. We would support the Department joining forces with Regional Extension Centers and the Colorado Regional Health Information Organization to require that EHR vendors provide a registry through their EHR system.

58) Please share any other advice or suggestions about provider support in the ACC.

There should be means by which the RCCOs can assist providers with issues around claims denial and financial reconciliation. RCCOs should be able to contact the state fiscal agent on behalf of providers in their networks.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

One of the primary goals of the ACC is to move PCMP practices toward the medical home model of care delivery that is patient centered, comprehensive, coordinated, and accessible with a commitment to quality and safety. The current payment structure to PCMPs supports this goal but does not do enough to promote significant change. The majority of a PCMP's reimbursement before and after the implementation of the ACC is still based on the number of times a PCMP bills a very similar set of CPT codes. A shift of paying for value of care over volume is required. One consideration may be a shared risk arrangement with PCMPs, along with promoting more efficient ways to deliver care. This could include services such as nurse triage via phone that may not generate billing activity but would reduce total costs of care and result in shared savings for PCMPs.

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

Not applicable for a RCCO respondent.

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

Some providers may be willing to transition to a value-based payment model, but further understanding of financials would be necessary. These providers have considerable infrastructure in place that would support care that is driven by analytics and intensive client support to drive outcomes. However, there are also many providers that currently do not have the infrastructure necessary to be successful in a value-based model, and less-advanced practices depend on the current volume-based structure to maintain financial solvency. For these reasons, there needs to be a staged rather than global approach to a transition in payment structures, taking certain practice variables into consideration. RCCOs may be in a position to help support practice transformation that will prepare practices for successful transition to a value-based system.

A primary barrier to transition is that current payment methodologies are still geared toward volume-based care delivery rather than value-based, and at this time the financial models being presented by payers in the community are not providing enough financial support to sustain the desired changes.

62) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

CCHA is not currently licensed by the DOI. A requirement to obtain either an LSLPN or HMO license would not necessarily preclude CCHA from bidding. However, the cost of obtaining such licensure and the purpose of obtaining such licensure would need to be further explored.

63) What role – if any – should the RCCOs play in the distribution of payments to providers?

RCCOs should definitely play a role in the distribution of payments to providers, as we believe this would promote increased PCMP attention and responsiveness to the RCCOs. This should start with the Key Performance Indicator reimbursements flowing through the RCCOs to the PCMPs. As the RCCO's financial risk increases, additional funds should flow through the RCCO to the providers.

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

Payment reform in any system is challenging if the intent is to shift where resources are spent or allocated. Payment reform in health care is especially difficult due to the complexity of health care. Therefore, everyone should have a realistic expectation of the time required for meaningful change in the ACC.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

Our recommendation is that the highest weighting is placed on measures that PCMPs have more control over, such as diabetes process and outcome measures, redirecting care from high cost facilities, and measuring patient satisfaction with their care. For consistency, it will also be helpful to align with performance measures adopted and utilized by other health plans, including Consumer Assessment of Healthcare Providers and Systems (CAHPS), National Quality Forum (NQF), and Healthcare Effectiveness Data and Information Set (HEDIS) measures. As mentioned in our response to question S6, incentives also need to be implemented for non-primary care providers such as emergency room departments.

66) Measuring Client experience. Please complete the table below to indicate how the Department should measure Client/patient experience:

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☒	☐	We support using the CAHPS survey. However, there is a high cost to administer this survey at a RCCO level. We would need more details about who would be administering the survey.
SF-12 Health Survey	☒	☐	
Other types of client interviews / surveys	☒	☐	
Patient Activation Measure	☒	☐	
Focus groups	☒	☐	
Other	Receiving the data for quality improvement purposes at a RCCO and/or PCMP level is very important to us.		

67) Knowing that, at this time, the Department only has claims data, how should population health be measured?

While claims data provides valuable information, there are also known gaps in data that result in inaccurate measures of performance. For example, if a client is newly enrolled in Medicaid and saw their PCMP for a well-child visit while enrolled in a non-Medicaid plan, it isn't captured in Medicaid claims data for several months and appears as a gap in care. We recommend that the Department allow PCMPs and RCCOs to supplement claims data with their own data sets to help fill these gaps.

In determining which metrics to include for measuring population health, they should be aligned with nationally accepted performance measures such as NQF and HEDIS that are adopted and utilized by other health plans. The more aligned we all are, the more successful we will be with making strides to improve population health.

68) How should quality and performance data be reported to the RCCOs, PCMPs, and the public?

It is important that data be shared regularly with RCCOs and PCMPs so they continuously know where they stand and aren't caught off guard in terms of performance. Frequent reporting allows RCCOs and PCMPs to identify issues or concerns early on and implement quality improvement strategies accordingly. New measures should initially only be visible to RCCOs and PCMPs. RCCOs and PCMPs need to be given a sufficient amount of time for validation and improvement efforts before the data is made available to the public or used as a performance indicator. RCCOs and PCMPs should also be allowed to supplement information from their own data sources. If only claims data is being used, data may be inaccurate or important data may be missing.

69) Measures for payment. Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7*	☒
8-10*	☒
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

*RCCOs and PCMPs do different work. Therefore, they cannot be measured in the exact same manner. The 5-7 range of measures seems appropriate for a PCMP. If there are too many measures, it is impossible for PCMPs to focus on all of them. With a smaller number of key measures to focus on, PCMPs are more likely to be successful with making improvements. RCCOs have a greater infrastructure and a larger scope of work compared to PCMPs, so 8-10 measures seems appropriate.

70) What percent of RCCO payments should be tied to measures or performance?

Percentage	
10-20%*	☒
21-30%	☐
31-40%	☐
41-50%	☐
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

*The current $1 RCCO withhold for Key Performance Indicator payments represents approximately 12% of the RCCO's total compensation. Under the current RCCO funding model, 12% is about right. However, if RCCOs move to an alternate payment model such as shared risk on the total cost of care, the percent tied to measures and performance would change. In this case, there would be several measures and performance metrics so it would not be relevant to compare to the current 12%.

71) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?

Yes, all RCCOs across each region should be paid on the same KPIs. This would not only help create a system of fairness but would increase the potential to make a collective impact within our state.

No, RCCOs and PCMPs should not be paid on the same KPIs but there should be some degree of overlap. RCCOs and PCMPs do different work and therefore cannot be measured and reimbursed in the exact same manner.

72) Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?

When evaluating a RCCO's performance, both improvement and national standards should be considered. Because the ACC is in its relative infancy stage, weighting improvement heavier is logical. When Colorado and other states have more mature programs, it may make sense to add more weight to reimbursement based on national benchmarks.

73) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

Yes, it is our recommendation that payment only be tied to measures where data is made available on a regular, frequent basis, even if limited to claims-based measures for a period of time. Looking at data more frequently than annually or bi-annually allows RCCOs and providers to monitor whether their performance

improvement strategies are working and make adjustments along the way. We recommend that the Department do one of the following:

- Look into options for PCMPs and other providers to supplement claims based data with their own data sets, which offer stronger supporting data that paints a more complete picture
- If only claims data is being utilized, set the target goal lower to account for the gaps and limitations with claims data

74) Incentive payment frequency. Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	☐
Annually	☐
Other	☒

If you checked the "Other" box, please describe payment frequency below:

Incentive payments are currently distributed quarterly to PCMPs and RCCOs. Quarterly is appropriate for the amount of money distributed as incentive payments. However, if a greater percentage of total compensation for RCCOs and PCMPs is distributed through incentive payments, then a monthly distribution frequency may be more appropriate to accommodate business cash flow necessities.

75) For potential offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

A RCCO can expect to incur fixed costs related to occupancy, furniture, equipment and the related technology licenses, insurance, and professional fees.

The largest annual fixed costs typically arise from the occupancy of the business location from which the RCCO operates. Physical space requirements can depend on the size of the required staff. Occupancy costs include rent, utilities, maintenance, and frequently property tax. In addition to the physical space requirements, office space requires furniture. The business and staff require technology based equipment and the related technology licenses. This fixed cost has a high obsolescence rate. General operating insurance is also a required element of operating a RCCO. Policies are typically administered on an annual basis, and the cost has a direct correlation with the industry, required coverage, and the history of the business.

Additionally, a RCCO will be required to prepare accounting records and annual tax reporting, address legal matters, administer information technology and processes that are HIPPA compliant, develop and maintain communication with the community, and manage the hiring and governance of competent staff. Each of these functional areas can be outsourced on a professional consulting basis. However, with a relevant staff size, economies of scale make hiring staff to fill these roles and control costs a preferred option.

76) For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

Not applicable for a RCCO respondent.

Health Information Technology (HIT)

77) Types of communication. For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call/phone number	☐	☐
Text message	☐	☐
Web portal	☐	☐
Email	☐	☐
Telemedicine / Video chat	☐	☐
Face-to-face meeting	☐	☐
Smartphone app	☐	☐
Other:		

This question is not applicable for a RCCO respondent.

78) HIT investments by organizations. For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below:

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	☒	☐
Digital care management tool	☒	☐
Care transitions alerts	☒	☐
Electronic Health Records (EHRs)	☒	☐
Health risk assessment software	☒	☐
Practice assessment tools	☒	☐
Practice management tools (scheduling, billing)	☒	☐
Client web portal for communicating care plan, services, benefit enrollment	☒	☐
Patient education/wellness tools	☒	☐
Provider/case manager directory	☒	☐
Shared decision-making tools	☒	☐
Telemedicine software	☐	☒
Other:	☐	☐
Other:	☐	☐

79) Importance of technology by type. The Department is working to determine what technology is in place, what technology is needed, and what technology should be standardized. For RCCOs, providers, and other organizations, use the table below to answer what HIT infrastructure outside of the SDAC your organization would use to perform population health management activities. Tools are scored from 1-5, where 1 are those items least-likely to be used, and 5 are items most-likely to be used:

Tool	1 Least	2	3	4	5 Most
Population analytics / reporting / dashboard	☐	☐	☐	☐	☒
Care management tool	☐	☐	☐	☐	☒
Care transitions alerts	☐	☐	☐	☐	☒
Electronic Health Records (EHRs)	☐	☐	☐	☒	☐
Practice assessment tools	☐	☐	☐	☒	☐
Health risk assessment software	☐	☐	☐	☒	☐
Practice management tools (scheduling, billing)	☐	☐	☒	☐	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☐	☐	☒	☐
Patient education wellness tools	☐	☐	☒	☐	☐
Provider/case manager directory	☐	☐	☐	☒	☐
Shared decision-making tools	☐	☐	☐	☒	☐
Telemedicine	☐	☒	☐	☐	☐
Other:	☐	☐	☐	☐	☐

80) What are the primary barriers to RCCOs and providers increasing their use Health Information Technology to improve the performance of Primary Care Practices?

Interoperability of data from disparate systems is the major barrier. The Health Information Exchange is currently limited to results delivery, which does not allow for provider-to-provider data exchange or communication. In cases where data is able to be exchanged, the lack of a master patient identifier makes it difficult to match patient information coming from these disparate systems. In addition, the high cost from electronic health record vendors will continue to be a barrier, especially for primary care practices, even as interoperability solutions are developed at a national and state level.

81) How can Health Information Technology support Behavioral Health Integration?

Behavioral health in particular lends itself to telemedicine solutions. Many clients would be more willing to address behavioral health needs if they could do so from the privacy of their own home or primary care physician's office. While co-location provides some access at PCMP offices, it can't be adopted network wide due to requirements of space and sometimes provider disinterest. Telemedicine can provide an alternative to the co-location model. However, in order to successfully expand utilization of telemedicine, Medicaid should publicly support one or more acceptable software platforms.

82) In the next iteration of the ACC, should there be a shared resource for data and analytics? Please describe the basic criteria for what a shared data and analytics platform needs to contain in order for it to be useful.

The Statewide Data Analytics Contractor (SDAC) dashboard already has the information necessary to provide robust data analytics. The interface needs to be modified for ease of use and provider customization. The current dashboard setup can be daunting and needs to incorporate a more simple and friendly format. The dashboard should also play on the natural competitive nature of medical providers and incorporate a rating system of some kind that compares provider performance.

83) Should there be a shared care management tool? Please describe the basic criteria for what a care management tool would need to contain in order for it to be useful.

CCHA does not recommend a shared care management tool but does support the idea of a central depository for data. Day-to-day operations of care coordination, including analysis and identification of potential clients for care coordination, care coordination activities (assessments, care plans), and internal care management improvement activities, should remain at a RCCO level. This allows ease of access and the flexibility to make changes and implement new ideas. However, we do support the idea of a bi-directional central depository where we are able to share our care coordination activities with other agencies as well as access data from other agencies.

84) Should there be a shared population health management tool? Please describe the basic criteria for what a population health management tool would need to contain in order for it to be useful.

CCHA supports the idea of a shared population health management tool. This tool should be used to produce evidence-based population predictive modeling for proactive care coordination/disease management. In order for the tool to be helpful, it would need the functionality to capture data from multiple resources beyond claims (e.g., RCCO, SEP, CCB) and push data to the RCCO. The data provided to the RCCO would need to be easily accessed, and RCCOs would require the ability to manipulate the data for targeting client populations.

85) Please describe the functionality that a common Medicaid provider directory would need to contain in order for it to be useful.

A useful Medicaid provider directory would contain accurate information and be updated on a monthly basis. In addition to practice address and phone number, other pertinent information would include the following: whether the practice is accepting new Medicaid clients, languages, hours of operation, practitioner gender and designation, as well as information regarding ADA accessibility.

86) How can the RCCOs support providers' access to actionable and timely clinical data?

In our experience, there are several ways that RCCOs can support PCMPs with accessing meaningful clinical data that can be utilized to continuously monitor and make improvements, including:

- Help practices take advantage of Meaningful Use financial incentives to implement an electronic health records system
- Hire quality improvement coaches to help practices create systems, templates and flow sheets for discrete data capturing

87) What are the HIT solutions that would benefit clients, providers, and RCCOs? Please comment on the parameters these tools or platforms would need to possess and the ways in which they could be used.

Health Information Exchange (HIE):
The HIE allows for exchange of patient level clinical data across the continuum of care including bi-directional exchange from both provider EHR systems as well as facility EHR systems via standard formats such as the CCD-A. A solution is needed to overcome barriers that limit substance abuse and mental health information to create a complete record when appropriate.

Functionality for patient matching and census delivery to RCCOs is important. Admit, Discharge, Transfer (ADT) alerts from the facilities connected to the HIE need to be matched to a patient record and delivered to the RCCO managing care for the patient in real time. In order to accomplish patient matching, a Master Patient Index needs to be created and incorporated into HIE technology.

Patient Portal:
Patient portals provide clients the ability to view and download their personal health information including patient education, clinical summary of visits, and lab results. This option opens up an avenue of communication between clients and their care team as appropriate. An assessment of the population's ability to access the internet would need to be completed and communications options would need to be limited to appropriate topics.

Population Health/Gaps in Care Tools:
These tools offer near real-time, updated information for practice performance on quality measures, as well as provider level performance data. They allow for patient drill down and provide actionable data at the point of care as the client is being seen.

Risk Stratification - Predictive Modeling:
Risk stratification/predictive modeling tools help providers and their care team identify which clients are high risk today (eliminate claims data lag as much as possible by leveraging HIE clinical data) based on several factors such as ER admits, readmits, number of conditions, behavioral health, etc. These tools help providers and RCCOs predict which clients are not yet on the high risk list but have a high probability of making the high risk list in the near future.

88) What technical assistance or resources related to HIT infrastructure should the RCCOs supply? This assistance or these resources could be for providers, social service organization, clients/families, or for others.

Efforts should be made to leverage or model a solution similar to the Centers for Medicare & Medicaid Services Blue Button Initiative to allow clients to access their own health information. Technical assistance should be supplied to help practices leverage their EHR technology, much like the Regional Extension Center program but with a slightly different focus on population health management, reporting, patient portal, and interoperability.

89) What role should health information exchange platforms like CORHIO or QHN play in the next iteration of the ACC?

Health Information Exchange platforms should remain intensely focused on the HIE to move beyond results delivery. Without a robust exchange of information, it is impossible to leverage population health and analytic tools across the ACC.

90) Please share any information, advice, and suggestions you have about health information technology in the ACC Program.

The patient profiler on the Statewide Data Analytics Contractor (SDAC) dashboard has the potential of functioning as a statewide electronic client health record. Though the information is not a complete picture of the client's needs, it does provide a great amount of detail. The Department should capitalize on this and adapt the format to mimic an electronic health record as much as possible.

Colorado Department of Health Care Policy and Financing

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Mountainland Pediatrics
Location: Thornton, Adams County, CO

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Community Reach Center
Location: Thornton, Adams County, CO
☐ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☒ Medical provider / PCMP / other provider
  i. Type or specialty: Pediatrics
  ii. Area of practice: Click here to enter text.
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☐ Other (please describe): Click here to enter text.

Are you currently involved in the ACC program?

☒ Yes
☐ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☒ 2-3 years
☐ 3-4 years
☐ Since before the program was implemented.

How have you been involved in the ACC program and what interaction have you had with RCCOs:
MLP is a contracted PCMH and is a delegated practice. We participate in all RCCO meetings.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:
We accept Medicaid

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☒ N/A

Please feel welcome to describe why or why not using the space below.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now? Number of patients who are attributed is high

   Reimbursement for PMPM is quick and allows us to support our patients with things that are not billable in a fee for service system.

   It is nice that they added a KPI that captures a pediatric measure.

   CORHIO is making it possible to know when one of our patients goes to the ED which allows us to follow up with them and schedule them with an out of hospital appointment.

   Nice focus on post-partum mothers and being reimbursed for screening.

2) What is not working well in the ACC Program?

   - Often get adults attributed to our pediatric practice and then we have difficulty getting them removed from our attribution. This effects our KPI's as adults tend to use more expensive services.
   - Denver Health patients are a challenge when they show up at our office wanting services as we will not get reimbursed for the services we provide.
   - The KPI of reducing ED use is not really within the control of the practice. When emergency rooms are advertising a 10 min wait and there is no disincentive for a patient to go to the ED, it is hard for us to impact that metric. Until the ED's are part of the solution, we will have a hard time impacting that metric.
   - The KPI for Well Child Checks – great idea, but is difficult to manage due to inaccurate contact information for parents. We often get newly attributed patients who are new to us and we try to reach out and invite the parent to bring the child in for a Well Child Check. Unfortunately, there is a high rate of being unable to contact parents due to inaccurate contact information.
   - SDAC data does not provide real time data, so it is difficult to impact the KPI's using that data.
   - Making the KPI's dependent on the region achieving them is not a good incentive and does not reward high performing practices.
   - The Medicaid population tends to be transitory, so they change practices frequently. It is difficult to be held accountable to the KPI's for a patient we never saw and was only attributed to us for a short period of time. It would be nice to base our KPI's on patients we have had on our rolls for a period of time (e.g. a quarter).
   - The RCCO's and BHO's don't align and don't necessarily have similar goals or accountability.

- No payment structure for doing integrated care.

3) What is working best in the Behavioral Health Organization (BHO) system right now?

The BHO system has a good geographic coverage and allows for the provision of treatment for a wide range of disorders. The integration of care makes good sense and works well for these patients.

4) What is not working well in the BHO system?

- When there is a Behavioral Health Provider as part of the practice there are not easy systems for reimbursement for their services. For example, HCPF does not recognize the behavioral health codes within the primary care setting which would allow for services to be billed for patients who don't have a mental health diagnosis, but still need services (e.g. obesity).

- When providing short term behavioral interventions the mental health required paperwork makes it an inefficient process. Completing an in-depth intake, a CCAR and other documentation required by the mental health system does not work when the patient may only need one to two encounters that could be 20 min long for each.

- Sharing information between mental health and physical health continues to experience barriers – the mental health side wants a release of information to be signed before releasing necessary information.

- Poor communication between physical health and mental health

5) What is working well with RCCO and BHO collaboration right now?

Communication is beginning to open up and the sharing of high utilizer data is happening. This has allowed the CMHC's to support the effort on lowering the cost of care while improving outcomes.

6) What is not working well with RCCO and BHO collaboration right now?

The two systems need better communication and alignment of goals as well as policies and procedures. Outcomes will continue to suffer if the two systems are not communicating well and working well together. It is often the high utilizers who are involved in both systems.

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

- Payment that supports integrated care and a focus on prevention/early intervention

- Systems that allow for easy communication

- Data collection between the 2 systems that can show good outcomes

[1] Many terms and definitions can be found in the Appendix at the end of this document.

- Consistency around care management – currently a patient can and does have care coordination in both systems

8) **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☒	☐	Have to have a mental health diagnosis in order to get services – that is not always true in a primary care setting
Community Behavioral Health Services Rule	☒	☐	Mental Health require more intensive documentation that is not realistic when a patient will be seen 1-2 times
Covered diagnoses list	☒	☐	Capitation does not cover autism spectrum disorders
Different behavioral / physical health reimbursement	☒	☐	Mental health does not cover diagnoses such as obesity
Institutions for Mental Diseases exclusion	☐	☒	
OBH rules, reporting, or financing (regulatory differences between agencies)	☒	☐	OBH requires more documentation that does not work in a primary care setting; No capacity to bill for services that are not based on a DSM diagnosis
PCMP financing structure	☐	☒	
Per-member per-month amount	☐	☒	
Physical space constraints	☒	☐	
Privacy Laws (HIPAA, 42 CFR)	☒	☐	42 CFR makes it difficult to share information readily from mental health to physical health
Professional / cultural divisions	☒	☐	All professions need to learn to work together in an integrated manner – both professions are focused on seeing as many patients as possible to maximize billing and that does not leave time to talk to each other
RCCO or BHO contracts	☒	☐	Goals, incentives and policies do not align
Staff capacity	☒	☐	Work force lacks adequate number of people to hire
State/Federal rules or reporting requirements	☒	☐	Reporting is based on having 2 separate models, not an integrated one

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

Technical resources / data sharing	☒	☐	No structure in place to share data
Training	☒	☐	Both systems are trained in an insular manner – there needs to be cross training
Others	Please type your response here.		

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

- Allow for the use of behavioral health codes
- Eliminate need for in depth documentation (CCAR etc.) in primary care setting
- Take down barriers to sharing information
- Create structures that allow for data sharing and shared goals around outcomes for patients
- Set up a payment structure that is amenable to an integrated care setting and that is clear to practices providing such care
- Make regulations reasonable so they don't become a burden and increase cost of care or the amount of time spent meeting requirements.

10) Please share any other general advice or suggestions you may have about behavioral health integration.

It will take systems changes in order to effect change in how services are provided and paid for. This is the opportunity to effect such a change.

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination?

Treating the whole person to support the healthiest life style as possible. Addressing all needs of the person, regardless of type of need (medical vs. non-medical).

b. How should RCCOs prioritize who receives care coordination first?

They should work with the practices who know their patients and their needs to define who is prioritized.

c. How should RCCOs identify clients and families who need care coordination?

Practices need access to data, not only the SDAC, but internal data from their EHR that allows them to identify needs based on population characteristics (can identify patients based on diagnosis – diabetes, asthma) and through the use of registries.

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

The practice should be responsible for reporting the number of patients with a care plan, number of contacts in a month, number of employees providing the care.

12) What services should be coordinated and are there services that should not be a part of care coordination?

Practices should work with other entities to be sure that all needs are covered – e.g. housing, benefits etc. The practice should not be responsible for the service specifically, but should be responsible to link patients to organizations that can meet the need.

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

Diagnoses, systems they are already in, unmet needs to be addressed in order to be successful.

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today?

Medical, Mental Health, Nursing homes, Health Departments, Housing Authority

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

Lots of coordination takes place outside and is usually focused on needs such as housing, benefits, child care etc. Those organizations don't usually reach out to the medical provider to let them know what coordination is happening and most medical practices who are providing coordination don't reach out to those organizations.

c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

Work with medical providers to ask more questions and to reach out to other organizations providing coordination. Provide training and outreach to non-medical organizations to facilitate better coordination.

d. What are the gaps in care coordination across the continuum of care?

There are gaps in specific services for the high utilizers, so when care coordinators try to find resources, there are none available.

15) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	Should the RCCO have a role? Yes	Should the RCCO have a role? No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma	☐	☒	☒	
Affordability (assistance with prescriptions or co-pays)	☒	☐	☒	
Daycare / childcare	☐	☒	☒	
Economic stability & employment	☐	☒	☒	
Education	☒	☐	☒	
Environment	☐	☒	☒	
Food access / nutrition	☒	☐	☒	
Health literacy	☒	☐	☒	
Housing	☐	☒	☒	
Language or translation services	☒	☐	☒	
Literacy	☐	☒	☒	
Transportation	☒	☐	☒	
Other	Please type your response here. Feel free to list as many non-medical factors as you want, and please explain how the RCCO should be involved.			

16) **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	Coordinate care? Yes	No	In what capacity should these individuals coordinate care in the ACC Program?
Advanced Practice (Registered) Nurses	☒	☐	Work with other professionals and lay persons involved in the case
Certified Addiction Councilors	☒	☐	""
Certified Nurse Midwives	☒	☐	""
Community Health Workers	☒	☐	""
Generalists (BA/BS/MA/MS)	☒	☐	""
Health Coaches	☒	☐	""
Licensed Clinical Social Workers	☒	☐	""
Licensed Marriage and Family Therapist	☒	☐	""
Licensed Mental Health Counselors	☒	☐	""
Licensed Professional Counselor	☒	☐	""
Masters of Public Health	☒	☐	""
Medical Doctors / Doctors of Osteopathic Medicine	☒	☐	""
Nurse Practitioners	☒	☐	""
Patient Navigators	☒	☐	""
Peer Advocates	☒	☐	""
Promotoras	☐	☒	
Psychiatrists	☒	☐	""
Psychologists	☒	☐	""
Registered Nurses	☒	☐	""
Social Workers	☒	☐	""
Wraparound facilitators	☒	☐	""
Other	Please type your response here.		

17) **Care coordination requirements for specific populations.** Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and infants	☐	☒	
Children	☐	☒	
Children who are healthy, but in socially-complex environments	☐	☒	
Children involved in the foster care system	☒	☐	
Children with a chronic illness	☒	☐	
Children with a serious emotional disturbance	☒	☐	
Children with medical complexity	☒	☐	
Children or youth with a behavioral health diagnosis or substance use disorder	☒	☐	
Transition-age adolescents	☒	☐	
Parents and families	☐	☒	
Pregnant women	☐	☒	
Adults	☐	☒	
Adults who are healthy, but in socially-complex situations	☐	☒	
Adults with a chronic illness	☒	☐	
Adults with a behavioral health diagnosis or substance use disorder	☒	☐	
Clients involved in the criminal justice system	☒	☐	
Clients with a disability	☒	☐	
Clients in a nursing facility	☒	☐	
Elderly clients	☒	☐	
Frail elderly clients	☒	☐	
Clients in palliative care	☒	☐	
Other populations, please comment:			

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

Work with DHS to ensure that kids get the care they need; provide training for practices on managing the care of socially complex kids.

19) How should care coordination be evaluated? How should its outcomes be measured?

A care coordination program should initially be measure by having good processes, not measured by outcomes, until solid data exists on outcomes that are risk adjusted and accurate for children. Initially all measures need to be quite separated from outcomes that are highly tied to patient behavior, or practices will be less likely to serve those with the highest risk.

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

a. What is the PMPM cost for providing care coordination services?

Based on a full time care coordinator that has an average case load of 500 the PMPM cost is between $8-$9 for that specific case load.

b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

t is not advisable to have the PMPM vary by specific population, please see 21.

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

No, the RCCO should not set specific ratios. They should evaluate if outcomes are being met and should focus on helping practices improve processes for quality care. Mandating a ratio does not ensure quality care. The ratio will vary depending on the acuity level and needs of the patients and the practice is the best judge of what it takes to manage care.

a. **Care coordinator to client ratios**. If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☐
51-100	☐
101-200	☐
201-500	☐
501-1,000	☒
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

Care coordination should be measured in a way that does not burden the medical providers with intensive documentation and more time spent reporting measures than providing care. Ultimately, if care is coordinated you get better outcomes, so figure out a way to measure overall outcomes instead of counting every service that is provided. Also recognizing that outcomes for children are not as immediate as adults as much of what we do is prevention based. Prevention only shows up as an outcome when you are looking at them longitudinally.

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Each practice should work with the RCCO to put a system in place to coordinate care. General guidelines can be helpful, but over-regulation makes it more expensive to provide the service and does not translate into better outcomes. Care coordination should be broadly defined and should include anything that adds value to the patient. One advantage of the current PMPM system is that it can be used by the practice to do whatever is helpful to the patient. Capitation was designed with this idea in mind, but over the years, more regulations were layered on top of the BHO's making it more difficult to use the dollars flexibly to support the needs of the patient. I would not like to see the RCCO's start layering on regulations and reporting requirements that become a burden and get in the way of good care. Most practices know how to provide good care and do so, despite barriers. RCCO's should work with practices to ensure quality care without over-regulation.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

- The RCCO should work with medical practices to define QI functions and to set goals around achievement of those functions.
- RCCO's should provide more support in the attribution process and how to get wrongly attributed patients off the attribution list.
- RCCO's should meet on a regular basis with practices to review data and expectations and provide support around interventions to meet KPI's.
- RCCO's should share KPI performance across RCCO's and interventions that are working in other regions.
- RCCO's should be in communication with Emergency Departments to help manage ED use by patients.
- Streamline regulations and allow flexibility at the local level to achieve better care, higher quality, and lower costs.

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

The RCCO should show what they are already doing to support practices in meeting their KPI's; and how they are working with other RCCO's to ensure standardization across regions.

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

27) Should the RCCO region maps change? Why or why not? If so, how?

28) Should the BHO region maps change? Why or why not? If so, how?

It would be nice if the RCCO regions and the BHO regions matched up

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

Standardize expectations across all regions

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

There is no benefit structure that supports integrated care. HCPF will not cover behavioral health codes and the BHO's require mental health level of documentation that is impractical. Funding needs to be flexible and able to support the needs of the patient. There is a need to move away from a fee for service model to a value based system where good outcomes are the focus.

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

Having multiple RCCO's per region causes confusion and is not as efficient as one RCCO who has good relationships with community partners as well as the PCMH's.

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

We accept Medicaid

34) What role should RCCOs play in attributing clients to their respective PCMPs?

They should help ensure that patients are assigned to the correct PCMP and help when there is a problem with attribution.

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

They should work together to take down barriers to good care.

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

Work should be done to include private insurance as part of the ACC system. There are many services we can provide to Medicaid patients that we cannot provide for our insurance patients because it is not covered under their insurance.

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

The RCCO should have an advisory board that includes patients.

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

The RCCO should have an advisory board that includes these community partners.

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

The achievement of good outcomes can only come through community engagement and buy in.

42) How should the Department structure stakeholder engagement for the ACC as a whole?

Through the PIAC's as well as some focus groups that engage community members as well as patients. It would be helpful to see what the end user is experiencing as working and not working.

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

No

a. If no, what are the gaps?

It is difficult to find specialists in our community who will take Medicaid, due to lower reimbursement rates and higher no show rates.

b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

a. What role should hospitals play in the next iteration of the ACC Program?

They have to become part of the solution as to the overuse of the ED's.

b. What role should pharmacies play in the next iteration of the ACC Program?

Communication around trends and problems they are experiencing.

c. What role should specialists play in the next iteration of the ACC Program?

We need to recruit more specialists to participate.

d. What role should home health play in the next iteration of the ACC Program?

They need to work closely with practices so care is coordinated and focused on good health outcomes.

e. What role should hospice care play in the next iteration of the ACC Program?

They need to work closely with practices so care is coordinated and the patient is supported during this transition.

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

g. What role should counties play in the next iteration of the ACC Program?

They need to understand and support the overall outcomes of the ACC's and coordinate their efforts to help us manage difficult populations.

h. What role should local public health agencies play in the next iteration of the ACC Program?

They are a good resource for population health and management – they have many lessons learned that can be shared. They also need to play a role in the management of difficult populations.

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

Many of these organizations have valuable lessons learned and are very good at engaging difficult to engage populations. These organizations should be at the table to help us learn, but also to partner around the management of special needs populations.

45) How can RCCOs help to support clients and families in making and keeping appointments?

Education of patients and supporting practices when they are dismissing a patient for excessive no shows.

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

47) **Community Health Worker reimbursement.** Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement process	(Please check all that apply)
Independently bill	☐
On staff (salary) at Primary Care Medical Provider Clinic	☐
On staff (salary) at RCCO	☒
Per Member Per Month Payment	☐

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

Work with dental providers to understand their role in providing oral health care to this population. Include dental providers as part of the medical home network.

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you?

Meeting the patient where they are at. Taking into consideration the things that influence their behavior and the way they need to get support.

b. What RCCO requirements would ensure cultural competency?

Focusing on good outcomes is the best measure. If your services are not culturally considerate of the patient then you will not get good outcomes.

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?

Good listening and engagement skills.

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

Having a staff that is reflective of the demographic make up of the practice would be helpful. Also recognizing that the health care work force is already unable to meet the demands, so when adding

cultural and language capacity as a requirement, it gets that much more difficult to meet the demand for services.

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

51) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

Engage hospitals and emergency rooms as partners in managing emergency room use. Currently they have a financial incentive to treat non-emergent issues in the emergency room.

52) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

There are many examples of good networking (health departments, BHO's) that can be examples to learn from. The system has to get buy in across the communities if system reform is to happen.

Practice Support

53) **Support for practices.** Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☒	☐	☐	☐
Network provider education	☒	☐	☐	☒
Assistance with practice redesign	☒	☐	☐	☐
Assistance with efficiency-enhancing activities	☒	☐	☐	☐
Provide web-based resources and directories	☒	☐	☐	☒
Provide practice-specific data reports	☒	☐	☐	☐
Provide clinical care guidelines and best practices.	☒	☐	☐	☐
Provide clinical screening tools	☒	☐	☐	☐
Provide health and functioning questionnaires	☒	☐	☐	☐
Provide chronic care templates	☒	☐	☐	☐
Provide registries	☒	☐	☐	☐
Offer client reminders	☒	☐	☐	☐
Offer client self-management tools	☒	☐	☐	☐
Offer educational materials about specific conditions	☒	☐	☐	☐
Supply behavioral health surveys	☒	☐	☐	☐
Supply other self-screening tools	☒	☐	☐	☐
Administer behavioral health surveys	☐	☒	☐	☐

Administer other self-screening tools	☐	☒	☐	☐
Prepare client action plans	☐	☒	☐	☐
Provide training on providing culturally-competent care	☒	☐	☐	☐
Provide training to supporting staff	☒	☐	☐	☐
Provide training on motivational interviewing	☒	☐	☐	☐
Provide tools and software for phone call and appointment tracking	☒	☐	☐	☐
Provide tools and resources for tracking labs, referrals, etc.	☒	☐	☐	☐
Provide referral and transitions of care checklists	☒	☐	☐	☐
Provide visit agendas or templates	☒	☐	☐	☐
Provide standing pharmacy order templates	☐	☒	☐	☐
Provide comprehensive directory of community resources	☒	☐	☐	☒

Provide materials regarding Nurse Advice Line	☒	☐	☐	☐
Ensure all tools and resources are centrally located on RCCO-specific website	☒	☐	☐	☐
Others				

54) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

55) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

Participation in QI projects; training for practices on models of efficiency; spreading knowledge learned in one region to other regions.

56) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

KPI's that can be tracked and impacted.

57) Should the Department require that PCMPs utilize disease registries to manage the health of their population?

No – most practices already do this and the meaningful use requirement facilitates the use of the electronic health record to manage populations of patients

58) Please share any other advice or suggestions about provider support in the ACC.

Hire staff who have experience in the medical field and who understand a quality improvement process and how to facilitate a practice in taking on a QI process. Staff should also be comfortable with data and how data can be used to improve outcomes while reducing costs.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

The payment structure is set up for the region to meet their KPI's. There is no incentive for a practice that is meeting the KPI's because they will only get paid if the region makes it.

The incentive is low and does not offset the cost of managing high risk, high utilizing consumers. The system almost penalizes the practice for taking on these types of patients.

KPI's for children need to be included and need to focus on process outcomes as the payoff for managing their care well comes far in the future (e.g. getting the weight of an obese child under control potentially avoids all the adult chronic disease conditions that would occur if the obesity continued).

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

Our practice would be interested in receiving Capitated payments for our Well Child Visits. These visits include multiple services and having a capitated model would allow our provider the ability to concentrate on the patient and not on what requires an additional co-pay.

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

Many practices have the capability and infrastructure to adapt to value based payment. It is the larger system of HCPF, RCCO's and BHO's that lack the infrastructure and access to real time data that is the barrier.

62) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

We are not currently licensed by the DOI with an LSLPN, HMO or other license. We are a primary care practice and do not meet the definition of a LSLPN or HMO license.

63) What role – if any – should the RCCOs play in the distribution of payments to providers?

From a primary care practice perspective because we are FFS I see no reason to change the role the RCCO has currently.

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

Most practices have an electronic health record that is capable of tracking data and outcomes. HCPF and RCCO's should work directly with each practice to define a data set that will support showing outcomes.

Measures for children include Well Child Checks; screening at each Well Child Check; Follow up appointments for positive screens; Immunization records and screening for Post-Partum Depression.

Practices should submit patient satisfaction surveys and documentation of QI projects.

66) **Measuring Client experience.** Please complete the table below to indicate how the Department should measure Client/patient experience:

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☒	☐	
SF-12 Health Survey	☐	☐	
Other types of client interviews / surveys	☒	☐	
Patient Activation Measure	☐	☐	
Focus groups	☒	☐	
Other	Please type your response here.		

67) Knowing that, at this time, the Department only has claims data, how should population health be measured?

Through data provided by practices from their EHR's

68) How should quality and performance data be reported to the RCCOs, PCMPs, and the public?

The RCCO's should work with practices to define the data that get at the triple aim.

69) **Measures for payment.** Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☒
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐

None	☐

70) What percent of RCCO payments should be tied to measures or performance?

Percentage	
10-20%	☒
21-30%	☐
31-40%	☐
41-50%	☐
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

71) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?

Yes

72) Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?

Initially it should be based on improvement, with the goal of getting to national standards

73) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)?

This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

74) **Incentive payment frequency**. Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☒
Quarterly	☐
Annually	☐
Other	☐

If you checked the "Other" box, please describe payment frequency below:

75) For potential offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

76) For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

- Screenings and follow up visits
- Obesity measures (bmi, weight at each visit)
- Asthma measures (controller prescribed, safety plan given)
- Track referrals and follow through with the referrals
- Immunizations
- Well child checks
- We are reimbursed for some of the screenings we do, asthma consults, collecting biometrics for obese patients, immunizations and well child checks

Health Information Technology (HIT)

77) **Types of communication.** For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	☒
Text message	☐	☒
Web portal	☐	☒
Email	☒	☐
Telemedicine / Video chat	☒	☐
Face-to-face meeting	☐	☒
Smartphone app	☒	☐

80) What are the primary barriers to RCCOs and providers increasing their use Health Information Technology to improve the performance of Primary Care Practices? Everyone uses a different system and they don't readily communicate with each other.

81) How can Health Information Technology support Behavioral Health Integration?

Address the 42 CFR issue

82) In the next iteration of the ACC, should there be a shared resource for data and analytics? Please describe the basic criteria for what a shared data and analytics platform needs to contain in order for it to be useful.

What data practices are collecting, how they are using it to impact care and how they are measuring success towards the triple aim.

83) Should there be a shared care management tool? Please describe the basic criteria for what a care management tool would need to contain in order for it to be useful.

The tool doesn't need to be exactly the same, but should capture some basic information such as: Need, Goal, Intervention and who will do it by when.

84) Should there be a shared population health management tool? Please describe the basic criteria for what a population health management tool would need to contain in order for it to be useful.

85) Please describe the functionality that a common Medicaid provider directory would need to contain in order for it to be useful.

Accurate and consistently updated list of providers and specialists who are currently accepting Medicaid patients.

86) How can the RCCOs support providers' access to actionable and timely clinical data?

Develop relationships with practices and focus on QI projects and data that illustrates progress.

87) What are the HIT solutions that would benefit clients, providers, and RCCOs? Please comment on the parameters these tools or platforms would need to possess and the ways in which they could be used.

88) What technical assistance or resources related to HIT infrastructure should the RCCOs supply?

This assistance or these resources could be for providers, social service organization, clients/families, or for others.

89) What role should health information exchange platforms like CORHIO or QHN play in the next iteration of the ACC?

90) Please share any information, advice, and suggestions you have about health information technology in the ACC Program.

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Mindy Klowden
Location: Wheat Ridge, CO

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Jefferson Center for Mental Health
Location: Wheat Ridge, CO
☒ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☒ Medical provider / PCMP / other provider
  i. Type or specialty: Community Mental Health Center
  ii. Area of practice: Click here to enter text.
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☐ Other (please describe): Click here to enter text.

Are you currently involved in the ACC program?
☒ Yes
☐ No

If you answered "yes" above, how long?
☒ 2-3 years

How have you been involved in the ACC program and what interaction have you had with RCCOs:
Jefferson Center for Mental Health provides care coordination, under contract with the Region 6 RCCO CCHA and subcontract with MCPN, for patients whose primary diagnoses are behavioral health conditions. Jefferson Center also works closely with CCHA on the Jefferson County Hotspotting Alliance, and is in the process of obtaining PCMP status for the Union Square Health Home.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:
Jefferson Center is the community mental health center serving Jefferson, Gilpin and Clear Creek Counties since 1958. Medicaid is Jefferson Center's largest revenue source and approximately 50% of patients served by Jefferson Center have Medicaid, or qualify for Medicaid and we assist them in obtaining coverage. As a former MHASA, Jefferson Center has experience managing the care and bearing risk for persons with serious mental illness. We are also one of the owners/managing partners in Foothills Behavioral Health Partners, the BHO for our region.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?
☒ Reserved (waiting to see the RFP)

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

The ACC has been very successful in ensuring Medicaid members have a primary care medical provider and have access to care coordination. The ACC has also provided the state Medicaid program with the opportunity to take small but important steps towards value based payments, and to experiment with a global payment methodology through Rocky Mountain Health Plans' 1281 program. Another aspect of the ACC that is working well is the opportunity for stakeholder input, through the open meetings of the PIAC, stakeholder participation in the subcommittees, and opportunities to provide input to ACC staff through mechanisms such as this RFI.

2) What is not working well in the ACC Program?

The ACC program was developed originally with a focus on primary care, and integration of behavioral health and coordination with specialty care has been something of an afterthought. Behavioral health organizations and community mental health centers have been involved with RCCOs to a varying degree across the state, but are not managing partners or voting members in all regions. This means that the vast experience of BHOs and CMHCs in managing care, carrying risk and coordinating care for people with complex conditions has not been leveraged.

Secondly, while PCMP status may be granted to community mental health centers who meet the contracting requirements, this has happened inconsistently across the state. There is also regional variation in terms of how care coordination has been delegated, and this has resulted in some inefficient processes.

Another aspect of the ACC program that is not working well is that the incentives to providers are not significant enough to really make a difference in patient care. The Department took an important step forward in defining advanced primary care standards for PCMPs. These standards promote integration and align closely with the patient centered medical home standards. However the additional $.50 PMPM is not sufficient to incentivize practices in taking steps to achieve more patient centered care and invest in the infrastructure that may be necessary for population health management and integrated behavioral health services.

3) What is working best in the Behavioral Health Organization (BHO) system right now?

The BHO system has been highly successful in achieving important benchmarks such as reducing hospital length of stay, hospital and ED utilization, and hospital recidivism among people with serious mental illness or serious emotional disturbances. While controlling costs per member, the BHOs have increased access to care. BHOs and community mental health centers have worked collaboratively to improve mental health functioning and overall functioning, reduce symptom severity, and contain costs to the state Medicaid program. Since 1996, BHO rates have increased at much slower rates when compared to other similar services, resulting in millions of dollars of likely savings for the state of Colorado.

Under the BHO system, community mental health centers like Jefferson Center have gained experience managing care for populations with complex health care needs and have successfully developed the clinical, administrative and technological capacities necessary to do population health management.

4) What is not working well in the BHO system?

Neither a total "carve-in" nor the current "carve-out" of behavioral healthcare services enables achievement of the "triple aim", or support integrated behavioral health and primary care. A total carve in would likely result in inferior care for people with serious mental illness, substance use disorders and children with serious emotional disturbances and in turn lead to increased hospitalization. A total carve in would also result in a loss of the 1915 (b) (3) Managed Care Waiver, which has allowed the state to control costs; in particular hospital costs would skyrocket. Prior to the carve-out, funding for behavioral health was constantly subject to cutbacks. A complete carve in may again mean that funding is not kept at an adequate level or that behavioral health providers are not given sufficient resources that are necessary to fully support patients in their recovery process, not just with their medical needs. However the existing carve-out does not fully support integrated, whole person health care. For example, primary care providers who are not part of the BHO network are not able to provide Medicaid members with fully integrated care. Community mental health centers, while supported through the carve-out for mental health and substance use disorder treatment, are not paid to provide behavioral medicine (addressing the behavioral aspects of physical health issues) or brief treatment for non-covered diagnoses (e.g. anxiety.) Some middle path may be required that both ensures an adequate level of behavioral health funding, and promotes whole person care. Ultimately, the ACC Program should consider moving toward a model where the RCCOs work with the BHOs - as equal partners- to assume and manage risk. In the short term, the 1915(b)(3) Managed Care Waiver has allowed the BHOs to bend the cost curve and must be kept in place as the state contemplates how it will bring together physical and behavioral healthcare in the future. The RCCO RFP should reward bidders who can integrate clinical care, data, and financing.

5) What is working well with RCCO and BHO collaboration right now?

The most recent BHO procurement process required that bidders include a detailed description of how the BHO would promote integrated behavioral health and primary care, and how the BHO would coordinate care with the RCCO. While much of this work was happening already, the contracting requirements helped to crystalize plans for collaboration. For example, FBHP formed an "Integration Collaborative" which includes representatives from Jefferson Center, Mental Health Partners, Arapahoe House, CCHA, and FBHP. The collaborative meets bimonthly to monitor integration activities, jointly problem solve and identify opportunities to expand and enhance integrated care in multiple clinic settings.

6) What is not working well with RCCO and BHO collaboration right now?

There is regional variation in the extent to which RCCOs and BHOs collaborate. In some communities, BHOs and community mental health centers are voting members of the RCCO boards, or even helped to develop/form the RCCO. In other communities, the BHOs and community mental health centers have worked diligently to collaborate with the RCCO but have no formal power or influence. The RCCOs have not all been able to use or interested in learning from the BHO's experience with successfully carrying risk and managing care.

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

Jefferson Center has served the community since 1958 and is considered a leader and early adopter in integrated behavioral health and primary care. We offer services that range from facilitated referrals to co-located behavioral health, to more fully integrated services. Our partners include 14 private community practices, 3 school based health centers, and 2 federally qualified health centers. One of our clinics, the Union 5quare Health Home, is a level 5 integrated health care home which offers psychiatric and mental health treatment, substance use disorder treatment, primary care, wellness services, and peer health coaching all under one roof.

Currently, community mental health centers that have achieved bi-directional integration, including Jefferson Center, are heavily reliant on grant funding. Typically, CMHCs are using capitated payments (from Medicaid, managed through the BHO) or FFS billing to commercial payors to pay for behavioral health services. Primary care providers working with the CMHC are utilizing separate FF5 billing or enhanced (per diem) payments to FQHCs. This is not a sustainable model, and has greatly hindered innovation and higher levels of integration. Time-limited grants such as the federal Primary Behavioral Health Care Integration program or local foundation funds have been used to fill in the holes, which are many. There is currently no ongoing, sustainable reimbursement available for the core services that truly make for a health home serving the SMI population including care coordination, wellness services, peer support, health coaching, and data collection.

On the primary care side, behavioral health providers are not able to bill for behavioral medicine, brief therapy (traditional mental health treatment is billable in 45-60 minute increments), or treatment of non-covered diagnoses (e.g. relational issues, grief and bereavement.) Current payment methodologies also do not support provider to provider consultation or time spent on collaborative care planning.

Efforts to promote healthcare integration through the ACC should coincide with the 5tate Innovation Model plan (5IM). As a state, we must seek multi-payer alignment on payment methodologies, key performance measures and integration principles.

Jefferson Center would like to suggest a few concrete steps that should be taken to promote behavioral health integration:

1. **Pilot an integrated behavioral and primary care global/bundled payment**

We are fortunate to have a very long history of working closely with Metro Community Provider Network, and have many shared patients with co-morbid conditions. We would like to have the opportunity to build on the work we have done at Union 5quare and other settings to offer whole person care. For an appropriate subset of patients (e.g. those with multiple chronic conditions including serious mental illness) a global budget or bundled case rate would help facilitate the appropriate level of care needed. This would support population health management, allow for the necessary resources to address chronic conditions, offer a higher level of care coordination and health education, and support provider to provider

[1] Many terms and definitions can be found in the Appendix at the end of this document.

consultation. As a former MHASA and part owner of FBHP, Jefferson Center is experienced with managed care and prepared to take on risk. We would like to see opportunity in the next round of RCCO contracts for the RCCOs to facilitate and support such a pilot. To achieve global or bundled payments, it may require funds be pulled from the ACC, the BHOs, and the Medicaid FFS/FQHC prospective payment system. This payment methodology would enable flexibility to proactively meet patients' needs, without the constraints of volume-based payments and separate billing for "behavioral health" vs. "physical health". It would support integration at the clinical, financial, and operational levels, and put physical and behavioral health on par.

We recognize that there are regional differences among the RCCOs as well as among providers, and that the strength of integration partnerships may vary from community to community. However there may be other communities where community mental health centers and FQHCs are ready for this kind of a pilot. The RCCO RFP should be written in such a way that it allows for the development of a pilot or pilots in which the RCCO's role is to support and encourage the pilot, but not to manage the funds or be directly involved in care delivery. The learnings from these pilots would be very valuable and we would fully participate in evaluation, dissemination and technical assistance to other communities in Colorado or even the nation at large.

2. **Support the development of integrated health homes within community mental health centers**
Persons with serious mental illness (SMI) die, on average 25 years earlier than the general population, with the average age of death being 53. (NASMPHD, 2006) The higher mortality rate is even more acute for persons with co-occurring substance use disorders; average age of death = 45) (Mauer, 2010.) This is largely due to preventable conditions. National research has found that people with SMI are more likely to have high blood pressure, metabolic disorders, asthma, stroke and other risk factors compared to people without SMI. Many of these health conditions are exacerbated by unhealthy practices such as inadequate physical activity, poor nutrition, smoking, and by the side effects of psychotropic medication. These health conditions are preventable through routine health promotion activities, primary care screening, monitoring, and chronic disease management. Yet people with SMI often lack access to adequate and coordinated health care, and are twice as likely to delay seeking medical care. Many individuals with SMI rely on emergency departments as a primary source of care, which results in avoidable expense and poor continuity in treatment of chronic conditions.

This underscores the importance of developing an integrated health home within the community mental health center setting to reach persons with SMI and/or SUD. CMHCs are highly experienced with population health, chronic disease management, and assisting patients in accessing and navigating needed community resources and social supports.

One example of this is Union Square Health Home (USHH), developed by Jefferson Center along with our partners at MCPN and Arapahoe House as a long term health care home for adults with serious mental illness in Jefferson County who previously lacked primary care. USHH offers psychiatric and mental health treatment, SUD treatment, primary care, wellness services, and peer health coaching all under one roof. USHH is a community-based solution to addressing a fragmented, poorly coordinated health care delivery system. By ensuring that adults living with SMI and other chronic conditions have access to integrated primary and preventive care, patients are diverted from inappropriate and more costly care settings such as the hospital emergency department

Preliminary outcomes indicate positive trends in wellness measures such as functioning in everyday life and staying socially connected, as well as physical health indicators including BMI, cholesterol, and blood glucose levels. One area where significant reduction in at-risk patients was seen was for metabolic syndrome. Metabolic syndrome is a group of indicators considered together, including blood pressure combined, waist circumference, plasma glucose, HDL cholesterol and triglycerides. Patients at-risk for three or more are positive for metabolic syndrome. At baseline patients averaged 1.5 at risk areas. That decreased to 1.2 at risk areas at 6-months ($t=3.2$, $df=146$, $p<.05$). Overall 25% of all patients were at-risk for three or more of those indicators at baseline and 12.2% at 6months. At the 6-month point in time 83.5% percent of patients were no longer at-risk (20.9% of all clients). Patient satisfaction is also high.

The development of bi-directional health homes was discussed in Colorado's SIM proposal, and we along with CBHC have advocated that the Department seek the 2703 Medicaid waiver to develop health homes for persons with chronic conditions. One way to ensure these efforts are aligned with the ACC would be if the RCCOs were directed to help identify patients with a SMI or SUD diagnoses who are not currently attributed to a PCMP, and connect them to the CMHC based health homes in their region. Recognition of CMHCs as PCMPs in the ACC is also critical.

3. **Open up the 9600 series health and behavior codes in Medicaid.** While the state should work towards payment reform, with global/bundled payments as the ultimate goal, an important interim step that should be taken immediately is to allow for billing under the Health and Behavioral Assessment CPT codes. These may be used to bill for services provided to clients who do not have a psychiatric diagnosis, but whose behavioral function impacts a health problem. There are 6 different codes that fall under this category and include health and behavior assessment, reassessment, brief intervention (15 minutes) with the individual, brief intervention in a group setting, brief intervention with the family and the patient, and brief intervention with the family but without the patient. These are important services that in many cases community mental health centers are already providing in FQHCs and other primary care settings, but are not being reimbursed for.

8) **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	Barrier? No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☒	☐	See previous comments
Community Behavioral Health Services Rule	☐	☒	
Covered diagnoses list	☒	☐	Currently community mental health centers are not reimbursed for care provided to persons with non-covered diagnoses such as PTSD, situational depression and anxiety. Yet these diagnoses are common among patients being seen in primary care settings.
Different behavioral / physical health reimbursement	☒	☐	See previous comments
Institutions for Mental Diseases exclusion	☒	☐	This is an archaic requirement that is a barrier not only to integration, but to access to needed in-patient care. The institutes (Ft. Logan and Pueblo) are made responsible for all medical expenses for patients that are admitted. So, if a patient has medical issues such as a pregnant woman, patient with sleep apnea or a chronic condition, the institutes may not accept them for in-patient care. They have been forced to be rigid in their acceptance criteria out of necessity to contain costs. The solution is to continue Medicaid payments for patients hospitalized at the institutions.
OBH rules, reporting, or financing (regulatory differences between agencies)	☒	☐	OBH and HCPF should continue to work together to align policies, reduce administrative burden on providers, and eliminate funding silos to support comprehensive care and population health objectives. Specific to integrated care, OBH should relax requirements around the CCAR for patients served in integrated/primary care settings.
PCMP financing structure	☒	☐	The current PCMP financing structure is not sufficient to incentivize practices in taking steps to achieve more patient centered care and invest in the infrastructure that may be necessary for population health management and integrated

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

			behavioral health services. For the long term, the ACC should pursue a global/bundled payment methodology that eliminates FFS completely and more fully supports integration. In the short term, the department may need to increase the PMPM payments.
Per-member per-month amount	☒	☐	See above comment.
Physical space constraints	☒	☐	Whether integrating behavioral health services into primary care, or primary care services into community mental health center settings, some modifications are required for clinics to support integrated care. In primary care, there may be the need for additional exam rooms or offices to allow for behavioral health treatment to occur with privacy. Rooms may be required for group treatment or group visits as well. In community mental health centers, physical modifications will be required to transform space previously used for individual, family and group psychotherapy into medical exam rooms. CMHCs will need to ensure that there is adequate equipment, refrigeration (e.g. for vaccinations), sinks, areas for labs and basic medical procedures. IT infrastructures that are necessary to support integration in any setting include disease registries and other population health management tools that are built into EHRs; technology that supports sophisticated data collection and reporting; and technology and systems required to facilitate health information exchange (such as through exchange of Continuity of Care documents). Consistent with SIM, the state should invest in infrastructure development and offer time limited grants that provide start-up funds to clinics who are ready to implement integrated care.
Privacy Laws (HIPAA, 42 CFR)	☒	☐	Community mental health centers routinely request releases of information and do not often encounter patients who are not willing to sign an ROI. However, ROI requirements of 42 CFR Part 2 make the electronic sharing of information/health information exchange very complicated. Currently, CORHIO does not have the technical capabilities to support tiered consent. This means that providers who want to do collaborative care planning are forced to do duplicate data entry and/or invest in technology that supports the exchange of continuity of care

			documents – which is useful but does not really allow for integrated treatment plans.
Professional / cultural divisions	☒	☐	The "cultural differences" between primary care and behavioral health are numerous. The ACC's role in addressing these divisions/siloes should be consistent with the State Innovation Model plan- to invest in practice transformation support and training.
RCCO or BHO contracts	☒	☐	See previous comments under general questions 1-6.
Staff capacity	☒	☐	The ACC's role in addressing staff capacity needs should be consistent with the State Innovation Model plan- to invest in practice transformation support and training.
State/Federal rules or reporting requirements	☒	☐	The CCAR/DACODS is an administrative burden on clinicians, particularly behavioral health professionals working in primary care settings. OBH and HCPF should work collaboratively to develop an amended/shortened tool.
Technical resources / data sharing	☒	☐	See comments under privacy laws.
Training	☒	☐	The ACC's role in addressing training needs should be consistent with the State Innovation Model plan- to invest in practice transformation support and training.
Others	Please type your response here.		

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

The State should recognize that integration of physical and behavioral health occurs along a continuum and there are advantages and disadvantages to each level of that continuum. Each practice needs to evaluate the needs of its patient population, the strengths and weaknesses of its infrastructure, and both its long term vision for integration and what is realistic in the short term. Co-located services increase access to care, begin to promote collaboration across providers, and help mitigate stigma. More fully integrated services, which include routine collaboration among providers, shared care plans and population health measures may not be realistic for many providers until payment reform more fully supports integrated services. The state should promote partnerships between physical and behavioral health providers where appropriate in a community, and also support practices who want to move towards a fully integrated model by hiring providers directly.

The State should also work to align principles of healthcare integration across the RCCO, BHO and commercial insurance environments in order to achieve the goals of SIM.

10) Please share any other general advice or suggestions you may have about behavioral health integration.

Please see previous comments under "behavioral health integration".

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination?

The definition that resonates most with us comes from the Institute for Healthcare Improvement: http://www.ihi.org/resources/Pages/IHIWhitePapers/IHICareCoordinationModelWhitePaper.aspx

"The care coordinator is the care provider responsible for identifying an individual's health goals and coordinating services and providers to meet those goals. Given the needs of the individual, the care coordinator may be a nurse care manager, social worker, community health worker, or lay person. Regardless of the credential, the care coordinator will have expertise in self-management and patient advocacy and will be adept at navigating complex systems and communicating with a range of people, from family members to doctors and specialists. It is the responsibility of this care coordinator to identify life and health goals with the individual and to coordinate services and community supports to work with the individual toward better health outcomes. All the while, the care coordinator keeps a current understanding of the strengths and gifts that the individual and family bring (their "assets"). At its essence, the care coordinator is the person responsible for ensuring that the care plan is carried out in partnership with the person at the center of the care plan."

b. How should RCCOs prioritize who receives care coordination first?

While all patients should have access to some basic care coordination services, those with multiple chronic conditions and complex social service needs (e.g. homelessness, unemployment) may require more intensive services. RCCOs and PCMPs need to use appropriate assessment tools to do risk stratification and ensure those patients at greatest risk are prioritized.

c. How should RCCOs identify clients and families who need care coordination?

RCCOs and PCMPs should use a combination of predictive modeling (based on claims data, history of ED/hospital utilization) and patient interview/assessment to determine clients and families in greatest need. The Patient Activation Measure is also useful in determining a patient's level of readiness to make change.

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

Through data on key performance indicators and outputs (patients served, encounters, etc.)

12) What services should be coordinated and are there services that should not be a part of care coordination?

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

- History of trauma
- Employment and Housing History

- Hospital and ED utilization history
- History of SUD and/or mental health problems
- Patient Activation Measure score

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

    a. What care coordination is going on today?

    b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

Community mental health centers such as Jefferson Center use care managers and navigators to assist patients in navigating the health care and behavioral health delivery systems, accessing needed community resources and recovery supports. What makes this care coordination different is that it is focused equally on health and health care as it is on social determinants of health, and overall individual/family functioning.

In addition, in our integrated clinics Jefferson Center employs health care coordinators who work to ensure communication across providers, break down barriers to care and assist patients in scheduling appointments, and completing all necessary screenings and paperwork. We have been heavily reliant on grant funding to support care coordination, yet this is an essential component to successfully integrating care.

    c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

The RCCOs play a valuable role in offering care coordination for patients that cannot access those services at the point of care. However, there has been ample research that shows care coordination is most effective when it is delivered at the point of care. We would like to see the next RCCO RFP promote and encourage the delegation of care coordination services to providers who have proven capacity and expertise in this area.

For this to be most successful, particularly with individuals with multiple chronic conditions, an increased PMPM or different payment methodology is required. Practices should have the flexibility they need to tier care coordination so that patients with more complex health care needs are offered more in depth services. An algorithm of care coordination should be used based on severity of physical and behavioral conditions. Community mental health centers are often the most appropriate care coordination provider for those patients who see the mental health center as their health care home. Consequently the department should directly encourage RCCOs to contract with community mental health centers as PCMPs and/or to delegate care coordination functions to CMHCs in the next RFP.

    d. What are the gaps in care coordination across the continuum of care?

Many health care providers do not have strong relationships with human service agencies and community based organizations. This is another strength community mental health centers bring to the table.

15) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	Should the RCCO have a role?	Should the RCCOs coordinate with community	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?

	Yes	No	supports and services? Yes	
Abuse, neglect, and trauma	☒	☐	☒	Support screening at the provider level; augment where necessary. Ensure access to appropriate treatment services when trauma is indicated.
Affordability (assistance with prescriptions or co-pays)	☒	☐	☒	Support at the provider level; augment where necessary.
Daycare / childcare	☒	☐	☒	
Economic stability & employment	☒	☐	☒	
Education	☒	☐	☒	
Environment	☒	☐	☒	
Food access / nutrition	☒	☐	☒	
Health literacy	☒	☐	☒	Support health coaching and patient education at the provider level; augment where necessary.
Housing	☒	☐	☒	
Language or translation services	☒	☐	☒	Support at the provider level; augment where necessary. Ensure language competencies within provider network.
Literacy	☒	☐	☒	
Transportation	☒	☐	☒	
Other	Please type your response here. Feel free to list as many non-medical factors as you want, and please explain how the RCCO should be involved.			

16) **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	Coordinate care? Yes	No	In what capacity should these individuals coordinate care in the ACC Program?
Advanced Practice (Registered) Nurses	☐	☒	
Certified Addiction Councilors	☒	☐	
Certified Nurse Midwives	☐	☒	
Community Health Workers	☒	☐	
Generalists (BA/BS/MA/MS)	☒	☐	
Health Coaches	☒	☐	
Licensed Clinical Social Workers	☒	☐	
Licensed Marriage and Family Therapist	☒	☐	
Licensed Mental Health Counselors	☒	☐	
Licensed Professional Counselor	☒	☐	
Masters of Public Health	☒	☐	
Medical Doctors / Doctors of Osteopathic Medicine	☐	☒	
Nurse Practitioners	☐	☒	
Patient Navigators	☒	☐	
Peer Advocates	☒	☐	
Promotoras	☒	☐	
Psychiatrists	☐	☒	
Psychologists	☐	☒	
Registered Nurses	☒	☐	
Social Workers	☒	☐	
Wraparound facilitators	☒	☐	
Other	Please type your response here. Responses above are driven by concern for providing appropriate care while containing cost- it would not be efficient to use a professional with credentials such as anMD, PhD, PsyD, APN, NP or PA to offer care coordination services.		

17) **Care coordination requirements for specific populations.** Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and infants	☒	☐	
Children	☒	☐	
Children who are healthy, but in socially-complex environments	☒	☐	
Children involved in the foster care system	☒	☐	
Children with a chronic illness	☒	☐	
Children with a serious emotional disturbance	☒	☐	
Children with medical complexity	☒	☐	
Children or youth with a behavioral health diagnosis or substance use disorder	☒	☐	
Transition-age adolescents	☒	☐	
Parents and families	☒	☐	
Pregnant women	☒	☐	
Adults	☒	☐	
Adults who are healthy, but in socially-complex situations	☒	☐	
Adults with a chronic illness	☒	☐	
Adults with a behavioral health diagnosis or substance use disorder	☒	☐	
Clients involved in the criminal justice system	☒	☐	
Clients with a disability	☒	☐	
Clients in a nursing facility	☒	☐	
Elderly clients	☒	☐	
Frail elderly clients	☒	☐	
Clients in palliative care	☒	☐	
Other populations, please comment: All populations should be given individualized, patient-centered care. Care coordination should be tailored to the needs of the individual and family. With that said, some populations will require more intensive services than others. Risk stratification should be used systematically.			

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

19) How should care coordination be evaluated? How should its outcomes be measured?

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

a. What is the PMPM cost for providing care coordination services?

b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

a. **Care coordinator to client ratios.** If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☐
51-100	☐
101-200	☐
201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

Care coordination metrics should be designed to reflect the triple aim of improved population health, improved patient experience of care, and reduced overall health care costs.

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

The RCCOs play a valuable role in offering care coordination for patients that cannot access those services at the point of care. However, there has been ample research that shows care coordination is most effective when it is delivered at the point of care. We would like to see the next RCCO RFP promote and encourage the delegation of care coordination services to providers who have proven capacity and expertise in this area.

For this to be most successful, particularly with individuals with multiple chronic conditions, an increased PMPM or different payment methodology is required. Practices should have the flexibility they need to tier care coordination so that patients with more complex health care needs are offered more in depth services. An algorithm of care coordination should be used based on severity of physical and behavioral conditions. Community mental health centers are often the most appropriate care coordination provider for those patients who see the mental health center as their health care home. Consequently the department should directly encourage RCCOs to contract with community mental health centers as PCMPs and/or to delegate care coordination functions to CMHCs in the next RFP.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

While some flexibility is required to meet the unique needs of each local community, some uniformity across the state is necessary to ensure the ACC program as a whole is achieving the Triple Aim. The RCCOs should be required to adhere to a uniform set of guidelines in terms of contracting with PCMPs, collaborating with BHOs and community mental health centers, collaborating with safety net medical providers, sharing risk with providers, data reporting and reaching key performance indicators. RCCOs should be encouraged to delegate care coordination activities at the point of care whenever providers have the capacity and proven experience. The ACC should also encourage RCCOs and PCMPs to invest in technology (e.g. medical records, health information exchange, use of disease registries.)

Regional variation should be allowed in terms of approved pilot projects, which may include different payment methodologies in the short term such as the 1281 pilot or the provider-level global/bundled payment pilot suggested in this paper between Jefferson Center and MCPN. It also makes sense to allow regional variation in the approach RCCOs take in providing training/practice transformation support.

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

RCCOs should have representation from BHOs, Community Mental Health Centers, human service organizations on their governing and advisory boards.

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

This proposal makes some sense from the perspective of large providers and FQHCs whose service boundaries cross multiple RCCO regions. Aligning with one RCCO could reduce administrative burden on providers. This should be considered with the caveat that the PATIENT should be given a voice in how they are enrolled and attributed.

27) Should the RCCO region maps change? Why or why not? If so, how?

The Department should re-evaluate the RCCO regions based on patient preferences and patterns of utilization. RCCO region maps should support naturally occurring medical neighborhoods.

28) Should the BHO region maps change? Why or why not? If so, how?

The BHOs and community mental health centers should be consulted in terms of how patients access care, what if any barriers exist currently, and if/how the map should be drawn to align RCCO and BHO regions. BHO maps should definitely align with community mental health center regions.

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

There are several policy levers the state should use to maximize effectiveness not only of the ACC but of the Colorado Medicaid program overall. One state policy lever that should be utilized is the 2703 Medicaid waiver for Health Homes for Persons with Chronic Conditions. Colorado should submit a State Plan Amendment to allow for the creation of Health Homes in Medicaid that are based in community mental health centers and serve people with serious mental illness, substance use disorders, and/or one or more other chronic conditions. This effort should be done in tandem with SIM, to ensure payment and outcome metrics are aligned. RCCOs should then be directed to help identify patients with a SMI or SUD diagnoses who are not currently attributed to a PCMP, and connect them to the CMHC based health homes in their region.

The Department should seek authorization to pilot an integrated behavioral and primary care global/bundled payment, such as proposed in response to question 7 of this document. Bundled payments such as those proposed here will further support cross-systems integration provided behavioral health is an equal partner in the endeavor.

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

While the Department offers continuous eligibility for children for 12 months, it does not have this in place for adults. Medicaid members who rely on seasonal employment (such as those working in resort communities) and those with complex social situations may experience fluctuations in income. Without continuous eligibility these patients are subject to churn and it is very challenging for providers to ensure continuity of care. The Department should change the benefit structure to prevent this from happening when possible.

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

No, this would just cause confusion and be inefficient.

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

N/A

34) What role should RCCOs play in attributing clients to their respective PCMPs?

As community mental health centers become PCMPs, RCCOs should work to ensure patients with SMI/SED diagnoses and multiple chronic conditions are attributed to health care homes where their needs can best be met.

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

Prevention and population health management need to be a key function of RCCOs and PCMPs, so strong linkages with both CDPHE and local public health departments are important. The ACC program should promote strong awareness of CDPHE's winnable battles and prevention strategies.

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

The ACC program, and the Department overall, should continue to work with CDHS/OBH to align policies, reduce administrative burden on providers, and eliminate funding silos to support comprehensive care and population health objectives. As more patients gain coverage through Medicaid expansion, the needs for OBH block grant and general fund dollars are changing. The agencies should work together, and involve stakeholders, in determining if and how these resources should be used differently. For example, there may be prevention and early intervention activities, services that address the social determinants of health, and other aspects of care that are not covered by Medicaid that OBH funds could be directed towards.

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

We encourage continued collaboration on enrollment, retention and churn.

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

The ACC should coordinate with the Division of Insurance to ensure adequate coverage for behavioral health in the commercial market. Commercial payors are beginning to expand their coverage for behavioral health due to parity legislation and the inclusion of mental health and substance use disorder treatment as 1 of 10 essential health benefits under in the Affordable Care Act. A key to integration is ensuring people who are on private insurance have the behavioral health coverage they need to get necessary prevention, early intervention and treatment. PCMPs and health homes established through SIM or the 2703 waiver may identify areas where coverage is inadequate or not in line with parity, and report this to The Division of Insurance who can inform and educate the insurance carrier about possible compliance issues and how they can remedy the situation.

Consider a license for integrated practices that streamlines regulatory processes and requirements between the physical health and behavioral health systems.

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

Representation on the governing and/or advisory boards, patient experience of care surveys, and use of ombudsman/client advocates.

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

Representation on the governing and/or advisory boards (this should include BHOs and CMHCs.)

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

Agendas and minutes from RCCO-level program advisory board meetings should be made available on the ACC website, just as PIAC meeting notes are.

42) How should the Department structure stakeholder engagement for the ACC as a whole?

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

No

a. If no, what are the gaps?

Many community mental health centers are still not recognized as PCMPs, and specialists are not part of the ACC program at all. There continues to be a shortage of specialists that accept Medicaid, largely due to concerns over administrative burden and inadequate reimbursement. A Global or bundled payment methodology may enable the ACC to move into being more of an ACO model of care. "Healthcare neighborhoods" need to be supported.

b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

a. What role should hospitals play in the next iteration of the ACC Program?

RCCOs could receive incentives for appropriate E.D. and inpatient utilization reductions. Hospitals should coordinate with RCCOs, BHOs, PCMPs and community mental health centers to develop health care neighborhoods and ensure strong care coordination designed to reduce inappropriate utilization patterns.

b. What role should pharmacies play in the next iteration of the ACC Program?

c. What role should specialists play in the next iteration of the ACC Program?

d. What role should home health play in the next iteration of the ACC Program?

e. What role should hospice care play in the next iteration of the ACC Program?

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

g. What role should counties play in the next iteration of the ACC Program?

h. What role should local public health agencies play in the next iteration of the ACC Program?

RCCOs, BHOs, PCMPs and community mental health centers should be included in the required planning for health departments and work to develop relationships and collaborations that support population health.

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

45) How can RCCOs help to support clients and families in making and keeping appointments?

This is an appropriate role for care coordinators, peers, patient navigators, etc.

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

Community health workers, peers, health coaches, navigators can play beneficial roles in promoting health literacy and assisting patients in navigating systems of care. PCMPs should be provided adequate and flexible funding to utilize these cost-effective resources. The Department should not require the use of these positions without ensuring adequate funding is available to pay for their services.

47) **Community Health Worker reimbursement.** Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement process	(Please check all that apply)
Independently bill	☐
On staff (salary) at Primary Care Medical Provider Clinic	☒
On staff (salary) at RCCO	☐

Per Member Per Month Payment	☒

Also- on staff at community mental health centers.

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

Oral health is a key component to overall health and RCCOs that facilitate coordination should be incentivized in some way, as should PCMPs that integrate oral health.

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you?

The ability to provide health care services that are patient-centered and responsive to and individual's unique cultural, ethnic, linguistic and other characteristics.

b. What RCCO requirements would ensure cultural competency?

RCCOs should be required to demonstrate network adequacy in terms of cultural and linguistic competencies.

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?

Access to language line, translators, and/or multilingual staff

Materials written in very basic language (4th grade reading level)

Availability of health coaching, peer support, and/or patient navigation

Cultural competency training and organizational policies

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

Same as above

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

51) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

Several communities have efforts to address the needs of "super-utilizers". In addition to the ACC Super-utilizer project in RCCOs 4 and 7, there is the Bridges to Care Program in Aurora (funded by a CMMI grant) and

the Jefferson County Hotspotting Alliance, which Jefferson Center for Mental Health helped to form and actively participates in along with CCHA, MCPN, Arapahoe House, Lutheran Medical Center and St. Anthony's. Each of these programs utilizes an intervention which includes care coordination and patient education that is designed to reduce ER and hospital utilization by getting patients into primary care and/or behavioral health services. The ACC should promote cross-systems integration and support efforts such as these.

52) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

Practice Support

53) **Support for practices.** Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☒	☐	☐	☐
Network provider education	☒	☐	☐	☐
Assistance with practice redesign	☒	☐	☐	☐
Assistance with efficiency-enhancing activities	☒	☐	☐	☐
Provide web-based resources and directories	☒	☐	☐	☐
Provide practice-specific data reports	☒	☐	☐	☐
Provide clinical care guidelines and best practices.	☒	☐	☐	☐
Provide clinical screening tools	☐	☐	☒	☐
Provide health and functioning questionnaires	☐	☐	☒	☐
Provide chronic care templates	☒	☐	☐	☐
Provide registries	☒	☐	☐	☐
Offer client reminders	☒	☐	☐	☐
Offer client self-management tools	☒	☐	☐	☐
Offer educational materials about specific conditions	☒	☐	☐	☐
Supply behavioral health surveys	☒	☐	☒	☐
Supply other self-screening tools	☒	☐	☐	☐
Administer behavioral health surveys	☒	☐	☒	☐
Administer other self-screening tools	☒	☐	☐	☐
Prepare client action plans	☒	☐	☐	☐
Provide training on providing culturally-competent care	☒	☐	☐	☐
Provide training to supporting staff	☒	☐	☐	☐
Provide training on motivational interviewing	☒	☐	☐	☐
Provide tools and software for phone call and appointment tracking	☒	☐	☐	☐
Provide tools and resources for tracking labs, referrals, etc.	☒	☐	☐	☐
Provide referral and transitions of care checklists	☒	☐	☐	☐

Provide visit agendas or templates	☒	☐	☐	☐
Provide standing pharmacy order templates	☒	☐	☐	☐
Provide comprehensive directory of community resources	☒	☐	☐	☐
Provide directory of other resources	☒	☐	☐	☐
Provide materials regarding Nurse Advice Line	☒	☐	☐	☐
Ensure all tools and resources are centrally located on RCCO-specific website	☒	☐	☐	☐
Others				

54) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

SBIRT, PHQ 2/9, AUDIT, DAST, CRAFFT, SF 36, and some kind of trauma screening should be used.

55) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

Practice transformation in the ACC should be aligned with practice transformation efforts under SIM. Adequate funding – well beyond the current $.50 offered to the advanced primary care practices- is needed to incentivize primary care medical home principles and behavioral health integration.

56) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

Develop payment methodologies that are risk-based and fully support whole person, integrated and comprehensive care.

57) Should the Department require that PCMPs utilize disease registries to manage the health of their population?

Disease registries and other population health management tools should be incentivized, not required.

58) Please share any other advice or suggestions about provider support in the ACC.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

No. Payment methodologies that align with SIM, more fully support integrated care, and move beyond fee for service towards global/bundled payments are needed.

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

"Primary care capitation" would not achieve whole-person care. Jefferson Center has proposed to work with our integration partner, MCPN, to take on risk and co-manage the care for a shared patient population. To achieve global or bundled payments, it may require funds be pulled from the ACC, the BHOs, and the Medicaid FFS/FQHC prospective payment system.

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

Some providers do and some do not. The required infrastructure includes population health management tools (such as disease registries with clinical decision making capabilities), electronic health records, QI expertise, and the ability to produce and analyze reports at both the population and the patient level. Practice transformation coaching/TA/training such as what is proposed in SIM will be required to prepare many practices for payment reform and behavioral health integration.

62) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

63) What role – if any – should the RCCOs play in the distribution of payments to providers?

Currently the Department pays PCMPs rather than the RCCOs. If the RCCOs were to take on this function, they would gain more "control" over the PCMP. While this may reduce administrative burden on the Department, it seems like it would signal the expectation that RCCOs become managed care entities. Not all RCCOs are experienced in bearing risk. This would be another example of the need to partner with and maximize the BHOs experience in effective utilization management, coordinating care and carrying risk.

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

66) **Measuring Client experience.** Please complete the table below to indicate how the Department should measure Client/patient experience:

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☒	☐	
SF-12 Health Survey	☒	☐	
Other types of client interviews / surveys	☐	☐	
Patient Activation Measure	☒	☐	The PAM is an effective tool to gauge patient self-efficacy pre and post intervention. It also helps determine the level/intensity of intervention (e.g. coaching, education) and care coordination that is needed.
Focus groups	☒	☐	
Other	Please type your response here. Patient/family member participation in governing/advisory boards.		

67) Knowing that, at this time, the Department only has claims data, how should population health be measured?

Work with CDPHE to design an assessment methodology. Use community assessments such as those required of hospitals and local health departments.

68) How should quality and performance data be reported to the RCCOs, PCMPs, and the public?

69) **Measures for payment.** Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☐
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐

51+	☐
None	☐

70) What percent of RCCO payments should be tied to measures or performance?

Percentage	
10-20%	☐
21-30%	☐
31-40%	☐
41-50%	☐
51-60%	☒
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

71) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?

Yes.

72) Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?

Both.

73) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

74) **Incentive payment frequency**. Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	☐
Annually	☐
Other	☐

If you checked the "Other" box, please describe payment frequency below:

75) For potential offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

N/A

76) For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

BHOs evaluate and monitor community mental health centers on a variety of indicators as required by the Department. These include but are not limited to hospital length of stay, hospital and ED utilization, hospital recidivism among people with serious mental illness or serious emotional disturbances, access to care, and penetration rate. OBH evaluates and monitors community mental health centers using the CCAR/DACODS to track client progress on a number of domains including symptom severity, mental health functioning, overall functioning, etc. Jefferson Center does much more than the minimum required by HCPD and OBH. We have a Performance, Quality and Effectiveness department with skilled data analysts/evaluators on staff. We manage reporting for numerous federal, state and local government, and private foundation grants. We also collect qualitative data to measure patient experience of care and patient satisfaction.

Health Information Technology (HIT)

77) **Types of communication.** For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO: **N/A**

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	☐
Text message	☐	☐
Web portal	☐	☐
Email	☐	☐
Telemedicine / Video chat	☐	☐
Face-to-face meeting	☐	☐
Smartphone app	☐	☐
Other:		

78) **HIT investments by organizations.** For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below:

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	☒	☐
Digital care management tool	☒	☐
Care transitions alerts	☐	☐
Electronic Health Records (EHRs)	☒	☐
Health risk assessment software	☒	☐
Practice assessment tools	☐	☐
Practice management tools (scheduling, billing)	☒	☐
Client web portal for communicating care plan, services, benefit enrollment	☒	☐
Patient education/wellness tools	☒	☐
Provider/case manager directory	☒	☐
Shared decision-making tools	☒	☐
Telemedicine software	☐	☒
Other: Smart phone apps for chronic disease management	☐	☒
Kiosks for client check in and screenings	☒	

Other: "My Strength" self-help platform	☒	☐

79) **Importance of technology by type.** The Department is working to determine what technology is in place, what technology is needed, and what technology should be standardized. For RCCOs, providers, and other organizations, use the table below to answer what HIT infrastructure outside of the SDAC your organization would use to perform population health management activities. Tools are scored from 1-5, where 1 are those items least-likely to be used, and 5 are items most-likely to be used:

Tool	1 Least	2	3	4	5 Most
Population analytics / reporting / dashboard	☐	☐	☐	☐	☒
Care management tool	☐	☐	☐	☐	☒
Care transitions alerts	☐	☐	☐	☒	☐
Electronic Health Records (EHRs)	☐	☐	☐	☐	☒
Practice assessment tools	☐	☐	☒	☐	☐
Health risk assessment software	☐	☐	☒	☐	☐
Practice management tools (scheduling, billing)	☐	☐	☐	☐	☒
Client web portal for communicating care plan, services, benefit enrollment	☐	☐	☒	☐	☐
Patient education wellness tools	☐	☐	☒	☐	☐
Provider/case manager directory	☐	☐	☒	☐	☐
Shared decision-making tools	☐	☐	☒	☐	☐
Telemedicine	☐	☐	☐	☒	☐
Other:	☐	☐	☐	☐	☐

80) What are the primary barriers to RCCOs and providers increasing their use Health Information Technology to improve the performance of Primary Care Practices?

The expense to providers and lack of interoperability across health care settings.

81) How can Health Information Technology support Behavioral Health Integration?

a) Tele-health may be a valuable tool for psychiatry and behavioral health interventions – this virtual integration may be most appropriate in rural communities or in small practices which do not have sufficient volume to support a co-located provider. Technology such as Project Echo may be essential to support provider to provider consultation.
b) We at Jefferson Center have been working with our integration partners at MCPN and Arapahoe House to try to achieve a private health information exchange that supports not only exchange of information around shared patients in integrated care settings but also clinical decision making and team based

care. We have spent several years and invested financial resources in searching for a platform that would connect our EHRs, and ultimately began working with CORHIO. However they do not currently have the technology to support tiered consent or data that can only be shared with the use of a signed release (required when SUD diagnoses and treatment are involved.) We are currently using continuity of care documents to exchange information as an interim solution but are hopeful CORHIO will identify or develop tiered consent in the future.

82) In the next iteration of the ACC, should there be a shared resource for data and analytics? Please describe the basic criteria for what a shared data and analytics platform needs to contain in order for it to be useful.

This should include behavioral health data.

83) Should there be a shared care management tool? Please describe the basic criteria for what a care management tool would need to contain in order for it to be useful.

84) Should there be a shared population health management tool? Please describe the basic criteria for what a population health management tool would need to contain in order for it to be useful.

85) Please describe the functionality that a common Medicaid provider directory would need to contain in order for it to be useful.

86) How can the RCCOs support providers' access to actionable and timely clinical data?

87) What are the HIT solutions that would benefit clients, providers, and RCCOs? Please comment on the parameters these tools or platforms would need to possess and the ways in which they could be used.

88) What technical assistance or resources related to HIT infrastructure should the RCCOs supply? This assistance or these resources could be for providers, social service organization, clients/families, or for others.

89) What role should health information exchange platforms like CORHIO or QHN play in the next iteration of the ACC?

CORHIO and QHN are facilitating much needed health information exchange across health care settings. They should continue to work towards integrating behavioral health data, getting all providers on board, and achieving tiered consent models to help work around the current barriers such as 42 CFR part 2.

90) Please share any information, advice, and suggestions you have about health information technology in the ACC Program.

The ACC program should align efforts around HIT and HIE with those occurring under SIM.

CommunityCare
CENTRAL COLORADO

Performance Improvement Advisory Committee (PIAC)
November 18, 2014
Meeting minutes

Roll Call:
Present: Dr. Fred Michel (AspenPointe), Dr. Michael Welch (Peak Vista Community Health Centers), Anita Rich (CCHAP), Meredith Roach (Community), April Plunk (Member), Agim Elshani (Member), Patricia Yeager (The Independence Center), Annette Fryman (Community Advocate), Dr. Greg Sharp (Ideal Family Healthcare)

Staff: Joe Farr, Allan Olipane, Ryan Smith, Terri Reishus, Kerri Tashjian, Dr. Joel Dickerman, and Kelley Vivian

The meeting was called to order at 5:30 p.m.

Agenda Item #1: Welcome and Introductions:
The Performance Improvement Advisory Committee introduced themselves and welcomed all participants.

Agenda Item #2: Charter, Membership and Meeting Schedule for 2015
PIAC members were thanked for their participation in 2014. A recap of highlights from the PIAC included retooling the member survey to get more actionable feedback from consumers and feedback on Community Care's pilot projects and programs.

Membership terms and the PAIC charter were reviewed. Members were reminded that service is voluntary and length of service is by calendar year. The committee reaffirmed desire to keep meetings at same day/time, same format, same frequency, and same terms of membership. PIAC members suggested ways for Community Care to broaden scope of participation by adding committees or committee members from different communities in the service geapgraphy and creating accessibility through technology.

Agenda Item #3: Request for Information (RFI): Stakeholder and Consumer Engagement for the Accountable Care Collaborative Discussion
The RFI released by the Department of Health Care Policy and Financing soliciting feedback on the next RFP for the Accountable Care Collaborative was discussed. The committee discussed the following numbered questions from the RFI regarding stakeholder and consumer engagement:

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

- What happened if a RCCO doesn't meet this requirement? Does it get penalized? How does the state ensure that the representation is really from the community? The state should require that RCCOs demonstrate their PIAC is representative of the community served, including by stakeholder group and by geography.
- RCCOs should better market their program to the community to encourage involvement. People can't join what they don't know about.
- PIAC committee should focus on more representation rather than limiting participation.
- More consumers and their families should be involved.
- There should be a requirement to get stakeholders and consumers engaged than just the PIAC. Surveys, comment drop boxes, and 21st century technology methods like social media should be included in requirements for stakeholder and consumer feedback.
- Consumer advocates are important as they can be the voice of those that can't participate (voice/advocacy) – kids, deaf and blind, etc.

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

- Some of the same themes on education of RCCO from question 39.
- RCCOs should be required to put forth communication tool or mechanism that allows stakeholders to talk with each other about the system, this could be social media.
- RCCOs should encourage listening in for all PIAC meetings even if someone can't attend in person, livestreaming would help people listen and learn.
- RCCOs should not be prescriptive and should be right for their community – should not require "x number of providers", "x number of a specific member population" etc.
- PIACS should also assess themselves and their ability to create change in the system. What good are these meetings if we don't change the system for the better. Maybe local PIACS should report up to the state PIAC for information sharing.
- The state should require RCCOs to non-profit, community agencies. For profit companies won't engage stakeholders. Community involvement is key and private interests should not be involved (for profit entities that would want to bid on RCCO). The state needs to ensure communities use stakeholder engagement to make decisions. Local community involvement is essential ingredient. Should be responsive to partners and community and an outside partner would not necessarily do this.
- Require in RFP that RCCOs demonstrate a process that engages clients and providers and how this happens – the documentation for this would be letters of support from providers, consumer, and community agencies.

1) What is working best in the Accountable Care Collaborative (ACC) right now?

- Being able to communicate directly to RCCO staff and solve issues and interact with consumers.
- Local contacts are important.
- Member feedback: Telling provider I am in the RCCO provides for better service.

- Pilots – rapid cycle change are a great form engagement of stakeholders. Pilots create opportunity for stakeholder feedback and a way to interact with RCCOs.
- Communicate more broadly and target communication where people congregate (health fairs, etc.).

7) What should be the next steps in behavioral health integration in Colorado?

- More integration in one location to treat the entire person.
- BHOs service areas should line up with RCCOs.
- Bring services close to where patients are.
- Require cultural competency – shared information exchange.
- HIPAA & CFR42 are restrictive to integration.
- PIAC posed question: Should bidders be rewarded for a unified community-based communication system? Regions need to connect, but systems to be community relevant.

Agenda Item #4: Public Comment:
No public comment was offered.

The meeting was adjourned at 7:00 p.m.

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Beth Ryan
Location: Denver, Colorado

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: The Denver Hospice
Location: Denver, CO
☒ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☒ Medical provider / PCMP / other provider
  i. Type or specialty: Palliative Care & Hospice
  ii. Area of practice: Palliative Care and Hospice
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☐ Other (please describe): Click here to enter text.

Are you currently involved in the ACC program?

☐ Yes
☒ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☐ 3-4 years
☐ Since before the program was implemented.

How have you been involved in the ACC program and what interaction have you had with RCCOs:
We have tried and offered to be participants in the ACC. Open the doors to other providers. We hope that's the case. We are interested.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:
Provide services for Medicaid as allowed by the Hospice benefit.
Palliative Care is poorly reimbursed thus not currently a sustainable model.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☒ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

Please feel welcome to describe why or why not using the space below.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

The Accountable Care Collaborative (ACA) seems to be doing well in reaching those clients that are available and already connected to systems.

2) What is not working well in the ACC Program?

It seems there's still a lot of work to do to reach those with high needs and at high risks. Those who are currently disenfranchised from systems and hard to reach (for a variety of reasons) are not being served. The ACC has not yet begun to touch the highest risk population.

3) What is working best in the Behavioral Health Organization (BHO) system right now?

Behavioral organizations do well with compliant individuals.

4) What is not working well in the BHO system?

Finding new ways to find and work with the non-engaged populations that generate higher costs and are at higher risks that are not. We recommend looking at strategies that take behavioral health out of the office and institutional environment in which it currently operates, and implement strategies in community (neighborhoods, community organizations, home setting, etc) in order to serve this population.

5) What is working well with RCCO and BHO collaboration right now?

A good step in the right direction are the case managers who are connected to individuals and doing case coordination. We didn't have this before. Additionally, the attempts to reach-out to Medicaid and dual eligibility populations are also working well.

6) What is not working well with RCCO and BHO collaboration right now?

We are still not reaching the hard to reach populations; those that are not coming into clinics and systems of care.

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

At The Denver Hospice, we believe that collaboration between Health Care (physical health) and Behavioral Health is critical to delivering holistic care coordination that improves the health and wellbeing of clients. We respectfully request that the ACC give serious and favorable consideration to the role that social workers play in health outcomes, and develop a reimbursement model that honors the health and financial contributions in-home social workers make to client outcomes and systems cost-savings.

For more than 20 years, the Denver Hospice has successfully integrated behavioral health with the physical care of our clients. Assembling teams of interdisciplinary professionals who share the same goal (related to the client's wellbeing) has been our strategy. We have seen successful outcomes with our Palliative Care collaborative work with Colorado Access, Kaiser Permanente, and New West Physicians.

We find that creating one plan of care that clarifies the outcomes to be achieved as an interdisciplinary team, and clearly defining the role of each team member is a winning approach to behavioral health integration.

Equally important, is to allow, empower and educate every client to recognize their priorities of care, and what that means for them. Develop a plan of with the client as the driver of that care.

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☒	☐	Currently, there isn't a payment structure in place for providers to be reimbursed for in-home social work with palliative care clients.
Community Behavioral Health Services Rule	☒	☐	Historically, BHO are structured in a building and not in community. This setting makes it sometimes challenging to respond to client needs such as transportation, mobility issues, etc.
Covered diagnoses list	☒	☐	Confidentiality of BHO medical records prohibits good interdisciplinary work
Different behavioral / physical health reimbursement	☒	☐	Only limited clinical professionals' services are reimbursed in palliative care, and when clinical professionals are working under the behavioral health scope, this falls into a separate line of service which prohibits billing.
Institutions for Mental Diseases exclusion	☒	☐	We observe too many silos in our health care system and the stigma of behavioral health care makes it even harder to break those silos.
OBH rules, reporting, or financing (regulatory differences between agencies)	☐	☐	
PCMP financing structure	☒	☐	Yes, because primary care physicians can only do so much and are not reimbursed adequately to take care of everything else that needs attention. Ideally primary care would be the holder of a client's care.
Per-member per-month amount	☒	☐	Currently this is barrier because these are higher costs of care that do not account for the even higher costs of emergency room prevention. We contend that we need to come up with how to help people that are currently outside of hospital walls and health care systems.
Physical space constraints	☒	☐	Work cannot be done successful in a building. There is a segment of the populations that need us to go to them. A plan on how to reach clients where they are is most needed.

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

Privacy Laws (HIPAA, 42 CFR)	☒	☐	Accessing the medical records (physical health and mental health) has been challenging for us. For interdisciplinary and collaborative work to be successful, we need records to live in the same system. We have found that our palliative care work could benefit from this type of data integration.
Professional / cultural divisions	☒	☐	In our work, we experience silos between the various health care providers. We see health care professionals trying to make it work on an individual and personal level, but the systems are not integrated.
RCCO or BHO contracts	☒	☐	We are not far enough along the continuum to know this. In rural communities BH is a difficult service to provide given that it can be so challenging to recruit qualified professionals into rural areas.
Staff capacity	☒	☐	Same as above. We do see the need for navigators or community health workers that can work with stable clients, with the goal of keeping them stable.
State/Federal rules or reporting requirements	☐	☐	
Technical resources / data sharing	☒	☐	Same as above. Ideally, records would be accessed and evaluated for reimbursement as coordinated care.
Training	☐	☐	More training. Interdisciplinary training is suggested
Others	Please type your response here.		

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

Collaboration. Care Coordination. Clinical, home and/or community based interactions. Interdisciplinary team based approach to care coordination.

10) Please share any other general advice or suggestions you may have about behavioral health integration.

Through an assessment of client and client records, determine the level of behavioral health the client may need (or maybe come up with a set of criteria): social worker, psychology, psychiatry, counseling, etc.

Evaluate how the different levels of behavioral health services contribute to outcomes and assign reimbursement based on level of intervention vs. outcomes.

Centering our care on the client and getting to know how a client is feeling about their interaction with team and the world is critical to getting it right.

Identify what is a normal response to life stressors vs. true behavioral health issues.

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination?

The intentional coordination and integration of services (physical, behavioral, emotional) needed to achieve positive health and wellbeing outcomes for clients

b. How should RCCOs prioritize who receives care coordination first?

Evaluate where the highest needs and the highest costs in health care are and start there. Find the hard to reach clients. Our biggest challenges as a system are with the hard to reach clients; with those who we don't see in our systems.

c. How should RCCOs identify clients and families who need care coordination?

Through medical homes, family health centers, schools, nonprofit organizations and other community groups. Claims data, although delayed could be used in conjunction with predictive modeling.
Perhaps utilize Community Health Workers to identify families.

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

Share all health records or ask the members directly (through a survey or focus group). Consider developing preferred network of providers to better coordinate care and reduce variation.

12) What services should be coordinated and are there services that should not be a part of care coordination?

The Denver Hospice believes that anything that would contribute to the positive outcome and wellbeing of a client should be considered part of care coordination.

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

We need to know how the client feels about his/her care. We need to ask them directly. In our experience, if you ask clients and engage them in their own care management, they will share what they need. Perhaps use motivational interviewing to encourage clients to share.

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today?

We believe some of that is already happening in the ACC.

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

Being in the home or face to face is really important. And not just once in a home. We need more than a snapshot. Seeing clients in their personal environment (when appropriate) can help us empower the client and implement better coordination because we will have deeper information that does not always make its way into a medical record.

c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

There will be duplication. Perhaps set up a system that identifies duplication. Leave information in the home for what services the member is receiving. If client is being served at home set up a "relay" sort of system where care providers can leave information for each other.

d. What are the gaps in care coordination across the continuum of care?

e. Different environment of care delivery operating in silos. We find that transitions points between arenas of care is where clients experience great challenges (from a hospital to home, from hospital to hospice care, from counseling to hospital, etc.). We recommend taking a closer look at those transitions areas

15) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	**Should the RCCO have a role?** Yes	No	**Should the RCCOs coordinate with community supports and services?** Yes	**Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?**
Abuse, neglect, and trauma	☒	☐	☒	Evaluate reimbursement or payment possibilities for supports.
Affordability (assistance with prescriptions or co-pays)	☒	☐	☒	
Daycare / childcare	☒	☐	☒	
Economic stability & employment	☐	☐	☒	
Education	☐	☐	☒	

Environment	☒	☐	☒	Determine what's the best environment and make suggestions with the input of the client
Food access / nutrition	☒	☐	☒	
Health literacy	☒	☐	☒	
Housing	☒	☐	☒	
Language or translation services	☒	☐	☒	
Literacy	☐	☐	☒	Offering resources
Transportation	☒	☐	☒	Depending on what exactly are the client's transportation needs; if it's to get to primary care doctor, then RCCOs should find a way to integrate this critical service.
Other	Please type your response here. Feel free to list as many non-medical factors as you want, and please explain how the RCCO should be involved.			

16) **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	**Coordinate care?** Yes	No	**In what capacity should these individuals coordinate care in the ACC Program?**
Advanced Practice (Registered) Nurses	☒	☐	They could be providing coordination of care with physicians, primary and specialty physicians.
Certified Addiction Councilors	☒	☐	As appropriate
Certified Nurse Midwives	☒	☐	As appropriate
Community Health Workers	☒	☐	This would be a good resource when clients are stable. CHW could be responsible for making sure stay healthy.
Generalists (BA/BS/MA/MS)	☐	☐	Don't know
Health Coaches	☒	☐	As appropriate
Licensed Clinical Social Workers	☒	☐	We think MSW can also be valuable. Not everyone needs to be a clinical licensed social worker. More of the holistic social work emphasis is also needed and could be beneficial to certain clients. Insisting on a Licensed Clinical

			Social Worker excludes the new grad from entering this work force realm.
Licensed Marriage and Family Therapist	☐	☐	
Licensed Mental Health Counselors	☒	☐	Frequently BH is the driver for interfering with the desired outcome; could consider this professional or physician as hub of coordination.
Licensed Professional Counselor	☐	☐	
Masters of Public Health	☒	☐	
Medical Doctors / Doctors of Osteopathic Medicine	☒	☐	More holistic approach to health is appropriate for some clients
Nurse Practitioners	☒	☐	
Client Navigators	☒	☐	
Peer Advocates	☒	☐	
Promotoras	☒	☐	
Psychiatrists	☒	☐	
Psychologists	☒	☐	
Registered Nurses	☒	☐	
Social Workers	☒	☐	
Wraparound facilitators	☒	☐	
Other	Please type your response here.		

17) **Care coordination requirements for specific populations.** Please use the table below to describe if any of the following populations require unique care coordination requirements, **or** if general requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and infants	☒	☐	Because the needs of the mother will also need to be taking into consideration
Children	☒	☐	Children's specialty and knowledge
Children who are healthy, but in socially-complex environments	☐	☐	
Children involved in the foster care system	☒	☐	
Children with a chronic illness	☐	☐	

Children with a serious emotional disturbance	☒	☒	Such as grief emotional support
Children with medical complexity	☐	☐	
Children or youth with a behavioral health diagnosis or substance use disorder	☒	☐	
Transition-age adolescents	☐	☐	
Parents and families	☐	☒	
Pregnant women	☐	☐	
Adults	☐	☒	
Adults who are healthy, but in socially-complex situations	☐	☐	
Adults with a chronic illness	☒	☐	High risk/high costs
Adults with a behavioral health diagnosis or substance use disorder	☒	☐	High risk/high costs
Clients involved in the criminal justice system	☐	☐	
Clients with a disability	☐	☐	
Clients in a nursing facility	☐	☐	
Elderly clients	☒	☐	High risk/high costs
Frail elderly clients	☒	☐	
Clients in palliative care	☒	☒	A combination of general and specialized cared coordination would be best
Other populations please comment: need more credential individuals in these areas. Support for these environments.			

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

It is our hope that long term palliative care and hospice care for children is included in the RCCOs consideration, and that the Denver Hospice can be a partner in this very important work for children.

19) How should care coordination be evaluated? How should its outcomes be measured?

We believe that evaluation based on population health, cost reduction and client experience are appropriate factors to measure and evaluate.

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

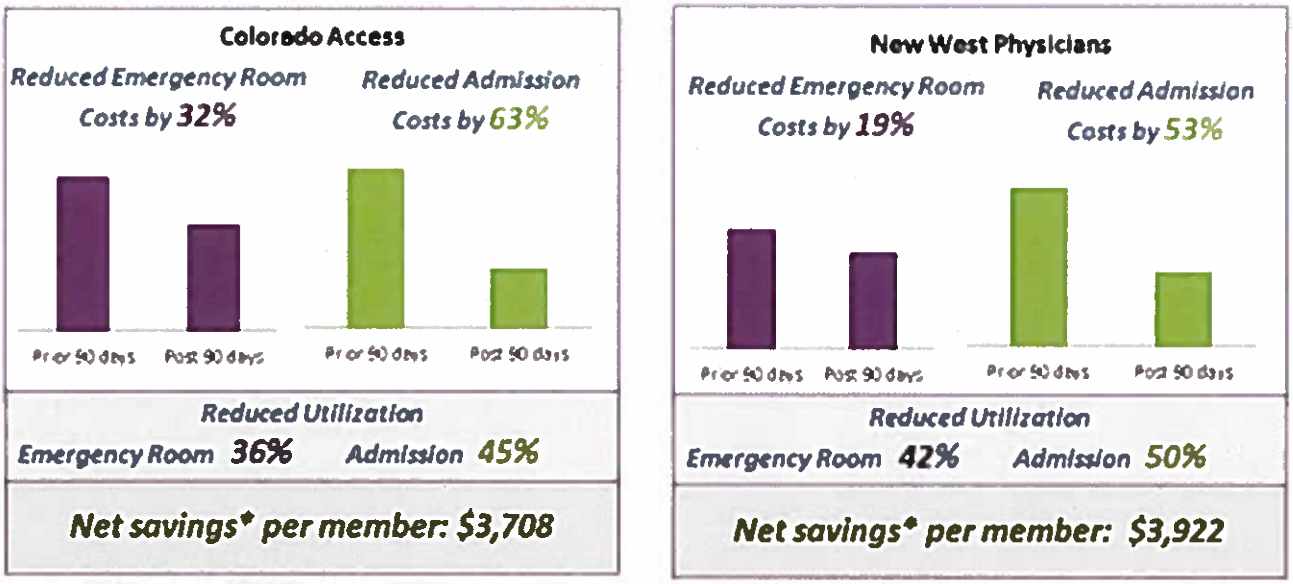
a. What is the PMPM cost for providing care coordination services?

For the Denver Hospice, the cost of providing palliative care in the home setting and telephonic support is approximately $1200 month. This includes very intentional and robust care management, for a defined 90 day

episode. We believe that when our services were evaluated for cost avoidance the value was clear. Our interdisciplinary in-home team for palliative care is a cost savings approach. See pilot evaluation and data below:

Optio Care Support for Advanced Illness Management
Partnering to provide community-based palliative care –outcomes & ROI

Triple AIM: Better Health, Better Care, Lower Costs
Proven results when partner in care delivery



* Net savings after program cost

THE DENVER HOSPICE

optio HEALTH SERVICES

b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

Yes, we agree that having the PMPM vary by populations may be a good strategy; to consider 3-tiers, by chronic disease and levels of care coordination.

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

Acuity may be the best approach but proactively identifying may be challenging; population is best approach at present.

a. **Care coordinator to client ratios.** If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☐
51-100	☐
101-200	☐
201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

May vary with a tiered approach to care coordination, active case requirements.

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

Cost avoidance/savings is most important.

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

Reduce variation by contracting a preferred network of providers for community-based services.
Data reporting must also be standardized, focus on Triple AIM outcomes.

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

Years of experience in community work. Familiarity and understanding of population needs. Partnership history and capabilities. Outcomes attributed to a Triple AIM focus.

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

Aligning the PCMP and RCCO makes intuitive sense: better coordination, better understanding of each other's work, leading to improved outcomes.

27) Should the RCCO region maps change? Why or why not? If so, how?

NA

28) Should the BHO region maps change? Why or why not? If so, how?

NA

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

NA

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

Rules regarding what services receive and level of reimbursement.

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

Benefit structure is not wide enough. It does not cover palliative care.

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

It depends on the level of coordination the identified population requires.

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

Yes, we would very much like to become a Medicaid provider. A reimbursement model for our work would be necessary.

34) What role should RCCOs play in attributing clients to their respective PCMPs?

N/A

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

N/A

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

N/A

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

N/A

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

N/A

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

Centering on the client, asking the client, strategies based on what clients need. Making sure the transition between health arenas is seamless and coordinated.

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

Regular engagement via various methods: in person, online, regular key informant interviews/focus groups, hotline. Ideally if clients would have one center/medical home that was the gatekeeper, engagement would occur through that medical home.

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

With a continuous dialogue with community, and particularly with clients and those receiving services.

42) How should the Department structure stakeholder engagement for the ACC as a whole?

Online, Offline, and in person

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

Currently we believe there are populations being left out because there are necessary yet non-reimbursed services.

a. If no, what are the gaps?

Palliative care for those who need it is currently a gap in the system because it's not reimbursable.

b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

a. What role should hospitals play in the next iteration of the ACC Program?

N/A

b. What role should pharmacies play in the next iteration of the ACC Program?

N/A

c. What role should specialists play in the next iteration of the ACC Program?

Palliative and Hospice care should be part of what is offered.

d. What role should home health play in the next iteration of the ACC Program?

Home health programs should play a larger role. Not as long term care, but could be a bridge to integrate behavioral and physical health as seen in outcomes by The Denver Hospice palliative care programs

e. What role should hospice care play in the next iteration of the ACC Program?

A larger role. Palliative and Hospice care are vital to improving quality and reducing costs.

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

N/A

g. What role should counties play in the next iteration of the ACC Program?

N/A

h. What role should local public health agencies play in the next iteration of the ACC Program?

N/A

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

Yes, we believe that seeking partnerships with community organizations will help the system provide a more holistic and comprehensive service

45) How can RCCOs help to support clients and families in making and keeping appointments?

With reminders and facilitate solutions for other factors that get in the way (transportation, language, literacy, engagement, etc.)

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Client Navigators as part of the next RFP?

Yes! But let's think of how to reimburse. They could be the bridge for the continuum of care. They could keep clients engaged and help them transition from one system to another.

47) **Community Health Worker reimbursement.** Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement process	(Please check all that apply)
Independently bill	☐
On staff (salary) at Primary Care Medical Provider Clinic	☒
On staff (salary) at RCCO	☐
Per Member Per Month Payment	☒

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

Oral health is as important as nutrition. We believe RCCOs should find ways to integrate these very important components.

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you?

Solidify relationships between clients and providers, clients and systems. This work is about relationships.

b. What RCCO requirements would ensure cultural competency?

Each provider should really address this. Maybe RCCOs can offer guidelines.

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?

There is quite a bit of competence that is needed to be able to provide adequate cultural and linguistically services. This is also a continuous process of learning and improving in this area.

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

Inequalities are likely to be there, but they can be reduced by training our providers and by integrating workers who are from community into our systems.

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

To be considered.

51) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

Look to pilots and programs that have demonstrated cost savings in these areas, like palliative care.

52) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

Practice Support

53) **Support for practices.** Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☐	☐	☐	☐
Network provider education	☐	☐	☐	☐
Assistance with practice redesign	☐	☐	☐	☐
Assistance with efficiency-enhancing activities	☐	☐	☐	☐
Provide web-based resources and directories	☐	☐	☐	☐
Provide practice-specific data reports	☐	☐	☐	☐
Provide clinical care guidelines and best practices.	☐	☐	☐	☐
Provide clinical screening tools	☐	☐	☐	☐
Provide health and functioning questionnaires	☐	☐	☐	☐
Provide chronic care templates	☐	☐	☐	☐
Provide registries	☐	☐	☐	☐
Offer client reminders	☐	☐	☐	☐
Offer client self-management tools	☐	☐	☐	☐
Offer educational materials about specific conditions	☐	☐	☐	☐
Supply behavioral health surveys	☐	☐	☐	☐
Supply other self-screening tools	☐	☐	☐	☐
Administer behavioral health surveys	☐	☐	☐	☐
Administer other self-screening tools	☐	☐	☐	☐
Prepare client action plans	☐	☐	☐	☐
Provide training on providing culturally-competent care	☐	☐	☐	☐
Provide training to supporting staff	☐	☐	☐	☐
Provide training on motivational interviewing	☐	☐	☐	☐
Provide tools and software for phone call and appointment tracking	☐	☐	☐	☐
Provide tools and resources for tracking labs, referrals, etc.	☐	☐	☐	☐
Provide referral and transitions of care checklists	☐	☐	☐	☐
Provide visit agendas or templates	☐	☐	☐	☐
Provide standing pharmacy order templates	☐	☐	☐	☐
Provide comprehensive directory of community resources	☐	☐	☐	☐
Provide directory of other resources	☐	☐	☐	☐
Provide materials regarding Nurse Advice Line	☐	☐	☐	☐
Ensure all tools and resources are centrally located on RCCO-specific website	☐	☐	☐	☐
Others	Recommend areas of focus are limited to those that impact desired outcomes, e.g., those supporting Triple AIM.			

54) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

55) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

N/A

56) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

Dependent upon role/scope of PCMP.

57) Should the Department require that PCMPs utilize disease registries to manage the health of their population?

Good for population health.

58) Please share any other advice or suggestions about provider support in the ACC.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

Give incentives to those who are achieving cost savings. Then re-invest.

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

N/A as we are not a PCMP; however, interested in risk-sharing opportunities.

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

Not at this time. Define a risk-share model tied to outcomes and cost savings. Current fee for service model is prohibitive/does not align with desired outcomes.

62) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

N/A

63) What role – if any – should the RCCOs play in the distribution of payments to providers?

None.

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

Define the basic service expectations. Research the cost savings potential. Be cautious and flexible. Be nimble with expectation to allow for change.

66) **Measuring Client experience.** Please complete the table below to indicate how the Department should measure Client/client experience:

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☒	☐	This is a good tool
SF-12 Health Survey	☐	☐	
Other types of client interviews / surveys	☒	☐	Internal survey with your own clients. Survey, and call people. Interview partners.
Client Activation Measure	☐	☐	
Focus groups	☐	☐	
Other	Please type your response here. Use external auditing; agree upon a standard tool that is accepted/used by other community activities.		

67) Knowing that, at this time, the Department only has claims data, how should population health be measured?

Define cost avoidance instead of claims? (it's an idea)

68) How should quality and performance data be reported to the RCCOs, PCMPs, and the public?

In simple, easy to digest ways. Again, align to Triple AIM to be able to adapt as data collection and reporting matures.

69) **Measures for payment.** Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☒
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

Less measures and they should be weighted, cost avoidance being the most important.

70) What percent of RCCO payments should be tied to measures or performance?

Percentage	
10-20%	☐
21-30%	☐
31-40%	☐
41-50%	☐
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

71) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?

May consider a weighted system when thinking in terms of KPIs as populations vary.

72) Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?

Integrate both of these measures.

73) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

As above; begin with what is available, then can supplement/adapt payment model as progresses.

74) **Incentive payment frequency.** Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	☒
Annually	☐
Other	☐

If you checked the "Other" box, please describe payment frequency below:

75) For potential offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

N/A

76) For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

Palliative care currently poorly/not reimbursed.
Data tracking includes:

- Client experience / HCHAPS
- Cost savings/cost avoidance
- Advanced Care planning metrics

Health Information Technology (HIT)

77) **Types of communication.** For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	☒
Text message	☒	☒
Web portal	☐	☒
Email	☐	☒
Telemedicine / Video chat	☐	☒
Face-to-face meeting	☐	☒
Smartphone app	☐	☒
Other: Privacy HIPPA and infrastructure play a role.		

78) **HIT investments by organizations.** For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below:

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	☐	☐
Digital care management tool	☐	☐
Care transitions alerts	☐	☐
Electronic Health Records (EHRs)	☐	☐
Health risk assessment software	☐	☐
Practice assessment tools	☐	☐
Practice management tools (scheduling, billing)	☐	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☐
Client education/wellness tools	☐	☐
Provider/case manager directory	☐	☐
Shared decision-making tools	☐	☐
Telemedicine software	☐	☐
Other: We look at what partners need, and invest in what would make the partnership stronger	☐	☐

Other:	☐	☐

79) **Importance of technology by type.** The Department is working to determine what technology is in place, what technology is needed, and what technology should be standardized. For RCCOs, providers, and other organizations, use the table below to answer what HIT infrastructure outside of the SDAC your organization would use to perform population health management activities. Tools are scored from 1-S, where 1 are those items least-likely to be used, and S are items most-likely to be used:

Tool	1 Least	2	3	4	5 Most
Population analytics / reporting / dashboard	☐	☐	☐	☐	☐
Care management tool	☐	☐	☐	☐	☐
Care transitions alerts	☐	☐	☐	☐	☐
Electronic Health Records (EHRs)	☐	☐	☐	☐	☒
Practice assessment tools	☐	☐	☐	☐	☐
Health risk assessment software	☐	☐	☐	☐	☐
Practice management tools (scheduling, billing)	☐	☐	☐	☐	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☐	☐	☐	☐
Client education wellness tools	☐	☐	☐	☐	☐
Provider/case manager directory	☐	☐	☐	☐	☐
Shared decision-making tools	☐	☐	☐	☐	☐
Telemedicine	☐	☐	☐	☐	☐
Other: These are generally, all important and could be useful if they do not become a barrier to care.	☐	☐	☐	☐	☐

80) What are the primary barriers to RCCOs and providers increasing their use Health Information Technology to improve the performance of Primary Care Practices?

Compatibility of systems seems to be a challenge in our work. Even the ones that have good health systems do not work well with home hospice work.

81) How can Health Information Technology support Behavioral Health Integration?

The information itself or part of it could be accessible to other disciplines that need it.

82) In the next iteration of the ACC, should there be a shared resource for data and analytics? Please describe the basic criteria for what a shared data and analytics platform needs to contain in order for it to be useful.

83) Should there be a shared care management tool? Please describe the basic criteria for what a care management tool would need to contain in order for it to be useful.

N/A

84) Should there be a shared population health management tool? Please describe the basic criteria for what a population health management tool would need to contain in order for it to be useful.

N/A

85) Please describe the functionality that a common Medicaid provider directory would need to contain in order for it to be useful.

N/A

86) How can the RCCOs support providers' access to actionable and timely clinical data?

Electronic portal

87) What are the HIT solutions that would benefit clients, providers, and RCCOs? Please comment on the parameters these tools or platforms would need to possess and the ways in which they could be used.

Simple, easily understood, customer friendly.

88) What technical assistance or resources related to HIT infrastructure should the RCCOs supply? This assistance or these resources could be for providers, social service organization, clients/families, or for others.

N/A

89) What role should health information exchange platforms like CORHIO or QHN play in the next iteration of the ACC?

N/A

90) Please share any information, advice, and suggestions you have about health information technology in the ACC Program.

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Paul Belli
Location: Aurora, CO

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Shield HealthCare
Location: Aurora, CO
☒ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☐ Medical provider / PCMP / other provider
  i. Type or specialty: Click here to enter text.
  ii. Area of practice: Click here to enter text.
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☒ Other (please describe): **Shield Healthcare is a major home medical supply and "safety net" provider in Colorado and wanted to comment on the questions that pertain to us, an Ancillary Provider. Our company provides home medical supplies including Incontinent, Enteral, Urology, Wound and Ostomy products to Medicare, Medicaid, Medicaid managed care and insurance members at home and bills their insurance.**

Are you currently involved in the ACC program?

☐ Yes
☐ No
☐ I don't know

How have you been involved in the ACC program and what interaction have you had with RCCOs:
Click here to enter text.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:
Click here to enter text.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☐ 3-4 years
☐ Since before the program was implemented.

P22, 43)

QUESTION

Does the current network of PCMP, specialists, behavioral health providers, hospitals, pharmacies, dental, home health and non-medical providers adequately serve the ACC population?

RESPONSE

The Network for mail order home medical providers is adequate to cover the State. DME/RT providers are adequate on the Front Range, but with the implementation of Medicare's Competitive Bid program, DME/Enteral providers are more scarce. The Rural and mountain regions of Colorado are a challenge to find adequate coverage of DME and Respiratory providers.

P24, 50)

QUESTION

Should the next RFP allow for preferred networks for specialty, facility or ancillary care?

RESPONSE:

(Ancillary Providers) All DME, RT and home medical suppliers should be allowed to serve Medicaid customers upon a referral. A hospital, physicians group, network, could have preferred providers, IF there is objective criteria that all providers can compete for that "preferred" designation.

P27 60)

QUESTION

IF PCMPs could voluntary elect to receive capitation payments, rather than fee for service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

RESPONSE

IF you provide Capitated payments to physicians, hospitals or networks, the payments should NOT include DME, RT or supplies. DME, RT and supplies should remain under the Medicaid Fee For Service. Most physician groups and networks do not clearly understand the Medicaid qualification rules and quantities for DME, RT and supplies and generally respond with excessive administrative requirements that do not enhance patient care.

P30, 76)

QUESTION

For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

RESPONSE

Shield is not being reimbursed for quality measures that it currently achieves in providing home medical supplies. Quality measures might include: Patient satisfaction ratings, timely delivery, quality products, phone answer response time, back order frequency, etc.

P33, 85)

QUESTION

Please describe the functionality that a common Medicaid provider directory would need to contain in order for it to be useful?

RESPONSE

A Medicaid provider directory should include:

- Organized by Regions covered: Denver Metro Area | Foothills | Palmer Divide | Urban Corridor | Eastern Plains | Front Range | Mountains | Western Slope | Continental Divide

- Products/Services/specialty provided
- Phone, fax and email contact information

P33 86)

QUESTION

How can the RCCO support provider's access actionable and timely clinical data?

RESPONSE

Create an electronic Medical Records file that member providers can access with a HIPAA compliant firewall and log in.

you answered "yes" above, how long?

☐ Less than one year

☐ 1-2 years

☐ 2-3 years

☐ 3-4 years

☒ Since before the program was implemented.

☐ Unlikely without significant changes

☐ Will not seek to participate

☒ N/A

CCHAP will continue to be involved with the ACC and RCCO's to assist with communication, training, and If

advocate for policies and procedures that address the needs of children.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

- Reimbursement (mostly due to the Federal ACA) is fairer now.

- The decision to make the well child visit one of the KPIs was a very good decision in behalf of children, but unfortunately attribution is still flawed and the SDAC data is delayed and often inaccurate. So, it is difficult to create an effective QI process to improve the KPI, but this is a good start.

- The decision to focus on integrated behavioral health in medical homes is a wonderful decision to improve health outcomes for people covered by Medicaid. Thank you.

- You have a great opportunity to do what is needed for the majority of Medicaid recipients. The majority of Medicaid recipients in Colorado are children and adolescents; they should not be considered one of the subgroups. The following principles should be incorporated into the core objectives of the ACC:

    - Children's health care needs are very different than adults. For adults, the focus is on managing chronic disease more effectively. For children, it is about preventing the development of those chronic diseases.
    - If the ACC really wants to focus on health and wellness, the greatest opportunity is with the children (the majority of Medicaid recipients). By focusing on preventive care, early screening and early intervention for children, there will be big savings; unfortunately those savings may not occur for many years or decades in the future, but the investment will eventually be worth it. o So, the ACC will need to invest in children to the extent possible now even though the savings come much later. We recommend that a portion of short-term savings that occurs due to chronic disease management in adults in the ACC be invested back into preventive care for children.
    - Children are part of families and you can't help the child unless you help the family. So, care coordination is more involved for children since it includes care coordination of the parents/family and often involves different community resources than for adults

2) What is not working well in the ACC Program?

- Attribution continues to attribute patients to the wrong medical home and the process of getting patients reassigned to the correct medical home is onerous for the patient and family. This is probably the most important issue to solve. It drives measurement of outcomes, it drives the focus of the medical home to improve care, it is central to affordability of practice transformation and meeting the KPIs, and it is key to patient experience.

- Practices report to CCHAP that the attribution process is difficult to understand, use and correct. Many pediatric practices still have adults on their list unknown to them, and they do not seem to be able to remove them. Sending lists and creating spread sheets are tedious and time consuming. Practices do not

have this time or expertise. Attribution needs to be fixed to create a simple way to add and remove members.

- The current system does not take into account the movement of patients on and off Medicaid and movement between RCCOs. Whether for KPIs or future shared savings incentives, practices need to be evaluated on established patients who have been in a practice for a minimum of six months. This allows the medical home to actually have time to have an impact on the Medicaid recipient's care. Otherwise, it is a substantial disincentive for practices to be open to the more complex and challenging patients, those that likely need access the most.

- The health care data through the SDAC is based on claims so it is delayed and is incomplete (particularly for children). Therefore, it is not very useful in helping medical homes improve outcomes for children.

- Both family practices and pediatric practices report that the SDAC does not accurately reflect the data that the practice can obtain from their EHR or their own claims data. This is particularly true regarding data on well child visits and health care screening. The RFP should ask how RCCOs and HCPF will improve the accuracy of its SDAC data and how they will take advantage of the more accurate practice-based data.

- Each RCCO does things very differently, which is confusing for medical homes with patients in several RCCOs. RCCOs are inconsistent in how they respond to requests for care coordination (quite variable depending on whom you reach at the RCCO). So the new RFP should ask how RCCOs will develop policies and procedures to make their methods and responses to requests for help more consistent, both within the RCCO and among all RCCOs.

- There are certain expectations/requirements and ways of doing things that are so different from one RCCO to another that it requires significant extra work for the medical home to adapt to the differences. So, the RFP should ask how RCCOs intend to deal with this

- If a patient lives in one region and goes to a medical home in another region, and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from the patient's region RCCO. This is particularly true in the Denver metro area. <u>There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients.</u>

- The "incentives" now are actually disincentives, especially the requirement that the RCCO must meet its KPIs before a high performing medical home can be rewarded for meeting its KPIs. The concept behind this approach is not consistent with how health care systems (and "medical neighborhoods") work.

- The geography of the 7 regions does not reflect the natural geography of health care systems and referral patterns. Larimer County should be in Region 2.

- RCCOs are not providing the level of care coordination that Medicaid patients need. We have had RCCO "care coordinators" just tell us to call 211. The level of commitment that patients and families need is difficult to find, unless care coordination is provided at the medical home level or the community level.

But of course the medical home will need a portion of the RCCO's pmpm in order to afford to provide that level of care coordination.

- Feedback from RCCOs to the medical home regarding patients referred to the RCCO for care coordination is spotty. How will RCCOs consistently provide feedback and communication to the medical home regarding what was done for the patients and whether there was improvement?

- There has been difficulty with communication from the state level through the RCCOs down to the individual practice/provider level. Providers feel as though they are not well informed from HCPF or RCCOs. We have heard many practices say that they are grateful that CCHAP keeps them informed..

- Currently, there is very little communication and alignment between BHO's and RCCO's. In order for integrated behavioral health to be successful at the practice and community level, the BHO's and RCCO's must have similar goals, policies/procedures that are aligned, payment structures that are aligned with movement toward integration and ongoing close communication with one another. The RFP should ask how they intend to do this.

3) What is working best in the Behavioral Health Organization (BHO) system right now?

- **The CPACK program** developed by CBHC is a very good program, particularly the following:
  - Assistance with finding a behavioral health provider for patients
  - Telephone consultation by a child psychiatrist
    The training component was not as helpful. We recommend that BHOs be required to provide the 2 components above as part of their new contracts

- **Ongoing development of the Independent Provider Networks.** This provides patients and families with more options in terms of selecting a behavioral health provider outside of the CMHC. This may also provide opportunities for families to gain opportunities to see behavioral health specialists in the their local communities.

- **Commitment to integrated care.** At the local level, there are many community mental health centers that are providing co-location of behavioral health providers within primary care settings. This is a step in the right direction; though the work cannot end there. In terms of standard of care, billing issues, and paperwork demands, this cannot be the only behavioral health integration effort at the BHO level. Ideally, community practices and clinics would be able to have the option of employing a behavioral health provider to be devoted entirely to the needs of their population. However, currently there are several barriers that make true integration nearly impossible.

4) What is not working well in the BHO system?

- BHOs say they are limited by policies to not be able to provide services for children who have symptoms or abnormal behaviors but no billable diagnosis.

- Children with specialized behavioral health needs, such as children with autism or dually-diagnosed children (those with developmental disabilities and socio-emotional or behavioral disorders) have little or no access to needed services. Or these services are sparse and extremely difficult to access.

- Value Options leadership is made up of the heads of mental health centers, which is a conflict of interest. The BHO function should be moved to the RCCOs and BHOs should be integrated into the RCCOs

- They are involved in separate regions. Regions should be identical to ensure collaboration and improved practices between the efforts for both organizations.

- **Difficulties with credentialing.** This process changes from BHO-to-BHO, is long and tedious, and in some cases, requires behavioral health providers to have worked with Medicaid populations for at least 5 years (?). This alienates a substantial portion of an already too-small workforce. Licensed behavioral health providers already engage in a lengthy process through DORA, in which their credentials and past work experiences are examined and verified. This process should have some consistency amongst BHOs and should be coordinated with other state departments with similar functions.

- **Referral processes.** Care coordination for behavioral health should occur at the practice level. Creating an additional step (by having providers fax referral forms to the BHO) creates an additional barrier for patients/families and practices. When referrals are made, direct contact should be with the local CMHC from the practice.

- **No streamlined processes across BHOs and RCCOs.** Primary care practices have patients and families from multiple counties in their practice at any given time. Having separate policies and procedures for each BHO and RCCO makes it difficult for providers to know how to get assistance when needed. Having one procedure, one contact person, and one phone number would allow BHOs/RCCOs to be more effectively utilized by practices.

- **Access to child psychiatrists.** There is an extreme (and known) shortage of psychiatrists statewide; this becomes increasingly dire when discussing access to child psychiatrists. The CPACK program is currently filling a critical void; but is a grant-funded program in danger of losing funding. BHOs could potentially have a role in helping to provide this much needed access.

- It is difficult to obtain coverage to treat behavioral problems in people with autism.

5) What is working well with RCCO and BHO collaboration right now?

- Colorado Access RCCO and BHO for RCCO region 5 works better because at least they are housed together and sometimes communicate. This is an example of a good start toward integration of BHOs and RCCOs. However, even CO Access and Access Behavioral Care need to work harder on communicating and coordinating.

6) What is not working well with RCCO and BHO collaboration right now?

- **Little to no communication or coordination between RCCOs and BHOs.** Operating as two completely independent systems. Both systems have their own processes for care coordination, for referrals, and don't seem to communicate as much as is needed. For integrated care to be successful at the practice level, it has to be operating successfully at a systems level. This is one of the biggest issues for integration for the Medicaid population.

- **Duplication of services.** If there was increased communication and alignment between the RCCOs and the BHOs, service duplication could be minimized, there would be cost savings, and it would be easier for patients and families to access services. For example, both BHOs and RCCOs offer care coordination services. In some cases, the local mental health center has also been delegated to provide care coordination. At the practice and provider level, it's often difficult to know which system to access to address a family's needs, particularly if a child has both behavioral health and physical health needs. Resources could be conserved and systems could be more effective if there was one access point for care coordination.

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

- The decision to focus on integrated behavioral health in medical homes is a wonderful decision to improve health outcomes for people covered by Medicaid. Thank you.

- If Colorado is serious about promoting integration of behavioral and physical (medical) health care, then the RCCOs and BHOs should be integrated. This would mean they should have the same regions and function as though they are one organization. This would reduce duplication of efforts and have better alignment of incentives and payments that support integrated care.

- Open the behavioral health and wellness codes (96150 – 96155) now. Don't wait. This will encourage integration immediately and enable medical homes to start now the process of evolving toward full integration.

- Care coordination for both behavioral health and medical care should be done in the primary care setting. And either the RCCO and/or the BHO should delegate the responsibility to do care coordination and a pmpm to cover the expense to the medical home as part of the payment reform process. And behavioral health care coordination and medical care coordination needs to be fully reimbursed. In addition, the BHO and the RCCO will need to have information and care coordinators to assist medical homes to handle uncommon or very complex issues.

- Provide infrastructure and funding for data collection and management to support integrated behavioral health in the medical home and the care coordination that will have to be part of that. Utilizing 5DAC data

is just one way to understand the activities within a medical home. SDAC data is delayed and does not include enough information to support behavioral health care coordination in the medical home. Other methods and technologies are needed. There will need to be an investment in the development of new technologies and methods to do behavioral screening, track referrals, document treatment and collect data on the whole care coordination process at the medical home level. This will require adequate reimbursement to cover the cost of starting up new care coordination programs in the medical home and start up technologies to improve screening, intervention and care coordination with follow through in the medical home.

- The CPACK program developed by CBHC is a very good program, particularly the following:
  a. Assistance with finding a behavioral health provider for patients
  b. Telephone consultation by a child psychiatrist to primary care providers
  We recommend that BHOs be required to provide the 2 components above as part of their new contracts.

- Payment options for integrated behavioral health (not just co-location) need to be clear and understandable to providers and practices. In order for the integrated model to be sustainable, there need to be ways to access understandable billing rules/policies.

- **Payment reform.** Though this is a long-term goal, there are things in the short-term that will promote the financial sustainability of integrated care. Open the behavioral health and wellness CPT codes (96150 – 96155) now. Don't wait. This will encourage integration immediately and enable medical homes to start now the process of evolving toward full integration. Also, in the current BHO rule, there is a covered diagnoses list that is required to bill. This list does not allow a provider to bill for v codes (physical or sexual abuse of a child, neglect of a child, parent-child relational problem, etc.) or other psychosocial or family stressors that are known precursors to mental illness; this is the opposite of a preventative approach and encourages pediatric BH providers to find a diagnosis – when the behavioral presentation is really due to family circumstances. Additionally, one of the goals in recent years for Colorado has been to decrease the number of children taking psychotropic medications. Allowing providers to intervene earlier would have a direct positive impact on that goal. The recommendation would be to allow for the billing of v codes (from DSM-5) and related psychosocial conditions (as opposed to being diagnosis driven).

- **Financial support of true integration, as opposed to co-location.** This would be another reason that BHOs and RCCOs need to be fully aligned in their payment systems and in other areas – as long as the payment remains siloed, the services will remain siloed. Payment options for integrated behavioral health (not just co-location) need to be clear and understandable to providers and practices. In order for the integrated model to be sustainable, there need to be ways to access understandable billing rules/policies.

- **Establish a standard of care for integrated BH providers and make the rules/regulations/guidelines accessible and clear.** This also includes credentialing requirements and providing immediate training on the correct use of HIPAA regulations. Any committee or group that is tasked with creating the standard of care of integrated behavioral health providers working in primary care settings should be composed of local clinicians and experts in the area (as opposed to strictly policymakers). This group should also provide guidance on the paperwork and credentialing requirements. All agencies involved in licensing and credentialing for behavioral health professionals (e.g., DORA, OBH) should be present.

- **Provide infrastructure and funding for data collection and management.** Utilizing SDAC data is just one way to understand the activities within a medical home – others are needed. There are currently projects being developed in the state that would utilize other modalities (e.g., IPad technology) to help practices collect data efficiently and effectively at the practice level. There will need to be an investment in the development of these programs and many practices would need financial assistance with implementation. However, this would be a way for practices to track all the activities that the state would like monitor (e.g., screening rates, follow-up, referral) and would allow the practice to improve patient and family care.

- **Support of care coordination activities.** Much of the care coordination will have to be done within the medical home. HCPF needs to be willing to help the integrated behavioral health provider understand how to be reimbursed for the care coordination that they will need to do on behalf of the Medicaid patient.

- **CMHC Policy and procedure change (via the BHO contract).** It is important to recognize the ways in which current policy can be problematic for practices, patients, and families. Currently, the BHO contract requires CMHC's to offer "intakes" or evaluations to patients/families within 7 days of referral from a primary care practice. This sounds reasonable. In theory, there are several complications: 1.) Offering a slot for an intake does not qualify as providing a gold standard of care. It has been frequently reported that time slots offered for intake appointments are typically during the 8-4 workday – this makes a family or patient choose between work and their health (and families are already much less likely to show up for behavioral health appointments). There needs to be increased flexibility in this area. 2.) Also, offering an intake is not the same as providing therapy. Patients or families may come in for intakes and typically wait to be assigned a therapist. Then wait for that assigned therapist to call and schedule an appointment. This could be weeks after an initial referral. This process does not translate to patient- or family- centered care. This is just one example.

- **Sustainability and prevention.** The clear fact remains that if prevention does not become the focus of healthcare (physical and behavioral) costs will continue to skyrocket and our population will continue to develop multiple costly, chronic diseases. Prevention is the key to long-term population health and begins in infancy. So much of the behavioral health work and overall healthcare focus in Colorado has been focused on those that have already developed chronic conditions; ultimately, this does not serve our population well in the long-term. Population health is a focus of the SIM work and thus, funding and attention must be given to early childhood behavioral health, prevention, and early intervention.

- **Support of current programming and infrastructure, as opposed to creating new duplicate programs.** Colorado is an innovative state in many ways and has already begun this work through the efforts of multiple programs, statewide initiatives, and community organizations. Programs like the CPACK program developed by CBHC address statewide disparities in the availability of child psychiatrists and promote behavioral health integration in primary care. Effort should be channeled into supporting existing effective programming, not creating new infrastructure.

8) Barriers to the integration of behavioral health and physical health services. Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	Barrier? No	If yes, please provide details of the barrier and how to address it:
	☒	☐	The current financial system for CMHC's only supports one form of integration – the colocation of a behavioral health provider that is based at the CMHC. Since funding for CMHC's is strictly determined by the number of "members" served, CMHC's are not currently incentivized to support an integrated behavioral health provider working in a primary care office (that is outside of their system). This can create a feeling of competition between CMHC providers and other integrated BH providers. Yet, in order for our behavioral health system to be successful, we need all providers to coordinate care and work together. There is no simple solution to this – this requires both culture change and payment reform. CMHC's should be provided funding based on community need; many rural or frontier parts of the state are less populated, yet have poorer behavioral health outcomes and need more programs/services. Additionally, CMHC's have practiced in a manner that may discourage coordination with PCP's – demanding multiple releases of information (before even getting on the phone with a PCP – which is NOT mandated by federal HIPAA guidelines) and failing to close the loop once a family has been referred. There needs to be immediate training statewide about the TRUE implications of HIPAA in all the CMHCs; instead of continuing to let it be a barrier to communication between providers. Additionally, each CMHC needs to have a designated person to handle communication and relationships between the CMHC and primary care practices. There needs to be ONE contact person (ideally there would be multiple, depending on the number of practices in the region) and one phone number to call and follow-up on referrals.
	☒	☐	If Colorado is serious about integrated care and allowing behavioral health professionals to successfully work alongside physical health providers, the state cannot just apply current behavioral health services rule to integrated care settings. There need to be guidelines for standard of care (for BH providers in integrated care settings) but paperwork requirements, requirements for updating "treatment plans" (which may or may not be relevant in integrated settings), need to reflect the work done by an

Community Mental Health Center financing structure[1]

Community Behavioral Health Services Rule

[1] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

Covered diagnoses list			patients or families a day (in a true integrated model) and so, requiring lengthy intake forms, treatment plans, and other cumbersome paperwork is not required for providing quality care and will add nothing to a patient/family experience. The requirements for integrated BH providers need to be consistent with those required of physical health providers – allowing BHP's to spend more time providing quality clinical care and training (as opposed to doing paperwork).
Different behavioral / physical health reimbursement	☒	☐	Many children do not have a covered diagnosis but need treatment For the pediatric population, the focus must be prevention and addressing psychosocial, economic, and family stressors BEFORE they develop into full-fledge psychiatric disorders. Investing in prevention among children (particularly those on Medicaid) is the only way to decrease the development of chronic disease in the adult population (which is one of the largest drivers of skyrocketing healthcare costs). The recommendation would be to allow for the billing of v codes (from D5M-5) and related psychosocial conditions (as opposed to being diagnosis driven).
Institutions for Mental Diseases exclusion OBH rules, reporting, or financing (regulatory differences between agencies)	☒	☐	Need behavioral health codes open for medical homes. Solve the problem as to whose patient is this and who is the primary care provider. With $3PMPM every one wants to be the primary. For the pediatric population, the focus must be prevention and addressing psychosocial, economic, and family stressors BEFORE they develop into full-fledge psychiatric disorders. Investing in prevention among children (particularly those on Medicaid) is the only way to decrease the development of chronic disease in the adult population (which is one of the largest drivers of skyrocketing healthcare costs). The recommendation would be to allow for the billing of v codes (from D5M-5) and related psychosocial conditions (as opposed to being diagnosis driven).
	☐	☐	
	☒	☐	Solve the release of information problem between the two different systems so the patient's needs and health are primary not the systems. All done with the patient as the focus. Currently, it's difficult to understand if OBH has any regulatory responsibility to behavioral health providers working within primary care. OBH has traditionally governed 27-65 designated facilities, which (in many cases) does not include primary care settings. This is

			establishment of treatment plans, crisis procedures, HIPAA regulation, etc. for individuals providing behavioral health and substance abuse services. There needs to be a training (by OBH or another identified agency) that clarifies the rules/guidelines for integrated behavioral health providers working within primary care settings. This should be 100% consistent with the requirements for physical health providers; there should not be more paperwork or reporting demands.
PCMP financing structure	☒	☐	
Per-member per-month amount	☒	☐	One of the core components of allowing behavioral health integration to be successful is care coordination. There need to be increased reimbursement levels to allow for care coordination to be completed within the medical home.
Physical space constraints	☒	☐	Always
Privacy Laws (HIPAA, 42 CFR)	☒	☐	Attorneys tend to give very conservative opinions that are not consistent with HIPPA rules. We need clinicians to describe the documentation methods they This issue needs to be addressed through training – immediately and statewide. Federal HIPPA states that providers can communicate with one another if in the best interest of patient (without a release of information). The only stricter state statute in Colorado (42 CFR) applies only to substance abuse and requires additional permissions. There is nothing stopping behavioral health providers and PCMPs from communicating from a HIPPA perspective (aside from in the case of substance abuse). Needing this many permissions and releases is a myth (primarily perpetuated by behavioral health). Dayna Matthew is a law professor at the University of Colorado Law School who is an expert in this area and also knows the local laws/statutes. She should be consulted and should assist in getting all trainings and discussions to occur.
	☒	☐	RCCOs and BHOs need to be merged, paid in similar manners, have aligned incentives, together all trainings and discussions to occur statewide. ~~remain siloed, it is difficult for the community practices and clinics to function in an integrated manner.~~ We can provide coaching on how to effectively work together, I think PCMPs and integrated behavioral health providers will be fine working together.
	☐	☒	Though there are practices that have been doing integrated behavioral health for decades, many PCP's and behavioral health providers are unfamiliar with the practice of integrated care. Most have a theoretical understanding of integrated care, but putting it into practice With a little coaching on how to effectively work together, PCMPs and integrated behavioral health providers are able to be successful serving patients and
	☐	☒	The Tri-agency Task Force, composed of individuals from multiple state agencies (CDPHE, HCPF, OBH, HHS) and community stakeholders, identified a whole host of policies that are barriers. A detailed report on how to fix those barriers was provided to leadership at HHS. This would be a great place to start.
	☒	☐	

Professional / cultural divisions RCCO or BHO contracts Staff capacity State/Federal rules or reporting requirements	☐	☒	This can be worked out. Utilizing SDAC data is just one way to understand the activities within a medical home – others are needed. There are currently projects being developed in the state that would utilize other modalities (e.g., IPad technology) to help practices collect data efficiently and effectively at the practice level. There will need to be an investment in the development of these programs and many practices would need financial assistance with implementation. However, this would be a way for practices to track all the activities that the state would like monitor (e.g., screening rates, follow-up, referral) and would allow the practice to improve patient and family care.
Technical resources / data sharing	☒	☐	Integrated behavioral health providers (IBHPs) for children require a very different skill set than IBHPs for adults. The Department of Child Psychiatry at UCDenver and Children's Hospital, along with CCHAP are expanding their training capacities. There is also work being done to develop a training program uniquely geared towards pediatric IBHPs – this is vital to providing effective and high quality care.
Please type your response here.			

Training

Others

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

The American Academy of Child and Adolescent Psychiatrists (AACAP) has identified several components that are vital to providing high quality behavioral health within a pediatric medical home:

- Prevention and screening
- Early Intervention
- Routine assessment and treatment
- Specialty consultation
- Specialized Treatment
- Coordination of services and monitoring

Adapted from the "Best Principles for Integration of Child Psychiatry into the Pediatric Health Home" 2012

This framework is based on key general principles that are aligned with the goals and objectives of multiple professional associations that currently support integrated behavioral health efforts. These principles include family-focused care, professional collaboration, care plan development, and care coordination.

The integrated behavioral health provider (IBHP) in a medical home that serves children on Medicaid should have the following skills:

- A command of child development to guide screening and referral decisions
- Ability to manage many aspects of post-partun depression
- Ability to manage common minor behavior problems in children
- Ability to provide early childhood intervention
- Ability to handle common behavioral issues in school age children, including counseling around ADHD
- Ability to assess and manage or refer adolescent behavioral health issues
- Ability to assess, manage or refer substance abuse issues in children or teens
- Skills in addressing socioeconomic barriers for the whole family
- Ability to oversee care coordination for behavioral health issues for the whole family

10) Please share any other general advice or suggestions you may have about behavioral health integration.

- The CPACK program developed by CBHC is a very good program, particularly the following:
  a. Assistance with finding a behavioral health provider for patients
  b. Telephone consultation by a child psychiatrist

The training component was not as helpful. We recommend that BHOs be required to provide the 2 components above as part of their new contracts.

- There needs to be better reimbursement for behavioral health care in the medical home setting.

- Colorado Medicaid needs to open behavioral health codes (96150 – 96155).

- The BHOs should be integrated with the RCCOs, have the same regions, reduce duplication of efforts and have better alignment of incentives and payment that support integrated care.

- There are many policies that are barriers to integration.

How will the RCCOs support the needed work force development? To integrate you need the expertise with in the practice for identifying need and the folks trained and integrated to meet the need. How are we going to train/help the staff get to the point to support a family and to help them to understand the need they have for services? This issue should be a focus of the next RFP how to train and pay for these services in a sustainable manner.

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination? Care Coordination is an organized/structured set of activities to support a patient receiving the appropriate services and resources necessary to achieve the best results necessary. These services are provided in a patient/family centered way which includes assessment of needs and strengths, a developed care plan and goals focused on the family and follow up on activities in the plan to be sure that needs were met or support services provided so that services stay focused on the needs identified by family.

b. How should RCCOs prioritize who receives care coordination first? High on the list need to be referrals from provider and practice staff, patients/families needing high levels of specialty care, premature infants, long term care services and palliative care, children and families needing waivers and children not showing up for their appointments. A request from the patient/family for help should also be considered a high priority.

c. How should RCCOs identify clients and families who need care coordination? We believe the effort and staff hours should go to those patients/families where change can be made such as socioeconomic issues, no show issues, lack of transportation. They should also help with navigating the health care system. Very high utilizers of emergency departments are easily identified as needing care coordination.

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider? Monthly activity reports.

12) What services should be coordinated and are there services that should not be a part of care coordination?

Services that can be provided in a pediatric or family medical home are: complex medical coordination including logistics/travel, ancillary services (PT/OT/home health services, ...), collaboration with mental/behavioral health, collaboration regarding school needs, referrals to early intervention services and Child Find, referral to other agencies (rehab, hospice, ...), collaboration with foster care and DHS system. RCCOs need to help medical homes by assisting families to find resoruces for needs like assistance with housing, food, parental employment, child care, in which case the RCCO can help families connect with other agencies that provide these services.

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

Need is determined by the patient and family. Care Coordination is basically built on a relationship and that relationship must be developed in a trust-filled, patient-centered, supportive environment.

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today? The care coordinators themselves (and the medical home) are not aware of whom else is involved.

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different? Takes place in school, non-profit organization, religious organizations, between friends and in families to name a few. These informal and formal relationships need to be supported, coordinated and nurtured. We are looking for results that lead to better lives, not credit for who did something.

c. How can the ACC avoid duplicating or disrupting current care coordination relationships? Allow providers to help patients and families and intervene to support

the work closest to the patient and in the patient/families community. RCCO centric care coordination is distant for the patient/family and not in tune with the system that the patient/family currently functions.

d. What are the gaps in care coordination across the continuum of care? There is a lack of understanding particular systems and a lack of relationship in the nondelegated system being created. It has lost its personal touch in most instances. In
the pediatric system, there are gaps in hospital to community, particular for preemie babies, interaction with schools and day care, developmental screening and treatment, transportation support, health literacy, and transition to adulthood. All vital for the successful growth of children.

15) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	**Should the RCCO have a role?** Yes	No	**Should the RCCOs coordinate with community supports and services?** Yes	**Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?**

Abuse, neglect, and trauma	☒	☐	☐	Reporting abuse and neglect, both child and elder and supporting the investigating agencies and helping with needed services not being provided by another agency.
Affordability (assistance with prescriptions or co-pays)	☒	☐	☐	Don't assist everyone, but have resources so that needed help can be obtained and the provider's identified services can be received. Help families find resources and document that the family was actually helped.
Daycare / childcare	☒	☐	☐	Help families find resources and document that the family was actually helped.
Economic stability & employment	☒	☐	☐	Help families find resources and document that the family was actually helped.
Education	☐	☐	☐	
Environment	☐	☐	☐	
Food access / nutrition	☒	☐	☐	Help families find resources and document that the family was actually helped.
Health literacy	☒	☐	☐	Help families find resources and document that the family was actually helped. Have RCCOs take responsibility for finding good training for providers and staff on this topic.
Housing	☒	☐	☐	Help families find resources and document

				that the family was actually helped.
Language or translation services	☒	☐	☐	Help families find resources and document that the family was actually helped. RCCOs should support practices with easy and inexpensive ways to obtain immediate interpretation and translation of documents.
Literacy	☒	☐	☐	Help families find resources and document that the family was actually helped.
Transportation	☒	☐	☐	Help families find resources and document that the family was actually helped. Make sure that resources are available in all areas of the RCCO.
Other	Please type your response here. Feel free to list as many non-medical factors as you want, and please explain how the RCCO should be involved.			

16) Requirements about who should be doing care coordination. Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

- **In answering the following question, we are assuming that care coordination is being done in the medical home**

Type:	Coordinate care?	In what capacity should these individuals coordinate care in the ACC Program?	Yes	No

Advanced Practice (Registered) Nurses	☐	☒	
Certified Addiction Councilors	☐	☒	
Certified Nurse Midwives	☒	☐	In OB Gyn office only
Community Health Workers	☒	☐	For most Medicaid recipients. Practical feet on the ground; health literacy helpers; follow up; know neighborhood and community resources
Generalists (BA/BS/MA/MS)	☒	☐	For most Medicaid recipients. Best choice; know alittle about a lot, good problem solvers
Health Coaches	☐	☐	
Licensed Clinical Social	☒	☐	For highly complex social situations or complicated mental health clients. Possibly for supervision; can also do

Workers			behavioral health, grief/loss and palliative care.
Licensed Marriage and Family Therapist	☐	☐	
Licensed Mental Health Counselors	☒	☐	For complicated mental health clients. Need to be generalist good at all ages
Licensed Professional Counselor	☒	☐	For complicated mental health clients. See above
Masters of Public Health	☐	☒	
Medical Doctors / Doctors of Osteopathic Medicine	☐	☒	
Nurse Practitioners	☐	☒	
Patient Navigators	☒	☐	For most Medicaid recipients. Can provide very practical information to patients, help with health literacy, know area
Peer Advocates	☒	☐	For most Medicaid recipients. Can help with practical information on community; can make calls and set up appointments
Promotoras	☒	☐	For most Medicaid recipients
Psychiatrists	☐	☒	
Psychologists	☒	☐	For complicated mental health clients
Registered Nurses	☒	☐	For medically complicated complex clients. Doing this work now
Social Workers	☒	☐	For clients with very complicated social issues
Wraparound facilitators	☐	☐	We don't know what these are, but might be like Peer Advocates.
Other	Please type your response here.		

17) Care coordination requirements for specific populations. Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe

Newborns and infants	☒	☐	Preemies, born with equipment needs, O2, genetic abnormalities
Children	☒	☐	Need special training regarding care coordination for children (which CCHAP can provide). Genetic abnormalities, need equipment, blind, hearing loss, developmental delays, foster care.
Children who are healthy, but in socially-complex environments	☒	☐	Need special training regarding care coordination for children (which CCHAP can provide). Legal, parental and behavioral issues as well as all the developmental issues of children and teens need special care and knowledge.
Children involved in the foster care system	☒	☐	Need special training regarding care coordination for children (which CCHAP can provide). Legal, parental and behavioral issues as well as ll the developmental issues of children and ttens need special car e and knowledge.
Children with a chronic illness	☒	☐	Special knowledge of complex medical conditions, waivers, equipment, respite is necessary.
Children with a serious emotional disturbance	☒	☐	Need special training regarding care coordination for children (which CCHAP can provide). Considered complex care need to understand needs of child and family.
Children with medical complexity	☒	☐	Need special training regarding care coordination for children (which CCHAP can provide. Needs to be a nurse providing the care coordination

Children or youth with a behavioral health diagnosis or substance use disorder	☒	☐	Need special training regarding care coordination for children (which CCHAP can provide). See above in emotional disturbance.
Transition-age adolescents	☒	☐	Persuading adult providers is hard.
Parents and families	☒	☐	Need to understand family dynamics
Pregnant women	☒	☐	Complicated medical situation
Adults	☐	☐	
Adults who are healthy, but in socially-complex situations	☐	☐	
Adults with a chronic illness	☐	☐	
Adults with a behavioral health diagnosis or substance use disorder	☐	☐	
Clients involved in the criminal justice system	☐	☐	
Clients with a disability	☐	☐	
Clients in a nursing facility	☐	☐	
Elderly clients	☐	☐	
Frail elderly clients	☐	☐	
Clients in palliative care	☐	☐	
Other populations, please comment:			

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

Working in a collaborative mode with anyone connected with the patient. RCCO staff will need to learn about the legal and temporary nature of foster care and residential care and support schools; behavioral health and physicians in helping the child receiving care to have a good care plan and make sure that plan follows the patient

19) How should care coordination be evaluated? How should its outcomes be measured?

A care coordination program should initially be measured by having good processes, not measured by outcomes, until solid data exists on outcomes that are risk adjusted and accurate for children. Initially all measures need to be quite separated from outcomes that are highly tied to patient behavior, or practices will again be less likely to serve those with highest risk. There should be the development of process and clinical outcomes the show that care is happening. The measurements should be the same for RCCOs and for medical homes that have been delegated to do care coordiantionby the RCCO.

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

a. What is the PMPM cost for providing care coordination services? We believe there should be a basic payment for care coordination. This would cover the cost for monitoring, data support, and "being ready for anything. Cost $5-6 PMPM at the medical home level, which is where care coordination should be done.

b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population? Yes. Complex medical and social situations need more time, possibly travel and much more clinical knowledge to ensure positive outcomes. Cost $6+ PMPM for high CRG patients and families.

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population? YES

a. **Care coordinator to client ratios.** If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☐
51-100	☒

101-200	☐
201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

Measurement will have to start with process outcomes, but as folks become more proficient outcomes could be decreased no shows, patient satisfaction, use of community resources, care plans completed, increase immunization rates, proportion of patients receiving well cild visits.

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

- Care coordination is best done in the medical home by members of the medical home team.
- Care coordination done from a call center in the RCCO tends to be superficial, only partially meet the needs of the patient and family, is fragmented (often fails to close the loop, i.e. follow through to be sure problems were satisfactorily met). The next best solution is for care coordination to be provided by community-based organizations set up to provide specific types of care coordination or care coordination for certain types of populations (ethnic group or chronic illness-specific groups). In this case, there must be direct bidirectional communication with the medical home. The least satisfactory care coordination is from a call center in the RCCO.

- Many medical homes relate to multiple RCCOs and they want to be delegated to do care coordination. If all RCCOs allowed medical homes to be delegated to do care coordination, they could receive a pmpm from all of them, which would enable them to afford to hire enough care coordinators to meet the needs of all of their ACC patients.

- Medical homes are willing to do care coordination, because they have a relationship with their patients. They trust them. Coordinating complex medical care is essential for good care and for cost savings. Also, the primary care provider is best positioned to have a long term relationship with the patient, and therefore know and understand other aspects of the

patient's life and how important those non-medical factors are on the patient's health and health issues.

- The overall goal of Colorado Medicaid should be to provide care coordination services for ALL patients in the Medicaid population (for some patients it may be very minimal, others extensive). This is the essence of preventive care. A care coordinator that is based in the medical home is in the best position to help identify risk factors proactively, as early as possible before they impact a patient's health and cause illness. Children with special healthcare needs (complex, complicated) require a higher level of care coordination, so the pmpm attached to their care coordination needs to be risk adjusted.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

- All RCCOs should have their offices in the region served, should be non-profits, be a Medicaid provider and be incorporated only in Colorado.

- All RCCOs should offer to delegate care coordination to medical homes willing to accept that responsibility and the RCCO should share a portion of the RCCO pmpm with the medical home that accepts delegation.

- All RCCOs should use the same criteria for delegation and for the amount that is paid for delegated services of care coordination. By doing this, services can reach a standard across the state. A patient would have access to similar services no matter where they moved across Colorado.

- RCCOs should all agree on how they will effectively communicate to medical homes regarding any contact the RCCO has with patients attributed to the medical home. They should include PCMPs in developing those criteria.

- All RCCOs should help (or contract with an organization to help) medical homes understand how to access their SDAC data, understand their data and use it to develop rapid cycle QI projects to improve health outcomes and meet KPIs.

- All RCCOs should agree to provide uniform support for medical homes when a medical home asks for help with care coordination, even when the medical home is in another region (and contracted with another RCCO) but the patient is in the first RCCO's region.

- RCCOs should be required to allow medical homes to give the RCCO a list of patients the medical home feels are their patients and receive help from the RCCO to understand why certain patients have been attributed to another medical home. If the patient is determined to be more appropriately attributed to the inquiring medical home, then the RCCO should help re-attribute the patient to the correct medical home.

- On a regular basis, RCCOs should share the RCCO's performance on KPIs, share savings incentives and share with the medical home how their own performance compares with other medical homes.
- Functions: No function of a RCCO should look different from one RCCO to another from the perspective of the customer, specialists, providers, patients, and families moving from one place to another. If the service touches a customer it MUST look and feel the same such as accessing services, contacting services, receiving services. Internally RCCOs can be different, but a customer should never hear "that is not my practice, we don't do that, or you will have to call this number."

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

All RCCOs should have their offices in the region served, should be non-profits and be incorporated only in Colorado.

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

- This is particularly applicable to the Denver metro area. There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for <u>all</u> of their ACC patients. For many expectations/requirements and ways of doing things the RCCOs are so different from one another that it requires significant extra work for medical homes to adapt to the differences. In addition, if a patient lives in one region and goes to a medical home in another region, and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from that first region.

- The first RFP was looking for different approaches from the different RCCOs. Now, we think uniformity would be more important and the basics of administration and service provision should be mandated by HCPF and all RCCOs adhere it.

27) Should the RCCO region maps change? Why or why not? If so, how?

Yes. There are two changes we recommend:

- Larimer County should be included in Region 2, since the medical community and the support organizations of Larimer County and very closely linked to Weld County.

- In the Metro Denver area, the boundary issues are so difficult that we recommend one RCCO be responsible for the whole metro area or that medical homes be allowed to choose one RCCO for all of their patients.

28) Should the BHO region maps change? Why or why not? If so, how?

If Colorado is serious about promoting integration of behavioral and physical (medical) health care, then the RCCOs and BHOs should be integrated. This would mean they should have the same regions and function as though they are one organization. They should share incentives that are aligned around successful integration of behavioral and medical services and outcomes. So the BHO maps/regions should conform to the RCCO regions/maps.

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

Improve attribution, decrease the time lag for data (not four months behind) , provide for the ability to pull reports on particular topics. Stop making changes that the medical homes have to make. Allow them some time to catch up with current expectations.

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

- There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients. There are certain expectations/requirements and ways of doing things that are so different from one RCCO to another that it requires significant extra work to adapt to the differences. If a patient lives in one region and goes to a medical home in another region and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from that first region. This is particularly true in the Denver metro area.

- Another alternative: When a practice contracts with a RCCO currently they "belong" to one RCCO. Change that and have them only contract with the state and have that contract extend to all RCCOS. This way RCCOS would be more accountable to standardization through out all of Colorado, and the services provided to patients/families would be more uniform.

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

34) **What role should RCCOs play in attributing clients to their respective PCMPs?**

The attribution system is quite flawed still. RCCOs should be required to allow medical homes to give the RCCO a list of patients the medical home feels are their patients and receive help from the RCCO to understand why certain patients are attributed to another medical home. If the patient is determined to be more appropriately attributed to the inquiring medical home, then the RCCO should help re-attribute the patient to the correct medical home.

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

Stakeholder Engagement

39) **What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?**

- The attribution system continues to be flawed and the process of getting patients reattributed to the correct medical homes is still very onerous. RCCOs should be required to allow medical homes to give the RCCO a list of patients the medical home feels is their patients and receive help from the RCCO to understand why certain patients are attributed to another medical home. If the patient is determined to be more appropriately attributed to the medical home, then the RCCO should help re-attribute the patient to the correct medical home.

- In the RFP, ask RCCOs how they can help improve processes for correct attribution and simple, easy correction of mis-attribution.

- Hold more patient/parent/family client focus groups.

40) **What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?** The RCCOs all do things very differently which is confusing for medical homes with patients in several RCCOs. RCCOs. RCCOs are very inconsistent in how they respond to requests for care coordination (quite variable depending on whom you reach at the RCCO). And they are very variable from one RCCO to another. So the new RFP should ask how RCCOs will develop policies and procedures to make their methods and response to requests for help more consistent.

- Feedback from RCCOs regarding patients referred to the RCCO for care coordination is spotty. How will RCCOs consistently provide feedback and communication to the medical home regarding what was done for the patients and was there improvement?

- And there are certain expectations/requirements and ways of doing things that are so different from one RCCO to another that it requires significant extra work to adapt to the differences. If a patient lives in one region and goes to a medical home in another region and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from that first region. This is particularly true in the Denver metro area. There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients.

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

42) **How should the Department structure stakeholder engagement for the ACC as a whole?**

Maintain Advisory groups, but use them for advice instead of reporting activities to them. These groups must be active participants and their view points be seen supportive and helpful. They may have ideas to make the program better. Use these folks as subject experts and advisors instead of once a quarter meeting attenders.

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population? NO

a. If no, what are the gaps?

Hospitals are not participating. They all must participate to make this effort work successfully.

b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities. Children and their families are not a sub population, but currently are being treated that way. The emphasis has been going to "where the money is" to keep the RCCO functioning. If you want to put an emphasis on whole person preventative care, look at your youngest members and don't think of them as a sub-population. They are the majority of your members.

44) **ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.**

a. What role should hospitals play in the next iteration of the ACC Program?

Hospitals should be incented to communicate better with medical homes. They should have significant financial disincentives to see Medicaid patients with minor problems in their emergency departments.

b. What role should pharmacies play in the next iteration of the ACC Program?

Pharmacies should be rewarded for arranging training for their pharmacists and technicians in cross-cultural communication, providing translation services and providing extra teaching for families with limited health literacy.

c. What role should specialists play in the next iteration of the ACC Program?

d. What role should home health play in the next iteration of the ACC Program?

e. What role should hospice care play in the next iteration of the ACC Program?

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

g. What role should counties play in the next iteration of the ACC Program?

The Healthy Communities personnel should be functionally merged with the RCCOs to enable better coordination and reduce duplication of efforts

h. What role should local public health agencies play in the next iteration of the ACC Program?

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

45) **How can RCCOs help to support clients and families in making and keeping appointments?**

Should be done in the practices part of the Care Coordination iand the PMPM should be sufficient to support it.

46) **Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?**

No, if we provide Care Coordination at the practice level, the practice needs to decide how is is going to do that. CHWs are a good choice if paired with others. PMPM should be enough to defray the expenses of CHW.

47) **Community Health Worker reimbursement.** Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement process	(Please check all that apply)
Independently bill	☐
On staff (salary) at Primary Care Medical Provider Clinic	☐

On staff (salary) at RCCO	☐
Per Member Per Month Payment	☐

48) **Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?**

- Maintain accurate up-to-date listings of dental providers accepting Medicaid.
- Assist dentists in applying for Medicaid credentials

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you?

The Joint Commission has identified the following 3 challenges as the "triple threat" to healthcare communication: 1. Language barriers 2. Cultural barriers, 3. Low health literacy barriers.

b. What RCCO requirements would ensure cultural competency?

RCCOs should contract for training for their staff and the personnel in medical homes to receive training regarding:

- Cultural barriers to good health outcomes and how to address them
- Cross-cultural communication
- Addressing limited English proficiency in clients
- Addressing limited health literacy
- Each RCCO must have a comprehensive strategy to address effective communication (oral and written) with limited English and culturally different patients/families as well as those with low health literacy.
- What is your "organization's" strategy for addressing the triple threat on these three levels:

- Building awareness of the "triple threat" to healthcare communication (1, 2, and 3 listed above)
- Identifying and addressing systemic solutions to health literacy (signage, website readability, handouts, phone trees, communications to patients, care coordination).
- Implementing education/training for providers and staff in private practice and clinic settings in your region to improve communications skills that lead to better health outcomes for all patients.

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?

- Understanding Cultural barriers to good health outcomes and how to address them
- Cross-cultural communication
- Addressing limited English proficiency in clients
- Addressing limited health literacy

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

51) **Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?**

- Pay medical homes even higher reimbursement for after-hours care than you do now.
- Pay emergency departments at a lower rate than medical homes for patients with minor problems.
- Require co-pays even for children. But waive the co-pay if they called their medical home first.

52) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

Practice Support

53) **Support for practices.** Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☒	☐	☐	☐

	☐	☐	☐	☐

Nurse line – the Medicaid nurse line number is on Medicaid cards. The Medicaid line does not communicate with the medical home about calls or referrals to emergency departments. The Medicaid nurse line undercuts the medical home. The patient should call their medical home.

There are so many programs being funded to provide practice support, SIM, CHES and now TCPI, I believe the question is not what to provide, but how does the ACC fit into what is available to practices and not flood the practices with helpers from each for these initiatives. How can the programs work in collaboration with a single goal in mind and split up the work? All the tools and supports are great, but the process of helping practices will not be welcomed if the programs look uncoordinated and non-collaborative. Let's work together.

specific website

Others 54) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

55) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

See Above

56) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

- The current "Enhanced Medical Home Standards" and the well child visit KPI are sufficient.
- The more incentives, the less of an incentive they create.
- A pmpm is also ok; but attribution is very flawed which serves as a disincentive

57) Should the Department require that PCMPs utilize disease registries to manage the health of their population?

Shouldn't be required, because it could be expensive for the small medical home and would likely require double entry of information. So, it could be recommended and incented. HCPF or RCCO would probably have t provide registries for smaller medical homes that are compatible with the medical home's EHR.

58) Please share any other advice or suggestions about provider support in the ACC.

The ACC is headed toward capitation. It would be important for HCPF to open codes now to encourage services and activities you want medical homes to provide later under capitation, so medical homes establish the habits now and so frequency of the services and fair reimbursement can be determined prior to switching to capitation. For example, socialemotional screening in toddlers and preschoolers should be reimbursed now.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

- The payment structure absolutely does not support the ACC goals. A medical home does not receive incentives for KPIs unless the RCCO meets its KPI. This becomes a disincentive, because many medical homes meet their performance targets, but do not get rewarded because the RCCO did not meet its targets. So the medical home has no incentive to maintain the performance. The philosophy that HCPF has espoused (that the high performing medical home should encourage or help the low performing medical home) is not realistic and is not how the real world works. There is no time for that, plus the high performing medical home has no way of knowing who is low performing. This idea shows a

lack of understanding of the world where health cares is delivered. Medical homes need to receive full incentives when they meet their KPI targets, no matter what happens in the RCCO.

- The incentives are too low to change much. Also, the KPIs need to remain focused on process, not outcomes, until the data is more sophisticated to accurately attribute patients and account for risk factors.

- Many medical homes have the ability to collect REAL-TIME data from their EHR and their claims database, which can be used to measure performance more accurately than the SDAC. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and providers to develop a vetting process that will enable HCPF and RCCOs to trust the medical home self-reported real-time data.

- Since children are the majority and give the best chance of truly improving health and wellness, KPIs need to be more child-focused. And since the potential cost savings for children's health care are so far in the future, KPIs need to be intermediate, process outcomes.

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-forservice, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

There is very little of the infrastructure in the state in place at the present time to enable capitation to be implemented successfully. Here are just some of the changes that would need to be in place before it would be fair or prudent to implement capitation:

- The state should already be paying fair amounts for all aspects of the care needed by Medicaid recipients before it moves to capitation. In other words, codes for things that HCPF wants done under capitation should be opened and reimbursement adequately now. This would encourage medical homes to already be doing these things before the change to capitation. It would also give HCPF and medical homes experience regarding what the actual costs are for providing the desired services and determine a fair capitation. It will be difficult to change behavior to include new activities under capitation among providers, if you continue to hold codes closed now for things you want done under capitation. You have to help the medical homes create the habits you want before the switch to capitation.

- All providers would have to be reliably involved in the ACC: primary care, all of the various adult and child specialists, the hospitals, the therapies, dentists, mental health providers, etc.

- The data system would have to be able to report real time data and be far, far more accurate than it is now.

- The attribution system is flawed. That would have to be improved and provide accurate, real-time attribution data before capitation should be instituted.

- You will have to change a variety of policies that are barriers to population management.

- Capitation has to be combined with significant incentives to implement processes and improve outcomes. So, you will need to have the incentive system very well developed and viewed by providers as motivating before implementing capitation

- Healthcare for children focuses on prevention, early detection and early intervention, which require initial increased investment to reduce potential expenses many years and decades down the line. Other ACO programs have shown that savings on children are difficult to show early on. So, incentives in the care of children will initially be for intermediate outcomes (or for process outcomes) and need to be direct incentives rather than incentives in the form of shared savings.

- Early in the transition from pre-ACC payment methods to ACC payment structure (2012), some medical homes were asked to return money to Medicaid. Transitions like that (for example the transition to capitation) have to avoid this. Primary care medical homes have such narrow margins that this can be very difficult financially on a medical home

- Many medical homes have the ability to collect from their EHR and their claims database REAL-TIME data with which performance can be measured. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and providers to develop a vetting process that will enable HCPF and RCCOs to trust that medical home self-reported real-time data is trustworthy.

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

Many medical homes have the capability and infrastructure to adapt to payment tied to value. What is missing is the state, HCPF, RCCO, BHO infrastructure. See all of the infrastructure elements HCPF needs to have in place listed in question 60

62) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

63) What role – if any – should the RCCOs play in the distribution of payments to providers?

RCCOs should be sure that medical homes that meet their key performance measures or other targets should receive their full share of incentive payment even when the RCCO as a whole has not met its performance targets.

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

- The HCPF Payment Reform Committee should meet at a time when providers and practice managers can actually attend. Monday afternoons is probably the worst time to actually enable providers or practice managers to attend. Once you select an appropriate time, then actively recruit participation.

- Make sure that your efforts are statewide. Views are different in the various regions of the state.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

- Many medical homes have the ability to collect from their EHR and their claims database REAL-TIME data with which performance can be measured. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-

time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and provider from medical homes to develop a vetting process that will enable HCPF and RCCOs to trust medical home self-reported realtime data.

- The measures for children can be drawn from HEDIS measures or CHIPRA measures or from the Pediatric Measurement Proposal that HCPF did in 2010 with the help of Jim Todd.

Appropriate child health measures could be selected from the following measures :

- Well child visits appropriate for age
- Developmental screening by three years of age
- Teen depression screening
- Complete immunization status by age two
- Post-partum depression screening rate for mothers of newborns by age 4 months
- Appropriate antibiotic use in URI and strep pharyngitis

- Medical homes could also be measured on:
- Patient (or family) satisfaction ratings
- Documentation of QI projects

- Screening should be part of KPIs, but you need to do more than just create a KPI. If you are going to have KPIs, then you need to track not only the number of times a screening was done, but also track the v-codes (or some way to track positives) and make them available in the SDAC so medical homes can track them. And the SDAC needs to track referrals (or intervention). Otherwise it is not worth measuring the number of screenings.

- The PCMP or medical home should receive real-time data (less than a month since date of service) with data that will allow them to compare their performance with performance of similar type of medical home.

- Healthcare for children focuses on prevention, early detection and early intervention, which require initial increased investment to reduce potential expenses many years and decades down the line. Other ACO programs have shown that savings on children are difficult to show early on. So, incentives in the care of children will initially be for intermediate

outcomes (or for process outcomes) and need to be direct incentives rather than incentives in the form of shared savings.

66) Measuring Client experience. Please complete the table below to indicate how the Department should measure Client/patient experience:

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☐	☐	
SF-12 Health Survey	☐	☐	
Other types of client interviews / surveys	☐	☐	
Patient Activation Measure	☐	☐	
Focus groups	☐	☐	
Other	☐	☐	
Please type your response here.			

67) Knowing that, at this time, the Department only has claims data, how should population health be measured?

- Many medical homes have the ability to collect from their EHR and their claims database REAL-TIME data with which performance can be measured. HCPF, 5DAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and provider from medical homes to develop a vetting process that will enable HCPF and RCCOs to trust that medical home self-reported real-time data is trustworthy.

- The measures for children can be drawn from HEDIS measures or CHIPRA measures or from the Pediatric Measurement Proposal that HCPF did in 2010 with the help of Jim Todd.

- The following measures should be used to measure outcomes for children:
  - Well child visits appropriate for age o Developmental screening o Teen depression screening

- Complete immunization status by age two
- Post-partum depression screening rate for mothers of newborns by age 4 months. o Appropriate antibiotic use in URI and strep pharyngitis

68) How should quality and performance data be reported to the RCCOs, PCMPs, and the public?

The PCMP or medical home should receive real-time data (less than a month since date of service) that will allow them to compare their performance with performance of similar type of medical home.

69) Measures for payment. Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☒
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

We only need 2-4 KPIs. Any more will dilute the effect. What we really want is good data, so we can improve our outcomes by doing a quality improvement project. Since children are the majority of Medicaid recipients and give you the best chance of truly improving health and wellness in the long term, KPIs need to be more child-focused. And since the savings are so far in the future, KPIs need to be intermediate, process outcomes.

70) What percent of RCCO payments should be tied to measures or performance?

Percentage	
10-20%	☒
21-30%	☐
31-40%	☐
41-50%	☐
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

71) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?

Because many medical homes have patients in more than one region, the KPIs should be the same for all regions. The RCCOs and the PCMPs should have the same KPIs. The medical home should receive incentive payments for reaching its targets even if the RCCO did not reach its target KPIs.

72) Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?

Both. The best incentives are those that give health care providers targets to shoot for AND reward progress

73) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

Real time data that is accurate is crucial for rapid cycle quality improvement in medical homes and in order to provide incentives that will motivate medical homes. This means data available within 2-4 weeks rather than 4-6+ months. The SDAC data comes too late to: (1) support rapid cycle quality improvement and comes too late to provide meaningful incentives. Both family practices and pediatric practices report that the SDAC is still inaccurate compared to the medical homes own data that they obtain from their EHR, or their claims-based data. Many medical homes these days are able to capture the data needed by HCPF and the RCCOs within a week or two of service, rather than 4+ months later. We recommend that the ACC develop a process for self reporting of data. We realize that HCPF would need to vet the quality and accuracy of practice data, but please consider this.

74) **Incentive payment frequency**. Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	☒
Annually	☐
Other	☐

If you checked the "Other" box, please describe payment frequency below:

75) For potential offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

76) For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

Health Information Technology (HIT)

77) **Types of communication**. For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	☒
Text message	☐	☒
Web portal	☐	☒
Email	☐	☒
Telemedicine / Video chat	☐	☒
Face-to-face meeting	☐	☒
Smartphone app	☐	☒
Other: ALL formats are necessary to address specific needs that the other formats cannot; that's why they're there.		

78) **HIT investments by organizations.** For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below:

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	☐	☐
Digital care management tool	☐	☐
Care transitions alerts	☐	☐
Electronic Health Records (EHRs)	☐	☐
Health risk assessment software	☐	☐
Practice assessment tools	☐	☐
Practice management tools (scheduling, billing)	☐	☐

Client web portal for communicating care plan, services, benefit enrollment	☐	☐
Patient education/wellness tools	☐	☐
Provider/case manager directory	☐	☐
Shared decision-making tools	☐	☐
Telemedicine software	☐	☐
Other:	☐	☐
Other:	☐	☐

79) **Importance of technology by type.** The Department is working to determine what technology is in place, what technology is needed, and what technology should be standardized. For RCCOs, providers, and other organizations, use the table below to answer what HIT infrastructure outside of the 5DAC your organization would use to perform population health management activities. Tools are scored from 1-5, where 1 are those items least-likely to be used, and 5 are items most-likely to be used:

Tool	1 Least	2	3	4	5 Most
Population analytics / reporting / dashboard	☐	☒	☐	☐	☐
Care management tool	☐	☐	☒	☐	☐
Care transitions alerts	☒	☐	☐	☐	☐
Electronic Health Records (EHRs)	☐	☐	☐	☐	☒
Practice assessment tools	☒	☐	☐	☐	☐
Health risk assessment software	☐	☒	☐	☐	☒
Practice management tools (scheduling, billing)	☐	☐	☐	☐	☒
Client web portal for communicating care plan, services, benefit enrollment	☐	☐	☐	☐	☒

Patient education wellness tools	☐	☐	☒	☐	☐
Provider/case manager directory	☐	☒	☐	☐	☐
Shared decision-making tools	☐	☒	☐	☐	☐
Telemedicine	☐	☐	☐	☐	☒
Other:	☐	☐	☐	☐	☐

80) What are the primary barriers to RCCOs and providers increasing their use Health Information Technology to improve the performance of Primary Care Practices?

- Technology to improve the performance of Primary Care Practices
- Possessing outdated tech (eg Windows XP, Office 2003), or next-to-no tech at all
- Inability to use basic office management software (ie MS Office)
- The Attribution algorithm is faulty; FIX IT. KEEP ADULTS OUT OF PEDIATRIC PRACTICES
- Liability anxieties create inter-agency barriers related to sharing PHI
- Releases are not standardized across Medicaid entities.

81) How can Health Information Technology support Behavioral Health Integration?

- 5ystems are needed for tracking
- Improving assessment and identification of needs that lead to/exacerbate behavioral health issues
- Reducing duplication of work; increasing real-time connections between providers
- Improving security, enhancing communication, reducing cost, increasing user satisfaction

82) In the next iteration of the ACC, should there be a shared resource for data and analytics? Please describe the basic criteria for what a shared data and analytics platform needs to contain in order for it to be useful.

YES. Needs to have more data and greater end-user flexibility. It should allow end-user customization to accommodate diverse needs

83) Should there be a shared care management tool? Please describe the basic criteria for what a care management tool would need to contain in order for it to be useful.

YES. System could be similar to BUS, TRAILS, EPIC, etc. Standardization is VITAL to ensure consistency across providers, regions, and to improve audit efficiency

84) Should there be a shared population health management tool? Please describe the basic criteria for what a population health management tool would need to contain in order for it to be useful.

Standardization is VITAL to ensure consistency across providers, regions, and to improve audit efficiency

85) Please describe the functionality that a common Medicaid provider directory would need to contain in order for it to be useful.

86) How can the RCCOs support providers' access to actionable and timely clinical data?

- Require HCPF to include more data and end-user functionality in the SDAC.

- Update ALL data every month (disregard 120-day timely filing delay).
- Make HCPF fix the attribution algorithm; incorporate pediatric practice information to eliminate attribution of adults to pediatric rosters.

87) What are the HIT solutions that would benefit clients, providers, and RCCOs? Please comment on the parameters these tools or platforms would need to possess and the ways in which they could be used.

- Standardized, regular, ADT info from hospitals
- Standardized ROI for use by all Medicaid entities.

88) What technical assistance or resources related to HIT infrastructure should the RCCOs supply? This assistance or these resources could be for providers, social service organization, clients/families, or for others.

- Assistance (one-on-one, classes, over-the-phone, web-based) on using parts of the SDAC; post TREO's SDAC webinar
- Education, consultation on encryption, transmission, and storage of PHI

89) What role should health information exchange platforms like CORHIO or QHN play in the next iteration of the ACC?

- Sharing of real-time ADT data
- Need to include small and single-provider practices as well

90) Please share any information, advice, and suggestions you have about health information technology in the ACC Program.

"No Practice Left Behind"
Many providers lack the skills to implement anything but the simplest of electronic activities. Population health management involves use of technology that many (most?) do not possess. RCCO's are well-placed to help the providers in their areas improve, as a group, toward more effective population management.

Appendix: Definitions and Acronyms

The following words have been defined for the purpose of this RFI.

42 CFR is a federal regulation outlining when information about someone's Substance Use Disorder (SUD) treatment may be disclosed with or without his or her consent.

Colorado Department of Health Care Policy and Financing

RFI Response Received and Recorded.

Serial Number: 070

Accepted by: KJDW

Notes:

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Brad Young
Location: 3660 Wadsworth, wheat Ridge, CO 80033

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Colorado Pharmacists Society
Location: 6825 E. Tennessee Ave.#440 Denver, Colorado 80224

☒ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☐ Medical provider / PCMP / other provider
  i. Type or specialty: Click here to enter text.
  ii. Area of practice: Click here to enter text.
☒ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☐ Other (please describe): Click here to enter text.

Are you currently involved in the ACC program?

☐ Yes
☒ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☐ 3-4 years

How have you been involved in the ACC program and what interaction have you had with RCCOs:
CPS in conjunction with RxPlus, Pfizer and GSK, have met with all 7 RCCOs to discuss how pharmacy can best serve the needs of each RCCO. A Pharmacy Stakeholder Report documenting the interactions and responses is attached to this e-mail.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:
CPS has worked closely with Colorado Medicaid on the current pricing methodology for pharmacy. We also have communicated and lobbied on Medicaid issues impacting the Pharmacy program

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

Colorado Pharmacists Society, RxPlus Pharmacies and chain pharmacies have been advocating a more active role for pharmacists in the RCCOs for several years. We believe that since patients see their pharmacists more regularly than other health care providers, community pharmacists are in a unique position to provide comprehensive medication

☐ Since before the program was implemented.

management, which has been demonstrated to help with adherence, improve transitions of care, and provide patient education and counselling. We would like to play a more active role in that capacity. Many pharmacies are using newly developed telecommunication tools that are designed to assist in that role (such as Prescribe Wellness). We continue to believe that pharmacists in all settings, including retail community pharmacists, can and should play a much more significant role in the RCCOs to help improve health outcomes for patients.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

2) What is not working well in the ACC Program?

3) What is working best in the Behavioral Health Organization (BHO) system right now?

4) What is not working well in the BHO system?

5) What is working well with RCCO and BHO collaboration right now?

6) What is not working well with RCCO and BHO collaboration right now?

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☐	☐	
Community Behavioral Health Services Rule	☐	☐	
Covered diagnoses list	☐	☐	
Different behavioral / physical health reimbursement	☐	☐	
Institutions for Mental Diseases exclusion	☐	☐	
OBH rules, reporting, or financing (regulatory differences between agencies)	☐	☐	
PCMP financing structure	☐	☐	
Per-member per-month amount	☐	☐	
Physical space constraints	☐	☐	
Privacy Laws (HIPAA, 42 CFR)	☐	☐	
Professional / cultural divisions	☐	☐	
RCCO or BHO contracts	☐	☐	
Staff capacity	☐	☐	
State/Federal rules or reporting requirements	☐	☐	
Technical resources / data sharing	☐	☐	
Training	☐	☐	
Others	Please type your response here.		

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

10) Please share any other general advice or suggestions you may have about behavioral health integration.

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination?

b. How should RCCOs prioritize who receives care coordination first?

c. How should RCCOs identify clients and families who need care coordination?

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

12) What services should be coordinated and are there services that should not be a part of care coordination?

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today?

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

d. What are the gaps in care coordination across the continuum of care?

15) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	Should the RCCO have a role? Yes	No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma	☐	☐	☐	
Affordability (assistance with prescriptions or co-pays)	☐	☐	☐	
Daycare / childcare	☐	☐	☐	
Economic stability & employment	☐	☐	☐	
Education	☐	☐	☐	
Environment	☐	☐	☐	
Food access / nutrition	☐	☐	☐	
Health literacy	☐	☐	☐	
Housing	☐	☐	☐	
Language or translation services	☐	☐	☐	
Literacy	☐	☐	☐	
Transportation	☐	☐	☐	
Other	Please type your response here. Feel free to list as many non-medical factors as you want, and please explain how the RCCO should be involved.			

16) **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	Coordinate care? Yes	Coordinate care? No	In what capacity should these individuals coordinate care in the ACC Program?
Advanced Practice (Registered) Nurses	☐	☐	
Certified Addiction Councilors	☐	☐	
Certified Nurse Midwives	☐	☐	
Community Health Workers	☐	☐	
Generalists (BA/BS/MA/MS)	☐	☐	
Health Coaches	☐	☐	
Licensed Clinical Social Workers	☐	☐	
Licensed Marriage and Family Therapist	☐	☐	
Licensed Mental Health Counselors	☐	☐	
Licensed Professional Counselor	☐	☐	
Masters of Public Health	☐	☐	
Medical Doctors / Doctors of Osteopathic Medicine	☐	☐	
Nurse Practitioners	☐	☐	
Patient Navigators	☐	☐	
Peer Advocates	☐	☐	
Promotoras	☐	☐	
Psychiatrists	☐	☐	
Psychologists	☐	☐	
Registered Nurses	☐	☐	
Social Workers	☐	☐	
Wraparound facilitators	☐	☐	
Other	Pharmacists should play a role in coordination and transition of care.		

17) **Care coordination requirements for specific populations.** Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and infants	☐	☐	
Children	☐	☐	
Children who are healthy, but in socially-complex environments	☐	☐	
Children involved in the foster care system	☐	☐	
Children with a chronic illness	☐	☐	
Children with a serious emotional disturbance	☐	☐	
Children with medical complexity	☐	☐	
Children or youth with a behavioral health diagnosis or substance use disorder	☐	☐	
Transition-age adolescents	☐	☐	
Parents and families	☐	☐	
Pregnant women	☐	☐	
Adults	☐	☐	
Adults who are healthy, but in socially-complex situations	☐	☐	
Adults with a chronic illness	☐	☐	
Adults with a behavioral health diagnosis or substance use disorder	☐	☐	
Clients involved in the criminal justice system	☐	☐	
Clients with a disability	☐	☐	
Clients in a nursing facility	☐	☐	
Elderly clients	☐	☐	
Frail elderly clients	☐	☐	
Clients in palliative care	☐	☐	
Other populations, please comment:			

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

19) How should care coordination be evaluated? How should its outcomes be measured?

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

a. What is the PMPM cost for providing care coordination services?

b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

a. **Care coordinator to client ratios.** If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☐
51-100	☐
101-200	☐
201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

27) Should the RCCO region maps change? Why or why not? If so, how?

28) Should the BHO region maps change? Why or why not? If so, how?

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

34) What role should RCCOs play in attributing clients to their respective PCMPs?

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

42) How should the Department structure stakeholder engagement for the ACC as a whole?

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

a. If no, what are the gaps?

b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

a. What role should hospitals play in the next iteration of the ACC Program?

b. What role should pharmacies play in the next iteration of the ACC Program?

Colorado Pharmacists Society, RxPlus Pharmacies and chain pharmacies have been advocating a more active role for pharmacists in the RCCOs for several years. We believe that since patients see their pharmacists more regularly than other health care providers, community pharmacists are in a unique position to provide comprehensive medication management, which has been demonstrated to help with adherence, improve transitions of care, and provide patient education and counselling. We would like to play a more active role in that capacity. Many pharmacies are using newly developed telecommunication tools that are designed to assist in that role (such as Prescribe Wellness). We continue to believe that pharmacists in all settings, including retail community pharmacists, can and should play a much more significant role in the RCCOs to help improve health outcomes for patients.

c. What role should specialists play in the next iteration of the ACC Program?

d. What role should home health play in the next iteration of the ACC Program?

e. What role should hospice care play in the next iteration of the ACC Program?

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

g. What role should counties play in the next iteration of the ACC Program?

h. What role should local public health agencies play in the next iteration of the ACC Program?

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

45) How can RCCOs help to support clients and families in making and keeping appointments?

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

47) **Community Health Worker reimbursement.** Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement process	(Please check all that apply)
Independently bill	☐
On staff (salary) at Primary Care Medical Provider Clinic	☐
On staff (salary) at RCCO	☐

Per Member Per Month Payment	☐

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you?

b. What RCCO requirements would ensure cultural competency?

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

51) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

52) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

CPS in conjunction with RxPlus, Pfizer and GSK, have met with all 7 RCCOs to discuss how pharmacy can best serve the needs of each RCCO. A Pharmacy Stakeholder Report documenting the interactions and responses is attached to this e-mail.

Practice Support

53) **Support for practices.** Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☐	☐	☐	☐
Network provider education	☐	☐	☐	☐
Assistance with practice redesign	☐	☐	☐	☐
Assistance with efficiency-enhancing activities	☐	☐	☐	☐
Provide web-based resources and directories	☐	☐	☐	☐
Provide practice-specific data reports	☐	☐	☐	☐
Provide clinical care guidelines and best practices.	☐	☐	☐	☐
Provide clinical screening tools	☐	☐	☐	☐
Provide health and functioning questionnaires	☐	☐	☐	☐
Provide chronic care templates	☐	☐	☐	☐
Provide registries	☐	☐	☐	☐
Offer client reminders	☐	☐	☐	☐
Offer client self-management tools	☐	☐	☐	☐
Offer educational materials about specific conditions	☐	☐	☐	☐
Supply behavioral health surveys	☐	☐	☐	☐
Supply other self-screening tools	☐	☐	☐	☐
Administer behavioral health surveys	☐	☐	☐	☐
Administer other self-screening tools	☐	☐	☐	☐
Prepare client action plans	☐	☐	☐	☐
Provide training on providing culturally-competent care	☐	☐	☐	☐
Provide training to supporting staff	☐	☐	☐	☐
Provide training on motivational interviewing	☐	☐	☐	☐
Provide tools and software for phone call and appointment tracking	☐	☐	☐	☐
Provide tools and resources for tracking labs, referrals, etc.	☐	☐	☐	☐
Provide referral and transitions of care checklists	☐	☐	☐	☐
Provide visit agendas or templates	☐	☐	☐	☐
Provide standing pharmacy order templates	☐	☐	☐	☐
Provide comprehensive directory of community resources	☐	☐	☐	☐
Provide directory of other resources	☐	☐	☐	☐
Provide materials regarding Nurse Advice Line	☐	☐	☐	☐
Ensure all tools and resources are centrally located on RCCO-specific website	☐	☐	☐	☐
Others				

54) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

55) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

56) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

57) Should the Department require that PCMPs utilize disease registries to manage the health of their population?

58) Please share any other advice or suggestions about provider support in the ACC.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

62) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

63) What role – if any – should the RCCOs play in the distribution of payments to providers?

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

66) **Measuring Client experience.** Please complete the table below to indicate how the Department should measure Client/patient experience:

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☐	☐	
SF-12 Health Survey	☐	☐	
Other types of client interviews / surveys	☐	☐	
Patient Activation Measure	☐	☐	
Focus groups	☐	☐	
Other	Please type your response here.		

67) Knowing that, at this time, the Department only has claims data, how should population health be measured?

68) How should quality and performance data be reported to the RCCOs, PCMPs, and the public?

69) **Measures for payment.** Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☐
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

70) What percent of RCCO payments should be tied to measures or performance?

Percentage	
10-20%	☐
21-30%	☐
31-40%	☐
41-50%	☐
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

71) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?

72) Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?

73) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

74) **Incentive payment frequency.** Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	☐
Annually	☐
Other	☐

If you checked the "Other" box, please describe payment frequency below:

75) For potential offers and other similar organizations: please describe the fixed costs of operating a RCCO.

76) For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

Health Information Technology (HIT)

77) **Types of communication.** For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	☐
Text message	☐	☐
Web portal	☐	☐
Email	☐	☐
Telemedicine / Video chat	☐	☐
Face-to-face meeting	☐	☐
Smartphone app	☐	☐
Other:		

78) **HIT investments by organizations.** For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below:

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	☐	☐
Digital care management tool	☐	☐
Care transitions alerts	☐	☐
Electronic Health Records (EHRs)	☐	☐
Health risk assessment software	☐	☐
Practice assessment tools	☐	☐
Practice management tools (scheduling, billing)	☐	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☐
Patient education/wellness tools	☐	☐
Provider/case manager directory	☐	☐
Shared decision-making tools	☐	☐
Telemedicine software	☐	☐
Other:	☐	☐
Other:	☐	☐

79) **Importance of technology by type.** The Department is working to determine what technology is in place, what technology is needed, and what technology should be standardized. For RCCOs, providers, and other organizations, use the table below to answer what HIT infrastructure outside of the SDAC your organization would use to perform population health management activities. Tools are scored from 1-5, where 1 are those items least-likely to be used, and 5 are items most-likely to be used:

Tool	1 Least	2	3	4	5 Most
Population analytics / reporting / dashboard	☐	☐	☐	☐	☐
Care management tool	☐	☐	☐	☐	☐
Care transitions alerts	☐	☐	☐	☐	☐
Electronic Health Records (EHRs)	☐	☐	☐	☐	☐
Practice assessment tools	☐	☐	☐	☐	☐
Health risk assessment software	☐	☐	☐	☐	☐
Practice management tools (scheduling, billing)	☐	☐	☐	☐	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☐	☐	☐	☐
Patient education wellness tools	☐	☐	☐	☐	☐
Provider/case manager directory	☐	☐	☐	☐	☐
Shared decision-making tools	☐	☐	☐	☐	☐
Telemedicine	☐	☐	☐	☐	☐
Other:	☐	☐	☐	☐	☐

80) What are the primary barriers to RCCOs and providers increasing their use Health Information Technology to improve the performance of Primary Care Practices?

81) How can Health Information Technology support Behavioral Health Integration?

82) In the next iteration of the ACC, should there be a shared resource for data and analytics? Please describe the basic criteria for what a shared data and analytics platform needs to contain in order for it to be useful.

83) Should there be a shared care management tool? Please describe the basic criteria for what a care management tool would need to contain in order for it to be useful.

84) Should there be a shared population health management tool? Please describe the basic criteria for what a population health management tool would need to contain in order for it to be useful.

85) Please describe the functionality that a common Medicaid provider directory would need to contain in order for it to be useful.

86) How can the RCCOs support providers' access to actionable and timely clinical data?

87) What are the HIT solutions that would benefit clients, providers, and RCCOs? Please comment on the parameters these tools or platforms would need to possess and the ways in which they could be used.

88) What technical assistance or resources related to HIT infrastructure should the RCCOs supply? This assistance or these resources could be for providers, social service organization, clients/families, or for others.

89) What role should health information exchange platforms like CORHIO or QHN play in the next iteration of the ACC?

90) Please share any information, advice, and suggestions you have about health information technology in the ACC Program.

Comprehensive Medication Management in Regional Care Collaborative Organizations

Expanding the role of the pharmacist in the delivery of cost effective healthcare in Colorado

Presented by the Pharmacy Stakeholders of Colorado

Executive Summary, Recommendations and Findings
October 2013

Executive Summary

This document serves two purposes. First, it is a compilation of the input and feedback received in the meetings between 6 of the Colorado RCCOs and the pharmacy stakeholders. Stakeholders include: Val Kalnins, Colorado Pharmacists Society; Brad Young, Grant Kinn and Fofi Mendez, RxPlus Pharmacies; Jim Driscoll, IPC; Charlie Sheffield, Colorado Chain Pharmacies; Spencer Guthrie, GSK.

Second, it provides a review of several well documented literature resources that describe the implementation of MTM/CMM services, including those in state Medicaid programs.

The purpose of the meetings with the RCCOs was to determine the following:

- What the RCCOs are doing now as far as Drug Therapy Management
- How can the pharmacist community help the RCCO achieve its goals of containing costs and improving quality
- What would be the RCCOs ideal scenario be for the inclusion of Drug Therapy Management/Comprehensive Medication Management

Each meeting began with these questions followed by an explanation of what is Medication Therapy Management (MTM) and Comprehensive Medication Management (CMM). For the purposes of our meetings, MTM and CMM were defined as follows:

> Medication Therapy Management is the delivery of pharmaceutical care services in which the pharmacist takes responsibility for all of a patient's drug-related needs and is held accountable for this commitment.
>
> Comprehensive Medication Management takes it to the next level as a patient care service in which drug therapy decisions are coordinated collaboratively by physicians, pharmacists, and other health professionals together with the patient.

Most of the services pharmacists currently provide are MTM. CMM, which includes integration with the health care team, leads to greater cost savings and improved quality of care for the patient through the coordinated care model.

What the RCCOs are doing now? Responses included:

- Delegate care management to FQHC
- Work with patient's existing pharmacies
- Care coordinator has patients records including medication profile
- Community care teams responsible for medication utilization

How can the pharmacist community help the RCCO achieve its goals? Responses included:

- Medication reconciliation (hospital or community setting),
- Medication Adherence/compliance
- Chronic pain management/substance abuse (review of medications when multiple PCPs have been visited).
- Expansion of Medication Review beyond Prescription Drugs (non-prescription drugs, supplements and herbal products)
- Pharmacists could play a key role in the education and outreach to the patient population

What is the RCCO's ideal scenario? All of the RCCOs consider medication management an important element of health care and are performing some form of medication management. Colorado Access currently has a CMM process in place which utilizes University of Colorado clinical pharmacists, and an MTM process for some individuals performed by personnel at the University of Arizona by fax and internet. But the RCCOs were generally not aware the possibility of implementing a pharmacist-based MTM/CMM process. One of the RCCOs, however, has reached out to local community pharmacists in their Region to become involved, and was enthusiastic about including pharmacists as health care specialists. All of the RCCOs we met with asked that we supply information about pharmacies in their regions.

The common thread from the meetings with all 6 RCCOs included the following:

- It is important that the Physician knows and trusts the pharmacist providing CMM
- The MTM/CMM activities should integrate into the care management program of that particular RCCO.
- All the RCCOs use some form of medication management. None of them have a formal CMM program
- All the RCCOs were receptive to the idea of incorporating CMM
- As long as it is simple, flexible and easy to implement, no RCCOs were opposed to enhancing their MTM programs.

Each RCCO was provided with additional references and resources on the value of pharmacist services and documents concerning MTM/CMM as requested. The attached report provides links and pdf files of those documents that were requested or that demonstrated the value of pharmacist services.

The document *Improving Potient ond Health System Outcomes through Advonced Phormocy Proctice: A Report to the U.S. Surgeon Generol* was cited numerous times as the source for the corroboration of the value and cost savings pharmacists services provide. This report to the Surgeon General provides 27 pages of examples of the value and cost savings that pharmacists can provide to the health care system.

RECOMMENDATIONS:

1. We concur in part with the comments made by the Department in the response to JBC Question 34 from the JBC Hearing January 7, 2013: "The Department believes that several options exist, which, with expanded funding, could promote more effective use of pharmaceuticals, improved health outcomes, and reduced long-term costs. The expansion of the Department's Rx Review program, authorized by HB 07-1021, to a full Medication Therapy Management program, could serve the Department's clients statewide and would be a promising investment."

2. We would further suggest that the RxReview program should be enhanced into a Comprehensive Medication Management system and be made available to the RCCOs in a way that makes it possible for each RCCO to develop their own unique CMM pilot programs utilizing RxReview if they choose to do so. Such an enhancement would require an appropriation by the legislature, but would provide savings with a significant return on investment (see literature from Minnesota below).

3. The Department noted in the January JBC hearing document that if a sizable appropriation is granted they may be compelled to "use the state's competitive procurement process to procure a vendor to perform these functions." And that "Such a vendor may not necessarily be required to contract with local pharmacists to perform these reviews." Any program developed should maximize face-to-face consultations and utilize pharmacists in Colorado. Multiple vendors are available to provide the necessary technology for the implementation of a pharmacist-provided CMM/MTM program using Colorado pharmacists.

KEY FINDINGS:

- *Phormacists ore seen os voluoble members of the heolth core neighborhood teom. Fostering the phormocist/potient relotionship wos seen as a possible component that could benefit the RCCO and the potient. Community Phormocy CMM services are an optimal RCCO option when;*

    1. *The physicion knows ond trusts the phormocist doing the CMM.*
    2. *It integrates into the care monogement program os designed and operates ot the locol level.*
    3. *It does not create ony odditionol worklood for the proviclers*
    4. *The Monogement model is simple to use ond implement.*
    5. *Physicions do not see odditionol worklood bosed on phormocist recommendations.*
    6. *There ore no unfunded mondotes.*[1]

PHARMACIST VALUE ADDED FINDINGS:

A consistent theme throughout discussions with the RCCOs was their requirement that each RCCO be able to maintain its own local process while creating and maintaining the patient/provider relationship.

- Each RCCO has its own management and implementation design for care based on local needs, resources, and demand. This would also apply to CMM. Pharmacists are the most accessible and convenient health care provider.

- All the RCCO's indicated they could integrate CMM further into their systems and suggested the following as value added components to the medical neighborhood;

1. Medication reconciliation (hospital or community setting),
2. Medication Adherence/compliance
3. Chronic pain management/substance abuse (review of medications when multiple PCPs have been visited).
4. Expansion of Medication Review beyond Prescription Drugs (non-prescription drugs, supplements and herbal products)
5. Pharmacists could play a key role in the education and outreach to the patient population.

- Any medication management program that is implemented must provide a common platform that is available to all providers to use and provides flexibility for the pharmacist and the RCCO.

- Upgrade the current HCPF RxReview program. Make the program available for RCCOs as an option for medication management services. Continue to operate RxReview as a fee-for-service program within Medicaid.

KEY MTM/CMM FINDINGS OUTSIDE OF COLORADO:

The policy recommendations above are supported by a wealth of data. There is a proven track record of significant ROI with MTM/CMM and Medicaid. Data from 2005 to 2011 in Minnesota[2,3] includes managed care lives. The report states: "This study documents that from 2006 to 2011, the Minnesota DHS MTM program continued to grow each year in terms of total number of MTM visits, claims, and participating pharmacists. Claim submissions and amount of dollars compensated has followed an exponential increase during the 6 years of the program."

The National Conference of State Legislatures (NCSL) Legisbrief Vol. 18, No. 4 January 2010, (http://ecom.ncsl.org/webimages/legisbriefs/Jan2010/1804.pdf) stated the following: "Minnesota, Mississippi, New Mexico and North Carolina initiated Medicaid-based programs as early as 2003. In Iowa, Medicaid medication therapy services uncovered 2.6 medication-related problems per patient; in 52 percent of cases, a new medication was recommended, and in 31 percent, discontinuing a medication was recommended. Minnesota's services resulted in a 31 percent reduction in total health expenditures per patient, from $11,965 to $8,197, and a 14 percent increase in meeting patients' goals. The savings exceeded the cost of medication therapy services by more than 12 to 1." The NCSL report has many references that document ongoing state MTM programs.

NCSL reported in March 2012 on MTM programs in 18 states.[4] According to the report, " Yet, the Institute of Medicine's 2004 report on health literacy says 90 million people have difficulty understanding, using, and acting on health information. The problem is compounded by the fact that most patients hide their confusion from their doctors because they are too ashamed and intimidated to ask for help."

The American Society of Health-System Pharmacists (ASHP) reported on the status of Medicaid programs in eleven states that have implemented MTM programs.[5]

An October 2010 article in the publication *Medicol Core* entitled US Pharmacists' Effect as Team Members on Patient Care examined 298 studies and concluded "Pharmacist-provided direct patient care has favorable effects across various patient outcomes, health care settings, and disease states. Incorporating pharmacists as health care team members in direct patient care is a viable solution to help improve US health care."[6]

Dr. Brian Isetts, Professor at the University of Minnesota, and one of the prime authors of "Clinical and economic outcomes of medication therapy management services: The Minnesota experience"[3] has been contacted and asked for advice about how pharmacists in Colorado can help implement a Colorado Medicaid MTM/CMM program. His advice was this: "There are 3-4 times as many Medicaid recipients who walk through the doors of community pharmacies everyday, compared to their peers in clinics and clinic/hospital pharmacies.... Which gets back to my forecast for the profession of pharmacy - there will be/are two types/classes of pharmacists in this country: Those who provide CMM for patients and those who don't.... I can help those community pharmacists who really want to build CMM practices."

CONCLUSION:

The documentation on the subject is overwhelming in support of the conclusion that pharmacist-provided medication management improves patient outcomes and saves significant health care dollars.

There are multiple vendors who provide IT platforms that make it possible for pharmacists to provide CMM services.

HCPF's RxReview program could be enhanced, with a sufficient appropriation from the Legislature, to provide a robust platform for pharmacist-provided CMM services for Medicaid patients through the RCCDs employing the services of Colorado-based pharmacists.

It is clear from the literature that there is a significant return on investment. From our meetings with the RCCOs, we believe that by meeting certain criteria, the RCCOs would find pharmacist-provided CMM services to be a welcome addition to their operations.

Medicaid expansion under the ACA coupled with the PCP shortage creates an opportunity to recognize pharmacists as an easily accessible, less expensive, trusted healthcare provider for the Medicaid population. There is no other provider where the patient can walk up to the desk and receive medical care.

- The RCCO's recognize this role and are willing to be a partner in building a platform for CMM that they can use as an option.
- The RCCO's are currently exploring various MTM/CMM models at the local level.
- The RCCO's conveyed that they have "seven secret sauces" on how they are doing care management. Let's take pharmacy best practices, make it local, share what works. and make medication care management one of the key ingredients of each of the seven secret sauces.
- The patient relationship with a pharmacist is a critical component of patient care, cost containment, increased patient satisfaction and provides the RCCO with the outcomes they desire.

ATTACHMENT A

RCCO Meetings:
The Department requested that pharmacy representatives meet with each of the RCCO's leadership to discuss how the RCCO teams view the possibility of developing CMM programs. The following meetings were held:

September 4: Region 4 Integrated Community Health Partners
Donna Mills, Director Region 4;
Brad Young, RxPlus

September 19: Region 6 Colorado Community Health Alliance
Kit Brekhus and Ryan Ward from ICHP;
Val Kalnins, CPS; Brad Young and Grant Kinn, RxPlus; Jim Driscoll, IPC; Charlie Sheffield, Colorado Chain Pharmacies; and Dave Rogers from Safeway.

September 23: Regions 2, 3, S Colorado Access
Rebecca Kurz, April Abrahamson, Molly Markert, Irene Girgis, (plus other staff) from Colorado Access;
Val Kalnins, CPS; Susan Hahn, Mental Health Centers of Denver and RxPlus; David Lamb, Good Day Pharmacies and RxPlus; Grant Kinn and Brad Young, RxPlus; Jim Driscoll, IPC; Fofi Mendez, RxPlus;

September 30: Region 1 Rocky Mountain Health Plans
Jenny Nate, Mike Huotari, and Julie Hoerner from Rocky Mountain Health Plans;
Val Kalnins, CPS; Grant Kinn, Brad Young, and Fofi Mendez from RxPlus;
Spencer Guthrie from GSK; Jim Driscoll from IPC; and

Surgeon General's Report 2011
http://www.usphs.gov/corpslinks/pharmacy/documents/2011AdvancedPharmacyPracticeReporttotheUSSG.pdf

This acknowledgement from the U.S. Surgeon General's report best summarizes why the pharmacy stakeholders of Colorado are convinced that the services the pharmacists of Colorado can provide to the RCCOs will be in the best interest of the RCCO and their patients.

"Through the delivery of patient care services, pharmacists improve outcomes, increase access to services for medically underserved and vulnerable populations, improve patient safety, shift time for physicians to focus on diagnosis and more critically ill patients, improve patient and provider satisfaction, enhance cost-effectiveness, and demonstrably improve the overall quality of health care through evidence-based practice."

Colorado Department of
Health Care Policy and Financing

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Kathi Wells & Bill Betts
Location: Statewide

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Program to integrate healthcare for children in foster care
Location: Statewide
☒ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☒ Medical provider / PCMP / other provider
  i. Type or specialty: Pediatrics
  ii. Area of practice: Foster Care
☒ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☐ Other (please describe): Click here to enter text.

Are you currently involved in the ACC program?

☐ Yes
☒ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☐ 3-4 years

How have you been involved in the ACC program and what interaction have you had with RCCOs:
Developing healthcare services for children in foster care all of whom are enrolled in RCCO

Please briefly describe your involvement with Medicaid, either in Colorado or another state:
Historically majority of services are paid through Medicaid fee for service. Have integrated behavioral health services into practice but experiencing barriers to behavioral health funding that are not seen for physical healthcare.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☒ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

We have no choice if we are going to serve this population.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

Historically, children foster care have frequent moves between healthcare providers with inadequate sharing of healthcare information. It was mandated that the RCCOs specifically address the healthcare needs of children in foster care. Therefore the promise of RCCOs, is that they can ensure children in foster care receive the specialized healthcare services that need, which the RCCOs can demonstrate through data on outcomes. RCCOs can assist in the development of a consistent medical home for these children, who have complex healthcare needs because have the ability to coordinate and direct where children in foster care receive services. However, it is currently unclear whether this potential is being realized consistently across the state.

2) What is not working well in the ACC Program?

It is unclear whether the ACC has provided guidance to the RCCOs on how to manage the unique healthcare needs for children in foster care. Many times there are a number of individuals (foster parent, child welfare case worker, guardian ad litem/courts) that have a role in ensuring that children get the healthcare that they need. Often RCCOs lack the infrastructure to ensure all parties are provided with the information that they need. While the RCCOs have care coordinators, these individuals are sometimes unaware of how the child welfare system functions and which individuals need to be contacted under specific situations. In addition some parts of the state, specialized services have been developed for children in foster care however the attributing process is often unaware of these services. Therefore, children foster care are not able to benefit from these resources. Also, some children in foster care experience frequent moves. The ACC system is not well designed to address information sharing when children move between providers and/or RCCOs.

3) What is working best in the Behavioral Health Organization (BHO) system right now?

This varies between BHOs. For example Access Behavioral Health makes it easy to contract for behavioral health services.

4) What is not working well in the BHO system?

In some areas it is difficult to contract for services (especially for specialized care- which is often needed for children in foster care). In some areas this means developing a single case agreement which can take up to 3-4 weeks. In other areas, BHOs refuse to contract for services. This is especially problematic for children in the child welfare system since they may enter the system in one area and get placed in a foster home in another. This means that which BHO is responsible can be difficult to determine.

5) What is working well with RCCO and BHO collaboration right now?

It is not clear what is working well. This does not mean that nothing is working, just that it is not clear to providers in the community.

6) What is not working well with RCCO and BHO collaboration right now?

Since medication is managed by one system and psychotherapy is managed by another, there is often a disconnect between these two closely related services. Additionally, the BHO and RCCO areas are different. This is further complicated by the fact that they do not overlap with areas for other parts of the system (such as judicial districts). This causes difficulty and confusion when trying to determine which agency to contact.

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☒	☐	
Community Behavioral Health Services Rule	☐	☐	
Covered diagnoses list	☐	☐	
Different behavioral / physical health reimbursement	☒	☐	
Institutions for Mental Diseases exclusion	☐	☐	
OBH rules, reporting, or financing (regulatory differences between agencies)	☒	☐	
PCMP financing structure	☐	☐	
Per-member per-month amount	☒	☐	
Physical space constraints	☐	☐	
Privacy Laws (HIPAA, 42 CFR)	☐	☐	
Professional / cultural divisions	☒	☐	
RCCO or BHO contracts	☒	☐	We currently work with a medical team but as behavioral health providers we cannot always see the individual that the medical team sees.
Staff capacity	☐	☐	
State/Federal rules or reporting requirements	☐	☐	
Technical resources / data sharing	☐	☐	
Training	☐	☐	

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

There is far too much for it to be listed here, but much of this guidance can be found in the Medical Home literature.

10) Please share any other general advice or suggestions you may have about behavioral health integration.

Because the carve out of behavioral health dollars, many families find that they can get healthcare anywhere but are barred from behavioral health services. For example, my behavioral health clinic is tied to a large hospital. Individuals with Medicaid can get healthcare from the hospital, but are unable to get behavioral health services because the BHO in the area refuses to contract for behavioral health.

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination?

b. How should RCCOs prioritize who receives care coordination first?

c. How should RCCOs identify clients and families who need care coordination?

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

12) What services should be coordinated and are there services that should not be a part of care coordination?

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today?

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

d. What are the gaps in care coordination across the continuum of care?

15) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	Should the RCCO have a role? Yes	No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma	☐	☐	☐	
Affordability (assistance with prescriptions or co-pays)	☐	☐	☐	
Daycare / childcare	☐	☐	☐	
Economic stability & employment	☐	☐	☐	
Education	☐	☐	☐	
Environment	☐	☐	☐	
Food access / nutrition	☐	☐	☐	
Health literacy	☐	☐	☐	
Housing	☐	☐	☐	
Language or translation services	☐	☐	☐	
Literacy	☐	☐	☐	
Transportation	☐	☐	☐	
Other	Please type your response here. Feel free to list as many non-medical factors as you want, and please explain how the RCCO should be involved.			

I have a hard time saying that RCCOs should absolutely have a role or not have a role. If any of these things have an impact on health care, they should be addressed, but I do not believe for example that issues of abuse neglect or trauma should be routinely addressed

16) **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	Coordinate care? Yes	No	In what capacity should these individuals coordinate care in the ACC Program?
Advanced Practice (Registered) Nurses	☐	☐	
Certified Addiction Councilors	☐	☐	
Certified Nurse Midwives	☐	☐	
Community Health Workers	☐	☐	
Generalists (BA/BS/MA/MS)	☐	☐	
Health Coaches	☐	☐	
Licensed Clinical Social Workers	☐	☐	
Licensed Marriage and Family Therapist	☐	☐	
Licensed Mental Health Counselors	☐	☐	
Licensed Professional Counselor	☐	☐	
Masters of Public Health	☐	☐	
Medical Doctors / Doctors of Osteopathic Medicine	☐	☐	
Nurse Practitioners	☐	☐	
Patient Navigators	☐	☐	
Peer Advocates	☐	☐	
Promotoras	☐	☐	
Psychiatrists	☐	☐	
Psychologists	☐	☐	
Registered Nurses	☐	☐	

Social Workers	☐	☐	
Wraparound facilitators	☐	☐	
Other	Again, I think that care for individuals varies, in some cases only one of these professionals will be involved, and by default will do case coordination. In cases where there are a variety of professionals involved, it is important that a primary person be selected to serve as the primary care coordinator. Which of these professions takes on this role will depend on the needs of the individual.		

17) **Care coordination requirements for specific populations.** Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and infants	☒	☐	
Children	☒	☐	
Children who are healthy, but in socially-complex environments	☒	☐	
Children involved in the foster care system	☒	☐	
Children with a chronic illness	☒	☐	
Children with a serious emotional disturbance	☒	☐	
Children with medical complexity	☒	☐	
Children or youth with a behavioral health diagnosis or substance use disorder	☒	☐	
Transition-age adolescents	☒	☐	
Parents and families	☒	☐	
Pregnant women	☒	☐	
Adults	☒	☐	
Adults who are healthy, but in socially-complex situations	☒	☐	
Adults with a chronic illness	☒	☐	
Adults with a behavioral health diagnosis or substance use disorder	☒	☐	
Clients involved in the criminal justice system	☒	☐	
Clients with a disability	☒	☐	
Clients in a nursing facility	☒	☐	
Elderly clients	☒	☐	
Frail elderly clients	☒	☐	

Clients in palliative care	☒	☐	
Other populations, please comment:			

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

RCCOs should ensure high quality healthcare (including medical, dental and behavioral health) for children in foster case, while in no way impeding the care they get from other systems. The problem with this statement is that it is an enormous and complex process to do this and to try. A whole committee of experts could work for years to develop recommendations around this, and it is unlikely that any answer written on this survey could adequately sum up this complex issue.

19) How should care coordination be evaluated? How should its outcomes be measured?

Again there are national standards published for this.

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

a. What is the PMPM cost for providing care coordination services?

b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

a. **Care coordinator to client ratios.** If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☐
51-100	☐
101-200	☐
201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐

2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

Providers in each region should be asked to rate the RCCO. RCCOs that do not have sufficient support should be at risk for losing their contract.

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

27) Should the RCCO region maps change? Why or why not? If so, how?

28) Should the BHO region maps change? Why or why not? If so, how?

It is not so much that the either the RCCO or BHO maps should change, rather that the maps are different. There the map for BHOs are different from RCCOs and for that matter are different from maps for DHS (child welfare), judicial districts, Departments of public health, etc.

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

34) What role should RCCOs play in attributing clients to their respective PCMPs?

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

42) How should the Department structure stakeholder engagement for the ACC as a whole?

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

No

a. If no, what are the gaps?

There is a disconnect for children in the foster care system.

b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

a. What role should hospitals play in the next iteration of the ACC Program?

b. What role should pharmacies play in the next iteration of the ACC Program?

c. What role should specialists play in the next iteration of the ACC Program?

d. What role should home health play in the next iteration of the ACC Program?

e. What role should hospice care play in the next iteration of the ACC Program?

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

g. What role should counties play in the next iteration of the ACC Program?

h. What role should local public health agencies play in the next iteration of the ACC Program?

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

45) How can RCCOs help to support clients and families in making and keeping appointments?

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

47) **Community Health Worker reimbursement.** Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement process	(Please check all that apply)
Independently bill	☐
On staff (salary) at Primary Care Medical Provider Clinic	☐
On staff (salary) at RCCO	☐
Per Member Per Month Payment	☐

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you?

b. What RCCO requirements would ensure cultural competency?

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

Yes

51) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

52) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

Practice Support

53) **Support for practices.** Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☐	☐	☐	☐
Network provider education	☐	☐	☐	☐
Assistance with practice redesign	☐	☐	☐	☐
Assistance with efficiency-enhancing activities	☐	☐	☐	☐
Provide web-based resources and directories	☐	☐	☐	☐
Provide practice-specific data reports	☐	☐	☐	☐
Provide clinical care guidelines and best practices.	☐	☐	☐	☐
Provide clinical screening tools	☐	☐	☐	☐
Provide health and functioning questionnaires	☐	☐	☐	☐
Provide chronic care templates	☐	☐	☐	☐
Provide registries	☐	☐	☐	☐
Offer client reminders	☐	☐	☐	☐
Offer client self-management tools	☐	☐	☐	☐
Offer educational materials about specific conditions	☐	☐	☐	☐
Supply behavioral health surveys	☒	☐	☐	☐
Supply other self-screening tools	☐	☐	☐	☐
Administer behavioral health surveys	☐	☐	☐	☐
Administer other self-screening tools	☐	☐	☐	☐
Prepare client action plans	☐	☐	☐	☐
Provide training on providing culturally-competent care	☐	☐	☐	☐
Provide training to supporting staff	☐	☐	☐	☐
Provide training on motivational interviewing	☐	☐	☐	☐
Provide tools and software for phone call and appointment tracking	☐	☐	☐	☐
Provide tools and resources for tracking labs, referrals, etc.	☐	☐	☐	☐
Provide referral and transitions of care checklists	☐	☐	☐	☐
Provide visit agendas or templates	☐	☐	☐	☐
Provide standing pharmacy order templates	☐	☐	☐	☐
Provide comprehensive directory of community resources	☐	☐	☐	☐
Provide directory of other resources	☐	☐	☐	☐
Provide materials regarding Nurse Advice Line	☐	☐	☐	☐
Ensure all tools and resources are centrally located on RCCO-specific website	☐	☐	☐	☐
Others				

54) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

55) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

56) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

57) Should the Department require that PCMPs utilize disease registries to manage the health of their population?

58) Please share any other advice or suggestions about provider support in the ACC.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

62) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

63) What role – if any – should the RCCOs play in the distribution of payments to providers?

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

66) **Measuring Client experience.** Please complete the table below to indicate how the Department should measure Client/patient experience:

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☒	☐	
SF-12 Health Survey	☐	☐	
Other types of client interviews / surveys	☐	☐	
Patient Activation Measure	☐	☐	
Focus groups	☒	☐	
Other	Please type your response here.		

67) Knowing that, at this time, the Department only has claims data, how should population health be measured?

68) How should quality and performance data be reported to the RCCOs, PCMPs, and the public?

Yes

69) **Measures for payment.** Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☐
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

70) What percent of RCCO payments should be tied to measures or performance?

Percentage	
10-20%	☐
21-30%	☐
31-40%	☐
41-50%	☐
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

71) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?

72) Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?

73) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

74) **Incentive payment frequency.** Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	☐
Annually	☐
Other	☐

If you checked the "Other" box, please describe payment frequency below:

75) For potential offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

76) For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

Specific measures of behavioral health symptoms. We are not being reimbursed

Health Information Technology (HIT)

77) **Types of communication.** For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	☐
Text message	☐	☐
Web portal	☐	☐
Email	☐	☐
Telemedicine / Video chat	☐	☐
Face-to-face meeting	☐	☐
Smartphone app	☐	☐
Other:		

78) **HIT investments by organizations.** For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below:

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	☐	☐
Digital care management tool	☐	☐
Care transitions alerts	☐	☐
Electronic Health Records (EHRs)	☐	☐
Health risk assessment software	☐	☐
Practice assessment tools	☐	☐
Practice management tools (scheduling, billing)	☐	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☐
Patient education/wellness tools	☐	☐
Provider/case manager directory	☐	☐
Shared decision-making tools	☐	☐
Telemedicine software	☐	☐
Other:	☐	☐
Other:	☐	☐

79) **Importance of technology by type.** The Department is working to determine what technology is in place, what technology is needed, and what technology should be standardized. For RCCOs, providers, and other organizations, use the table below to answer what HIT infrastructure outside of the SDAC your organization would use to perform population health management activities. Tools are scored from 1-5, where 1 are those items least-likely to be used, and 5 are items most-likely to be used:

Tool	1 Least	2	3	4	5 Most
Population analytics / reporting / dashboard	☐	☐	☐	☐	☒
Care management tool	☐	☐	☐	☐	☐
Care transitions alerts	☐	☐	☐	☐	☐
Electronic Health Records (EHRs)	☐	☐	☐	☐	☒
Practice assessment tools	☐	☐	☐	☐	☐
Health risk assessment software	☐	☐	☐	☐	☐
Practice management tools (scheduling, billing)	☐	☐	☐	☐	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☐	☐	☐	☐
Patient education wellness tools	☐	☐	☐	☐	☐
Provider/case manager directory	☐	☐	☐	☐	☐
Shared decision-making tools	☐	☐	☐	☐	☐
Telemedicine	☐	☐	☐	☐	☒
Other:	☐	☐	☐	☐	☐

80) What are the primary barriers to RCCOs and providers increasing their use Health Information Technology to improve the performance of Primary Care Practices?

Cost

81) How can Health Information Technology support Behavioral Health Integration?

82) In the next iteration of the ACC, should there be a shared resource for data and analytics? Please describe the basic criteria for what a shared data and analytics platform needs to contain in order for it to be useful.

Routine reports of effectiveness should be shared. Data should be made available (with appropriated safeguards/confidentiality) to health researchers for studies specific issues of health.

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Colorado Society of Anesthesiologists
Location: City, County, State.

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Click here to enter text.
Location: City, County, State.
☐ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☐ Medical provider / PCMP / other provider
  i. Type or specialty: Click here to enter text.
  ii. Area of practice: Click here to enter text.
☒ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☒ Other (please describe): Colorado Society of Anesthesiologists

Are you currently involved in the ACC program?

☐ Yes
☐ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☐ 3-4 years

How have you been involved in the ACC program and what interaction have you had with RCCOs:
Click here to enter text.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:
Click here to enter text.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

Please feel welcome to describe why or why not using the space below.

Accountable Care Collaborative Strategy Unit
1570 Grant St.
Denver, Colorado 80203-1818

Re: ACC RFI

Dear Mr. Dunlevy,

The Colorado Society of Anesthesiologists (CSA) would like to submit the following response to the Request for information. With over 700 physician members the CSA represents the interests of the practicing anesthesiologists in the state of Colorado. The Perioperative Surgical Home is a concept that has been developed by the American Society of Anesthesiologists (ASA) to address the need for increased care coordination with the goal of improving patient safety, quality care, and achieving cost efficiencies in the health care system.

We believe that the Perioperative Surgical Home concept addresses the stated goal of the Accountable Care Collaborative to provide "a client and family-centered, whole-person approach that improves health outcomes and ensures savings". This model of care would dramatically increase coordination of the perioperative care of the patient, from the time a decision is made to have a surgical procedure, through the hospital course of treatment, and then through the postsurgical rehabilitation period. Initial studies have demonstrated significant improvements in the patient experience of care, decreased costs, reduction in postoperative infections, targeted preoperative testing, fewer transfusions, shortened hospital stays, and fewer hospital readmissions when anesthesiologists are actively engaged in the entire continuum of perioperative care.

Attached is an informational overview prepared by the ASA that provides additional detail regarding the Perioperative Surgical Home. The CSA also intends to submit this concept in its response to the Colorado Department of Health Care Policy and Financing request for proposals for a targeted rate increase for 2015.

We look forward to the opportunity to discuss this innovative care management model with the ACC. The CSA is committed to working collaboratively with the ACC to improve the delivery of health care to the Medicaid patient population.

Sincerely,

Murray S. Willis MD

Murray S. Willis, M.D.
President

Principles of the Perioperative Surgical Home

BACKGROUND

Surgical patients require preoperative testing and preparation, anesthesia, specialized nursing care, postoperative recovery and rehabilitation, in addition to the surgical procedure itself. Perioperative care accounts for 60% of hospital expenditures. Although advances in medicine have increased safety, perioperative patients are at risk for bleeding, infection, blocked blood vessels or thromboembolism, and other hospital-acquired conditions. At present, multiple physicians, typically working independently, manage these patients, often creating inefficiencies in care delivery and increased risk for adverse events. The PSH integrates the care of surgical patients from start to finish throughout the health care system. The PSH improves patient experience, promotes overall health, and reduces costs. Additionally, the PSH aligns with legislative intent for alternative payment models.

PSH PRINCIPLES

Care is coordinated and/or integrated: The overall perioperative care will be coordinated across all elements of the complex health care system (e.g., subspecialty care, hospitals, home health agencies, nursing homes) and the patient's community (e.g., family, public and private community-based services).

Preoperative evaluation: Each patient presenting for surgery will go through a standardized preoperative evaluation and appropriate medical management of underlying medical conditions to decrease the risk of the perioperative experience. The preoperative phase will have a strong focus on an excellent patient experience as demonstrated by a straightforward and easy to understand process supported by educational materials.

Intraoperative medical practice: The PSH would ensure greater consistency in anesthetic, surgical and nursing care and protocol-based patient management during surgery.

Postoperative management: The team will particularly focus on the management of pain, nausea and vomiting, and reducing the incidence of the most common postoperative complications. The goal is to optimize patients' return to their overall normal function, with minimized morbidity.

Quality and safety is ensured through the following:

- PSH coordinates patient care to support the attainment of optimal, patient-centered outcomes that are defined by fully coordinated pre-operative, intra-operative and postoperative care driven by a compassionate, robust partnership between physicians, non-physician healthcare workers, surgical facilities, and patients.
- Surgical Care shall be evidence-based and clinical decision-support tools will guide decision-making.
- Physicians are accountable for continuous quality improvement through voluntary engagement in performance measurement and improvement.
- Patients actively participate in education, risk modification strategies, and shared decision making, and feedback is sought to ensure patients' expectations are being met

- Information technology is utilized appropriately to support optimal patient care, performance measurement, coordination with all providers and facilities, patient education, and as the basis for enhanced communication
- Practices go through a voluntary recognition process by an appropriate non-governmental entity to demonstrate they have the capabilities to provide patient centered surgical care consistent with the Perioperative Surgical Home.
- Patients and families participate in quality improvement activities at the practice level.

Surgical care is advanced by establishing a single point of contact for preoperative, intraoperative and postoperative care. Care is enhanced through transparent scheduling, expanded pre-op clinic access hours and new options for communication between patients and their PSH care team.

Payment appropriately recognizes the added value provided to patients by the PSH. The payment structure should be based on the following framework:

- Reflects the value of physician and non-physician patient-centered care management work that is a part of the direct care but also the work that falls outside of the face-to-face visit.
- Pays for services associated with coordination of care both within a given practice and between consultants, ancillary providers, and community resources.
- Supports adoption and use of health information technology for quality improvement.
- Supports provision of enhanced communication access such as secure e-mail, web-based e-visits, and telephone consultation.
- Recognizes the value of physician work associated with email and other non face-to-face care technologies, including patient education, e-consent and other innovative approaches to care.
- Allows for separate payments for extraordinary care visits. (Payments for perioperative services that fall outside of the face-to-face visit, as described above, should not result in a reduction in the payments for face-to-face visits).
- Allows physicians to share in savings from reduced surgical complications, length of stay, value-based resource utilization, and other metrics developed that reflect better care.
- Allows for additional payments for achieving measurable and continuous quality improvements.

Learning Collaborative

ASA announced it has chosen Premier, Inc. (NASDAQ: PINC), a leading health care improvement company, to develop a first-of-its-kind learning collaborative for the ASA's PSH model of care. ASA's PSH learning collaborative will proactively pursue care redesign strategies seeking to enhance the surgical patient's experience, improve quality and outcomes, and reduce costs. This includes better care coordination to reduce length of stay, readmissions, and complications. The ultimate goal is to create an evidence-based "road map" for other health care organizations to spread knowledge and best practices of the PSH model.

For more information visit the PSH website at http://www.periopsurghome.info/index.php

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Click here to enter text.
Location: City, County, State.

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: KPCO Colorado
Location: Denver, CO
☒ **Please check if you are answering on behalf of this entity**

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☒ Medical provider / PCMP / other provider
  i. Type or specialty: Primary and Specialty Care
  ii. Area of practice: Click here to enter text.
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☐ Other (please describe): Click here to enter text.

Are you currently involved in the ACC program?

☒ Yes
☐ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☐ 3-4 years
☒ Since before the program was implemented.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

Two key aspects of the ACC stand out as the most effective and valuable for integrated care delivery systems like KPCO: the ACC's focus on establishing medical homes for Medicaid clients; and the access to data afforded by the Statewide Data Analytics Contractor (SDAC). These elements complement KPCO's focus on preventive care, and enables providers to anticipate the needs of the most complex clients within the ACC. The ability to partner with RCCOs to coordinate care of Medicaid clients directly allows KPCO to provide its Medicaid members with many of the benefits of an integrated model. However, there are constraints that prevent PCMPs from readily establishing connections to hospitals serving Medicaid clients (e.g. timely communication to PCMPs regarding Medicaid clients' emergency room visits and admissions is not yet reliable and consistent). While KPCO does not have care management delegation agreements with all the RCCOs, they are in place for the great majority of KPCO's Medicaid members. Furthermore, the ability of PCMPs to both receive and access data in the SDAC helps KPCO evaluate its performance as a PCMP, and obtain risk scores of its Medicaid clients to plan how various care needs will be met.

2) What is not working well in the ACC Program?

The current structure of the ACC does not allow Medicaid clients to realize the full benefits of an integrated health care delivery system like KPCO, In significant part due to the fee-for-service payment methodology. As a PCMP, KPCO's integrated approach aligns with the ACC vision for whole person care—yet the current fee-for-service reimbursement causes challenges for KPCO as it looks to invest resources that address both medical and social needs of Medicaid members. For instance, the work of KPCO's Community Health Specialists, which were specifically resourced to address the non-medical, social needs of KPCO's Medicaid population, does not translate into codes that are reimbursed by Medicaid. However, the work of these Community Health Specialists contributes to KPCO's ability to drive positive health outcomes for Medicaid clients.

Moreover, when KPCO's Medicaid clients access care outside of KPCO, it is challenging to receive timely information relevant to addressing clients' health needs. Finally, while there is ongoing work to improve the disjointed nature of the current RCCO and BHO structures, facilitating effective communication and coordination to meet the behavioral health needs of clients continues to be a challenge.

3) What is working best in the Behavioral Health Organization (BHO) system right now?

Through its developing partnerships with the BHOs, KPCO has appreciated the flexibility of the BHOs to work with PCMPs to establish effective care coordination workflows. The BHOs have largely delegated coordination of care to the community mental health centers (CMHCs). As referenced below, execution on the part of the CMHCs can be fragmented.

The Denver Boulder and Northern Colorado BHOs are very interested in contracting with KPCO for integrated behavioral medicine services, and contracting discussions underway, with one contract nearing completion (Access Behavioral Care). The BHOs have also expressed an interest in contracting for Substance Use Disorder Treatment services, which will further enhance efforts to integrate physical and behavioral health care.

4) What is not working well in the BHO system?

The carve-out itself presents significant challenges for PCMPs that work to help secure access to behavioral health for Medicaid clients, as it requires specialized knowledge of BHOs and community mental health centers (CMHCs), whose enforcement of regulations vary. Not only do workflows/interpretation of regulations differ across BHOs, they differ across CMHCs within the same BHO, which, at times, makes it very difficult to coordinate care. Providers from one KPCO medical office may have Medicaid members from three BHOs and as many as 4-5 CMHCs, each with different procedures as to how the Medicaid member should access services (whether urgent or routine). Due to variances in the interpretation of HIPAA regulations among CMHCs, sharing protected health information to treat patients that PCMPs and CMHCs have in common presents challenges. For instance, medication reconciliations do not occur in as streamlined and efficient a manner as possible to meet patient needs. This is especially true when a new patient presents to his/her KPCO provider with multiple co-morbidities, including recent psychiatric history. Reconciliation of all current medications, including psychiatric, is not only fundamental to the PCMPs' diagnostic formulation and medication recommendations, it is critical to the process of addressing care needs. Lastly, access to psychiatric services at the CMHC can be 60-90+ days out, with some CMHCs not having the ability to bridge psychiatric medications until they can be seen by the CMHC prescriber.

5) What is working well with RCCO and BHO collaboration right now?

As a PCMP, KPCO has not had experience with RCCO and BHO collaborations, but has collaborated with BHOs on behavioral health matters, and separately with RCCOs on primary and specialty care.

6) What is not working well with RCCO and BHO collaboration right now?

Please see the response to question five, above.

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

Moving toward behavioral health integration must include incenting and otherwise encouraging PCMPs to provide behavioral health services, and/or establish clear pathways for PCMPs to collaborate closely with behavioral health providers. The current carve-out presents obstacles for PCMPs to provide behavioral health services to Medicaid clients in primary care settings, while the coordination across the ACC and BHO structures is also challenging, as described in responses to questions 2 through 5 above.

KPCO is committed to provide the same level of fully integrated care to Medicaid members as its commercial members. The behavioral health carve out makes this endeavor challenging. It will be important to address the issues described above from an administrative level, rather than expecting the PCMP to work with each CMHC to develop workflows that fit the individual CMHC. The issues range from expectations and accountability related to access for psychiatric appointments to standardized workflows for sharing protected information within HIPAA guidelines.

KPCO is an active participant in the State Innovation Model (SIM) planning efforts. SIM has an ambitious goal of connecting 80% of Coloradans with coordinated systems of care that give them access to integrated behavioral health care in primary care settings. KPCO has demonstrated its success in this arena with its commercial members, and are invested in ensuring realizing the same success with Medicaid members.

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services. Using the table below, please explain which issues are barriers, and how they can be addressed:**

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☒	☐	The BH carve out presents structural care issues that make seamless care difficult for larger integrated health systems (e.g. KPCO) serving Medicaid members.
Community Behavioral Health Services Rule	☐	☐	No opinion.
Covered diagnoses list	☒	☐	Excluding certain disorders (e.g. neurodevelopmental) creates a 2 tiered system.
Different behavioral / physical health reimbursement	☒	☐	Moving reimbursement methodology toward risk-based, capitated payments for physical health to make it more consistent with behavioral health reimbursements, and allow for shared risks and savings.
Institutions for Mental Diseases exclusion	☐	☐	No opinion.
OBH rules, reporting, or financing (regulatory differences between agencies)	☐	☐	No opinion.
PCMP financing structure	☒	☐	Aligning reimbursement methodologies between physical and behavioral health.
Per-member per-month amount	☒	☐	Aligning reimbursement methodologies between physical and behavioral health.
Physical space constraints	☒	☐	Limited existing physical infrastructure reduces capacity to build the best space plan to support integrated care (pods, etc.).
Privacy Laws (HIPAA, 42 CFR)	☒	☐	Need to ensure that the HIE addresses the issues effectively.
Professional / cultural divisions	☒	☐	Training and demonstrating value/ROI of integrated care should address this.
RCCO or BHO contracts	☒	☐	BHO carve out creates barriers to fully integrated care for Medicaid patients in integrated health systems – contracts/collaborations between RCCOs and BHOs could mitigate these challenges.
Staff capacity	☒	☐	Workforce development needed to train integrated staff (Primary Care and

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

			Behavioral Health). Limited numbers of appropriately licensed staff (including Substance Use Disorder treatment staff) presents issues. This needs to be addressed on a number of levels, including at the graduate school level.
State/Federal rules or reporting requirements	☒	☐	Though this has eased somewhat, there needs to be increased focus on reporting that is essential to document the services that are provided, vs. a one-size-fits-all approach.
Technical resources / data sharing	☒	☐	Lack of technical ability to share medical/behavioral health information in real time is a challenge.
Training	☒	☐	See above.
Others	BHO structure requires a multi-BHO PCMP to set up a s a fee-for-service provider across several different BHOs with different billing/auditing requirements in order to provide on-site behavioral health services, and bill. It would be helpful if it were possible for PCMPs to bill Medicaid directly for some mental health services without having to bill the BHO separately.		

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physicai and behavioral health care?

- The patient/famiiy is in the center of the team.
- Shared decislon making with the patient and family.
- Health care providers (Px and BH) are on the same team (BH inciudes Substance Use Disorders), focused on a common popuiatlon.
- Shared Electronic Medicai Record.
- Joint treatment/services plannlng with shared goals with the patient, health care providers, and social workers/community specialists.
- Common workspace.
- Positive overall health outcomes of the individuai/the whole person is the common focus.
- Population Management and Chronic Disease Management are a focus (including complex, high risk, high cost patients).
- Data informed decision making, with outcomes tracking.
- Supports are provided to patients/famiiies to help address heaith care disparities, health outcomes and access.
- Integration of inpatient and outpatient services.

10) Please share any other general advice or suggestions you may have about behavioral health integration.

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination?

Care coordination is deliberately organizing patient care activities, inclusive of addressing nonmedical/social needs, and sharing information among all of the participants concerned with a patient's care to achieve safer and more effective care.

b. How should RCCOs prioritize who receives care coordination first?

All members should receive care coordination according to need/risk. RCCOs should establish both real time (for instance, for discharge notifications) and retrospective processes (i.e. high utilization systems, claims, risk stratification) to determine need and subsequent receipt of care coordination. Additional indicators that trigger real time care, such as sudden missed appointments, should further inform prioritization of care coordination.

c. How should RCCOs identify clients and families who need care coordination?

Please see the response to (b) above.

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

Medical providers should provide counts to RCCOs of clients receiving care coordination, and continue to require regular reporting. The outcomes of care coordination should be the focus of RCCO tracking activities. At times, the current approach seems to emphasize staffing levels and program features over outcomes.

12) What services should be coordinated and are there services that should not be a part of care coordination?

KPCO's integrated care delivery model includes coordination of services, such as: Emergency Department utilization, behavioral health, transportation, financial challenges, chronic disease management, end of life issues, transitions from hospitalizations, prevention services, home health, Durable Medical Equipment, and medications. While securing resources for nonmedical/social needs can be challenging, care coordination services should also include connecting Medicaid clients to resources that address such needs as housing, food insecurity, and legal issues.

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

Lists of active medications, recent hospitalizations and discharge summaries are a few of the important pieces of information consistently utilized by KPCO clinicians to address care coordination needs. Population analytic reporting also supports both disease and prevention services. In addition, information regarding where Medicaid clients live provides insights into potential for in-home assistance, and could inform approaches to care coordination.

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today?

KPCO's integrated care delivery model includes coordination of the following services: Emergency Department utilization, behavioral health, transportation, financial challenges, chronic disease management, end of life issues, transitions from hospitalizations, prevention services, home health, Durable Medical Equipment, medications, and more. Most, if not all, care coordination for KP Medicaid members occur with KP care coordinators that share a single electronic medical record (EMR), and can effectively coordinate communications through the shared EMR. Care coordination as an activity expands beyond the title of care coordinator, and any care coordination activity for a member conducted by a KP clinician is documented in the shared EMR.

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

The only systemic outside care coordination activity that occurs today is with Behavioral Health (BH) services for ACC Medicaid members. Because the BH services do not occur in shared EMR the communication, coordination of care can be difficult. KPCO makes an effort when possible to incorporate external BH service information into the EMR, and shares relevant clinical information with BHOs/CMHCs when requested.

c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

Creating a cross functional platform that can communicate with all multiple systems, and consider subsidizing a compatible EMR system for practice sites seeing a majority of ACC members. Also, securing contracted payment arrangements to augment fee-for-service payments would help clearly delineate ownership of care coordination responsibilities.

d. What are the gaps in care coordination across the continuum of care?

Fee for service structure makes it difficult to determine utilization of members across systems. Members can choose to see any participating provider, and utilization information does not pass easily between systems.

15) RCCOs' roles in addressing clients' and their families' non-medical needs. Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	Should the RCCO have a role? Yes	No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma	☒	☐	☒	
Affordability (assistance with	☒	☐	☒	Provide actual monetary assistance to members.

prescriptions or co-pays)				
Daycare / childcare	☐	☒	☒	
Economic stability & employment	☐	☒	☒	
Education	☐	☒	☒	
Environment	☐	☒	☒	
Food access / nutrition	☒	☐	☒	Health classes, dietician consultations
Health literacy	☒	☐	☒	Health classes, self-management classes
Housing	☐	☒	☒	
Language or translation services	☒	☐	☒	Documentation should be translated, conversations with members should be using translation services
Literacy	☐	☒	☒	
Transportation	☒	☐	☒	
Other	Please type your response here. Feel free to list as many non-medical factors as you want, and please expiain how the RCCO should be involved.			

16) **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	Coordinate care? Yes	No	In what capacity should these individuals coordinate care in the ACC Program?
Advanced Practice (Registered) Nurses	☒	☐	Develop APN/RN run clinics, Group visit approach, lead Interdisciplinary team (IDT) care coordination.
Certified Addiction Councilors	☒	☐	Referrals as appropriate. Share information.
Certified Nurse Midwives	☒	☐	Develop APN/RN run clinics, Group visit approach, lead interdisciplinary team (IDT) care coordination.
Community Health Workers	☒	☐	Coordinate meeting social care needs.

Generalists (BA/BS/MA/MS)	☒	☐	Coordinate meeting social care needs.
Heaith Coaches	☒	☐	Work in community/home environments
Licensed Clinical Sociai Workers	☐	☒	Referrals as appropriate. Share information.
Licensed Marriage and Family Therapist	☐	☒	Referrals as appropriate. Share information.
Licensed Mental Health Counselors	☒	☐	Referrais as appropriate. Share information.
Licensed Professionai Counseior	☒	☐	Referrals as appropriate. Share information.
Masters of Public Heaith	☐	☒	Referrais as appropriate. Share information.
Medical Doctors / Doctors of Osteopathic Medicine	☒	☐	
Nurse Practitioners	☒	☐	
Patient Navigators	☒	☐	Integrate components of medicai and social care
Peer Advocates	☒	☐	Group visits, house calis/check-ins
Promotoras	☒	☐	
Psychiatrists	☐	☒	Share information.
Psychologists	☐	☒	Share information.
Registered Nurses	☒	☐	Coordinate group visits, act as a facilitator for IDT, manage whole-person care, and chronic disease managment
Social Workers	☒	☐	Coordinate across continuum of care, inciuding sociai.
Wraparound facilitators	☒	☐	
Other	Please type your response here.		

17) **Care coordination requirements for specific populations.** Please use the tabie below to describe if any of the foliowing populations require unique care coordination requirements, or if generai requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and infants	☒	☐	Post natal care, iactation consuitation
Children	☒	☐	immunizations, well-chiid visits
Children who are healthy, but in socially-compiex environments	☐	☒	Assessment for safety
Children involved in the foster care system	☒	☐	Assessment for safety

Children with a chronic illness	☒	☐	Disease management
Children with a serious emotional disturbance	☒	☐	Behavioral health services
Children with medical complexity	☒	☐	Complex care management
Children or youth with a behavioral health diagnosis or substance use disorder	☒	☐	Access to addiction prescriptions
Transition-age adolescents	☐	☒	
Parents and families	☐	☒	
Pregnant women	☒	☐	At risk mother coordination
Adults	☒	☐	Prevention reminders (crc screening, mammography, etc)
Adults who are healthy, but in socially-complex situations	☒	☐	Assess social needs
Adults with a chronic illness	☒	☐	Disease Management and Care Coordination
Adults with a behavioral health diagnosis or substance use disorder	☐	☒	
Clients involved in the criminal justice system	☐	☒	
Clients with a disability	☐	☒	
Clients in a nursing facility	☐	☒	
Elderly clients	☒	☐	Fall prevention, cognitive screening, functional status assessment,
Frail elderly clients	☒	☐	End of live and Palliative care referrals
Clients in palliative care	☒	☐	Care Coordination, ensure appropriate access
Other populations, please comment:			

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

Create RN/MSW liaison teams within RCCOs and the foster care system to ensure necessary care coordination and appropriate resource utiiization.

19) How should care coordination be evaluated? How should its outcomes be measured?

HEDIS metrics, CRC screening, HBA1C control rates, 30-day readmission, ED utilization, Inpatient utilization, hypertension control rates, total cost of care, etc.

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

a. What is the PMPM cost for providing care coordination services?

As an integrated system, KPCO spreads costs of care, including care coordination services, across our entire membership. It is therefore challenging to quantify the exact cost for providing care coordination services to Medicaid clients. However, connecting PMPM reimbursements for care coordination to risk scores would help to account for the complex care coordination needs of clients. Also, under the current care management PMPM, it is unclear how to respond to high-utilizing members who decline to engage with primary care, or who might benefit from home-based, high-intensity interventions. Perhaps this can be addressed through a combination of RCCO involvement and changes in PMPM reimbursement structure.

b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

Yes, due to variable costs of care by population, it would be advisable to vary PMPMs accordingly.

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

No, as it is not easy to determine a general ratio because care coordination activities are often specialized according to specific populations (i.e. diabetes Care Coordinators, palliative care coordinators, asthma care coordinators, complex care coordinators, perinatal care coordination, behavioral health coordination etc.). Organizations should staff care coordination based on the risk of their specific population, with a focus on health outcomes and total cost of care rather than prescribed general ratios.

a. Care coordinator to client ratios. If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☐
51-100	☐
101-200	☐
201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

HEDIS metrics, CRC screening, HBA1C control rates, 30 readmission, ED utilization, inpatient utilization, hypertension control rates, total cost of care, and patient satisfaction data (and/or data that includes input from Medicaid clients).

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Care coordination activity should be focused on overarching quality outcomes. Determining the direct correlation between care coordination activity and its effect on outcomes is challenging. KPCO relies heavily on evidence based best practices informed by literature review as a guide to determine how to deploy care coordination activity. In the health care system, any client experiences is vast and complex, and drawing correlation or causation of improved outcomes to any one activity, including care coordination, is difficult. However, it is clear that when care coordination activities are monitored and maintained, overall quality of outcomes improves for members.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

As a PCMP providing services to Medicaid clients across all seven ACC regions, KPCO also serves as the delegated entity for care coordination duties in four of the seven regions. While the delegation agreements with Colorado Access and the Colorado Community Health Alliance (CCHA) are similar, the requirements, and associated deadlines, differ, and each RCCO has multiple meetings on similar topics around best practices and program or policy changes, which places a strain on resources. KPCO recommends care coordination delegation continue to be standardized, along with reporting requirements. Guidelines for RCCOs on what types of responsibilities can be delegated, with a corresponding range of PMPM payments would also be helpful, as it would help to make negotiations between PCMPs and RCCOs transparent and consistent. Further, for any program initiative that provides incentive payments for PCMPs through an evaluation of the PCMP capabilities (such as the enhanced primary care provider program), a standardized evaluation process that meets the requirements of all RCCOs would help prevent unduly burdensome and redundant work for PCMPs that work with multiple RCCOs. This process should allow PCMPs that meet the requirements in one RCCO to demonstrate that they meet the requirements for all RCCOs through one standardized evaluation. Similarly, PCMPs could be stratified by level and receive standard reporting directly from the Department, rather than doing several similar data requests with each RCCO that would need to be combined.

There is also a consistent challenge to provide coverage for the multiple meetings convened by each RCCO. If the meetings could be combined or categorized in such a way that multi-regional PCMPs could attend one of each type of meeting, or attend the meetings on some kind of rotation, PCMPs could dedicate their valuable time and resources to addressing pressing needs in the administration of the program.

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

Specific examples that demonstrate a bidder's capabilities in building and strengthening community relationships should be required. Also, previous experience as an ASO, health plan, or other entity with experience developing provider networks for Medicaid or commercial plans would be valuable. A strong understanding of potential contract arrangements between PCMPs, specialists, and the RCCO is essential. New RCCOs, as suggested in this RFI, could be required to contract directly with providers to create a preferred provider network.

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

If this proposal would allow PCMPs like KPCO, with a presence across all regions, to consistently and efficiently address the administrative requirements of the chosen RCCOs, KPCO would be in favor of this proposal. As noted above, accounting for, and responding to, the different ways that each RCCO approaches its duties drives significant work for PCMPs that work across multiple regions. Moreover, if RCCOs were set up as health plan-like entities, responsible for contracting, developing, and maintaining a provider network, the ability of

the PCMP to choose a RCCO with which to contract would naturally follow from this structure. PCMPs would select the RCCO that most directly supports their needs such as data transfer, member hand-offs, etc.

27) Should the RCCO region maps change? Why or why not? if so, how?

KPCO does not have specific recommendations regarding how the RCCO or BHO region maps are drawn. However, the difference between the RCCO and BHO maps cause additional administrative issues as we coordinate the care of Medicaid members. Therefore, KPCO recommends aligning the RCCO and BHO maps. Also, utilizing state data on public transportation and health care access, the travel patterns of families should also be a consideration in defining logical region definitions that will make it easy for members to access services.

28) Should the BHO region maps change? Why or why not? if so, how?

Please see answer to question 27, above.

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

An amount of time that does not exceed 12 months seems reasonable for a seamless transition. However, because KPCO lacks experience serving as a RCCO, and the capabilities and approaches of RCCOs vary, it is difficult to know the appropriate number of months for a successful transition. Apart from the number of months, it would be important for the transition to include comprehensive knowledge transfer that allows the new RCCO to learn from, and reference, the experience of the outgoing RCCO. if RCCOs take on more functions like network development, contracting, and maintenance function, a more lengthy transition may be required.

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

Policy and rule changes that would achieve the following outcomes are recommended:

- Create a referral requirement in the ACC to allow improved coordination of care and utilization management.
- Adjust/modify policies to help align Medicaid to coverage available through Connect for Health Colorado to facilitate transitions between different types of health care coverage.
- Allow for hospital risk to be included as part of integrated PCMP risk-bearing payment methodologies to connect investments in primary care, including preventive care, to outcomes.
- Update the Medicaid provider enrollment application and process to include requirements for access and appointment availability.
- Adjust/modify policies to help coordinate Medicaid with coverage available through Connect for Health Colorado to reduce simultaneous enrollment.

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

While Medicaid benefits seem quite comprehensive, there are two challenges: 1) The structure does not reimburse for many preventive care services that lead to positive health outcomes; and 2) It is unclear to

Medicaid providers and clients alike what the Medicaid benefit package includes/excludes. A standard evidence of coverage document for Medicaid members would make the obligations of Medicaid and providers clear to members, and let them know what is available in way that aligns with coverage documentation in the commercial world. Additionally, a defined benefit package would provide a template for integrated PCMPs like KPCO to develop a benefit plan, create provider relationships to meet that plan, and enter into partial or full risk capitation payment models.

Retroactivity for Medicaid eligibility, while not directly connected to the benefit structure, creates challenges as primary care providers that serve members covered with commercial coverage as well as Medicaid. Among the challenges are determining the benefit package of individuals who are enrolled in an Exchange coverage product, and are retroactively enrolled in Medicaid. This situation may also result in members experiencing a taxable event for the period of dual eligibility. Moreover, retroactive enrollments create challenges for providers and health plans that increase administrative costs, and adversely impact the member experience.

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

The transition of the RCCOs from a regionally-based entity to a more flexible structure would not only allow more bidders to participate, it would potentially give Medicaid clients more choice regarding their health care. Having multiple RCCOs would also simplify provider contracting so that geographically based barriers would not create the need for additional contracts with other agencies. Also, having multiple RCCOs per region should provide the State with improved comparative performance information.

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

This question is not applicable to KPCO.

34) What role should RCCOs play in attributing clients to their respective PCMPs?

PCMPs like KPCO need to be able to plan and budget for new Medicaid client attribution. This makes the transparent, consistent and automated attributing of clients an important RCCO responsibility. Also, to improve client satisfaction, it would be helpful if the RCCOs could develop and use neutral criteria to assist Medicaid clients with PCMP selection. Alternatively, providing Medicaid clients with a choice to choose a RCCO and/or PCMP at the time of application could aid in enhancing client choice while aligning with practices/policies for coverage available through Connect for Health Colorado.

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

Public health data sets that may help the ACC Program better understand the health status of Medicaid clients and the needs of communities should be shared between CDPHE and the ACC Program. Such exchange of data may then lead to initiatives that combine public health and health care practices to improve health outcomes.

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

The development of the Colorado PEAK website is an excellent example of how streamlining eligibility processes for programs that benefit similar/same populations can increase and ease access to helpful resources for vulnerable populations. Given the similarities between the populations served by the ACC Program and CDHS, additional collaborations that ease access to resources is encouraged. One specific area that could benefit from an ACC/CDHS collaboration is around foster care transitions. As a PCMP, KPCO has experienced challenges learning of issues related to foster care transitions to inform the care planning process.

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

It would be helpful to have regular data from both the ACC Program and Connect for Health Colorado that demonstrates the real-time membership churn between Medicaid and the Exchange. As much as possible, a former commercial member's health plan should inform their passive enrollment into a RCCO, and PCMP selection in the ACC. Unless the Medicaid client chooses otherwise, and whenever possible, the client should be attributed to his/her previous CHP+ plan or previous Exchange provider. This would greatly enhance continuity of care. On the other side, when members transition from Medicaid to the Exchange, the Exchange customer service representatives should have access to information regarding which RCCO and PCMP the individual previously accessed in the ACC Program, and then help explain available plans with similar networks.

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

If RCCO entities become responsible for the development and direct contracting with preferred provider networks, they may need to work with DORA/DOI. The ACC Program and DORA/DOI should collaborate to ensure that any new, related requirements on the RCCOs are understood, and met without causing undue administrative burden on the RCCOs.

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

There continues to be opportunity to help stakeholders understand the role of RCCOs, as well as the support they can provide. Offering a clear and consistent explanation of the services and support RCCOs provide to Medicaid clients and their families will support continued success of the ACC. Some suggested approaches include:

- Develop a fact sheet for client advocates that can be shared with outreach workers and enrollment specialists. This fact sheet might include an explanation of how the RCCO supports service delivery as well as medical and non-medical referrals.
- Develop a client mailing/insert that identifies the clients' RCCO that can be included with the Medicaid card mailing.
- Provide Medicaid case workers with a RCCO contact to refer clients to when they have questions specific to access.
- Include a RCCO contact phone number on the Notice of Action communication generated by CBMS. This would be an additional number to the existing case worker contact, and would help clients know to call their RCCO (and not their case worker) for questions specific to access.

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

Much of the successes of the ACC Program can be attributed to the involvement of local communities. To ensure appropriate and inclusive representation of required stakeholders, RCCOs could develop a newsletter or other communication tool that aligns with current methods of communication and engagement to provide updates to all stakeholders that want to be engaged. This option, along with a feedback email address, may provide additional opportunity for stakeholders to participate when attending meetings is not possible. It may also be helpful to replicate the liaison line that the CHP+ program has for stakeholders, which is a dedicated contact for community organizations that support CHP+ members.

41) How can enhanced community engagement be created in the ACC?

The Department has many established statewide relationships with organizations serving and assisting Medicaid clients through multiple departments (eligibility, policy, safety net, etc.). There may be opportunity to leverage existing communication channels among these departments to enhance engagement through a collective approach.

42) How should the Department structure stakeholder engagement for the ACC as a whole?

Given the additional health coverage options available through Connect for Health Colorado (C4HCO), it would be beneficial to leverage and align with the C4HCO Assistance Network for future stakeholder engagement efforts. Given many households are eligible for mixed coverage options, this approach may

help support continuity of care for clients. In addition, consistently leveraging existing Department communications tools (ACA Implementation, At a Glance, and Provider Bulletin) may support stakeholder engagement for the ACC.

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behaviorai health providers, hospitals, pharmacies, dentai, home heaith, and non-medical providers adequately serve the ACC popuiation?

Because KP is an integrated deiivery system, we are abie to provide most services Internaiiy, and we have arrangements in piace to augment gaps with external providers. However, we stiii experience some gaps with access. Whiie the RCCOs have worked to bring provider groups together, and emphasize the vaiue of the ACC program and the need for serving Medicaid ciients, there are stiii challenges in ensuring providers are avaiiabie and willing to meet the needs of the Medicaid population.

a. If no, what are the gaps?

One significant gap involves the inconsistencies between the "open" and "closed" status in the MMiS, and whether a provider or specialist wiii actuaiiy see a Medicaid member in a timeiy fashion. Most Medicaid providers ieave their panel status as open, and take all the ACC members who attribute to them, but there is a wide disparity among providers for appointment availabiiity. To our knowiedge, appointment availabiiity within Medicaid is not measured consistentiy, if at aii.

Contributing to this gap is the difference between Medicaid payment rates and those of commerciai carriers. Commercial carriers offer competitive rates, and aiso require contracted physiclans to maintain an access standard.

Medicaid could aiso add incentives/requirements for providers who participate in Medicaid to meet some ievei of access standards as a condition of participation.

b. Please address gaps for the population as a whoie, and for specific subpopulations such as children/families and individuals with disabiiities.

From a primary care perspective, popuiation needs may drive a different array of services, but the overaii challenges across the network remain the same. To truly function as a primary care medicai home, it is incumbent upon us to develop reiationships with speciaiists that are commonly needed among our patient panei demographics. As a heaith plan, this ability to meet and maintain services for our population is measured by a series of contractual requirements and periodic audits. The data measured is not contained in ciaims, but is contained in other metric systems we have developed for this purpose.

44) ACC Ciients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

a. What roie should hospitals play in the next iteration of the ACC Program?

Lack of timeiy information about clients seen in the EDs, and who have been admitted, continues to cause chaiienges in providing appropriate follow up in Primary Care. RCCOs, along with hospitals, should deveiop a standard data sharing agreement for post-hospitai and post-ER discharge to share that information reai-

time with PCMPs. Perhaps if hospitals collected PCMP information at check-in for Medicaid clients, they could then share information directly with the PCMP without needing the RCCO pass-through.

Hospitals could also align with the goals of RCCOs and PCMP to avoid non-emergent use of the ED and avoidable hospitalizations.

b. What role should pharmacies play in the next iteration of the ACC Program?

As an integrated delivery system with built-in pharmacies at all clinics, KPCO often uses pharmacy information to add members to disease registries and plan targeted interventions. The more data we can receive about members who have filled their prescriptions through outside pharmacies, the more accurate our care coordination and disease management will be. (see HIT request for complete claims data feed).

Also, it is worth noting that the differences between Medicaid's formulary and KPCO's formulary are challenging. For instance, Medicaid recently made a change to several ADHD medications requiring brand name products rather than generic. KPCO is different from other pharmacies in that we typically do not carry both. The product that is carried is the preferred KP agent. This requires us to order in the medication, often leading to delays in filling the prescription as well as waste of unused products. If possible, KPCO would like to have the ACC Program allow flexibility for providers like KPCO to administer the Medicaid pharmacy benefit similar to CHP+, in which the formulary and utilization tools are owned and managed by KP.

Additional challenges within the current pharmacy structure, which KPCO would like to see addressed in the next iteration of the ACC, include: 1) The PA process, which can also take several days to over a week to get a response, and leads to delay in drug therapy; 2) Lack of notification to clients of policy changes, which puts the pharmacies in the position of having to explain Medicaid's rationale and goals of the changes.

c. What role should specialists play in the next iteration of the ACC Program?

Please see question 43. Specialist Medicaid Provider enrollment should include a requirement for availability to Medicaid patients, perhaps in the form of a metric that is monitored, and a mechanism to ensure Medicaid members are provided access to care in a timely manner. On the incentive side, specialists could be paid a PMPM to participate in a RCCO network on the condition that the provider ensures Medicaid clients access to care a timely manner. Specialists could also contract directly with RCCOs and be part of a RCCO provider network. KPCO also recommends a referral requirement within the ACC to increase the effectiveness of PCMP interventions, as well as prevent self-referrals to providers.

d. What role should home health play in the next iteration of the ACC Program?

There should be improved data sharing between RCCO and PCMPs regarding the home health plan of care.

e. What role should hospice care play in the next iteration of the ACC Program?

Hospice services would significantly augment existing services, and they should be included in the ACC Program.

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

For questions d through f, KPCO generally recommends that there be improved data sharing between RCCOs and PCMPs to allow for more effective care coordination and care planning.

g. What role should counties play in the next iteration of the ACC Program?

Due to the lack of understanding regarding the role counties currently play in the ACC Program, and KPCO's experience KPCO has in working directly with counties, KPCO does not have an opinion on this question.

h. What role should local public health agencies play in the next iteration of the ACC Program?

Please see the answer provided in question 35 regarding collaborations between CDPHE and the ACC Program.

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

Community Organizations are helpful resources who know first-hand the nature of the provider network in their area. KPCO partners with these organizations in other efforts related to charitable health coverage. Community Organizations, if willing, could help members choose a PCMP in their neighborhood that meets their needs.

45) How can RCCOs help to support clients and families in making and keeping appointments?

Providing resources to remind clients and families of upcoming appointments, with enough lead time and information to make transportation arrangements, would be helpful. KPCO's experience shows that challenges in making and keeping appointments often stems from non-medical needs for support, such as transportation and after hours care options. It would be helpful for RCCOs to invest in these supports.

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

KPCO's experiences with Community Health Workers has been positive, and would therefore find value including them in the next RFP in some way. Currently, KPCO employs Community Health Specialists to address non-medical/social needs of its members.

47) **Community Health Worker reimbursement.** Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement process	(Please check all that apply)
Independently bill	☒
On staff (salary) at	☒

Primary Care Medical Provider Clinic	
On staff (salary) at RCCO	☒
Per Member Per Month Payment	☒

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

Providing support for both Medicaid clients and PCMPs who may need assistance connecting to oral health providers would be an important function of the RCCO. The support could consist of providing up-to-date lists of providers accepting Medicaid clients, and as needed, scheduling appointments with oral health providers.

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you?

To KPCO, providing a culturally competent system of care means ensuring that members' cultural needs are considered and respected at every point of contact. The delivery of health care services should acknowledge and understand cultural diversity in the clinical setting, respect members' health beliefs and practices, and value cross-cultural communication.

b. What RCCO requirements would ensure cultural competency?

Adopting the National Culturally and Linguistically Appropriate Standards (CLAS), which provide a framework for all health care organizations to best serve diverse communities, would help ensure cultural competency.

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?

Providers and staff should be able recognize the cultural beliefs, attitudes and health practices of diverse populations, and use that knowledge and evidence to prescribe the best possible intervention at the systems level or at the individual level.

d. Low health literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

In addition to the responses to (b) and (c) above, RCCOs should collaborate with community organizations to create or leverage member materials that help simplify and translate health care information into plain language. While requiring that member materials are available at a certain reading level can be helpful, these standards can vary, and working with organizations that understand the communities in which they are embedded is valuable and important. Also, the Health Insurance Marketplace within the Centers for Medicare

and Medicaid 5ervices has created materials for health care consumers ("From Coverage to Care") that could be distributed by RCCOs. The materials can be accessed at https://marketplace.cms.gov/technical-assistance-resources/c2c.html.

50) 5hould the next RFP allow for preferred networks for speciaity, faciiity, or ancillary care?

Yes, as such preferred networks wouid aid PCMPs like KPCO better coordinate and manage the care of its Medicaid members. Currently, Medicaid members' visits to providers outside of KPCO are not consistentiy communicated. As a result, KPCO is limited in its ability to understand the full health care history of its Medicaid members, which in turn can limit how well providers can address members' care needs.

51) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

On a national level, KPCO's focus on preventive care, and its capabilities as an integrated health plan and care delivery system, have led to positive outcomes that include decreases in emergency room utilization. in fact, Kaiser Permanente's national data shows that KP consistently has iower ER utiiization in Medicaid popuiations, and in general, has ER utilizatlon at about 50% of the national average. Allowing integrated systems and/or other providers that have successful track records in decreasing emergency room utiiization to maximize their influence and impacts on client care couid help the ACC address the trend of increasing emergency room utilization. Outside of Medicaid, key factors that allow KPCO to impact emergency room utiiization include access to urgent care, and timely follow-up following members' emergency room visits. These visits are noted In a shared system that allows KPCO's care coordinators to quickly follow up with members, determine the health concerns that led them to the emergency room, and manage their issues going forward to prevent future emergency room visits.

52) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

5ince the implementation of the Affordabie Care Act, more Coloradans have access to the health insurance modei of heaith care delivery. This model includes payment of monthly premiums, and forms of cost-sharing (coinsurance and co-payments). The difference between this model and the Medicaid delivery system (no premiums) make the transition between Medicaid and commercially availabie pians challenging. 5pecificaiiy, the drastic financial adjustments from very low to no cost health coverage to $100-$200/month out-of-pocket obligations are difficult. KPCO encourages the ACC Program and Connect for Heaith Colorado to coilaborate in educating consumers of these differences, and help faciiitate transitions by aiigning language/terms, and policies, when possibie.

Practice Support

53) **Support for practices.** Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☐	☐	☐	☐
Network provider education	☐	☐	☐	☐
Assistance with practice redesign	☒	☐	☐	☐
Assistance with efficiency-enhancing activities	☐	☐	☐	☐
Provide web-based resources and directories	☒	☐	☐	☒
Provide practice-specific data reports	☒	☐	☐	☒
Provide clinical care guidelines and best practices.	☐	☐	☐	☐
Provide clinical screening tools	☐	☐	☐	☐
Provide health and functioning questionnaires	☐	☐	☐	☐
Provide chronic care templates	☐	☐	☐	☐
Provide registries	☒	☐	☐	☒
Offer client reminders	☐	☐	☐	☐
Offer client self-management tools	☐	☐	☐	☐
Offer educational materials about specific conditions	☐	☐	☐	☐
Supply behavioral health surveys	☐	☐	☐	☐
Supply other self-screening tools	☐	☐	☐	☐
Administer behavioral health surveys	☒	☐	☒	☒
Administer other self-screening tools	☒	☐	☒	☒
Prepare client action plans	☐	☐	☐	☐
Provide training on providing culturaliy-competent care	☐	☐	☐	☐
Provide training to supporting staff	☒	☐	☐	☐
Provide training on motivational interviewing	☐	☐	☐	☐
Provide tools and software for phone call and appointment tracking	☐	☐	☐	☐
Provide tools and resources for tracking labs, referrals, etc.	☐	☐	☐	☐
Provide referral and transitions of care checklists	☐	☐	☐	☐
Provide visit agendas or templates	☐	☐	☐	☐
Provide standing pharmacy order templates	☐	☐	☐	☐
Provide comprehensive directory of community resources	☒	☐	☐	☒
Provide directory of other resources	☐	☐	☐	☐
Provide materials regarding Nurse Advice Line	☐	☐	☐	☐
Ensure all tools and resources are centrally located on RCCO-specific website	☒	☐	☐	☐
Others	• Help (up-to-date directory; live support) finding specialists currently accepting Medicaid. • See also note at top of following page, and response to question 55.			

Note: The responses on the previous page highlight the supports that would be *most* helpful to large, integrated delivery systems working to tailor care to meet the need of Medicaid and low-income members. "No" boxes have therefore been left unchecked.

54) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

Behaviorai health surveying and self-screening should use standard, validated, widely used tools such as the PHQ-9, global self-reported health status; and SF-12 health survey.

55) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

Priority supports include providing comparative practice-level performance data (item 6); supplying actionable data about clients (providing registries, administering health/self-screening surveys); and providing tools to help rapidly locate resources to meet clients' needs that can't be met by the practice itself (emphasis upon quality/currency) rather than comprehensiveness.

Training for selected staff members who then provide internai system-wide expertise would also be helpful. Finally, consultative support in identifying best practices for delivering care to Medicaid and low-income populations.

56) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

A basic monthly risk-adjusted PMPM amount coupled with additional incentive payments for achieving triple-aim outcomes at the individual practice level.

57) Should the Department require that PCMPs utilize disease registries to manage the health of their population?

Yes. However, given the current structure of Medicaid and frequent movement between providers, practice-level registries will need to be supplemented by registries provided by the state.

58) Please share any other advice or suggestions about provider support in the ACC.

Providers in the ACC would benefit from support aimed at streamlining referral processes; facilitating the exchange of care plan/treatment information and clear pathways for addressing very-high-need clients or clients who are unwilling to engage with their PCMP.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

The payment structure of having providers on a primarily fee-for-service basis with a moderate capitated basis and small amounts withheld for incentive purposes supports some, but not all, of the goals of the ACC. The incentives for meeting goals around emergency use, readmissions, and high cost imaging partially support the overall cost savings goals. Possible additional linkages could be implemented to tie the incentives more directly to the PCMPs that contribute to cost goals in addition to goals related to improving quality and the overall health of the clients.

Risk arrangements that include hospital and outpatient services, in addition to physician services, would create great opportunities for savings. At this time, the unpredictability of the costs of certain high cost drugs warrants their exclusion from risk arrangements.

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

Yes, KPCO would be interested in pursuing a capitation arrangement rather than a fee for service structure. The structure of such an arrangement would be most beneficial if the arrangement and capitation amounts were tied to overall cost of providing quality care to the members in relation to the fee-for-service providers rather than upon an aggregation of services coded by the PCMP. In order to provide care in the most appropriate venue and provider, the capitation should include both primary care and specialty care to allow for the most appropriate use of resources.

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

If the value is defined to be not only the direct cost associated with providing the care, but also includes the overall long term health of the members, then such an environment and infrastructure does exist.

62) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

Kaiser Foundation Health Plan of Colorado is licensed by the DOI.

63) What role – if any – should the RCCOs play in the distribution of payments to providers?

The payments to the providers should be based in some part on the contribution that they made to the overall success of the program, rather than as aggregate group in total.

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

No Additional Comments

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

HEDIS measures should be incorporated into the payment structure for each PCMP to ensure that the higher performing PCMPs are recognized for the quality of care provided.

66) Measuring Client experience. Please complete the table below to indicate how the Department should measure Client/patient experience:

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☒	☐	The use of CAHPS is preferred for measuring the satisfaction since it can provide a consistent basis for comparison.
SF-12 Health Survey	☒	☐	
Other types of client interviews / surveys	☐	☐	
Patient Activation Measure	☒	☐	
Focus groups	☒	☐	
Other	Please type your response here.		

67) Knowing that, at this time, the Department only has claims data, how should population health be measured?

The claims data could be utilized via risk scores to measure and evaluate the populations that are being served by providers. Additional screening and mining of the data can be used to inform long term medication management.

68) How should quality and performance data be reported to the RCCOs, PCMPs, and the public?

KPCO has been supplying data to its RCCO partners according to care delegation contracts (see also response to 24). Colorado Access RCCO has been sharing a performance report (P3) that shows benchmarks among PCMPs. This report has been a helpful tool in understanding KPCO performance compared to other PCMPs in the region, and standardizing this report across RCCOs may be a good way of sharing performance between the RCCOs, and to the public.

69) Measures for payment. Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

71-80%	☐
81-90%	☐
91%+	☐

71) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?

A single core set of KPIs should be used across all RCCOs in order to ensure consistent comparisons. Minimal additional RCCO specific measures could be added to address specific considerations unique to those RCCOs. Providers should be paid based upon a different set of KPIs that are within their direct control and contribute to the overall success of the program.

72) Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?

RCCOs should be reimbursed based upon national standards. As a Health Plan, KPCO devotes significant resources to the completion of NCQA certification and HEDIS metrics. Allowing these significant efforts to also be recognized by the ACC would be an efficient way to measuring quality without adding new metrics or manual processes.

73) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

Yes.

74) Incentive payment frequency. Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☒
Quarteriy	☒
Annuaily	☐
Other	☐

If you checked the "Other" box, please describe payment frequency below:

75) For potential offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

A more specific understanding of how the RCCO structure and requirements might change wouid help Inform a response to this question.

76) For practices and community providers, what are you currently measuring to assess the quality of your care deiivery? Are you being reimbursed on any of these measures?

HEDI5 measures are currently being used to measure quality.

Health Information Technology (HIT)

77) **Types of communication.** For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	1 No, I wouldn't use	2	3	4	5 Yes, I would use
Phone call / phone number	☐	☒	☐	☐	☐
Text message	☒	☐	☐	☐	☐
Web portal	☐	☐	☒	☐	☐
Email	☐	☐	☒	☐	☐
Telemedicine / Video chat	☐	☐	☒	☐	☐
Face-to-face meeting	☐	☒	☐	☐	☐
Smartphone app	☒	☐	☐	☐	☐
Other: Click here to enter text.	☐	☐	☐	☐	☐

Nationally, KP is developing and implementing innovative health IT solutions that improve quality, access to care and convenience to its nearly 9 million members.

Preliminary information shows KPCO's telemedicine initiatives increase access to health care services, while enhancing patient convenience and satisfaction.

Electronic medical Records (EMR's) email, web portal, and smartphone apps are all currently available at KPCO to all members as well as traditional face to face appointments.

KPCO's integrated care delivery model ensures patients have easy access to appropriate care and information at all hours, there are multiple points of entry to the system, and providers are culturally competent and responsive to patients' needs.

78) **HIT investments by organizations.** For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below:

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	☒	☐
Digital care management tool	☒	☐
Care transitions alerts	☒	☐
Electronic Health Records (EHRs)	☒	☐
Health risk assessment software	☒	☐
Practice assessment tools	☒	☐

Practice management tools (scheduling, billing)	☒	☐
Client web portal for communicating care plan, services, benefit enrollment	☒	☐
Patient education/wellness tools	☒	☐
Provider/case manager directory		
Telemedicine software	☒	☐
Other: State of the art online pharmacy refill system, mail order delivery.	☒	☐
Other: Smartphone applications	☒	☐

79) Importance of technology by type. The Department is working to determine what technology is in place, what technology is needed, and what technology should be standardized. For RCCOs, providers, and other organizations, use the table below to answer what HIT infrastructure outside of the SDAC your organization would use to perform population health management activities. Tools are scored from 1-5, where 1 are those items least-likely to be used, and 5 are items most-likely to be used:

Tool	1 Least	2	3	4	5 Most

Telemedicine	☐	☐	☒	☐	☐
Other: Click here to enter text.	☐	☐	☐	☐	☐

80) What are the primary barriers to RCCOs and providers increasing their use Health Information Technology to improve the performance of Primary Care Practices?

The key barrier is inconsistency among practices. KPCO uses the same system across all of its primary and specialty care providers, and also provides some of this access to contracted external providers. However,

Medicaid members may self refer to a provider or hospital that does not share data with our network. If they do share with a program such as CORHIO or the APCD, the interface of that data with KPCO's does not necessarily directly lead to appropriate follow-up interventions without manual translation of the data. KPCO would support the development of a standard data sharing protocol for use by all Medicaid providers. This would ensure that post-visit data is available for all Medicaid members regardless of provider.

81) How can Health Information Technology support Behavioral Health Integration?

Improved data sharing between BHO, RCCO, and PCMP for referrals to the BHO and receiving pharmacy and care plan follow-up data back from the BHO.

82) In the next iteration of the ACC, should there be a shared resource for data and analytics? Please describe the basic criteria for what a shared data and analytics platform needs to contain in order for it to be useful.

The need was identified by KPCO to gather more data related to Medicaid patients to better understand cost impact and utilization to support efforts to improve service.

- A consistent and reliable claims direct feed linkages with the proper data elements to allow for secure data flow from State and SDAC data sources. Trustworthiness (Confidence in the data)
- Complete documentation of procedures, construction, process, and data elements (Data Dictionary)
- Claims data to reflect external as well as internal encounters.
- Historical and current data selection available through dropdown choice.
- Business goals for reliable data access improve clinical effectiveness and member/patient satisfaction.
    - Improve clinical quality of care
    - Improve patient safety and reduce medical errors
    - Improve wellness, prevention and disease management
    - Understand physician profiles and clinical performance
    - Improve customer satisfaction, acquisition and retention

83) Should there be a shared care management tool? Please describe the basic criteria for what a care management tool would need to contain in order for it to be useful.

Yes. A shared care management tool could include:

- Primary, specialty, and inpatient care workflows
- Complex case management
- Medical cost trend analyses and benchmarking of performance
- Population segmentation
- Identification of patient-specific gaps in care and opportunities to reduce cost of care while maintaining or improving quality
- Profiling of provider quality-of-care and cost-efficiency
- Bundled payment analytics
- Disease management and care planning
- Ensure that the essential data elements are accurately conveyed to the receiving practitioners in a timely and accurate manner

84) Should there be a shared population health management tool? Please describe the basic criteria for what a population health management tool would need to contain in order for it to be useful.

Yes. A shared population management tool would include:

1. Development of patient lists that incorporates claims, pharmacy, utilization, disease state, care coordination activity, demographics, primary care, labs, and more.
2. Ability to develop outcome metrics for a given population, i.e., diabetes control rates, CRC screen rates, etc.
3. Two-way communications between various systems including EMRs, care coordination software, and utilization management tools.

85) Please describe the functionality that a common Medicaid provider directory would need to contain in order for it to be useful.

- Online, with a designation of whether actively accepting members
- Average wait times for specialist appointments.
- Ability for users to flag providers for deletion for reasons such as: no longer participating, no access.
- Ability for users to report issues with providers such as fraud and abuse.
- Ability for providers to include some details about practice.

86) How can the RCCOs support providers' access to actionable and timely clinical data?

A consistent and reliable claims direct feed with the proper data elements to allow for secure data flow from State and SDAC data sources.

87) What are the HIT solutions that would benefit clients, providers, and RCCOs? Please comment on the parameters these tools or platforms would need to possess and the ways in which they could be used.

KP.Org currently provides a web portal for clients to connect with (email) most providers, view most test results, and get help on a variety of topics.

88) What technical assistance or resources related to HIT infrastructure should the RCCOs supply? This assistance or these resources could be for providers, social service organization, clients/families, or for others.

RCCOs could act as a consulting partner for data elements to secure data feed setup, and assist with troubleshooting. Additionally, RCCOs could:

- Offer support through web, email, and telephone.
- Provide support webinars
- Provide documentation, data dictionary.

89) What role should health information exchange platforms like CORHIO or QHN play in the next iteration of the ACC?

See response to 80 above. These organizations could evolve into a web-based platform for providers to share after-visit information among other Medicaid providers.

90) Please share any information, advice, and suggestions you have about health information technology in the ACC Program.

For enhanced PCMPs such as KPCO, a direct data feed of all Medicaid data, with an onboarding consultation with Medicaid claims data experts to help integrate Medicaid claims data into our existing data warehouse, would help us to more comprehensively address members' needs by improving our ability to plan interventions for Medicaid clients.

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Gretchen McGinnis
Location: Denver, Colorado

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Colorado Access
Location: Denver, Colorado
☒ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☐ Medical provider / PCMP / other provider
  i. Type or specialty: Click here to enter text.
  ii. Area of practice: Click here to enter text.
☐ Provider advocate (e.g. medical society)
☒ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☐ Other (please describe): Click here to enter text.

Are you currently invoived in the ACC program?

☒ Yes
☐ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☐ 3-4 years
☒ Since before the program was implemented.

How have you been involved in the ACC program and what interaction have you had with RCCOs:
Colorado Access participated in the CRICC program that preceded the ACC and we have been a RCCO in regions 2, 3 and 5 since inception.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:
Colorado Access has been serving Colorado Medicaid clients since late 1995.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☒ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

Please feel welcome to describe why or why not using the space below.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

The ACC program has many strengths and a number of things that are working well. The regional and population based approach has brought communities and organizations together in new ways. There is a new understanding of the data and information available and a desire to develop metrics that are meaningful and useful for all parties. A number of other benefits of the ACC program are listed below. This is certainly not an exhaustive list but some of the high points of this important program.

- *A new focus on populations and communities*
- *Opportunities for local engagement and decision making*
- *Awareness of the systems of care that exist in communities and where there are gaps in these systems*
- *Opportunities for new relationships and connections between entities*
- *New funding to support important activities – care coordination, provider supports*
- *Primary care focus and connection to medical homes*
- *Awareness from all parties that things aren't as easy as they were initially thought to be*
- *New data availability and growing understanding of data strengths and weaknesses*
- *Understanding of outcomes and how they are measured*
- *Focus on KPIs – small number of metrics*
- *Longitudinal focus of the program, overnight transformation is not possible*

In terms of coordinating with other care management entities such as SEPs - The potential to tap into additional resources, support and coordination creates an opportunity to serve the SEP client in a way we have never been able to before. The opportunity to view/have knowledge of medical/acute care elements or their long term care needs allows a greater opportunity to view the person holistically and fill in gaps (by adding additional supports/services) that would have otherwise been difficult/impossible to identify.

2) What is not working well in the ACC Program?

As is to be expected with a new program of this magnitude, the ACC program has had some challenges and there are areas in which things have been more difficult or complicated than expected. One of the most pervasive challenges in the ACC to date has been the constant rate of change and growth in the program. The overall enrollment in the ACC has grown exponentially due to Medicaid expansions and inclusions of new populations into the program which has also brought other challenges in terms of broadening the scope of the program, adding in new requirements and expectations and drawing focus away from some of the key components of the original model. As the program has grown rapidly there has been a move toward requiring more structured and regimented tasks as a means of overseeing the growing and broadening program. This directive approach is at odds with one of the most fundamental ideals of this program – that the activities that will truly drive health system change and improve health outcomes are developed and delivered at an individual level. Interventions that are unique to each patient, to each provider, to each community and to

eoch region ore fundamentol to driving chonge. The imposition of structured ouditing ond oversight functians on o model thot needs to oddress each relotionship individuolly leods to frustratian an both sides ond a sense thot a lot of time ond resources ore being spent on octivities that ore of little volue. The issue of poyment reform cantinues to be o challenge as we oll agree that the woy in which we poy for core needs to chonge but we don't hove the tools and the systems in place to test new models. The frustrotion with this con lead to misplaced ongst and creote distroctions to achieving the best results we can in our current poyment enviranment. As is noted in the RFI, the ACC program is working to transition from a medical model to a health model. In order for that to happen, all the other Deportments, agencies and groups that have been develaped to deal with the less medicol areos need to be part of the long term plonning of the ACC so thot roles continue to be clear, responsibilities are appropriotely attributed ond resaurces are expended responsibly to achieve the brooder gools. The ACC can't take an the functians of all these ather entities and so we must oll colloborate and caardinote an a statewide level to achieve this visian.

In oddition to these overorching ideos, below is o list af ather areos in which the pragram isn't functioning as well as it could be.

- *Lack of clarity about the next phose af the ACC doesn't allow for longitudinal resource plonning ond investment*
- *System limitotions moke many things mare camplicated ond resource intensive.*
- *Data sharing and coordinotion among entitles continues to be challenging and frought with different interpretations af legal and technical requirements.*
- *Brood awareness that we are oll learning what does and doesn't drive change and there will be successful efforts ond unsuccessful efforts and both ore voluable*
- *The quantitotive story isn't reflecting the quolitative story – which is mare importont? Are we quontifying the right things?*
- *Pay for performance structure doesn't oddress thot what is valuoble in the long term may not yield short term results*
- *Incrementol steps toward success oren't being meosured ond reparted.*
- *Medicaid is o populotion thot is hord to find and engoge – clients don't hove ony Incentives to update their cantoct informotion, connect with RCCOs, etc.*
- *Differing and evolving definitions of whot canstitutes care coordinotian – activities, documentation, etc.*

Finolly, it is important that the Deportment and the cammunity at lorge see the RCCOs as a system that is designed to fill in the gops in a client-centered way, individuolized to the needs of eoch persan, ond avoiding duplicatian. The brood, sweeping generalizations about what RCCO should da, ond how we should interact with ather systems could very well lead to more directive terms in our contract that would steer us further into the need to 'check the baxes', duplicote efforts, ond decreose client centeredness/individuol-need-bosed interactions.

3) What is working best in the Behavioral Health Organization (BHO) system right now?

The BHO system is successfully corrying risk, ond ollowing locol flexibility ond discretion to effectively deploy ond fund resources ond services. The BHOs are very successful in promoting the treotment of persons with serious mental illnesses in the community. They hove been effective in reducing inoppropriote over-utilizotion of expensive hospitol services and re-investing in community bosed olternotives ond recovery services. Prior to capitotion, Colorado spent over 50% of its Medicoid mentol heolth expenditures on inpotient core, with little focus on reducing recidivism ond promoting recovery. The system hos olso been successful in building portnerships with locol entities, ond coordinoting core for members with complex needs. This is forwording the Triple Aim, ond allowing for successful integroted core efforts. Hoving director- level positions dedicoted to Integrated core ond the cross system willingness to olign behoviorol ond physicol heolth metrics hove been porticulorly effective.

BHOs with brooder networks of providers offer more opportunities for integroted core ond different models thot con be ottroctive to o brood orroy of PCMPs. There is olso o greot willingness in mony oreos for the RCCO ond BHOs to colloborote ond identify shored priorities ond projects oround integroted core. The opplicotion of teleheolth initiotives to behoviorol heolth integrotion is going very well ond will bring greoter occess to behoviorol heolth services to o brooder populotion.

4) What is not working well in the BHO system?

The current silo poyment structure is still on obstocle to integroting core for those with complex heolth needs. Increosed payment flexibility is needed to incent olternotive poyment models thot support BHOs in providing diverse models of integroted core ond core coordinotion. There ore olso remoining chollenges with the success of member referrols from the physicol heolth to the behoviorol heolth system. There seems to be on expectotion thot everyone should get integroted core but not oll members wont it/ PCMPs ore sometimes chollenged by wonting to refer clients for behoviorol heolth core but member doesn't wont to go ond sometimes members doesn't wont core coordinoted. The ongoing chollenges with doto ond informotion shoring oround behoviorol heolth doto, specificolly 42 CFR continues to be o huge issue ond reolly limits the efficiency of integroted core ond core coordinotion. The BHOs ond CMHCs olso don't hove formol roles in the ACC ond this should evolve in the next version of the ACC. Active porticipotion in shored sovings ond other outcome bosed progroms would be good ploces to moke thot connection more formol.

5) What is working well with RCCO and BHO collaboration right now?

Communicotion ond colloborotion is continuolly improving – especiolly when doto con be shored ocross systems. Providers ond core coordinotors report more ond more successes in providing effective core to members with complex behoviorol ond physicol needs os the systems support eoch other with not only clinicol expertise, but olso system novigotion, poyment ond odministrotive expertise. Teleheolth octivities ore being implemented ond ore showing positive outcomes. The presence of on integroted core leodership role in the BHO provides o good point of contoct for these projects ond efforts. There is olso willingness to olign on reporting metrics ond efficiencies of scole between the RCCO and the BHO.

6) What is not working well with RCCO and BHO collaboration right now?

While the strength noted above represents success for packets of providers and members, systematic collaboration is still a challenge. The ability of the BHO and RCCO (as well as Substance Use, Child Welfare and other service entities) to share data in real-time, provide comprehensive non-overlapping care, and realize shared savings is still limited. A finite set of covered diagnoses (versus covered services) limits the ability of BHO to support RCCO member needs, and payment structures and different contract priorities do not equally incent RCCO and BHO collaboration and integrated care. The overlap in contract requirements or lack of shared outcomes in contracts should be evaluated and approached systematically.

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

Poyment reform is criticol. The steps essentiol for successful core integration need to be clarified and poyment needs to be aligned with those steps- from communication to shared outcomes. As a state, we must move away from o fee for service model. The documentotion ond doto ond informotian sharing requirements must be clear ocross the state and not apen to voriable interpretation. Eorly intervention ond integroted care octivities must be encouraged and funded which is a chollenge in the current diagnosis bosed model. Further, integrotian must be pilated ocross a variety of Medical/Heolth home models. While the Primory Core Provider medical home model is importont, members should hove the aption ta create their own medicol home- which could be with a primory core physician, or within their community mental heolth center, or onother voriotion.

A number of potentiol suggestions for next steps ore listed below:

- *Allow each region ta pilot one or two mojor poyment reform trials where poyment is based on the provision af complete integrated service models.*
- *Develap a cost bosed encounter madel for integroted core based an current activities in successful models. This could be paid in oddition ta the copitoted diagnasis based model.*
- *Create o pool of funding either thraugh sovings ar some funding taken from each of the RCCO and BHO budgets thot is shored between a RCCO and o BHO in o region thot must be used jointly to develap and implement integrated core and early intervention services within the regian. Neither the RCCO or the BHO con spend any of the shored funds without agreement of the ather and integration plons need to be*

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) Barriers to the integration of behavioral health and physical health services. Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☐	☐	
Community Behavioral Health Services Rule	☐	☐	
Covered diagnoses list	☒	☐	Limits ability to pay for integrated care and provide early intervention and preventive services before a diagnosis is present.
Different behavioral / physical health reimbursement	☒	☐	Duplicate payments for FQ encounters for behavioral and physical health the same day. Capitated model vs FFS. Capitated model allows for payments outside of fee for service model to support innovation or align incentives to achieve desired outcomes. Current ACC model doesn't allow for this.
Institutions for Mental Diseases exclusion	☐	☐	
OBH rules, reporting, or financing (regulatory differences between agencies)	☐	☐	
PCMP financing structure	☐	☐	
Per-member per-month amount	☐	☐	
Physical space constraints	☐	☐	
Privacy Laws (HIPAA, 42 CFR)	☒	☐	Confusion on interpretation between entities, significant legal documents required (or at least thought to be required) to allow for the coordination of care and collaboration RCCOs, BHOs SEPs and other entities have in their contracts.
Professional / cultural divisions	☐	☐	
RCCO or BHO contracts	☒	☐	Lack of clear alignment of contracts, ie big focus on integrated care in BHO contract, not a specific focus in RCCO contract.
Staff capacity	☐	☐	

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

State/Federal rules or reporting requirements	☐	☐	Medicare data source needed
Technical resources / data sharing	☒	☐	RCCOs specifically directed not to share SDAC access with BHO or SEP staff, even when within the same organization. Not all BH data and/or long term care data available in SDAC to calculate total cost of care or shared savings.
Training	☐	☐	BHO finance based on covered services and co-located care; Operating inside the current system doesn't support integrated care funding; need to open codes
Others	Please type your response here.		

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

10) Please share any other general advice or suggestions you may have about behavioral health integration.

Integrated care is an important solution for complex members, and RCCO and BHO systems need to be equal partners in working towards the creation of a flexible integration system. It is also important, however that integration doesn't occur at the expense of an existing mental health system that or with the complete burden on primary care practices. The mental health system is designed for, and has successfully met, the needs of an important subset of Coloradans. Mental health funding and services cannot compete against physical health funding and services. Physical and behavioral health providers must retain their specialized expertise and must be incented as complementary pieces of an overall health care system.

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination?

At its core, care coordination should be Member/Family-Centered and individualized. Multi-disciplinary teams should be used and the model should be outcomes focused, not managed at the individual task or process level. Creativity and trial and error need to be encouraged and successes and failures transparent. Overall care management should:

-facilitate provision of comprehensive health promotion and chronic condition care

-ensure ongoing, proactive and planned care activities

-build and use effective communication strategies among family, medical home, specialists, schools, and other systems of care, support and advocacy

-build and use evidence based interventions for special populations

-help improve, measure, monitor and sustain quality outcomes of triple aim

Adapted from Jeanne W. McAllister Elizabeth Presler W. Carl Cooley

b. How should RCCOs prioritize who receives care coordination first?

Each RCCO should have a stratification model that is based on the unique needs of each community and region but allow for direct referrals. Real time, proactive data must be available to allow for the implementation of a successful stratification model.

c. How should RCCOs identify clients and families who need care coordination?

Health risk assessment results

Member/Family request

Clinic or community partner referred

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

Monitor outcomes (SDAC and other)

Chart audit

Validation of stratification methadology

Patient activation, satisfaction, health confidence

12) What services should be coordinated and are there services that should not be a part of care coordination?

It needs to be acknowledged thot no amount of core coordinotion provided by the RCCO, or ony heolth core system, will solve the culture of poverty ond resolve the life situotions thot mony of our members find themselves in. Addressing that issue is of vitol importance but there isn't one individual system or poyor that con odequotely tockle this complex and devostoting issue. The RCCO can provide valuoble support in coordinating medical, behovioral, substonce, LTSS, CCB, HH, DME, specialty, transportotion NEMT and non-medicol transportotion (os this affects sociol, nutritian, school meetings, work). The RCCO con olso provide support to clients in reoching gools outside of the health orena but those are secondory gools ond the RCCO should take those on in service to the member's overoll health and wellness.

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

The absolute most importont piece of informotion is o patient's willingness to engoge ond portner to achieve o higher level of health. This can be ossessed thraugh metrics such as patient activotian, heolth confidence, heolth beliefs, individuol potient gools and borriers to thase gools and their sociol support network. Practical information on their heolth history is also importont but secondory to the patient's desire to chonge their heolth.

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today?

This question is dependent on the individual client. Some clients hove little to no core coordinotion while others have core coordinotors from a number of different systems – RCCO, BHO, SEP, CCB, foster care, etc. Often clients don't recognize thot the folks they are working with are octually proviging core monogement services so when asked, they report that no one is monoging their care but with better infarmation we can determine thot they are in foct working with 2 or 3 core coordinotors in different systems. A shared dota system for eoch of these systems that are poid to coordinote care could facilitate better connectian points between individuol core coordinotors and eliminate the need for duplicotive or occasionolly conflicting activities. Within Colorado Access where we ore the RCCO, the BHO ond the SEP we hove implemented processes to identify shared clients ond develop o single coordinote care plan but that isn't possible in all regions.

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

For the most part, care coordination provided by other systems is focused on o specific areo. For exomple, BHOs provide coordinotion for behoviorol heolth covered services and diognoses, but don't tend to take o broader approach. SEP cose managers focus on home heolth and long term core needs, not the larger holistic view the client may need.

c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

HCPF can provide the RCCOs with information about what other programs the client is eligible for as well as current touch points for other state and federally funded programs.

A thoughtful review of the contract expectations of the various entities that are paid to provide care management and/or care coordination needs to be undertaken. Adding the FBMME population into the RCCOs has created even more overlap with the SEPs. The potential for duplication or less effective care coordination between programs is high and this should be addressed. Expectations should be clearly set for RCCOs, SEPs, CCBs and other programs such as Health Communities around care coordination and what role each plays in an effective and efficient system.

d. What are the gaps in care coordination across the continuum of care?

The biggest gap is the lack of data sharing and overlapping program enrollment. Frequently it is only through interacting with the patient that we learn about their engagement with other systems. A more coordinated approach to data sharing could eliminate this time consuming and unsatisfying discovery process. The RCCO can be the central point for care coordination but that expectation and requirement needs to be shared with all the other programs so that data can be defined appropriately.

15) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	Should the RCCO have a role? Yes	No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma	☐	☒	☒	RCCOs are mandatory reporters but this is primarily a BHO care coordination function
Affordability (assistance with prescriptions or co-pays)	☐	☒	☒	To some degree but resources are limited
Daycare / childcare	☐	☒	☒	As it relates to health care activities, long term services should be addressed through TANF
Economic stability & employment	☐	☒	☒	RCCO can be a resource but this is not a primary function or goal
Education	☒	☐	☒	For children definitely, for adults not a core function
Environment	☐	☒	☐	Again not a core function, can partner and coordinate with CDPHE and other local public

				health agencies.
Food access / nutrition	☒	☐	☐	
Health literacy	☒	☐	☐	
Housing	☐	☒	☒	RCCO can provide a supportive role
Language or translation services	☒	☐	☒	
Literacy	☐	☒	☒	For children this is addressed through coordination with the school, for adults can provide referrals but shouldn't be a primary RCCO goal
Transportation	☒	☐	☒	As it relates to health care and overall health but not related to employment, recreation, etc.
Other	Whatever RCCO is expected to perform, need to ensure it is inside of appropriate legal parameters and that it is not the responsibility of some other system Where is the funding mandate for each of these requirements; is there a responsible party			

16) **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	**Coordinate care?** Yes	No	**In what capacity should these individuals coordinate care in the ACC Program?**
Advanced Practice (Registered) Nurses	☒	☐	
Certified Addiction Councilors	☒	☐	
Certified Nurse Midwives	☒	☐	
Community Health Workers	☒	☐	
Generalists (BA/BS/MA/MS)	☒	☐	
Health Coaches	☒	☐	
Licensed Clinical Social Workers	☒	☐	
Licensed Marriage and Family Therapist	☒	☐	

Licensed Mental Health Counselors	☒	☐	
Licensed Professional Counselor	☒	☐	
Masters of Public Health	☒	☐	
Medical Doctors / Doctors of Osteopathic Medicine	☒	☐	
Nurse Practitioners	☒	☐	
Patient Navigators	☒	☐	
Peer Advocates	☒	☐	
Promotoras	☒	☐	
Psychiatrists	☒	☐	
Psychologists	☒	☐	
Registered Nurses	☒	☐	
Social Workers	☒	☐	
Wraparound facilitators	☒	☐	
Other	Please type your response here.		

We believe that the credentials of the care coordinator are not of primary importance. We utilize a multi-disciplinary team as we recognize that the different skill sets in each of these areas are necessary to provide a comprehensive care management program. The most important skill for a care coordinator is the ability to connect with and motivate a client toward better health. With a multi-disciplinary team, the skills one care coordinator may lack can be made up for by other members of the team giving the member the benefit of all of these areas of expertise.

17) **Care coordination requirements for specific populations.** Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and infants	☐	☐	
Children	☐	☐	
Children who are healthy, but in socially-complex environments	☐	☐	
Children involved in the foster care system	☐	☐	
Children with a chronic illness	☐	☐	
Children with a serious emotional disturbance	☐	☐	
Children with medical complexity	☐	☐	

Children or youth with a behavioral health diagnosis or substance use disorder	☐	☐	
Transition-age adolescents	☐	☐	
Parents and families	☐	☐	
Pregnant women	☐	☐	
Adults	☐	☐	
Adults who are healthy, but in socially-complex situations	☐	☐	
Adults with a chronic illness	☐	☐	
Adults with a behavioral health diagnosis or substance use disorder	☐	☐	
Clients involved in the criminal justice system	☐	☐	
Clients with a disability	☐	☐	
Clients in a nursing facility	☐	☐	
Elderly clients	☐	☐	
Frail elderly clients	☐	☐	
Clients in palliative care	☐	☐	
Other populations, please comment:			

We believe care caardinotian in inherently on individuolized functian ond while members af o graup may have similor needs, eoch situatian is unique and should be addressed os such. Population heolth ond outreach strotegies con be opplied to same af the graups abave os opprapriote in a cammunity ar a region but requiring o program to deol with each individual graup takes owoy the RCCOs obility to determine what is needed in an oreo ond devote resources accordingly.

18) How do you envisian the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

One camplexity thot is unique in deoling with the faster core system is the requirement to get releases af infarmotion from social services in arder to effectively interoct with faster parents. Working with the foster parents is key to praviding effective care coordinatian but is impassible withaut this consent ond getting individualized cansents far the cose workers in a resaurce intensive and aften unsuccessful process. This issue tends to be handled differently between the RCCOs ond BHOs so clorificotian on expectatians and requirements ocross systems is needed. Far children with special needs autside af the foster core system, caardinotion with various ogencies con be useful when goad relotianships are established but cannectians shauldn't be mandated. Effective callabarotian and caardinatian anly hoppens when bath parties came to the table willingly ond nat oll agencies wont to be in thot role.

19) How should care coordination be evaluated? How should its outcomes be measured?

Care caordinotian metrics shauld include o measure whot is octuolly being pravided by the core coordinotors. The ultimote autcame af chonging patient behavior or supporting better access to, ond utilizotion af care

should be one of the things evoluoted but not the only thing. Other metrics could include potient engogement ond octivation, oppropriateness of core plons, core plon gools ochieved. Client sotisfoction should olso be on importont component os thot con drive the ultimote success of the relotionship. It should olso be understood thot core coordinotian is in most coses ond long term intervention ond so evoluotion ond meosurement should be done on o longitudinol bosis.

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

    a. What is the PMPM cost for providing care coordination services?

Care coordinotian is o function thot con expand or contract depending on the functions expected and the funds ovoiloble.

    b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

No, vorying poyment by population odds o layer of complexity in terms of monaging the progrom and is difficult to accaunt for in varlaus practices ond community groups. The availoble funds for each region shauld be set and the RCCOs and PCMPs should be accountoble for allocoting the funding to each population as oppropriate.

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

No, RCCOs shauld hove the flexibllity ta deploy resaurces os they need to in their community and take an innavotive care monogement programs and pratocals ta determine whot warks in different areas and with different papulations. Mandoted ratios can lead ta ineffective and inefficient resource allocotian that doesn't ultimotely achieve the gools af the progrom.

    a. Care coordinator to client ratios. If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☐
51-100	☐
101-200	☐
201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐

3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

The Deportment should evaluate the care management is being delivered but the content ond structure of thot core management should be determined by the RCCO based on their region's needs. Eoch RCCO should hove their own core monogement evaluotion program ond the Deportment con determine how closely the RCCO is following their program ond model. More prescriptive evaluation models have the effect of limiting the creativity and flexibility the RCCOs need to work with their community partners and achieve the desired outcomes. More regimented program and processes keep resources tied up with low or no volue activities thot ore contractually required and thot weokens the overoll success of the program.

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

- *Doto reporting for PCMPs to RCCOs*
- *RCCO Contracting with PCMPs*
- *Oversight ond responsibility of PCMP/which RCCO do they 'belong' to or ore 'shored'*
- *Approoch to PHI with community portners (led by HCPF)*

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

Bidders need to demonstrate history in o region, significont depth ond breodth of relotionships with stokeholders ond o commitment to serving this populotion over time. Bidders who ore in seorch of o profit of wont to use Medicoid os o spring boord to grow other membership should be scrutinized.

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

We ocknowledge that it is chollenging for practices to work with different RCCOs ocross their practice. This con't be ovoided in some situations without significant baundary chonges (which are addressed elsewhere in this RFI). Howevер in situotions where a practice has the mojority of their members with ane RCCO ond only a small number with ane ar more ather RCCOs, the practice should be able to work with the RCCO thot hos the mojority of its members if this is feasible operationally for the Deportment and the RCCOs. It is aur experience that RCCOs are more than willing to work together to develop unique solutions to progroms so there ore likely other woys to oddress this issue thot could be explored.

In proctical terms there are some exomples thot wauld need to be oddressed if this ideo were to be seriously considered:

- *Could a PCMP choose a RCCO with wham they hove very little ar no membership?*
- *For large clinics systems, such os FQHCs, chaosing o RCCO from wham to supply and receive oll reporting is daoble but moving all clients associated with these large systems from several RCCOs to one RCCO will imbolonce the member distribution across RCCO regions which wos an eorly premise of the program.*
- *Haw would be choice be monoged? How long wauld be choice be for? Could ar wauld practices move between RCCOs? Would they have to choose for their entire papulation ar could different sub populotians be assigned to different RCCOs?*

27) Should the RCCO region maps change? Why or why not? If so, how?

RCCO and BHO region maps should be aligned to support population level prevention and care and to improve Triple Aim outcomes. Regions and service areas of SEPs, CCBs and public health systems need to be addressed as well.

28) Should the BHO region maps change? Why or why not? If so, how?

RCCO and BHO region maps should be aligned to support population level prevention and care and to improve Triple Aim outcomes. Regions and service areas of SEPs, CCBs and public health systems need to be addressed as well.

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

There are many areas in which overlaps between contracts such as the RCCO and the SEP, RCCOs and Healthy Communities, RCCOs and BHOs, that the department could be well served by going through and integrating regulations and various policies to present a more streamlined approach to managing care across an integrated continuum for Medicaid recipients. The fragmented funding and contracts only creates the reality that we are all working with Medicaid clients (many times the same clients, doing the same things) with insufficient funding to fully support the work needed to do our contracts justice. In addition to this overarching review of rules and responsibilities and scope, below is a list of other areas in which changes should be evaluated

- *Payment reform – upper payment limit constraints*
- *Create hospital, specialist and member incentives*
    - *Example: When HCPF created hospital incentive to share data with RCCO, we immediately received more files than we had in three years of trying to get them on our own*
- *HIPAA and 42 CFR interpretations and data sharing requirements*
- *Less regulated/regimented oversight, encourage more creativity*
- *Better alignment with CHP+*
- *Evolve the attribution model and determine how to get new enrollees engaged in a medical home*

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

The substance abuse benefit should be at parity with the mental health benefit. The co-payments don't incent the right access to care behavior and need to be addressed. The adult dental benefit could be expanded. The diagnosis based BHO system continues to challenge the desired integration of care. Benefit

gaps exist for autism, developmental disability, and other traumatic brain injuries as well as appropriate long term care placement services for individuals with significant behavioral health disorders.

- Covered services verses covered diagnoses on BHO
- Alternative medicine options – evidence based solutions for things like pain management and cost containment
- Project ECHO – aligning evidence based practices with covered services and budget neutral

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

No, one of the most powerful components of the RCCO program is their unified focus and accountability for a population. There is no ability to "cherry pick" or complete for desirable members. The single RCCO in a region must establish relationships with all the providers in the region, understand all aspects of the health care system in that community and be a true driver of change and improvement in the entire system. If multiple RCCOs are in a region, focus will be on competing for members and differentiating between RCCOS and the community integrator focus will be lost. Multiple RCCOs per region would also impose a significant hardship on providers as they would need to choose which RCCO to contract with and risk losing members if they chose the other RCCO or work with multiple RCCOs for smaller patient populations which has already been identified by providers as an issue (see question 26). The current presence of the Denver Health Managed Care plan in Denver as well as the Region 5 RCCO provides some experience with having two programs in a region. Providers and members regularly and vehemently report confusion about both programs, providers are unclear on who to bill when, care is disrupted and another layer of complexity is added on to an already complex system.

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

34) What role should RCCOs play in attributing clients to their respective PCMPs?

RCCOs should have an active role in attribution. The current claim based attribution model should be the first pass for attribution but other claim sources should be included such as BHO, CHP and exchange claims. As the PCMP network grows to allow for CMHCs and other non traditional primary care providers to function in this capacity, a new attribution model and methodology will need to be developed that recognizes those relationships. For members that don't have a strong connection to one provider, weak attribution information should be provided to the RCCOs and the practices who can examine other sources such as medical records or other program history to determine if a full attribution is warranted.

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

The programs should coordinate on activities and have a general awareness of key priority areas and have regular meetings to share program information and establish key contacts in various areas for more detailed collaboration. Data sharing expectations should be laid out and available data should be incorporated into the SDAC.

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

The programs should coordinate on activities and have a general awareness of key priority areas and have regular meetings to share program information and establish key contacts in various areas for more detailed collaboration. Efforts should also be directed to create complimentary but not duplicative services for people at DHS verses RCCO CM. Data sharing expectations between the entities should be described and any appropriate data should be included in the SDAC.

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

The programs should coordinate on activities and have a general awareness of key priority areas and have regular meetings to share program information and establish key contacts in various areas for more detailed collaboration. This should include enrollment comparisons between programs so that duplicate enrollments can be identified and the clients managed by the appropriate program as well as collaboration on health insurance education and "churn" management.

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

No real need for collaboration at this time but if needed, the entities should work together.

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

42) How should the Department structure stakeholder engagement for the ACC as a whole?

The stakeholder group for the ACC is very broad and as the program grows, so do the number of people who have some connection to the program. The Department should re-evaluate the current committee structure and determine what committees are useful and valuable and which are not. Each committee needs to have a specific role and function and an understanding of how the Department wants to use their input. However, having a role on a formal committee should not be the only way to have a voice in the program. The Department should hold regular stakeholder meetings on a variety of topics throughout the state to consistently gather feedback and build connections between the different entities. The RCCOs should also continue to feed information to the Department on behalf of the stakeholders to inform program and policy directions.

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

There are gaps in all of these groups in areas across the state. It is unreasonable to expect that there will ever be a network of all these various providers that will be adequate statewide. There will always be gaps and areas in which there are more providers than are needed. The question for the ACC program to focus on is how each RCCO addresses the gaps in their regions and works within their communities to develop and grow the networks over time.

a. If no, what are the gaps?

b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

a. What role should hospitals play in the next iteration of the ACC Program?

They must play a significant role. They are one of the largest expenses in the program and a huge focus in terms of re-aligning their services.

b. What role should pharmacies play in the next iteration of the ACC Program?

To the degree that they can support the goals of the ACC, they should be at the table but it should be an option to include them, not a requirement.

c. What role should specialists play in the next iteration of the ACC Program?

Specialists provide a vital service and are in very short supply in many cases. They need to be formally incorporated into the ACC and actively engaged in the transformation of the Medicaid program.

d. What role should home health play in the next iteration of the ACC Program?

To the degree that they can support the goals of the ACC, they should be at the table but it should be an option to include them, not a requirement.

e. What role should hospice care play in the next iteration of the ACC Program?

To the degree that they can support the goals of the ACC, they should be at the table but it should be an option to include them, not a requirement.

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

The SEPs and CCBs need to be formally incorporated in the ACC. All three entities have responsibility for coordinating various aspects of care for the same clients and there are many opportunities for duplication of care coordination services or less effective care coordination. The contracts and contract expectations need to explicitly lay out the responsibilities of each entity as they relate to each other and clearly delineate how the entities need to work together.

g. What role should counties play in the next iteration of the ACC Program?

As a key area in which clients interact around their Medicaid benefits, counties must have a role in the ACC. Their responsibilities and accountabilities related to the ACC need to be laid out and consistently communicated and measured.

h. What role should local public health agencies play in the next iteration of the ACC Program?

As entities that are responsible for the health of a population that overlaps significantly with the RCCOs, the functions of each should be clearly understood and areas of collaboration and coordination laid out in contracts or MOUs.

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

To the degree that they can support the goals of the ACC, they should be at the table but it should be an option to include them, not a requirement.

45) How can RCCOs help to support clients and families in making and keeping appointments?

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

47) **Community Health Worker reimbursement.** Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement process	(Please check all that apply)
Independently bill	☐
On staff (salary) at	☐

Primary Care Medical Provider Clinic	
On staff (salary) at RCCO	☐
Per Member Per Month Payment	☐

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

If the Medicaid dental contract is being administered through an ASO contract, that contractor should be held accountable for ensuring an adequate network of providers and working with the RCCOs to coordinate dental care. The RCCO should be in a supporting role in terms of coordinating access to dental care and the contracts for both the RCCO and dental ASO should be extremely clear on what role each plays and ensure that there is no duplication of efforts. This is true for all state contracts in which a vendor is responsible for a certain service. The presence of the RCCOs and the ACC shouldn't remove any requirements for other contractors to perform their functions. Any contracts that include any responsibility for care coordination should be reviewed to ensure no duplication of requirements and clear delineation of roles and expectations about collaboration. A review of RCCO, BHO and SEP contracts highlights many areas in which opportunities for duplication and confusion about roles can occur.

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you?

b. What RCCO requirements would ensure cultural competency?

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

No, as lang as the PCMP model is "any willing provider" then thot should apply acrass all types of providers. The practice of hoving limited or preferred networks is challenging for potients to novigote and con create more confusion and frustrotian for the members ond the praviders.

51) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

52) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

Practice Support

53) **Support for practices.** Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☐	☒	☐	☐
Network provider education	☒	☐	☐	☐
Assistance with practice redesign	☒	☐	☐	☐
Assistance with efficiency-enhancing activities	☒	☐	☐	☐
Provide web-based resources and directories	☒	☐	☐	☐
Provide practice-specific data reports	☒	☐	☐	☐
Provide clinical care guidelines and best practices.	☒	☐	☐	☒
Provide clinical screening tools	☒	☐	☐	☐
Provide health and functioning questionnaires	☒	☐	☐	☐
Provide chronic care templates	☒	☐	☐	☐
Provide registries	☒	☐	☐	☐
Offer client reminders	☒	☐	☐	☐
Offer client self-management tools	☒	☐	☐	☐
Offer educational materials about specific conditions	☒	☐	☐	☐
Supply behavioral health surveys	☒	☐	☐	☐
Supply other self-screening tools	☒	☐	☐	☐
Administer behavioral health surveys	☒	☐	☐	☐
Administer other self-screening tools	☒	☐	☐	☐
Prepare client action plans	☒	☐	☐	☐
Provide training on providing culturally-competent care	☒	☐	☐	☐
Provide training to supporting staff	☒	☐	☐	☐
Provide training on motivational interviewing	☒	☐	☐	☐
Provide tools and software for phone call and appointment tracking	☒	☐	☐	☐
Provide tools and resources for tracking labs, referrals, etc.	☒	☐	☐	☐
Provide referral and transitions of care checklists	☒	☐	☐	☐
Provide visit agendas or templates	☒	☐	☐	☐
Provide standing pharmacy order templates	☒	☐	☐	☐
Provide comprehensive directory of community resources	☒	☐	☐	☐
Provide directory of other resources	☒	☐	☐	☐
Provide materials regarding Nurse Advice Line	☒	☐	☐	☐
Ensure all tools and resources are centrally located on RCCO-specific website	☒	☐	☐	☐
Others				

All of these con be provided by the RCCO assuming thot they are things thot practices want ond will use. There shouldn't be any requirement to provide any set list of these octivities. The RCCO needs to be free to develap the tools and supports thot the proctices in their region need ond not be tethered to a list of supports that won't be volued by the provider community.

54) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

55) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

RCCOs should do this only os it relotes to impraving KPIs and overoll program outcomes. Tronsformotion far the sake af transformation should be led by the practice ond supported by the RCCO as oppropriate.

56) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

This should be purely an outcame driven decision. Achieving externol certificotion or accreditotion is af na value if it daesn't ultimately imprave the client experience and leod to high quolity core. Providers should be incented for incremental progress toword stondord goals, not just on achievement of a single stotistic. The Deportment ond the RCCOs should work together with practices to identify some process or interim metrics thot demanstrate a practice's wark to improve the client experience and reward progress along the woy.

57) Should the Department require that PCMPs utilize disease registries to manage the health af their population?

They should be required only ta the extent thot their use octuolly leads ta better outcames. The proctice af requiring specific tools thot dan't drive outcomes just ties up valuoble resources and keeps providers ond RCCOs fram developing new and creotive oppraaches to comman problems.

58) Please share any other advice or suggestians about pravider support in the ACC.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

While we are moving to a more value based system, the most significant payment component is still fee for service. This payment model doesn't support the comprehensive transformation of the system that is being sought through the ACC. As long as providers are primarily paid via FFS, they will continue to focus on volume rather than outcomes and quality of care. The current model of providing a bonus for achieving outcomes isn't significant enough to drive change within a practice and the fact that it is paid on a regional level often serves to de-motivate smaller practices who see no way to move the regional average. In order to truly drive transformation, the payment model must change in as dramatic a fashion as the transformation that is being sought. In many cases, significant change will be driven by pain rather than rewards.

There are also many services and functions that are not currently covered or reimbursed such as provider to provider consultation, or health and behavior codes or more efficient means of provider patient communication like phone and email consults. Allowing for these important services to be provided and paid for acknowledges their value and generates data that can be studied for additional intervention opportunities.

The current process of having PCMP payments come from the Dept misses an opportunity to further connect the RCCOs and the providers. The RCCO and PCMP payment amounts are not sufficient to perform all of the contractual requirements and have funds remaining to drive transformation on a system level. The next iteration of the ACC could include a regional pool of funds that can be used collectively to incent change or support community level services. This could also be a mechanism of distributing shared savings in a less complicated fashion.

The current ACC program and payment models don't include any mechanisms to formally engage clients in the cost of their care. This is an area that could be explored in the next iteration of the ACC so that members "have some skin in the game" and are incented to learn more about their insurance and become more active and engaged consumers.

The current ACC payment model also excludes major players in the health care system such as hospitals and specialists and they need to be actively engaged in the program's funding structure.

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

Some do and some don't. The skill level and infrastructure of PCMPs across the state is very broad and varies from being extremely sophisticated and innovative to being very limited and antiquated. There is no one size

fits all approoch to providers. In addition, the current model of paying incentive dollors based on regionol improvement demotivotes smoller proctices os they feel os though they con hove no impoct on the regionol outcomes. The current model is olso o block or white model in which you either ochieve or foil, there is no recognition of continued progress toword o gool or incentives to tockle long term tronsformotion octivities. Providers ond RCCOs need opportunities to demonstrote smoll successes ond steps toword ochieving these importont but hord to reoch gools.

It should olso be broodly recognlzed ond understood thot most metrics ore ultimotely dependent on potient behoviors ond there is currently no opportunity for providers to be evoluoted on the work they ore doing and hove direct control over. It is widely ocknowledged thot the incentives for the potients ore not olwoys oligned with using core oppropriotely, for exomple hoving o primory core visit co poy but no co poyments for emergency room visits or ombulonce services. Providers ond RCCOs con provide the highest quolity medical homes and coordinote core but ultimotely the outcomes meosured lie with the potient. Monitoring ond evoluotion of metrlcs thot directly meosure the providers ond RCCOs octivities in oddition to ultimote potient driven outcomes ollow for progress to be meosured in both orenos ond will provide more incentives for positive chonge.

62) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

We ore currently licensed by the DOI os on HMO ond risk beoring entity.

63) What role – if any – should the RCCOs play in the distribution of payments to providers?

The RCCOs should distribute the poyments to providers to reinforce the connection between the RCCO ond the provider ond ollow the RCCO to better monitor ond support o proctice's progress.

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

The limitotions ond requirements of CMS ond Medicoid regulotions need to be more tronsporent ond well understood by the RCCOs ond other ployers in the ACC progrom. The collective creotivity of o lorge group of people working with oll the relevont informotion con be very powerful ond when focused on o chollenge such os poyment reform within the current regulotory infrostructure con bring new ideos os well as provide odditionol support to push for federol regulotory ond progrommotic chonge.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of *core, sotisfoction of clients ond providers, ond heolth outcomes?*

- *CAHPS like questionnoire from HCPF to clients thot ollows for specific meosurement of eoch portion of the heolth core system (benefits, PCMP, RCCO, LTSS, tronsportotion)*
- *Leveroging olreody existing occreditotions such os NCQA certificotion, CPCI ond meoningful use to tie together PCMP efforts with progrom performonce ond incentive reimbursement*
- *Access to core stondords – how well providers support member's desire to utilize services*

- *Metrics incarparating member feedback about experience – not just CAHPS but real time satisfactian infarmatian and provider level sampling*
- *Activities that influence ar drive access ta specialty care*
- *Mare in depth analysis af experience and autcames inside af each measure because high level KPIs are nat demanstrating success; need ta dig Inta the details behind those ta see what is and isn't warking*
- *Payment that aligns the entire neighbarhaad ta participate in meaningful way, includes all players in a neighbarhaad*

66) Measuring Client experience. Please complete the table below to indicate how the Department should measure Client/patient experience:

Tool:	Should It be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☒	☐	
SF-12 Health Survey	☒	☐	
Other types of client interviews / surveys	☒	☐	
Patient Activation Measure	☒	☐	
Focus groups	☒	☐	
Other	Please type your response here.		

67) Knowing that, at this time, the Department only has claims data, how should population health be measured?

If appropriate claims metrics can be identified they should be used but if no metrics are available, work with the RCCOs to evaluate their population health programs individually.

68) How should quality and performance data be reported to the RCCOs, PCMPs, and the public?

Quality and performance metrics should be transparent and replicable and should consider both improvements, maintenance of improvements and incremental steps toward improvements. Metrics and evaluation should be approached as a collaborative process that provides opportunities for learning and ongoing change. Metrics should not be approached as a pass fail and RCCOs and PCMPs should be given the opportunity to narrate metrics to highlight activities that were undertaken to improve each measure, whether or not they were successful. RCCOs and PCMPs should be evaluated both on their ultimate outcomes but also on their quality improvement process and ability to learn from their activities.

69) Measures for payment. Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☒
8-10	☐
11-20	☐
21-30	☐

31-40	☐
41-50	☐
51+	☐
None	☐

70) What percent of RCCO payments should be tied to measures or performance?

Percentage	
10-20%	☒
21-30%	☐
31-40%	☐
41-50%	☐
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

71) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?

KPIs should be consistent ocross RCCOs and providers but the baselines and levels of improvements should be regionally based. KPIs ond other metrics should be consistent and aligned with other stotewide models such os SIM ond CPCI to allow for maximum focus on a few metrics.

72) Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?

Based an improvement os well os maintain improvement. Constant ond consistent improvement isn't always possible or practicol. RCCOs ond providers should be rewarded for making significont improvements ond maintaining those improvements over time while making significant progress on anather metric. Process or interim steps should alsa be included and rewarded at a lower level to incent ond encourage innovation ond pragress even when the ultimote goals oren't met.

73) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

No, measures should be develaped to evoluate the chonges that are desired and colculoted ot the frequency with which they are expected to change. There oren't ony hord ond fast rules, eoch metric should be Individuolly development ond monitared.

74) **Incentive payment frequency.** Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	☐
Annually	☒
Other	☒

If you checked the "Other" box, please describe payment frequency below:

Bi- annually, unless metrics truly change more quickly

75) For potential offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

RCCOs and other entities will develop whatever programs and services that are needed that can be supported with the funds provided. Since the RCCO program hasn't been static and the requirements and expectations are constantly growing, it is a function of determining what programs and services will best support each community and region and result in the desired outcomes while living within the available budget.

76) For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

Health Information Technology (HIT)

77) **Types of communication.** For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	☐
Text message	☐	☐
Web portal	☐	☐
Email	☐	☐
Telemedicine / Video chat	☐	☐
Face-to-face meeting	☐	☐
Smartphone app	☐	☐
Other:		

78) **HIT investments by organizations.** For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below:

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	☒	☐
Digital care management tool	☒	☐
Care transitions alerts	☒	☐
Electronic Health Records (EHRs)	☐	☐
Health risk assessment software	☒	☐
Practice assessment tools	☐	☐
Practice management tools (scheduling, billing)	☐	☐
Client web portal for communicating care plan, services, benefit enrollment	☒	☐
Patient education/wellness tools	☒	☐
Provider/case manager directory	☒	☐
Shared decision-making tools	☐	☐
Telemedicine software	☒	☐
Other:	☐	☐
Other:	☐	☐

79) Importance of technology by type. The Department is working to determine what technology is in place, what technology is needed, and what technology should be standardized. For RCCOs, providers, and other organizations, use the table below to answer what HIT infrastructure outside of the SDAC your organization would use to perform population health management activities. Tools are scored from 1-5, where 1 are those items least-likely to be used, and 5 are items most-likely to be used:

Tool	1 Least	2	3	4	5 Most
Population analytics / reporting / dashboard	☐	☐	☐	☒	☐
Care management tool	☐	☐	☐	☐	☒
Care transitions alerts	☐	☐	☐	☐	☒
Electronic Health Records (EHRs)	☐	☐	☐	☒	☐
Practice assessment tools	☐	☐	☒	☐	☐
Health risk assessment software	☐	☐	☒	☐	☐
Practice management tools (scheduling, billing)	☐	☐	☐	☒	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☐	☒	☐	☐
Patient education wellness tools	☐	☐	☒	☐	☐
Provider/case manager directory	☐	☐	☐	☒	☐
Shared decision-making tools	☐	☐	☒	☐	☐
Telemedicine	☐	☐	☐	☒	☐
Other:	☐	☐	☐	☐	☐

80) What are the primary barriers to RCCOs and providers increasing their use Health Information Technology to improve the performance of Primary Care Practices?

Primary care practices consistently ask for data about their entire patient population, not just a subset of their patients. Including all Medicaid data (ACC and non ACC) and other claim data that is available such as CHP, exchange and other information would allow providers to use the HIT as a standard part of their practice. Integration of EHR or EMR data into more coordinated and functional tools would also allow providers and RCCOs to see connections or gaps in care more easily.

81) How can Health Information Technology support Behavioral Health Integration?

Integrated medical records that contain medical and behavioral health information would help both systems provide improved and better integrated care. Additionally, HIT could support access to more timely data so that systems and providers can more promptly respond to diagnostic/clinical/claims trends. However the issues of what behavioral health information can or cannot be shared needs to be resolved in a statewide fashion and that determination broadly disseminated before any HIT solution can be developed.

82) In the next iteration of the ACC, should there be a shared resource for data and analytics? Please describe the basic criteria for what a shared data and analytics platform needs to contain in order for it to be useful.

It would be good to hove better insight into the metrics ond calculations within the SDAC so metrics could more easily replicated. The current propriety noture of some of the SDAC metrics is extremely challenging to understand and that creotes problems with buy in to the model. Doto thot is used to evoluote the RCCOs or the PCMPs should be completely tronsporent and replicable and providers ond RCCOs should hove direct input into the metric design.

In terms of a shared dota ond onalytic resource different from the SDAC, the current RCCOs hove each developed their own mechonisms to analyze the doto which would be difficult to merge into one appraoch. The unique needs of eoch regian and their portners and stakeholders can best be addressed by pravlding the RCCOs with os much row data as passible and continuing to develap the SDAC to be a more useful provider focing tool.

83) Should there be a shared care management tool? Please describe the basic criteria for what a care management tool would need to contain in order for it to be useful.

It seems the time to implement o shored core monogement tool has possed. At this point, each RCCO hos invested in their own tools and systems, mony BHOs hove done the some and individuol provider groups are bringing up their own systems os well. In addition, the SEPs hove a separote tool, Healthy Communities have o seporate system, etc. Merging them into one system now would be too complicated and likely toke everyone bock several steps. Some work could be done to coordinote documentation/trocking requirements so that information con more easily be shared between systems if ony of the groups decide to go thot route.

84) Should there be a shared population health management tool? Please describe the basic criteria for what a population health management tool would need to contain in order for it to be useful.

Finding a single tool that will meet the needs and demonds of multi different groups is unlikely. RCCOs should work within their regions to determine what tools already exist, whot moy be needed ond determine how best to deploy any tools and/or infarmotion.

85) Please describe the functionality that a common Medicaid provider directory would need to contain in order for it to be useful.

The moin criticism of oll provider directories is how quickly they become out of dote. A useful Medicaid provider directory would need to include current infarmation on providers who ore accepting new potients, not just providers who hove ever accepted a Medicaid client. It would also be helpful to have informotion about the provider's longuoge and specialized services or programs directed at certain populations. Information an panel size ond/or % of practice dedicated to Medicoid would also be very helpful.

86) How can the RCCOs support providers' access to actionable and timely clinical data?

87) What are the HIT solutions that would benefit clients, providers, and RCCOs? Please comment on the parameters these tools or platforms would need to possess and the ways in which they could be used.

88) What technical assistance or resources related to HIT infrastructure should the RCCOs supply? This assistance or these resources could be for providers, social service organization, clients/families, or for others.

89) What role should health information exchange platforms like CORHIO or QHN play in the next iteration of the ACC?

If the systems can provide real time or neor reol time access to hospitol and emergency room dato to RCCOs ond PCMPs as well as provide access to better coordinate a potients core, they should be integrated. Hawever if the systems aren't able to deliver that informotion in o timely and efficient foshion then their involvement moy be more of a distroction than o value add.

90) Please share any information, advice, and suggestions you have about health information technology in the ACC Program.

Colorado Department of Health Care Policy and Financing

Notes: Standard cover sheet added

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Kathleen Joy

Location: Western Colorado Pediatrics Grand Junction Colorado

Mesa County

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Western Colorado Pediatrics Associates

Location: Grand Junction Colorado

☐ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☒ Medical provider / PCMP / other provider
  i. Type or specialty:
  ii. Area of practice: Pediatrics
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☒ Other (please describe): Advocate for children on Medicaid

How have you been involved in the ACC program and what interaction have you had with RCCOs:

No

Please briefly describe your involvement with Medicaid, either in Colorado or another state:

Multiple families are on Medicaid, but services are often limited and/or not paid for.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely
☒ Likely
☐ Reserved (waiting to see the RFP)

☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

Are you currently involved in the ACC program?

☒ Yes
☐ No
☐ I don't know

Please feel welcome to describe why or why not using the space below.

If you answered "yes" above, how long?

☐ Less than one year
☒ 1-2 years
☐ 2-3 years
☐ 3-4 years
☐ Since before the program was implemented.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

- Reimbursement (mostly due to the Federal ACA) is fairer now.
- The decision to make the well child visit one of the KPIs was a very good decision in behalf of children, but unfortunately attribution is still flawed and the SDAC data is delayed and often inaccurate. So, it is difficult to create an effective QI process to improve the KPI, but this is a good start.
- The decision to focus on integrated behavioral health in medical homes is a wonderful decision to improve health outcomes for people covered by Medicaid. Thank you.
- You have a great opportunity to do what is needed for the majority of Medicaid recipients. The majority of Medicaid recipients in Colorado are children and adolescents; they should not be considered one of the subgroups. The following principles should be incorporated into the core objectives of the ACC:
    - Children's health care needs are very different than adults. For adults, the focus is on managing chronic disease more effectively. For children, it is about preventing the development of those chronic diseases.

- If the ACC really wants to focus on health and wellness, the greatest opportunity is with the children (the majority of Medicaid recipients). By focusing on preventive care, early screening and early intervention for children, there will be big savings; unfortunately those savings may not occur for many years or decades in the future, but the investment will eventually be worth it.
- So, the ACC will need to invest in children to the extent possible now even though the savings come much later. We recommend that a portion of short-term savings that occurs due to chronic disease management in adults in the ACC be invested back into preventive care for children.
- Children are part of families and you can't help the child unless you help the family. So, care coordination is more involved for children since it includes care coordination of the parents/family.
- There is increased recognition that behavioral health is a part of overall health and should be accessible within a pediatric medical home. However, the current mental health system must have policies, procedures, and resources that support integrated behavioral health activities at the practice level.

2) What is not working well in the ACC Program?

- Attribution continues to attribute patients to the wrong medical home and the process of getting patients reassigned to the correct medical home is onerous for the patient and family.

- The health care data through the SDAC is based on claims so it is delayed and is incomplete (particularly for children). Therefore, it is not very useful in helping medical homes improve outcomes for children.

- Each RCCO does things very differently, which is confusing for medical homes with patients in several RCCOs. RCCOs are inconsistent in how they respond to requests for care coordination (quite variable depending on whom you reach at the RCCO). So the new RFP should ask how RCCOs will develop policies and procedures to make their methods and responses to requests for help more consistent, both within the RCCO and among all RCCOs.

- There are certain expectations/requirements and ways of doing things that are so different from one RCCO to another that it requires significant extra work for the medical home to adapt to the differences. To deal with this. So, the RFP should ask how RCCOs intend

- If a patient lives in one region and goes to a medical home in another region, and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from the patient's region RCCO. This is particularly true in the Denver metro area. <u>There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients.</u>

- The "incentives" now are actually disincentives, especially the requirement that the RCCO must meet its KPIs before a high performing medical home can be rewarded for meeting its KPIs. The concept behind this approach is not consistent with how health care systems (and "medical neighborhoods") work.

- The geography of the 7 regions does not reflect the natural geography of health care systems and referral patterns. Larimer County should be in Region 2.

- RCCOs are not providing the level of care coordination that Medicaid patients need. We have had RCCO "care coordinators" just tell us to call 211. The level of commitment that patients and families need is difficult to find, unless care coordination is provided at the medical home level or the community level.

- Both family practices and pediatric practices report that the SDAC does not reflect their own data that the practice can obtain from their EHR or their own claims data. This is particularly true regarding data on health care screening. The RFP should ask how RCCOs and HCPF should take advantage of this practice-based data.

- Most medical homes are not working closely with RCCOs and are not receiving much support. The RFP should ask how RCCOs intend to work more closely with medical homes.

- Feedback from RCCOs to the medical home regarding patients referred to the RCCO for care coordination is spotty. How will RCCOs consistently provide feedback and communication to the medical home regarding what was done for the patients and whether there was improvement?

- There has been difficulty with communication from the state level through the RCCOs down to the individual practice/provider level. Providers feel as though they are not well informed from HCPF or RCCOs. We are grateful that CCHAP keeps us informed.

- The current system does not take into account the movement of patients on and off Medicaid and movement between RCCOs. Whether for KPIs or future shared savings incentives, practices need to be evaluated on established patients who have been in a practice for a minimum of six months. This allows the medical home to actually have time to make an impact on the child's care. Otherwise, it is a substantial disincentive for practices to be open to the more complex and challenging patients, those that likely need access the most.

- Currently, there is very little communication and alignment between BHO's and RCCO's. In order for integrated behavioral health to be successful at the practice and community level, the BHO's and RCCO's must have similar goals, policies/procedures that are aligned, payment structures that are aligned with movement toward integration and ongoing close communication with one another. The RFP should ask how they intend to do this.

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

- The decision to focus on integrated behavioral health in medical homes is a wonderful decision to improve health outcomes for people covered by Medicaid. Thank you.

- If Colorado is serious about promoting integration of behavioral and physical (medical) health care, then the RCCOs and BHOs should be integrated. This would mean they should have the same regions and function as though they are one organization. This would reduce duplication of efforts and have better alignment of incentives and payments that support integrated care.

- Open the behavioral health and wellness codes (96150 – 96155) now. Don't wait. This will encourage integration immediately and enable medical homes to start now the process of evolving toward full integration.

- Care coordination for both behavioral health and medical care should be done in the primary care setting. And either the RCCO and/or the BHO should delegate the responsibility to do care coordination and a pmpm to cover the expense to the medical home as part of the payment reform process. And behavioral health care coordination and medical care coordination needs to be fully reimbursed. In addition, the BHO and the RCCO will need to have information and care coordinators to assist medical homes to handle uncommon or very complex issues.

- Provide infrastructure and funding for data collection and management to support integrated behavioral health in the medical home and the care coordination that will have to be part of that. Utilizing SDAC data is just one way to understand the activities within a medical home. SDAC data is delayed and does not include enough information to support behavioral health care coordination in the medical home. Other methods and technologies are needed. There will need to be an investment in the development of new technologies and methods to do behavioral screening, track referrals, document treatment and collect data on the whole care coordination process at the medical home level. This will require adequate reimbursement to cover the cost of starting up new care coordination programs in the medical home and start up technologies to improve screening, intervention and care coordination with follow through in the medical home.

- The CPACK program developed by CBHC is a very good program, particularly the following:

a. Assistance with finding a behavioral health provider for patients
b. Telephone consultation by a child psychiatrist to primary care providers
We recommend that BHOs be required to provide the 2 components above as part of their new contracts.

- Payment options for integrated behavioral health (not just co-location) need to be clear and understandable to providers and practices. In order for the integrated model to be sustainable, there need to be ways to access understandable billing rules/policies.

Core Coordinotion

Question 12) What needs for children/families should be coordinated in medical homes ond are there services thot should not be a port of care coordinatian by the pediotric ond family medicol home

One of the most difficult services to provide in the medical home is home visits. Support from the larger system is needed.

Services that can be provided in a pediatric or family medical home are: complex medical coordination including logistics/travel, ancillary services (PT/OT/home health services, ...), collaboration with mental/behavioral health, collaboration regarding school needs, referrals to early intervention services and Child Find, referral to other agencies (rehab, hospice, ...), collaboration with foster care and DHS system. RCCOs need to help medical homes with needs like assistance with housing, food, parental employment, child care, in which case the RCCO can help families connect with other agencies that provide these services.

Question 19: How should care coordination program be evaluated? How should its outcomes be measured?

A care coordination program should initially be measured by having good processes, not measured by outcomes, until solid data exists on outcomes that are risk adjusted and accurate for children. Initially all measures need to be quite separated from outcomes that are highly tied to patient behavior, or practices will again be less likely to serve those with highest risk.

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Our medical home relates to multiple RCCOs and we want to be delegated to do care coordination. If all RCCOs allowed medical homes to be delegated to do care coordination, we could receive a pmpm from all of them, which would enable us to afford to hire enough care coordinators to meet the needs of all of our ACC patients.

Where should care coordination be done? Care coordination is best done in the medical home. We are willing to do care coordination, because we have a relationship with our patients and they trust us and we recognize that coordinating complex medical care is essential for good care and for cost savings. Also, the primary care provider is best positioned to have a long term relationship with the patient, and therefore know and understand other aspects of the patient's life and how important those non-medical factors are on the patient's health and health issues.

If care coordination cannot be done in the medical home, then it is best done by community-based organizations. The least effective, least well-received, least trusted is care coordination done from a call center in an RCCO. The role of the RCCO should be to help the medical home-based care coordination staff access resources for families.

The majority of practices are willing to provide Care Coordination, if they can get financial support (PMPM) for providing the service.

Should you be doing care coordination for certain patient populations e.g. children with asthma or special needs children? Or for your entire Medicaid population healthy or chronically ill? The overall goal of Colorado Medicaid should be to provide care coordination services for ALL patients in the Medicaid population (for some patients it may be very minimal, others extensive). This is the essence of preventive care. A care coordinator that is based in the medical home is in the best position to help identify risk factors proactively, as early as possible before they impact a patient's health and cause illness. Children with special healthcare needs (complex, complicated) require a higher level of care coordination, so the pmpm attached to their care coordination needs to be risk adjusted.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

- All RCCOs should have their offices in the region served, should be non-profits, be a Medicaid provider and be incorporated only in Colorado.

- All RCCOs should offer to delegate care coordination to medical homes willing to accept that responsibility and the RCCO should share a portion of the RCCO pmpm with the medical home that accepts delegation.

- All RCCOs should use the same criteria for delegation and for the amount that is paid for delegated services of care coordination. By doing this, services can reach a standard across the state. A patient would have access to similar services no matter where they moved across Colorado.

- RCCOs should all agree on how they will effectively communicate to medical homes regarding any contact the RCCO has with patients attributed to the medical home. They should include PCMPs in developing those criteria.

- All RCCOs should help (or contract with an organization to help) medical homes understand how to access their SDAC data, understand their data and use it to develop rapid cycle QI projects to improve health outcomes and meet KPIs.

- All RCCOs should agree to provide uniform support for medical homes when a medical home asks for help with care coordination, even when the medical home is in another region (and contracted with another RCCO) but the patient is in the first RCCO's region.

- RCCOs should be required to allow medical homes to give the RCCO a list of patients the medical home feels is their patients and receive help from the RCCO to understand why certain patients have been attributed to another medical home. If the patient is determined to be more appropriately attributed to the inquiring medical home, then the RCCO should help re-attribute the patient to the correct medical home.

- RCCOs should share on a regular basis the RCCO's performance on KPIs and share savings incentives and share with the medical home how their own performance compares with other medical homes.

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

This is particularly applicable to the Denver metro area. There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients. For many expectations/requirements and ways of doing things the RCCOs are so different from one another that it requires significant extra work for medical homes to adapt to the differences. In addition, if a patient lives in one region and goes to a medical home in another region, and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from that first region.

27) Should the RCCO region maps change? Why or why not? If so, how?

Yes. There are two changes we recommend:

- Larimer County should be included in Region 2, since the medical community and the support organizations of Larimer County and very closely linked to Weld County
- In the Metro Denver area, the boundary issues are so difficult that we recommend one RCCO be responsible for the whole metro area or that medical homes be allowed to choose one RCCO for all of their patients.

28) Should the BHO region maps change? Why or why not? If so, how?

If Colorado is serious about promoting integration of behavioral and physical (medical) health care, then the RCCOs and BHOs should be integrated. This would mean they should have the same regions and function as though they are one organization. They should share incentives that are aligned around successful integration of behavioral and medical services and outcomes. So the BHO maps/regions should conform to the RCCO regions/maps.

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients. There are certain expectations/requirements and ways of doing things that are so different from one RCCO to another that it requires significant extra work to adapt to the differences. If a patient lives in one region and goes to a medical home in another region and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from that first region. This is particularly true in the Denver metro area.

Another alternative: When a practice contracts with a RCCO currently they "belong" to one RCCO. Change that and have them only contract with the state and have that contract extend to all RCCOS. This way RCCOS would be more accountable to standardization through out all of Colorado, and the services provided to patients/families would be more uniform.

34) What role should RCCOs play in attributing clients to their respective PCMPs?

The attribution system is quite flawed still. RCCOs should be required to allow medical homes to give the RCCO a list of patients the medical home feels are their patients and receive help from the RCCO to understand why certain patients are attributed to another medical home. If the patient is determined to be more appropriately attributed to the inquiring medical home, then the RCCO should help re-attribute the patient to the correct medical home.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

- The payment structure absolutely does not support the ACC goals. A medical home does not receive incentives for KPIs unless the RCCO meets its KPI. This becomes a disincentive, because many medical homes meet their performance targets, but do not get rewarded because the RCCO did not meet its targets. So the medical home has no incentive to maintain the performance. The philosophy that HCPF has espoused (that the high performing medical home should encourage or help the low performing medical home) is not realistic and is not how the real world works. There is no time for that, plus the high

performing medical home has no way of knowing who is low performing. This idea shows a lack of understanding of the world where health cares is delivered. Medical homes need to receive full incentives when they meet their KPI targets, no matter what happens in the RCCO.

- The incentives are too low to change much. Also, the KPIs need to remain focused on process, not outcomes, until the data is more sophisticated to accurately attribute patients and account for risk factors.

- Many medical homes have the ability to collect REAL-TIME data from their EHR and their claims database, which can be used to measure performance more accurately than the SDAC. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and providers to develop a vetting process that will enable HCPF and RCCOs to trust the medical home self-reported real-time data.

- Since children are the majority and give the best chance of truly improving health and wellness, KPIs need to be more child-focused. And since the potential cost savings for children's health care are so far in the future, KPIs need to be intermediate, process outcomes.

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

<u>There is very little of the infrastructure in the state in place at the present time to enable capitation to be implemented successfully.</u> Here are just some of the changes that would need to be in place before it would be fair or prudent to implement capitation:

- The state would need to already be paying fair amounts for all aspects of the care needed by Medicaid recipients before it could effectively move to capitation. In other words, codes for things that HCPF wants done under capitation should be opened and reimbursement adequately now. This would encourage medical homes to already be doing these things before the change to capitation. It would also give HCPF and medical homes experience regarding what the actual costs are for providing the desired services and determine a fair capitation. It will be difficult to change behavior to include new activities under capitation among providers, if you continue to hold codes closed now for things you want done under capitation. You have to help the medical homes create the habits you want before the switch to capitation.

- All providers would have to be reliably involved in the ACC: primary care, all of the various adult and child specialists, the hospitals, the therapies, dentists, mental health providers, etc.

- The data system would have to be able to report real time data and be far, far more accurate than it is now.

- The attribution system is flawed. That would have to be improved and provide accurate, real-time attribution data before capitation should be instituted.

- You will have to change a variety of policies that are barriers to population management.

- Capitation has to be combined with significant incentives to implement processes and improve outcomes. So, you will need to have the incentive system very well developed and viewed by providers as motivating before implementing capitation

- Healthcare for children focuses on prevention, early detection and early intervention, which require initial increased investment to reduce potential expenses many years and decades down the line. Other ACO programs have shown that savings on children are difficult to show early on. So, incentives in the care of children will initially be for intermediate outcomes (or for process outcomes) and need to be direct incentives rather than incentives in the form of shared savings.

- Early in the transition from pre-ACC payment methods to ACC payment structure (2012), some medical homes were asked to return money to Medicaid. Transitions like that (for example the transition to capitation) have to avoid this. Primary care medical homes have such narrow margins that this can be very difficult financially on a medical home

- Many medical homes have the ability to collect from their EHR and their claims database REAL-TIME data with which performance can be measured. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and providers to develop a vetting process that will enable HCPF and RCCOs to trust that medical home self-reported real-time data is trustworthy.

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

Many medical homes have the capability and infrastructure to adapt to payment tied to value. What is missing is the state, HCPF, RCCO, BHO infrastructure. See all of the infrastructure elements HCPF needs to have in place listed in question 60

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

- The HCPF Payment Reform Committee should meet at a time when providers and practice managers can actually attend. Monday afternoons is probably the worst time to actually enable providers or practice managers to attend. Once you select an appropriate time, then actively recruit participation.

- Make sure that your efforts are statewide. Views are different in the various regions of the state.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

- Many medical homes have the ability to collect from their EHR and their claims database REAL-TIME data with which performance can be measured. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and provider from medical homes to develop a vetting process that will enable HCPF and RCCOs to trust medical home self-reported real-time data.

- The measures for children can be drawn from HEDIS measures or CHIPRA measures or from the Pediatric Measurement Proposal that HCPF did in 2010 with the help of Jim Todd. Appropriate child health measures could be selected from the following measures :
    - Well child visits appropriate for age
    - Developmental screening by three years of age
    - Teen depression screening
    - Complete immunization status by age two
    - Post-partum depression screening rate for mothers of newborns by age 4 months
    - Appropriate antibiotic use in URI and strep pharyngitis

- Medical homes could also be measured on:
    - Patient (or family) satisfaction ratings
    - Documentation of QI projects

Screening should be part of KPIs, but you need to do more than just create a KPI. If you are going to have KPIs, then you need to track not only the number of times a screening was done, but also track the v-codes (or some way to track positives) and make them available in the SDAC so medical homes can track them. And the SDAC needs to track referrals (or intervention). Otherwise it is not worth measuring the number of screenings.

- The PCMP or medical home should receive real-time data (less than a month since date of service) with data that will allow them to compare their performance with performance of similar type of medical home.

- Healthcare for children focuses on prevention, early detection and early intervention, which require initial increased investment to reduce potential expenses many years and decades down the line. Other ACO programs have shown that savings on children are difficult to show early on. So, incentives in the care of children will initially be for intermediate outcomes (or for process outcomes) and need to be direct incentives rather than incentives in the form of shared savings.

69) Measures for payment. Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☒
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

We only need 2-4 KPIs. Any more will dilute the effect. What we really want is good data, so we can improve our outcomes by doing a quality improvement project. Since children are the majority of Medicaid recipients and give you the best chance of truly improving health and wellness in the long term, KPIs need to be more child-focused. And since the savings are so far in the future, KPIs need to be intermediate, process outcomes.

ACC Request for Information

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: DCCCA, Inc.
Location: Lawrence, Douglas, Kansas

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: DCCCA, Inc.
Location: Lawrence, Douglas, Kansas
X Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☐ Medical provider / PCMP / other provider
  i. Type or specialty: Click here to enter text.
  ii. Area of practice: Click here to enter text.
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
X Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
X Other (please describe): privatized provider

Are you currently involved in the ACC program?

☐ Yes
X No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☐ 3-4 years

How have you been involved in the ACC program and what interaction have you had with RCCOs:
We have worked with Value Options in Kansas

Please briefly describe your involvement with Medicaid, either in Colorado or another state:
We provide Medicaid paid behavioral health and child welfare services

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely
☐ Likely
X Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

Please feel welcome to describe why or why not using the space below.

☐ Since before the program was implemented.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

2) What is not working well in the ACC Program?

3) What is working best in the Behavioral Health Organization (BHO) system right now?

4) What is not working well in the BHO system?

5) What is working well with RCCO and BHO collaboration right now?

6) What is not working well with RCCO and BHO collaboration right now?

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

DCCCA has extensive experience providing child welfare services to families using outcomes-based performance measures as well as pay for performance in the Kansas system. Our experience has been that when outcomes are clear, owned by all stakeholders and measured and reported frequently the system responds well and families benefit. All groups involved in services to families must have a clear understanding of how the outcomes are measured and how they are based on clear and achievable standards in the industry. Competition between providers/vendors that rewards the achievement toward outcomes works to provide quality services to families and individuals. The goals and measures may need to be adjusted over time so that quality vendors can achieve reasonable outcomes without going bankrupt during the initial years of implementation.

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☐	☐	
Community Behavioral Health Services Rule	☐	☐	
Covered diagnoses list	☐	☐	
Different behavioral / physical health reimbursement	☐	☐	
Institutions for Mental Diseases exclusion	☐	☐	
OBH rules, reporting, or financing (regulatory differences between agencies)	☐	☐	
PCMP financing structure	☐	☐	
Per-member per-month amount	☐	☐	Should provide exceptions for very high cost individuals
Physical space constraints	☐	☐	
Privacy Laws (HIPAA, 42 CFR)	☐	☐	
Professional / cultural divisions	☐	☐	
RCCO or BHO contracts	☐	☐	
Staff capacity	☐	☐	Reasonable caseloads should be established in the contract and measured.
State/Federal rules or reporting requirements	☐	☐	
Technical resources / data sharing	☐	☐	
Training	☐	☐	Common training resources and opportunities should be shared across providers.

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

Others	Please type your response here.

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

10) Please share any other general advice or suggestions you may have about behavioral health integration.

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination?

For care coordination you might consider adapting the Family Group Decision Making model used in social services. It is a process in which a person who needs help is assisted with arranging a facilitator-led meeting with family and significant others to inform them of the situation and volunteer to provide specific assistance. This could be taking a high risk patient to appointments, checking blood pressure or medications daily or ensuring their environment remains safe. In social services the cost for preparing for the meeting and facilitating with some follow-up is about $2000. There are evidence-based models for Family Group Decision Making and the Kempe Center at CU specializes in this approach.

b. How should RCCOs prioritize who receives care coordination first?

c. How should RCCOs identify clients and families who need care coordination?

Chronic users of the system, serious or relapsing conditions, multiple family members with high need.

Use data collected in the system to establish cut-off points for who qualifies with exceptions considered

And approved by designated individuals within a very short time period.

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

Require specific encounter data documenting care coordination by client/family

12) What services should be coordinated and are there services that should not be a part of care coordination?

Services should be provided based on assessed and documented family need. Consider using the evidence-based North Carolina Family Assessment Scale (NCFAS) which is free in the public domain, easy to document and quick. It can also be used post intervention to measure family change.

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

Need assessed by a measurable instrument; history of providers they have used in the past, who else in their household has the same or similar condition or need

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today?

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

d. What are the gaps in care coordination across the continuum of care?

15) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	Should the RCCO have a role? Yes	No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma	X	☐	X	Tracking client outcomes data by provider to determine who continues to be an approved provider e.g. % of children free from abuse and neglect using a consistent definition
Affordability (assistance with prescriptions or co-pays)	☐	☐	☐	
Daycare / childcare	X	☐	X	Ensuring families have assistance accessing care if it is a barrier to achieving outcomes
Economic stability & employment	☐	☐	☐	
Education	☐	☐	☐	Early childhood education and high quality pre-school definitely support better long-term outcomes for individuals.
Environment	☐	☐	☐	#1 Children need to be safe
Food access / nutrition	X	☐	X	Ensuring families have access to proper nutrition if it is a documented unmet need
Health literacy	☐	☐	☐	Health literacy is helpful for families but not as important as food, housing, child care, employment and safety.
Housing	☐	☐	☐	Safe and stable housing for families with children
Language or translation services	X	☐	☐	We find that family members can often provide reliable translation at no cost but some funds are necessary for exceptions
Literacy	☐	☐	☐	This is not generally a barrier to services
Transportation	☐	☐	☐	Provide needy clients with bus passes

Other	Transportation to appointments is a huge barrier. No show rates are very high. As many services as possible should be provided in-home such as assessment, case coordination and some service delivery.

16) **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	Coordinate care? Yes	No	In what capacity should these individuals coordinate care in the ACC Program?
Advanced Practice (Registered) Nurses	☐	X	
Certified Addiction Councilors	X	☐	We tried in-home drug counseling that did not work well.
Certified Nurse Midwives	☐	☐	
Community Health Workers	X	☐	
Generalists (BA/BS/MA/MS)	X	☐	Only if well trained on safety and service delivery
Health Coaches	☐	☐	
Licensed Clinical Social Workers	X	☐	This is an expensive option for in-home but a good choice for assessment and case planning
Licensed Marriage and Family Therapist	X	☐	Same as above
Licensed Mental Health Counselors	X	☐	Same as above
Licensed Professional Counselor	X	☐	Same as above
Masters of Public Health	☐	☐	
Medical Doctors / Doctors of Osteopathic Medicine	☐	☐	
Nurse Practitioners	☐	☐	Perhaps to sign off or supervise some case plans
Patient Navigators	☐	☐	

Peer Advocates	☐	☐	
Promotoras	☐	☐	
Psychiatrists	☐	☐	
Psychologists	X	☐	
Registered Nurses	☐	☐	
Social Workers	X	☐	Excellent for in-home assessment and service delivery
Wraparound facilitators	☐	☐	
Other

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Kelley Vivian
Location: Colorado Springs, El Paso County, Colorado

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Community Health Partnership
Location: Colorado Springs, El Paso County, Colorado

☒ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☐ Medical provider / PCMP / other provider
  i. **Type or specialty:** Click here to enter text.
  ii. **Area of practice:** Click here to enter text.
☐ Provider advocate (e.g. medical society)
☒ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☐ **Other (please describe):** Click here to enter text.

Are you currently involved in the ACC program?

☒ Yes
☐ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☐ 3-4 years

How have you been involved in the ACC program and what interaction have you had with RCCOs:
Community Health Partnership (CHP) is the RCCO for Region 7.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:
Click here to enter text.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☒ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

Please feel welcome to describe why or why not using the space below.

☒ Since before the program was implemented.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

Allowing RCCOs to be implemented in response to the unique nature of each community is working well in the ACC program. Also, the inclusion of RCCO Leadership Group and RCCO staff in HCPF meetings and discussions about ACC program implementation is also working well.

2) What is not working well in the ACC Program?

3) What is working best in the Behavioral Health Organization (BHO) system right now?

The State of Colorado has been a strong leader and model for the nation over the past 20 years as it relates to the management and delivery of Behavioral Health services. Instead of operating in a system that emphasizes volume through a fee for service system, Colorado has been progressive in their approach by moving to a capitated, risk-based approach for an entire population of people. Risk stratification, expansive access, management of expensive clinical care with best practice clinical pathways and a strong emphasis on taking care back into the communities has allowed for significant statewide savings and better care outcomes. With over 20 years of experience in this risk-based model, which is a fundamental component in any payment reform initiative, the BHOs have figured out how to manage provider risk. This skill set can be scaled to accomplish similar outcomes across all of healthcare.

4) What is not working well in the BHO system?

Even though the BHOs have operated in a managed, risk-based contract for decades, over the years this model has continued to emphasize encounters and retroactive fee for service accounting continues to take place. To be successful in healthcare delivery moving forward, HCPF will need to plan for a system that reimburses strong, performance-based outcomes.

5) What is working well with RCCO and BHO collaboration right now?

RCCO and BHO collaboration is working well at the community level with great cooperation between the RCCO and community mental health center (CMHC) system. RCCOs and CMHCs are working together to support whole-person care coordination and integration of behavioral health and physical health into primary care and CMHCs.

6) What is not working well with RCCO and BHO collaboration right now?

Differences in interpretations of HIPAA among BHOs and RCCOs is hindering the ability to share population data and achieve better health outcomes, reduce costs, and treat each client holistically.

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

First, as alignment continues between the RCCO and BHOs, the RCCO RFP should continue to emphasize further integration of programs, data and finances to meet goals related to the development of health homes and person-centered care, as well as finding further efficiencies. RCCOs that can demonstrate continued movement in this direction should be rewarded with higher scores on RFP scoring.

Second, the Colorado State Health Innovation Plan is critical to the advancement of healthcare integration in Colorado. Bringing together stakeholders from multiple disciplines to create a centralized platform to best deliver care and track both the data and finance on the back end is critical. Feedback from the medical community, behavioral health community, social services, and educational fields need to be included.

Third, to truly allow behavioral health to integrate into physical health, the alignment of government funding streams must occur. Funds from HCPF (Medicaid) and OBH must work in tandem to allow for comprehensive care of patients as well as achieve population health goals moving forward.

Fourth, to provide comprehensive care, we must continue to move away from a fee for service system, which emphasizes volume, and move towards a risk-based payment model where comprehensive care utilizing advanced techniques such as risk stratification, produces stronger clinical and financial outcomes.

Fifth, as we move further into integrated care planning for people with multiple, complex health needs (i.e., intellectual and developmental disabilities, organic-based dementia care and traumatic brain injuries), we encourage HCPF to utilize BHO/MSO experience since they have been successfully providing risk-based population care for years.

Sixth, creating enough flexibility in the billing and reporting systems to distill specific types of encounters in organizations that are hosting behavioral healthcare providers but not hiring those providers directly.

Lastly, we encourage HCPF to consider enhancing the existing Medicaid SUD benefit to a full continuum of care, including services in parity with those offered for mental health and physical health (such as intensive outpatient, partial-hospitalization and inpatient / residential treatment services) to produce better health outcomes and lower costs over time.

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	Barrier? No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☐	☒	
Community Behavioral Health Services Rule	☐	☒	
Covered diagnoses list	☒	☐	If there was not a limited diagnosis set, it would allow for much more comprehensive services to be provided to patients in a physical health setting.
Different behavioral / physical health reimbursement	☐	☒	Right now we cannot bill physical health in the behavioral health setting so CMHC are not able to run primary care unless they become an FQHC. Also physical health is incentivized by FFS and CMHCs are not, so the billing mechanisms do not align.
Institutions for Mental Diseases exclusion	☒	☐	IMD continues to be a barrier for expanded services to meet local population needs. While the 1915 (b) waiver through the Medicaid Managed Care program offers some flexibility, the risk of how our waiver could be interpreted by the Feds have prevented many service expansions from occurring in our community.
OBH rules, reporting, or financing (regulatory differences between agencies)	☒	☐	Better alignment in licensing and compliance standards between OBH, HCPF and CDPHE could assist with streamlined standards and service provision process for approach by state agencies
PCMP financing structure	☐	☒	
Per-member per-month amount	☒	☐	The PMPM paid to PCMPs is insufficient to move toward patient-centered medical home care that is inclusive of behavioral health providers as a part of the care team.
Physical space constraints	☒	☐	Locally we are looking for additional solutions for expanded space for primary care in the CMHC (bidirectional care). As 2703 health homes continue to be considered in Colorado, this will remain an important area to address.

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

Privacy Laws (HIPAA, 42 CFR)	☒	☐	42 CFR is a real problem for care coordination and a barrier to ensuring the best care is delivered to patients; HIPAA is less of a concern
Professional / cultural divisions	☒	☐	As the primary care and behavioral health fields continue to come together and integrate, professional and cultural divisions is something we will need to continue to bridge. The BHO and the MHCs have very rich experience in this area that can be utilized to bring the two fields closer together.
RCCO or BHO contracts	☐	☒	
Staff capacity	☒	☐	Work force issues and staff capacity is an issue nationally for all of healthcare. We have an aggressive state and local recruiting strategy to bring in specialists in the behavioral health area.
State/Federal rules or reporting requirements	☒	☐	The reporting requirements need to be aligned across state agencies
Technical resources / data sharing	☒	☐	For best continuity of care, SDAC data needs to be shared with the BHOs and encounter data from the BHO needs to be shared with RCCOs
Training	☒	☐	While there are national training programs to best train BH specialists to work in Primary Care, the field is still fairly young. Training happens mostly through internship programs and certificate training programs. Very few Masters/Doctorate programs teach to integrated care and even fewer primary care residencies and nursing programs train to how to utilize behavioral health consultants as a part of the medical team. More work needs to continue in this area.
Others	Please type your response here.		

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

We are strong advocates of the SAMHSA 6 levels of integration. This approach aligns with an emerging national standardization of levels of behavioral/physical health integration. It allows for training, research and cross-collaboration while using a similar language and operational approach.

http://www.integration.samhsa.gov/integrated-care models/A_Standard_Framework_for_Levels_of_Integrated_Healthcare.pdf

10) Please share any other general advice or suggestions you may have about behavioral health integration.

We strongly believe that in order to achieve full integration across primary care practices and behavioral health, the principles of integration need to be agreed to across state agencies and should align across all payers. Only through this alignment will the RCCO, BHO and commercial payers be able to accomplish the goals of Colorado's State Health Innovation Plan. This not only should align services and the integration model (e.g. SAMHSA 6 Levels of Integration Model), but also administrative systems, data, financing, provider needs, and patient needs including social determinants of health, physical and behavioral health needs. Additionally, there are many key populations that still rest in different oversight and funding streams that need to be integrated into our centralized care structure: such as people with autism-spectrum disorders, traumatic brain injuries, and developmental disabilities.

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination?

Care coordination are "activities that address the health and wellbeing of the whole person, including physical health, behavioral health, and social and community supports such as educational, financial, transportation, and personal safety. Care coordination should include a multi-disciplinary team-based approach that involves the member and member's family in shared decision making to create a care plan that helps the member achieve desired health outcomes".

b. How should RCCOs prioritize who receives care coordination first?

RCCOs should be allowed to prioritize members for care coordination according to their own methodology, which should reflect the needs of the community served. RCCO should also have the ability to support members that self-identify for care coordination, members that PCMPs identify for care coordination, and members that other community agencies identify as being in need of support.

c. How should RCCOs identify clients and families who need care coordination?

RCCOs should use multiple sources of data to identify members, including SDAC, electronic health records, and community-based communication and referral systems. RCCOs that utilize local systems of communication and data sharing should be awarded additional points in the RFP scoring.

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

RCCOs should document care coordination at delegated providers in ways that makes the most sense for the provider and promote tracking of care coordination across payers. RCCOs need to be respectful of the ability of each practice to document care coordination in its EHR and should support the costs of modifying EHRs to support care coordination documentation. RCCOs should document the provider's ability to conduct care coordination and track that ability over time.

12) What services should be coordinated and are there services that should not be a part of care coordination?

Medical, behavioral and home and community-based services should be coordinated and communicated across the care team, including to the client and to the client's providers. Social and community based services that support the whole person should be included in coordination to the extent possible; however, these services are difficult to document, often have extensive waitlists (e.g., housing), and require a client to be engaged and activated in order to achieve maximum success.

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

RCCOs need real time access to client data, not data that is three to six month old, in order to support care coordination. Bidders should be awarded extra points if they bring other real-time data sources to the contract. These sources could include care management data, community-based health information exchange, hospital data, or other community-based data.

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today?

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

RCCOs should be a part of their community so that RCCOs have knowledge of what other systems of care coordination exist. RCCOs should develop relationships with other care coordination entities so that RCCOs and other agencies can work together to serve the client. Clients should have choices in who leads their care coordination and RCCOs and other systems should honor that choice to the extent possible.

d. What are the gaps in care coordination across the continuum of care?

Social service needs such as housing and transportation present large gaps in the continuum of care. The Department should consider strategies for RCCOs to use their funding to help address these issues in their community. Bidders that demonstrate partnerships that support gaps in the continuum of care should be awarded additional points.

15) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	**Should the RCCO have a role?** Yes	No	**Should the RCCOs coordinate with community supports and services?** Yes	**Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?**
Abuse, neglect, and trauma	☒	☐	☒	
Affordability (assistance with prescriptions or co-pays)	☒	☐	☒	

Daycare / childcare	☐	☒	☒	
Economic stability & employment	☐	☒	☒	
Education	☐	☒	☒	
Environment	☐	☒	☒	
Food access / nutrition	☒	☐	☒	
Health literacy	☒	☐	☒	
Housing	☒	☐	☒	
Language or translation services	☒	☐	☒	
Literacy	☐	☒	☒	
Transportation	☒	☐	☒	
Other	Please type your response here. Feel free to list as many non-medical factors as you want, and please explain how the RCCO should be involved. RCCO should have a role in helping the client identify and access non-medical needs that support overall health. RCCOs can connect clients to services that exist in the community. Bidders should be able to demonstrate that they have an understanding of the impact of the social determinants of health on client's lives, how to connect clients to resources, and how to form partnerships in the community that support whole person health.			

16) **Requirements about who should** be **doing care coordination**. Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	Coordinate care? Yes	No	In what capacity should these individuals coordinate care in the ACC Program?
Advanced Practice (Registered) Nurses	☒	☐	
Certified Addiction Councilors	☐	☒	
Certified Nurse Midwives	☐	☒	
Community Health Workers	☒	☐	
Generalists (BA/BS/MA/MS)	☒	☐	
Health Coaches	☒	☐	
Licensed Clinical Social Workers	☒	☐	
Licensed Marriage and Family Therapist	☐	☒	
Licensed Mental Health Counselors	☐	☒	
Licensed Professional Counselor	☐	☒	
Masters of Public Health	☐	☒	
Medical Doctors / Doctors of Osteopathic Medicine	☐	☒	
Nurse Practitioners	☐	☒	
Patient Navigators	☒	☐	
Peer Advocates	☒	☐	
Promotoras	☒	☐	
Psychiatrists	☐	☒	
Psychologists	☐	☒	
Registered Nurses	☒	☐	
Social Workers	☒	☐	
Wraparound facilitators	☐	☐	
Other	Please type your response here. The Department should focus care coordination on the knowledge, skills and abilities of individuals rather than on licensure and post-secondary education. In general physicians, nurse practitioners and licensed behavioral health providers are in short supply in Medicaid and they need to be working to the top of their licensure to treat clients. Care		

coordinators of all background that have received cultural competency, patient navigation, and other forms of training that support client interaction should be care coordinators. RCCOs should build systems of care coordination based on the strengths and resources that exist in their communities, not solely on the licensure of individuals.

17) **Care coordination requirements for specific populations.** Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and infants	☐	☒	
Children	☐	☒	
Children who are healthy, but in socially-complex environments	☐	☒	
Children involved in the foster care system	☐	☒	
Children with a chronic illness	☐	☒	
Children with a serious emotional disturbance	☐	☒	
Children with medical complexity	☐	☒	
Children or youth with a behavioral health diagnosis or substance use disorder	☐	☒	
Transition-age adolescents	☐	☒	
Parents and families	☐	☒	
Pregnant women	☐	☒	
Adults	☐	☒	
Adults who are healthy, but in socially-complex situations	☐	☒	
Adults with a chronic illness	☐	☒	
Adults with a behavioral health diagnosis or substance use disorder	☐	☒	
Clients involved in the criminal justice system	☐	☒	
Clients with a disability	☐	☒	
Clients in a nursing facility	☐	☒	
Elderly clients	☐	☒	
Frail elderly clients	☐	☒	
Clients in palliative care	☐	☒	
Other populations, please comment: The state should endorse a standard definition of care coordination and require that potential bidders show how they would meet the tenets of care coordination in the contract. Bidders should be able to demonstrate that a sub-population may have			

unique considerations for care coordination and how its model of care coordination or relationships with other community agencies allows the bidder to serve the needs of individuals and of sub-populations.

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

RCCOs should be partners with child-serving agencies and bring medical resources to the table to support the child and family. The client, guardian or family should be able to select which agency coordinates care. RCCOs can also serve to support the child-serving agencies case worker with care coordination resources.

19) How should care coordination be evaluated? How should its outcomes be measured?

5ee #22 for more information.

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

a. What is the PMPM cost for providing care coordination services?

The true cost for providing care coordination is dependent on the intensity of the coordination and the number of people to be served. The current PMPM is inadequate to cover the cost of care coordination for the entire population to be served.

b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

PMPM could be risk adjusted by acuity, but this should not be attempted by population as every population has different care coordination needs and one-size-fits-all payment methodology may not adequately cover needed services.

21) 5hould there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

No. Care coordination should be client-centered and based on available infrastructure and capacity on the community. Unfortunately one cannot reach everyone in this population, due to their nature and economic situations.

a. **Care coordinator to client ratios.** If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☐
51-100	☐

101-200	☐
201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

Since outcomes will be client specific, cost reduction and utilization of services may be the logical route in the short term. Client satisfaction measures specific to care coordination should be included. Long term evaluation will need to utilize outcomes measures that assess wellbeing and quality of life of the client.

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

While it is important to establish criteria for eligibility for care coordination at the RCCO and provider practice levels, the need for and type of care coordination should be specific to each individual client. It must be person-centered to be successful, and we must recognize the need for flexibility to fully address the needs of our clients.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

CHP recommends that HCPF continue to allow RCCOs to implement the tenets of the ACC program in response to the needs of the community and providers. While the Denver market has overlapping RCCOs and a larger population that seeks care across RCCO boundaries, this issue is less present outside Denver.

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

A bidder should be able to demonstrate a history of community partnerships that have produced results. A bidder should be able to detail partnerships, scope of work of each partner, and tangible outcomes from the partnerships. A bidder should have a presence in the community it serves and be able to describe its presence as more than an address or satellite office. Letters of support from community agencies, such as nonprofit social service agencies, county agencies, and other non-medical entities that serve Medicaid clients should be required in the bid package.

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

This would be confusing for clients and difficult for RCCOs to manage. If a client in enrolled in the RCCO outside his community, it would be difficult to choose a new provider when the client wishes to change providers. If a client lives in Boulder, sees a PCMP in Denver, is then enrolled into a Denver-based RCCO at the request of the PCMP, the client gets discharged from the PCMP or wishes to find a new PCMP, the Denver-based RCCO can only offer other Denver-based alternatives. Further, if the same Boulder client needs community resources and calls his RCCO, but the RCCO is Denver-based, it will not be able to help the client locate resources within the client's community. RCCOs form relationships with PCMPs, specialists, and community agencies inside their geographies. The current system of allowing clients to access care across boundaries supports client choice. Letting PCMPs choose to enroll their clients in a RCCO of the PCMPs choosing negates that choice.

27) Should the RCCO region maps change? Why or why not? If so, how?

CHP recommends keeping the current RCCO regions and the current ratio of one RCCO per region consistent in the next bid. Maintaining consistency and the ability to build upon hard won relationships outweighs the possible benefits of tweaking boundaries or increasing or decreasing the number of RCCOs.

28) Should the BHO region maps change? Why or why not? If so, how?

CHP recommends increasing the number of BHO regions and aligning the BHO regions with the RCCO region map to promote continuity of care for clients, improve partnerships among physical health and behavioral health providers, and streamline access to care for clients.

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

HCPF should provide six months of transition time from the date successful bidders are announced to the implementation date. This would allow adequate time for contract negotiations, readiness reviews, and at least 60 days for transition teams to work together to ensure seamless transition of RCCOs for clients and providers. During the transition time, RCCOs should renew or execute contracts with PCMPs and other network providers, participate in a readiness review with HCPF, standup the customer service center, create transition materials for clients, and be ready to go live on the implementation date.

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

CHP has the following recommendations for HCPF:

- **Extend continuous eligibility to adults in Medicaid.**

- **Remove payment barriers that impede behavioral health and physical health integration.**

As noted in HCPF's SIM proposal, Medicaid administers and pays for behavioral health benefits separately from physical health benefits, creating disparate delivery and payment systems. Medicaid reimburses behavioral health services through a fully capitated behavioral health carve out through the Colorado Community Mental Health Services Program. Despite the financial savings of this model, the carve out makes it difficult to integrate behavioral health services into the RCCO delivery system. **CHP recommends that HCPF modify billing rules regarding covered diagnosis, timing of behavioral health and physical health encounters, and allowable billable behavioral health services provided in a primary care medical provider (PCMP) office to incentivize integration.**

- **Allow RCCOs to distribute PCMP PMPM, incentive and shared savings payments**

As RCCOs work to develop relationships with PCMPs to drive care delivery system transformation, having closer involvement of the RCCOs in capitated and pay for performance payment delivery is a critical measure to encourage PCMPS to work with their RCCO partners. Having PMPM payments run through RCCOs will help PCMPs acknowledge the role of the RCCO in supporting members with care coordination and PCMPs with practice support.

Allowing RCCOS to determine how pay for performance and shared savings payments are distributed to providers in the RCCO will allow more leverage in driving service delivery transformation and building the medical neighborhood. For example, RCCOs can pass through incentives to PCMPs based on individual performance. RCCOs can also reward non-PCMPs for their role in meeting performance indicators and shared savings.

- **Enact payment reforms that target regional performance and allow regional shared savings**

CHP supports HCPF's desire to implement payment reform pilots and shared savings. Properly structured, alternative payment methods can promote high-value services and quality patient outcomes while reducing

costs in the ACC program. Regional variations in provider structure and community supports are best served by regional pools for shared savings and region specific payment reform pilots.

- **Seek solutions to remove restrictions around payment reforms for hospital services.**

Federal upper payment limit and hospital provider fee rules are disincentives to including hospital services in payment reform and risk sharing arrangements. Hospital services are a significant portion of Medicaid costs, and CHP advocates including hospitals in payment reform initiatives. To effectively implement payment reform and transition the ACC program to risk, HCPF must seek federal demonstration waivers or find other solutions to preserve federal funding and allow for payment arrangements beyond fee-for-service.

- **Provide claims data by provider location and at the Medicaid provider ID level.**

Prior to the next RFP, HCPF should require that all Medicaid providers obtain Medicaid IDs by location. For example, some RCCO providers have as many as 10 locations under one billing ID. This makes it impossible to determine what location within the ID would be best suited for certain practice transformation activities. Since RCCOs cannot isolate data by location for large providers it is difficult to determine care delivery system issues with accuracy—which then makes it overly difficult to determine how and which practice transformation activities need to occur to improve care delivery. Beyond location ID, being able to identify claims by National Provider Identification (NPI), will help drive better practice support initiatives.

- **Provide RCCO access to HCPF databases that collect information on Medicaid members, including systems used by Single Entry Points (SEP) and Community-Centered Boards (CCB) and Office of Behavioral Health.**

The foundation for care management is current data sharing and analytics at the point of service and assessing that information to make decisions about resources allocation. Initial care management cannot be better than the limited data presented at any given time. In order to fully achieve care coordination within the RCCO, RCCO's need access to data about the care our members receive from community-based services and behavioral health services. Requiring RCCOs to collect this information piecemeal and only from willing partners undermines activities to integrate systems.

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

The current benefit structure does not support efforts by RCCOs and PCMPs to activate and engage patients in their healthcare. CHP recommends HCPF alter the benefit structure to include a higher co-pay for emergency department usage and a lower co-pay for primary care usage.

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

CHP recommends keeping the current RCCO regions and the current ratio of one RCCO per region consistent in the next bid. Maintaining consistency and the ability to build upon hard won relationships outweighs the possible benefits of tweaking boundaries or increasing or decreasing the number of RCCOs.

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

34) What role should RCCOs play in attributing clients to their respective PCMPs?

CHP recommends HCPF allow RCCOs to directly assist members with changing PCMP attribution. The primary tenet of a patient-centered medical home is the relationship between a patient and the provider team. Correctly identifying a provider's patient panel and being able to allow patients to self- attribute to a PCMP is a timely, convenient manner is key to affirming the patient-provider relationship and assuring the participants become a team.

Having two systems to attribute patients makes little sense to providers and patients, who often don't know their current attribution status. Allowing RCCOs direct access to record and update a member's PCMP choice regardless of the member's current attribution status will greatly improve the timeliness of attribution and the continuity of care for members. PCMPs and members will have confidence that the attribution to the provider of choice happened quickly and accurately, and the patient-provider relationship can be solidified.

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

Collaboration should exist at the local level between RCCOs and local public health agencies (LPHA). Each LPHA is structured differently to meet the needs of its jurisdiction as are RCCOs. LPHAs and RCCOs can find ways to work together to serve clients in common. HCPF and CDPHE can provide guidance or highlight successful partnerships, but should not prescribe collaboration.

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

Collaboration should exist at the local level between RCCOs and local departments of human services (DHS). Each DHS is structured differently to meet the needs of its jurisdiction as are RCCOs. DHSs and RCCOs can find ways to work together to serve clients in common. HCPF and CDHS can provide guidance or highlight successful partnerships, but should not prescribe collaboration.

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

Collaboration should exist at the local level between RCCOs and local grantees with Connect for Health CO insurance navigators, often community social service agencies. RCCO already have partnerships with many

Connect for Health CO sites. Collaboration could be expanded to sharing eligibility files to enable RCCOs to proactively assist newly eligible Medicaid clients to select PCMPs.

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

HCPF, DORA and DOI should be consistent in their conceptual framework for the ACC program. Regulations should support the ACC, and RCCOs should not be placed in the position of negotiating different requirements from state departments. We recommend establishing conceptual frameworks for defining financial risk between DOI and HCPF.

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

RCCOs should be required to continue to utilize the current Performance Improvement Advisory Committee (PIAC) structure to provide input into the contractor's implementation and ongoing management of the ACC program. The PIAC should continue to involve members, client's families, client advocates, and advocacy organizations that interact with mutual members. The contractor should have a PIAC that represents stakeholders from across its geography. At least one member of the PIAC should represent the Medicaid-Medicare community in an effort to improve innovation and collaboration efforts for the Medicaid-Medicare Program where possible. RCCOs should also ensure that engagement with clients, their families, and advocates includes a diverse representation that ensures the RCCO is responsive to community needs and encourages building of a medical neighborhood to include behavioral health providers, PCMPs, and non-medical providers. The PIAC should continue to be required to meet at least quarterly, with minutes posted to the contractor's website, and RCCOs should complete PIAC projects in a reasonable time frame to promote member engagement and innovation. Members have different health beliefs, and opinions, on how they receive care, therefore, member focus groups may continue to be useful in ensuring that RCCOs are able to adjust to varying local community and member needs specific to their unique region. RCCOs should also continue to be required to promote member education and healthy lifestyle choices in a manner that is appropriate for the respective region (newsletters, decision aids, etc.).

Bidders in the RCCO process should demonstrate active engagement with the local community and clients served. Bidders that can demonstrate this engagement should be awarded additional points in the scoring system.

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

Again, the PIAC should remain as a requirement for RCCOs as the committee provides for member, provider, community, and social service provider engagement in a forum that promotes collaboration and accountability amongst the local community. Moreover, RCCOs should be required to put in place guidelines that facilitate stakeholder engagement across RCCO boundaries where appropriate. In order to promote ongoing feedback, process improvement, and innovation RCCOs should be required to regularly survey providers, community organizations, and social service providers to glean specific feedback that can be used to improve care coordination, overall engagement, and build upon comprehensive care coordination, integrated care, and a patient centered medical neighborhood. Suitable suggestions made by stakeholders should be implemented in a reasonable time frame as deemed appropriate by the RCCO. The RCCO should be able to adjust to the feedback of stakeholders in a way that allows for local variation amongst each community.

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

It is crucial that RCCOs are able to respond to the unique needs of their respective communities. Much work has been done to establish and maintain relationships within local communities. In HCPF's scoring and RFP

should award extra points for community involvement. It is important to create community involvement that demonstrates the responsiveness of RCCOs to their community and ensures stakeholders have a vested interest in the success of the RCCO. RCCOs should also work with their respective communities to reduce duplication of services, eliminate redundancies, and/or collaborate where appropriate in an effort to streamline services, refer to appropriate resources, and build upon referral networks which can positively impact the medical neighborhood as well as health and wellbeing of the member. It also may be beneficial to communicate opportunities for public comment, specific to the work of the RCCOs, with an ever-widening net to ensure the uniqueness and diversity of each community is represented. Enhanced community engagement may also be created through an annual Colorado ACC conference that provides opportunities to share best practices, successes, collaborate, and create deeper community engagement.

42) How should the Department structure stakeholder engagement for the ACC as a whole?

The Department should continue to require that RCCOs submit a regular Stakeholder Feedback report that describes the contractor's work in collaborating with stakeholders, a summary of stakeholder feedback, trends, issues, complaints, and proposals to solve issues. The Department should allow for RCCOs to be less prescriptive in how they address issues, which allows for local variation and ensures a local patient centered approach that better meets the needs of the individual than a population specific approach. Stakeholder engagement is critical to the success the ACC. Ongoing regular consultation, involvement, and broad inclusivity of stakeholders will remain important in steering ACC initiatives, promoting shared accountability, two-way engagement, and collaborative decision making that allows for flexibility by region. Stakeholder engagement should not merely be a public exercise but a way to engage in issues that matter to the respective community, which goes beyond reporting, where information is used to make critical decisions. In that, it's important to tie stakeholder benefits to the goals of the ACC where appropriate. RCCOs should be able to demonstrate and report on their successes, as well as lessons learned, through interacting with stakeholders and be allowed to adjust programming as appropriate while ensuring the Department is well informed through a regular reporting process.

The Department may want to consider how local PIACs fit into the state-wide PIAC structure in the next RFP.

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

No.

a. If no, what are the gaps?

Not enough specialty and behavioral care.

b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

There are gaps in specialty care for children.

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

a. What role should hospitals play in the next iteration of the ACC Program?

Hospitals need to better coordinate social support services with community services.

b. What role should pharmacies play in the next iteration of the ACC Program?

Pharmacy data needs to be available for the RCCOs.

c. What role should specialists play in the next iteration of the ACC Program?

Specialists will get involved if the financial incentives are there.

d. What role should home health play in the next iteration of the ACC Program?

Home health care and access to their data for transitions of care is critical for the MMEs.

e. What role should hospice care play in the next iteration of the ACC Program?

Hospice care will also be vital and their data must integrate and be accessible.

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

SEPs and CCBs seem to be doing fine. Need to look at better communication and data sharing between Medicaid and Community Living departments at HCPF.

g. What role should counties play in the next iteration of the ACC Program?

Counties' public health data should better integrated with HCPF and RCCOs.

h. What role should local public health agencies play in the next iteration of the ACC Program?

See 44g for more information.

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

Community organizations' funding where services are directly tied to providing medical or behavioral health care should be funneled through the RCCOs or integrated in a way to facilitate better transitions of care support at the state level.

45) How can RCCOs help to support clients and families in making and keeping appointments?

RCCOs must leverage current community organizations. Payment systems at the state level need to be modified to better facilitate this. See 44l for more information.

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

No. The next RFP should require the bidder to articulate how they will create or support a system of care coordination that meets the requirements of the clients and community. Bidders should be required to demonstrate an on-the-ground, local care coordination system that conducts the activities and determines how they best serve the needs of our clients. The Department should require skills, not specific job titles.

47) **Community Health Worker reimbursement.** Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement process	(Please check all that apply)
Independently bill	☒
On staff (salary) at Primary Care Medical Provider Clinic	☒
On staff (salary) at RCCO	☒
Per Member Per Month Payment	☒

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

Partnership only with dental providers, unless the state significantly changes the adult dental benefit.

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you?

It covers the spectrum from language, religion, education, age, and any life experiences that if not understood, could hinder care for the client.

b. What RCCO requirements would ensure cultural competency?

Requirements with a financial stick and/or carrot attached would better ensure cultural competence is taken seriously by all providers and is applied consistently to all clients.

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?

Skills needed would be active communication and a non-judgmental attitude. These skills should be taught and reinforced by regular training activities.

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

Consistent training on health disparities, the effects of poverty, and communication will address these inequities. RCCOs should be free to determine what training should be offered to accommodate differing needs of communities.

S0) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

As RCCOs evolve and begin to resemble Qualified Health Plans in their focus on the Triple Aim, RCCOs will need to have the expressed support and approval from HCPF and Centers for Medicare and Medicaid Services (CMS) to develop preferred networks of specialists, facilities and ancillary providers. The primary purposes of these networks would be to increase timely access to specialty care, improve outcomes, and decrease overall cost for Medicaid beneficiaries who have specific conditions or diagnoses. This allows for natural referral patterns within communities to be honored.

To be clear, CHP is not recommending that patients be restricted to these preferred providers to obtain specialty care. Patients would have the choice to obtain care from any willing provider; however, the CHP PCMPs and care management teams will recommend these selected programs and selected providers to their appropriate patients, as they will be able to obtain timely access and closely coordinate care with these selected providers.

The RCCOs will also need HCPF/CMS' expressed understanding and approval to provide incentives to patients to choose to obtain their care from the preferred network, to stay within the selected network during the course of treatment, and to complete a recommended course of treatment. For example, these incentives might include such mechanisms as waived copays, transportation or arranged child care.

Unless specifically defined in the agreement between HCPF and the RCCO, or in a subsequent payment reform program, HCPF would retain all responsibility for claims payment and would retain risk for services rendered by these preferred network providers. Claims would continue to be billed as fee for service (FFS). The RCCOS will develop formal administrative agreements or 'compacts' with these providers, outlining the access standards, goals, metrics and administrative procedures of specific programs. Any additional funding that may be required to develop and make these programs successful, beyond FFS payment, will be the responsibility of the individual RCCO.

S1) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

Change the benefit structure on incentivize using primary care by making it free. Financially dis-incentivize ER visits by increasing co-pay and allowing for triage at ER to not serve non-emergent presentations. Emergency department patterns vary distinctly by region, making the ability of a RCCO to intervene in ways that are community-specific critical to success.

S2) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

See #S0 for more information.

Practice Support

53) **Support for practices.** Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☐	☐	☐	☐
Network provider education	☒	☐	☐	☐
Assistance with practice redesign	☒	☐	☐	☐
Assistance with efficiency-enhancing activities	☒	☐	☐	☐
Provide web-based resources and directories	☒	☐	☐	☐
Provide practice-specific data reports	☒	☐	☐	☐
Provide clinical care guidelines and best practices.	☒	☐	☐	☐
Provide clinical screening tools	☒	☐	☒	☐
Provide health and functioning questionnaires	☒	☐	☒	☐
Provide chronic care templates	☒	☐	☒	☐
Provide registries	☐	☒	☐	☒
Offer client reminders	☐	☒	☐	☐
Offer client self-management tools	☒	☐	☒	☐
Offer educational materials about specific conditions	☒	☐	☐	☐
Supply behavioral health surveys	☒	☐	☐	☐
Supply other self-screening tools	☒	☐	☒	☐
Administer behavioral health surveys	☒	☐	☒	☐
Administer other self-screening tools	☒	☐	☒	☐
Prepare client action plans	☒	☐	☐	☐
Provide training on providing culturally-competent care	☒	☐	☐	☐
Provide training to supporting staff	☒	☐	☐	☐
Provide training on motivational interviewing	☒	☐	☐	☐
Provide tools and software for phone call and appointment tracking	☐	☒	☐	☐
Provide tools and resources for tracking labs, referrals, etc.	☒	☐	☐	☐
Provide referral and transitions of care checklists	☒	☐	☐	☐
Provide visit agendas or templates	☒	☐	☐	☐
Provide standing pharmacy order templates	☒	☐	☐	☐
Provide comprehensive directory of community resources	☒	☐	☐	☐
Provide directory of other resources	☒	☐	☐	☐
Provide materials regarding Nurse Advice Line	☒	☐	☐	☐
Ensure all tools and resources are centrally located on RCCO-specific website	☒	☐	☐	☐
Others: Patient satisfaction tools and measures				

54) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

Training on cultural competency and practice specific data tools. This could be provided through health information exchange.

55) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

The ability to assist practices in achieving PCMH status through an accredited agency is valuable. More importantly, however, is the flexibility to meet practices "where they are" in terms of transforming into medical homes.

56) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

Provider financial support incentives that integrate behavioral and pharmacy, especially in smaller practices.

57) Should the Department require that PCMPs utilize disease registries to manage the health of their population?

use of registries would provide valuable data sources, but not sure it would assist PCMPs in their work without support from the RCCOs More comprehensive population-level data warehousing would be more useful in the long run.

58) Please share any other advice or suggestions about provider support in the ACC.

RCCOs need to provide assistance to practices on business processes to make them more efficient. Additionally, practice support should be based on the needs of a specific practice, not on a formula. Flexibility and adaptability are required to support the variety in size, sophistication, and interest of our practices.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

No. Substandard Medicaid fee-for-service provider reimbursement rates, even when combined with RCCO provider PMPM payments, provide little financial incentive for PCMPs and specialists. Reimbursements are not adequate to finance medical home models. We must institute more innovative ways to deliver cost-effective care. Some type of shared savings will be instrumental to any solution. Furthermore, the siloed and differing forms of payment for medical and behavioral health do not serve to support an integrated model. At the very least, the behavioral health capitation needs to expand the provided scope of services to enable reimbursement for access and intervention.

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

In some cases, yes. Medicaid providers serve low-income populations, and some may require extra assistance in building ACO client-capacity. Larger providers are often better staffed and trained to deliver the services critical to medical home success and consequently, a value-based reimbursement system would likely favor those entities. Some of the barriers to smaller, less mature, or minimal Medicaid practices include strained and less adequately trained clinical and administrative staff, antiquated records systems, absence ofelectronic medical records, and inability to manage expanding regulatory requirements. Inefficient processes quickly translate to higher costs and mitigate the advantage of value-based payment systems. Finally, it is important to keep in mind providers are strained with similar, but distinct care management mandates from other insurers, often adding yet another obstacle to uniform care delivery. Aligning value based payments with what is demanding by commercial payers could help ensure success.

62) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

CHP is not currently licensed by the DOI; however we, along with the other two RCCOs that are not currently licensed as HMOs, have had discussions with the DOI and HCPF about requirements to take risk. Medicaid is not an insurance program, and the RCCOs are not in the insurance business. Although Medicaid functions as a health plan in some ways, Medicaid beneficiaries are not sold, and do not buy, insurance policies; rather they are covered based on entitlement to benefits of a program pursuant to federal and state regulations. We believe that HCPF currently has the authority to establish risk arrangements with RCCOs and are open to continued discussions on appropriate requirements.

63) What role – if any – should the RCCOs play in the distribution of payments to providers?

As RCCOs work to develop relationships with PCMPs to drive care delivery system transformation, having closer involvement of the RCCOs in capitated and pay for performance payment delivery is a critical measure to encourage PCMPS to work with their RCCO partners. Having PMPM payments run through RCCOs will help PCMPs acknowledge the role of the RCCO in supporting members with care coordination and PCMPs with practice support.

Allowing RCCOS to determine how pay for performance and shared savings payments are distributed to providers in the RCCO will allow more leverage in driving service delivery transformation and building the health neighborhood. For example, RCCOs can pass through incentives to PCMPs based on individual performance. RCCOs can also reward non-PCMPs for their role in meeting performance indicators and shared savings.

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

We must create more robust systems of quality measurement and evaluation of payment reform pilot programs, ones which align financial incentives and support ACO capacity-building. RCCO incentive and shared-payment capacity must be directly tied to their ability to manage population health and improve outcomes. And, to determine the most efficient care management activities needed to deliver those quality outcomes, it is imperative RCCO's have access to timely data, particularly data which drives agreed-upon KPI's.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

The state should consider the following:

- Have consistent measures over longer periods of time and solid methodology for measurement
- Discover KPIs that align with commercial plans to reduce administrative burden
- Choose measures that balance cost and quality
- Choose process measures for chronic conditions; measure prevention and wellness; use HEDIS measures
- Measures should be adjusted by risk weights or acuity of population
- Total cost of care should be reduced by percentages in yearly increments

66) **Measuring Client experience.** Please complete the table below to indicate how the Department should measure Client/patient experience:

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☒	☐	The CAHPS is useful, and the ability to drill down further into the data sets would be useful in making local decisions.
SF-12 Health Survey	☐	☒	This is not a measure of satisfaction or experience, but patient perception of his/her health status.

Other types of client interviews / surveys	☒	☐	Interviews and surveys with open ended questions are useful, on many levels, to measure patient experience. While Likert scale questions are useful, open ended questions provide for a better snapshot of patient experience. Volume of surveys and geographic distribution would be important considerations.
Patient Activation Measure	☐	☒	This is not a measure of satisfaction or experience, but the patient's engagement.
Focus groups	☒	☐	Focus groups are very useful but heavily biased toward who shows up, but should be regionalized to ensure the overall true patient experience is captured in each respective community. Engaging in focus groups in metro areas alone does not provide for an accurate picture of patient experience in rural or frontier areas where patient needs are different.
Other	Please type your response here.		

67) Knowing that, at this time, the Department only has claims data, how should population health be measured?

It is very difficult to pull meaningful health outcomes and population health data from claims. Population health measures should be adopted only when a community (or the state) has the means to collect the data. This may mean different timelines for different RCCO regions.

68) How should quality and performance data be reported to the RCCOs, PCMPs, and the public?

It is imperative RCCO's have access to timely data, particularly data which drives performance in KPIs. Dashboard-level information should be supported by raw data, for both RCCO's and PCMP's. Quality also equates to eliminating redundant processes and efforts. At present, RCCO's receive data from multiple sources, much of it duplicative, infrequent, and stale. Any efforts in movement towards a single source (all-claims) data base would likely improve patient care delivery and reduce costs.

69) **Measures for payment**. Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☒
8-10	☐
11-20	☐
21-30	☐

31-40	☐
41-S0	☐
S1+	☐
None	☐

Regardless of how many measures the Department selects, the measures should be fully vetted prior to announcement or implementation. It is unhelpful to announce performance measures tied to payment without providing a baseline, the calculation methodology, and time for RCCOs and PCMPS to prepare for interventions. Also, performance measures should hold steady over a longer period of time to allow for accurate measurement and the ability of RCCOs and PCMPS to make adjustments to interventions during the measurement period. Advantages gained from having RCCOs and PCMPs focus on multiple performance indicators may be quickly offset by the efforts expended in establishing them and collecting data need to measure them.

70) What percent of RCCO payments should be tied to measures or performance?

Percentage	
10-20%	☐
21-30%	☐
31-40%	☐
41-S0%	☐
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

The answer here depends on the nature of the payment model proposed in the next RFP. As payment reform gradually moves from fee-for-service to more capitated models, the need for performance incentivizing will lessen, as payees will fundamentally improve performance in order to remain competitive. In the initial stages of payment reform, we believe RCCO risk (value-based compensation) should be minimized.

And for now, the State should also maintain a payment model that recognizes there will be some level of upfront costs for both RCCO's and PCMP's – again, one with more predictable payments which allow entities to build critical infrastructure.

71) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?

Yes. Health care delivery maybe be marginally unique from community to community; however, the general model and objective of the accountable care model are consistent.

72) Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?

Every state is different, and ACO models vary. It would therefore be best to measure performance on improvement, as has been done thus far.

73) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

No. The frequency and availability of data should have no bearing on payments. RCCO's understand the constraints inherent in claims-based measurements. So long as the payment model employed allows for adequate upfront payments, frequency and timing of incentive-based compensation are less critical.

74) **Incentive payment frequency.** Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	☐
Annually	☐
Other	☒

If you checked the "Other" box, please describe payment frequency below:

Incentive payments should be made as soon as possible after performance has been measured. We would advocate for at least quarterly distributions, and more frequently than that, if the cost and effort required doing so did not exceed the benefit.

75) For potential offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

RCCO fixed costs are derived from the design of the quality and reporting, network development, care management and customer service components of the accountable care model. There are infrastructure fixed costs as well, such as facilities costs, supply costs, legal costs, and insurance costs, among others required to run a business.

Fixed/start-up costs include creating the financial, legal, and reporting infrastructure; contracting with vendors and providers that may provide services to the RCCO; and developing processes for care coordination, quality assurance, quality measure reporting, beneficiary engagement, and community involvement.

76) For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

Health Information Technology (HIT)

77) **Types of communication.** For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	☒
Text message	☐	☒
Web portal	☒	☐
Email	☐	☒
Telemedicine / Video chat	☐	☒
Face-to-face meeting	☐	☒
Smartphone app	☐	☒
Other:		

78) **HIT investments by organizations.** For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below:

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	☒	☐
Digital care management tool	☒	☐
Care transitions alerts	☐	☒
Electronic Health Records (EHRs)	☐	☒
Health risk assessment software	☐	☒
Practice assessment tools	☒	☐
Practice management tools (scheduling, billing)	☒	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☒
Patient education/wellness tools	☒	☐
Provider/case manager directory	☒	☐
Shared decision-making tools	☐	☒
Telemedicine software	☐	☒
Other: health information exchange	☐	☒
Other:	☐	☐

79) **Importance of technology by type.** The Department is working to determine what technology is in place, what technology is needed, and what technology should be standardized. For RCCOs, providers, and other organizations, use the table below to answer what HIT infrastructure outside of the SDAC your organization would use to perform population health management activities. Tools are scored from 1-S, where 1 are those items least-likely to be used, and S are items most-likely to be used:

Tool	1 Least	2	3	4	5 Most
Population analytics / reporting / dashboard	☐	☐	☐	☐	☒
Care management tool	☐	☐	☐	☐	☒
Care transitions alerts	☐	☐	☐	☐	☒
Electronic Health Records (EHRs)	☐	☐	☐	☐	☒
Practice assessment tools	☐	☐	☐	☒	☐
Health risk assessment software	☐	☐	☐	☒	☐
Practice management tools (scheduling, billing)	☐	☐	☐	☒	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☐	☐	☐	☒
Patient education wellness tools	☐	☐	☐	☐	☒
Provider/case manager directory	☐	☐	☐	☒	☐
Shared decision-making tools	☐	☐	☐	☒	☐
Telemedicine	☐	☐	☐	☒	☐
Other:	☐	☐	☐	☐	☐

80) What are the primary barriers to RCCOs and providers increasing their use Health Information Technology to improve the performance of Primary Care Practices?

The deficits caused by lack of functionality and high cost are the primary barriers in adoption of HIT. There must be a defined return on investment in order to convince providers to change their workflow beyond meaningful use and other federal incentives. Multiple log-ins have significant impact on the practice workflow and can provide distinct barriers to providers accepting Medicaid into their payer mix. HIT should be more aligned with commercial and Medicare payer systems to provide efficiency.

81) How can Health Information Technology support Behavioral Health Integration?

Data that resides in both behavioral health EHRs and medical EHRs must be integrated in order for care to be integrated. Only by sharing a virtual community health record and care plans can we accomplish seamless integration of care between these two systems of care.

82) In the next iteration of the ACC, should there be a shared resource for data and analytics? Please describe the basic criteria for what a shared data and analytics platform needs to contain in order for it to be useful.

While data analytics are very important, more resources need to be pushed down to the providers to allow for adoption of sharing their information in near real time to better manage outcomes and cost (see #84 for more information). The statewide data and analytics platform, based solely on claims data, is useful in providing patient stratification and for tracking RCCO and provider performance consistently, but cannot provide data on health outcomes. Looking at health outcomes is essential to the fundamental goals of the ACC program as well as the Triple Aim. To make it more useful, communities need the ability to query claims data for standard and ad hoc reports as necessary.

83) Should there be a shared care management tool? Please describe the basic criteria for what a care management tool would need to contain in order for it to be useful.

Care management tools are useful in tracking and documenting care coordination activities and provide a valuable component of an overall HIT communication strategy. Many providers already have their own care management tools, and requiring them to adopt a statewide shared tool will create distinct workflow and cost barriers A better solution is to connect disparate EHRs through HIE to create real time access to a consolidated virtual community health record for each patient

84) Should there be a shared population health management tool? Please describe the basic criteria for what a population health management tool would need to contain in order for it to be useful.

Absolutely. Whether it is statewide or community based, providers and payers need access to data analytics which are available only through data warehousing. The warehouse should have the ability to aggregate and report clinical measures to health plans, quality assurance agencies, and providers without chart extraction (see #87 below for further information).

85) Please describe the functionality that a common Medicaid provider directory would need to contain in order for it to be useful.

86) How can the RCCOs support providers' access to actionable and timely clinical data?

Health information Exchange is the ideal solution, based on a comprehensive model that includes real-time data from providers throughout the system of care (please see #88 for more information). HIE will establish virtual community health records containing longitudinal medical information compiled from hospitals, physician groups (primary and specialty), pharmacies, and ancillary providers. This would also facilitate communication between providers for clinical referrals and behavioral health integration. Ideally, the system would provide alerts into practice EHRs to notify providers about opportunities for preventive or follow-up care.

87) What are the HIT solutions that would benefit clients, providers, and RCCOs? Please comment on the parameters these tools or platforms would need to possess and the ways in which they could be used.

Health Information Exchange and consolidated community Personal Health Records (PHR) that tie directly from data in the HIE are essential to providing comprehensive care coordination across systems of care A community-based population and public health data warehouse with actionable information will provide the basis for meaningful and measurable programs to improve the health of the community, enabling the health neighborhood to better understand and manage integrated care (please see #90 for more information).

88) What technical assistance or resources related to HIT infrastructure should the RCCOs supply? This assistance or these resources could be for providers, social service organization, clients/families, or for others.

RCCOs, as community-based facilitators, should assist with facilitating, training and investing in connection of HIEs, establishing population-based data warehousing and data analytics whenever possible to establish community-specific integrated solutions to support broadly defined health neighborhoods (including medical, behavioral, and social services providers). RCCOs can also play a role in making care management tools available to support care coordination.

89) What role should health information exchange platforms like CORHIO or QHN play in the next iteration of the ACC?

CORHIO, QHN and other HIE platforms can help provide the hospital data they are already connected to and are an integral part of the solution. To maximize their potential, these platforms must be community supporters and system integrators with community-based solutions. (see #90 for further detail).

90) Please share any information, advice, and suggestions you have about health information technology in the ACC Program.

Health Information Exchange (HIE) should be regionally based to accommodate the needs of different communities. HIE is essential to care coordination. Equally important is access to data analytics at the population level to enable communities to identify and address issues and opportunities within the health neighborhood.

While care management tools are very useful in coordinating care among providers, we need to invest in connecting EHRs through system integration first. Because of practice workflow, care management tools may not be adopted by all providers.

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Community Reach Center
Location: Thornton, CO 80260

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Click here to enter text.
Location: City, County, State.
☐ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☒ Medical provider / PCMP / other provider
  i. Type or specialty: CMHC
  ii. Area of practice: Click here to enter text.
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☐ Other (please describe): Click here to enter text.

How have you been involved in the ACC program and what interaction have you had with RCCOs:
Due to owning a pediatric practice, Community Reach Center is involved and engaged with the RCCOs

Please briefly describe your involvement with Medicaid, either in Colorado or another state:
We are a community mental health center serving Adams County in Colorado

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely
☒ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

Are you currently involved in the ACC program?

☐ Yes
☒ No
☐ I don't know

Please feel welcome to describe why or why not using the space below.

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☐ 3-4 years
☐ Since before the program was implemented.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

- Better collaboration
- Better understanding of the system, strengths, challenges
- Sharing of information

2) What is not working well in the ACC Program?

- EDs are not part of the solution, so hard to keep consumers out of the ED when there is a billboard advertising less than a 10 minute wait.
- All of the new 'pop up' ERs that increase access to the highest level of care
- BHOs and RICCOs don't align
- CMHC not a patient center home even though some patients prefer to come through the door of CMHC; disconnect from medical requirements and behavioral health requirements; medical home model does not fit with Behavioral Health

- Billing and coding not aligned to have an integrated practice
- Medically focused. Behavioral health is being recognized, but often as an afterthought.
- CMHC have a long history of treating the whole person, care coordination, addressing social needs like housing, etc., while physical health care has not historically had the structure or system to address the whole person's needs.
- Trying to fit Behavioral Health into the medical model verses reforming the system

3) What is working best in the Behavioral Health Organization (BHO) system right now?

- Good coverage
- Treats a wide range of disorders
- Formal structure for consumers to be represented
- BHI has NCQH standards that improve quality of care
- Integrated care works well and makes sense for patients
- UM function provides a nice checks and balance, helps build community based services and helps keep down costs
- Helps maintain consistency
- The risk based payment model enables the BHOs and their provider network to create a person-focused, integrated healthcare delivery system that is focused on addressing the needs of the individual and communities.
- Provides behavioral, physical and human services to improve health outcomes
- Risk Based payment model allows for a system to manage and pay for the care for people with significant and complex needs

4) What is not working well in the BHO system?

- Significant amount of time spent on tracking, analysis and providing data to the BHOs that don't necessarily focus on the value of the work or outcomes that are important to consumers
- Focus on the encounter verses health outcomes

5) What is working well with RCCO and BHO collaboration right now?

- Open communication and working on building a strong partnership/ collaboration
- There is a palpable desire for working collaboratively across groups invested in integration e.g. Department of Family Medicine, BHO, RCCOs, PCMPs, substance use treatment, prevention, mental health, departments of government, to efficiently plan for integration.

6) What is not working well with RCCO and BHO collaboration right now

The two systems need better communication and alignment of goals as well as policies and procedures. Outcomes will continue to suffer if the two systems are not communicating well and working well together. It is often the high utilizers who are involved in both systems.

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

- Align RCCOs, BHOs and commercial insurance in order to achieve goals of the ACC, improve patient care
- Focus on value vs. volume/ encounters
- Address regulatory burden and payment structures that prevent quality work
- Focus on services vs. administrative burden.
- Streamline reporting and processes
- Primary Care documentation requirements are very different from Behavioral Health. If true integration is going to occur, need for the two systems to better align in documentation, assessment and treatment planning processes
- Payment system should support integration and treatment of the whole person
- Open up codes to allow for BH billing with physical health care issues; BH providers are the experts in behavioral change; more change can occur if BH providers are able to work and bill for services with individuals who have diabetes, cardiac conditions, etc. making change in diet, exercise, etc. is difficult and requires more than medication and quarterly appointments with their PCP
- Integrate RCCOs and BHOs
- Have care coordination follow the individual and the place where they want to be served. CMHCs have a long history of providing care coordination. Even in the current system, PCP rely on CMHCs to provide the care coordination, but they receive additional payment for those services
- Integrate funding for comprehensive healthcare to explicitly include behavioral health
- Place the patient at the center of healthcare and surround that patient with appropriate comprehensive services

[1] Many terms and definitions can be found in the Appendix at the end of this document.

- Focus on development of outcome measures that are consumer-generated, and consumer available and utilized, rather than focusing on clinician-generated outcome measures.

8) **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☒	☐	Currently you must have a mental health diagnosis to receive reimbursement for services. These services must meet the coding manual requirements which can be vague at times.
Community Behavioral Health Services Rule	☒	☐	Numerous rules and regulation require a large amount of paper work and assessment/reassessment time (i.e. treatment plan reviews, duplicate assessments/documentation). This is often a deterrent to consumers due to the amount of time this takes away from actual treatment.
Covered diagnoses list	☒	☐	Current list of covered diagnosis under capitation is limiting.
Different behavioral / physical health reimbursement	☒	☐	
Institutions for Mental Diseases exclusion	☐	☐	

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

OBH rules, reporting, or financing (regulatory differences between agencies)	☒	☐	
PCMP financing structure	☐	☒	
Per-member per-month amount	☐	☒	
Physical space constraints	☒	☐	
Privacy Laws (HIPAA, 42 CFR)	☒	☐	Due to the federal nature of limitations with 42 CFR, a task force should be developed to include behavioral health and physical health stakeholders to discuss a consistent methodology for information sharing within the limitations of HIPAA/42 CFR.
Professional / cultural divisions	☒	☐	
RCCO or BHO contracts	☒	☐	
Staff capacity	☒	☐	Workforce Development is needed. There is a shortage of psychiatrists, psychiatric nurses, and Licensed Clinical Social Workers.
State/Federal rules or reporting requirements	☒	☐	
Technical resources / data sharing	☒	☐	
Training	☒	☐	There is currently very little cross training between mental health and physical health.
Others	Please type your response here.		

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

The current strong collaborative partnerships that are in place are viable, however are not bridging the gaps at this time. There is a need for a more formalized information sharing structure that has shared language, goals and accountability. An integrated and shared financial structure that allows codes for mental health within physical health settings is also need. In addition, current staffing is not reflective of true integration as the ratio of behavioral health professionals to physical health providers is not balanced.

10) Please share any other general advice or suggestions you may have about behavioral health integration.

It has taken a long time and a great deal of work to breakdown the cultural and communication barriers between behavioral health and physical health. As we move forward with true integration, the process needs to start with a shared vision and that accounts for the cultural differences and the strengths of the different communities and their partners. Community Reach Center would like to see a commitment to:

- Fully integrate behavioral health providers into medical healthcare settings
- Integrate funding for comprehensive healthcare to explicitly include behavioral health
- Establish and promote inclusion of behavioral health as necessary to the success of Patient-Centered Medical Home, Accountable Care Organizations and other team-based, patient-centered, and quality driven delivery initiative
- Place the patient at the center of healthcare and surround that patient with appropriate comprehensive services
- Develop training standards and curricula that support comprehensive integrated healthcare

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination?

Treating the whole person to support the healthiest life style as possible. Addressing all needs of the person, regardless of type of need (medical vs. non-medical). It involves the deliberate organization of patient care activities between two or more participants involved in a patient's care.

b. How should RCCOs prioritize who receives care coordination first?

With consideration of the "whole" person, it should be "How should the system prioritize who receives care coordination first, not the RCCOs as it does not address all of the care coordination that is provided outside of the RCCOs. This prioritization should be done based on need/ known high risk factors, meeting the triple aim and the goals established by the state. Care Coordination should focus on those that present the highest physical and mental health risks for mortality, as well as the highest utilizers of multiple systems.

c. How should RCCOs identify clients and families who need care coordination?

The entire system should have access to a common database such as CORIHO which would allow for the identification of those with high risk situations, cases outside of the triple aim (i.e. access is one of the aims, data shows that a consumer has not been able to access a needed service, that should trigger care coordination needs).

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

The practice should be responsible for reporting the number of patients with a care plan, number of contacts in a month, number of employees providing the care.

12) What services should be coordinated and are there services that should not be a part of care coordination?

If the goal is to be patient centered and to treat the whole person, all things should be part of care coordination as we need to ensure that the individual's housing, social, day care, employment needs are addressed

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

In order to assess the care coordination needs of the client, a brief assessment of the major domains (i.e. health, vocational, education, social, housing, etc.) should be completed, the diagnoses, systems they are already in, and unmet needs to be addressed in order to be successful.

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today?

A tremendous amount of care coordination occurs at the Community Mental Health Center. Providers address behavioral health needs, collaborate with primary care providers, attend to housing, employment, education etc. The higher risk consumers require significantly more care coordination as they are often involved in numerous systems.

Additionally, care coordination is happening at PCMHs, nursing homes, child welfare and early intervention programs.

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

As mentioned above, Community Mental Health Centers do a tremendous amount of care coordination.

This coordination is best captured with the quote below:

> "If a person doesn't have a roof over their head, if they don't have a meal, if they're a victim of physical or sexual abuse if their household has a lot of stress in it, if their kids' school is not safe, then that's going to impact their health.....that health is more than just the pill that we're giving you or the hospital that we put you in. It's all the other parts of your life and whether they're working in harmony."
> Dr. Jeffrey Brenner in interview "What Primary Care has to Learn from Behavioral Health". National Council for Behavioral Health.

c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

Care coordination needs to follow the client and be in a place that is convenient and preferred by the client. Many clients prefer to come to Community Mental Health Center for their care coordination as this is where the majority of the coordination takes place. Community Mental Health Centers have a long history of care coordination. By attending to all needs, they have demonstrated success with keeping clients out of the hospitals and reducing costs under the full risk capitation system

d. What are the gaps in care coordination across the continuum of care?

Care Coordination is often not well-defined, with a variety of care coordinators within the different silos providing care coordination to meet the needs of their particular agency/mandate. Often care coordination is unfunded which can create a financial barrier for providers.

15) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	Should the RCCO have a role? Yes	Should the RCCO have a role? No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma	☐	☒	☒	
Affordability (assistance with prescriptions or co-pays)	☒	☐	☒	
Daycare / childcare	☐	☒	☒	
Economic stability & employment	☐	☒	☒	
Education	☒	☐	☒	
Environment	☐	☒	☒	
Food access / nutrition	☒	☐	☒	
Health literacy	☒	☐	☒	
Housing	☐	☒	☒	
Language or translation services	☒	☐	☒	
Literacy	☐	☒	☒	
Transportation	☒	☐	☒	
Other				

16) **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	Coordinate care? Yes	No	In what capacity should these individuals coordinate care in the ACC Program?
Advanced Practice (Registered) Nurses	☒	☐	Work with other professionals and lay persons involved in the case
Certified Addiction Councilors	☒	☐	""
Certified Nurse Midwives	☒	☐	""
Community Health Workers	☒	☐	""
Generalists (BA/BS/MA/MS)	☒	☐	""
Health Coaches	☒	☐	""
Licensed Clinical Social Workers	☒	☐	""
Licensed Marriage and Family Therapist	☒	☐	""
Licensed Mental Health Counselors	☒	☐	""
Licensed Professional Counselor	☒	☐	""
Masters of Public Health	☒	☐	""
Medical Doctors / Doctors of Osteopathic Medicine	☒	☐	""
Nurse Practitioners	☒	☐	""
Patient Navigators	☒	☐	""
Peer Advocates	☒	☐	""
Promotoras	☐	☒	
Psychiatrists	☒	☐	""
Psychologists	☒	☐	""

Social Workers	☒	☐	""
Wraparound facilitators	☒	☐	""
Other			

17) **Care coordination requirements for specific populations.** Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and infants	☐	☒	
Children	☐	☒	
Children who are healthy, but in socially-complex environments	☐	☒	
Children involved in the foster care system	☒	☐	Special population has special needs, like determining where the youth should live. Having a care coordinator who understands all of the needs are therefore are about to address court/ custody issues.
Children with a chronic illness	☒	☐	Like with other special populations, having a competent care coordinator who understands the population, challenges, and needs are critical to achieving health outcomes.
Children with a serious emotional disturbance	☒	☐	Like with other special populations, having a competent care coordinator who understands the population, challenges, and needs are critical to achieving health outcomes.
Children with medical complexity	☒	☐	Like with other special populations, having a competent care coordinator who understands the population, challenges, and needs are critical to achieving health outcomes.
Children or youth with a behavioral health diagnosis or substance use disorder	☒	☐	Like with other special populations, having a competent care coordinator who understands the population, challenges, and needs are critical to achieving health outcomes.
Transition-age adolescents	☒	☐	Like with other special populations, having a competent care coordinator who understands the population, challenges, and needs are critical to achieving health outcomes.
Parents and families	☐	☒	
Pregnant women	☐	☒	

Adults	☐	☒	
Adults who are healthy, but in socially-complex situations	☐	☒	
Adults with a chronic illness	☒	☐	Like with other special populations, having a competent care coordinator who understands the population, challenges, and needs are critical to achieving health outcomes.
Adults with a behavioral health diagnosis or substance use disorder	☒	☐	Like with other special populations, having a competent care coordinator who understands the population, challenges, and needs are critical to achieving health outcomes.
Clients involved in the criminal justice system	☒	☐	Like with other special populations, having a competent care coordinator who understands the population, challenges, and needs are critical to achieving health outcomes.
Clients with a disability	☒	☐	Like with other special populations, having a competent care coordinator who understands the population, challenges, and needs are critical to achieving health outcomes.
Clients in a nursing facility	☒	☐	Like with other special populations, having a competent care coordinator who understands the population, challenges, and needs are critical to achieving health outcomes.
Elderly clients	☒	☐	Like with other special populations, having a competent care coordinator who understands the population, challenges, and needs are critical to achieving health outcomes.
Frail elderly clients	☒	☐	Like with other special populations, having a competent care coordinator who understands the population, challenges, and needs are critical to achieving health outcomes.
Clients in palliative care	☒	☐	Like with other special populations, having a competent care coordinator who understands the population, challenges, and needs are critical to achieving health outcomes.
Other populations, please comment:			

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

- The establishment of Complex Care Teams providing a multidisciplinary approach to complex care coordination.
- Ensuring that there are strong community resource partnerships
- Identifying standardized best practice interventions
- Assessing Behavioral Health Needs /Physical Health Needs-Medication Needs/Community Resource Needs

19) How should care coordination be evaluated? How should its outcomes be measured?

Identifying the value of care coordination and that will help to define what should be measured. If the value is improving quality of care, decreasing costs, then those would be reasonable outcome measurements. However, assessing readiness for the system is important. We believe initially, a care coordination program should be measure by having good processes, not measured by outcomes, until solid data exists on outcomes that are risk adjusted and accurate for clients. Initially all measures need to be quite separated from outcomes that are highly tied to client behavior, or practices will be less likely to serve those with the highest risk.

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

a. What is the PMPM cost for providing care coordination services?

N/A

b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

N/A

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

Not necessarily. Each community and population is different; what works for one population does not necessarily work for another population. In the event there is a move toward establishing a ratio, then the system should account for the acuity and population.

a. **Care coordinator to client ratios.** If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☐
51-100	☐
101-200	☐
201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

A comparison of those high utilizers that are receiving care coordination (actually receiving rather than just being offered) to those that are not receiving care coordination would provide valuable data. Metrics developed should include usage of ER/ED, PCP, adjunctive services (behavioral health, specialty care) between those with and without care coordination. Metrics should include physical and behavioral health outcomes to include adherence to treatment regimens (i.e. diabetes, attendance at behavioral health services), improvement in overall functioning (GAF for behavioral health); length of inpatient stay for medical and behavioral health; consumer's perception of care coordination services received (i.e. patient feels more hopeful, patient feels as though someone is helping to navigate the system).

Another area for consideration would be to look at those individuals who are not yet 'high utilizers' and whether effective care coordination prevents them from moving into the 'high' category.

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

- Consider aligning with Section 2703 of the Affordable Care Act for individuals with multiple chronic health conditions.
- Don't over regulate! Allow flexibility to determine what works best for the client. Again the focus should be on the value that care coordination brings to the client and the system.
- Focus on better health outcomes, improved quality of life and not creating more administrative burden.
- Care coordination is most effective when it's done at the point of care.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

Streamline administrative burden, allowing local flexibility to enable providers to achieve the triple aim in the communities that we serve.

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

No response

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

No Response

27) Should the RCCO region maps change? Why or why not? If so, how?

- The RCCOs and the BHOs regions should align in a manner that maximizes community partnerships and addresses community needs.

28) Should the BHO region maps change? Why or why not? If so, how?

- The RCCOs and the BHOs should align in a manner that maximizes community partnerships and addresses community needs.

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

N/A

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

- Information sharing
- Resolving 42CFR challenges
- Streamlining behavioral health similar to physical health
- Payment reform

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

- Continuous eligibility is necessary to ensuring continuity of care, achieving outcomes and reducing long term cost;

- The loss of benefits impacts access, health outcomes and increases the administrative burden for the providers
- A change to allow for the instant enrollment in Medicaid if eligible, and when transferring Medicaid from county to county.
- There is no benefit structure that supports integrated care. HCPF will not cover behavioral health codes and the BHO's require mental health level of documentation that is impractical. Funding needs to be flexible and able to support the needs of the patient. There is a need to move away from a fee for service model to a value based system where good outcomes are the focus.

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

- Having multiple RCCO's per region causes confusion and is not as efficient as one RCCO who has good relationships with community partners as well as the PCMH's.

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

N/A

34) What role should RCCOs play in attributing clients to their respective PCMPs?

N/A

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

Collaboration on Disaster Response Efforts and Regulations for facilities.

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

Collaboration needs to exist. Individuals and families involved with human services have a significant amount of needs, if health outcomes are to be achieved, treating the full person/family is critical.

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

Necessary if we are going to address health outcomes for Coloradans, not just a Medicaid issue

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

Work should be done to include private insurance as part of the ACC system. There are many services we can provide to Medicaid clients that we cannot provide for our insurance clients because it is not covered under their insurance.

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

- Consumer Representative
- Consumer Advocate
- Consumer Rights

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

- Same as above

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

Allow the communities to function as the lead for creating their system of care with the support of parameters and guidelines to follow.

42) How should the Department structure stakeholder engagement for the ACC as a whole?

Through the PIAC's as well as some focus groups that engage community members as well as consumers. It would be helpful to see what the end user is experiencing as working and not working.

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

No

a. If no, what are the gaps?

- Shortages of psychiatrists, nurses, LCSW's
- Waitlists for those looking for support for DD/ Autism/TBI

b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

a. What role should hospitals play in the next iteration of the ACC Program?

They have to become part of the solution as to the overuse of the ED's.

b. What role should pharmacies play in the next iteration of the ACC Program?

Communication around trends and problems they are experiencing.

c. What role should specialists play in the next iteration of the ACC Program?

We need to recruit more specialists to participate.

d. What role should home health play in the next iteration of the ACC Program?

They need to work closely with practices so care is coordinated and focused on good health outcomes.

e. What role should hospice care play in the next iteration of the ACC Program?

They need to work closely with practices so care is coordinated and focused on good health outcomes.

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

No response

g. What role should counties play in the next iteration of the ACC Program?

They need to understand and support the overall outcomes of the ACC's and coordinate their efforts to help us manage difficult populations.

h. What role should local public health agencies play in the next iteration of the ACC Program?

They are a good resource for population health and management – they have many lessons learned that can be shared. They also need to play a role in the management of difficult populations.

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

Many of these organizations have valuable lessons learned and are very good at engaging difficult to engage populations. These organizations should be at the table to help us learn, but also to partner around the management of special needs populations.

45) How can RCCOs help to support clients and families in making and keeping appointments?

- Address transportation needs, support telehealth, evaluate operations to ensure scheduling and appointments are convenient for clients.
- RCOOs should link with the various providers to discuss how site-specific improvements and strategies can be made to increase compliance with appointments.

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

Not require but encourage.

47) **Community Health Worker reimbursement**. Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement process	(Please check all that apply)
Independently bill	☐
On staff (salary) at Primary Care Medical Provider Clinic	☐
On staff (salary) at RCCO	☒
Per Member Per Month Payment	☐

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

Work with dental providers to understand their role in providing oral health care to this population. Include dental providers as part of the medical home network.

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you?

- Meeting the client where they are at with consideration the things that influence their behavior and the way they need to get support.
- Cultural competency is effectively providing services to people of all cultures, races, ethnic backgrounds and religions in a manner that respects the worth of the individual and preserves their dignity.

b. What RCCO requirements would ensure cultural competency?

- Focusing on good outcomes is the best measure. If your services are not culturally considerate of the client, the outcomes will likely suffer.
- Compliance of providers training all staff in CLAS Standard

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?

- Good listening and engagement skills.
- Know how to utilize bilingual staff, interpreters, telephone interpretation services
- 'Market' services available in non-English brochures and materials distributed to the public
- Educate all staff on what services are provided
- Discourage use of family and friends as interpreters
- Staff should be trauma informed as a cultural shift for providing services
- Assess knowledge of medical terminology of interpreter candidates
- Stay informed of Tools to Reduce Disparities such as:
    - A Physician's Practical Guide to Culturally Competent Care
    - Culturally Competent Nursing Care: A Cornerstone of Caring
    - Health Care Language Services Implementation Guide
    - Cultural Competency Curriculum for Disaster Preparedness and Crisis Response

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

Having a staff that is reflective of the demographic makeup of the practice would be helpful. Also recognizing that the health care work force is already unable to meet the demands, so when adding cultural and language capacity as a requirement, it gets that much more difficult to meet the demand for services.

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

Pending payment reform, the BHOs and CMHCs have demonstrated that in a full risk capitated system, building strong provider networks is key to reducing costs while ensuring outcomes.

51) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

- Engage hospitals and emergency rooms as partners in managing emergency room use. Currently, they have a financial incentive to treat non-emergent issues in the emergency room.
- More oversight by the State with regard to the number of pop up free standing emergency rooms is needed. These can be problematic as clients are not well educated on the fact that the appropriate use of the facility as an emergency room rather than a walk in triage clinic.
- Develop a way for the RCCOs to share more real-time data with providers so they can intervene while the client is in the emergency room.

52) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

Practice Support

53) **Support for practices.** Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☒	☐	☐	☐
Network provider education	☒	☐	☐	☒
Assistance with practice redesign	☒	☐	☐	☐
Assistance with efficiency-enhancing activities	☒	☐	☐	☐
Provide web-based resources and directories	☒	☐	☐	☒
Provide practice-specific data reports	☒	☐	☐	☐

Provide clinical care guidelines and best practices.	☒	☐	☐	☐
Provide clinical screening tools	☒	☐	☐	☐
Provide health and functioning questionnaires	☒	☐	☐	☐
Provide chronic care templates	☒	☐	☐	☐
Provide registries	☒	☐	☐	☐
Offer client reminders	☒	☐	☐	☐
Offer client self-management tools	☒	☐	☐	☐
Offer educational materials about specific conditions	☒	☐	☐	☐
Supply behavioral health surveys	☒	☐	☐	☐
Supply other self-screening tools	☒	☐	☐	☐
Administer behavioral health surveys	☐	☒	☐	☐
Administer other self-screening tools	☐	☒	☐	☐
Prepare client action plans	☐	☒	☐	☐
Provide training on providing culturally-competent care	☒	☐	☐	☐
Provide training to supporting staff	☒	☐	☐	☐
Provide training on motivational interviewing	☒	☐	☐	☐
Provide tools and software for phone call and appointment tracking	☒	☐	☐	☐
Provide tools and resources for tracking labs, referrals, etc.	☒	☐	☐	☐
Provide referral and transitions of care checklists	☒	☐	☐	☐
Provide visit agendas or templates	☒	☐	☐	☐
Provide standing pharmacy order templates	☐	☒	☐	☐
Provide comprehensive directory of community resources	☒	☐	☐	☒
Provide directory of other resources	☒	☐	☐	☒
Provide materials regarding Nurse Advice Line	☒	☐	☐	☐
Ensure all tools and resources are centrally located on RCCO-specific website	☒	☐	☐	☐
Others				

54) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

No response

55) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

No response

56) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

57) Should the Department require that PCMPs utilize disease registries to manage the health of their population?

No response

58) Please share any other advice or suggestions about provider support in the ACC.

No response

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

While there has been some demonstrated success, the current system does not fully support the goals of the ACC in that the system still focuses on the providing a service to get reimbursed; fee for service models does not allow for creativity and leads systems to chasing the dollar vs. focusing on value and outcomes. The PMPM payment might work for primary care, but it leads to duplicative services, dollars going to providers who are not necessarily providing care coordination and is limited to primary care practices.

The ACC program should consider moving towards a risk-based payment model and away from a fee-for-service model.

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

CMHC providers in Colorado have demonstrated how full risk capitation systems can work. We have great flexibility to provide the right services at the right time and at the right place as we work to meet the triple aim. We have reduced utilization of costly services, such as hospitalization, built strong community based resources and services and been nimble enough to meet the needs of our local communities.

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

Yes, but value needs to be measured appropriately and include items that providers can influence. Should focus on health outcomes instead of services delivered.

62) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

No Answer

63) What role – if any – should the RCCOs play in the distribution of payments to providers?

No Answer

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

Improvement in functioning and decrease in symptom severity (currently used by C-Stat) should be tied to diagnoses and other elements of functioning in order to determine if reasonable progress is being made based on what the consumer presents with, rather than treating all consumers the same. Other outcomes should also be reflective of current research, and use of best practices to treat specific populations.

Focus on consumer perception of outcomes. Rather than solely focusing on staff perception of improvement, have consumers rating their assessment of improvement during their episode of care. Relationship with the behavioral health provider is consistently shown as the strongest predictor of engagement by consumers and improvement, especially early on in treatment. Assessments should occur on a regular basis regarding consumer's perception of the care received by their providers at the various locations. Creative methods for outcome measurement should also be utilized such as measuring the amount of hope a consumer has in their recovery following their appointments with providers. Hope is also shown to be a strong predictor for future engagement in services, as well as decreased suicides.

66) **Measuring Client** experience. Please complete the table below to indicate how the Department should measure Client/patient experience:

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☒	☐	
SF-12 Health Survey	☐	☐	
Other types of client interviews / surveys	☒	☐	Consumer Advisory Panels at all sites to gain current patient/consumer feedback and input into services provided.
Patient Activation Measure	☐	☐	
Focus groups	☒	☐	
Other	Please type your response here. Use of Outcome Rating Scale and Session Rating Scale (Feedback Informed Treatment) http://www.nrepp.samhsa.gov/ViewIntervention.aspx?id=249 is an EBP that is designed to improve the retention of participants in treatment and to assist them in reaching reliable and clinically significant change. The program can be implemented by behavioral health care therapists as part of any behavioral health care intervention.		

67) Knowing that, at this time, the Department only has claims data, how should population health be measured?

Through data provided to the department, analysis of HIE data and claims data.

68) How should quality and performance data be reported to the RCCOs, PCMPs, and the public?

No answer

69) **Measures for payment.** Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☒
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

70) What percent of RCCO payments should be tied to measures or performance?

Percentage	
10-20%	☒
21-30%	☐
31-40%	☐
41-50%	☐
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

Difficult to say as payment reform needs to be considered and pending the payment system, the % should be set on national standards.

71) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?

The state should consider payment reform that moves toward a risk based payment model and away from a fee for service model as it incentivizes providers to assume and manage risk. This model for behavioral health has demonstrated achieving both financial and health outcomes.

72) Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?

The recommendation is overall payment reform. Once a system is in place, metrics should be established that align Colorado's health outcome goals with national standards and meeting the triple aim. One key factor to consider is to calibrate performance based on where the system in Colorado is and working to achieve the national standards.

73) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

See recommendation on payment reform to a risk based payment model, the model adopted will guide the details.

74) **Incentive payment frequency**. Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	☒
Annually	☐
Other	☐

If you checked the "Other" box, please describe payment frequency below:

75) For potential offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

No response

76) For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

- Functional status
- Engagement
- Symptom Severity
- Hospitalization
- EBP outcomes
- Access to Care (time to first appointment from request, time response to crisis response, time to psychiatric appointment from initial evaluation, time to psychiatric appointment from hospital discharge:
- New State Crisis Services will measure:

- Timeliness of walk-in to being served at CSU
- Timeliness of dispatch to community-based crisis services
- Engagement in treatment planning
- Consumer's perception of satisfaction of crisis services
- Percentage of consumers that make or keep appointments following discharge from crisis services
- Decrease in suicidality from admission to discharge in crisis services

Health Information Technology (HIT)

77) **Types of communication.** For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	☒
Text message	☐	☒
Web portal	☐	☒
Email	☐	☒
Telemedicine / Video chat	☐	☒
Face-to-face meeting	☐	☒
Smartphone app	☐	☒
Other:		

78) **HIT investments by organizations.** For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below:

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	☒	☐
Digital care management tool	☐	☐
Care transitions alerts	☐	☐
Electronic Health Records (EHRs)	☒	☐
Health risk assessment software	☐	☐
Practice assessment tools	☐	☐
Practice management tools (scheduling, billing)	☒	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☒
Patient education/wellness tools	☒	☐
Provider/case manager directory	☐	☐
Shared decision-making tools	☐	☐
Telemedicine software	☒	☐

Other:	☐	☐
Other:	☐	☐

79) **Importance of technology by type.** The Department is working to determine what technology is in place, what technology is needed, and what technology should be standardized. For RCCOs, providers, and other organizations, use the table below to answer what HIT infrastructure outside of the SDAC your organization would use to perform population health management activities. Tools are scored from 1-S, where 1 are those items least-likely to be used, and S are items most-likely to be used:

Tool	1 Least	2	3	4	5 Most
Population analytics / reporting / dashboard	☐	☐	☐	☒	☐
Care management tool	☐	☐	☐	☒	☐
Care transitions alerts	☐	☐	☐	☒	☐
Electronic Health Records (EHRs)	☐	☐	☐	☐	☒
Practice assessment tools	☐	☐	☒	☐	☐
Health risk assessment software	☐	☐	☒	☐	☐
Practice management tools (scheduling, billing)	☐	☐	☐	☐	☒
Client web portal for communicating care plan, services, benefit enrollment	☐	☐	☐	☐	☒
Patient education wellness tools	☐	☐	☐	☐	☒
Provider/case manager directory	☐	☐	☐	☐	☒
Shared decision-making tools	☐	☐	☐	☐	☒
Telemedicine	☐	☐	☐	☐	☒
Other:	☐	☐	☐	☐	☐

80) What are the primary barriers to RCCOs and providers increasing their use Health Information Technology to improve the performance of Primary Care Practices?

42 CFR: Colorado State regulations on Community Mental Health Centers (2 CCR 502- 1) previously required a release of information, signed annually, that specifically designated the entity the PHI would be released to. This changed to 2 years on 11-01-2013.

This would come into play in any level of integration (whether that be facilitated referrals, co-location or more fully integrated services) that involved a community mental health center partner, or managed services organization, or substance use disorder treatment provider partner

81) How can Health Information Technology support Behavioral Health Integration?

HIT can only support BH Integration if HCPF/OBH address 42CFR Part 2. Although integration has been a push for several years in 2013, OBH consolidated eight volumes of rules to one but made no regulation change regarding sharing of BH data except for moving from one year to two year release expiration. They did, however, add language to reinforce that HIPAA and 42 CFR Part 2 are to be followed.

82) In the next iteration of the ACC, should there be a shared resource for data and analytics? Please describe the basic criteria for what a shared data and analytics platform needs to contain in order for it to be useful.

There is not currently the technology or capacity in the system to support electronic sharing of 42 CFR covered information even if a release is signed. Some CMHC's have been working closely with CORHIO however only sending mental health only information, not information on anyone co-occurring or SUD primary diagnosis.

83) Should there be a shared care management tool? Please describe the basic criteria for what a care management tool would need to contain in order for it to be useful.

It might support the sharing of consistent information in a manner that is familiar to all parties. At the same time, we need to ensure that whatever is put into place, it is not there simply to track and add to an already overly administratively burdensome system.

84) Should there be a shared population health management tool? Please describe the basic criteria for what a population health management tool would need to contain in order for it to be useful.

It seems too early in the process to consider this. It has taken years of working together to attend to cultural and communication differences between primary care, behavioral health and social services. There is potential, but need to consider when and how it would be used.

85) Please describe the functionality that a common Medicaid provider directory would need to contain in order for it to be useful.

- Provide both physical and behavioral health resources/ providers
- Provide links and contact information for ease of access
- Include some screening (like the PHQ 9) so that people can do some self-assessment and get connected to the correct resource

86) How can the RCCOs support providers' access to actionable and timely clinical data?

Ensure a user friendly system and access that is comprehensive and reflects real time data that supports treatment decision in the moment that will have a positive effect on health outcomes

87) What are the HIT solutions that would benefit clients, providers, and RCCOs? Please comment on the parameters these tools or platforms would need to possess and the ways in which they could be used.

88)

No response

89) What technical assistance or resources related to HIT infrastructure should the RCCOs supply? This assistance or these resources could be for providers, social service organization, clients/families, or for others.

- Portal for the individual to access his/her information
- Support for the centers to create the file for information exchange

90) What role should health information exchange platforms like CORHIO or QHN play in the next iteration of the ACC?

- Need a platform to be available to both physical health as well as behavioral health
- Critical that it allows for easy exchange of information
- Provides real time data that can be used to impact client treatment
- Support for the CMHC's to create the file for information exchange

91) Please share any information, advice, and suggestions you have about health information technology in the ACC Program.

- Advocacy at federal level around 42 CFR Part 2
- Colorado will need to address HIE as part of the State Innovation Model (SIM)
- CORHIO exploring granular consent model

Colorado Department of Health Care Policy and Financing

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Anonymous
Location: City, County, State.

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Click here to enter text.
Location: City, County, State.
☐ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☐ Medical provider / PCMP / other provider
  i. Type or specialty: Click here to enter text.
  ii. Area of practice: Click here to enter text.
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☒ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☐ Other (please describe): Click here to enter text.

Are you currently involved in the ACC program?

☒ Yes
☐ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☒ 3-4 years
☐ Since before the program was implemented.

How have you been involved in the ACC program and what interaction have you had with RCCOs: Involvement with ACC includes advocacy and grant support for the evaluation. Involvement with RCCOs includes advocacy and grant support.

Please briefly describe your involvement with Medicaid, either in Colorado or another state: Involvement includes advocacy and grant support.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

- Children are being enrolled in ACC, and the well child visit KPI is a positive first step in measuring and promoting progress in children's health.

- HCPF has a great opportunity to do what is needed for the majority of Medicaid recipients: children and adolescents. They should not be considered one of the subgroups. The following principles should be incorporated into the core objectives of the ACC:

    - Children's health care needs are very different than adults. For adults, the focus is on managing chronic disease more effectively. For children, it is about preventing the development of those chronic diseases.
    - If the ACC really wants to focus on health and wellness, the greatest opportunity is with the children (the majority of Medicaid recipients). By focusing on preventive care, early screening and early intervention for children, there will be big savings; unfortunately those savings may not occur for many years or decades in the future, but the investment will eventually be worth it.
    - So, the ACC will need to invest in children to the extent possible now even though the savings come much later. We recommend that a portion of short-term savings that occurs due to chronic disease management in adults in the ACC be invested back into preventive care for children.
    - Children are part of families and you can't help the child unless you help the family. So, care coordination is more involved for children since it includes care coordination of the parents/family.
    - There is increased recognition that behavioral health is a part of overall health and should be accessible within a pediatric medical home. However, the current mental health system must have policies, procedures, and resources that support integrated behavioral health activities at the practice level.

2) What is not working well in the ACC Program?

- As ACC evolves into a system the promotes integrated care and clients' behavioral health, HCPF's definition of behavioral health care must: 1) move from an outdated disease-focused model to one that includes promotion, prevention, and early intervention and 2) reflect the unique needs of children, youth, and adults.
    - The current definition reads as follows. "Behavioral health care refers to all services to treat health conditions that primarily present as alterations in thinking, mood or behavior and changes in emotional (mood), psychological (thinking), or social well-being (behavior) and conditions related to addictions."

- Feedback from RCCOs to the medical home regarding patients referred to the RCCO for care coordination is spotty. How will RCCOs consistently provide feedback and communication to the medical home regarding what was done for the patients and whether there was improvement?

- Currently, there is very little communication and alignment between BHO's and RCCO's. In order for integrated behavioral health to be successful at the practice and community level, the BHO's and RCCO's must have similar goals, policies/procedures that are aligned, payment structures that are aligned with movement toward integration and ongoing close communication with one another. The RFP should ask how they intend to do this.

3) What is working best in the Behavioral Health Organization (BHO) system right now?

4) What is not working well in the BHO system?

5) What is working well with RCCO and BHO collaboration right now?

6) What is not working well with RCCO and BHO collaboration right now?

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

- Successful integration of medical and behavioral health means the RCCOs and BHOs must also be integrated. They should have the same regions and function as though they are one organization. This would reduce duplication of efforts and have better alignment of incentives and payments that support integrated care. It would also serve clients much better.

- Care coordination for both behavioral health and medical care should be done in the primary care setting for the majority of clients. The RCCO and/or the BHO should delegate the responsibility to do care coordination and a PMPM to cover the expense to the medical home as part of the payment reform process. In addition, the BHO and the RCCO will need to have information and care coordinators to assist medical homes to handle uncommon or very complex issues.

- Payment options for truly integrated behavioral health (not just co-location) need to be clear and understandable to providers and practices. In order for the integrated model to be sustainable, there need to be ways to access understandable billing rules/policies.

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☒	☐	
Community Behavioral Health Services Rule	☐	☐	
Covered diagnoses list	☒	☐	
Different behavioral / physical health reimbursement	☒	☐	
Institutions for Mental Diseases exclusion	☐	☐	
OBH rules, reporting, or financing (regulatory differences between agencies)	☐	☐	
PCMP financing structure	☐	☐	
Per-member per-month amount	☐	☐	
Physical space constraints	☐	☐	
Privacy Laws (HIPAA, 42 CFR)	☐	☐	
Professional / cultural divisions	☐	☐	
RCCO or BHO contracts	☐	☐	
Staff capacity	☐	☐	
State/Federal rules or reporting requirements	☐	☐	
Technical resources / data sharing	☐	☐	
Training	☐	☐	
Others	Please type your response here.		

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

10) Please share any other general advice or suggestions you may have about behavioral health integration.

- As noted above, HCPF's definition of behavioral health care must evolve and : 1) move from an outdated disease-focused model to one that includes promotion, prevention, and early intervention and 2) reflect the unique needs of children, youth, and adults.

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination?

b. How should RCCOs prioritize who receives care coordination first?

c. How should RCCOs identify clients and families who need care coordination?

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

12) What services should be coordinated and are there services that should not be a part of care coordination?

- RCCOs must be incentivized to promote non-clinical care with an understanding of its impact on health outcomes. RCCOs can help medical homes address such client needs as housing, food, parental employment, child care, or help practices connect with other agencies that provide these services.

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today?

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

d. What are the gaps in care coordination across the continuum of care?

15) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	Should the RCCO have a role? Yes	No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma	☐	☐	☐	
Affordability (assistance with prescriptions or co-pays)	☐	☐	☐	
Daycare / childcare	☐	☐	☐	
Economic stability & employment	☐	☐	☐	
Education	☐	☐	☐	
Environment	☐	☐	☐	
Food access / nutrition	☐	☐	☐	
Health literacy	☐	☐	☐	
Housing	☐	☐	☐	
Language or translation services	☐	☐	☐	
Literacy	☐	☐	☐	

Transportation	☐	☐	☐	
Other	Please type your response here. Feel free to list as many non-medical factors as you want, and please explain how the RCCO should be involved.			

16) **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

- All of the types of individuals below must be considered as potential members of care coordination teams. Practices should be given the latitude to decide who fits best with their model and their patients' needs.

Type:	**Coordinate care?** Yes	No	**In what capacity should these individuals coordinate care in the ACC Program?**
Advanced Practice (Registered) Nurses	☐	☐	
Certified Addiction Councilors	☐	☐	
Certified Nurse Midwives	☐	☐	
Community Health Workers	☐	☐	
Generalists (BA/BS/MA/MS)	☐	☐	
Health Coaches	☐	☐	
Licensed Clinical Social Workers	☐	☐	
Licensed Marriage and Family Therapist	☐	☐	
Licensed Mental Health Counselors	☐	☐	
Licensed Professional Counselor	☐	☐	
Masters of Public Health	☐	☐	
Medical Doctors / Doctors of Osteopathic Medicine	☐	☐	
Nurse Practitioners	☐	☐	

Patient Navigators	☐	☐	
Peer Advocates	☐	☐	
Promotoras	☐	☐	
Psychiatrists	☐	☐	
Psychologists	☐	☐	
Registered Nurses	☐	☐	
Social Workers	☐	☐	
Wraparound facilitators	☐	☐	
Other	Please type your response here.		

17) **Care coordination requirements for specific populations.** Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and infants	☐	☐	
Children	☐	☐	
Children who are healthy, but in socially-complex environments	☐	☐	
Children involved in the foster care system	☐	☐	
Children with a chronic illness	☐	☐	
Children with a serious emotional disturbance	☐	☐	
Children with medical complexity	☐	☐	
Children or youth with a behavioral health diagnosis or substance use disorder	☐	☐	
Transition-age adolescents	☐	☐	
Parents and families	☐	☐	
Pregnant women	☐	☐	
Adults	☐	☐	
Adults who are healthy, but in socially-complex situations	☐	☐	
Adults with a chronic illness	☐	☐	
Adults with a behavioral health diagnosis or substance use disorder	☐	☐	
Clients involved in the criminal justice system	☐	☐	

Clients with a disability	☐	☐	
Clients in a nursing facility	☐	☐	
Elderly clients	☐	☐	
Frail elderly clients	☐	☐	
Clients in palliative care	☐	☐	
Other populations, please comment:			

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

19) How should care coordination be evaluated? How should its outcomes be measured?

- A care coordination program should initially be measured by having good processes, not measured by outcomes, until solid data exists on outcomes that are risk adjusted and accurate for children. Initially all measures need to be quite separated from outcomes that are highly tied to patient behavior, or practices will again be less likely to serve those with highest risk.

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

a. What is the PMPM cost for providing care coordination services?

b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

a. **Care coordinator to client ratios.** If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☐
51-100	☐

101-200	☐
201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

- Care coordination is best done in the medical home. They are willing to do care coordination, because they have a relationship with patients and they trust the providers. They also recognize that coordinating complex medical care is essential for good care and for cost savings. Primary care providers are best positioned to have a long-term relationship with the patient. They know and understand other aspects of the patient's life and how important those non-medical factors are on the patient's health and health issues.

- If care coordination cannot be done in the medical home, then it is best done by community-based organizations. The least effective, least well-received, least trusted is care coordination done from a call center in a RCCO. The role of the RCCO should be to help the medical home-based care coordination staff access resources for families.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

27) Should the RCCO region maps change? Why or why not? If so, how?

28) Should the BHO region maps change? Why or why not? If so, how?

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

34) What role should RCCOs play in attributing clients to their respective PCMPs?

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

42) How should the Department structure stakeholder engagement for the ACC as a whole?

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

a. If no, what are the gaps?

b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

a. What role should hospitals play in the next iteration of the ACC Program?

b. What role should pharmacies play in the next iteration of the ACC Program?

c. What role should specialists play in the next iteration of the ACC Program?

d. What role should home health play in the next iteration of the ACC Program?

e. What role should hospice care play in the next iteration of the ACC Program?

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

g. What role should counties play in the next iteration of the ACC Program?

h. What role should local public health agencies play in the next iteration of the ACC Program?

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

45) How can RCCOs help to support clients and families in making and keeping appointments?

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

47) **Community Health Worker reimbursement.** Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement process	(Please check all that apply)
Independently bill	☐
On staff (salary) at Primary Care Medical Provider Clinic	☐
On staff (salary) at RCCO	☐
Per Member Per Month Payment	☐

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you?

b. What RCCO requirements would ensure cultural competency?

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

51) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

52) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

Practice Support

53) **Support for practices.** Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☐	☐	☐	☐
Network provider education	☐	☐	☐	☐
Assistance with practice redesign	☐	☐	☐	☐
Assistance with efficiency-enhancing activities	☐	☐	☐	☐
Provide web-based resources and directories	☐	☐	☐	☐
Provide practice-specific data reports	☐	☐	☐	☐
Provide clinical care guidelines and best practices.	☐	☐	☐	☐
Provide clinical screening tools	☐	☐	☐	☐
Provide health and functioning questionnaires	☐	☐	☐	☐
Provide chronic care templates	☐	☐	☐	☐
Provide registries	☐	☐	☐	☐
Offer client reminders	☐	☐	☐	☐
Offer client self-management tools	☐	☐	☐	☐
Offer educational materials about specific conditions	☐	☐	☐	☐
Supply behavioral health surveys	☐	☐	☐	☐
Supply other self-screening tools	☐	☐	☐	☐
Administer behavioral health surveys	☐	☐	☐	☐
Administer other self-screening tools	☐	☐	☐	☐
Prepare client action plans	☐	☐	☐	☐
Provide training on providing culturally-competent care	☐	☐	☐	☐
Provide training to supporting staff	☐	☐	☐	☐
Provide training on motivational interviewing	☐	☐	☐	☐
Provide tools and software for phone call and appointment tracking	☐	☐	☐	☐
Provide tools and resources for tracking labs, referrals, etc.	☐	☐	☐	☐
Provide referral and transitions of care checklists	☐	☐	☐	☐
Provide visit agendas or templates	☐	☐	☐	☐
Provide standing pharmacy order templates	☐	☐	☐	☐
Provide comprehensive directory of community resources	☐	☐	☐	☐
Provide directory of other resources	☐	☐	☐	☐
Provide materials regarding Nurse Advice Line	☐	☐	☐	☐
Ensure all tools and resources are centrally located on RCCO-specific website	☐	☐	☐	☐
Others				

54) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

55) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

56) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

57) Should the Department require that PCMPs utilize disease registries to manage the health of their population?

58) Please share any other advice or suggestions about provider support in the ACC.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

62) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

63) What role – if any – should the RCCOs play in the distribution of payments to providers?

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

66) **Measuring Client experience.** Please complete the table below to indicate how the Department should measure Client/patient experience:

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☐	☐	
SF-12 Health Survey	☐	☐	
Other types of client interviews / surveys	☐	☐	
Patient Activation Measure	☐	☐	
Focus groups	☐	☐	
Other	Please type your response here.		

67) Knowing that, at this time, the Department only has claims data, how should population health be measured?

68) How should quality and performance data be reported to the RCCOs, PCMPs, and the public?

69) **Measures for payment.** Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

- We only need 2-4 KPIs. Any more will dilute the effect. What we really want is good data, so we can improve our outcomes by doing a quality improvement project. Since children are the majority of Medicaid recipients and give HCPF the best chance of truly improving health and wellness in the long term, KPIs must be more child-focused. And since the savings are so far in the future, KPIs need to be intermediate, process outcomes.

Colorado Department of Health Care Policy and Financing

RFI Response Received and Recorded.

Serial Number: 080

Accepted by: KJDW

Notes:

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Sam Murillo
Location: Centennial, Arapahoe, CO

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Family Voices Colorado
Location: Centennial, Arapahoe, CO
✓ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
✓ Client advocate
☐ Medical provider / PCMP / other provider
  i. Type or specialty: Click here to enter text.
  ii. Area of practice: Click here to enter text.
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☐ Other (please describe): Click here to enter text.

Are you currently involved in the ACC program?

✓ Yes
☐ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☐ 3-4 years
✓ Since before the program was implemented.

How have you been involved in the ACC program and what interaction have you had with RCCOs:
FVC has been involved with ACC through Medical Home certification and Provider Recruitment and with RCCOs through policy advocacy interactions.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:
FVC involvement with Medicaid includes Medical Home certification, Provider recruitment, direct client advocacy representation, policy advocacy eg boards/committees.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely
✓ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

FVC will likely seek participation should the department recognize/acknowledge the need for systems navigation services as part of the triple aim and goal of the next ACC iteration.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

Provider support post-recruitment

Administrative clarity

Meeting basic health care needs of clients

2) What is not working well in the ACC Program?

Network adequacy

Knowledge of special health care needs

Transitions to adult providers

Lack of community-based contracts for navigation and advocacy

3) What is working best in the Behavioral Health Organization (BHO) system right now?

Administrative intervention

4) What is not working well in the BHO system?

Lack of universal quality between BHOs

Lack of quality service delivery for dual-dx in context of IDD/BH

Lack of flexibility if client is not being served well by their BHO

Lack of agency/provider accountability

Lack of community-based contracts for navigation and advocacy

5) What is working well with RCCO and BHO collaboration right now?

Administrative collaboration which improves clarity of service delivery

6) What is not working well with RCCO and BHO collaboration right now?

Routine quality care coordination that includes community-based contracts for navigation and advocacy

Making sure clients have access to information and service while also understanding process information

Lack of routine evaluation for accountability

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

Real choice and access of providers

Safe problem-resolution if providers are named as a barrier

Seamless coordination and service delivery for dual-dx

Integration must acknowledge client-specific community-based navigation and advocacy is needed

Integration must acknowledge impact of social determinants of health to help realize meaningful engagement for consumers

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	✓	☐	Needs to based on quality services rendered so equity is part of delivery
Community Behavioral Health Services Rule	✓	☐	Universal implementation should not be subjective
Covered diagnoses list	✓	☐	Basing services on targeting criteria or dx is not person centered
Different behavioral / physical health reimbursement	✓	☐	Systems shouldn't be able to push responsibility secondary to a rate; this is not person centered
Institutions for Mental Diseases exclusion	✓	☐	IMD is limiting, not based on person centered planning and puts triple aim tenets at risk
OBH rules, reporting, or financing (regulatory differences between agencies)	✓	☐	There needs to be intra-agency communication and regulation-fusion where applicable
PCMP financing structure	☐	☐	
Per-member per-month amount	✓	☐	There needs to be more equity so services are better
Physical space constraints	☐	☐	
Privacy Laws (HIPAA, 42 CFR)	☐	☐	
Professional / cultural divisions	✓	☐	These are different constructs. Inclusiveness practices and cultural responsiveness is a huge gap
RCCO or BHO contracts	✓	☐	Contracts need to include community-based navigation and advocacy
Staff capacity	✓	☐	Capacity needs to align with systems knowledge
State/Federal rules or reporting requirements	✓	☐	Not necessarily based on client experience
Technical resources / data sharing	✓	☐	Needs to be more transparent and fluid

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

Training	✓	☐	Universally implemented training is a gap
Others	Please type your response here.		

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

Ability to deliver services to children with special health care needs including dual-dx

Transition when appropriate

Staff with systems knowledge

Ability to problem-solve non-medical barriers to care

Contemporary perspective of care coordination that includes navigation and advocacy when applicable

Contract with community-based navigation and advocacy organization

10) Please share any other general advice or suggestions you may have about behavioral health integration.

It is not realistic to say that our health care delivery system at present includes integrated behavioral health when systems still push clients back and forth secondary to a diagnosis or varying levels of complex health care management.

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination?

A bridge amongst service delivery that is ecological model based, seamless and equitable, including systemic barrier navigation and advocacy and is universally understood but flexibly implemented to meet the client needs.

b. How should RCCOs prioritize who receives care coordination first?

Previous gap analysis of client health outcomes, level of complexity and acute needs

c. How should RCCOs identify clients and families who need care coordination?

Previous evaluation of client health outcomes, level of complexity and acute needs

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

Client experience and health outcomes data

12) What services should be coordinated and are there services that should not be a part of care coordination?

Any service that has an impact on day-to-day health outcomes. Transition and medication management are huge issues. In fact, contemporary care coordination in the perspective of Family Voices Colorado includes systemic navigation and advocacy.

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

Previous health history; most impactful social determinants of health; present systemic barriers

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today?

There are different forms and varying quality of care coordination going on today. Care coordination is can look vastly different in the community versus as part of a system, i.e. hospital setting. Care coordination has

continued to live in silos, often divided even by service and specialty, e.g. neurology, oncology, evaluation. At best, care coordination revolves around "treat and street" mentality, which is medical model based. Traditional care coordination doesn't have an understanding of social determinants or systemic barriers experienced by the patient/client.

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

There is agency-specific, system-specific and disability-specific care coordination. Care coordination can go unreimbursed outside of the RCCO/ACC. That care coordination as well as RCCO/ACC does not include systemic navigation or robust advocacy as provided by Family Voices Colorado.

c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

By setting the tone for higher quality care coordination that includes modernizing by including expert systemic navigation and robust advocacy, the ACC neither duplicates nor disrupts current relationships. This could be accomplished by new partnerships with community-based organizations such as, Family Voices Colorado.

d. What are the gaps in care coordination across the continuum of care?

Poor rapid-response to health changes; lack of historical and/or contextual understanding of health outcomes; no real transition or provider preparedness; no seamless communication among providers; lack of awareness of social determinants; low accountability of information sharing.

15) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	Should the RCCO have a role? Yes	No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma	✓	☐	✓	Grievance and accountability
Affordability (assistance with prescriptions or co-pays)	✓	☐	✓	
Daycare / childcare	✓	☐	✓	Program evaluation
Economic stability & employment	✓	☐	✓	
Education	✓	☐	✓	School-based health; service implementation
Environment	✓	☐	✓	Health and safety
Food access / nutrition	✓	☐	✓	Support
Health literacy	✓	☐	✓	Synergy with hospital health education
Housing	✓	☐	✓	Communication with Division
Language or translation services	✓	☐	✓	Assuring accessibility
Literacy	☐	✓	☐	
Transportation	✓	☐	✓	Accountability of providers
Other	Please type your response here. Feel free to list as many non-medical factors as you want, and please explain how the RCCO should be involved.			

16) **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	Coordinate care? Yes	No	In what capacity should these individuals coordinate care in the ACC Program?
Advanced Practice (Registered) Nurses	✓	☐	Supervision; Health education; outcomes evaluation
Certified Addiction Councilors	✓	☐	Counseling; Cross system collaboration
Certified Nurse Midwives	✓	☐	Screening; Supervision; Health education; outcomes evaluation
Community Health Workers	✓	☐	System education through I&R
Generalists (BA/BS/MA/MS)	✓	☐	Task tracking; data gathering
Health Coaches	✓	☐	Health literacy and education; outcomes evaluation
Licensed Clinical Social Workers	✓	☐	Screening; resources; policy; advocacy; provider consult
Licensed Marriage and Family Therapist	✓	☐	Therapy; cross system collaboration
Licensed Mental Health Counselors	✓	☐	Therapy; cross system collaboration
Licensed Professional Counselor	✓	☐	Therapy; cross system collaboration
Masters of Public Health	✓	☐	Policy; Implementation
Medical Doctors / Doctors of Osteopathic Medicine	✓	☐	Screening; direct service; med mgmnt; letters of med nec
Nurse Practitioners	✓	☐	Screening; direct service; med mgmnt; letters of med nec
Patient Navigators	✓	☐	Systems navigation; advocacy; policy; provider consult
Peer Advocates	✓	☐	Training; advocacy
Promotoras	✓	☐	System education and I&R
Psychiatrists	✓	☐	Screening; direct service; med mgmnt; letters of med nec
Psychologists	✓	☐	Screening; direct service; letters of med nec
Registered Nurses	✓	☐	Health education; cross system collaboration
Social Workers	✓	☐	Screening; resources; policy; advocacy; provider consult
Wraparound facilitators	✓	☐	System education, training

Other	Please type your response here.

17) **Care coordination requirements for specific populations.** Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and infants	✓	☐	PCP-specialty collaboration; evaluation and service delivery ie EI
Children	☐	✓	
Children who are healthy, but in socially-complex environments	✓	☐	Ongoing evaluation of social determinants; barrier assessment; CWH and navigation; family systems education and advocacy as needed
Children involved in the foster care system	✓	☐	Case management interface cross systemically as well as with PCP
Children with a chronic illness	✓	☐	PCP-specialty-ancillary providers collaboration; barrier assessment; CWH and navigation; family systems education and advocacy as needed
Children with a serious emotional disturbance	✓	☐	PCP-specialty-ancillary providers collaboration; barrier assessment; CWH and navigation; family systems education and advocacy as needed
Children with medical complexity	✓	☐	PCP-specialty-ancillary providers collaboration; barrier assessment; CWH and navigation; family systems education and advocacy as needed
Children or youth with a behavioral health diagnosis or substance use disorder	✓	☐	PCP-specialty-ancillary providers collaboration; barrier assessment; CWH and navigation; family systems education and advocacy as needed
Transition-age adolescents	✓		Provider network adequacy; clearer process especially amongst behavioral health and physical health
Parents and families	☐	✓	
Pregnant women		✓	
Adults	☐	✓	
Adults who are healthy, but in socially-complex situations	✓	☐	Evaluation of health outcomes secondary to social determinants
Adults with a chronic illness	✓	☐	PCP-specialty-ancillary providers collaboration; barrier assessment; CWH and navigation; family systems education and advocacy as needed

Adults with a behavioral health diagnosis or substance use disorder	✓	☐	PCP-specialty-ancillary providers collaboration; barrier assessment; CWH and navigation; family systems education and advocacy as needed
Clients involved in the criminal justice system	✓	☐	barrier assessment; CWH and navigation; family systems education and advocacy as needed
Clients with a disability	✓	☐	PCP-specialty-ancillary providers collaboration; barrier assessment; CWH and navigation; family systems education and advocacy as needed
Clients in a nursing facility	✓	☐	Community living asap; systems education and advocacy as needed
Elderly clients	✓	☐	PCP-specialty-ancillary providers collaboration; barrier assessment; CWH and navigation; family systems education and advocacy as needed
Frail elderly clients	✓	☐	PCP-specialty-ancillary providers collaboration; barrier assessment; CWH and navigation; family systems education and advocacy as needed
Clients in palliative care	☐	✓	
Other populations, please comment: Refugee and undocumented populations need systems education, resources and advocacy funneled through community-based organizations as part of service delivery team.			

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

Collaborate through contract for intentional navigation and advocacy fed by intake of RCCO.

19) How should care coordination be evaluated? How should its outcomes be measured?

Improvement in health and systems knowledge as indicated by client experience and engagement; decrease in frequency, duration, complexity of barriers; increase in undisturbed service; expansion of real choice.

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

a. What is the PMPM cost for providing care coordination services?

Much higher than that especially in considering varying degrees of complexity and time it takes to provide navigation and advocacy. Traditional care coordination ends at the door and does not bridge gap of systems barriers.

b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

Yes tiered PMPM would be ideal if for complexity not necessarily population versus population. A cost similar to service delivery rates such as HH, day program; and should include consumer direction as appropriate.

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

A manageable ratio would be helpful. It should vary by acuity, complexity of barrier and expertise of worker.

a. **Care coordinator to client ratios.** If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	✓
51-100	☐
101-200	☐
201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

Improvement in health and systems knowledge as indicated by client experience and engagement; decrease in frequency, duration, complexity of barriers; increase in undisturbed service; expansion of real choice.

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

As aforementioned it needs to be modernized to beyond discharge-like practices to include systemic navigation and advocacy and include more consumer direction.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

Care coordination; transition; data reporting; accountability; meaningful grievance; due process

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

Proven ability to access clients; meaningful partnerships; person centric and inclusiveness practices

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

Effective if based on client choice and fit

27) Should the RCCO region maps change? Why or why not? If so, how?

Yes, to expand choice and options and to reposition rural areas that have been underserved.

28) Should the BHO region maps change? Why or why not? If so, how?

Yes, to expand choice and options. How should be based on client experience and issues with service delivery.

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

Align rules from different departments that involve service delivery and oversight of care coordination

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

Only if current client experience is poor; choice without options is not real choice.

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

34) What role should RCCOs play in attributing clients to their respective PCMPs?

Initial referral and follow up on connection.

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

Rules/regs; Provider accountability

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

Rules/regs; Provider accountability

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

Access

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

Rules and regs; due process

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

Key-informant status; meaningful ways to drive resolution policy decisions.

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

Monthly convenings and proactive information gathering used for quality improvement

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

Contracts for specific actions/tasks

42) How should the Department structure stakeholder engagement for the ACC as a whole?

As key-informant and a driver of program improvement

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

No

a. If no, what are the gaps?

Knowledge of systems and how to provide care for complexity

b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

Lack of understanding of how to provide care; manage social determinants of health; willing administration

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

a. What role should hospitals play in the next iteration of the ACC Program?

Care coordination; billing; barrier resolution

b. What role should pharmacies play in the next iteration of the ACC Program?

Barrier resolution

c. What role should specialists play in the next iteration of the ACC Program?

Authorization

d. What role should home health play in the next iteration of the ACC Program?

Improved service delivery

e. What role should hospice care play in the next iteration of the ACC Program?

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

Conflict free practices and more robust understanding of all options and services related to clients,

g. What role should counties play in the next iteration of the ACC Program?

Improved eligibility and information of systems

h. What role should local public health agencies play in the next iteration of the ACC Program?

Care coordination and resources

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

Navigation and advocacy contractors. Yes there are valuable assets in the community. Family Voices Colorado is only one example.

45) How can RCCOs help to support clients and families in making and keeping appointments?

CHW

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

Yes as well as experts in complex barriers and direct advocacy

47) **Community Health Worker reimbursement.** Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement process	(Please check all that apply)
Independently bill	✓
On staff (salary) at Primary Care Medical Provider Clinic	✓
On staff (salary) at RCCO	✓
Per Member Per Month Payment	✓

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you?

An ongoing level of understanding and knowledge that requires responsive and inclusive practices.

b. What RCCO requirements would ensure cultural competency?

Continued education and training; client interactions

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?

Intentional interviewing and access to experts in the community of the clients

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

Meaningful engagement with the community

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

Only if it doesn't decrease service delivery.

51) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

Assure access, choice and direction to clients and families

52) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

Practice Support

53) **Support for practices.** Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☐	☐	☐	☐
Network provider education	☐	☐	☐	☐
Assistance with practice redesign	☐	☐	☐	☐
Assistance with efficiency-enhancing activities	☐	☐	☐	☐
Provide web-based resources and directories	☐	☐	☐	☐
Provide practice-specific data reports	☐	☐	☐	☐
Provide clinical care guidelines and best practices.	☐	☐	☐	☐
Provide clinical screening tools	☐	☐	☐	☐
Provide health and functioning questionnaires	☐	☐	☐	☐
Provide chronic care templates	☐	☐	☐	☐
Provide registries	☐	☐	☐	☐
Offer client reminders	☐	☐	☐	☐
Offer client self-management tools	☐	☐	☐	☐
Offer educational materials about specific conditions	☐	☐	☐	☐
Supply behavioral health surveys	☐	☐	☐	☐
Supply other self-screening tools	☐	☐	☐	☐
Administer behavioral health surveys	☐	☐	☐	☐
Administer other self-screening tools	☐	☐	☐	☐
Prepare client action plans	☐	☐	☐	☐
Provide training on providing culturally-competent care	☐	☐	☐	☐
Provide training to supporting staff	☐	☐	☐	☐
Provide training on motivational interviewing	☐	☐	☐	☐
Provide tools and software for phone call and appointment tracking	☐	☐	☐	☐
Provide tools and resources for tracking labs, referrals, etc.	☐	☐	☐	☐
Provide referral and transitions of care checklists	☐	☐	☐	☐
Provide visit agendas or templates	☐	☐	☐	☐
Provide standing pharmacy order templates	☐	☐	☐	☐
Provide comprehensive directory of community resources	☐	☐	☐	☐
Provide directory of other resources	☐	☐	☐	☐
Provide materials regarding Nurse Advice Line	☐	☐	☐	☐
Ensure all tools and resources are centrally located on RCCO-specific website	☐	☐	☐	☐
Others				

54) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

55) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

56) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

57) Should the Department require that PCMPs utilize disease registries to manage the health of their population?

58) Please share any other advice or suggestions about provider support in the ACC.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

62) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

63) What role – if any – should the RCCOs play in the distribution of payments to providers?

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

66) **Measuring Client experience.** Please complete the table below to indicate how the Department should measure Client/patient experience:

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	✓	☐	
SF-12 Health Survey	☐	☐	
Other types of client interviews / surveys	✓	☐	
Patient Activation Measure	✓	☐	
Focus groups	✓	☐	
Other	Please type your response here.		

67) Knowing that, at this time, the Department only has claims data, how should population health be measured?

68) How should quality and performance data be reported to the RCCOs, PCMPs, and the public?

69) **Measures for payment.** Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☐
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

70) What percent of RCCO payments should be tied to measures or performance?

Percentage	
10-20%	☐
21-30%	☐
31-40%	☐
41-50%	☐
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

71) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?

72) Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?

73) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

74) **Incentive payment frequency**. Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	☐
Annually	☐
Other	☐

If you checked the "Other" box, please describe payment frequency below:

75) For potential offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

76) For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

Health Information Technology (HIT)

77) **Types of communication.** For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	☐
Text message	☐	☐
Web portal	☐	☐
Email	☐	☐
Telemedicine / Video chat	☐	☐
Face-to-face meeting	☐	☐
Smartphone app	☐	☐
Other:		

78) **HIT investments by organizations.** For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below:

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	☐	☐
Digital care management tool	☐	☐
Care transitions alerts	☐	☐
Electronic Health Records (EHRs)	☐	☐
Health risk assessment software	☐	☐
Practice assessment tools	☐	☐
Practice management tools (scheduling, billing)	☐	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☐
Patient education/wellness tools	☐	☐
Provider/case manager directory	☐	☐
Shared decision-making tools	☐	☐
Telemedicine software	☐	☐
Other:	☐	☐
Other:	☐	☐

79) **Importance of technology by type**. The Department is working to determine what technology is in place, what technology is needed, and what technology should be standardized. For RCCOs, providers, and other organizations, use the table below to answer what HIT infrastructure outside of the SDAC your organization would use to perform population health management activities. Tools are scored from 1-5, where 1 are those items least-likely to be used, and 5 are items most-likely to be used:

Tool	1 Least	2	3	4	5 Most
Population analytics / reporting / dashboard	☐	☐	☐	✓	☐
Care management tool	☐	☐	☐	☐	✓
Care transitions alerts	☐	☐	☐	☐	✓
Electronic Health Records (EHRs)	☐	☐	☐	☐	✓
Practice assessment tools	☐	☐	☐	✓	☐
Health risk assessment software	☐	☐	☐	☐	✓
Practice management tools (scheduling, billing)	☐	☐	☐	✓	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☐	☐	☐	✓
Patient education wellness tools	☐	☐	☐	☐	✓
Provider/case manager directory	☐	☐	☐	✓	☐
Shared decision-making tools	☐	☐	☐	☐	✓
Telemedicine	☐	☐	☐	☐	✓
Other:	☐	☐	☐	☐	☐

80) What are the primary barriers to RCCOs and providers increasing their use Health Information Technology to improve the performance of Primary Care Practices?

Cost, TA, management, timely entry and analysis, cross-system interoperability.

81) How can Health Information Technology support Behavioral Health Integration?

Coordination could actually be seamless.

82) In the next iteration of the ACC, should there be a shared resource for data and analytics? Please describe the basic criteria for what a shared data and analytics platform needs to contain in order for it to be useful.

83) Should there be a shared care management tool? Please describe the basic criteria for what a care management tool would need to contain in order for it to be useful.

Health outcomes data and social determinants. Previous barrier to care list.

84) Should there be a shared population health management tool? Please describe the basic criteria for what a population health management tool would need to contain in order for it to be useful.

85) Please describe the functionality that a common Medicaid provider directory would need to contain in order for it to be useful.

86) How can the RCCOs support providers' access to actionable and timely clinical data?

Supporting interoperability.

87) What are the HIT solutions that would benefit clients, providers, and RCCOs? Please comment on the parameters these tools or platforms would need to possess and the ways in which they could be used.

PHR owned by client.

88) What technical assistance or resources related to HIT infrastructure should the RCCOs supply? This assistance or these resources could be for providers, social service organization, clients/families, or for others.

89) What role should health information exchange platforms like CORHIO or QHN play in the next iteration of the ACC?

90) Please share any information, advice, and suggestions you have about health information technology in the ACC Program.

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Allison Cusick
Location: Denver, CO

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Delta Dental of Colorado and Delta Dental of Colorado Foundation
Location: Denver, Colorado
☒ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☐ Medical provider / PCMP / other provider
  i. Type or specialty: Click here to enter text.
  ii. Area of practice: Click here to enter text.
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☒ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☒ Other (please describe): Dental Insurance Carrier

Are you currently involved in the ACC program?

☐ Yes
☒ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☐ 3-4 years

How have you been involved in the ACC program and what interaction have you had with RCCOs:
Very limited.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:
Our mission is to improve the oral health of the communities we serve.

We are currently not involved directly in the provision of Medicaid yet through our community benefit and Foundation programs, we aim to 1) increase access to oral health care for the underserved, many of whom are enrolled in Medicaid and CHP+, and 2) increase the public's awareness regarding the importance of oral health.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☒ N/A

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

2) What is not working well in the ACC Program?

Oral health is not included as part of the ACC program model. If the state wants to be truly comprehensive in serving "all aspects of a person's health care," dental must be a part of the ACC program model.

3) What is working best in the Behavioral Health Organization (BHO) system right now?

4) What is not working well in the BHO system?

5) What is working well with RCCO and BHO collaboration right now?

6) What is not working well with RCCO and BHO collaboration right now?

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☐	☐	
Community Behavioral Health Services Rule	☐	☐	
Covered diagnoses list	☐	☐	
Different behavioral / physical health reimbursement	☐	☐	
Institutions for Mental Diseases exclusion	☐	☐	
OBH rules, reporting, or financing (regulatory differences between agencies)	☐	☐	
PCMP financing structure	☐	☐	
Per-member per-month amount	☐	☐	
Physical space constraints	☐	☐	
Privacy Laws (HIPAA, 42 CFR)	☐	☐	
Professional / cultural divisions	☐	☐	
RCCO or BHO contracts	☐	☐	
Staff capacity	☐	☐	
State/Federal rules or reporting requirements	☐	☐	
Technical resources / data sharing	☐	☐	
Training	☐	☐	
Others	Please type your response here.		

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

10) Please share any other general advice or suggestions you may have about behavioral health integration.

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination?

National Quality Farum: *Core coordination is o function thot helps ensure that the potient's needs and preferences for health services and informatian shoring ocrass people, functions, ond sites ore met aver time. Coardination moximized the value af services delivered to patients by facilitating beneficiol, efficient, sofe, and high-quolity patient experiences and impraved healthcore autcames.*

b. How should RCCOs prioritize who receives care coordination first?

The National Quality Forum also notes that care coordination is "especially important for people with chronic conditions, such as diabetes..." Individuals with chronic conditions place a significant burden on the overall healthcare system, including medical, dental, and behavioral health, and by coordinating their care may help reduce costs and improve outcomes.

It is also vital to coordinate care for Medicaid families with children who may not be familiar with navigating the healthcare system. There are many barriers to accessing care, and care coordination could alleviate some of these barriers. Additionally, there is great opportunity to ensure that children remain as healthy as possible, with oral, behavioral, and overall health, if they have access to coordinated services aimed at prevention and early intervention.

c. How should RCCOs identify clients and families who need care coordination?

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

12) What services should be coordinated and are there services that should not be a part of care coordination?

Services related to an individual's overall health and well-being should be coordinated. This includes, but is not limited to medical, behavioral, and oral health.

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today?

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

d. What are the gaps in care coordination across the continuum of care?

15) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	Should the RCCO have a role? Yes	No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma	☒	☐	☐	
Affordability (assistance with prescriptions or co-pays)	☒	☐	☐	
Daycare / childcare	☐	☐	☐	
Economic stability & employment	☐	☐	☐	
Education	☐	☐	☐	
Environment	☐	☐	☐	
Food access / nutrition	☒	☐	☐	
Health literacy	☒	☐	☐	
Housing	☐	☐	☐	

Language or translation services	☐	☐	☐	
Literacy	☐	☐	☐	
Transportation	☐	☐	☐	
Other	It appears that you're not considering dental when you refer to "health care". While we believe the oral health is an integral and natural part of healthcare, we are specifically calling it out here, because if you're truly going to provide comprehensive care coordination, oral health cannot be left out.			

16) **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	Coordinate care? Yes	No	In what capacity should these individuals coordinate care in the ACC Program?
Advanced Practice (Registered) Nurses	☒	☐	
Certified Addiction Councilors	☒	☐	
Certified Nurse Midwives	☒	☐	
Community Health Workers	☒	☐	
Generalists (BA/BS/MA/MS)	☒	☐	
Health Coaches	☒	☐	
Licensed Clinical Social Workers	☒	☐	
Licensed Marriage and Family Therapist	☒	☐	
Licensed Mental Health Counselors	☒	☐	
Licensed Professional Counselor	☒	☐	
Masters of Public Health	☒	☐	
Medical Doctors / Doctors of Osteopathic Medicine	☒	☐	
Nurse Practitioners	☒	☐	

Patient Navigators	☒	☐	
Peer Advocates	☒	☐	
Promotoras	☒	☐	
Psychiatrists	☒	☐	
Psychologists	☒	☐	
Registered Nurses	☒	☐	
Social Workers	☒	☐	
Wraparound facilitators	☒	☐	
Other	Dental Professionals – Dental professionals must be recognized as an part of an integrated health care team. Dentists and dental hygienists can provide reminders and support the coordination of regular and/or follow-up care for patients with chronic conditions such as heart disease, diabetes and for pregnant women.		

17) **Care coordination requirements for specific populations.** Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and infants	☐	☐	
Children	☐	☐	
Children who are healthy, but in socially-complex environments	☐	☐	
Children involved in the foster care system	☐	☐	
Children with a chronic illness	☐	☐	
Children with a serious emotional disturbance	☐	☐	
Children with medical complexity	☐	☐	
Children or youth with a behavioral health diagnosis or substance use disorder	☐	☐	
Transition-age adolescents	☐	☐	
Parents and families	☐	☐	
Pregnant women	☐	☐	
Adults	☐	☐	
Adults who are healthy, but in socially-complex situations	☐	☐	
Adults with a chronic illness	☐	☐	

Adults with a behavioral health diagnosis or substance use disorder	☐	☐	
Clients involved in the criminal justice system	☐	☐	
Clients with a disability	☐	☐	
Clients in a nursing facility	☐	☐	
Elderly clients	☐	☐	
Frail elderly clients	☐	☐	
Clients in palliative care	☐	☐	
Other populations, please comment:			

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

19) How should care coordination be evaluated? How should its outcomes be measured?

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

a. What is the PMPM cost for providing care coordination services?

b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

a. **Care coordinator to client ratios.** If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☐
51-100	☐
101-200	☐

201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

27) Should the RCCO region maps change? Why or why not? If so, how?

28) Should the BHO region maps change? Why or why not? If so, how?

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

34) What role should RCCOs play in attributing clients to their respective PCMPs?

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

42) How should the Department structure stakeholder engagement for the ACC as a whole?

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

It is difficult to tell how dental providers are currently a part of the ACC model. That said there are currently not enough dental providers to adequately serve the ACC population. Dental providers that accept Medicaid are often in the center of urban areas, leaving large access gaps in more rural areas.

a. If no, what are the gaps?

b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

a. What role should hospitals play in the next iteration of the ACC Program?

b. What role should pharmacies play in the next iteration of the ACC Program?

c. What role should specialists play in the next iteration of the ACC Program?

d. What role should home health play in the next iteration of the ACC Program?

e. What role should hospice care play in the next iteration of the ACC Program?

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

g. What role should counties play in the next iteration of the ACC Program?

h. What role should local public health agencies play in the next iteration of the ACC Program?

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

There could be potential partnerships with Foundations to leverage and/or spread innovative models of care to the ACC model. This may include such projects as Delta Dental of Colorado Foundation's Medical-Dental Integration project, which aims to co-locate dental hygienists as part of the medical care team to provide preventive dental services. There may also be opportunities to pilot smaller projects in collaboration with Foundations and/or other non-profit organizations.

45) How can RCCOs help to support clients and families in making and keeping appointments?

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

Yes. These individuals play a key role in educating families, coordinating and case managing care, and assisting families with understanding how to navigate the entire health system.

47) **Community Health Worker reimbursement.** Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement process	(Please check all that apply)
Independently bill	☐
On staff (salary) at Primary Care Medical Provider Clinic	☐
On staff (salary) at RCCO	☐
Per Member Per Month Payment	☐

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

Dental care is an important benefit for individuals and should be integrated into the RCCO structure. Delta Dental of Colorado administers the CHP+ program for the state, and has gained a level of understanding of what is needed to successfully administer this type of program. To attract and retain a high quality, robust dental network it is imperative that there is 1) a good plan design, 2) competitive dental fee reimbursement structure, and 3) broad access to care. Improving access to and utilization of preventive dental care, will reduce the need for more costly restorative services and emergency room utilization.

A dental carrier with a strong network within Colorado should be contracted with to administer the dental benefit, conduct member outreach, develop a strong network, and work with other RCCO partners to ensure maximum medical-dental integration. RCCO's can support the dental carrier by ensuring that members utilize their dental benefit at a dental home. This is especially important for at risk populations such as children, pregnant women and older adults with chronic conditions such as diabetes and heart disease.

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

   a. What does cultural competence mean to you?

   b. What RCCO requirements would ensure cultural competency?

   c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?

   d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

51) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

Dental providers and organizations are a critical partner to reducing emergency room utilization. Through partnerships and care coordination, children and adults will have greater access to prevention and early intervention for their dental needs. This will reduce higher cost restorative procedures and emergency

department utilization. We encourage the ACC to ensure that the RCCOs include dental providers in their network of providers and include an oral health access measure in their reporting.

52) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

GENERAL QUESTIONS

1) What is working best in the Accountable Care Collaborative (ACC) right now?

The present arrangement promotes local service delivery and effective care coordination, and it decelerates cost increases. This investment into the community and local coordination enables us to meet local needs. The promising cost containment opportunities through the ACC helps promote successful integrated health care.

Working with the ACC allows the Regional Care Collaborative Organizations (RCCO) to work independently and meet contract requirements. This level of autonomy allows RCCOs to be creative as they strive for solutions, which translates into greater innovation.

2) What is not working well in the ACC Program?

Reducing the cost of care requires program innovation. At present, there is too much of a singular focus on care coordination instead of concentrating on additional systems and solutions that meet all elements of the Triple Aim. Efforts must be made to better align incentives for reform. In the current model, true payment reform is not possible. Each RCCO's expectations align with their contracts with other entities and agencies; however, the State holds the contracts with providers rather than the RCCOs. The RCCOs therefore cannot provide incentives or engage in payment reform at the point of care.

3) What is working best in the Behavioral Health Organization (BHO) system right now?

By increasing the implementation of integrated care models, the BHO system has achieved significant progress in reaching the Triple Aim goals of improving client experience and improving health outcomes in a cost-effective manner. Joint BHO/RCCO partnership efforts and other community-based initiatives also contribute appreciably to obtaining these goals.

The current BHO system has also successfully slowed cost increases. Based on an evaluation of 15 years of data completed by the Altarum Institute (2011), the Colorado behavioral health carve-out model has slowed cost growth while increasing service access and maintaining quality.

The maturity of the BHO system enables the BHOs to quickly implement benefits for new populations. BHO performance has steadily improved, which is evident through a variety of validated performance indicators, such as:

- Flexible and sophisticated encounter/claims systems

- High compliance with contract, State and federal standards, as demonstrated through the EQRO compliance and performance measure validation reviews

4) What is not working well in the BHO system?

Our first priority is to provide the most efficient care for the individuals we serve, but the "silo" design of the current BHO system splits an individual into separate diagnoses (e.g., separate diagnoses within the DD and SUD systems). This process creates a disparity of care, as the more silos are created the more barriers are created toward true care integration. Our suggested improvements will be found in questions 7 to 18 of this response.

5) What is working well with RCCO and BHO collaboration right now?

The strong RCCO and BHO collaboration has increased care coordination, which is an important first step. The collaboration has created the opportunity for personnel from both of these entities to work together. Such teamwork incites innovation.

6) What is not working well with RCCO and BHO collaboration right now?

Though payment reform is in progress, it is occurring at too slow of a pace to impact true health reform. For the future, the models should be based on joint accountability and true integration supported by payment reform initiatives.

BEHAVIORAL HEALTH INTEGRATION

7) What should be the next steps in behavioral health integration in Colorado?

The next steps in behavioral health integration within the RCCO model should move beyond a fee-for-service delivery model between disparate healthcare systems to one that includes care coordination, enhancements of all providers' holistic approach to care, and models of payment reform such as global payment, payments for episodic care, and/or capitation/sub-capitation. While care coordination increases access to health care services for people identified as needing care coordination, it does not ensure improvement in individual clinical outcomes at the point of care. We suggest the following as immediate next steps:

1. Conduct a comprehensive analysis to identify and remove barriers to payment reform. Although payment reform in and of itself will not produce practice transformation, financial sustainability is a significant consideration for most practices.

   Analysis could include:

   - What State and Federal rules, regulations, policies, and procedures restrict or impede the delivery and reimbursement of integrated care? (i.e., same day billing restrictions, pre-certifications, prior authorizations, etc.)
   - What primary care and behavioral health services are eligible for encounter rates?
   - What behavioral health services still require CCARs and pre-authorizations, and how can these requirements be modified in order to facilitate integrated care delivery?
   - What integrated behavioral health services fall under capltation or case rates, where used?

2. Conduct a comprehensive analysis to identify and remove communication barriers between behavioral health and medical providers. Confusion regarding HIPAA and CFR42 regulations poses major challenges to integrated care delivery, regardless of whether the model of care is co-located or through collaborative agreements between behavioral health and medical providers.

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

While definitions of integrated care vary, most rest on the premise of care that includes attention to a person's medical, behavioral (including substance use), and psychosocial needs. However, it is important to differentiate between care that occurs in a coordinated fashion across different settings and care that is delivered in the same setting. At minimum, integrated care in Colorado should be co-located, meaning that behavioral health and medical providers are practicing in the

same physical location. While co-location alone does not ensure whole-person, whole-family integrated care, it is a necessary component. Features that demonstrate practice transformation include open communication between providers (including documentation), purposeful use of universal standardized screening, treatment plans that include medical and behavioral data, and monitoring of health and behavior change rather than concentrating solely on mental illness.

10) Please share any other general advice or suggestions you may have about behavioral health integration?

We make the following additional suggestions about behavioral health integration:

- **Integration takes time**: Integration is a multivariate, multi-systemic endeavor that takes time to accomplish. It follows a developmental trajectory of trial and error and cultural transformation that can take several years to mature. Because few practices currently operate at a high degree of integration, practices that are starting to head in this direction should be allowed a reasonable timeframe to reach full integration.

- **There are many ways to accomplish integration**: Because clinics respond to the needs of their specific populations and work within financial and human resource realities, clinics vary greatly in terms of staffing, workflows, protocols, and treatment approaches.

- **Integrated care alone does not ensure whole-person care**: Integrated care is primarily focused on the outpatient level of care at both the medical and behavioral levels. However, there is still a need for coordination with specialty services, and that includes the current mental health system responsible for managing the needs of the severely and persistently mentally ill. Additionally, holistic care for Medicaid recipients requires that their other psychosocial needs are also addressed. Basic needs such as housing, food, and safety must be met if there is any hope for improved health outcomes. Coordination with other service systems such as Housing Authorities, TANF/WIC, Foster Care and Juvenile Justice Systems, Corrections, and the myriad of non-profit organizations that support these individuals should be a required component of person-centered care planning.

- **Integrated care should not be setting specific**: All people, regardless of their level of need, can benefit from an integrated approach. While these needs can be managed in high-quality integrated primary care settings for the majority of the population, it is equally important to meet the medical needs of people who are active users of the mental health system.

CARE COORDINATION

11a) Care coordination is an important part of the ACC Program. What is the best definition of care coordination?

With reference to a definition developed by the Agency for Healthcare Research and Quality (AHRQ), ValueOptions utilizes the following modified version:

"Care coordination is the deliberate organization of client-focused care activities between two or more participants (including the client) involved in a client's person-centered care plan. The care coordination process facilitates the delivery of appropriate healthcare services and integration of behavioral and physical healthcare systems. Organizing care involves the marshalling of various personnel and other resources required to carry out all necessary care activities. It is often managed by the documentation and exchange of information among all participants responsible for the different aspects of care."

Activities may include: comprehensive care management, coordination of care among treating providers, health promotion and education, comprehensive support during transitions between levels of care, psychosocial support for the client and the client's caregivers and family, referrals to community resources, and utilization of a consolidated client health record.

11b) How should RCCOs prioritize who receives care coordination first?

RCCOs should prioritize which individuals have access to care coordination services through a combination of data analytics with population stratification and employing real time clinical criteria and algorithms designed to quickly identify and engage clients with emerging risk that have not yet fully registered within the analytic review process. In addition to the data-driven stratification process that identifies highest to lowest risk candidates for care coordination, an assessment process should be applied for all individuals to quantify current coordination needs and recalibrate risk scores for participation.

11c) How should RCCOs identify clients and families who need care coordination?

RCCOs would use a combination of the data-driven analytics and the real time event-driven criteria to identify participants for care coordination activities. Real time events may include major health adverse incidents requiring hospitalization and transitions back to community-based care such as a cardiac event stroke, joint replacement, or psychiatric hospitalization for suicidal ideation. Data-driven identification may include cumulative risk scores based on predictive modeling and significant care gaps requiring coordination for closure.

11d) How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

RCCOs should track care coordination provided by delegated medical providers using a quality and informatics/analytics based oversight process. The RCCO could provide the parameters used to measure the care coordination process to the delegated provider management team. Operational and clinical outcomes reports, as well as quality audits, provide the evidence that these parameters have been met. Sample parameters would include but are not limited to:

- Utilization of a mutually agreed stratification and prioritization process for assigning care coordination resources
- Percentage of clients engaged in care coordination within a year compared to overall population served (engagement defined as successfully contacted, agreement to participate, and completion of an initial needs assessment)
- Percentage of clients engaged in care coordination in relationship to the total number identified and referred.
- Percentage of clients with a comprehensive needs assessment and care plan developed within 30 days of initial identification/referral
- Percentage of clients with hospitalizations, residential treatment, or skilled nursing home rehabilitation receiving care coordination services per recommended protocol while transitioning back to community based care
- Readmission rates within 30 days of clients with hospitalizations, residential treatment, or skilled nursing home rehabilitation transitioning back to community based care
- Clients with chronic health conditions receiving recommended annual interventions per best practice guidelines
- Clients with chronic health conditions requiring medication treatment remaining adherent with medication regimens

12) What services should be coordinated and are there services that should not be a part of care coordination?

Any formal benefit related service, as well as informal services supporting the needs for clients with complex health issues requiring care coordination support, should be included within the scope of care coordination activities. This would also include services that are registered on the plan of care: community based programs, prevention and health promotion, outpatient treatment for behavioral and medical care, long term services and support, rehabilitation, intermediate levels of care, crisis support and interventions, higher levels of care (inpatient, residential, skilled nursing, and rehabilitation), pharmacy services, dental services, and psychosocial support.

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

The ultimate goal of care coordination is to support the improvement of health, which includes physical health and recovery from mental illness. The process begins by gathering information obtained through a comprehensive needs assessment and review of available records, conducting direct recovery-focused interviews with the client, and obtaining additional information from the client's care team addressing the following areas:

- Immediate needs and current services
- Historic services received in addition to current services
- Health conditions including both physical and behavioral health (mental health and substance use) and current medications
- Functional status that includes the client's strengths and barriers
- Accessibility requirements (including communication needs, need for transfer equipment, need for personal assistance, need for appointments at a particular time of day)
- Transportation access
- Equipment needs including DME and assistive technology
- Housing/home environment
- Employment status and interest
- Involvement with other care coordinators, care teams, or other state agencies
- Social supports
- Cultural, linguistic, and ethnic identification
- Food security and nutrition
- Wellness and exercise
- Advance directives/guardianship
- Personal goals
- Understanding of available services and benefits
- Understanding of and engagement in recovery-oriented activities

14a) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems. What care coordination is going on today?

We recommend a dedicated primary care coordinator through our delegated provider relationships. When the primary care issues are physical health related, the dedicated primary care coordinator from the Federally Qualified Health Center (FQHC) group would serve as the key contact. For clients with primary care issues associated with behavioral health, the dedicated primary care coordinator from the Community Mental Health Center (CMHC) would provide the service. Clients not attributed with either a CMHC or FQHC would receive a primary care coordinator through the RCCO. In all cases, the overall care coordination needs should be

addressed by the primary care coordinator with collaboration with the other provider entities as needed.

14b) What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

The care coordination process would be provided as outlined in the response to Question 14a above. All care coordination would take place using a RCCO-related care coordinator, either through the RCCO provider partner or through the RCCO care coordination staff. Case management is provided in ancillary systems, such as HCBS programs, child welfare, and juvenile justice. That care management is different because each process is responsible only for the services provided within its system. The RCCO Care Coordination process is not specific to any service system and works to coordinate and align these systems and their respective case management targets to promote a holistic plan of coordinated care.

14c) How can the ACC avoid duplicating or disrupting current care coordination relationships?

Successful care coordination relies upon continuity of relationship and the minimization of duplication and/or disruption of care. A primary care coordinator should be responsible for coordinating all aspects of the client's care needs, relying on consultation with the allied care team and ACC partners as needed for condition-specific questions requiring specialty input. Care coordinators should develop a centralized person-centric care plan based on the individual's needs and distribute this to key participants on the care team. In addition, case managers for services such as Child Welfare and JJA/Correction should also be part of the care team. The primary care coordinator should also schedule interdisciplinary care team meetings including the client to review and adjust the care plan based on progress and setbacks.

14d) What are the gaps in care coordination across the continuum of care?

Delay in sharing rapidly changing health information following key health events is the largest source of care gaps in the continuum of care. For example, a client may receive services in the emergency room. Ideally the care coordinator would receive notification within 24 hours of the visit in order to assess current health needs and make sure they are met. Refining the process of real time data sharing is critical for effective care coordination.

16) Requirements about who should be doing care coordination. Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Our recommendation is to utilize a primary dedicated care coordinator model matching the client's primary needs with the appropriate coordinator who may be on staff with the ACC provider partner or part of the ACC. For this reason, we suggest employing and contracting with multi-disciplinary provider types. We would differentiate provider types that serve as the primary coordinator and those that serve as adjunct or secondary coordinators supporting the primary coordinator, such as a certified peer specialist. Those serving on the client's care team would be expected to collaborate with the coordination process as appropriate to their role.

17) Care coordination requirements for specific populations. Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

We would utilize a 'generalist' primary care coordinator as a starting point specific to medical or behavioral health service needs with additional specialty or training when available to further address the unique service needs. We would also employ a consultation model and adjunct coordination supports to further address the unique requirements of these client types.

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

Traditionally, the BHOs have participated in programs that bring together various systems (DHS, juvenile justice, schools, BHOs) to provide coordinated care for high risk families. RCCOs could become involved in these types of coordinated care projects to incorporate medical services. Of particular importance to this population are preventive services such as childhood immunizations, well-child checks, and comprehensive programs that include educational, environmental service, and social support elements for chronic diseases that are drivers of high ER utilization (e.g., pediatric asthma).

RCCOs should also collaborate with the courts, probation, schools, and other treatment providers to keep children out of residential placement through the juvenile justice system. RCCOs should also participate in the DHS Core Services program and with specialty programs such as The Collaborative for Autism and Neurodevelopmental Disabilities Options, and the Reduce, Educate, Accommodate & Pace program (for Traumatic Brain Injury in children).

PROGRAM STRUCTURE

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

Where feasible, standardized functions provide consistency of care and facilitate quality reporting. However, regional variation in resource availability and population demographics often poses barriers to effective standardization. Provider contracting and payment methodologies should remain flexible functions in order promote creative solutions across regions. High-level uniform functions should be required in order to generate meaningful data aimed at ensuring consistency of care for specific cohorts. Specifically, care coordination functions should follow clinically-relevant, best practice continuity of care standards, and reporting requirements should be based on preventive and acute care measures that align with parallel initiatives such as PCMH recognition, Stage 1 Meaningful Use, and CMS Core Measures.

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

Bidders should be required to have a local presence to assure a point of accountability with an understanding of the community and its strengths in order to ensure opportunity for collaboration. Upon contract implementation, bidders should be required to perform a needs assessment and to update it annually.

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

27) Should the RCCO region maps change? Why or why not? If so, how?

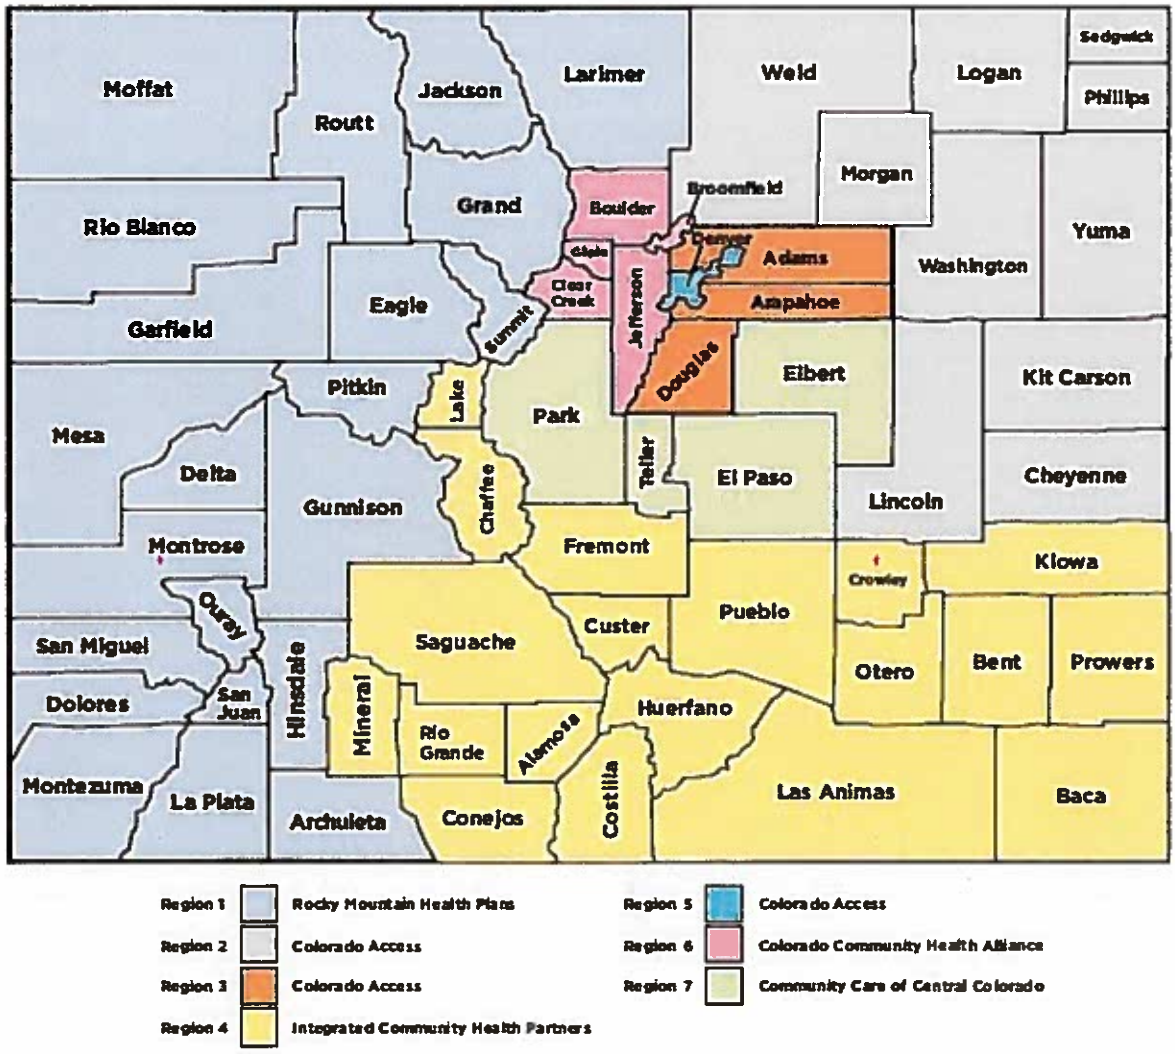
28) Should the BHO region maps change? Why or why not? If so, how?

Allowing PCMPs to choose the RCCO to which the practice's clients are enrolled may have marginal success as there would need to be multiple RCCOs in one region. However, in regions such as the Denver metro area, choice and competition would be highly valuable, when logistics

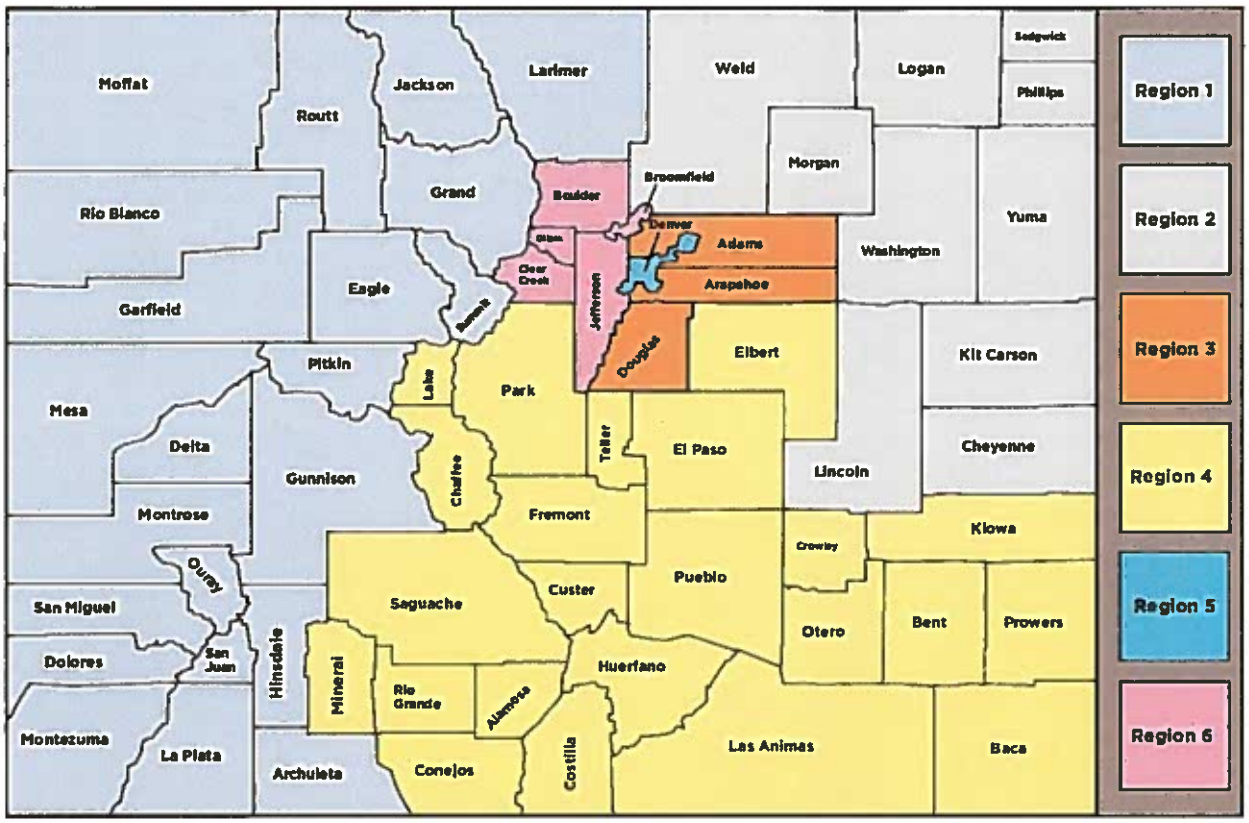
permit. If this choice option is initiated, individual choice would likely be preferred over provider choice.

The RCCO map should change to more closely align natural support systems. For example, Pueblo and Colorado Springs regions should be one region. This would align more closely with the BHO regions and require fewer RCCO regions. Please refer to the map below for a possible reconfiguration of the regions.

CURRENT MAP OF THE COLORADO REGIONS



MAP OF COLORADO FEATURING RECONFIGURED REGIONS



29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

ValueOptions would suggest a transition period of at least six months. This would ensure that proper transition and implementation processes are in place to safeguard the continuity and quality of care that clients receive, avoid disruption and/or transition noise, and mitigate transition risk throughout the RCCO region.

The core activities that occur during the transition period include, but should not be limited to:

- Identifying a local presence in the RCCO region
- Hiring and training of staff
- Developing working knowledge of local services and resources
- Developing protocols and procedures
- Initiating and developing provider contracts
- Ensuring continuity of care for individuals receiving services

- Conducting outreach and education for individuals, families, providers, and other organizations
- Any IT build out or data management preparation

The expenses involved in the transition will vary.

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

Multiple RCCOs could enhance individual choice, but reporting and eligibility issues could arise from a multiple RCCO structure. This would not be possible in most regions; however, it may be an important change for the Denver metro area.

34) What role should RCCOs play in attributing clients to their respective PCMPs?

RCCOs should have administrative responsibilities for attributions within defined guidelines.

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

The success of any program stems from integrated and collaborative efforts with State agencies and departments. That is why we strongly support the involvement of all stakeholders within a transparent environment. In many of our public/private partnerships, we have developed a "knowledge exchange" philosophy that guides our approach to implementing successful programs. Our knowledge exchange philosophy proposes that no one individual or organization possesses all knowledge, and that everyone involved has something to gain from an open, honest exchange of information. We assert that all individuals who have a stake in an initiative, from a strategic level to those administering hands-on care for the individuals we serve, have something to offer and that all stakeholders can learn from each other. This is the philosophy that we would suggest in order to effectively collaborate with the Colorado Departments of Health Services and Public Health and Environment, the Department of Regulatory Agencies or the Division of Insurance, Connect for Health Colorado, and the greater insurance marketplace. Our experience has shown that the synergy produced by mutual learning helps to create a program that is effective at the outset and that will continue to progress as the relationships develop.

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

Please see our response to question 35 above.

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

Please see our response to question 35 above.

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

Please see our response to question 35 above.

NETWORK ADEQUACY AND CREATING A COMPREHENSIVE SYSTEM OF CARE

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

The current network does not adequately serve the ACC population.

43a) If no, what are the gaps?

Below are the gaps in service for the ACC population.

- Specialty services (Neurology, Dental, Orthopedics) for Medicaid includes long wait times for appointments
- Transportation to and from services (food banks, medical appointments, DHS offices) is inadequate
- Access to services for children is a critical gap. Every child should have the opportunity to receive services that others have access to. The current silos by which services are delivered impede whole-person, whole-family integrated care.

45) How can RCCOs help to support clients and families in making and keeping appointments?

There are many technological programs and services at the RCCOs' disposal to assist individuals in making and keeping appointments. Provider education will also help to educate and empower consumers.

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

Community Health Workers and Patient Navigators with state-recognized certification should be required as part of the next RFP.

47) Community Health Worker reimbursement. Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement process	(Please check all that apply)
Independently bill	
On staff (salary) at Primary Care Medical Provider Clinic	✓
On staff (salary) at RCCO	✓
Per Member Per Month Payment	

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you?

Culture influences all aspects of human behavior, including health maintenance behaviors and how health beliefs and practices are passed from generation to generation. Recovery, rehabilitation, and reintegration are more likely where systems and services are created with cultural sensitivity in mind, and when providers have the cultural competence needed to understand the backgrounds of the families and communities they serve.

This objective not only addresses the needs of individuals served, but also takes into consideration all underlying social and institutional inequalities that lead to low health literacy. Disability and poor health goes beyond the individual's health status; environmental barriers such as racism and poverty influence his or her recovery and access to care. Cultural competence acknowledges and incorporates an appreciation of diversity and an acceptance of various behaviors, beliefs, and values when providing services and includes those variables into the assessment and treatment of the person.

The mission of the National Center for Cultural Competence (NCCC) informs our approach to cultural competence. NCCC tenets that serve as the foundation of our own practices are the following:

- We are committed to broadening multi-cultural participation in our provider network.
- The organization must value diversity
- The organization should have a way to conduct a self-assessment.
- The organization should have administrative structures that enable them to manage diversity, such as policies, procedures, and training that address diversity.
- The organization should have a plan to acquire and incorporate cultural knowledge.
- The organization should have a way to identify and to adapt to the culturally diverse communities they serve.

49) c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

In order for providers and staff to provide culturally and linguistically responsive care, we must establish policies and procedures that ensure that all organizational and individual activities are culturally competent. Our staff and network providers are trained to respect the cultural differences of the individuals we serve and provide care that is imbued with the understanding and appreciation of these differences in order to improve the overall health literacy of the community.

We are committed to breaking down the barriers to access and utilization that many minorities face when accessing health care. These barriers include relevancy of services, financial, language and literacy barriers.

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

Yes, the next RFP should allow for networks other than the State's Medicaid providers.

PRACTICE SUPPORT

53) Support for practices. Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

TYPES OF SUPPORT

Tools	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support		✓		
Network provider education	✓			
Assistance with practice redesign	✓			
Assistance with efficiency-enhancing activities	✓			
Provide web-based resources and directories	✓			
Provide practice-specific data reports	✓			
Provide clinical care guidelines and best practices	✓			
Provide clinical screening tools	✓			
Provide health and functioning questionnaires	✓			
Provide chronic care templates	✓			
Provide registries	✓			
Offer client reminders	✓			
Offer client self-management tools	✓			
Offer educational materials about specific conditions	✓			
Supply behavioral health surveys	✓			
Supply other self-screening tools	✓			
Administer behavioral health surveys	✓			
Administer other self-screening tools	✓			
Prepare client action plans	✓			
Provide training on providing culturally-competent care	✓			
Provide training to supporting staff	✓			
Provide training on motivational interviewing	✓			
Provide tools and software for phone call and appointment tracking	✓			
Provide tools and resources for tracking labs, referrals, etc.	✓			
Provide referral and transitions of care checklists	✓			
Provide visit agendas or templates	✓			

(This table is continued on the next page.)

Provide comprehensive directory of community resources	✓			
Provide directory of other resources	✓			
Provide materials regarding Nurse Advice Line		✓		
Ensure all tools and resources are centrally located on RCCO-specific website	✓			

56) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

The most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home is a risk-adjusted per member per month payment for a defined set of primary care and behavioral health services combined with a quality incentive payment methodology to reward quality measurement and high-quality care.

57) Should the Department require that PCMPs utilize disease registries to manage the health of their population?

Yes, the department should require that PCMPs utilize disease registries to manage the health of their population:

- **State Level Registries**: Publicly available data should be used to inform population health management. Examples include the Central Cancer Registry, the Birth Defects Registry, the multi-state Autism and Developmental Disabilities Monitoring Network, the Immunization Information System, and Colorado Health Information Dataset.
- **Point of Care Registries**: These should be accessible by the entire treatment team, include medical and behavioral health, and be tailored to a practice needs and its client population. In addition to disease registries, prevention-oriented registries should be included for recommended services by age and gender. Ideally, registries should be up-to-date, searchable by field, and capable of being used to identify care gaps to inform care coordination.

PAYMENT STRUCTURE AND QUALITY MONITORING

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

The current payment structure meets the goals of the ACC; however, as the program grows efforts must be made to allow for alternative payment structures and payment reform to motivate providers to give the highest quality care that yields positive outcomes.

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

In the current environment, providers may not have the infrastructure to tie payments to value. However, it should be incumbent upon the RCCOs to support the necessary technology and provider support systems to providers to achieve the alignment between quality care and payment.

62) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

We believe that appropriate security is necessary for RCCO contracts. A requirement for LSLPN or HMO licensure or a financial reserve requirement similar to those under LSLPN or HMO licensure will not preclude ValueOptions from bidding.

63) What role – if any – should the RCCOs play in the distribution of payments to providers?

The RCCOs should play a key role in payment to providers, and providers' incentives for quality care should be aligned with a RCCO payment mechanism. Payment should be reformed to allow RCCOs to motivate providers to give the highest quality care that yield positive outcomes with incentives.

66) Measuring Client experience. Please complete the table below to indicate how the Department should measure Client/patient experience:

Should this Tool be used?	Yes	No	Comment
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	✓		
SF-12 Health Survey	✓		
Other types of client interviews / surveys	✓		
Patient Activation Measure	✓		
Focus groups	✓		
Other	Answer:		

We support best practice outcomes for each category. RCCOS should be responsible for surveying clients and collecting the outcomes data, and then adopting the tools that produced the strongest results as best practices.

67) Knowing that, at this time, the Department only has claims data, how should population health be measured?

Although claims are useful for measuring population health, claims alone do not tell the whole story. Claims do not contain clinical information such as vital signs, lab values, and the full diagnostic picture. This information is critical for proactive management of high-risk clients. Moreover, claims do not always capture all services rendered at the point of care. For example, it is not possible to tell from a claim if a client recently discharged from a hospital for cardiac event has been screened for depression. Although a system capable of integrating the full array of EHRs with claims may not be feasible, it would be possible to build a reporting structure consisting of key EHR fields that could be analyzed in conjunction with claims.

Other population health metrics could include life expectancy from birth, or age-adjusted mortality rate, condition-specific changes in life expectancy, or condition-specific or age-specific mortality rates, self-reported level of health or functional status, and experiential status.

68) How should quality and performance data be reported to the RCCOs, PCMPs, and the public?

External dashboards with a high level of transparency should be implemented to best report quality and performance data to the RCCOs, PCMPs, and the public. Data should meet both HEDIS® performance measures to provide nationally comparable outcomes information to gauge program effectiveness, as well as local metrics.

69) Measures for payment. Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	✓
8-10	
11-20	
21-30	
31-40	
41-50	
51+	
None	

This will increase as providers gain reporting infrastructure with support of the RCCOs.

70) What percent of RCCO payments should be tied to measures or performance?

The RCCO should be allowed to accept a global capitation if their program can accommodate such a model. Also, a Medical Loss Ratio should be developed by which gain-sharing or partial risk corridors can be established. Under these models, a margin of 3 percent should be at risk with an established MLR and administrative fee. Any incentive payments should be directly linked to outcomes.

(Please see the table below.)

10-20%	✓
21-30%	
31-40%	
41-50%	
51-60%	
61-70%	
71-80%	
81-90%	
91%+	

71) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?

The RCCOs need core KPIs that promote the kind of advancement needed to provide the best care for the individuals we serve. All RCCOs should be held accountable for their results as they relate to quality and outcomes. This also allows for comparison in performance and an opportunity to learn when variation exists. Outside of those core KPIs, RCCOs should be assigned other KPIs based on their current performance. These KPIs will be individualized to the RCCO's status in terms of programmatic and financial transformation. These additional KPIs should be assigned strategically to yield the best provider outcomes. Such individualization will promote the innovation needed to improve the entire system, and unique approaches that emerge should be adopted later as best practices. Providers must assure attainment outcomes for these additional KPIs, and we will support their efforts through consultation and learning collaborations.

72) Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?

National standards should be used to inform baseline KPIs. However, it is also important to incentivize improvement, particularly for providers who start out from poorer baselines, or who have a high number of complex clients or other disparities that could impact performance—large disparities in very small populations have a different impact than similar disparities in larger populations. RCCOs should be allowed flexibility in determining additional incentives based on improvement, as there will be regional variables that will be need to be considered. One suggestion is to offer PCMPs a menu of process and outcome measures from which to choose for improvement-based incentive payments. Additionally, it is important to monitor how KPIs are

generalized across all populations. Cohort comparisons are necessary in order to develop more meaningful measures for specific subpopulations.

73) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

While a combination of EHR and claims data would be ideal, it is important to utilize current functionality while developing future functionality. There is much variability in degree of EHR adoption across PCMPs. Many providers are not currently on EHRs, and those that are may be at different stages of implementation. Colorado does not currently have a centralized HIE that allows for all data elements to be captured and analyzed at a state-wide or regional level. Although there are several limitations with using claims-based measures, claims ensure a common language that makes standardized reporting possible. When raw claims are available, ad-hoc analysis incorporating utilization, clinical, and financial variables can greatly inform both care coordination at the individual level as well as population health management. We therefore suggest bi-annual claims-based measures to account for the typical 90 day claims lag, with a gradual phasing-in of EHR-based measures that have particular relevance to integration.

74) Incentive payment frequency. Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	
Quarterly	✓
Annually	
Other	

75) For potential offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

Fixed costs include technology, office space, staffing, and other customary costs associated with accomplishing required operational tasks.

HEALTH INFORMATION TECHNOLOGY (HIT)

78) HIT investments by organizations. For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	✓	
Digital care management tool	✓	
Care transitions alerts		✓
Electronic Health Records (EHRs)		
Health risk assessment software	✓	
Practice assessment tools	✓	
Practice management tools (scheduling, billing)	✓	
Client web portal for communicating care plan, services, benefit enrollment	✓	
Patient education/wellness tools	✓	
Provider/case manager directory	✓	
Shared decision-making tools	✓	
Telemedicine software	✓	
Other:		

79) Importance of technology by type. The Department is working to determine what technology is in place, what technology is needed, and what technology should be standardized. For RCCOs, providers, and other organizations, use the table below to answer what HIT infrastructure outside of the SDAC your organization would use to perform population health management activities. Tools are scored from 1-5, where 1 are those items least-likely to be used, and 5 are items most-likely to be used:

(Please see the table below.)

Tool	1 (least)	2	3	4	5 (most)
Population analytics / reporting / dashboard					✓
Care management tool					✓
Care transitions alerts					✓
Electronic Health Records (EHRs)					✓
Practice assessment tools				✓	
Health risk assessment software			✓		
Practice management tools (scheduling, billing)			✓		
Client web portal for communicating care plan, services, benefit enrollment					✓
Patient education wellness tools					✓
Provider/case manager directory				✓	
Shared decision-making tools				✓	
Telemedicine			✓		
Other:					

80) What are the primary barriers to RCCOs and providers increasing their use Health Information Technology to improve the performance of Primary Care Practices?

The primary barriers are financial and operational. Practices that can finance information technology enhancements are not always convinced that the return on investment will justify the expense. There are additional financial and other expenses that are incurred. Specifically, employees need to be trained on how to use the technology, and workflows and associated protocols need to be established. Additionally, behavioral health providers are not eligible for Meaningful Use incentives to offset the cost of EHR adoption or the provider licensing fees that some EHRs require. The "new" information gleaned from the enhanced technology must also be incorporated into existing quality improvement programs so that it can yield practice change. Although often desired, practice change can disrupt a practice's routine operations. There is also concern among providers about the current capacity of EHRs to manage consents and re-disclosure of substance abuse data. Finally, unless a common EHR is adopted across providers, it is cost prohibitive for the RCCO to integrate health information systems with all possible EHR platforms available to providers.

81) How can Health Information Technology support Behavioral Health Integration?

Health information technology (HIT) must allow for all treatment team clients to enter and retrieve client information. The data must also be reportable so that it can be analyzed at both the individual and aggregate levels. This can also assist initial encounter tracking, follow-up care encounter tracking, and care transitions. HIT can facilitate services that are critical in integrated care settings. For example, screening instruments tied to clinical decision support that includes treatment and referral guidelines are extremely useful in integrated settings. Additionally, HIT can be used to facilitate scheduling referral appointments in real time, to send appointments reminders, to alert the care team if high-risk clients miss appointments or do not refill critical prescriptions, and to automate information sharing between providers.

82) In the next iteration of the ACC, should there be a shared resource for data and analytics? Please describe the basic criteria for what a shared data and analytics platform needs to contain in order for it to be useful.

In the next iteration of the ACC, there could be a shared resource for high-level reporting and analytics for cross-regional comparison purposes. However, if RCCOs are to assume membership clinical and/or financial risk, they should be permitted to conduct their own analyses and/or to identify analytics subcontractors with national expertise if they choose to do so. Assigning the full analytic responsibility to one shared resource limits ad-hoc analytic innovation and compromises data reliability. Any shared data analytics platform would have to include raw claims (medical, behavioral, and pharmacy). Ideally, this resource would be able to integrate EHR data. However, it is cost prohibitive for the RCCO to integrate health information systems with all possible EHR platforms that are available to providers.

83) Should there be a shared care management tool? Please describe the basic criteria for what a care management tool would need to contain in order for it to be useful.

While many entities have various tools to effectuate their care management program, it is important to recognize that individuals have many people in their lives supporting their health and wellness. Each RCCO needs to be able to have the technology to support a shared care management platform to assure better coordination of care and improved health and wellness outcomes for the individuals they serve. As a core requirement, the care management tool needs to support the interdisciplinary care team by sharing access of the client's focused care plan for individuals receiving care coordination services.

84) Should there be a shared population health management tool? Please describe the basic criteria for what a population health management tool would need to contain in order for it to be useful.

We recommend a single shared public health management (PHM) tool in recognition of the scope of the projects and the new issuers that are likely to be encountered. This tool ensures the entire care team adheres to a single set of clinical protocols, and leverages similar technology to strengthen the delivery of care. Additionally, it allows the team to interpret and use the patient data to have a direct and tangible impact on the patient's overall experience and health outcomes.

A shared PHM tool should account for the complete physical, behavioral, and psychosocial environment needs of the patient. The data should be secure and easily accessible through a Web portal to support information sharing among the patient, family, RCCO staff, physical and behavioral health providers, and other members of the care team. The application should store and display critical information and offer a holistic view of the patient's care.

In addition to the obvious benefits of data-sharing noted above, other criteria to apply would include but is not limited to the following:

- Structured data collection capabilities
- Custom reporting and analytic tools
- Application of evidence-based guidelines
- Use of risk stratification analytics to identify chronic care/co-morbid cases
- Automated communications to patients, RCCO, clinicians and care team about patient care needs such as:
  - Gaps in recommended care
  - Failed to fill prescriptions
  - Missed appointments or immunizations

85) Please describe the functionality that a common Medicaid provider directory would need to contain in order for it to be useful.

An online directory of Medicaid providers and services, accessed via the Web or a mobile device, would offer users access to a provider directory. Regardless of the route used, users would be able to search the network database to locate a provider online from their computer or mobile device.

Provider searches would be conducted by simply entering the user's physical address, the distance they are willing to travel, and the type of provider they would like to locate. Based on the search criteria selected, the search results will supply the appropriate provider information and a map to offer driving directions to easily help locate the provider.

To offer the most useful data, the online directory should include the elements listed below.

RECOMMENDED PROVIDER DIRECTORY DATA ELEMENTS	
Provider name	All practice locations/addresses
Telephone numbers	Office hours
Foreign languages spoken	Provider Type
Provider Licensure Level	Clinical specialties/modalities
Practice limitations or age restrictions	Disability accessibility
Accessibility to Public Transportation	If accepting new patients

Additionally, to offer efficiency and access to the most current information, the source data of the provider directory should be an integrated component of the information management system. This integration ensures that as updates are made to the provider file, the changes are available in the provider directory in real time.

86) How can the RCCOs support providers' access to actionable and timely clinical data?

RCCOs should provide secure Web-based solutions offer providers with convenient access to real-time clinical data, available twenty-four hours, seven days a week. Online capabilities to minimize administrative burdens allow providers to access and conduct actionable tasks including but not limited to the ability to communicate with patients via a secure messaging center, view eligibility and benefits, submit requests for authorizations, create and submit treatment plans, submit claims, updating practice information, and access outcomes and provider profile reports.

87) What are the HIT solutions that would benefit clients, providers, and RCCOs? Please comment on the parameters these tools or platforms would need to possess and the ways in which they could be used.

The following HIT solutions would benefits clients, providers, and RCCOs:

- **Patient portals**: Secure web portals designed to help providers and the RCCO to share records and other useful information with patients and engage them in self-management.

  Patient portals should include access to helpful resources such as a repository of credible and educational health information, access to the shared PHM tool, and allow clients to view benefits, claims, and authorizations. Clients should also be able to conduct provider searches, set up appointment and medication reminders, and communicate directly with their provider.
- **Provider portals**: Secure web portals designed to help providers and the RCCO to share records and other useful information about patients.

As noted above, the provider portal should offer access to the shared PHM tool, allow providers to communicate with patients via a secure messaging center, view eligibility and benefits, submit requests for authorizations, create and submit treatment plans, submit claims, updating practice information, and access outcomes and provider profile reports.

88) What technical assistance or resources related to HIT infrastructure should the RCCOs supply? This assistance or these resources could be for providers, social service organization, clients/families, or for others.

Active, timely, and continuous communication, training, and technical assistance are essential components of contract compliance. RCCOs should be prepared to offer providers, patients, and other stakeholders using their HIT initial orientation sessions on how to use the HIT, and continuous communication and training opportunities via the web portals.

The RCCOs' HIT infrastructure should be one that is flexible and designed to easily adapt to regulatory and other contractual changes. The IT resources should be staffed sufficiently and with experienced IT professionals to support the ongoing needs of the Colorado ACC contract.

89) What role should health information exchange platforms like CORHIO or QHN play in the next iteration of the ACC?

Although the PHM solution offers data at a more aggregated level, the CORHIO or QHN offers more robust set of data such as admission and discharge summaries and actionable data like lab results. Once the both sets of data are brought together they can offer great value at the point of care and an enterprise reporting level; this type of data is specifically useful for performance or risk-based programs such as the ACC.

Department of Health Cara Policy end Flnencing
Accountable Cere Collaborative Strategy Unit
1570 Grent Street
Denver, CO 80203-1818

RE: RFI UHAA 2015000017: *Accounteble* Cere *Colleborative Request for Informetion*

Delivered vie email: RCCORFP@state.co.us

Dear Mr. Dunlevey-Wilson:

Enclosed please find e response to the ebove referanced Request for Informetion (RFI). We eppreciate the opportunity to provide feedback to the Depertment of Health Cera Policy end Flnancing (HCPF) on the Accountable Care Collaborative (ACC) program and the potentiel to improve upon the design for Regional Cere Collaborative Organizations (RCCOs). We epplaud the work the State has accomplished through the development end implementetion of ACC and believe the State hes the opportunity to further enhence the care provided by the State's RCCOs.

Our response is influenced by our more then 30 years of serving Mediceld beneficieries and working closely with providers end heelth delivery systems to drive innovation and performance. We have provided HCPF with suggestions based upon our nationel Medicald experience in 24 states end with neerly five million beneficiaries. We believe Colorado hes the opportunity to leverege a provider-based epproach end echieve systemic performance through the development of system-wide supports thet reduce fragmentation end eneble the State to address the needs of all Coloradens served by Mediceid.

We look forward to ongoing opportunities to working with Colorado to provide our expertise to support the work of the ACC end the RCCOs. Should you have eny questions, I can be raeched at 202-654-8281 or catherine_k_anderson@uhc.com.

Sincerely,

Cetherine K. Anderson
Vice President, State Programs

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Catherine Anderson
Location: 701 Pennsylvania Ave, NW
Washington, DC 20004

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: UnitedHealthcare Community Plan
Location: City, County, State.
☒ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted -- Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☐ Medical provider / PCMP / other provider
  i. Type or specialty: Click here to enter text.
  ii. Area of practice: Click here to enter text.
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☐ Other (please describe): Click here to enter text.

Are you currently involved in the ACC program?

☐ Yes
☐ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☐ 3-4 years

How have you been involved in the ACC program and what interaction have you had with RCCOs:
Click here to enter text.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:
Click here to enter text.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

Given the upcoming competitive procurement we hove elected to not respond to the questions in this section.

☐ Since before the program was implemented.

General Questions

1) What is working best In the Accountable Care Collaborative (ACC) right now?

Colorado has been progressive in piloting innovative health care payment and delivery reform strategies to move the Medicaid system away from unmanaged fee for service (FFS) with the implementation of the ACC. Serving as the primary infrastructure for the Medicaid program, the State has predominantly favored transforming the system utilizing ACC strategies as an alternative to risk bearing managed care. The State has been able to achieve moderate successes in cost savings around a few Key Performance Indicators (KPIs) however many opportunities are available to advance reform in the next phase of the ACC program.

The State has also demonstrated leadership in its efforts to consolidate purchasing authority for the majority of all Medicaid programs under the Department of Healthcare Policy and Financing (HCPF) with its recent move of the department of Division for Developmental Disabilities under HCPF. While the responsibility of program administration for behavioral health services still remains in the Department of Human Services, HCPF is responsible for contracting with Behavioral Health Organizations (BHOs). The recent organizational changes have consolidated the majority of the Medicaid purchasing power authority down to HCPF and as a result of those efforts the State is better positioned to explore purchasing strategies to drive deep system reform across Medicaid and long-term services and supports (LTSS) waiver programs.

2) What is not working well in the ACC Program?

Similar to other states that favored accountable care structures – ACC system performance has been hindered largely due to the regional and fragmented nature of the infrastructure, the proficiency of the system's data analytics, and the limited Regional Care Collaborative Organizations' (RCCOs) capacity to manage the growing Medicaid population, specifically complex populations, and the growing administrative responsibilities associated with advancing system reform.

- *Regional Structure.* The State has favored regionalism to allow for a customized approach to address the unique delivery system characteristics within a specific area – such as special needs of the beneficiaries, network development, and enrollment capacity. However as the system is maturing the variation stemming from the regional micro systems is limiting system performance, creating disparity and fragmentation between regions that impacts quality, outcomes, and cost savings. This also translates to dramatic variation in the beneficiary and provider experience. Additionally because there is no core ACC program framework the State has limited ability to compare or drive performance across regions.

- *Data Transparency and Analytics.* The data model is a post service claims based data repository system that does not currently have the capability to provide real time information to the RCCOs. Because of this, the information distributed to RCCOs via regular reporting is retrospective and often lags by three to four months due to the time it takes physicians to

submit claims. Additionally the claims experience is limited - behavioral health information, waiver services, and utilization for non-ACC beneficiaries does not currently feed into the data model which further limits the utilization detail available to RCCOs. We recognize the State's efforts in both acknowledging this as an issue and long term strategy to improve access through the Colorado Medicaid Management Innovation and Transformation (COMMIT) project. Experience, however, tells us that multi-year MMIS implementations are likely not designed to keep pace with Colorado's desire for innovation and in support of the imminent next phase of the ACC program.

- *System Fragmentotion.* System fragmentation exists within the ACC program and across the Medicaid system as a whole. The ACC program is not currently accountable for covering all Medicaid eligible populations and administering all Medicaid covered services (physical, behavioral health, and waiver benefits). The separate administration of vital services and/or programs limits the Medicaid system's ability to support holistic, person-centered care management and does not support accountability at the state level. Within the ACC, RCCOs have been given significant latitude to develop program structures, financing models and activities based on locally identified opportunities. Because of this autonomy quality measures, alignment of provider incentives, care management approaches and integration strategies creating significant inconsistencies in beneficiary experience, performance outcomes and initiatives to drive future reform.

- *Attribution of Beneficiories to RCCOs.* As we know the State is already aware, the attribution model for assignment of beneficiaries to RCCOs has created challenges with accurately identifying the primary care provider of record. The downstream impact of that is an inability of providers and/or RCCOs to identify beneficiaries participating in the ACC in order to target efforts to impact benchmark performance. The key to developing a successful attribution model is provider awareness, as early as possible, of which patients are attributed to their practice to maximize the potential impact of strategies to holistically manage the patient. Additionally practice churn affects accurate attribution and the data transparency limitations likely exasperate this issue in the current system. Without a model accountable for the entire Medicaid system that includes enabling visibility to utilization data across the entire accountable care system and the analytical capability to track patient movement it may be difficult for practices to accurately identify ACC members that frequently change physicians.

3) What is working best in the Behavioral Health Organization (BHO) system right now?

4) What is not working well in the BHO system?

   As discussed in the answer to question two, the separate administration of behavioral health creates system fragmentation that limits the Medicaid system's ability to provide true person-centered care and align incentives across all of Medicaid. Within the behavioral health system, substance use disorder (SUD) benefits are carved out of the BHO contract and administered in a separate system creating deeper fragmentation within the behavioral health system and Medicaid in general.

5) What is working well with RCCO and BHO collaboration right now?

6) What is not working well with RCCO and BHO collaboration right now?

RCCO and BHO collaboration is driven by the individual organizations' desire to collaborate and therefore very disparate. The State allows RCCOs substantial flexibility to determine the extent of the BHO collaboration necessary to serve their beneficiaries often creating challenges with the sharing of information between the two systems. This issue is further complicated by the regional service area incongruence between the ACC and BHO programs. The lack of alignment creates the need for a RCCO in some instances to work with multiple BHOs which complicates partnerships.

Colorado – like many other states – has developed approaches to Medicaid reform strategies born out of the organizational structure of the State departments – specifically the Department of Healthcare Policy and Financing (HCPF), its sub agencies and the Department of Human Services (DHS). As such the State has historically run separate programs underneath the distinct authority of each department which has resulted in detached systems with limited connectivity. Although purchasing authority has been recently consolidated under HCPF there are still two different purchasing strategies being employed – fee for service coupled with an administrative fee for ACC versus capitation for BHO – resulting in misaligned incentives thereby creating barriers to integration and system-wide transformation. Additionally the bifurcation at the agency level tends to institutionalize the cultural separation between behavioral health and physical health programs throughout the delivery system and between vested stakeholders.

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

Opportunities exist to enhance the existing ACC and BHO infrastructure to strengthen the system's core capabilities and partner those capabilities with the systemic discipline of a statewide approach that supports regional development, introduces global payments into unmanaged Medicaid programs, and has the aptitude to make targeted intellectual and financial investments to reform the entire Medicaid system. Foundational to the reform strategy is a disciplined approach which bridges delivery system fragmentation to support integration, creates connectivity across all Medicaid programs (ACC, LTSS and behavioral health), and builds provider capacity to manage complex populations such as the Medicare and Medicaid dually eligible individuals and individuals needing LTSS. Additionally this enhanced strategy would allow for the development of capabilities that augment data analytics currently available – for example: the creation of real time utilization notification and connectivity to behavioral health, LTSS and Medicaid fee for service systems.

Examining the varied infrastructures and financial models that currently exist in the Colorado Medicaid system, the State would not be able to deploy an enhanced model. Additionally payment reform alone is not a sufficient way in and of itself to incent change in the way care is delivered in the State. Delivery system reform needs to focus on breaking down the barriers between traditionally separate systems to achieve true integration, align RCCO and BHO incentives, and enhance data analytics and system investment to most effectively utilize the existing ACC and BHO infrastructure without creating additional system complexity. We would recommend the State develop a state-wide model that is accountable for scalable statewide transformation of the Medicaid system data analytics, bringing to market core, scalable capabilities to progress the health care delivery system towards pay for performance, and is able to take on a variety of payment models to create system cohesion and capacity to manage all Medicaid populations (those already in some type of managed system and those that remain in fee for service).

Secondary to the enhanced model discussed above is the regional organization of various Medicaid delivery systems. The State should consider regional alignment of service areas for all Medicaid programs (ACC, BHO, SUD, and LTSS). Broad system goals should be reflected in procurement requirements to ensure alignment with program goals and advancement of Medicaid modernization as discussed in the State vision for the next RCCO procurement. This will enable the State to identify sophisticated, experienced, innovative and qualified RCCOs capable of participating in the evolution of Colorado's Medicaid system.

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☐	☐	
Community Behavioral Health Services Rule	☐	☐	
Covered diagnoses list	☐	☐	
Different behavioral / physical health reimbursement	☒	☐	The different reimbursement methodologies – capitation and fee-for-service combined with per member per month administrative fees – create barriers to integration because of the misaligned incentives. It is recommended the State develop a state-wide model that connects the two separate systems, effectively utilizes the existing infrastructure, aligns performance goals and is capable of administering a variety of payment models.
Institutions for Mental Diseases exclusion	☐	☐	
OBH rules, reporting, or financing (regulatory differences between agencies)	☒	☐	Broad misalignment of program administration such as rules, reporting, financial incentives, and contract terms across two separate systems will be a barrier to true integration. While purchasing power has been consolidated underneath HCPF the administration of behavioral health system still remains in the Office of Behavioral Health. This bifurcation tends to institutionalize the cultural separation between programs throughout the delivery system and between vested stakeholders. Agency consolidation can assist with addressing the challenges that exist in the bifurcated administration of services. Short of agency consolidation the State should identify and remove to the extent possible barriers and/or conflicts that exist with the two agencies.
PCMP financing structure	☐	☐	
Per-member per-month amount	☐	☐	

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

Physical space constraints	☐	☐	
Privacy Laws (HIPAA, 42 CFR)	☒	☐	We have found in certain circumstances that restrictions in privacy laws prohibit the sharing of clinical information among providers which can be problematic when trying to achieve integration. System development that enables this level of information management as well as clarity on what can be shared and with whom is important to advance integration approaches. Patient consent mechanisms are essential.
Professional / cultural divisions	☐	☐	
RCCO or BHO contracts	☐	☐	
Staff capacity	☐	☐	
State/Federal rules or reporting requirements	☐	☐	
Technical resources / data sharing	☒	☐	RCCOs and other Medicaid contractors are not currently funded to develop these advanced approaches and because of the system fragmentation a single system would not have the authority or incentive to provide a sustainable solution for all programs. The optimal approach would be a statewide model that builds on the existing data capabilities to expand data analytics, technical support and innovative technologies across all systems. This model will allow the State to leverage the suite of technology tools available through private contractors to enhance system performance. More broadly this will allow the State to advance data solutions at the regional level faster, at a lower cost and with less administrative burden for State while creating transparency within the system which does not exist today.
Training	☐	☐	
Others	Please type your response here.		

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

10) Please share any other general advice or suggestions you may have about behavioral health integration.

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination?

b. How should RCCOs prioritize who receives care coordination first?

c. How should RCCOs identify clients and families who need care coordination?

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

12) What services should be coordinated and are there services that should not be a part of care coordination?

In order for the State to achieve true integration that supports a holistic, person-centered approach the Medicaid system should facilitate coordination of all services across all Medicaid programs (physical, behavioral, long-term supports and services and social supports). An approach short of that will be limited in its ability to maximize system performance in alignment with State goals. Building on the enhanced model discussed in the answer to question 7, the State can utilize the statewide vendor to create connectivity across the entire system and build capabilities to effectively leverage the existing infrastructure to, for example, identify the lead organization responsible for primary care coordination responsibilities based on the beneficiary's needs. Care coordination would be supported through enhanced data analytics and transparency, organized collaboration between systems, and focused performance metrics that will enhance the system's ability to facilitate person-centeredness and ease the administrative burdens. Additionally the statewide model recommendation should offer care coordination services for populations that remain in unmanaged Medicaid fee for service.

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

RCCOs and other Medicaid partners need access to actionable, critical and complete information on their attributed panel of beneficiaries to effectively coordinate benefits and services in alignment with a person-centered approach. Real time information should be available to assist care coordinators with understanding the beneficiary's risk level, gaps in care, and current inpatient and emergency room utilization. Thoughtfully designed information technology infrastructures that accomplish this type of data connectivity are complex and require financial investment to develop competencies. Capital to invest in these solutions is likely limited and strategic approaches to incentivize investment

are not sufficient when considering the breadth of the other competing interests for all stakeholders (RCCOs, BHOs, PCMPs, hospitals, HCPF). As an alternative the State should consider a state-wide model that facilitates consistency and broad adoption core competencies such as information technology solutions across the Medicaid system as a whole. The independent nature of the RCCOs and BHOs has created varied adoption of supportive technology and it will be difficult to address the regional and program variation without a state-wide system that facilitates partnerships and connectivity.

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today?

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

d. What are the gaps in care coordination across the continuum of care?

15) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	Should the RCCO have a role? Yes	No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma	☐	☐	☐	
Affordability (assistance with prescriptions or co-pays)	☐	☐	☐	
Daycare / childcare	☐	☐	☐	
Economic stability	☐	☐	☐	

& employment				
Education	☐	☐	☐	
Environment	☐	☐	☐	
Food access / nutrition	☐	☐	☐	
Health literacy	☐	☐	☐	
Housing	☐	☐	☐	
Language or translation services	☐	☐	☐	
Literacy	☐	☐	☐	
Transportation	☐	☐	☐	
Other	The State's expectations of coordination of social supports – such as those listed in this chart – need to be appropriately funded through rates and reflect the data transparency limitations that exist in the current system. RCCO per member per month administrative fees provide for limited financial opportunities to take on and/or develop sophisticated capabilities to develop robust strategies to facilitate coordination of services that are outside of direct authority of HCPF.			

16) **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	Coordinate care? Yes	No	In what capacity should these individuals coordinate care in the ACC Program?
Advanced Practice (Registered) Nurses	☐	☐	
Certified Addiction Councilors	☐	☐	
Certified Nurse Midwives	☐	☐	
Community Health Workers	☐	☐	
Generalists (BA/BS/MA/MS)	☐	☐	
Health Coaches	☐	☐	

Licensed Clinical Social Workers	☐	☐	
Licensed Marriage and Family Therapist	☐	☐	
Licensed Mental Health Counselors	☐	☐	
Licensed Professional Counselor	☐	☐	
Masters of Public Health	☐	☐	
Medical Doctors / Doctors of Osteopathic Medicine	☐	☐

Other	The State should avoid mandating participation of a representative based on clinical credentials and allow the lead organization responsible for care coordination to determine the appropriate staffing based on the needs of the beneficiary. For more complex beneficiaries an interdisciplinary care team (ICT) approach may be employed and the determination of participants on the ICT should be driven by the beneficiary's needs and preferences. The State should avoid mandating the make-up of the ICT or the credentials of the care coordinator (for example, nurse versus social worker versus behavioral health). Allowing flexibility within a baseline framework to develop staffing resources based on beneficiary needs ensures effective alignment of staff based on those served by the program. Procuring vendors experienced in clinical approaches for complex populations in the next cycle will allow the State to leverage their core competencies as opposed to the State developing the model.		

17) Care coordination requirements for specific populations. Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and infants	☐	☐	
Children	☐	☐	
Children who are healthy, but in socially-complex environments	☐	☐	
Children involved in the foster care system	☐	☐	
Children with a chronic illness	☐	☐	
Children with a serious emotional disturbance	☐	☐	
Children with medical complexity	☐	☐	
Children or youth with a behavioral health diagnosis or substance use disorder	☐	☐	
Transition-age adolescents	☐	☐	
Parents and families	☐	☐	
Pregnant women	☐	☐	
Adults	☐	☐	
Adults who are healthy, but in socially-complex situations	☐	☐	
Adults with a chronic illness	☐	☐	
Adults with a behavioral health diagnosis or substance use disorder	☐	☐	
Clients involved in the criminal justice system	☐	☐	
Clients with a disability	☐	☐	
Clients in a nursing facility	☐	☐	
Elderly clients	☐	☐	
Frail elderly clients	☐	☐	
Clients in palliative care	☐	☐	
Other populations, please comment: The State should leverage the core competencies of its vendors to, for example, risk stratify the population they are serving to prioritize service allocation based on individual needs. For example beneficiaries determined to be at the highest risk based on a clinical assessment would receive robust, high-touch care coordination support and those with lower clinical complexity would only receive periodic support. We would encourage the State to not develop care coordination requirements based on individual populations as clinical complexity and/or severity within those populations is going to vary. The model should develop system-wide baseline requirements and allow for the use of proprietary clinical tools to assess the needs of beneficiaries to effectively align benefits and resources. The intent of any mandated standardization should be to allow for the collection of standardized elements without requiring standardized assessment tools.			

Procuring vendors experienced in clinical approaches to effectively address the needs of varied complexity in the next cycle will allow the State to leverage their core competencies as opposed to the State developing the model. The enhanced model discussed in the answer to question 7 can be leveraged to fill gaps that may exist in the ACC and BHO models to ensure the system is capable of coordinating care for all populations listed above.

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

19) How should care coordination be evaluated? How should its outcomes be measured?

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

a. What is the PMPM cost for providing care coordination services?

b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

The State must provide sufficient payment to cover the costs of administering the ACC program considering the terms of the agreement with the RCCO. Without adequate funding, the State will lose the benefits of innovations and savings that RCCOs provide. Rate development should consider the resources necessary to clinically manage the Medicaid population including quality improvement initiatives and beneficiary engagement strategies. Accordingly, the State should consider developing unique rates for populations not currently in the ACC program or complex populations such as those requiring LTSS waiver services or individuals with developmental disabilities to account for the high cost associated with care coordination needs. The use of a state-wide model would allow the State to offer care coordination services to populations that are in Medicaid fee for service.

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

The State should allow flexibility for the organization to determine appropriate staffing levels with appropriate HCPF approval. This ensures the model effectively aligns staff based on the individuals served by the program. This is acutely important in the ACC program because the State's attribution model does not consider the cohort mix of beneficiaries attributed since there is only a single RCCO serving each region. Allowing flexibility in the staffing requirements enables the system to manage a population with a range of clinical severity.

a. Care coordinator to client ratios. If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☐
51-100	☐
101-200	☐
201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

We recommend that performance be measured as a function of clinical performance, beneficiary satisfaction, utilization standards and quality of care. Typical tools used to benchmark quality and measure performance in accountable care models are Healthcare Effectiveness Data Information Set (HEDIS), Consumer Assessment of Healthcare Providers and Systems (CAHPS) and baseline performance targets based on the specific practice and/or RCCO. Care coordination in and of itself should be viewed as a core competency evaluated during procurement and measured as a function of process.

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

We would also encourage the State to evaluate the existing Medicaid rule prohibiting outreach to Medicaid beneficiaries assigned to RCCOs. The rule pre-dates the ACC implementation and has its roots in the State's negative experience with capitated managed care. This legislative barrier significantly impacts a RCCO's ability to locate attributed members with no prior service history and ultimately limits the program's ability to ensure care coordination for all Medicaid beneficiaries.

The State should design the upcoming procurement to collect meaningful information and appropriately score experience in alignment with program goals and advancement of Medicaid modernization both in the short and long term. This will allow the State to leverage the private sector's skills and experience in a more robust way to advance reform consistent with HCPF's strategic vision to transform the healthcare system – specifically strengthen mental health, substance abuse, and physical health integration; develop ACC sensitivities to the diverse needs of Medicaid beneficiaries; and support an integrated, multi-disciplinary delivery system with a focus on person-centered care. Additionally developing a state-wide model would allow the State to transfer a significant amount of the administrative responsibilities—claims processing and call centers—to the private sector, thereby alleviating that burden on limited public resources.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

All core system functions of the ACC model should be standardized across all regions to bring the system in alignment at the state level. This should be done at an elemental level and allow for enough flexibility within the core standards to adjust for regional variances at the community level and encourage innovative approaches to provider partnerships and incentive models to advance system reform. This level of standardization will allow for performance comparison, efficiency, and affordability of central functions such as data collection and reporting, and create administrative simplification. This vital step in the next phase of the ACC program will develop the necessary framework to create accountability at the state level and prepare the State to integrate medically complex populations and services into a centrally aligned and connected system. The state-wide model coupled with a partnership with a dynamic organization that is able to customize strategic supports at a regional level, introduce and align payment strategies across disparate systems, and be held to overarching programmatic goals will allow the State to advance reform strategies at a faster pace and in alignment with its change agenda.

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

27) Should the RCCO region maps change? Why or why not? If so, how?

Yes, please see the answer to question #7.

28) Should the BHO region maps change? Why or why not? If so, how?

Yes, please see the answer to question #7.

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

As previously discussed, we would recommend the State evaluate the existing Medicaid rule restricting the types of outreach and direct contact that RCCOs can use to engage Medicaid

beneficiaries. The rule pre-dates the ACC implementation and has its roots in the State's negative experience with capitated managed care in the 1990s. This legislative barrier limits the likely success of innovative models of care and the program's ability to ensure care coordination for all Medicaid beneficiaries.

We would encourage the State to review and adjust its attribution model to ensure it is effective at assigning beneficiaries to RCCOs. In addition to the limitations discussed in the answer to question two, the current attribution model makes a one-time assignment of a beneficiary to a RCCO based on the address on record. While this is effective at the out-set, beneficiaries often move in and out of the service areas and the current system does not allow for re-attribution when the State becomes aware of a new address post the primary assignment. This issue coupled with the inability of the RCCO to outreach to Medicaid beneficiaries that do not have a record of using services makes tracking and engaging attributed beneficiaries difficult. This is an acute issue with individuals that are returning to the community from incarceration or beneficiaries that are precariously housed or homeless. Also we would encourage the State to consider refining the rules governing RCCO assignment for beneficiaries that elect to seek services with a PCMP that is in another region. If the State elects to maintain this freedom of choice it is recommended the beneficiary be automatically reassigned to the RCCO that administers the Medicaid program for the region in which the PCMP provides services. This aligns performance accountability to the appropriate RCCO and supports upstream accountability at the State level as discussed in the enhanced model throughout this response.

We would encourage the State to mandate participation any willing Medicaid provider in the ACC program and for the State to set the rates during the first few years of the second phase of the program. This will encourage market acceptance of ACC tactics and ensure penetration of reform strategies advanced via the ACC model. The participation mandate should not limit the ability to negotiate incentive models or unique payment terms with mutual support of providers.

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

Currently the benefits administered under the ACC are not comprehensive. There are several carve-outs such as behavioral health, substance use disorder and LTSS waiver programs with the most complex populations still in unmanaged fee for service. A comprehensive benefit design will result in better coordination of care in a person-centered approach by eliminating fragmentation and confusion. For optimal results, the State should include all State Plan and waiver benefits, including but not limited to LTSS (including both nursing home and home and community based services), transitional services (such as "Money Follows the Person"), pharmacy benefits, and behavioral health services in a single system. Recognizing the current limitations in the ACC, BHO and LTSS systems and the lack of connectivity between all, it is highly unlikely the State will be able to advance innovative solutions relying on a region up approach through disconnected systems using the financial models that exist today. Even the most well thought out attempts to address these challenges by the State will likely result in slow, iterative advancements. Developing a statewide framework with a partnership with the private sector can effectively leverage the existing infrastructure, create system-wide accountability and advance the State's reform goals at a faster and more cost effective pace.

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

This is not necessarily to best solution to attempt to resolve some of the existing challenges in the ACC system. We fear if the State introduces a second RCCO per region it will only intensify regional variation, system complexity, fragmentation and stress at the point of service for all stakeholders. Critical mass of beneficiaries is also another factor for consideration and if this would create disincentives for RCCOs to invest in system improvements if competing for membership within the region. Alternatively the system should be structured in such a way to create statewide accountability for the administration of the Medicaid system as a whole – encouraging integration, creating a statewide infrastructure, facilitating benefit comprehension, and program connectivity.

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

34) What role should RCCOs play in attributing clients to their respective PCMPs?

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

Interagency collaboration across all departments administering programs effecting Medicaid beneficiaries is a fundamental step to aligning program goals across the public delivery systems. Because of the historical separation between the agencies (HCPF, the Department of Public Health and Environment, DHS), each agency likely has different leadership, missions and staff expertise. Without addressing variances to the degree that allows Medicaid transformation to progress in the same direction the State will be challenged to scale reform strategies across the entire Medicaid system. While the State has made tremendous strides in the alignment of purchasing power underneath HCPF as previously discussed, there are still opportunities to advance deeper alignment of state purchasing models (capitation versus fee for service), payment policies, and contracting requirements across systems. Additionally creating a central, state-wide infrastructure that is responsible for the system improvement such as regional consistency and accountability across all programs – independent of agency authority – will be key to driving program efficiencies and system reform.

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

Please see answer to #35

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

The churn of individuals newly eligible for private insurance via the exchange and Medicaid is a documented phenomenon that can create challenges for beneficiaries. In an effort to scale efficiencies and leverage the State's successful work in developing and implementing the Connect for Colorado insurance exchange, HCPF should consider the opportunity to use the enhanced model (discussed in answer to question 7) to create connectivity between Connect for Health Colorado and the Medicaid system. Creating a single entity responsible for the overarching administration of the Medicaid system and developing capabilities that allow for the seamless transmission of data (for example, transferal of eligibility between the two systems) can stabilize the transition to the extent possible for beneficiaries. Real time notification of eligibility shifts will also reduce gaps in care and ensure timely access to necessary for services for affected beneficiaries.

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

Please see answer to #35.

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

42) How should the Department structure stakeholder engagement for the ACC as a whole?

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

a. If no, what are the gaps?

b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

a. What role should hospitals play in the next iteration of the ACC Program?

b. What role should pharmacies play in the next iteration of the ACC Program?

c. What role should specialists play in the next iteration of the ACC Program?

d. What role should home health play in the next iteration of the ACC Program?

e. What role should hospice care play in the next iteration of the ACC Program?

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

g. What role should counties play in the next iteration of the ACC Program?

h. What role should local public health agencies play in the next iteration of the ACC Program?

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

45) How can RCCOs help to support clients and families in making and keeping appointments?

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

47) **Community Health Worker reimbursement.** Please use the table below to detail how Community Health Workers should be reimbursed:

To the extent that the State allows the expansion of community health workers in the Medicaid system we would recommend the appropriate funding for such services whether they are encountered as a medical expense or otherwise actuarially accounted for in the rates.

Needs to be a medical expense, needs to be encountered

Reimbursement process	(Please check all that apply)
Independently bill	☐
On staff (salary) at Primary Care Medical Provider Clinic	☐
On staff (salary) at RCCO	☐
Per Member Per Month Payment	☐

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you?

b. What RCCO requirements would ensure cultural competency?

Incorporating cultural competency as a component of the procurement will assist the State in identifying RCCOs with core competencies and experience in this area.

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

51) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

Effective management of acute transitions and emergency room diversion initiatives require real time notification to effectively coordinate care to avoid future inappropriate utilization. Without this level of transparency there will be limited opportunities to intervene and appropriately redirect care during acute episodes. Additionally, advancements of innovation at the regional level to develop these capabilities have been minimal and disparate. The State is focused on a long term strategy through its Colorado Medicaid Management Innovation and Transformation (COMMIT) project, however, our experience tells us that multi-year MMIS implementations simply are not designed to keep pace with Colorado's desire for innovation.

Developing a statewide model maximizing the existing infrastructure and partnering with the private sector to build system competencies as discussed throughout this response affords the State the opportunity to modernize its technological and claims infrastructure for the Medicaid system as a whole. This model will also advance data transparency allowing for the development of innovative emergency room utilization initiatives spanning both physical and behavioral health admissions advancing integration. Deploying these recommendations will modernize the Medicaid system's

technological infrastructure at a lower cost and reduce the complexity of its traditional Medicaid Management Information Systems (MMIS).

S2) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

Practice Support

53) **Support for practices.** Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

We would encourage the State to not mandate any of the following identified types of assistance. The inherent system is not adequately funded to support mandating RCCOs to provide this level of provider support. It is more conceivable for the State to develop a model in which these services and supports are universally provided across all regions and systems.

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☐	☐	☐	☐
Network provider education	☐	☐	☐	☐
Assistance with practice redesign	☐	☐	☐	☐
Assistance with efficiency-enhancing activities	☐	☐	☐	☐
Provide web-based resources and directories	☐	☐	☐	☐

Provide directory of other resources	☐	☐	☐	☐
Provide materials regarding Nurse Advice Line	☐	☐	☐	☐

Ensure all tools and resources are centrally located on RCCO-specific website	☐	☐	☐	☐
Others				

54) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

55) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

Through our experience with multiple payment reform strategies we have learned that effective, efficient transformation takes coordination, robust collaborative care tools, strategic infrastructure investments, and experienced resources to provide one-on-one practice support. This ideal creates a model where all key constituents in the community can successfully evolve. As stated in the answer to question 53, the inherent system is not adequately funded to support mandating RCCOs provide this level of provider support. Payment reforms alone are also not sufficient to change the system. In order to impact the delivery of care effective tools and supports for providers are necessary.

As discussed throughout our response RCCOs and other Medicaid partners need actionable, critical information on their attributed panel of patients. The most successful accountable care systems are able to customize assistance at the individual practice level coupled with targeted investments to support practice transformation (e.g., information technology solutions such as electronic health records, data analytics capabllities, health information systems, total cost of care management, and data collection methodologies that support performance measurement and reporting). Thoughtfully designed IT infrastructures that accomplish data connectivity across systems are complex and require a financial commitment to develop competencies. Capital to invest in these solutions may be limited and therefore it is important for the system to develop tailored incentive strategies that focus system investment and encourage the use of technology that enhances performance. For example, compensation initiatives that encourage embracing the use of certified electronic health records as a performance measure to earn a financial incentive facilitate adoption. For these reasons, it is more conceivable for the State to develop a model in which these services and supports are universally provided across all regions and systems. An all-inclusive approach to offering sophisticated tools and resources will enable the system to become more adapt at driving quality outcomes and controlling costs. This model also encourages the customization of tools such as evidence-based guidelines and references at the point of service, real-time utilization tracking, and practice coaching to implement evidence-based care based on the individual practice needs to assist with meaningful transformation.

56) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

57) Should the Department require that PCMPs utilize disease registries to manage the health of their population?

58) Please share any other advice or suggestions about provider support in the ACC.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

There is no way to unilaterally answer this question because not all practices will be equal in their level of sophistication, readiness to accept risk, availability of technology solutions, etc. to participate in alternative payment initiatives such as bundled payments, shared savings and up-side/down side risk. As an alternative we would encourage the State to develop a model and supporting capabilities that can provide a spectrum of supports and alternative payment options to customize the approach based on the characteristics of the practice. By creating a state-wide systemic approach, the model can create standardized assessments for practice participation in alternative payment programs and make available a continuum of options to partner with practices. This creates an approach with the necessary amount of flexibility to account for practice variation, allows for the State to maximize the number of practices engaged in payment transformation and creates much needed administrative simplification for participating practices.

62) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

63) What role – if any – should the RCCOs play in the distribution of payments to providers?

The option of using RCCOs to distribute payment to providers is going to vary depending on the individual organizations experience and ability to take on risk similar to providers as discussed in the answer to question 61. We believe the State would be best served developing a statewide model using a partner with deep experience in transformative practice strategies to most effectively leverage the existing infrastructure and advance alternative payment strategies at a swifter pace. Certainly if the State wants to explore deployment of more advanced value based purchasing strategies with RCCOs they should require potential ACC bidders to demonstrate sophisticated abilities to develop strategic partnerships with providers up to and including experience with value based partnerships

such as bundled payment, shared savings and up-side and down-side risk during the upcoming procurement.

Approaching system reform at the state level and recognizing the need to develop robust, flexible solutions that allow a range of shared-saving and risk-bearing options informed by RCCOs' and other Medicaid contractors' experience with managing risk will assist with determining the right balance of accountability, integration and activation to establish the most complete, effective care for Colorado's Medicaid beneficiaries. Additionally system transformation needs to be sequential across the spectrum of value based contracting strategies to ensure success.

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

66) **Measuring Client experience.** Please complete the table below to indicate how the Department should measure Client/patient experience:

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☐	☐	
SF-12 Health Survey	☐	☐	
Other types of client interviews / surveys	☐	☐	
Patient Activation Measure	☐	☐	
Focus groups	☐	☐	
Other	Please type your response here.		

67) Knowing that, at this time, the Department only has claims data, how should population health be measured?

68) How should quality and performance data be reported to the RCCOs, PCMPs, and the public?

69) **Measures for payment.** Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☒
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

70) What percent of RCCO payments should be tied to measures or performance?

Percentage	
10-20%	☐
21-30%	☐
31-40%	☐
41-50%	☐
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

71) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?

Yes, all RCCOs should be paid on the same Key Performance Indicators (KPIs). Narrowing KPIs to a small core set of indicators that measure system performance in alignment with state transformation goals across all regions uniformly progresses system transformation and eases the administration burden at the point of service. Additionally it creates a system wide concentrated effort around the core metrics to begin to minimize the regional variation. RCCOs should be allowed the flexibility to determine performance programs for the individual practices in their networks. Allowing flexibility to adjust performance measurement based on an individual practice allows the system to account for variations in practice sophistication and develop innovative performance incentives programs to advance transformation.

Performance metrics need to be sensitive to the current data limitations to ensure performance is achievable. Developing the statewide enhanced model will enable the introduction of more robust KPIs assuming the existing data transparency limitations are addressed.

72) Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?

Due to a position of favored regionalism in the current system, the State should benchmark performance based on individual RCCO performance as compared to the total Colorado system. Said another way benchmarking needs to consider the individual performance of the RCCO and be a component of how the RCCO compares to the performance of other RCCOs to establish statewide benchmarks and performance goals that are realistic for the ACC. It is important that performance metrics be established at the state level and aligned with HCPF's goals for system integration and transformation.

73) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

Performance payment should only be tied to metrics where data is available and performance can be influenced. As discussed throughout our response, we would encourage the State to consider an alternative model that develops core data sharing capabilities through a statewide contractor and universally facilitates the dissemination of information across the entire Medicaid system. Short of doing so will severely limit the State's ability to foster transformation beyond performance improvement that has been realized to date.

74) **Incentive payment frequency.** Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	☐
Annually	☐
Other	☐

If you checked the "Other" box, please describe payment frequency below:

75) For potential offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

76) For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

Health Information Technology (HIT)

77) **Types of communication.** For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	☐
Text message	☐	☐
Web portal	☐	☐
Email	☐	☐
Telemedicine / Video chat	☐	☐
Face-to-face meeting	☐	☐
Smartphone app	☐	☐
Other:		

78) **HIT investments by organizations.** For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below:

Given the competitive procurement we are electing to not answer this question. Core competencies and innovations – such as those listed below – should be evaluated and appropriately scored during procurement.

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	☐	☐
Digital care management tool	☐	☐
Care transitions alerts	☐	☐
Electronic Health Records (EHRs)	☐	☐
Health risk assessment software	☐	☐
Practice assessment tools	☐	☐
Practice management tools (scheduling, billing)	☐	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☐
Patient education/wellness tools	☐	☐
Provider/case manager directory	☐	☐
Shared decision-making tools	☐	☐
Telemedicine software	☐	☐
Other:	☐	☐

Other:	☐	☒

79) Importance of technology by type. The Department is working to determine what technology is in place, what technology is needed, and what technology should be standardized. For RCCOs, providers, and other organizations, use the table below to answer what HIT infrastructure outside of the SDAC your organization would use to perform population health management activities. Tools are scored from 1-5, where 1 are those items least-likely to be used, and 5 are items most-likely to be used:

Tool	1 Least	2	3	4	5 Most
Population analytics / reporting / dashboard	☐	☐	☐	☐	☐
Care management tool	☐	☐	☐	☐	☐
Care transitions alerts	☐	☐	☐	☐	☐
Electronic Health Records (EHRs)	☐	☐	☐	☐	☐
Practice assessment tools	☐	☐	☐	☐	☐
Health risk assessment software	☐	☐	☐	☐	☐
Practice management tools (scheduling, billing)	☐	☐	☐	☐	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☐	☐	☐	☐
Patient education wellness tools	☐	☐	☐	☐	☐
Provider/case manager directory	☐	☐	☐	☐	☐
Shared decision-making tools	☐	☐	☐	☐	☐
Telemedicine	☐	☐	☐	☐	☐
Other:	☐	☐	☐	☐	☐

80) What are the primary barriers to RCCOs and providers increasing their use Health Information Technology to improve the performance of Primary Care Practices?

The State should consider a state-wide model that facilitates consistency and broad adoption of core competencies such as health information technology (HIT) across the Medicaid system as a whole. The independent nature of the RCCOs creates varied adoption and use of the HIT.

81) How can Health Information Technology support Behavioral Health Integration?

The State should consider a state-wide model that facilitates consistency and broad adoption of core competencies such as HIT among other information technological solutions across the Medicaid system as a whole. The use of HIT in and of itself will only assist with service integration if there is broad adoption of HIT across Medicaid and if there is system connectivity to support the

dissemination of information. The independent nature of the RCCOs and BHOs creates varied adoption and use of the HIT that will be difficult to address without a state-wide system that facilitates partnerships and connectivity.

82) In the next iteration of the ACC, should there be a shared resource for data and analytics? Please describe the basic criteria for what a shared data and analytics platform needs to contain in order for it to be useful.

83) Should there be a shared care management tool? Please describe the basic criteria for what a care management tool would need to contain in order for it to be useful.

84) Should there be a shared population health management tool? Please describe the basic criteria for what a population health management tool would need to contain in order for it to be useful.

85) Please describe the functionality that a common Medicaid provider directory would need to contain in order for it to be useful.

86) How can the RCCOs support providers' access to actionable and timely clinical data?

Please see answers to question # 2, 8, 13 and 51.

87) What are the HIT solutions that would benefit clients, providers, and RCCOs? Please comment on the parameters these tools or platforms would need to possess and the ways in which they could be used.

88) What technical assistance or resources related to HIT infrastructure should the RCCOs supply? This assistance or these resources could be for providers, social service organization, clients/families, or for others.

89) What role should health information exchange platforms like CORHIO or QHN play in the next iteration of the ACC?

90) Please share any information, advice, and suggestions you have about health information technology in the ACC Program.

Colorado Department of Health Care Policy and Financing

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Tonya Wheeler
Location: 1660 S. Albion St. Ste. 420

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Advocates for Recovery
Location: Denver, Denver, CO 80222
☒ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☐ Medical provider / PCMP / other provider
  i. Type or specialty: Click here to enter text.
  ii. Area of practice: Click here to enter text.
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organjzation
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☒ Other (please describe): Recovery Community Organization

Are you currently involved in the ACC program?

☐ Yes
☒ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☐ 3-4 years
☐ Since before the program was implemented.

How have you been involved in the ACC program and what interaction have you had with RCCOs:
No

Please briefly describe your involvement with Medicaid, either in Colorado or another state:
N/A

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☒ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

Please feel welcome to describe why or why not using the space below.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

2) What is not working well in the ACC Program?

3) What is working best in the Behavioral Health Organization (BHO) system right now? BHO's are supportive of recovery support services, supportive of peers receiving adequate and appropriate training, inclusive of peer feedback and response.

4) What is not working well in the BHO system? It is still difficult for the community to access the full continuum of behavioral health care, treatment and services. BHOs only contract with treatment providers, not recovery community organizations. BHO's are not including recovery community organizations as contractors in the continuum of care. The BHOs have long term experience with the mental health community, but not as much experience working with providers of substance use disorder services.
5) What is working well with RCCO and BHO collaboration right now?

6) What is not working well with RCCO and BHO collaboration right now?

   Access to and coverage for the full continuum of behavioral health care, treatment and services including medication assisted treatment for substance use disorders and recovery support services provided in the community.

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

Full integration of recovery support services for substance use and mental health disorders into the full continuum of health care systems.

Insured access to and coverage for the full continuum of behavioral health care, treatment and services including medication assisted treatment for substance use disorders.

Behavioral Health Care programs should be able to serve as primary care providers for the patients/clients whose primary diagnosis is a substance use and/or mental health disorder.

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☐	☐	
Community Behavioral Health Services Rule	☐	☐	
Covered diagnoses list	☐	☐	
Different behavioral / physical health reimbursement	☒	☐	Reimbursement for BHC needs to be consistent with parity so that providers are equitably reimbursed for their level of effort.
Institutions for Mental Diseases exclusion	☐	☐	
OBH rules, reporting, or financing (regulatory differences between agencies)	☒	☐	There are no designated funds at this time for the provision of recovery support services in the community. Recovery community organizations are not included as funded agencies in the provision of recovery services.
PCMP financing structure	☐	☐	
Per-member per-month amount	☐	☐	
Physical space constraints	☐	☐	
Privacy Laws (HIPAA, 42 CFR)	☐	☐	
Professional / cultural divisions	☐	☐	
RCCO or BHO contracts	☐	☐	
Staff capacity	☐	☐	
State/Federal rules or reporting requirements	☐	☐	
Technical resources / data sharing	☐	☐	

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

Training	☒	☐	Peers should be appropriately and adequately trained as SUD peer recovery coaches and mental health peer specialists.
Others	Stigma needs to be addressed head on. Providers consciously and subconsciously stigmatize patients/clients with their language, frequently have unresolved issues/jaded perspective regarding behavioral health conditions which effect their ability to treat patients/clients effectively who are challenged by these conditions; patients/clients, fearful of being stigmatized, or who harbor shame and remorse around their behavioral health challenges, frequently avoid accessing needed health care, decreasing the likelihood of meaningful engagement in care when they need it most, before their health is in jeopardy.		

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

Patient- Centered – Supporting patients/clients and their families to manage and organize their own care and participate as fully informed partners in health system transformation at the practice, community and policy levels.

Comprehensive – A team of providers that is wholly accountable for all of a patient/client's healthcare and healthcare related needs. Includes prevention and wellness, acute care, chronic care, behavioral and oral healthcare and healthcare related needs.

Coordinated – Ensuring that the patient/client's care is organized across all elements of the broad health care system, including specialty care, hospitals, home health care, behavioral health care, oral health care, community supports and services, palliative care, end of life care and public health.

Accessible – Delivers community friendly services with shorter wait times, extended hours, in the patient/clients primary language, with 24/7 electronic or telephone access and strong communication through health IT innovations.

Committed to quality and safety – On an ongoing basis, utilizes a data driven process or processes to study and improve the delivery of care, treatment and services to meet the needs of patients/clients and the community.

(Adapted from the PCPCC, 2013)

10) Please share any other general advice or suggestions you may have about behavioral health integration.

Community education and the delivery mechanism of services need to be drastically improved. Simply stated, people need to know how to get help, where to go, what they can get help for, etc.

Care Coordination

11) Care coordination is an important part of the ACC Program.
    a. What is the best definition of care coordination? Ensuring that the patient/client's care is organized across all elements of the broad health care system, including specialty care, hospitals, home health care, behavioral health care, oral health care, community supports and services, palliative care, end of life care and public health.
    b. How should RCCOs prioritize who receives care coordination first? Based on presenting health care concerns and health history, triage based on symptoms, acute vs. chronic, severity, co-occurring disorders (including behavioral health disorders), health risks (perceived and real), economic stability.

    c. How should RCCOs identify clients and families who need care coordination? See b above. Based on acuity, history of medical and behavioral health care concerns.

    d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider? Use of a unified data collection system to trend data across settings, time, and clients served.

12) What services should be coordinated and are there services that should not be a part of care coordination? Using a patient centered approach; services should be coordinated based on the patient/client and family priorities. No healthcare or healthcare related services should be excluded. Ongoing community support is key.

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs? It is most important to know what their priorities for care are. It is also helpful to know their medical and behavioral health and healthcare history, what healthcare and healthcare related needs are already being met, and how can needed care, treatment and services be provided in a way that complements what is already working for the patient/client.

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today? Coordination within systems, (i.e.; in hospitals, in behavioral health programs), coordination with a specific diagnostic focus (i.e.; diabetes, HIV, depression), sometimes coordination is provided across a system (i.e.; one coordinator that works across a hospital system with a patient/client that has been hospitalized and needs to access medication management and PT services upon discharge.)

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different? Disease specific care coordination

c. How can the ACC avoid duplicating or disrupting current care coordination relationships? By providing a case manager, or someone to oversee the delivery of care coordination and insure against disruption or duplication of effort. Patients/clients can also be empowered to oversee this for themselves.

d. What are the gaps in care coordination across the continuum of care? If care coordination is only provided for a specific diagnosis, or a specific set of circumstances, it is not inclusive of all of the factors that impact health and well-being. If t's aren't crossed, I's aren't dotted, there is a risk of re-occurrence or relapse. Care coordination needs to include referral and access to recovery organizations in the community for individuals with behavioral health diagnoses.

15) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	**Should the RCCO have a role?** Yes	No	**Should the RCCOs coordinate with community supports and services?** Yes	**Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?**
Abuse, neglect, and trauma	☒	☐	☒	Assessment and education
Affordability (assistance with prescriptions or co-pays)	☒	☐	☐	

Daycare / childcare	☒	☐	☐	
Economic stability & employment	☒	☐	☒	Assessment and education
Education	☒	☐	☒	Assessment, referral, workforce development
Environment	☒	☐	☒	Assessment and education
Food access / nutrition	☒	☐	☒	Assessment and education
Health literacy	☒	☐	☒	Assessment and training
Housing	☒	☐	☒	Assessment and referral
Language or translation services	☒	☐	☐	
Literacy	☒	☐	☐	
Transportation	☒	☐	☐	
Other	Please type your response here. Feel free to list as many non-medical factors as you want, and please explain how the RCCO should be involved.			

16) **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	**Coordinate care?** Yes	No	**In what capacity should these individuals coordinate care in the ACC Program?**
Advanced Practice (Registered) Nurses	☒	☐	Each of these professionals should be involved in the coordination of a patient/clients care, to the extent that
Certified Addiction Councilors	☒	☐	their clinical and/or academic expertise is relevant to the
Certified Nurse Midwives	☒	☐	Patient/client's healthcare concerns and priorities. Using
Community Health Workers	☒	☐	a "no wrong door" approach, each could be a point of first

Generalists (BA/BS/MA/MS)	☒	☐	contact, could offer referrals or could be a referral for
Health Coaches	☒	☐	Another provider. Who works as the coordinator of care
Licensed Clinical Social Workers	☒	☐	depends largely on the preference of the patient/client and their family, what their chief concerns are and who their
Licensed Marriage and Family Therapist	☒	☐	Preference is to fulfill the role of care coordination. All of these providers should be trained to be a care coordinator.
Licensed Mental Health Counselors	☒	☐	
Licensed Professional Counselor	☒	☐	
Masters of Public Health	☒	☐	
Medical Doctors / Doctors of Osteopathic Medicine	☒	☐	
Nurse Practitioners	☒	☐	
Patient Navigators	☒	☐	
Peer Advocates	☒	☐	
Promotoras	☒	☐	
Psychiatrists	☒	☐	
Psychologists	☒	☐	
Registered Nurses	☒	☐	
Social Workers	☒	☐	
Wraparound facilitators	☒	☐	
Other	Please type your response here.		

17) **Care coordination requirements for specific populations.** Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and infants	☒	☐	
Children	☐	☒	
Children who are healthy, but in socially-complex environments	☒	☐	

Children involved in the foster care system	☒	☐	
Children with a chronic illness	☒	☐	
Children with a serious emotional disturbance	☒	☐	
Children with medical complexity	☒	☐	
Children or youth with a behavioral health diagnosis or substance use disorder	☒	☐	
Transition-age adolescents	☒	☐	
Parents and families	☐	☒	
Pregnant women	☒	☐	
Adults	☐	☒	
Adults who are healthy, but in socially-complex situations	☒	☐	
Adults with a chronic illness	☒	☐	
Adults with a behavioral health diagnosis or substance use disorder	☒	☐	
Clients involved in the criminal justice system	☒	☐	
Clients with a disability	☒	☐	
Clients in a nursing facility	☒	☐	
Elderly clients	☒	☐	
Frail elderly clients	☒	☐	
Clients in palliative care	☒	☐	
Other populations, please comment:			

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

19) How should care coordination be evaluated? How should its outcomes be measured? It should be evaluated based on increased access to preventative care and increased patient/client satisfaction with their overall health and well-being. Outcomes should be measured based on decreases in preventable diseases, increased utilization of preventative health services, increased sense of self -worth amongst patients/clients, decreased use of EDs and urgent care clinics.

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

a. What is the PMPM cost for providing care coordination services?

b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population? Vary by acuity, vary by needed services, vary by available resources within and outside the network of providers

c. Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population? Yes. Vary by acuity, vary by needed services, vary by available resources within and outside the network of providers

21)

a. **Care coordinator to client ratios.** If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☒
26-50	☒
51-100	☐
101-200	☐
201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important? Quality of life metrics (independent living, stable housing, education, vocational training, stable employment, regular exercise) – decrease in preventable diseases/illnesses, decreased use of ED, increased appropriate utilization of health care services, increased perception of self-worth, self-efficacy. Patients, families and healthcare team feel empowered as a result of their efforts at achieving and sustaining health and wellness.

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

Examples provided are good. Add utilization of a basic standard set of outcome measures to be reported. This would not preclude RCCOs from collecting additional/supplemental data, but would provide for more comparability between RCCOs and would serve to raise and level the playing field for consumers.

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

Bidder should already have community relationships as demonstrated by letters of support within their application. Role of community partners should be explicitly defined in the bidder's application and the role of the community partner should reflect the current scope of work that the community partner is currently engaged in.

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

Operationalizing this proposal may result in increased competition among the RCCOs. If there is a demonstrated need for this competition, in order to increase the quality of care provided, then this may be a good move. There may be some parameters put around this though to insure that patients are not traveling extraordinary distances or spending excessive personal funds to receive care.

27) Should the RCCO region maps change? Why or why not? If so, how?
28) Should the BHO region maps change? Why or why not? If so, how?

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

Changes in legislation, policy, rules or procedures that require coverage of the full continuum of care, (i.e.: recovery support services in the community).

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

32) Should there be multiple RCCOs per region?

This would involve two or more entities operating in the same region and competing for clients and providers.

If so, why? If so, how many and where? What issues would this address?

If there is a demonstrated need for this competition, in order to increase the quality of care provided, then this may be a good move. There may be some parameters put around this though to insure that patients are not traveling extraordinary distances or spending excessive personal funds to receive care.

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not? NA

34) What role should RCCOs play in attributing clients to their respective PCMPs? RCCO's should have the flexibility to insure that clients are appropriately placed into care with a PCMP based on their primary diagnosis.

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

CDPHE is responsible for monitoring a wide range of public health concerns including immunizations, sexually transmitted infections, tuberculosis, and birth defects. Their efforts inform providers and the public at large about current and future health and wellness indicators. This data has a significant effect on our statewide "health care IQ" and also on healthcare spending. CDPHE serves a vital function in keeping the ACC informed about current healthcare concerns in the state and future possibilities. All ACC initiatives should be informed by CDPHE interpreted data.

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

Much like CDPHE, offices within CDHS provide a similar monitoring function for specific illnesses/disease (i.e.; OBH for substance use and mental health disorders). Thus all ACC initiatives should be informed by CDHS interpreted data specific to its significance to public health.

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

The ACC Program and Connect for Health Colorado should collaborate around issues pertinent to both – issues related broadly to public health and disease prevention and control and ways to improve health outcomes.

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

To the extent that each of these organizations has a stake in improved health outcomes, whether due to their relationship to the insurance marketplace, as in the case of the Division of Insurance, or due to their relationship with the licensure/certification of healthcare professionals as in the Division of Regulatory Agencies, both have a vested interest in quality health outcomes. Collaboration around what works to accomplish this should occur between and with these divisions and the ACC program.

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates? RCCOS should be required to employ clients, client's families and client advocates to inform the development and delivery of care, treatment and services.

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region? RCCOs should be required to have both a formal, structured mechanism to engage with providers, community organizations, social service providers and others (a regularly scheduled meeting to present news, updates, etc.) and an informal way to interact with providers, community organizations, social service providers and others (one-on-one meetings in person or by phone to discuss more specific information with each). RCCOs should keep track of and report on these interactions and any resulting initiatives.

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC? Think outside the box. Who are the community organizations that have not yet been tapped and how can they be accessed? (i.e.; county commissioners, school boards, teachers unions, recreation programs, local chambers of commerce, neighborhood associations, etc.)

42) How should the Department structure stakeholder engagement for the ACC as a whole?

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

a. If no, what are the gaps? Recovery organizations are not represented for substance use and mental health disorders. Therapeutic recreation programs for individuals with disabilities are also not represented. Both of these function as a "bridge back" to the community at large for the populations they serve, an important step to prevent behavioral or physical relapse and should be considered integral to the network of care provided.

b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

a. What role should hospitals play in the next iteration of the ACC Program?
b. What role should pharmacies play in the next iteration of the ACC Program?
c. What role should specialists play in the next iteration of the ACC Program?
d. What role should home health play in the next iteration of the ACC Program?
e. What role should hospice care play in the next iteration of the ACC Program?
f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?
g. What role should counties play in the next iteration of the ACC Program?
h. What role should local public health agencies play in the next iteration of the ACC Program?
i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

Recovery organizations for individuals with mental health and substance use disorders should be involved, providing input as well as to serving as a resource.

45) How can RCCOs help to support clients and families in making and keeping appointments?

Effective utilization of technology that is available to clients and families including cell phones, smart phones, email and text alerts as well as social networking.

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

Absolutely!

47) **Community Health Worker reimbursement.** Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement process	(Please check all that apply)
Independently bill	☐
On staff (salary) at Primary Care Medical Provider Clinic	☐
On staff (salary) at RCCO	☒
Per Member Per Month Payment	☐

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

The same as physical health care.

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you? Demonstrated understanding of the role and influence that culture has on an individual's access to and receipt of health care. Respect for the patient's (and patient's family's) right to make their own health care choices. Providing all health related information in a manner which is understandable to the patient, and confirming that they understand the information that has been provided.

b. What RCCO requirements would ensure cultural competency? Assessment of providers understanding of the cultural needs of their patient population. Determine what measures they have taken to insure cultural competency. Not just staff coursework, but actual adaptations to how care, treatment and/or services are provided to insure literacy and understanding. Also, community partners should reflect access to culturally relevant services (i.e.; faith based organizations, curanderos, recovery community organizations, etc.)

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy? Information should be provided by staff and reinforced in more than one format (i.e.: orally and in writing or orally and with pictures/diagrams), patients should always receive care in their native language, or with an interpreter that speaks their native language, family members should not be asked to be interpreters for patients. Staff should also have the ability to draw on local resources, community partners for assistance is they need it.

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes? Insuring that information is available in multiple formats (written, spoken, via the internet, etc.), at all literacy levels, in the variety of languages spoken, and amongst all of the community partners that the provider is engaged with will go a long way to insure that inequality is addresses and reduced.

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care? If there is a demonstrated need for this.

51) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend? Reward promotion and access to preventative care and think outside of the box, in terms of where preventative care could be placed where it would be accessible to individuals who have not historically accessed it where it is.

52) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

Practice Support

53) **Support for practices.** Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☒	☐	☐	☐
Network provider education	☒	☐	☐	☐
Assistance with practice redesign	☒	☐	☐	☐
Assistance with efficiency-enhancing activities	☒	☐	☐	☐
Provide web-based resources and directories	☒	☐	☐	☐
Provide practice-specific data reports	☒	☐	☐	☐
Provide clinical care guidelines and best practices.	☒	☐	☐	☐
Provide clinical screening tools	☒	☐	☐	☐
Provide health and functioning questionnaires	☒	☐	☐	☐
Provide chronic care templates	☒	☐	☐	☐
Provide registries	☒	☐	☐	☒
Offer client reminders	☒	☐	☐	☐
Offer client self-management tools	☒	☐	☐	☐
Offer educational materials about specific conditions	☒	☐	☐	☐
Supply behavioral health surveys	☒	☐	☐	☐
Supply other self-screening tools	☒	☐	☐	☐
Administer behavioral health surveys	☒	☐	☐	☐
Administer other self-screening tools	☒	☐	☐	☐
Prepare client action plans	☒	☐	☐	☐
Provide training on providing culturally-competent care	☒	☐	☐	☐
Provide training to supporting staff	☒	☐	☐	☐
Provide training on motivational interviewing	☒	☐	☐	☐
Provide tools and software for phone call and appointment tracking	☒	☐	☐	☐
Provide tools and resources for tracking labs, referrals, etc.	☒	☐	☐	☐
Provide referral and transitions of care checklists	☒	☐	☐	☐
Provide visit agendas or templates	☐	☒	☐	☐
Provide standing pharmacy order templates	☐	☒	☐	☐
Provide comprehensive directory of community resources	☒	☐	☐	☒
Provide directory of other resources	☒	☐	☐	☒
Provide materials regarding Nurse Advice Line	☒	☐	☐	☒

Ensure all tools and resources are centrally located on RCCO-specific website	☒	☐	☐	☐

Others	PCMPs should utilize SBIRT broadly to assess for risky substance use and should utilize ACES to assess for trauma.

54) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

55) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

56) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home? Reductions in preventable diseases/ illnesses, increased immunizations (especially among children), reduction in patients' overall utilization of the ED, increase in referrals resulting in patients connecting to needed/desired care, treatment or services, PCMPs instituting and utilizing a committee structure to discuss and plan the delivery of care, treatment and services in their practice, including a patient(or patients' family member) representative in such a committee

57) Should the Department require that PCMPs utilize disease registries to manage the health of their population? Yes.

58) Please share any other advice or suggestions about provider support in the ACC.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation? NA

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

62) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding? NA

63) What role – if any – should the RCCOs play in the distribution of payments to providers?

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

66) **Measuring Client experience.** Please complete the table below to indicate how the Department should measure Client/patient experience:

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☒	☐	
SF-12 Health Survey	☒	☐	
Other types of client interviews / surveys	☒	☐	
Patient Activation Measure	☒	☐	
Focus groups	☒	☐	
Other	Please type your response here.		

67) Knowing that, at this time, the Department only has claims data, how should population health be measured? Claims data should show, over time, if utilization has changed, has use of EDs gone down, have more patients begun getting annual checkups, are more screens for preventable diseases been requested?

68) How should quality and performance data be reported to the RCCOs, PCMPs, and the public? By all means necessary, including at your website, through the media, at various conferences and workshops.

69) **Measures for payment.** Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☒
8-10	☐
11-20	☐
21-30	☐

31-40	☐
41-50	☐
51+	☐
None	☐

70) What percent of RCCO payments should be tied to measures or performance?

Percentage	
10-20%	☐
21-30%	☒
31-40%	☒
41-50%	☐
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

71) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs? Yes and yes.

72) Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement? Yes

73) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures. No

74) **Incentive payment frequency**. Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	☐

Annually	☒
Other	☐

If you checked the "Other" box, please describe payment frequency below:

75) For potential offertory and other similar organizations: please describe the fixed costs of operating a RCCO.

76) For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

Health Information Technology (HIT)

77) **Types of communication.** For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	☐
Text message	☐	☐
Web portal	☐	☐
Email	☐	☐
Telemedicine / Video chat	☐	☐
Face-to-face meeting	☐	☐
Smartphone app	☐	☐
Other:		

78) **HIT investments by organizations.** For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below:

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	☐	☐
Digital care management tool	☐	☐
Care transitions alerts	☐	☐
Electronic Health Records (EHRs)	☐	☐
Health risk assessment software	☐	☐
Practice assessment tools	☐	☐
Practice management tools (scheduling, billing)	☐	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☐
Patient education/wellness tools	☐	☐
Provider/case manager directory	☐	☐
Shared decision-making tools	☐	☐
Telemedicine software	☐	☐
Other:	☐	☐

Other:	☐	☐

79) **Importance of technology by type.** The Department is working to determine what technology is in place, what technology is needed, and what technology should be standardized. For RCCOs, providers, and other organizations, use the table below to answer what HIT infrastructure outside of the SDAC your organization would use to perform population health management activities. Tools are scored from 1-5, where 1 are those items least-likely to be used, and 5 are items most-likely to be used:

Tool	1 Least	2	3	4	5 Most
Population analytics / reporting / dashboard	☐	☐	☐	☐	☐
Care management tool	☐	☐	☐	☐	☐
Care transitions alerts	☐	☐	☐	☐	☐
Electronic Health Records (EHRs)	☐	☐	☐	☐	☐
Practice assessment tools	☐	☐	☐	☐	☐
Health risk assessment software	☐	☐	☐	☐	☐
Practice management tools (scheduling, billing)	☐	☐	☐	☐	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☐	☐	☐	☐
Patient education wellness tools	☐	☐	☐	☐	☐
Provider/case manager directory	☐	☐	☐	☐	☐
Shared decision-making tools	☐	☐	☐	☐	☐
Telemedicine	☐	☐	☐	☐	☐
Other:	☐	☐	☐	☐	☐

80) What are the primary barriers to RCCOs and providers increasing their use Health Information Technology to improve the performance of Primary Care Practices? Cost, both for hardware, software and training, multiple platforms that don't necessarily "talk" to one another.

81) How can Health Information Technology support Behavioral Health Integration? Integration of key behavioral health elements into the patient health record (i.e.; SBIRT tools) with access to personal behavioral health information and/or screening results in the record

limited those who are designated with a "need to know" status, or to whom the patient has given consent for their access to the behavioral health information.

82) In the next iteration of the ACC, should there be a shared resource for data and analytics? Please describe the basic criteria for what a shared data and analytics platform needs to contain in order for it to be useful. Yes

83) Should there be a shared care management tool? Please describe the basic criteria for what a care management tool would need to contain in order for it to be useful. Yes

84) Should there be a shared population health management tool? Please describe the basic criteria for what a population health management tool would need to contain in order for it to be useful. Yes

85) Please describe the functionality that a common Medicaid provider directory would need to contain in order for it to be useful.

86) How can the RCCOs support providers' access to actionable and timely clinical data?

87) What are the HIT solutions that would benefit clients, providers, and RCCOs? Please comment on the parameters these tools or platforms would need to possess and the ways in which they could be used.

88) What technical assistance or resources related to HIT infrastructure should the RCCOs supply? This assistance or these resources could be for providers, social service organization, clients/families, or for others.

89) What role should health information exchange platforms like CORHIO or QHN play in the next iteration of the ACC?

90) Please share any information, advice, and suggestions you have about health information technology in the ACC Program.

Colorado Department of Health Care Policy and Financing

RFI Response Received and Recorded.

Serial Number: 085

Accepted by: KJDW

Notes: Standard cover sheet added; formatting standardized

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Patrece Hairston, PsyD

Location: Aurora, CO

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Colorado Children's Healthcare Access Program (CCHAP)

Location: All of Colorado

☒ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☒ Client advocate
☒ Medical provider / PCMP / other provider
  i. Type or specialty: Pediatric Psychologist
  ii. Area of practice: Click here to enter text.
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☒ Other (please describe): **Advocate for children on Medicaid**

Are you currently involved in the ACC program?

☒ Yes
☐ No
☐ I don't know

How have you been involved in the ACC program and what interaction have you had with RCCOs:

Clinician and advocate.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:

I provide technical assistance and consulation to pediatric practices statewide attempting to do integrated behavioral health.

I'm also a clinician and have worked in multiple behavioral health setttings with 70% of my clinical time spent with families on Medicaid.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☒ N/A

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☒ 2-3 years
☐ 3-4 years
☐ Since before the program was implemented.

CCHAP will continue to be involved with the ACC and RCCO's to assist with communication, training, and advocate for policies and procedures that address the needs of children.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

- Reimbursement (mostly due to the Federal ACA) is fairer now.
- The decision to make the well child visit one of the KPIs was a very good decision in behalf of children, but unfortunately attribution is still flawed and the SDAC data is delayed and often inaccurate. So, it is difficult to create an effective QI process to improve the KPI, but this is a good start.
- The decision to focus on integrated behavioral health in medical homes is a wonderful decision to improve health outcomes for people covered by Medicaid. Thank you.
- You have a great opportunity to do what is needed for the majority of Medicaid recipients. The majority of Medicaid recipients in Colorado are children and adolescents; they should not be considered one of the subgroups. The following principles should be incorporated into the core objectives of the ACC:
    - Children's health care needs are very different than adults. For adults, the focus is on managing chronic disease more effectively. For children, it is about preventing the development of those chronic diseases.
    - If the ACC really wants to focus on health and wellness, the greatest opportunity is with the children (the majority of Medicaid recipients). By focusing on preventive care, early screening and early intervention for children, there will be big savings; unfortunately those savings may not occur for many years or decades in the future, but the investment will eventually be worth it.

- So, the ACC will need to invest in children to the extent possible now even though the savings come much later. We recommend that a portion of short-term savings that occurs due to chronic disease management in adults in the ACC be invested back into preventive care for children.
- Children are part of families and you can't help the child unless you help the family. So, care coordination is more involved for children since it includes care coordination of the parents/family and often involves different community resources than for adults

2) What is not working well in the ACC Program?

- Attribution continues to attribute patients to the wrong medical home and the process of getting patients reassigned to the correct medical home is onerous for the patient and family. This is probably the most important issue to solve. It drives measurement of outcomes, it drives the focus of the medical home to improve care, it is central to affordability of practice transformation and meeting the KPIs, and it is key to patient experience.

- Practices report to CCHAP that the attribution process is difficult to understand, use and correct. Many pediatric practices still have adults on their list unknown to them, and they do not seem to be able to remove them. Sending lists and creating spread sheets are tedious and time consuming. Practices do not have this time or expertise. Attribution needs to be fixed to create a simple way to add and remove members.

- The current system does not take into account the movement of patients on and off Medicaid and movement between RCCOs. Whether for KPIs or future shared savings incentives, practices need to be evaluated on established patients who have been in a practice for a minimum of six months. This allows the medical home to actually have time to have an impact on the Medicaid recipient's care. Otherwise, it is a substantial disincentive for practices to be open to the more complex and challenging patients, those that likely need access the most.

- The health care data through the SDAC is based on claims so it is delayed and is incomplete (particularly for children). Therefore, it is not very useful in helping medical homes improve outcomes for children.

- Both family practices and pediatric practices report that the SDAC does not accurately reflect the data that the practice can obtain from their EHR or their own claims data. This is particularly true regarding data on well child visits and health care screening. The RFP should ask how RCCOs and HCPF will improve the accuracy of its SDAC data and how they will take advantage of the more accurate practice-based data.

- Each RCCO does things very differently, which is confusing for medical homes with patients in several RCCOs. RCCOs are inconsistent in how they respond to requests for care coordination (quite variable depending on whom you reach at the RCCO). So the new RFP should ask how RCCOs will develop policies and procedures to make their methods and responses to requests for help more consistent, both within the RCCO and among all RCCOs.

- There are certain expectations/requirements and ways of doing things that are so different from one RCCO to another that it requires significant extra work for the medical home to adapt to the differences. So, the RFP should ask how RCCOs intend to deal with this

- If a patient lives in one region and goes to a medical home in another region, and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from the patient's region RCCO. This is particularly true in the Denver metro area. <u>There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients.</u>

- The "incentives" now are actually disincentives, especially the requirement that the RCCO must meet its KPIs before a high performing medical home can be rewarded for meeting its KPIs. The concept behind this approach is not consistent with how health care systems (and "medical neighborhoods") work.

- The geography of the 7 regions does not reflect the natural geography of health care systems and referral patterns. Larimer County should be in Region 2.

- RCCOs are not providing the level of care coordination that Medicaid patients need. We have had RCCO "care coordinators" just tell us to call 211. The level of commitment that patients and families need is difficult to find, unless care coordination is provided at the medical home level or the community level. But of course the medical home will need a portion of the RCCO's pmpm in order to afford to provide that level of care coordination.

- Feedback from RCCOs to the medical home regarding patients referred to the RCCO for care coordination is spotty. How will RCCOs consistently provide feedback and communication to the medical home regarding what was done for the patients and whether there was improvement?

- There has been difficulty with communication from the state level through the RCCOs down to the individual practice/provider level. Providers feel as though they are not well informed from HCPF or RCCOs. We have heard many practices say that they are grateful that CCHAP keeps them informed..

- Currently, there is very little communication and alignment between BHO's and RCCO's. In order for integrated behavioral health to be successful at the practice and community level, the BHO's and RCCO's must have similar goals, policies/procedures that are aligned, payment structures that are aligned with movement toward integration and ongoing close communication with one another. The RFP should ask how they intend to do this.

3) What is working best in the Behavioral Health Organization (BHO) system right now?

- **The CPACK program** developed by CBHC is a very good program, particularly the following:
  - Assistance with finding a behavioral health provider for patients
  - Telephone consultation by a child psychiatrist

  The training component was not as helpful. We recommend that BHOs be required to provide the 2 components above as part of their new contracts

- **Ongoing development of the Independent Provider Networks.** This provides patients and families with more options in terms of selecting a behavioral health provider outside of the CMHC. This may also provide opportunities for families to gain opportunities to see behavioral health specialists in the their local communities.

- **Commitment to integrated care.** At the local level, there are many community mental health centers that are providing co-location of behavioral health providers within primary care settings. This is a step in the right direction; though the work cannot end there. In terms of standard of care, billing issues, and paperwork demands, this cannot be the only behavioral health integration effort at the BHO level. Ideally, community practices and clinics would be able to have the option of employing a behavioral health provider to be devoted entirely to the needs of their population. However, currently there are several barriers that make true integration nearly impossible.

4) What is not working well in the BHO system?

- BHOs say they are limited by policies to not be able to provide services for children who have symptoms or abnormal behaviors but no billable diagnosis.

- Children with specialized behavioral health needs, such as children with autism or dually-diagnosed children (those with developmental disabilities and socio-emotional or behavioral disorders) have little or no access to needed services. Or these services are sparse and extremely difficult to access.

- Value Options leadership is made up of the heads of mental health centers, which is a conflict of interest. The BHO function should be moved to the RCCOs and BHOs should be integrated into the RCCOs

- They are involved in separate regions. Regions should be identical to ensure collaboration and improved practices between the efforts for both organizations.

- **Difficulties with credentialing.** This process changes from BHO-to-BHO, is long and tedious, and in some cases, requires behavioral health providers to have worked with Medicaid populations for at least 5 years (?). This alienates a substantial portion of an already too-small workforce. Licensed behavioral health providers already engage in a lengthy process through DORA, in which their credentials and past work experiences are examined and verified. This process should have some consistency amongst BHOs and should be coordinated with other state departments with similar functions.

- **Referral processes.** Care coordination for behavioral health should occur at the practice level. Creating an additional step (by having providers fax referral forms to the BHO) creates an additional barrier for patients/families and practices. When referrals are made, direct contact should be with the local CMHC from the practice.

- **No streamlined processes across BHOs and RCCOs.** Primary care practices have patients and families from multiple counties in their practice at any given time. Having separate policies and procedures for each BHO and RCCO makes it difficult for providers to know how to get assistance when needed. Having one procedure, one contact person, and one phone number would allow BHOs/RCCOs to be more effectively utilized by practices.

- **Access to child psychiatrists.** There is an extreme (and known) shortage of psychiatrists statewide; this becomes increasingly dire when discussing access to child psychiatrists. The CPACK program is currently filling a critical void; but is a grant-funded program in danger of losing funding. BHOs could potentially have a role in helping to provide this much needed access.

5) What is working well with RCCO and BHO collaboration right now?

- Colorado Access RCCO and BHO for RCCO region 5 works better because at least they are housed together and sometimes communicate. This is an example of a good start toward integration of BHOs and RCCOs. However, even CO Access and Access Behavioral Care need to work harder on communicating and coordinating.

6) What is not working well with RCCO and BHO collaboration right now?

- **Little to no communication or coordination between RCCOs and BHOs.** Operating as two completely independent systems. Both systems have their own processes for care coordination, for referrals, and don't seem to communicate as much as is needed. For integrated care to be successful at the practice level, it has to be operating successfully at a systems level. This is one of the biggest issues for integration for the Medicaid population.

- **Duplication of services.** If there was increased communication and alignment between the RCCOs and the BHOs, service duplication could be minimized, there would be cost savings, and it would be easier for patients and families to access services. For example, both BHOs and RCCOs offer care coordination services. In some cases, the local mental health center has also been delegated to provide care coordination. At the practice and provider level, it's often difficult to know which system to access to address a family's needs, particularly if a child has both behavioral health and physical health needs. Resources could be conserved and systems could be more effective if there was one access point for care coordination.

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

- Payment options for integrated behavioral health (not just co-location) need to be clear and understandable to providers and practices. In order for the integrated model to be sustainable, there need to be ways to access understandable billing rules/policies.

- **Payment reform.** Though this is a long-term goal, there are things in the short-term that will promote the financial sustainability of integrated care. Open the behavioral health and wellness CPT codes (96150 – 96155) now. Don't wait. This will encourage integration immediately and enable medical homes to start now the process of evolving toward full integration. Also, in the current BHO rule, there is a covered diagnoses list that is required to bill. This list does not allow a provider to bill for v codes (physical or sexual abuse of a child, neglect of a child, parent-child relational problem, etc.) or other psychosocial or family stressors that are known precursors to mental illness; this is the opposite of a preventative approach and encourages pediatric BH providers to find a diagnosis – when the behavioral presentation is really due to family circumstances. Additionally, one of the goals in recent years for Colorado has been to decrease the number of children taking psychotropic medications. Allowing providers to intervene earlier would have a direct positive impact on that goal. The recommendation would be to allow for the billing of v codes (from

DSM-5) and related psychosocial conditions (as opposed to being diagnosis driven).

- **Financial support of true integration, as opposed to co-location.** This would be another reason that BHOs and RCCOs need to be fully aligned in their payment systems and in other areas – as long as the payment remains siloed, the services will remain siloed. Payment options for integrated behavioral health (not just co-location) need to be clear and understandable to providers and practices. In order for the integrated model to be sustainable, there need to be ways to access understandable billing rules/policies.

- **Establish a standard of care for integrated BH providers and make the rules/regulations/guidelines accessible and clear.** This also includes credentialing requirements and providing immediate training on the correct use of HIPAA regulations. Any committee or group that is tasked with creating the standard of care of integrated behavioral health providers working in primary care settings should be composed of local clinicians and experts in the area (as opposed to strictly policymakers). This group should also provide guidance on the paperwork and credentialing requirements. All agencies involved in licensing and credentialing for behavioral health professionals (e.g., DORA, OBH) should be present.

- **Provide infrastructure and funding for data collection and management.** Utilizing SDAC data is just one way to understand the activities within a medical home – others are needed. There are currently projects being developed in the state that would utilize other modalities (e.g., IPad technology) to help practices collect data efficiently and effectively at the practice level. There will need to be an investment in the development of these programs and many practices would need financial assistance with implementation. However, this would be a way for practices to track all the activities that the state would like monitor (e.g., screening rates, follow-up, referral) and would allow the practice to improve patient and family care.

- **Support of care coordination activities.** Much of the care coordination will have to be done within the medical home. HCPF needs to be willing to help the integrated behavioral health provider understand how to be reimbursed for the care coordination that they will need to do on behalf of the Medicaid patient.

- **CMHC Policy and procedure change (via the BHO contract).** It is important to recognize the ways in which current policy can be problematic for practices, patients, and families. Currently, the BHO contract requires CMHC's to offer "intakes" or evaluations to patients/families within 7 days of referral from a primary care practice. This sounds reasonable. In theory, there are several complications: 1.) Offering a slot for an intake does not qualify as providing a gold standard of care. It has been frequently reported that time slots offered for intake appointments are typically during the 8-4 workday – this makes a family or patient choose between work and their health (and families are already much less likely to show up for behavioral health appointments). There needs to be increased flexibility in this area. 2.) Also, offering an intake is not the same as providing therapy. Patients or families may come in for intakes and typically wait to be assigned a therapist. Then wait for that assigned therapist to call and schedule an appointment. This could be weeks after an initial referral. This process does not translate to patient- or family- centered care. This is just one example.

- **Sustainability and prevention.** The clear fact remains that if prevention does not become the focus of healthcare (physical and behavioral) costs will continue to skyrocket and our population will continue to develop multiple costly, chronic diseases. Prevention is the key to long-term population health and begins in infancy. So much of the behavioral health work and overall healthcare focus in Colorado has been focused on those that have already developed chronic conditions; ultimately, this does not serve our

population well in the long-term. Population health is a focus of the SIM work and thus, funding and attention must be given to early childhood behavioral health, prevention, and early intervention.

- **Support of current programming and infrastructure, as opposed to creating new duplicate programs.** Colorado is an innovative state in many ways and has already begun this work through the efforts of multiple programs, statewide initiatives, and community organizations. Programs like the CPACK program developed by CBHC address statewide disparities in the availability of child psychiatrists and promote behavioral health integration in primary care. Effort should be channeled into supporting existing effective programming, not creating new infrastructure.

- If Colorado is serious about promoting integration of behavioral and physical (medical) health care, then the RCCOs and BHOs should be integrated. This would mean they should have the same regions and function as though they are one organization. This would reduce duplication of efforts and have better alignment of incentives and payments that support integrated care.

- Open the behavioral health and wellness codes (96150 – 96155) now. Don't wait. This will encourage integration immediately and enable medical homes to start now the process of evolving toward full integration.

- Care coordination for both behavioral health and medical care should be done in the primary care setting. And either the RCCO and/or the BHO should delegate the responsibility to do care coordination and a pmpm to cover the expense to the medical home as part of the payment reform process. And behavioral health care coordination and medical care coordination needs to be fully reimbursed. In addition, the BHO and the RCCO will need to have information and care coordinators to assist medical homes to handle uncommon or very complex issues.

- Provide infrastructure and funding for data collection and management to support integrated behavioral health in the medical home and the care coordination that will have to be part of that. Utilizing SDAC data is just one way to understand the activities within a medical home. SDAC data is delayed and does not include enough information to support behavioral health care coordination in the medical home. Other methods and technologies are needed. There will need to be an investment in the development of new technologies and methods to do behavioral screening, track referrals, document treatment and collect data on the whole care coordination process at the medical home level. This will require adequate reimbursement to cover the cost of starting up new care coordination programs in the medical home and start up technologies to improve screening, intervention and care coordination with follow through in the medical home.

- The CPACK program developed by CBHC is a very good program, particularly the following:
  a. Assistance with finding a behavioral health provider for patients
  b. Telephone consultation by a child psychiatrist to primary care providers
  We recommend that BHOs be required to provide the 2 components above as part of their new contracts.

- Payment options for integrated behavioral health (not just co-location) need to be clear and understandable to providers and practices. In order for the integrated model to be sustainable, there need to be ways to access understandable billing rules/policies.

- **Payment reform.** Though this is a long-term goal, there are things in the short-term that will promote the financial sustainability of integrated care. Open the behavioral health and wellness CPT codes (96150 – 961S5) now. Don't wait. This will encourage integration immediately and enable medical homes to start now the process of evolving toward full integration. Also, in the current BHO rule, there is a covered diagnoses list that is required to bill. This list does not allow a provider to bill for v codes (physical or sexual abuse of a child, neglect of a child, parent-child relational problem, etc.) or other psychosocial or family stressors that are known precursors to mental illness; this is the opposite of a preventative approach and encourages pediatric BH providers to find a diagnosis – when the behavioral presentation is really due to family circumstances. Additionally, one of the goals in recent years for Colorado has been to decrease the number of children taking psychotropic medications. Allowing providers to intervene earlier would have a direct positive impact on that goal. The recommendation would be to allow for the billing of v codes (from DSM-S) and related psychosocial conditions (as opposed to being diagnosis driven).

- **Financial support of true integration, as opposed to co-location.** This would be another reason that BHOs and RCCOs need to be fully aligned in their payment systems and in other areas – as long as the payment remains siloed, the services will remain siloed. Payment options for integrated behavioral health (not just co-location) need to be clear and understandable to providers and practices. In order for the integrated model to be sustainable, there need to be ways to access understandable billing rules/policies.

- **Establish a standard of care for integrated BH providers and make the rules/regulations/guidelines accessible and clear.** This also includes credentialing requirements and providing immediate training on the correct use of HIPAA regulations. Any committee or group that is tasked with creating the standard of care of integrated behavioral health providers working in primary care settings should be composed of local clinicians and experts in the area (as opposed to strictly policymakers). This group should also provide guidance on the paperwork and credentialing requirements. All agencies involved in licensing and credentialing for behavioral health professionals (e.g., DORA, OBH) should be present.

- **Provide infrastructure and funding for data collection and management.** Utilizing SDAC data is just one way to understand the activities within a medical home – others are needed. There are currently projects being developed in the state that would utilize other modalities (e.g., IPad technology) to help practices collect data efficiently and effectively at the practice level. There will need to be an investment in the development of these programs and many practices would need financial assistance with implementation. However, this would be a way for practices to track all the activities that the state would like monitor (e.g., screening rates, follow-up, referral) and would allow the practice to improve patient and family care.

- **Support of care coordination activities.** Much of the care coordination will have to be done within the medical home. HCPF needs to be willing to help the integrated behavioral health provider understand how to be reimbursed for the care coordination that they will need to do on behalf of the Medicaid patient.

- **CMHC Policy and procedure change (via the BHO contract).** It is important to recognize the ways in which current policy can be problematic for practices, patients, and families. Currently, the BHO contract requires CMHC's to offer "intakes" or evaluations to patients/families within 7 days of referral from a primary care practice. This sounds reasonable. In theory, there are several complications: 1.) Offering a slot for an intake does not qualify as providing a gold standard of care. It has been frequently reported that time slots offered for intake appointments are typically during the 8-4 workday – this makes a family or patient choose between work and their health (and families are already much less likely to show up for

behavioral health appointments). There needs to be increased flexibility in this area. 2.) Also, offering an intake is not the same as providing therapy. Patients or families may come in for intakes and typically wait to be assigned a therapist. Then wait for that assigned therapist to call and schedule an appointment. This could be weeks after an initial referral. This process does not translate to patient- or family- centered care. This is just one example.

- **Sustainability and prevention.** The clear fact remains that if prevention does not become the focus of healthcare (physical and behavioral) costs will continue to skyrocket and our population will continue to develop multiple costly, chronic diseases. Prevention is the key to long-term population health and begins in infancy. So much of the behavioral health work and overall healthcare focus in Colorado has been focused on those that have already developed chronic conditions; ultimately, this does not serve our population well in the long-term. Population health is a focus of the SIM work and thus, funding and attention must be given to early childhood behavioral health, prevention, and early intervention.

- **Support of current programming and infrastructure, as opposed to creating new duplicate programs.** Colorado is an innovative state in many ways and has already begun this work through the efforts of multiple programs, statewide initiatives, and community organizations. Programs like the CPACK program developed by CBHC address statewide disparities in the availability of child psychiatrists and promote behavioral health integration in primary care. Effort should be channeled into supporting existing effective programming, not creating new infrastructure.

8) Barriers to the integration of behavioral health and physical health services. Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	Barrier? No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☒	☐	The current financial system for CMHC's only supports one form of integration – the co-location of a behavioral health provider that is based at the CMHC. Since funding for CMHC's is strictly determined by the number of "members" served, CMHC's are not currently incentivized to support an integrated behavioral health provider working in a primary care office (that is outside of their system). This can create a feeling of competition between CMHC providers and other integrated BH providers. Yet, in order for our behavioral health system to be successful, we need all providers to coordinate care and work together. There is no simple solution to this – this requires both culture change and payment reform. CMHC's should be provided funding based on community need; many rural or frontier parts of the state are less populated, yet have poorer behavioral health outcomes and need more programs/services. Additionally, CMHC's have practiced in a manner that may discourage coordination with PCP's – demanding multiple releases of information (before even getting on the phone with a PCP – which is NOT mandated by federal HIPAA guidelines) and failing to close the loop once a family has been referred. There needs to be immediate training statewide about the TRUE implications of HIPAA in all the CMHCs; instead of continuing to let it be a barrier to communication between providers. Additionally, each CMHC needs to have a designated person to handle communication and relationships between the CMHC and primary care practices. There needs to be ONE contact person (ideally there would be multiple, depending on the number of practices in the region) and one phone number to call and follow-up on referrals.
Community Behavioral Health Services Rule	☒	☐	If Colorado is serious about integrated care and allowing behavioral health professionals to successfully work alongside physical health providers, the state cannot just apply current behavioral health services rule to integrated care settings. There need to be guidelines for standard of care (for BH providers in integrated care settings) but paperwork requirements, requirements for updating "treatment plans" (which may or may not be relevant in integrated settings), need to reflect the work done by an

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

			integrated BH provider. Not unlike a PCP, an integrated BH provider may see 15 – 20 patients or families a day (in a true integrated model) and so, requiring lengthy intake forms, treatment plans, and other cumbersome paperwork is not required for providing quality care and will add nothing to a patient/family experience. The requirements for integrated BH providers need to be consistent with those required of physical health providers – allowing BHP's to spend more time providing quality clinical care and training (as opposed to doing paperwork).
Covered diagnoses list	☒	☐	Many children do not have a covered diagnosis but need treatment. For the pediatric population, the focus must be prevention and addressing psychosocial, economic, and family stressors BEFORE they develop into full-fledge psychiatric disorders. Investing in prevention among children (particularly those on Medicaid) is the only way to decrease the development of chronic disease in the adult population (which is one of the largest drivers of skyrocketing healthcare costs). The recommendation would be to allow for the billing of v codes (from DSM-5) and related psychosocial conditions (as opposed to being diagnosis driven).
Different behavioral / physical health reimbursement	☒	☐	For the pediatric population, the focus must be prevention and addressing psychosocial, economic, and family stressors BEFORE they develop into full-fledge psychiatric disorders. Investing in prevention among children (particularly those on Medicaid) is the only way to decrease the development of chronic disease in the adult population (which is one of the largest drivers of skyrocketing healthcare costs). The recommendation would be to allow for the billing of v codes (from DSM-5) and related psychosocial conditions (as opposed to being diagnosis driven).
Institutions for Mental Diseases exclusion	☐	☐	
OBH rules, reporting, or financing (regulatory differences between agencies)	☒	☐	Solve the release of information problem between the two different systems so the patient's needs and health are primary not the systems. All done with the patient as the focus. Currently, it's difficult to understand if OBH has any regulatory responsibility to behavioral health providers working within primary care. OBH has traditionally governed 27-65 designated facilities, which (in many cases) does not include primary care settings. This is extremely significant, since OBH provides guidance on documentation requirements, the establishment of treatment plans, crisis procedures, HIPAA regulation, etc. for individuals providing behavioral health and substance abuse services. There needs to be a training

			(by OBH or another identified agency) that clarifies the rules/guidelines for integrated behavioral health providers working within primary care settings. This should be 100% consistent with the requirements for physical health providers; there should not be more paperwork or reporting demands.
PCMP financing structure	☒	☐	
Per-member per-month amount	☒	☐	One of the core components of allowing behavioral health integration to be successful is care coordination. There need to be increased reimbursement levels to allow for care coordination to be completed within the medical home.
Physical space constraints	☒	☐	
Privacy Laws (HIPAA, 42 CFR)	☒	☐	Attorneys tend to give very conservative opinions that are not consistent with HIPPA rules. We need clinicians to describe the documentation methods they This issue needs to be addressed through training – immediately and statewide. Federal HIPPA states that providers can communicate with one another if in the best interest of patient (without a release of information). The only stricter state statute in Colorado (42 CFR) applies only to substance abuse and requires additional permissions. There is nothing stopping behavioral health providers and PCMPs from communicating from a HIPPA perspective (aside from in the case of substance abuse). Needing this many permissions and releases is a myth (primarily perpetuated by behavioral health). Dayna Matthew is a law professor at the University of Colorado Law School who is an expert in this area and also knows the local laws/statutes. She should be consulted and should assist in putting together a training to be disseminated to PCMP's and CMHC's statewide.
Professional / cultural divisions	☒	☐	Though there are practices that have been doing integrated behavioral health for decades, many PCP's and behavioral health providers are unfamiliar with the practice of integrated care. Most have a theoretical understanding of integrated care, but putting it into practice With a little coaching on how to effectively work together, PCMPs and integrated behavioral health providers are able to be successful serving patients and families.
RCCO or BHO contracts	☒	☐	RCCOs and BHOs need to be merged, paid in similar manners, have aligned incentives, coordinate all activities and function as a unit. When the larger systems remain siloed, it is difficult for the community practices and clinics to function in an integrated manner.
Staff capacity	☐	☒	

State/Federal rules or reporting requirements	☒	☐	The Tri-agency Task Force, composed of individuals from multiple state agencies (CDPHE, HCPF, OBH, HHS) and community stakeholders, identified a whole host of policies that are barriers. A detailed report on how to fix those barriers was provided to leadership at HHS. This would be a great place to start.
Technical resources / data sharing	☐	☒	This can be worked out. Utilizing SDAC data is just one way to understand the activities within a medical home – others are needed. There are currently projects being developed in the state that would utilize other modalities (e.g., IPad technology) to help practices collect data efficiently and effectively at the practice level. There will need to be an investment in the development of these programs and many practices would need financial assistance with implementation. However, this would be a way for practices to track all the activities that the state would like monitor (e.g., screening rates, follow-up, referral) and would allow the practice to improve patient and family care.
Training	☒	☐	Integrated behavioral health providers (IBHPs) for children require a very different skill set than IBHPs for adults. The Department of Child Psychiatry at UCDenver and Children's Hospital, along with CCHAP are expanding their training capacities. There is also work being done to develop a training program uniquely geared towards pediatric IBHPs – this is vital to providing effective and high quality care.
Others	Please type your response here.		

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

The American Academy of Child and Adolescent Psychiatrists (AACAP) has identified several components that are vital to providing high quality behavioral health within a pediatric medical home:

- Prevention and screening
- Early Intervention
- Routine assessment and treatment
- Specialty consultation
- Specialized Treatment
- Coordination of services and monitoring

Adapted from the "Best Principles for Integration of Child Psychiatry into the Pediatric Health Home" 2012

This framework is based on key general principles that are aligned with the goals and objectives of multiple professional associations that currently support integrated behavioral health efforts. These principles include family-focused care, professional collaboration, care plan development, and care coordination.

The integrated behavioral health provider (IBHP) in a medical home that serves children on Medicaid should have the following skills:

- A command of child development to guide screening and referral decisions
- Ability to manage many aspects of post-partun depression
- Ability to manage common minor behavior problems in children
- Ability to provide early childhood intervention
- Ability to handle common behavioral issues in school age children, including counseling around ADHD
- Ability to assess and manage or refer adolescent behavioral health issues
- Ability to assess, manage or refer substance abuse issues in children or teens
- Skills in addressing socioeconomic barriers for the whole family
- Ability to oversee care coordination for behavioral health issues for the whole family

10) Please share any other general advice or suggestions you may have about behavioral health integration.

- The CPACK program developed by CBHC is a very good program, particularly the following:
  a. Assistance with finding a behavioral health provider for patients
  b. Telephone consultation by a child psychiatrist
     The training component was not as helpful. We recommend that BHOs be required to provide the 2 components above as part of their new contracts.

- There needs to be better reimbursement for behavioral health care in the medical home setting.

- Colorado Medicaid needs to open behavioral health codes (96150 – 96155).

- The BHOs should be integrated with the RCCOs, have the same regions, reduce duplication of efforts and have better alignment of incentives and payment that support integrated care.

- There are many policies that are barriers to integration.

How will the RCCOs support the needed work force development? To integrate you need the expertise with in the practice for identifying need and the folks trained and integrated to meet the need. How are we going to train/help the staff get to the point to support a family and to help them to understand the need they have for services? This issue should be a focus of the next RFP how to train and pay for these services in a sustainable manner.

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination? Care Coordination is an organized/structured set of activities to support a patient receiving the appropriate services and resources necessary to achieve the best results necessary. These services are provided in a patient/family centered way which includes assessment of needs and strengths, a developed care plan and goals focused on the family and follow up on activities in the plan to be sure that needs were met or support services provided so that services stay focused on the needs identified by family.

b. How should RCCOs prioritize who receives care coordination first? High on the list need to be referrals from provider and practice staff, patients/families needing high levels of specialty care, premature infants, long term care services and palliative care, children and families needing waivers and children not showing up for their appointments. A request from the patient/family for help should also be considered a high priority.

c. How should RCCOs identify clients and families who need care coordination? We believe the effort and staff hours should go to those patients/families where change can be made such as socioeconomic issues, no show issues, lack of transportation. They should also help with navigating the health care system. Very high utilizers of emergency departments are easily identified as needing care coordination.

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider? Monthly activity reports.

12) What services should be coordinated and are there services that should not be a part of care coordination?

Services that can be provided in a pediatric or family medical home are: complex medical coordination including logistics/travel, ancillary services (PT/OT/home health services, ...), collaboration with mental/behavioral health, collaboration regarding school needs, referrals to early intervention services and Child Find, referral to other agencies (rehab, hospice, ...), collaboration with foster care and DHS system. RCCOs need to help medical homes by assisting families to find resoruces for needs like assistance with housing, food, parental employment, child care, in which case the RCCO can help families connect with other agencies that provide these services.

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

Need is determined by the patient and family. Care Coordination is basically built on a relationship and that relationship must be developed in a trust-filled, patient-centered, supportive environment.

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today? The care coordinators themselves (and the medical home) are not aware of whom else is involved.

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different? Takes place in school, non-profit organization, religious organizations, between friends and in families to name a few. These informal and formal relationships need to be supported, coordinated and nurtured. We are looking for results that lead to better lives, not credit for who did something.

c. How can the ACC avoid duplicating or disrupting current care coordination relationships? Allow providers to help patients and families and intervene to support the work closest to the patient and in the patient/families community. RCCO centric care coordination is distant for the patient/family and not in tune with the system that the patient/family currently functions.

d. What are the gaps in care coordination across the continuum of care? There is a lack of understanding particular systems and a lack of relationship in the non-delegated system being created. It has lost its personal touch in most instances. In

the pediatric system, there are gaps in hospital to community, particular for preemie babies, interaction with schools and day care, developmental screening and treatment, transportation support, health literacy, and transition to adulthood. All vital for the successful growth of children.

15) RCCOs' roles in addressing clients' and their families' non-medical needs. Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	Should the RCCO have a role? Yes	No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma	☒	☐	☐	Reporting abuse and neglect, both child and elder and supporting the investigating agencies and helping with needed services not being provided by another agency.
Affordability (assistance with prescriptions or co-pays)	☒	☐	☐	Don't assist everyone, but have resources so that needed help can be obtained and the provider's identified services can be received. Help families find resources and document that the family was actually helped.
Daycare / childcare	☒	☐	☐	Help families find resources and document that the family was actually helped.
Economic stability & employment	☒	☐	☐	Help families find resources and document that the family was actually helped.
Education	☐	☐	☐	
Environment	☐	☐	☐	
Food access / nutrition	☒	☐	☐	Help families find resources and document that the family was actually helped.
Health literacy	☒	☐	☐	Help families find resources and document that the family was actually helped. Have RCCOs take responsibility for finding good training for providers and staff on this topic.

Housing	☒	☐	☐	Help families find resources and document that the family was actually helped.
Language or translation services	☒	☐	☐	Help families find resources and document that the family was actually helped. RCCOs should support practices with easy and inexpensive ways to obtain immediate interpretation and translation of documents.
Literacy	☒	☐	☐	Help families find resources and document that the family was actually helped.
Transportation	☒	☐	☐	Help families find resources and document that the family was actually helped. Make sure that resources are available in all areas of the RCCO.
Other	Please type your response here. Feel free to list as many non-medical factors as you want, and please explain how the RCCO should be involved.			

16) Requirements about who should be doing care coordination. Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

- **In answering the following question, we are assuming that care coordination is being done in the medical home**

Type:	Coordinate care? Yes	No	In what capacity should these individuals coordinate care in the ACC Program?
Advanced Practice (Registered) Nurses	☐	☒	
Certified Addiction Councilors	☐	☒	
Certified Nurse Midwives	☒	☐	In OB Gyn office only
Community Health Workers	☒	☐	For most Medicaid recipients. Practical feet on the ground; health literacy helpers; follow up; know neighborhood and community resources
Generalists (BA/BS/MA/MS)	☒	☐	For most Medicaid recipients. Best choice; know alittle about a lot, good problem solvers
Health Coaches	☐	☐	

Licensed Clinical Social Workers	☒	☐	For highly complex social situations or complicated mental health clients. Possibly for supervision; can also do behavioral health, grief/loss and palliative care.
Licensed Marriage and Family Therapist	☐	☐	
Licensed Mental Health Counselors	☒	☐	For complicated mental health clients. Need to be generalist good at all ages
Licensed Professional Counselor	☒	☐	For complicated mental health clients. See above
Masters of Public Health	☐	☒	
Medical Doctors / Doctors of Osteopathic Medicine	☐	☒	
Nurse Practitioners	☐	☒	
Patient Navigators	☒	☐	For most Medicaid recipients. Can provide very practical information to patients, help with health literacy, know area
Peer Advocates	☒	☐	For most Medicaid recipients. Can help with practical information on community; can make calls and set up appointments
Promotoras	☒	☐	For most Medicaid recipients
Psychiatrists	☐	☒	
Psychologists	☒	☐	For complicated mental health clients
Registered Nurses	☒	☐	For medically complicated complex clients. Doing this work now
Social Workers	☒	☐	For clients with very complicated social issues
Wraparound facilitators	☐	☐	We don't know what these are, but might be like Peer Advocates.
Other	Please type your response here.		

17) Care coordination requirements for specific populations. Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and infants	☒	☐	Preemies, born with equipment needs, O2, genetic abnormalities
Children	☒	☐	Need special training regarding care coordination for children (which CCHAP can provide). Genetic abnormalities, need equipment, blind, hearing loss, developmental delays, foster care.
Children who are healthy, but in socially-complex environments	☒	☐	Need special training regarding care coordination for children (which CCHAP can provide). Legal, parental and behavioral issues as well as all the developmental issues of children and teens need special care and knowledge.
Children involved in the foster care system	☒	☐	Need special training regarding care coordination for children (which CCHAP can provide). Legal, parental and behavioral issues as well as ll the developmental issues of children and ttens need special car e and knowledge.
Children with a chronic illness	☒	☐	Special knowledge of complex medical conditions, waivers, equipment, respite is necessary.
Children with a serious emotional disturbance	☒	☐	Need special training regarding care coordination for children (which CCHAP can provide). Considered complex care need to understand needs of child and family.
Children with medical complexity	☒	☐	Need special training regarding care coordination for children (which CCHAP can provide. Needs to be a nurse providing the care coordination
Children or youth with a behavioral health diagnosis or substance use disorder	☒	☐	Need special training regarding care coordination for children (which CCHAP can provide). See above in emotional disturbance.

Transition-age adolescents	☒	☐	Persuading adult providers is hard.
Parents and families	☒	☐	Need to understand family dynamics
Pregnant women	☒	☐	Complicated medical situation
Adults	☐	☐	
Adults who are healthy, but in socially-complex situations	☐	☐	
Adults with a chronic illness	☐	☐	
Adults with a behavioral health diagnosis or substance use disorder	☐	☐	
Clients involved in the criminal justice system	☐	☐	
Clients with a disability	☐	☐	
Clients in a nursing facility	☐	☐	
Elderly clients	☐	☐	
Frail elderly clients	☐	☐	
Clients in palliative care	☐	☐	
Other populations, please comment:			

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

Working in a collaborative mode with anyone connected with the patient. RCCO staff will need to learn about the legal and temporary nature of foster care and residential care and support schools; behavioral health and physicians in helping the child receiving care to have a good care plan and make sure that plan follows the patient

19) How should care coordination be evaluated? How should its outcomes be measured?

A care coordination program should initially be measured by having good processes, not measured by outcomes, until solid data exists on outcomes that are risk adjusted and accurate

for children. Initially all measures need to be quite separated from outcomes that are highly tied to patient behavior, or practices will again be less likely to serve those with highest risk.

There should be the development of process and clinical outcomes the show that care is happening. The measurements should be the same for RCCOs and for medical homes that have been delegated to do care coordiantionby the RCCO.

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

a. What is the PMPM cost for providing care coordination services? We believe there should be a basic payment for care coordination. This would cover the cost for monitoring, data support, and "being ready for anything. Cost $5-6 PMPM at the medical home level, which is where care coordination should be done.

b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population? Yes. Complex medical and social situations need more time, possibly travel and much more clinical knowledge to ensure positive outcomes. Cost $6+ PMPM for high CRG patients and families.

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population? YES

a. Care coordinator to client ratios. If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☐
51-100	☒
101-200	☐
201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐

2,001-3,000	☐
3,001-4,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

Measurement will have to start with process outcomes, but as folks become more proficient outcomes could be decreased no shows, patient satisfaction, use of community resources, care plans completed, increase immunization rates, proportion of patients receiving well cild visits.

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

- Care coordination is best done in the medical home by members of the medical home team. Care coordination done from a call center in the RCCO tends to be superficial, only partially meet the needs of the patient and family, is fragmented (often fails to close the loop, i.e. follow through to be sure problems were satisfactorily met). The next best solution is for care coordination to be provided by community-based organizations set up to provide specific types of care coordination or care coordination for certain types of populations (ethnic group or chronic illness-specific groups). In this case, there must be direct bi-directional communication with the medical home. The least satisfactory care coordination is from a call center in the RCCO.

- Many medical homes relate to multiple RCCOs and they want to be delegated to do care coordination. If all RCCOs allowed medical homes to be delegated to do care coordination, they could receive a pmpm from all of them, which would enable them to afford to hire enough care coordinators to meet the needs of all of their ACC patients.

- Medical homes are willing to do care coordination, because they have a relationship with their patients. They trust them. Coordinating complex medical care is essential for good care and for cost savings. Also, the primary care provider is best positioned to have a long term relationship with the patient, and therefore know and understand other aspects of the patient's life and how important those non-medical factors are on the patient's health and health issues.

- The overall goal of Colorado Medicaid should be to provide care coordination services for ALL patients in the Medicaid population (for some patients it may be very minimal, others extensive). This is the essence of preventive care. A care coordinator that is based in the medical home is in the best position to help identify risk factors proactively, as early as possible before they impact a patient's health and cause illness. Children with special healthcare needs (complex, complicated) require a higher level of care coordination, so the pmpm attached to their care coordination needs to be risk adjusted.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

- All RCCOs should have their offices in the region served, should be non-profits, be a Medicaid provider and be incorporated only in Colorado.

- All RCCOs should offer to delegate care coordination to medical homes willing to accept that responsibility and the RCCO should share a portion of the RCCO pmpm with the medical home that accepts delegation.

- All RCCOs should use the same criteria for delegation and for the amount that is paid for delegated services of care coordination. By doing this, services can reach a standard across the state. A patient would have access to similar services no matter where they moved across Colorado.

- RCCOs should all agree on how they will effectively communicate to medical homes regarding any contact the RCCO has with patients attributed to the medical home. They should include PCMPs in developing those criteria.

- All RCCOs should help (or contract with an organization to help) medical homes understand how to access their SDAC data, understand their data and use it to develop rapid cycle QI projects to improve health outcomes and meet KPIs.

- All RCCOs should agree to provide uniform support for medical homes when a medical home asks for help with care coordination, even when the medical home is in another region (and contracted with another RCCO) but the patient is in the first RCCO's region.

- RCCOs should be required to allow medical homes to give the RCCO a list of patients the medical home feels are their patients and receive help from the RCCO to understand why certain patients have been attributed to another medical home. If the patient is determined to be more appropriately attributed to the inquiring medical home, then the RCCO should help re-attribute the patient to the correct medical home.

- On a regular basis, RCCOs should share the RCCO's performance on KPIs, share savings incentives and share with the medical home how their own performance compares with other medical homes.

- Functions: No function of a RCCO should look different from one RCCO to another from the perspective of the customer, specialists, providers, patients, and families moving from one place to another. If the service touches a customer it MUST look and feel the same such as accessing services, contacting services, receiving services. Internally RCCOs can be different, but a customer should never hear "that is not my practice, we don't do that, or you will have to call this number."

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

All RCCOs should have their offices in the region served, should be non-profits and be incorporated only in Colorado.

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

- This is particularly applicable to the Denver metro area. There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients. For many expectations/requirements and ways of doing things the RCCOs are so different from one another that it requires significant extra work for medical homes to adapt to the differences. In addition, if a patient lives in one region and goes to a medical home in another region, and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from that first region.

- The first RFP was looking for different approaches from the different RCCOs. Now, we think uniformity would be more important and the basics of administration and service provision should be mandated by HCPF and all RCCOs adhere it.

27) Should the RCCO region maps change? Why or why not? If so, how?

Yes. There are two changes we recommend:

- Larimer County should be included in Region 2, since the medical community and the support organizations of Larimer County and very closely linked to Weld County.

- In the Metro Denver area, the boundary issues are so difficult that we recommend one RCCO be responsible for the whole metro area or that medical homes be allowed to choose one RCCO for all of their patients.

28) Should the BHO region maps change? Why or why not? If so, how?

If Colorado is serious about promoting integration of behavioral and physical (medical) health care, then the RCCOs and BHOs should be integrated. This would mean they should have the

same regions and function as though they are one organization. They should share incentives that are aligned around successful integration of behavioral and medical services and outcomes. So the BHO maps/regions should conform to the RCCO regions/maps.

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

Improve attribution, decrease the time lag for data (not four months behind) , provide for the ability to pull reports on particular topics. Stop making changes that the medical homes have to make. Allow them some time to catch up with current expectations.

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

- There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients. There are certain expectations/requirements and ways of doing things that are so different from one RCCO to another that it requires significant extra work to adapt to the differences. If a patient lives in one region and goes to a medical home in another region and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from that first region. This is particularly true in the Denver metro area.

- Another alternative: When a practice contracts with a RCCO currently they "belong" to one RCCO. Change that and have them only contract with the state and have that contract extend to all RCCOS. This way RCCOS would be more accountable to standardization through out all of Colorado, and the services provided to patients/families would be more uniform.

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

34) What role should RCCOs play in attributing clients to their respective PCMPs?

The attribution system is quite flawed still. RCCOs should be required to allow medical homes to give the RCCO a list of patients the medical home feels are their patients and receive help from the RCCO to understand why certain patients are attributed to another medical home. If the patient is determined to be more appropriately attributed to the inquiring medical home, then the RCCO should help re-attribute the patient to the correct medical home.

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

- The attribution system continues to be flawed and the process of getting patients re-attributed to the correct medical homes is still very onerous. RCCOs should be required to allow medical homes to give the RCCO a list of patients the medical home feels is their patients and receive help from the RCCO to understand why certain patients are attributed to another medical home. If the patient is determined to be more appropriately attributed to the medical home, then the RCCO should help re-attribute the patient to the correct medical home.

- In the RFP, ask RCCOs how they can help improve processes for correct attribution and simple, easy correction of mis-attribution.

- Hold more patient/parent/family client focus groups.

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

- The RCCOs all do things very differently which is confusing for medical homes with patients in several RCCOs. RCCOs. RCCOs are very inconsistent in how they respond to requests for care coordination (quite variable depending on whom you reach at the RCCO). And they are very variable from one RCCO to another. So the new RFP should ask how RCCOs will develop policies and procedures to make their methods and response to requests for help more consistent.

- Feedback from RCCOs regarding patients referred to the RCCO for care coordination is spotty. How will RCCOs consistently provide feedback and communication to the medical home regarding what was done for the patients and was there improvement?

- And there are certain expectations/requirements and ways of doing things that are so different from one RCCO to another that it requires significant extra work to adapt to the differences. If a patient lives in one region and goes to a medical home in another region and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from that first region. This is particularly true in the Denver metro area. There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients.

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

42) How should the Department structure stakeholder engagement for the ACC as a whole?

Maintain Advisory groups, but use them for advice instead of reporting activities to them. These groups must be active participants and their view points be seen supportive and helpful. They may have ideas to make the program better. Use these folks as subject experts and advisors instead of once a quarter meeting attenders.

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population? NO

a. If no, what are the gaps?

   Hospitals are not participating. They all must participate to make this effort work successfully.

b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities. Children and their families are not a sub population, but currently are being treated that way. The emphasis has been going to "where the money is" to keep the RCCO functioning. If you want to put an emphasis on whole person preventative care, look at your youngest members and don't think of them as a sub-population. They are the majority of your members.

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

a. What role should hospitals play in the next iteration of the ACC Program?

Hospitals should be incented to communicate better with medical homes. They should have significant financial disincentives to see Medicaid patients with minor problems in their emergency departments.

b. What role should pharmacies play in the next iteration of the ACC Program?

Pharmacies should be rewarded for arranging training for their pharmacists and technicians in cross-cultural communication, providing translation services and providing extra teaching for families with limited health literacy.

c. What role should specialists play in the next iteration of the ACC Program?

d. What role should home health play in the next iteration of the ACC Program?

e. What role should hospice care play in the next iteration of the ACC Program?

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

g. What role should counties play in the next iteration of the ACC Program?

The Healthy Communities personnel should be functionally merged with the RCCOs to enable better coordination and reduce duplication of efforts

h. What role should local public health agencies play in the next iteration of the ACC Program?

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

45) How can RCCOs help to support clients and families in making and keeping appointments?

Should be done in the practices part of the Care Coordination iand the PMPM should be sufficient to support it.

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

No, if we provide Care Coordination at the practice level, the practice needs to decide how is is going to do that. CHWs are a good choice if paired with others. PMPM should be enough to defray the expenses of CHW.

47) Community Health Worker reimbursement. Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement process	(Please check all that apply)
Independently bill	☐
On staff (salary) at Primary Care Medical Provider Clinic	☐
On staff (salary) at RCCO	☐
Per Member Per Month Payment	☐

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

- Maintain accurate up-to-date listings of dental providers accepting Medicaid.
- Assist dentists in applying for Medicaid credentials

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you?

The Joint Commission has identified the following 3 challenges as the "triple threat" to healthcare communication: 1. Language barriers 2. Cultural barriers, 3. Low health literacy barriers.

b. What RCCO requirements would ensure cultural competency?

RCCOs should contract for training for their staff and the personnel in medical homes to receive training regarding:

- Cultural barriers to good health outcomes and how to address them
- Cross-cultural communication
- Addressing limited English proficiency in clients
- Addressing limited health literacy
- Each RCCO must have a comprehensive strategy to address effective communication (oral and written) with limited English and culturally different patients/families as well as those with low health literacy.
- What is your "organization's" strategy for addressing the triple threat on these three levels:
  - Building awareness of the "triple threat" to healthcare communication (1, 2, and 3 listed above)
  - Identifying and addressing systemic solutions to health literacy (signage, website readability, handouts, phone trees, communications to patients, care coordination).
  - Implementing education/training for providers and staff in private practice and clinic settings in your region to improve communications skills that lead to better health outcomes for all patients.

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?

- Understanding Cultural barriers to good health outcomes and how to address them
- Cross-cultural communication
- Addressing limited English proficiency in clients
- Addressing limited health literacy

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

51) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

- Pay medical homes even higher reimbursement for after-hours care than you do now.
- Pay emergency departments at a lower rate than medical homes for patients with minor problems.
- Require co-pays even for children. But waive the co-pay if they called their medical home first.

52) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

Practice Support

53) Support for practices. Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☒	☐	☐	☐
Network provider education	☒	☐	☐	☐
Assistance with practice redesign	☐	☐	☐	☐
Assistance with efficiency-enhancing activities	☐	☐	☐	☐
Provide web-based resources and directories	☐	☐	☐	☐
Provide practice-specific data reports	☐	☐	☐	☐
Provide clinical care guidelines and best practices.	☐	☐	☐	☐
Provide clinical screening tools	☐	☐	☐	☐
Provide health and functioning questionnaires	☐	☐	☐	☐

Provide chronic care templates	☐	☐	☐	☐
Provide registries	☐	☐	☐	☐
Offer client reminders	☒	☐	☐	☐
Offer client self-management tools	☐	☐	☐	☐
Offer educational materials about specific conditions	☐	☐	☐	☐
Supply behavioral health surveys	☐	☐	☐	☐
Supply other self-screening tools	☐	☐	☐	☐
Administer behavioral health surveys	☐	☐	☐	☐
Administer other self-screening tools	☐	☐	☐	☐
Prepare client action plans	☐	☒	☐	☐
Provide training on providing culturally-competent care	☒	☐	☐	☐
Provide training to supporting staff	☒	☐	☐	☐
Provide training on motivational interviewing	☒	☐	☐	☐
Provide tools and software for phone call and appointment tracking	☐	☐	☐	☐
Provide tools and resources for tracking labs, referrals, etc.	☐	☐	☐	☐
Provide referral and transitions of care checklists	☐	☐	☐	☐
Provide visit agendas or templates	☐	☐	☐	☐
Provide standing pharmacy order templates	☐	☐	☐	☐
Provide comprehensive directory of community resources	☐	☐	☐	☐
Provide directory of other resources	☐	☐	☐	☐
Provide materials regarding Nurse Advice Line	☐	☐	☐	☐
Ensure all tools and resources are centrally located on RCCO-specific website	☐	☐	☐	☐

Others	Nurse line – the Medicaid nurse line number is on Medicaid cards. The Medicaid line does not communicate with the medical home about calls or referrals to emergency departments. The Medicaid nurse line undercuts the medical home. The patient should call their medical home. There are so many programs being funded to provide practice support, SIM, CHES and now TCPI, I believe the question is not what to provide, but how does the ACC fit into what is available to practices and not flood the practices with helpers from each for these initiatives. How can the programs work in collaboration with a single goal in mind and split up the work? All the tools and supports are great, but the process of helping practices will not be welcomed if the program look uncoordinated and non-collaborative. Let's work together.

54) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

55) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

See Above

56) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

- The current "Enhanced Medical Home Standards" and the well child visit KPI are sufficient.
- The more incentives, the less of an incentive they create.
- A pmpm is also ok; but attribution is very flawed which serves as a disincentive

57) Should the Department require that PCMPs utilize disease registries to manage the health of their population?

Shouldn't be required, because it could be expensive for the small medical home and would likely require double entry of information. So, it could be recommended and incented. HCPF or RCCO would probably have t provide registries for smaller medical homes that are compatible with the medical home's EHR.

58) Please share any other advice or suggestions about provider support in the ACC.

The ACC is headed toward capitation. It would be important for HCPF to open codes now to encourage services and activities you want medical homes to provide later under capitation, so medical homes establish the habits now and so frequency of the services and fair reimbursement can be determined prior to switching to capitation. For example, social-emotional screening in toddlers and preschoolers should be reimbursed now.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

- The payment structure absolutely does not support the ACC goals. A medical home does not receive incentives for KPIs unless the RCCO meets its KPI. This becomes a disincentive, because many medical homes meet their performance targets, but do not get rewarded because the RCCO did not meet its targets. So the medical home has no incentive to maintain the performance. The philosophy that HCPF has espoused (that the high performing medical home should encourage or help the low performing medical home) is not realistic and is not how the real world works. There is no time for that, plus the high performing medical home has no way of knowing who is low performing. This idea shows a lack of understanding of the world where health cares is delivered. Medical homes need to receive full incentives when they meet their KPI targets, no matter what happens in the RCCO.

- The incentives are too low to change much. Also, the KPIs need to remain focused on process, not outcomes, until the data is more sophisticated to accurately attribute patients and account for risk factors.

- Many medical homes have the ability to collect REAL-TIME data from their EHR and their claims database, which can be used to measure performance more accurately than the SDAC. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and providers to develop a vetting process that will enable HCPF and RCCOs to trust the medical home self-reported real-time data.

- Since children are the majority and give the best chance of truly improving health and wellness, KPIs need to be more child-focused. And since the potential cost savings for children's health care are so far in the future, KPIs need to be intermediate, process outcomes.

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

There is very little of the infrastructure in the state in place at the present time to enable capitation to be implemented successfully. Here are just some of the changes that would need to be in place before it would be fair or prudent to implement capitation:

- The state should already be paying fair amounts for all aspects of the care needed by Medicaid recipients before it moves to capitation. In other words, codes for things that HCPF wants done under capitation should be opened and reimbursement adequately now. This would encourage medical homes to already be doing these things before the change to capitation. It would also give HCPF and medical homes experience regarding what the actual costs are for providing the desired services and determine a fair capitation. It will be difficult to change behavior to include new activities under capitation among providers, if you continue to hold codes closed now for things you want done under capitation. You have to help the medical homes create the habits you want before the switch to capitation.

- All providers would have to be reliably involved in the ACC: primary care, all of the various adult and child specialists, the hospitals, the therapies, dentists, mental health providers, etc.

- The data system would have to be able to report real time data and be far, far more accurate than it is now.

- The attribution system is flawed. That would have to be improved and provide accurate, real-time attribution data before capitation should be instituted.

- You will have to change a variety of policies that are barriers to population management.

- Capitation has to be combined with significant incentives to implement processes and improve outcomes. So, you will need to have the incentive system very well developed and viewed by providers as motivating before implementing capitation

- Healthcare for children focuses on prevention, early detection and early intervention, which require initial increased investment to reduce potential expenses many years and decades down the line. Other ACO programs have shown that savings on children are difficult to show early on. So, incentives in the care of children will initially be for intermediate outcomes (or for process outcomes) and need to be direct incentives rather than incentives in the form of shared savings.

- Early in the transition from pre-ACC payment methods to ACC payment structure (2012), some medical homes were asked to return money to Medicaid. Transitions like that (for example the transition to capitation) have to avoid this. Primary care medical homes have such narrow margins that this can be very difficult financially on a medical home

- Many medical homes have the ability to collect from their EHR and their claims database REAL-TIME data with which performance can be measured. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and providers to develop a vetting process that will enable HCPF and RCCOs to trust that medical home self-reported real-time data is trustworthy.

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

Many medical homes have the capability and infrastructure to adapt to payment tied to value. What is missing is the state, HCPF, RCCO, BHO infrastructure. See all of the infrastructure elements HCPF needs to have in place listed in question 60

62) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

63) What role – if any – should the RCCOs play in the distribution of payments to providers?

RCCOs should be sure that medical homes that meet their key performance measures or other targets should receive their full share of incentive payment even when the RCCO as a whole has not met its performance targets.

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

- The HCPF Payment Reform Committee should meet at a time when providers and practice managers can actually attend. Monday afternoons is probably the worst time to actually enable providers or practice managers to attend. Once you select an appropriate time, then actively recruit participation.

- Make sure that your efforts are statewide. Views are different in the various regions of the state.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

- Many medical homes have the ability to collect from their EHR and their claims database REAL-TIME data with which performance can be measured. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and provider from medical homes to develop a vetting process that will enable HCPF and RCCOs to trust medical home self-reported real-time data.

- The measures for children can be drawn from HEDIS measures or CHIPRA measures or from the Pediatric Measurement Proposal that HCPF did in 2010 with the help of Jim Todd. Appropriate child health measures could be selected from the following measures :
    - Well child visits appropriate for age
    - Developmental screening by three years of age
    - Teen depression screening
    - Complete immunization status by age two
    - Post-partum depression screening rate for mothers of newborns by age 4 months
    - Appropriate antibiotic use in URI and strep pharyngitis

- Medical homes could also be measured on:
    - Patient (or family) satisfaction ratings
    - Documentation of QI projects

- Screening should be part of KPIs, but you need to do more than just create a KPI. If you are going to have KPIs, then you need to track not only the number of times a screening was done, but also track the v-codes (or some way to track positives) and make them available in the SDAC so medical homes can track them. And the SDAC needs to track referrals (or intervention). Otherwise it is not worth measuring the number of screenings.

- The PCMP or medical home should receive real-time data (less than a month since date of service) with data that will allow them to compare their performance with performance of similar type of medical home.

- Healthcare for children focuses on prevention, early detection and early intervention, which require initial increased investment to reduce potential expenses many years and decades down the line. Other ACO programs have shown that savings on children are difficult to show early on. So, incentives in the care of children will initially be for intermediate

outcomes (or for process outcomes) and need to be direct incentives rather than incentives in the form of shared savings.

66) Measuring Client experience. Please complete the table below to indicate how the Department should measure Client/patient experience:

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☐	☐	
SF-12 Health Survey	☐	☐	
Other types of client interviews / surveys	☐	☐	
Patient Activation Measure	☐	☐	
Focus groups	☐	☐	
Other	Please type your response here.		

67) Knowing that, at this time, the Department only has claims data, how should population health be measured?

- Many medical homes have the ability to collect from their EHR and their claims database REAL-TIME data with which performance can be measured. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and provider from medical homes to develop a vetting process that will enable HCPF and RCCOs to trust that medical home self-reported real-time data is trustworthy.

- The measures for children can be drawn from HEDIS measures or CHIPRA measures or from the Pediatric Measurement Proposal that HCPF did in 2010 with the help of Jim Todd.

- The following measures should be used to measure outcomes for children:
  - Well child visits appropriate for age
  - Developmental screening
  - Teen depression screening
  - Complete immunization status by age two
  - Post-partum depression screening rate for mothers of newborns by age 4 months.
  - Appropriate antibiotic use in URI and strep pharyngitis

68) How should quality and performance data be reported to the RCCOs, PCMPs, and the public?

The PCMP or medical home should receive real-time data (less than a month since date of service) that will allow them to compare their performance with performance of similar type of medical home.

69) Measures for payment. Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☒
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

We only need 2-4 KPIs. Any more will dilute the effect. What we really want is good data, so we can improve our outcomes by doing a quality improvement project. Since children are the majority of Medicaid recipients and give you the best chance of truly improving health and

wellness in the long term, KPIs need to be more child-focused. And since the savings are so far in the future, KPIs need to be intermediate, process outcomes.

70) What percent of RCCO payments should be tied to measures or performance?

Percentage	
10-20%	☒
21-30%	☐
31-40%	☐
41-50%	☐
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

71) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?

Because many medical homes have patients in more than one region, the KPIs should be the same for all regions. The RCCOs and the PCMPs should have the same KPIs. The medical home should receive incentive payments for reaching its targets even if the RCCO did not reach its target KPIs.

72) Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?

Both. The best incentives are those that give health care providers targets to shoot for AND reward progress

73) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

Real time data that is accurate is crucial for rapid cycle quality improvement in medical homes and in order to provide incentives that will motivate medical homes. This means data available within 2-4 weeks rather than 4-6+ months. The SDAC data comes too late to: (1) support rapid cycle quality improvement and comes too late to provide meaningful incentives. Both family practices and pediatric practices report that the SDAC is still inaccurate compared to the medical homes own data that they obtain from their EHR, or their claims-based data. Many medical homes these days are able to capture the data needed by HCPF and the RCCOs within a week or two of service, rather than 4+ months later. We recommend that the ACC develop a process for self reporting of data. We realize that HCPF would need to vet the quality and accuracy of practice data, but please consider this.

74) Incentive payment frequency. Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	☒
Annually	☐
Other	☐

If you checked the "Other" box, please describe payment frequency below:

75) For potential offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

76) For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

Health Information Technology (HIT)

77) Types of communication. For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	☒
Text message	☐	☒
Web portal	☐	☒
Email	☐	☒
Telemedicine / Video chat	☐	☒
Face-to-face meeting	☐	☒
Smartphone app	☐	☒
Other: ALL formats are necessary to address specific needs that the other formats cannot; that's why they're there.		

78) HIT investments by organizations. For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below:

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	☐	☐
Digital care management tool	☐	☐
Care transitions alerts	☐	☐
Electronic Health Records (EHRs)	☐	☐
Health risk assessment software	☐	☐
Practice assessment tools	☐	☐

Practice management tools (scheduling, billing)	☐	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☐
Patient education/wellness tools	☐	☐
Provider/case manager directory	☐	☐
Shared decision-making tools	☐	☐
Telemedicine software	☐	☐
Other:	☐	☐
Other:	☐	☐

79) Importance of technology by type. The Department is working to determine what technology is in place, what technology is needed, and what technology should be standardized. For RCCOs, providers, and other organizations, use the table below to answer what HIT infrastructure outside of the SDAC your organization would use to perform population health management activities. Tools are scored from 1-5, where 1 are those items least-likely to be used, and 5 are items most-likely to be used:

Tool	1 Least	2	3	4	5 Most
Population analytics / reporting / dashboard	☐	☒	☐	☐	☐
Care management tool	☐	☐	☒	☐	☐
Care transitions alerts	☒	☐	☐	☐	☐
Electronic Health Records (EHRs)	☐	☐	☐	☐	☒
Practice assessment tools	☒	☐	☐	☐	☐
Health risk assessment software	☐	☒	☐	☐	☒
Practice management tools (scheduling, billing)	☐	☐	☐	☐	☒

Client web portal for communicating care plan, services, benefit enrollment	☐	☐	☐	☐	☒
Patient education wellness tools	☐	☐	☒	☐	☐
Provider/case manager directory	☐	☒	☐	☐	☐
Shared decision-making tools	☐	☒	☐	☐	☐
Telemedicine	☐	☐	☐	☐	☒
Other:	☐	☐	☐	☐	☐

80) What are the primary barriers to RCCOs and providers increasing their use Health Information Technology to improve the performance of Primary Care Practices?

- Technology to improve the performance of Primary Care Practices
- Possessing outdated tech (eg Windows XP, Office 2003), or next-to-no tech at all
- Inability to use basic office management software (ie MS Office)
- The Attribution algorithm is faulty; FIX IT. KEEP ADULTS OUT OF PEDIATRIC PRACTICES
- Liability anxieties create inter-agency barriers related to sharing PHI
- Releases are not standardized across Medicaid entities.

81) How can Health Information Technology support Behavioral Health Integration?

- Systems are needed for tracking
- Improving assessment and identification of needs that lead to/exacerbate behavioral health issues
- Reducing duplication of work; increasing real-time connections between providers
- Improving security, enhancing communication, reducing cost, increasing user satisfaction

82) In the next iteration of the ACC, should there be a shared resource for data and analytics? Please describe the basic criteria for what a shared data and analytics platform needs to contain in order for it to be useful.

YES. Needs to have more data and greater end-user flexibility. It should allow end-user customization to accommodate diverse needs

83) Should there be a shared care management tool? Please describe the basic criteria for what a care management tool would need to contain in order for it to be useful.

YES. System could be similar to BUS, TRAILS, EPIC, etc. Standardization is VITAL to ensure consistency across providers, regions, and to improve audit efficiency

84) Should there be a shared population health management tool? Please describe the basic criteria for what a population health management tool would need to contain in order for it to be useful.

Standardization is VITAL to ensure consistency across providers, regions, and to improve audit efficiency

85) Please describe the functionality that a common Medicaid provider directory would need to contain in order for it to be useful.

86) How can the RCCOs support providers' access to actionable and timely clinical data?

- Require HCPF to include more data and end-user functionality in the SDAC.

- Update ALL data every month (disregard 120-day timely filing delay).
- Make HCPF fix the attribution algorithm; incorporate pediatric practice information to eliminate attribution of adults to pediatric rosters.

87) What are the HIT solutions that would benefit clients, providers, and RCCOs? Please comment on the parameters these tools or platforms would need to possess and the ways in which they could be used.

- Standardized, regular, ADT info from hospitals

- Standardized ROI for use by all Medicaid entities.

88) What technical assistance or resources related to HIT infrastructure should the RCCOs supply? This assistance or these resources could be for providers, social service organization, clients/families, or for others.

- Assistance (one-on-one, classes, over-the-phone, web-based) on using parts of the SDAC; post TREO's SDAC webinar
- Education, consultation on encryption, transmission, and storage of PHI

89) What role should health information exchange platforms like CORHIO or QHN play in the next iteration of the ACC?

- Sharing of real-time ADT data
- Need to include small and single-provider practices as well

90) Please share any information, advice, and suggestions you have about health information technology in the ACC Program.

"No Practice Left Behind"
Many providers lack the skills to implement anything but the simplest of electronic activities. Population health management involves use of technology that many (most?) do not possess. RCCO's are well-placed to help the providers in their areas improve, as a group, toward more effective population management.

Colorado Department of
Health Care Policy and Financing

Serial # 086

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Mental Health Partners
Location: Boulder, Boulder County, CO

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Click here to enter text.
Location: City, County, State.
☐ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
X Medical provider / PCMP / other provider
  i. Type or specialty: community mental health center
  ii. Area of practice: mental health and substance abuse
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☐ Other (please describe): Click here to enter text.

Are you currently involved in the ACC program?

X Yes
☐ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
X 1-2 years
☐ 2-3 years
☐ 3-4 years
☐ Since before the program was implemented.

How have you been involved in the ACC program and what interaction have you had with RCCOs:

MHP is a partner/provider and part owner in Foothills Behavioral Health Partners, the Behavioral Health Organization that manages the Medicaid behavioral health capitation contract for the metro west region. FBHP works collaboratively with the RCCO in our area, Colorado Community Health Alliance, to integrate, coordinate and improve health care services to the Medicaid members in our region. MHP is a part of that work and staff of both MHP and CCHA meet regularly to further these goals. MHP is currently working with CCHA on the program focused on Medicare/Medicaid eligibles. MHP provides integrated behavioral health services at current RCCO PCMP clinics, including behavioral health coordination and tele-health services. The integrated care model provided by the partnership between MHP and Clinica Family Health Services is a mature, Level 6 model, with MHP clinicians working as an integral part of Clinica's primary care teams. MHP also has integrated services with other primary care practices that serve both Medicaid and commercially insured patients.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:

MHP is a co-owner of Foothill Behavioral Health Partners, the BHO in this region. We are the contracted community behavioral health center

provider for Boulder and Broomfield counties. MHP has a long history of serving Medicaid eligible individuals and families.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

X Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

Providing mental health services to the Medicaid eligible population in the counties we serve is a core component of our mission. We have the broad continuum of services essential to meeting the needs of this population, including services that focus on wellness, prevention and the social determinants of health, consistent with the ACC focus on health and wellness. As evidence of this commitment, MHP has recently opened our model for a person-centered healthcare home that incorporates a broad array of psychosocial rehabilitation services as well as a medical center that includes psychiatry, primary care, oral health and nursing services.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

It is to the department's credit that the ACC's intent is to improve healthcare and meet triple aim goals in Colorado. The ACC has created opportunity to expand focus on integration, care coordination and care transitions and to pilot new payment structures. It has furthered the development of patient-centered

healthcare homes and supported the strengthening of relationships between physical health/RCCOs and behavioral health/BHOs.

2) What is not working well in the ACC Program?

Per-member per-month payments are not a particularly robust care management tool. A risk-based, global payment model with clear performance expectations and aligned incentives between payers and providers offers a much more powerful approach to achieving the goals outlined for the evolution of the ACC.

The ACC will achieve health outcomes and ensure savings only if the identification and management of patient populations through clinical information systems and measurement-based care, including automated linkages to community resources, is in place. Coordination of care does not translate to full continuum of care. The ACC is very primary care centric and would benefit from capitalizing on the value of other kinds of healthcare homes, like community mental health centers. The ACC gives care coordination a lighter touch than MHP does for example. By providing care coordination close to the patient and the patient's treatment, the coordination is seamlessly linked to treatment. Care coordination works best when it happens as close to the patient as possible and when it is conducted by people who have extensive knowledge of the community surrounding the patient. There's a lack of clarity around care coordination roles, responsibility and exactly what constitutes the proper level of care coordination. Mental health centers have been doing chronic condition management since the inception of the Medicaid mental health capitation program and have skills to bring to this endeavor.

Human services and public health organizations need to be more involved in the ACC/RCCO model.

3) What is working best in the Behavioral Health Organization (BHO) system right now?

Prior to the inception of the Medicaid mental health capitation program, over 50% of Medicaid dollars were spent on inpatient care; by 2007, as a result of managing care and investing in community-based services by the BHOs and providers, that percentage was reduced to 7%. The program has aligned incentives between payers and providers and shifted the treatment paradigm to community-based, recovery-oriented, person-centered services that focus on the triple aim. The risk-based global payment model provides a more flexible revenue source leading to an ability to provide services that are difficult to reimburse in a fee-for-service payment model. These services include prevention and wellness services designed to focus on health, resilience, self-management of illness, etc. The program also defines performance expectations but leaves room for local decision-making around the types of services and programs that will be effective in meeting those expectations. The BHO/CMHC/MSO system is continually working on innovative delivery system and services improvement in line with the direction of healthcare policy.

BHO providers offer unparalleled mental health and substance abuse services. The comprehensiveness of the continuum of care provided and the populations served at community behavioral health centers, including MHP, best meets the needs of the community. Services for the seriously mentally ill are cost-effective and save the State money. We serve people in the community and keep them out of higher-cost residential care and hospitalization. We collaborate effectively with human services (child welfare, criminal

justice, etc) and with local FQHCs. Global payment models support this kind of coordination and integration.

4) What is not working well in the BHO system?

As is already widely acknowledged, we need a more comprehensive and robust substance abuse benefit.

The BHO has difficulty communicating outside the system because of stricter privacy regulations than those found in physical healthcare. Restrictions around sharing of substance use information are even greater.

These stricter regulations around information sharing, as well as other more burdensome regulations in behavioral health, create obstacles to integration and add cost without adding value.

5) What is working well with RCCO and BHO collaboration right now?

The RCCOs and BHOs are working together to recognize the mental health centers as healthcare homes. They have also worked out ways to share data and to use it to improve patient care. The state is encouraging collaboration, which is an important first step. Some RCCOs and BHOs/CMHCs are moving beyond care coordination to focus on integration and population health.

6) What is not working well with RCCO and BHO collaboration right now?

The limited funding for care coordination services is an issue. The lack of clarity around responsibilities is also an issue. As stated previously, care coordination and collaboration is most effective when provided as close to care as possible and taps the existing relationships and the deep and broad knowledge of multiple healthcare and human services organizations. This is more characteristic of the BHO system than it is of the RCCO system currently.

An effort to determine financial reimbursement models that support integration and collaboration must be undertaken. Models such as bundled payments, pay-for-performance and gain-sharing are viable options; these models will advance the current relationship. Local culture and local practice are essential elements and will influence the partnership. Understanding the local culture and leveraging local relationships to address social determinants is critical for achieving the triple aim and for the successful creation of incentives that encourage favorable and measurable outcomes.

It's important to remember that *core coordinotion* is not *integrotion*. In fact coordination is a very early developmental step in actual integration of physical, mental, addictions, and oral health. The BHOs, given their longer history and developmental arc and their more robust payment model and aligned incentives, are farther along in working towards true integration than the current care coordination emphasis in the RCCOs.

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

The top priority needs to be the payment form. An equitable funding mechanism that reflects the respective value of services provided needs to be in place . From a behavioral health standpoint, the mechanism would be a global payment system or potentially a full PMPM (per-member per-month) allocation that accurately reflects value and a shared risks-shared savings approach. A lack of understanding and appreciation may exist for the underlying behavioral health conditions that impact medical costs. Those costs, as well as savings accrued in physical health from behavioral health interventions, need to be clearly understood before a blended payment system is put into place.

Additionally, clinical best practices need clarification for the integration of physical, mental, dental and substance abuse services to be successful. Integration would be better supported—and collaborative care facilitated—if an alignment of payment allowed for the joint provision of behavioral and medical care. Optimally, the model would include payment for an exam room consultation. The ability to bill and code small time increments to capture short consults and check-in interactions would also be beneficial.

Alignment of regulations is a third concern. Our documentation standards are more onerous than the rest of healthcare; this area needs alignment with other providers.

Information exchanges would improve coordination across all providers, mental health and physical health.

Lastly, integration efforts should address prevention in mental health. Intervening at the first signs of a possible need, ahead of a formal diagnosis, could catch an issue early and possibly prevent the development of a more serious situation.

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	X		The Medicaid mental health capitation program has been successful in helping Colorado improve care, care experience and cost of care. Payers (BHOs) and providers (CMHCs and others) have been aligned in working toward triple aim goals and supporting innovation. At the same time, funding streams are fragmented, spread across different state departments and mis-aligned, with some based on fee-for-service models that are inadequate and ineffective. There is concern that the success obtained from the Medicaid capitation program could be displaced under the RCCO initiative.
Community Behavioral Health Services Rule	X	☐	
Covered diagnoses list	X	☐	The list doesn't allow for preventive care, sub-clinical conditions or behavioral management of chronic medical conditions. Some diagnoses that can benefit from behavioral health intervention are not included in the list. The list unnecessarily restricts important activities in an integrated setting, including wellness activities or early interventions around social determinants that can help prevent more expensive problems from developing.
Different behavioral / physical health reimbursement	X	☐	
Institutions for Mental Diseases exclusion	☐		
OBH rules, reporting, or financing (regulatory differences between agencies)	X	☐	Working with 2 different reporting and regulatory agencies is onerous. There are documentation issues. Rules and regulations governing behavioral health are more burdensome, which impairs the ability of behavioral health providers to work at the pace of a primary care practice.
PCMP financing structure	X	☐	The financing structure for mental health and substance abuse under PCMP is not

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

			clear.
Per-member per-month amount	X	☐	Currently substance abuse is greatly underfunded; it's unclear what the financing structure would be if substance abuse and physical health were combined.
Physical space constraints	X	☐	Often there isn't the physical space in primary care to incorporate the behavioral health provider.
Privacy Laws (HIPAA, 42 CFR)	X	☐	Difficulties exist with coordination of care, especially around substance abuse. There's a huge barrier in the documentation of medical records (what we can document and what we can report).
Professional / cultural divisions	X	☐	These are workable, but need intentional focus.
RCCO or BHO contracts	☐		
Staff capacity	X	☐	Maintaining adequate staffing is extremely challenging given the number of national and state healthcare reform initiatives; we face continuous salary pressure in the recruitment and hiring of new providers. Bilingual staff are particularly difficult to recruit. Ongoing training is expensive.
State/Federal rules or reporting requirements	X	☐	Alignment would create less complication; we recommend a uniform report.
Technical resources / data sharing	X	☐	The need for multiple releases and the difficulty in charting or sharing information are issues. Care is provided when and where it's needed only when the mental health provider is in the same physical space. Federal privacy constraints impede data sharing.
Training	X	☐	Integrated care is a specialty that requires training.
Others	Please type your response here.		

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

A shared care plan between behavioral and medical health, including substance abuse, is necessary. Optimally, providers share the same location; at the least, they are on the primary care team. Whole-person assessments are critical; patients need to be screened for physical, mental, addictions and oral health issues. The availability and/or access to both physical and mental health must include care coordination and system navigation.

10) Please share any other general advice or suggestions you may have about behavioral health integration.

Integration often fails due to lack of funding once a pilot program concludes. The best way to support integration is with a global payment structure that allows greater flexibility in the use of resources. Mental health capitation is effective in supporting quality and cost effectiveness. The State has been focused on bringing behavioral health into the ACC system, a system that is still evolving and is at very early stages of integration and of managing care. The State could leverage the success of the mental health capitation contract by recognizing community behavioral health providers as PCMPs and moving all of the behavioral and physical healthcare needs of the seriously mentally ill under a global payment model managed by the BHOs. Start with a pilot for a limited set of high-needs folks and impact one of your most distressed populations. This creates a platform for extending that pilot into complex condition management, by mental health centers that have long experience in managing complex chronic conditions, for a broader population who have co-morbidities, perhaps using Wagner's chronic care model. Success in these high cost areas can then be scaled to populations without chronic complexities.

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination? *"The deliberate organization of patient care activities between two or more participants (including the patient) involved in a patient's care to facilitate the appropriate delivery of health care services. Organizing care involves the marshalling of personnel and other resources needed to carry out all required patient care activities, and is often managed by the exchange of information among participants responsible for different aspects of care."* (AHRQ, *Closing the Quality Gap)* We would add the element mentioned below about ensuring linkage to all resources necessary for care to comprehensive.

We prefer the term care management; it implies a more proactive and comprehensive approach to managing the care of a defined patient population. Care coordination, or care management, entails providing the linkage to services and/or resources as well as the facilitation of effectively accessing and utilizing those services and/or resources. For example, a patient may need help finding a primary care provider, making the appointment and mapping out the bus route to the provider. That patient may also need to be accompanied to the first appointment to build the skills necessary to achieve maximum independence, which is the long-term goal of care coordination.

b. How should RCCOs prioritize who receives care coordination first?

We recommend prioritizing according to the level of integration, with the most impact in terms of overall cost realization. An individual's level of need, the complexity of their disorder and their level of functioning are also considerations in determining who receives priority.

c. How should RCCOs identify clients and families who need care coordination?

We recommend identifying clients and families by utilization first and cost secondarily, with a comprehensive understanding of what those both entail. Recognize that behavioral health, substance abuse and social determinants greatly impact costs.

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

It depends on whether the care coordination is specific to the care being delivered by that medical provider or if it's a more generalized level of care coordination. Care coordination is best handled by the primary medical provider/healthcare home and not by a RCCO. A RCCO can provide care coordination support but not necessarily the actual care coordination The barriers around sharing information make the tracking of care coordination difficult. Efforts are being made to design an electronic record that would be shared by all providers.

12) What services should be coordinated and are there services that should not be a part of care coordination?

Physical, mental, substance abuse and oral health services as well as serious disease management need to be coordinated. Prevention services, including wellness initiatives, health education and transition of care coordination are needed. We're constrained by Medicaid's medically necessary standard. Providers who provide services outside of that standard are not reimbursed. That needs to be fixed. We are further constrained by Medicaid's covered diagnosis and covered service requirements, which mean that prevention and wellness activities are not reimbursed.

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

Utilization of services, diagnoses, medications and social determinants are most important. A comprehensive assessment of social determinants, in combination with the medical assessment, determine the level of care coordination needed by the patient. These factors may be stand-ins for a level of risk assessment.

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today?

Typically the primary clinician or case manager is coordinating a patient's care. In other cases, the FQHCs have care coordinators. MHP has care coordinators. RCCO and hospitals have care coordinators. Local governmental and non-profit organizations frequently have care coordinators, e.g. family resource centers, homeless services agencies, aging services agencies, etc. This multitude of coordinators creates fragmentation, inefficiency and too much stepping on toes.

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

See 14) a. It isn't totally clear how care coordination provided by different agencies is different. All likely seek to provide comprehensive connection to resources, with some specific expertise in areas most related to the organization's mission. For example, a homeless serving agency may have more knowledge and expertise in housing resources, a food pantry in food resources, others in benefit acquisition, etc. Care coordination that occurs at community mental health centers provides coordination that is more geared to the specific needs and complexities related to individuals with mental health and substance use challenges. For example, housing resources that will be more tolerant to some behaviors that others might see as problematic or offering more support in completing applications for benefits, etc. People with behavioral health issues also may have criminal charges related to their illness; mental health providers incorporate this knowledge into care coordination approaches. MHP also partners with local agencies by providing on-site staff to work with the agencies' clients, including providing recovery care coordinators in housing sites in order to support retention of housing. MHP

coordination tends to be more comprehensive, more intensive and longer-lasting than what occurs at the ACC level.

c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

When the ACC contracts with a PCMP, a determination should be made if the PCMP has sufficient volume to have care coordination on-site, working as a part of their primary care team. This is the ideal situation since care coordination is most effective when it is provided as close to the care as possible. The ACC can focus on supporting care coordination at lower volume PCMPs, which may also be more likely to serve lower need/risk patients, where care coordination from a distance might make more sense. For PCMPs where care coordination is provided on-site, the ACC could focus on offering technical assistance and a higher level of support when resources at the local level are exhausted and gaps remain. Care coordination for complex chronic conditions (where co-morbidities typically exist) needs to happen at the local provider level. This is characteristic of a significant number of people served at community mental health centers and other safety net providers and illustrates why community mental health centers need to be recognized as PCMPs. Local providers are more likely to be successful in preventing duplication of care coordination than the ACC/RCCO would be. This issue illustrates why human services and public health agencies need to be involved in the ACC.

d. What are the gaps in care coordination across the continuum of care?

The difficulty in communicating with providers and families due to the multiple releases required by Colorado law creates a gap in care coordination. A gap in care coordination exists between substance abuse and the rest of the system. A gap exists between hospital health systems and community providers and between hospitals and their communities. There are also gaps in care coordination related to social determinants of health, e.g. housing and food stability, domestic violence, child abuse and neglect, etc.

15) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	Should the RCCO have a role? Yes	No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma	X	☐	X	
Affordability (assistance with prescriptions or co-pays)	X	☐	X	

Daycare / childcare	X	☐	X	
Economic stability & employment	X	☐	X	
Education	X	☐	X	
Environment	X	☐	X	
Food access / nutrition	X	☐	X	
Health literacy	X	☐	X	
Housing	X	☐	X	
Language or translation services	X	☐	X	
Literacy	X	☐	X	
Transportation	X	☐	X	
Other	Please type your response here. Feel free to list as many non-medical factors as you want, and please explain how the RCCO should be involved.			

16) **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	Coordinate care? Yes	No	In what capacity should these individuals coordinate care in the ACC Program?
Advanced Practice (Registered) Nurses	☐	☐	There's no one on this list who couldn't do care coordination—care coordination is in their scope of work—but care coordination is not the best use of their time and skill set.
Certified Addiction Councilors		☐	
Certified Nurse Midwives	☐	☐	
Community Health Workers	☐	☐	

Generalists (BA/BS/MA/MS)	X	☐	
Health Coaches	X	☐	
Licensed Clinical Social Workers	☐	☐	
Licensed Marriage and Family Therapist	☐	☐	
Licensed Mental Health Counselors	☐	☐	
Licensed Professional Counselor	☐	☐	
Masters of Public Health	X	☐	
Medical Doctors / Doctors of Osteopathic Medicine	☐	☐	
Nurse Practitioners	☐	☐	
Patient Navigators	X	☐	
Peer Advocates	X	☐	
Promotoras	X	☐	
Psychiatrists	☐	☐	
Psychologists	☐	☐	
Registered Nurses	☐	☐	
Social Workers	☐	☐	
Wraparound facilitators	X	☐	
Other	Please type your response here.		

17) **Care coordination requirements for specific populations**. Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and infants	X	☐	General requirements apply and each of these populations has unique needs, resources and funding streams.
Children	X	☐	
Children who are healthy, but in socially-complex environments	X	☐	
Children involved in the foster care	X	☐	

system			
Children with a chronic illness	X	☐	
Children with a serious emotional disturbance	X	☐	
Children with medical complexity	X	☐	
Children or youth with a behavioral health diagnosis or substance use disorder	X	☐	
Transition-age adolescents	X	☐	
Parents and families	X	☐	
Pregnant women	X	☐	
Adults	X	☐	
Adults who are healthy, but in socially-complex situations	X	☐	
Adults with a chronic illness	X	☐	
Adults with a behavioral health diagnosis or substance use disorder	X	☐	
Clients involved in the criminal justice system	X	☐	
Clients with a disability	X	☐	
Clients in a nursing facility	X	☐	
Elderly clients	X	☐	
Frail elderly clients	X	☐	
Clients in palliative care	X	☐	
Other populations, please comment:			

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

This is included in care management responsibilities. Maintain those relationships and understand the specific medical and social needs of those children. Perhaps focus on supporting role of the most appropriate healthcare home (PCP, mental health or specialty provider) in conjunction with human services for children involved in foster care.

19) How should care coordination be evaluated? How should its outcomes be measured? We recommend benchmarking utilization and cost against previous timeframes or state and national metrics. Qualitative outcomes can be measured at both the provider and the patient level.

Care Coordination should be evaluated based on its ability to improve health outcomes, care experience and cost for the individual. This allows care coordination to directly link to improving the value of healthcare services for the individual. This involves direct self-reported patient measures combined with health outcome and cost data at the individual level. These measures should include

measures of self-management/self-efficacy (e.g., the Patient Activation Measure) and successful linkage(s).

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

    a. What is the PMPM cost for providing care coordination services?

       This cost is dependent upon the level of care coordination being provided. An estimate of risk needs to be built into the PMPM formula.

    b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

       Varying PMPM across populations may or may not be effective as some populations will be at higher risk than others.

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

    No, we don't recommend it. The contractor is responsible for outcomes. The State shouldn't try to micro-manage how contractors achieve those outcomes.

    a. **Care coordinator to client ratios.** If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☐
51-100	☐
101-200	☐
201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

The Department needs to look at the effectiveness of care coordination activities in contributing to improved health, better care experience and overall cost of care.

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

We agree with data reporting. Most important is the ability to report data that allow for statewide comparisons. We need clear data definitions so the data mean the same thing across entities.

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

There should be minimum expectations of actions to engage and collaborate with essential community providers, including those whose focus is on social determinants of health. A bidder should be required to conduct a comprehensive community needs assessment during year one of their contract. The assessment needs to focus on identifying gaps and health needs, followed by a plan that addresses the findings.

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

27) Should the RCCO region maps change? Why or why not? If so, how?

Yes, the region maps should change. RCCOs and BHOs should be aligned across the state. It's difficult to provide integrated care when they don't align. Broader is better (tiny areas create difficulty for people receiving care).

28) Should the BHO region maps change? Why or why not? If so, how?

Yes (see #27)

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

Allowing mental health providers to bill for behavioral medicine services and fully funding the substance abuse benefit will increase the effectiveness of the ACC. Decrease administrative burden of behavioral health providers. Align documentation and reporting requirements. Seek changes in regulations regarding information sharing.

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

The current substance abuse benefit is very limited. Inflexibility in focus on covered service and covered diagnosis which prevents reimbursement for prevention and early intervention and wellness.

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

34) What role should RCCOs play in attributing clients to their respective PCMPs?

RCCOs should provide clients with options and facilitate clients in selecting their PCMPs. RCCOs should not attribute them.

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

They should develop a collaborative approach to prevention and population health management, including desired outcomes and shared goals. The ACC program and public health should work together to develop joint strategic agendas.

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

Both entities should be working toward common goals for human services, specifically around vulnerable populations such as children in foster care.

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

The ACC should be addressing issues of underinsurance, specifically high deductible plans and the gaps in care they sometimes create. Insurers in the insurance marketplace need to be fully educated on the services generally required to treat patients with mental health and/or behavioral health needs. Historically, the standard insurance policy includes inpatient benefits. With parity in place, an entire continuum of services should be offered to ensure the best quality outcomes.

The models developed in the ACC Program should be extended to the exchange marketplace and the broader commercial plans, aligned with the State Improvement Model (SIM).

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

Regulatory agencies should be removing regulatory barriers to the delivery of high quality, efficient care. The Division of Insurance needs to assume a more active role in the review of insurance claims and payment practices and the related requirements of compliance.

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

The RCCOs should be required to have a defined stakeholder engagement process in place that includes clients, families and client advocates. That process needs to be a part of their strategic planning process.

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

RCCOs should support and leverage existing relationships between PCMPs (including community mental health centers) and stakeholders, community organizations, social services and public health agencies, government, non-profits, etc. MHP has an extensive array of partnerships in our community and is co-located with many of these partners. Advisory groups and shared decision-making might be helpful.

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

See #40.

42) How should the Department structure stakeholder engagement for the ACC as a whole?

The opinions and concerns of the various stakeholders, including clients and families, should be united in a strategic or operational planning process.

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

No

a. If no, what are the gaps?

Gaps exist across the board (dental care, hospital beds, psychiatry).

b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

There is a gap in service for folks on the autism spectrum and for traumatic brain injury. Some gaps reflect resource shortages or the limitations of treatment knowledge.

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

a. What role should hospitals play in the next iteration of the ACC Program?

Hospitals should act as a provider of services for inpatient needs.

b. What role should pharmacies play in the next iteration of the ACC Program?

Pharmacies are not as engaged as they could or need to be. They also need incentive alignment.

c. What role should specialists play in the next iteration of the ACC Program?

It depends on who is defined as a specialist. In some cases, specialists may be the most appropriate healthcare home (PCMP).

d. What role should home health play in the next iteration of the ACC Program?

Home health definitely needs to play a role. As an ancillary provider, home health needs a value assigned for the services they provide to the home-bound population.

e. What role should hospice care play in the next iteration of the ACC Program?

Hospices are another ancillary provider that need a value assigned for the services they provide to patients in hospice care.

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

Both organizations serve populations with complex health needs. They should be supported in working with RCCOs around the array of services they need. Folks waiting for services from Community Centered Boards often experience delays, which is an issue. What role should counties play in the next iteration of the ACC Program?

Counties need to be engaged in the ACC. Local involvement is required for the ACC Program to be successful. A county's role will vary from county to county.

g. What role should local public health agencies play in the next iteration of the ACC Program?

Population health goals should be aligned between Public Health and the ACC.

h. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

Nonprofits like the FQHCs and the community mental health centers should be full healthcare provider partners in the process. Safety net providers such as CMHCs and FQHCs have long-standing experience in integrating care, attending to the social determinants of health, and managing complex healthcare needs. These skills could be better leveraged.

45) How can RCCOs help to support clients and families in making and keeping appointments?

These activities are best carried out at the local and provider level. RCCOs can ensure that adequate resources are available to support these activities, including transportation support.

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

The RFP should hold bidders accountable for outcomes and provide the flexibility for local solutions. I the case of Community Health Workers and Patient Navigators, service codes would need to align to their scope of work.

47) **Community Health Worker reimbursement.** Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement process	(Please check all that apply)
Independently bill	☐
On staff (salary) at Primary Care Medical Provider Clinic	X
On staff (salary) at	☐

RCCO	
Per Member Per Month Payment	?

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

Oral health is as important in integrated care settings as physical and behavioral health. The RCCO should absolutely be incorporating the coordination of dental care and enlisting a network of providers. Dentists need incentives to encourage their participation.

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you?

Cultural competence is the ability of a provider to recognize and deliver care that is consistent with the cultural beliefs and practices of the individual receiving care. The provider must have the ability to adapt medical practices and the delivery of healthcare services to ensure that those experiences are congruent with the cultural beliefs of the individual receiving care, including family members.

b. What RCCO requirements would ensure cultural competency?

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?

Providers need to include bilingual bicultural community members to help build health literacy in that community, for example the Promotoras program.

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

It would be helpful for the RCCOs to target specific populations and establish outcomes related to engaging those populations, thereby creating an incentive for providers to more effectively conduct outreach in those communities.

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

If a preferred network is helpful in managing risk and securing care, they should be allowed. Networks should be developed around variables such as quality and value.

51) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

The ACC needs to connect people with health homes and work to understand and overcome what prevents this from happening, e.g. hours of operation for PCPs, transportation obstacles, etc.

The ACC needs to fully fund psychiatric evaluation services within the ER or virtually.

Furthermore, ACC needs to identify the services that can be provided outside of the ER—assuming those services are less expensive in a non-acute environment—and incentivize their delivery in appropriate settings. Medicare has followed this course for avoidable readmissions.

52) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

Practice Support

53) **Support for practices.** Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☐	☐	☐	☐
Network provider education	☐	☐	☐	☐
Assistance with practice redesign	☐	☐	☐	☐
Assistance with efficiency-enhancing activities	☐	☐	☐	☐
Provide web-based resources and directories	☐	☐	☐	☐
Provide practice-specific data reports	☐	☐	☐	☐
Provide clinical care guidelines and best practices.	☐	☐	☐	☐
Provide clinical screening tools	☐	☐	☐	☐
Provide health and functioning questionnaires	☐	☐	☐	☐
Provide chronic care templates	☐	☐	☐	☐
Provide registries	☐	☐	☐	☐
Offer client reminders	☐	☐	☐	☐
Offer client self-management tools	☐	☐	☐	☐
Offer educational materials about specific conditions	☐	☐	☐	☐
Supply behavioral health surveys	☐	☐	☐	☐
Supply other self-screening tools	☐	☐	☐	☐
Administer behavioral health surveys	☐	☐	☐	☐
Administer other self-screening tools	☐	☐	☐	☐
Prepare client action plans	☐	☐	☐	☐
Provide training on providing culturally-competent care	☐	☐	☐	☐
Provide training to supporting staff	☐	☐	☐	☐
Provide training on motivational interviewing	☐	☐	☐	☐
Provide tools and software for phone call and appointment tracking	☐	☐	☐	☐
Provide tools and resources for tracking labs, referrals, etc.	☐	☐	☐	☐
Provide referral and transitions of care checklists	☐	☐	☐	☐
Provide visit agendas or templates	☐	☐	☐	☐
Provide standing pharmacy order templates	☐	☐	☐	☐
Provide comprehensive directory of community resources	☐	☐	☐	☐
Provide directory of other resources	☐	☐	☐	☐
Provide materials regarding Nurse Advice Line	☐	☐	☐	☐
Ensure all tools and resources are centrally located on RCCO-specific website	☐	☐	☐	☐
Others				

54) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

NA

55) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

Hold them accountable for outcomes and not how they achieve those outcomes. Incentivize high-performing programs.

56) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

Shared savings.

57) Should the Department require that PCMPs utilize disease registries to manage the health of their population?

We are in favor of measuring outcomes based on conditions. Disease registries can be a useful tool.

58) Please share any other advice or suggestions about provider support in the ACC.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals? T

The current payment structure minimally supports the goals of the ACC. Prometheus or other bundled or global payment systems with risk-based shared-savings across providers and RCCOs would better support goals because the approach aligns incentives.

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

As a community mental health center, we currently receive capitation payments. We believe those payments should be continued under an at-risk global payment system because the approach provides the most effective means of achieving the triple aim.

Over time, all services across the continuum should be included, although the approach may need to be incremental.

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

Yes, behavioral health providers have the infrastructure to successfully tie payments to value.

62) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

NA

63) What role – if any – should the RCCOs play in the distribution of payments to providers?

The RCCOs should participate in a shared-savings distribution that creates the right kind of incentives for providers. Their role would be to analyze the data and provide objective feedback to the providers regarding impact, quality and cost of care, thereby developing the methodology for the distribution of funds.

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

The ACC should consider an incremental implementation of the Prometheus System for payment reform.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

Measures must be tied to the individual. All quality and outcome measurement needs to directly measure the individual's care experience.

1) Condition specific health outcomes (e.g., Symptom Reduction)
2) Functional health outcomes (e.g., Improved Level of Functioning and ability to participate in meaningful daily activities)
3) Patient Engagement (e.g., Patient Activation, Self-Management Skills and/or Health Self-Efficacy)

66) **Measuring Client experience.** Please complete the table below to indicate how the Department should measure Client/patient experience:

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	X	☐	
SF-12 Health Survey	X	☐	
Other types of client interviews / surveys	☐	☐	
Patient Activation Measure	X	☐	
Focus groups	☐	☐	
Other	Please type your response here.		

67) Knowing that, at this time, the Department only has claims data, how should population health be measured?

Population health should be measured according to cost and utilization.

68) How should quality and performance data be reported to the RCCOs, PCMPs, and the public?

69) **Measures for payment.** Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☐
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐

None	☐

70) What percent of RCCO payments should be tied to measures or performance?

Percentage	
10-20%	
21-30%	☐
31-40%	☐
41-50%	☐
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

71) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)?

There should be a balance between common and local measures. Common metrics allow overall system improvement and benchmarking across regions. The locally selected/defined measures serve as an incubator for new measures that promote system/service innovation.

Should providers and RCCOs be paid on the same KPIs?

Yes, the payment between these entities should be aligned.

72) Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?

Potentially, both could work. Providers already operating at a high level should not be penalized by a lack of room for improvement and therefore may be benchmarked against national or local standards. In cases showing valid reasons for lower performance, the ability to demonstrate improvement rather than having payments withheld could serve as an incentive to improve performance.

73) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

Yes. The data must be provided and monitored on a routine basis in order to impact the quality of care and health outcomes.

74) **Incentive payment frequency.** Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	☐
Annually	☐
Other	☐

If you checked the "Other" box, please describe payment frequency below:

75) For potential offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

76) For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

We use the CCAR and DACODS and participate in OBH's C-STAT program. We are at the beginning stages of being reimbursed based on these measures.

There are also performance indicators based on our participation as a provider in the Medicaid mental health capitation program.

Health Information Technology (HIT)

77) **Types of communication.** For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	☐
Text message	☐	☐
Web portal	☐	☐
Email	☐	☐
Telemedicine / Video chat	☐	☐
Face-to-face meeting	☐	☐
Smartphone app	☐	☐
Other:		

78) **HIT investments by organizations.** For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below:

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	X	
Digital care management tool	☐	☐
Care transitions alerts	☐	☐
Electronic Health Records (EHRs)	X	☐
Health risk assessment software	☐	☐
Practice assessment tools	X	☐
Practice management tools (scheduling, billing)	X	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	X
Patient education/wellness tools	X	☐
Provider/case manager directory	X	☐
Shared decision-making tools	X	☐
Telemedicine software	☐	X
Other:	☐	☐
Other:	☐	☐

79) **Importance of technology by type.** The Department is working to determine what technology is in place, what technology is needed, and what technology should be standardized. For RCCOs, providers, and other organizations, use the table below to answer what HIT infrastructure outside of the 5DAC your organization would use to perform population health management activities. Tools are scored from 1-5, where 1 are those items least-likely to be used, and 5 are items most-likely to be used:

Tool	1 Least	2	3	4	5 Most
Population analytics / reporting / dashboard	☐	☐	☐	☐	X
Care management tool	☐	☐	☐	☐	X
Care transitions alerts	☐	☐	☐	☐	X
Electronic Health Records (EHRs)	☐	☐	☐	☐	X
Practice assessment tools	☐	☐	☐	☐	X
Health risk assessment software	☐		☐	X	☐
Practice management tools (scheduling, billing)	☐	☐	☐	☐	X
Client web portal for communicating care plan, services, benefit enrollment	☐		☐	☐	X
Patient education wellness tools	☐		☐	☐	X
Provider/case manager directory	☐	☐	☐	☐	X
Shared decision-making tools	☐		☐	☐	X
Telemedicine	☐	☐		☐	X
Other:	☐	☐	☐	☐	☐

80) What are the primary barriers to RCCOs and providers increasing their use Health Information Technology to improve the performance of Primary Care Practices?

The primary barrier is the lack of certainty regarding the payment mechanism. Secondary barriers include upfront infrastructure and the time and expense of installation. The efficient use of HIT tools needs to be built into the actual provision of care.

81) How can Health Information Technology support Behavioral Health Integration?

HIT can support behavioral health integration by utilizing EHRs that integrate physical health and behavioral health.

82) In the next iteration of the ACC, should there be a shared resource for data and analytics? Please describe the basic criteria for what a shared data and analytics platform needs to contain in order for it to be useful.

Yes, we recommend a shared resource for data and analytics. At a minimum, this shared data set would include claims data, pharmacy data, diagnostic data, lab data and social determinants data.

83) Should there be a shared care management tool? Please describe the basic criteria for what a care management tool would need to contain in order for it to be useful.

Technology needs to support health information exchange.

84) Should there be a shared population health management tool? Please describe the basic criteria for what a population health management tool would need to contain in order for it to be useful.

Potentially, yes, there should be a shared population management tool. In terms of population health analytics, a common tool that includes a comprehensive examination of the various costs that drive overall cost—behavioral health, social determinants, etc—could be useful.

85) Please describe the functionality that a common Medicaid provider directory would need to contain in order for it to be useful.

The usual demographics, contact information, credentials and, eventually, quality data.

86) How can the RCCOs support providers' access to actionable and timely clinical data?

Make available clinical and system involvement that crosses services systems/providers. Inform providers where and with whom patients are receiving services. And lastly, support health information exchange.

87) What are the HIT solutions that would benefit clients, providers, and RCCOs? Please comment on the parameters these tools or platforms would need to possess and the ways in which they could be used.

A cloud-based healthcare exchange.

88) What technical assistance or resources related to HIT infrastructure should the RCCOs supply? This assistance or these resources could be for providers, social service organization, clients/families, or for others.

89) What role should health information exchange platforms like CORHIO or QHN play in the next iteration of the ACC?

It's imperative that we have a real-time bi-directional information exchange in order to adequately manage a patient population.

90) Please share any information, advice, and suggestions you have about health information technology in the ACC Program.

Colorado Department of Health Care Policy and Financing

RFI Response Received and Recorded.

Serial Number: 087

Accepted by: KJDW

Notes: Standard cover sheet added; revised numbering in HIT section

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: David Myers
Location: Englewood, Arapahoe, CO

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Metro Community Provider Network
Location: Englewood, Arapahoe, CO
☒ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☐ Medical provider / PCMP / other provider
  i. Type or specialty: Click here to enter text.
  ii. Area of practice: Click here to enter text.
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☒ Other (please describe): FQHC

Are you currently involved in the ACC program?

☒ Yes
☐ No

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☐ 3-4 years
☒ Since before the program was implemented.

How have you been involved in the ACC program and what interaction have you had with RCCOs:
MCPN has been a provider with two RCCO's – Colorado Access and CCHA.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:
MCPN has been a Medicaid provider for 25 years.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☒ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

Please feel welcome to describe why or why not using the space below.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

Partnerships and enhanced relationships with hospitals. Patients are getting more care coordination, there's a welcomed focus on patient outcomes. Our experience is that the two RCCO's we work with perform very differently and the best examples of RCCOs working well are when they provide support and training and when they act as a catalyst for communication among different providers. Our experience with RCCO's with sophisticated infrastructure and experience is that there's a commitment to data and data driven outcomes.

Another area which has worked well is the convening of groups to discuss payment reform. Our experience has also shown us that the best RCCO's can partner with providers to do practice management improvement.

The PMPM payment is more effective in program development and implementing best practices as opposed to reimbursement for provider encounters. We would ask that the pmpm reflect the work necessary to create the desired outcomes.

2) What is not working well in the ACC Program?

- *Attribution is still not working well. We continue to see patients who want us to be their PCMP but it is difficult to get them attributed to us.*
- *Data are neither timely nor transparent. There's very little support for data interpretation or analysis on how to make it actionable. Additionally data are not granular enough to determine what the cost drivers are.*
- *Rewards (or lack thereof) are confusing and minimalized. MCPN is still not sure if and when it's earned back the $1 and in some cases it doesn't really relate to MCPN's performance – rather to the performance of all the providers in the region.*
- *Related to the above is a failure to appropriately recognize/reward leaders in cost/quality.*
- *Being in multiple regions has created differing priorities and strategies which are not always coherent (for example we had a diabetes intervention program with one RCCO but not the other – it created a siloed program in which if you lived in one county you benefited from the services but you could not benefit from the services if you lived in another county even though you were seeing the same provider in the same clinical location).*
- *RCCO's have different abilities to manage the program. For example, MCPN had a mini-grant with each of its RCCO's. In one case the RCCO was incredibly efficient in contracting and working collaborative in creating positive outcomes and grant deliverables. In the second case, the RCCO was a barrier to getting a contract and, because of the delay, MCPN did not get its contract until well into the grant year. Rather than working collaboratively, the second RCCO tried to micromanage the grant which produced considerable frustration.*
- *There's a lack accountability of some RCCOs related to funding issues.*
- *Conflicts of interest are not disclosed nor addressed and some RCCOs proceed down a course that does not subscribe to the well being of the entire region.*
- *RCCO's differ in their ability to communicate effectively and some RCCO's have extremely poor communication commitments. For example a major initiative was discussed in one of our RCCO's that had significant impact on MCPN and its patients and there's been virtually no serious attempt to include MCPN in the conversation. All communication has been through a community partner despite*

the request of MCPN's CEO to be included in the decision-moking process. When this wos brought to the ottention of the RCCO, the response wos to leove o voice messoge directed to the MCPN CEO soying the progrom wos o wonderful ideo ond coll if there were ony questions.

- *Some RCCO's hove on ogendo thot does not olwoys seem equitoble. For exomple, under the 1281 opportunities, one RCCO ignored MCPN in developing its proposol. When osked, the RCCO soid something to the effect thot MCPN wos so sophisticoted thot it did not need 1281 help ond the focus should be on the privote sector which needed more help. This of course ruled out ony opportunity to discuss poyment reform or olternotive poyment systems.*
- *The exponsion populotion wos included in the KPI's even though there wos not boseline doto to evoluote.*
- *It is not olwoys cleor where the dollors go ot the RCCO level; we would like to request more tronsporency in this oreo.*
- *Heolth Colorodo should provide feedbock/confirmotion to PCMP's on potient's enrollment stotus ond reottribution.*
- *A comprehensive stote wide gop onolysis needs to be conducted on speciolty core occess.*
- *Mony FQHC CICP potients who ore enrolled into the ACC ore put into the unottributed bucket due to o lock of cloims doto. We would like to recommend thot FQHC's be given on opportunity to provide visit doto for CICP potients to be correctly ottributed.*

3) What is working best in the Behavioral Health Organization (BHO) system right now?

The finoncing mechonism is o model thot MCPN strives to emulote in thot it's efficient ond rewords performonce. The BHO structure olso mokes conversotions eosier ot o regionol level.

We olso find the BHO's ore working more colloborotively with FQHC's. Another mojor development is the lounch of the Crisis response system.

4) What is not working well in the BHO system?

- *CCAR requirements (need I soy more?)*
- *There seems to be o focus on gronting credit for certoin covered diognosis ond procedures but not others in the primory core setting. We're often told thot services in our system ore not countoble in the BHO world.*
- *Reloted to the obove, the current system is too limited on whot con be diognosed ond treoted ond tends to exclude potient populotions with orgonic ond troumotic broin disorders*
- *The system segments Medicoid from non-Medicoid ond creotes o differentiol between those two populotions.*
- *Lock of psychiotric core for high need potients. Psychiotric conditions ore o lorge ER driver*
- *Different levels of understonding of integrotion ocross the RCCO's*

5) What is working well with RCCO and BHO collaboration right now?

Eosier more streomlined communicotion in RCCO's who ore controcted to serve os the BHO.

6) What is not working well with RCCO and BHO collaboration right now?

- *The most significont borrier is doto does not flaw well between the BHO's ond the praviders in the RCCO.*
- *The facus on PCMP in the RCCO world morginalizes the BHO's ond their work. Same of my portners soy "it's hard ta hove a ploce ot the table" when the price for playing is thot you're a PCMP.*

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

The next step should be the development of o plon to integrote systems of care, system sovings ond potient core. For exomple, there should be discussion on specific BH KPI's, and on incentives for fully integroted practices

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☒	☐	Siloed funding
Community Behavioral Health Services Rule	☒	☐	Creates different expectations and deliverables, CCAR is burdensome
Covered diagnoses list	☒	☐	Too limited (see above)
Different behavioral / physical health reimbursement	☒	☐	Creates siloed funding
Institutions for Mental Diseases exclusion	☐	☐	
OBH rules, reporting, or financing (regulatory differences between agencies)	☐	☐	
PCMP financing structure	☒	☐	Given lack of programmatic integration, fee structure creates contentious issue
Per-member per-month amount	☒	☐	Yes, payment is not reflective of the work required especially for the FBMME population
Physical space constraints	☒	☐	
Privacy Laws (HIPAA, 42 CFR)	☒	☐	It's a barrier to flow of information, especially on IT highway
Professional / cultural divisions	☒	☐	10 min office visits versus 50 min office visits
RCCO or BHO contracts	☒	☐	Excessive lead time for contract approval by state
Staff capacity	☒	☐	Not enough candidates to hire. There are significant "pipeline issues".
State/Federal rules or reporting requirements	☐	☐	
Technical resources / data sharing	☒	☐	42 CFR is a barrier. Diversity of IT systems is a barrier.
Training	☐	☐	

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

Others	Please type your response here.

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

SIM definition of integrated care and current HCPF definition should be supported and enforced.

10) Please share any other general advice or suggestions you may have about behavioral health integration.

Currently there is no financial incentive or award for integrated care producing better outcomes. The oppasite should be true.

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination?

A series of value producing activities which link the healthcare consumer with services that successfully drive cost, quality, and customer service.

NCQA: The deliberate organization of patient care activities between two or more participants (including the patient) involved in a patient's care to facilitate the appropriate delivery of health care services. Organizing care involves marshaling of personnel and other resources needed to carry out all required patient care activities and is often managed by the exchange of information among participants responsible for different aspects of care.

NCQA 2014 PCMH Standards: Four elements: Assuming accountability for care coordination, providing patient support, developing relationships and agreements with key outside providers, and establishing connectivity that assures appropriate information transfer.

MCPN care coordination provides assessments, interventions, coaching, and support to MCPN patients <u>proactively</u> by assisting in managing the patient's healthcare needs.

How should RCCOs prioritize who receives care coordination first?

RCCOs should not be prioritizing who received care coordination first, is should be the PCMP.

All PCMP's should standardize risk stratification processes with a focus on high need populations; which includes people with co-morbid conditions/poorly controlled conditions who are at risk for emergency room use and potential admission. Prioritization factors should include: Utilization patterns, cost, social determinants of health, behavioral health needs, number of conditions and medications, and patient's weighted CRG score.

b. How should RCCOs identify clients and families who need care coordination?

PCMP should be identifying clients and families and notifying RCCOs

c. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

They should develop highly sophisticated information highways to receive care coordination data from PCMP, RCCOs should not impose external tools for data collection on PCMP. <u>Standardize</u> monthly metrics across the RCCO's. Continue yearly audits for best practice information gathering and coaching for improvement opportunities.

12) What services should be coordinated and are there services that should not be a part of care coordination?

All services should be care coordinated but managed at the PCMP level. PCMPs should not be administratively burdened to such a degree during care coordination.

Hospitals need to take accountability for care coordination during a patient's hospital stay and provide a warm hand off to the patient's PCMP upon discharge.

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

Various stratification tools exist that can guide levels of care coordination. One drawback, however, is that many of these measures and scales do not take into consideration a patient's support system.

Some specific examples of what's needed to help care coordination is knowledge of benefits, med records, real time hospital records, DOC records, specialist and lab reports, and pharmacy information. The patient also needs a comprehensive health need assessment that includes complete information regarding patient's care coordination needs.

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

As a general statement, funding and business priorities often define a provider/institution's care coordination model. Because there is not integrated funding there is no incentive to provide integrated care coordination. For example, there is poor to no coordination at all between long term Medicaid benefits and short term Medicaid benefits. In considering total cost of care, the acute care program is totally separate from long term services.

a. What care coordination is going on today?

MCPN's approach is to provide holistic patient-centered care that is well managed and coordinated. Clinical care coordinators are the hub of the wheel in an MCPN patient's care. They ensure that all aspects of a patient's life are being examined in order to improve health outcomes.

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

Many of the hospitals in the Denver metro area have different standards and definitions of care coordination which in turn affects patient's care transition process from hospital to medical home.

Additionally, care coordination offered through the DOC tends to be done in isolation which affects patient's transition upon release.

c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

CTP (Community Touch Point) reporting from ALL RCCO's. This report allows care coordinators to see what care coordination services a patient may be receiving somewhere in the community and who should take the primary care management role.

d. What are the gaps in care coordination across the continuum of care?

Frogmented hospitol core tronsitions due to limited hospitol stoff to ossist in providing odequote dischorge educotion ond support. Deloy in hospitol records. Access to speciolty core. Unrelioble Medicoid- provided tronsportotion.

15) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families: *Pleose see our comment under "other".*

Non-medical need:	Should the RCCO have a role? Yes	No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma	☒	☐	☒	
Affordability (assistance with prescriptions or co-pays)	☒	☐	☒	
Daycare / childcare	☐	☒	☒	
Economic stability & employment	☒	☐	☒	
Education	☒	☐	☒	
Environment	☒	☐	☒	
Food access / nutrition	☒	☐	☒	
Health literacy	☒	☐	☒	
Housing	☒	☐	☒	
Language or translation services	☒	☐	☒	
Literacy	☒	☐	☐	

Transportation	☒	☐	☒	*THE NEMT contract needs to examined as it is not currently providing timely services to patients.*
Other	Please type your response here. Feel free to list as many non-medical factors as you want, and please explain how the RCCO should be involved. *The RCCO's should be more involved in building relationships with organizations/services that are community based so that all PCMP's can have a complete and updated resource list.* *A care coordination model should address these issues; however, the PCMP should be the site of care coordination. To the extent that the RCCOs are providing care coordination, yes they should address these issues*			

16) **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	Coordinate care? Yes	No	In what capacity should these individuals coordinate care in the ACC Program?
Advanced Practice (Registered) Nurses	☒	☐	*See answer below under "other".*
Certified Addiction Councilors	☒	☐	
Certified Nurse Midwives	☒	☐	
Community Health Workers	☒	☐	
Generalists (BA/BS/MA/MS)	☒	☐	
Health Coaches	☒	☐	
Licensed Clinical Social Workers	☒	☐	
Licensed Marriage and Family Therapist	☒	☐	
Licensed Mental Health Counselors	☒	☐	
Licensed Professional Counselor	☒	☐	
Masters of Public Health	☒	☐	
Medical Doctors / Doctors of Osteopathic Medicine	☒	☐	

Nurse Practitioners	☒	☐	
Patient Navigators	☒	☐	
Peer Advocates	☒	☐	
Promotoras	☒	☐	
Psychiatrists	☒	☐	
Psychologists	☒	☐	
Registered Nurses	☒	☐	
Social Workers	☒	☐	
Wraparound facilitators	☒	☐	
Other	Please type your response here. *Each one of these has a potential role in a care coordinated delivery system. Depends on configuration of health system, composition of care teams, and community demographics*		

17) **Care coordination requirements for specific populations.** Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient: *See response under "other".*

Population	Specific	General	If specific, please describe
Newborns and infants	☐	☒	
Children	☐	☒	
Children who are healthy, but in socially-complex environments	☒	☐	
Children involved in the foster care system	☒	☐	
Children with a chronic illness	☒	☐	
Children with a serious emotional disturbance	☒	☐	
Children with medical complexity	☒	☐	
Children or youth with a behavioral health diagnosis or substance use disorder	☒	☐	
Transition-age adolescents	☒	☐	
Parents and families	☐	☒	
Pregnant women	☐	☒	
Adults	☐	☒	
Adults who are healthy, but in socially-complex situations	☒	☐	
Adults with a chronic illness	☒	☐	

Adults with a behavioral health diagnosis or substance use disorder	☒	☐	
Clients involved in the criminal justice system	☒	☐	
Clients with a disability	☒	☐	
Clients in a nursing facility	☒	☐	
Elderly clients	☐	☒	
Frail elderly clients	☒	☐	
Clients in palliative care	☒	☐	
Other papulatians, please comment: *Core coordination should be individualized; it's caunterintuitive ta develop specific, papulotion madels.* *Potients who are deemed "high risk" require more comprehensive core coordination which can be resaurce heovy and time consuming. Low risk potients may benefit fram minimol/moderote care coordinotion, or moy require no care coordinatian interoction at all. This must be tailored to eoch potient's specific needs.*			

18) How do yau envision the RCCOs working with child-serving agencies in the state ta deliver care for medically ar socially complex children ar for children involved in the faster care system?

RCCOs shauld assure that the child has a PCMP. Child serving agencies should be working closely with the RCCO's as well as with the patient's PCMP to ensure the patient's needs are being properly communicated and addressed.

19) How shauld care coardination be evaluated? How should its outcomes be measured?

Impraved clinicol outcomes, cost reduction, improved quality of life. Core coordination measures should be standardized acrass the RCCO's with delegated practice's input. NQF measures should be considered as well as evidence based taals such as the PAM/CAM.

20) Today, RCCOs receive $8-$9 per member per month (PMPM) ta cover care coordinatian and ather expenses, like developing and supporting a netwark af providers.

MCPN daes nat have the resaurces to calculate a pmpm. As a generol rule, the pmpm should be of saund actuarial basis and based an the work needed to produce the desired outcomes.

Furthermore, the cast varies as it is based an total attributed patients and level of staffing. Additianally, different models of care coordinotion vary in cost/resaurces depending an the size of a practice and a practice/orgonizotion's cammitment ta providing high quality core coordinotion.

a. What is the PMPM cost far praviding care coordination services?

Please see above.

b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by populatian?

Yes, patients that are deemed as high risk are more time and resource intensive and should have a higher pmpm. Incentives should be awarded to PCMP's who are able to lower costs and improve outcomes for particularly complex high need patients.

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

Yes there should be a ratio established on evidence and research. There should also be adequate funding to assure adequacy in care coordinator to client ratio. MCPN works off of a 4 tier care coordination risk stratification model that warrants smaller caseloads for patients who are tiered high and needing more intensive services. Patient's needing intensive care coordination fit into a 1 to 30 care coordinator to client caseload. Patients with mid-moderate needs have proven to have positive outcomes in a 1 to 100/150 care coordinator to client ratio. Additionally, care coordination should be broken out into pediatric care coordination and adult care coordination based on the varying needs and resources.

a. **Care coordinator to client ratios.** If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50 (intensive)	☒
51-100	☐
101-200 (mid/moderate)	☒
201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

Core coordination outcomes should be evaluated consistently across the RCCO's with standardized measures from NQF and NCQA. Best practices should be shared across the RCCO's in developing annual audit reviews of PCMP's. The outcomes should be improved clinical outcomes, cost reduction, and improved quality of life

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

As o closing comment, MCPN would like to reiterate thot reseorch supports the idea that core coordination ot the PCMP level is the most effective. Thot principle should be the guiding wisdom in building o state sponsared core coordinotion effort.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

There should be standardization in data, in payment methodology, in communication, and in recognizing FQHCs as a unique type of provider in RCCO structure. MCPN is cautious about mandating more than is necessary since our experience has been that the State requirements are pushed down to the PCMP's sometimes without regard to the PCMP's system of care.

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

- *A bidder should devote a portion of the budget to assessing community needs and strengths. It should also develop financial transparency with the community so that it is apparent that financial resources are being spent in the community for the purposes of improving health status. This includes keeping the medical loss ratio at 90%.*
- *Parallel to that, there should be a clearly defined financial commitment to building the community relationships in the form of mini-grants. PCMP's, such as FQ's. which can truly impact outcomes should be given representation in governance and in decision making.*
- *Conflicts of interest should be stated and addressed as part of the bidding process. There should be clear and measurable deliverables in the community engagement plan.*
- *Finally, there should be letters of support from FQs, hospitals, health departments and other safety net providers*

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

- *It is true that a PCMP operating in multiple RCCO's encounter additional administrative challenges. Working with one RCCO will create administrative efficiency especially under payment reform. MCPN cannot emphasize more strongly its desire to work with one single payment system vs. multiple payment systems under multiple payors.*
- *Of paramount importance, if this provision is implemented, is in assuring and holding RCCOs accountable that they will assign unattributed patients equitably even if a provider is solely contracting with a different RCCO. This goes back to the previous statement on having RCCO's declare conflicts of interest and inviting scrutiny on how Medicaid clients are assigned to a PCMP.*

27) Should the RCCO region maps change? Why or why not? If so, how?

Yes, the maps should reflect natural referral patterns. Suburban Denver should not be split into two RCCOs

28) Should the BHO region maps change? Why or why not? If so, how?
MCPN has no opinion on this.

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

MCPN doesn't feel it hos enough knowledge to onswer this question. Whot we do know is that there should be no disruption to payments or core processes in any tronsition periad.

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

- *Improved systems for patient's ability to select RCCO*
- *Allow 12 month continuous eligibility,*
- *Provide for olternate FQ payment mechanisms,*
- *Limit medical loss rotio to 90%*
- *After patient choice, those not making a PCMP selection should be auto attributed to a narrow group of providers that meet certain requirements with regard to both occreditotion (JCAHO or AAAHC) ond those practices which ore committed to the principles of PCMH. If the goal is to improve outcomes, it makes no sense to assign potients to practices which have no systems or commitments to practice transformotion.*

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

- *The cap on dentol is a limitotion.*
- *Cose management payment should reflect both the work and the outcomes.*
- *Goinsharing should be bosed on work of the provider not necessarily by RCCO region.*

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

No, this would creote confusion and inefficiencies. MCPN sees it as both costly and o detriment to patient core.

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

N/A

34) What role should RCCOs play in attributing clients to their respective PCMPs?

- *Certain RCCOs hove high degrees of conflict of interest ond should play no role.*
- *Attribution should be timely: after 3 months without attribution RCCOs should stop receiving PMPM entirely until the individual is attributed.*

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

CDPHE does public health reporting ond surveillance; RCCO's hove on intervention role. This seems to be o noturol alliance in oreos of planning and strategic development.

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

No opinion

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

No opinion

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

No opinion

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

RCCO's should hove consumer seots on Governonce.

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

Providers who see a significant number of the RCCOs patients should hove a role in governonce.

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

There should be on expectotion within the RFP ond o plan to engoge non-RCCO providers who con cantribute to success, i.e. hospitals, etc.

42) How should the Department structure stakeholder engagement for the ACC as a whole?

Cantinue and suppart the work of PIAC.

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

No

a. If no, what are the gaps?

Not enough dentists ond speciolists to serve the populotion. Administrotive ond procedurol issues don't incent them to see this populotion.

b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

Again, nat enough dentists ond speciolists ta serve the papulation regardless of how you slice it. Administrotive ond pracedurol issues don't incent them ta see this populotian.

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

Successful outcomes depend on getting the client what they need when they need it. All of the entities listed play a role in successful care coordination.

Incentives should align with outcomes that spell success for the program with a special focus on hospital relationships.

a. What role should hospitals play in the next iteration of the ACC Program?

Poyment reform should include hospitols.

b. What role should pharmacies play in the next iteration of the ACC Program?

Phormoceuticols should be included in poyment reform,

c. What role should specialists play in the next iteration of the ACC Program?

Speciolty core should be included in poyment reform.

d. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

SEPS ond CCB's should hove o supportive role.

e. What role should counties play in the next iteration of the ACC Program?

Counties should hove o supportive role.

f. What role should local public health agencies play in the next iteration of the ACC Program?

Locol public heolth ogencies should be supportive ond o source of doto.

g. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

Agoin, these ogencies should be supportive. They moy hove on importont role in mini-gronts ond other initiotives designed to improve outcomes.

45) How can RCCOs help to support clients and families in making and keeping appointments?

These services ore best orgonized ond monoged ot the PCMP level.

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

No. This is too prescriptive ond misses the point. The point is thot the rebid should reword those providers who engoge in proctice tronsformotion ond encouroge the development of PCMH's. If those providers ore recognized, they will develop the evidence-bosed systems to oddress core monogement needs.

47) **Community Health Worker reimbursement.** Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement process	(Please check all that apply)
Independently bill	☐
On staff (salary) at Primary Care Medical Provider Clinic	☒
On staff (salary) at RCCO	☐
Per Member Per Month Payment	☐

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

The role is on educotion one. PCMPs offering dentol services olso should get on enhonced reimbursement.

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

RCCOs should give priority to PCMPs who o demonstroted trock record of serving underserved ond morginolized populotions.

a. What does cultural competence mean to you?

Meeting the potient's needs in o context thot tokes into occount their environment ond belief systems.

b. What RCCO requirements would ensure cultural competency?

Assuring consumer surveys include consumers of different cultures. Expressing KPI's by culturol definitions might olso identify oreos of speciol focus.

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?

Patience and special training are the essential elements. Appropriate tools must also be available to facilitate communication. At a minimum there should be translation services available and accommodations for interpreters when appropriate.

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

Part of the answer is found above under c. Additionally, reducing inequities requires special focus and interventions that are clearly defined.

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

Without a capitated system preferred networks are impassible. It is our preference that payment reform moves toward capitation and then preferred networks would make sense.

51) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

Enhanced payments to PCMPS would provide walk in access outside of traditional business hours.

52) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

Practice Support

53) **Support for practices.** Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support: *See answers under "Others"*

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☒	☐	☐	☐
Network provider education	☐	☒	☐	☐
Assistance with practice redesign	☐	☒	☐	☐
Assistance with efficiency-enhancing activities	☐	☒	☐	☐
Provide web-based resources and directories	☐	☒	☐	☐

Offer client self-management tools	☐	☒	☐	☐
Offer educational materials about specific conditions	☐	☒	☐	☐
Supply behavioral health surveys	☐	☒	☐	☐
Supply other self-screening tools	☐	☒	☐	☐
Administer behavioral health surveys	☐	☒	☐	☐
Administer other self-screening tools	☐	☒	☐	☐
Prepare client action plans	☐	☒	☐	☐
Provide training on providing culturally-competent care	☒	☐	☐	☐
Provide training to supporting staff	☒	☐	☐	☐
Provide training on motivational interviewing	☒	☐	☐	☐
Provide tools and software for phone call and appointment tracking	☐	☒	☐	☐
Provide tools and resources for tracking labs, referrals, etc.	☐	☒	☐	☐
Provide referral and transitions of care checklists	☐	☒	☐	☐
Provide visit agendas or templates	☐	☒	☐	☐
Provide standing pharmacy order templates	☐	☒	☐	☐
Provide comprehensive directory of community resources	☐	☒	☐	☐
Provide directory of other resources	☐	☒	☐	☐
Provide materials regarding Nurse Advice Line	☒	☐	☐	☐
Ensure all tools and resources are centrally located on RCCO-specific website	☐	☐	☐	☐
Others	*For sophisticated practices there should be support to conduct most of these activities at the PCMP level. The caution, as always, is the tendency for RCCO's to mandate how a practice delivers care. The other caution is the "pushing down the work" phenomenon when a RCCO has a*			

contract deliverable and delegates the work to the PCMP without regard to the PCMP's workflow and processes. A better solution might be fore the Department to contract with a non-RCCO entity such as Health TeamWorks to develop many of these items.

54) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

55) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

RCCOS should be supportive, but not restrictive, ond develop o structure to oword gronts for innovotive proctice tronsformotion proposols.. RCCOs should fovor PCMPs thot hove undergone proctice tronsformotions.

56) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

Have standards that are based in NCQA recagnitian as well as capitatian payment mechanisms. JCAHO and AAAHC are alsa entities which accredit PCMH's. Recagnitian shauld alsa be based an praven clinical cast effectiveness and patient-centered efficiencies and clinical autcames.

57) Should the Department require that PCMPs utilize disease registries to manage the health of their population?

RCCOs shouldn't contract with PCMPs who are nat capable of utilizing diseose registries.

58) Please share any other advice or suggestions about provider support in the ACC.

High performing PCMPs should be reworded far individual performance not performonce of the region.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

No, the methodology is so diluted thot there is no correlotion between performonce ond incentive we receive. A PCMP should be poid for whot it does.

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

HCPF should work with CHCs to develop ond pilot on APM thot moves owoy from FFS ond towords populotion-bosed poyment with o poth to toking on risk over time for interested CHCs. The APM should serve os o bose.

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

MCPN does hove the infrostructure ond should be oworded occordingly.

62) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

We do not plon on bidding.

63) What role – if any – should the RCCOs play in the distribution of payments to providers?

RCCOs moy hove o role os TPA but not os the poyor.

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

Negotiotions need to be directly with PCMP with the RCCOs os o portner. The RCCO's should not be ollowed to negotiote without the PCMP ot the toble. MCPN leorned of ot leost one situotion in which the RCCO was negotioting with HCPF on pmpm for primory core ond MCPN wos not included in those discussions. Agoin, the conflicts of interest con be enormous with some RCCO's in who they decide to reword ond support ond in who they choose not to support.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

Key Performonce Indicotors ore o good tool but should be focused ond the doto methodology should be re-worked to ossess longitudinol effects, not just quorterly phenomenon.

66) **Measuring Client experience.** Please complete the table below to indicate how the Department should measure Client/patient experience:

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☒	☐	*Gold stondard, most opprapriote to meosure potient experience*
SF-12 Health Survey	☐	☒	
Other types of client interviews / surveys	☐	☒	
Patient Activation Measure	☐	☒	
Focus groups	☐	☒	
Other	Please type your response here.		

67) Knowing that, at this time, the Department only has claims data, how shauld populatian health be measured?

Laok beyond HCPF, portner with CDPHE to develop survey tools. The Deportment should support CHC efforts to develop stotewide a clinicol doto tool

68) How shauld quality and perfarmance data be reported to the RCCOs, PCMPs, and the public?

Increose tronsparency af how data is utilized. Work with PCMPs to develop the model which will be actionable and useful. Currently the dota is presented withaut ony reosonable woy to understond the methodalogy and it is so ald as ta nat be actionoble..

69) **Measures for payment.** Please use the table below to describe haw many measures should be tied to payment at ane time. These could functian similarly to Key Performance Indicatars, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☒
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐

None	☐

70) What percent of RCCO payments should be tied to measures or performance?

Percentage	
10-20%	☒
21-30%	☐
31-40%	☐
41-50%	☐
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

MCPN would like to see a formula which is incrementally rewarding as opposed to a fixed formula. Initially the formula should start out low and accelerate payment to high performers.

71) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?

Yes, and Yes

72) Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?

The question is to how to reward high performers yet incentivize low performers. The system should have both elements – one to reward based on national benchmarks and one to encourage low performers to improve their outcomes.

73) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

Yes

74) **Incentive payment frequency.** Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	☒
Annually	☐
Other	☐

If you checked the "Other" box, please describe payment frequency below:

75) For potential offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

Administrotive costs should not exceed 10%

76) For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

UDS, MU, Medicore Advontage, ond PCMH metrics.

Yes, we are being reimbursed for some of these meosures

Health Information Technology (HIT)

77) **Types of communication.** For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	☐
Text message	☐	☐
Web portal	☐	☐
Email	☐	☐
Telemedicine / Video chat	☐	☐
Face-to-face meeting	☐	☐
Smartphone app	☐	☐
Other: *N/A*		

78) **HIT investments by organizations.** For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below:

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	☒	☐
Digital care management tool	☐	☒
Care transitions alerts	☐	☒
Electronic Health Records (EHRs)	☒	☐
Health risk assessment software	☐	☒
Practice assessment tools	☒	☐
Practice management tools (scheduling, billing)	☒	☐
Client web portal for communicating care plan, services, benefit enrollment	☒	☐
Patient education/wellness tools	☒	☐
Provider/case manager directory	☒	☐
Shared decision-making tools	☒	☐
Telemedicine software	☐	☐
Other:	☐	☐
Other:	☐	☐

79) **Importance of technology by type.** The Department is working to determine what technology is in place, what technology is needed, and what technology should be standardized. For RCCOs, providers, and other organizations, use the table below to answer what HIT infrastructure outside of the SDAC your organization would use to perform population health management activities. Tools are scored from 1-S, where 1 are those items least-likely to be used, and 5 are items most-likely to be used:

Tool	1 Least	2	3	4	5 Most
Population analytics / reporting / dashboard	☐	☐	☐	☐	☒
Care management tool	☐	☐	☐	☐	☒
Care transitions alerts	☐	☐	☐	☐	☒
Electronic Health Records (EHRs)	☐	☐	☐	☐	☒
Practice assessment tools	☐	☐	☐	☐	☒
Health risk assessment software	☐	☐	☐	☐	☒
Practice management tools (scheduling, billing)	☐	☐	☐	☐	☒
Client web portal for communicating care plan, services, benefit enrollment	☐	☐	☐	☐	☒
Patient education wellness tools	☐	☐	☐	☐	☒
Provider/case manager directory	☐	☐	☐	☐	☒
Shared decision-making tools	☐	☐	☐	☐	☒
Telemedicine	☐	☐	☐	☐	☒
Other: *Eoch of these elements con be very useful in the right setting with the right potient.*	☐	☐	☐	☐	☐

80) What are the primary barriers to RCCOs and providers increasing their use Health Information Technology to improve the performance of Primary Care Practices?

Access to occurote ond timely informotian. An odditionol borrier is cost. A third borrier is a shortoge of competent IT stoff. Additionolly there is the lock of interoperability between systems as a borrier. As an important example, core coordinotion softwore tools ore not interoperoble with EHRs. Finally is the inobility to bill for HIT related services

81) How can Health Information Technology support Behavioral Health Integration?

By creoting o unified potient record. The borriers to this are cost, 42 CFR, ond different technologies.

82) In the next iteration of the ACC, should there be a shared resource for data and analytics? Please describe the basic criteria for what a shared data and analytics platform needs to contain in order for it to be useful.

Yes, there should be a shared resource for dato and onolytics. The bosic criterio should include: Heolth risk assessment criteria that is linked on the data highwoy to EHR's ond other providers, KPI doto with less log time thot includes potient's hospitolizotion locotion and reporting chief complaint (in TREO this doto currently has to be trocked potient by potient in the potient profile), weighted CRG ond bose risk group, ond specific quality meosures infarmotion: both clinicol ond bosed on o defined RCCO core coordinotion metrics.

83) Should there be a shared care management tool? Please describe the basic criteria for what a care management tool would need to contain in order for it to be useful.

Yes, with on emphosis on toking o PCMP's workflow ond helping to lood it an the dato highwoy so it becomes port of the CCD. The bosic criterio should be bosed on predictive voluing by segmenting potients bosed an the KPI's. It should ollow visibility into doto for patient's entire heolth neighborhood to view, in order to allow doto streoms from onyone providing core coordination for the potient. This should oll hoppen in reol time. The tool should pull in ossessment informotion such as the SCP, HRA, hospital ADT, PCMP proctice doto, ond quolity meosures from PCMP's EMR. The tool should outomote tosks bosed on patient's risk volue and adjoining protocols in order to divide out core teom responsibilities. It should olso hove doto preservotion copobilities as well as the ability to pull full doto sets doily. Lostly, the workflow should auto-ossign coseloods based on new attribution lists and account for the odd/delete churn thot PCMP's must deol with month to month. Ideolly, the core monogement tool can serve as a community tool to torget more impactful (ond doto driven) interventions with ACC patients.

As olwoys, the coution is thot this should be done with the input of the PCMH's and not become another "controct deliveroble" imposed by the RCCO's.

84) Should there be a shared population health management tool? Please describe the basic criteria for what a population health management tool would need to contain in order for it to be useful.

Yes. The bosic criterio should be the obility for o PCMP to run reports for potient educotion, teom ond provider improvement. Also there should be o mechonism to view ond strotify doto bosed on oll BH, Orol heolth, preventive core, ond ocute ond chronic conditions. This tool should olso hove the obility to torget <u>rising risk</u> populotions into cotegories for core coordinotion outreoch.

85) Please describe the functionality that a common Medicaid provider directory would need to contain in order for it to be useful.

Needs to be up to dote ond cleor who is occepting new Medicoid ond timeliness of occess.

86) How can the RCCOs support providers' access to actionable and timely clinical data?

Need to be more reol time ond octionable. RCCO needs to partner with PCMPs to loy groundwork to create plotform which oll proviclers share doto.

87) What are the HIT solutions that would benefit clients, providers, and RCCOs? Please comment on the parameters these tools or platforms would need to possess and the ways in which they could be used.

The Deportment needs to suppart CORHIO in completing the informatian highwoy.

88) What technical assistance or resources related to HIT infrastructure should the RCCOs supply? This assistance or these resources could be for providers, social service organization, clients/families, or for others.

It should not be in the RCCO scope of service to osk them to create ossistonce and resources for HIT infrostructure. This is o huge respansibility ond should be left to those orgonizations which hove this functian as their primary purpose. Assigning RCCO's that responsibility would dilute their focus ond impoct

89) What role should health information exchange platforms like CORHIO or QHN play in the next iteration of the ACC?

CORHIO's role is vitol ond the single most importont element that MCPN needs to succeed in core monagement

90) Please share any information, advice, and suggestions you have about health information technology in the ACC Program.

SDAC doto should be more gronulor especially in the areo of providing cost drivers for individual potients. Agoin we can't emphosize strongly enough the need to hove octionoble doto.

Colorado Department of
Health Care Policy and Financing

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Wendy Nading, RN, ND
Location: Englewood, Arapahoe, CO

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Tri County Health Department
Location: Adams, Arapahoe, Douglas
☒ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☐ Medical provider / PCMP / other provider
  i. Type or specialty: Click here to enter text.
  ii. Area of practice: Click here to enter text.
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☒ Other (please describe): Public Health Agency

Are you currently involved in the ACC program?

☒ Yes
☐ No
☐ I don't know

If you answered "yes" above, how long?

☒ Less than one year
☐ 1-2 years
☐ 2-3 years
☐ 3-4 years
☐ Since before the program was implemented.

How have you been involved in the ACC program and what interaction have you had with RCCOs:
Community partner as the local public health agency with interactions limited to meetings and workgroups

Please briefly describe your involvement with Medicaid, either in Colorado or another state:
Direct service provider to Medicaid clients for family planning, immunizations, family nurse partnership; care coordination to Medicaid clients for Health Care Program for Children with Special Needs; Medicaid Presumptive Eligibility site; Healthy Communities site

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☒ N/A

Please feel welcome to describe why or why not using the space below.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now? **Supporting primary care with medical home transformation**

2) What is not working well in the ACC Program? **Clear delineation and communication within the community of service delivery including what specific services are offered and who receives these services, both provider and client. Engagement of key stakeholders; collaboration at the community level with service providers to understand and map out what each organization is already doing and how partnering with the RCCO can enhance and not duplicate services; sharing data to enhance services and efficiencies**

3) What is working best in the Behavioral Health Organization (BHO) system right now? **Stakeholder feedback in the TCHD jurisdiction from a convening perspective indicates a positive working relationship between the BHO and mental health providers; concern that new system may be more disruptive than helpful if new processes will be required**

4) What is not working well in the BHO system? **Payment when both physical and mental health services are provided; sharing data**

5) What is working well with RCCO and BHO collaboration right now?

6) What is not working well with RCCO and BHO collaboration right now?

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1] **Programs focusing on prevention**

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services. Using the table below, please explain which issues are barriers, and how they can be addressed:**

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☐	☐	
Community Behavioral Health Services Rule	☐	☐	
Covered diagnoses list	☐	☐	
Different behavioral / physical health reimbursement	☐	☐	
Institutions for Mental Diseases exclusion	☐	☐	
OBH rules, reporting, or financing (regulatory differences between agencies)	☐	☐	
PCMP financing structure	☐	☐	
Per-member per-month amount	☐	☐	
Physical space constraints	☐	☐	
Privacy Laws (HIPAA, 42 CFR)	☐	☐	
Professional / cultural divisions	☐	☐	
RCCO or BHO contracts	☐	☐	
Staff capacity	☐	☐	
State/Federal rules or reporting requirements	☐	☐	
Technical resources / data sharing	☐	☐	
Training	☐	☐	
Others	Please type your response here.		

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

10) Please share any other general advice or suggestions you may have about behavioral health integration.

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination?

b. How should RCCOs prioritize who receives care coordination first? **Map and assess what care coordination is already occurring, by service provider and scope; identify gaps through collaboration with other care coordination providers; based on gaps, either provide within the RCCO if the necessary skill set is present or refer if this expertise is already being offered by a partnering provider**

c. How should RCCOs identify clients and families who need care coordination? **Develop an advisory committee/board at defined community levels (for example by county, zip codes or hospital districts) within the RCCO that includes comprehensive stakeholder involvement (providers, CBOs, local public health, CDPHE, HCPF, local schools) to collectively determine the mapping, assessment, and prioritization of care coordination; the RCCO can function as a 'coordinator of care coordination' across multiple systems and providers with a focus on streamlining the referral process but not providing direct care coordination unless a gap is identified; consider the RCCO funding existing care coordination programs instead of building expertise inside the RCCO when it is already established in the community**

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider? **Shared care coordination web based application (similar to the CDPHE e-CaST care coordination application); allow PHI exchange across care coordination systems and providers**

12) What services should be coordinated and are there services that should not be a part of care coordination? **See 11 b and c for response**

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs? **If an advisory board is in place, this type of information could be collectively determined by multiple stakeholders based on community characteristics. Care coordination is so broadly defined that this questions is difficult to answer.**

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today? **Primary and specialty care, behavioral health providers, hospitals, CBOs, human services, local public health, schools.**

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different? **Each community responds with different resources but extensive care coordination is occurring by multiple service providers. There is minimal detailed understanding of these activities across systems.**

c. How can the ACC avoid duplicating or disrupting current care coordination relationships? **Systems work on bringing care coordination providers together to map services across populations and develop a roadmap to guide service delivery across the continuum of care.**

d. What are the gaps in care coordination across the continuum of care? **Gaps still need to be identified based on a comprehensive assessment of current services and capacity.**

15) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	Should the RCCO have a role? Yes	Should the RCCO have a role? No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma	☐	☒	☐	As a clearinghouse and referral source for clients to established community providers; provider education on the community resources available
Affordability (assistance with prescriptions or co-pays)	☒	☐	☐	
Daycare / childcare	☐	☒	☐	As a clearinghouse and referral source for clients to established community providers; provider education on the community resources available
Economic stability & employment	☐	☒	☐	As a clearinghouse and referral source for clients to established community providers; provider education on the community resources available
Education	☐	☒	☐	As a clearinghouse and referral source for clients to established community providers; provider education on the community resources available
Environment	☐	☒	☐	As a clearinghouse and referral source for clients to established community providers; provider education on the community resources available
Food access / nutrition	☐	☒	☐	As a clearinghouse and referral source for clients to established community providers; provider education on the community resources available
Health literacy	☒	☐	☐	

Housing	☐	☒	☐	As a clearinghouse and referral source for clients to established community providers; provider education on the community resources available
Language or translation services	☒	☐	☐	
Literacy	☐	☒	☐	As a clearinghouse and referral source for clients to established community providers; provider education on the community resources available
Transportation	☒	☐	☐	
Other	Please type your response here. Feel free to list as many non-medical factors as you want, and please explain how the RCCO should be involved.			

16) **Requirements about who should be doing care coordination**. Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	**Coordinate care?** Yes	No	**In what capacity should these individuals coordinate care in the ACC Program?**
Advanced Practice (Registered) Nurses	☒	☐	Clinical care coordination
Certified Addiction Councilors	☐	☐	
Certified Nurse Midwives	☐	☐	
Community Health Workers	☒	☐	Non medical coordination outside the health care delivery system; community based; refer to literature to ensure evidenced-based design
Generalists (BA/BS/MA/MS)	☐	☐	
Health Coaches	☐	☐	
Licensed Clinical Social Workers	☒	☐	Behavioral health linkages, patient assistance with specialized community supports such as disability and housing
Licensed Marriage and Family Therapist	☐	☐	
Licensed Mental Health Counselors	☐	☐	

Licensed Professional Counselor	☐	☐	
Masters of Public Health	☐	☐	
Medical Doctors / Doctors of Osteopathic Medicine	☐	☐	
Nurse Practitioners	☐	☐	
Patient Navigators	☒	☐	Non medical coordination within the health care delivery system as part of a care team
Peer Advocates	☐	☐	
Promotoras	☒	☐	Non medical coordination outside the health care delivery system; community based; refer to literature to ensure evidenced-based design
Psychiatrists	☐	☐	
Psychologists	☐	☐	
Registered Nurses	☒	☐	Clinical care coordination; lead in a multidisciplinary care team
Social Workers	☐	☐	
Wraparound facilitators	☐	☐	
Other	Please type your response here.		

17) **Care coordination requirements for specific populations**. Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and infants	☒	☐	Prevention focused; refer to CDC community guide for evidenced based strategies; HealthTeamWorks prevention guidelines; may not require individual care coordination but practice supports
Children	☒	☐	Prevention focused; refer to CDC community guide for evidenced based strategies; HealthTeamWorks prevention guidelines; may not require individual care coordination but practice supports
Children who are healthy, but in socially-complex environments	☒	☐	Prevention focused; refer to CDC community guide for evidenced based

			strategies; HealthTeamWorks prevention guidelines; ensure access to a multidisciplinary care team
Children involved in the foster care system	☒	☐	Through formal partnership with county and CDHS
Children with a chronic illness	☒	☐	
Children with a serious emotional disturbance	☒	☐	
Children with medical complexity	☒	☐	
Children or youth with a behavioral health diagnosis or substance use disorder	☒	☐	
Transition-age adolescents	☒	☐	Prevention focused; may not require individual care coordination but practice supports
Parents and families	☒	☐	Prevention focused; may not require individual care coordination but practice supports
Pregnant women	☒	☐	
Adults	☒	☐	Prevention focused; may not require individual care coordination but practice supports
Adults who are healthy, but in socially-complex situations	☒	☐	
Adults with a chronic illness	☒	☐	may not require individual care coordination but practice supports to ensure disease management tools in place
Adults with a behavioral health diagnosis or substance use disorder	☒	☐	
Clients involved in the criminal justice system	☒	☐	
Clients with a disability	☒	☐	
Clients in a nursing facility	☒	☐	
Elderly clients	☒	☐	
Frail elderly clients	☒	☐	
Clients in palliative care	☒	☐	
Other populations, please comment: **General comment about the above section: If care coordination occurs, it should be targeted in response and therefore specific. In addition, not every member of the populations listed above would require care coordination. Conversely, a client within any of the above populations may require care coordination at some point in the care continuum. If care coordination is provided from a community based multidisciplinary care team, a tailored and specific response is much more likely.**			

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system? **Stakeholder engagement at the community level is critical in identifying supports already in place, capacity and gaps.**

19) How should care coordination be evaluated? How should its outcomes be measured? **Most agencies providing care coordination collect data on measuring success in addition to the data available from local public health agencies, hospitals, all payer claims database, RCCOs, etc. Layering this data together using key indicators to develop a type of needs index could be a direction of focus for the RCCO.**

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

   a. What is the PMPM cost for providing care coordination services?

   b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

   a. **Care coordinator to client ratios.** If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☐
51-100	☐
101-200	☐
201-500	☐
501-1,000	☐

More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important? **A metric to measure RCCO engagement with community providers to clearly map out existing care coordination and delineation of scope.**

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies). **All of the examples listed plus stakeholder engagement.**

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs? **Requirements to include, by listing, of specific community representation and the infrastructure that will be used to ensure participation; attention to how to define community should be clear and reasonable; for example, if one RCCO has multiple counties, this community engagement should be ensured for multiple communities; for example, where local health alliances are active and well represented, could this be the infrastructure used to engage the community, not simply attending meetings but by carrying out coordinated and integrated activities.**

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

27) Should the RCCO region maps change? Why or why not? If so, how?

28) Should the BHO region maps change? Why or why not? If so, how?

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective? **Data sharing improvements.**

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

34) What role should RCCOs play in attributing clients to their respective PCMPs?

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment? **Formal collaborative agreements to ensure coordinated and integrated activities.**

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services? **Formal collaborative agreements to ensure coordinated and integrated activities.**

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado? **Coordination to offer seamless enrollment assistance whether the client is Medicaid eligible or shopping the marketplace; currently the systems seem to operate as either Medicaid assistance OR Connect for health marketplace guides**

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates? **Requirements to address health literacy to increase understanding of what a RCCO is and why participation is a benefit to the client. Clients generally have no idea what a RCCO is or why the RCCO might be contacting them directly or how the RCCO partners with the medical home. Clients often receive multiple contacts with multiple messaging from multiple providers without an understanding of the purpose.**

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region? **Formal advisory board or similar structure at the community level with a work plan for coordinated and integrated activities.**

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC? **Capitalize on existing community collaboratives to provide the organizational structure to launch innovation.**

42) How should the Department structure stakeholder engagement for the ACC as a whole? **Establish minimum representation requirements, by scope (human services, public health, hospital, mental health, substance abuse, specialty care, CBO, etc,) utilizing already existing formalized workgroups/collaboratives (such as Aurora Health Access) whenever possible so the ACC effort is going into the community instead of drawing stakeholders into a newly created RCCO structure .**

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

a. If no, what are the gaps? **Specialty care in general. Primary care with respect to timely access. Clients report using the ED because timely access to primary care is an issue.**

b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

a. What role should hospitals play in the next iteration of the ACC Program? **Advisory board participation at the community level to strategize solutions with larger stakeholder group. Share data, work processes, current capacity and resources available as part of this work.**

b. What role should pharmacies play in the next iteration of the ACC Program? **Pharmacists as part of the multidisciplinary care team, partnering with other care team members such as the RN to deliver medication therapy management at the PCMH level**

c. What role should specialists play in the next iteration of the ACC Program? **To partner as a true participating member of the medical neighborhood by increasing access for Medicaid clients**

d. What role should home health play in the next iteration of the ACC Program? **In part, participating in transitions in care initiatives, including a focus on ensuring minimal duplication of care coordination activities.**

e. What role should hospice care play in the next iteration of the ACC Program? **In part, system level advocacy voice on provider education for end of life decision making with patients and their families**

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program? ? **Advisory board participation at the community level to strategize solutions with larger stakeholder group. Share data, work processes, current capacity**

and resources available as part of this work. A focus on ensuring minimal duplication of care coordination activities.

g. What role should counties play in the next iteration of the ACC Program? **Advisory board participation at the community level to strategize solutions with larger stakeholder group. Share data, work processes, current capacity and resources available as part of this work.**

h. What role should local public health agencies play in the next iteration of the ACC Program? **Advisory board participation at the community level to ensure optimal collaboration in the following: prioritization of prevention activities; bridging PCMH activities with community linkages and supports; sharing and understanding population health data to prioritize activities and assess outcomes; outreach, enrollment and care coordination activities; and consideration of options for investment of RCCO savings into local public health to support community-based prevention activities that address both the individual (eg, smoking cessation) and community (eg, tobacco policies to reduce second-hand smoke exposure.**

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past? **Advisory board representation at the community level; partnering will most likely lead to identification of the importance of these organizations in providing direct services to Medicaid clients leading to opportunities for identifying duplication of services and utilizing these client contacts to align with ACC activities (linkages to care, health literacy, enrollment, care coordination).**

45) How can RCCOs help to support clients and families in making and keeping appointments? **Giving the resources to providers to perform these activities since they have the established relationships with the client**

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP? **If evidenced based models of care are utilized; not as a general requirement and not as a replacement for a licensed clinical care team member (RN, RD, pharmacists, social worker, behavioral health professional)**

47) **Community Health Worker reimbursement.** Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement process	(Please check all that apply)
Independently bill	☐
On staff (salary) at Primary Care	☐

Medical Provider Clinic	
On staff (salary) at RCCO	☐
Per Member Per Month Payment	☐

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers? **increase capacity; increase reimbursement; provider consensus on standard of care (such as first ever visit to a dentist)**

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you?

b. What RCCO requirements would ensure cultural competency?

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

51) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend? **Provide client incentives or disincentives; health literacy emphasis on provider training and supports; timely primary care access**

52) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

Practice Support

53) **Support for practices.** Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☒	☐	☐	☐
Network provider education	☒	☐	☐	☐
Assistance with practice redesign	☒	☐	☐	☐
Assistance with efficiency-enhancing activities	☒	☐	☐	☐
Provide web-based resources and directories	☒	☐	☐	☐
Provide practice-specific data reports	☒	☐	☐	☐
Provide clinical care guidelines and best practices.	☒	☐	☐	☐
Provide clinical screening tools	☒	☐	☐	☐
Provide health and functioning questionnaires	☒	☐	☐	☐
Provide chronic care templates	☒	☐	☐	☐
Provide registries	☒	☐	☐	☐
Offer client reminders	☐	☐	☐	☐
Offer client self-management tools	☐	☐	☐	☐
Offer educational materials about specific conditions	☐	☐	☐	☐
Supply behavioral health surveys	☐	☐	☐	☐
Supply other self-screening tools	☐	☐	☐	☐
Administer behavioral health surveys	☐	☐	☐	☐
Administer other self-screening tools	☐	☐	☐	☐
Prepare client action plans	☐	☐	☐	☐
Provide training on providing culturally-competent care	☒	☐	☐	☐
Provide training to supporting staff	☒	☐	☐	☐
Provide training on motivational interviewing	☒	☐	☐	☐
Provide tools and software for phone call and appointment tracking	☒	☐	☐	☐
Provide tools and resources for tracking labs, referrals, etc.	☒	☐	☐	☐
Provide referral and transitions of care checklists	☒	☐	☐	☐
Provide visit agendas or templates	☒	☐	☐	☐
Provide standing pharmacy order templates	☒	☐	☐	☐
Provide comprehensive directory of community resources	☒	☐	☐	☐
Provide directory of other resources	☒	☐	☐	☐
Provide materials regarding Nurse Advice Line	☒	☐	☐	☐
Ensure all tools and resources are centrally located on RCCO-specific website	☒	☐	☐	☐
Others				

54) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

55) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes? **Increased reimbursement**

56) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

57) Should the Department require that PCMPs utilize disease registries to manage the health of their population?

58) Please share any other advice or suggestions about provider support in the ACC.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals? **Increased PCMH reimbursement**

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

62) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

63) What role – if any – should the RCCOs play in the distribution of payments to providers?

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

66) **Measuring Client experience.** Please complete the table below to indicate how the Department should measure Client/patient experience:

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☐	☐	
SF-12 Health Survey	☐	☐	
Other types of client interviews / surveys	☐	☐	
Patient Activation Measure	☐	☐	
Focus groups	☐	☐	
Other	Please type your response here.		

67) Knowing that, at this time, the Department only has claims data, how should population health be measured? **Engage key stakeholders to share data to drive reporting of common indicators to determine a health index rating**

68) How should quality and performance data be reported to the RCCOs, PCMPs, and the public?

69) **Measures for payment.** Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☐
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

70) What percent of RCCO payments should be tied to measures or performance?

Percentage	
10-20%	☐
21-30%	☐
31-40%	☐
41-50%	☐
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

71) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?

72) Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?

73) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

74) **Incentive payment frequency**. Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	☐
Annually	☐
Other	☐

If you checked the "Other" box, please describe payment frequency below:

75) For potential offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

76) For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

Health Information Technology (HIT)

77) **Types of communication.** For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	☐
Text message	☐	☐
Web portal	☐	☐
Email	☐	☐
Telemedicine / Video chat	☐	☐
Face-to-face meeting	☐	☐
Smartphone app	☐	☐
Other:		

78) **HIT investments by organizations.** For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below:

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	☐	☐
Digital care management tool	☐	☐
Care transitions alerts	☐	☐
Electronic Health Records (EHRs)	☒	☐
Health risk assessment software	☐	☐
Practice assessment tools	☐	☐
Practice management tools (scheduling, billing)	☒	☐
Client web portal for communicating care plan, services, benefit enrollment	☒	☐
Patient education/wellness tools	☐	☐
Provider/case manager directory	☒	☐
Shared decision-making tools	☐	☐
Telemedicine software	☐	☐
Other:	☐	☐
Other:	☐	☐

79) **Importance of technology by type**. The Department is working to determine what technology is in place, what technology is needed, and what technology should be standardized. For RCCOs, providers, and other organizations, use the table below to answer what HIT infrastructure outside of the 5DAC your organization would use to perform population health management activities. Tools are scored from 1-5, where 1 are those items least-likely to be used, and 5 are items most-likely to be used:

Tool	1 Least	2	3	4	5 Most
Population analytics / reporting / dashboard	☐	☐	☐	☐	☐
Care management tool	☐	☐	☐	☐	☐
Care transitions alerts	☐	☐	☐	☐	☐
Electronic Health Records (EHRs)	☐	☐	☐	☐	☐
Practice assessment tools	☐	☐	☐	☐	☐
Health risk assessment software	☐	☐	☐	☐	☐
Practice management tools (scheduling, billing)	☐	☐	☐	☐	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☐	☐	☐	☐
Patient education wellness tools	☐	☐	☐	☐	☐
Provider/case manager directory	☐	☐	☐	☐	☐
Shared decision-making tools	☐	☐	☐	☐	☐
Telemedicine	☐	☐	☐	☐	☐
Other:	☐	☐	☐	☐	☐

80) What are the primary barriers to RCCOs and providers increasing their use Health Information Technology to improve the performance of Primary Care Practices? **Significant challenges in sharing meaningful data with partners and have barriers in place to sharing data even on a shared population**

81) How can Health Information Technology support Behavioral Health Integration?

82) In the next iteration of the ACC, should there be a shared resource for data and analytics? Please describe the basic criteria for what a shared data and analytics platform needs to contain in order for it to be useful. **Yes**

83) Should there be a shared care management tool? Please describe the basic criteria for what a care management tool would need to contain in order for it to be useful. **Yes**

84) Should there be a shared population health management tool? Please describe the basic criteria for what a population health management tool would need to contain in order for it to be useful. Yes

85) Please describe the functionality that a common Medicaid provider directory would need to contain in order for it to be useful.

86) How can the RCCOs support providers' access to actionable and timely clinical data?

87) What are the HIT solutions that would benefit clients, providers, and RCCOs? Please comment on the parameters these tools or platforms would need to possess and the ways in which they could be used.

88) What technical assistance or resources related to HIT infrastructure should the RCCOs supply? This assistance or these resources could be for providers, social service organization, clients/families, or for others.

89) What role should health information exchange platforms like CORHIO or QHN play in the next iteration of the ACC?

90) Please share any information, advice, and suggestions you have about health information technology in the ACC Program.

Colorado Department of
Health Care Policy and Financing

Serial # 089

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Aubrey Hill
Location: Denver, Colorado

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Colorado Coalition for the Medically Underserved
Location: Denver, CO (statewide representation)
☒ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☒ Client advocate
☐ Medical provider / PCMP / other provider
  i. Type or specialty: Click here to enter text.
  ii. Area of practice: Click here to enter text.
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☐ Other (please describe): Click here to enter text.

Are you currently involved in the ACC program?

☒ Yes
☐ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years

How have you been involved in the ACC program and what interaction have you had with RCCOs:
CCMU has long been interested in the ACC program since we are committed to a better functioning delivery system for Medicaid patients (as part of the medically underserved population we represent).

Aubrey, our Director of Health Systems Change, has been on the PIAC for 3 years, and a co-chair for nearly two.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:
We are heavily invested in Medicaid as a key coverage program for our low-income, vulnerable populations around the state.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☒ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

We will continue to participate as we have been, though we will not have financial interest in the

☐ 2-3 years
☐ 3-4 years
☒ Since before the program was implemented.

program.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

Largely, the foundation of this program is strong. The RCCOs, to our knowledge, are committed to local cultures, relationships and networks, and strengths. The RCCOs are also hard at work in ensuring PCMP network adequacy, with constant marketing and mystery shopper checks. We also see it as promising that the state is very focused on the program—constantly analyzing data and listening to partner stories—and always ready to try something new. That kind of energy is imperative for such a large challenge that we have ahead of us in trying to successfully scale up a program that was once a small pilot and is now a large program serving such diverse populations.

2) What is not working well in the ACC Program?

We were most interested in the outcomes of the CHI CAHPS survey where they discovered that there was no statistically significant difference in the care experiences between fee-for-service Medicaid patients and ACC patients. We recognize that the program's impact was still evolving at the time the survey was taken, but the results should serve as guideposts for how we move ahead and recognize the potential for positive impacts. We think that more patients could be served by care coordination that is broadly defined and well-connected to many parts of the system where patients need navigation supports. We heard from some of our focus groups that social determinants of health supports are critical, and so is a system that makes it possible for more seamless navigating to get to what they need.

Confusing paperwork and specialty referrals are the two other pieces that we know could be improved. The focus groups told us that they are not sure who to talk to or trust when they need to find out information about getting what they need out of Medicaid. We need to better understand the sources that different patient populations will turn to for advice, and ensure they have the most thorough and up-to-date information (and access to a good resource if they need it).

Specialty referrals are just a matter of strengthening the Medicaid specialty provider networks, which we know is a significant challenge, and we find it promising that HCPF is devoting some budget requests to target some gaps in care. We hope that attention will continue on this issue.

We also think that special populations within the ACC will need additional attention in how their care is managed as the ACC was not created initially with children in mind, nor those with disabilities, but now that

those populations are enrolled in the ACC, we have to be especially mindful of how we can improve the experience for them.

3) What is working best in the Behavioral Health Organization (BHO) system right now?

4) What is not working well in the BHO system?

5) What is working well with RCCO and BHO collaboration right now?

6) What is not working well with RCCO and BHO collaboration right now?

As far as we know, the biggest challenge is being able to schedule two appointments in the same day and having both of those appointments covered by Medicaid, which will be tricky as we continue down the road on wholesale integration of the health care system.

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

As mentioned above, we think that the first step is analyzing some of the barriers that patients face as they attempt to move through clinics that are integrated. We know we want to scale up these clinics' successes in integrating, so paying close attention to their experiences and struggles will be critical for the future.

Across all the focus groups that CCMU conducted, we heard loud and clear that patients desire integration of behavioral health and primary care. They mentioned that the more consolidated services are in general, the better. The preference is strongly for a single center where they can get all their needs met during one trip. We know that transportation is a challenge, so the more efficient we can make their visits to health centers, the better for their ability to access services. This goes beyond behavioral health, too, and as we heard one woman say, if her doctor does not have the answers, she'd rather go down the hall and find out from someone else, rather than wait two weeks to complete the referral (and have that doctor only spend two minutes with her).

The sentiment is strongly in favor of integration, and the best next steps are to remove any barriers for clinics to fully integrate in terms of billing policies and the like. Patients greatly desire a seamless interaction with the system, so we should be able to achieve that by keeping the patient's perspective at the forefront of the changes we pursue.

Also, keeping in mind the physical space limitations that some clinics may face, it would behoove the state to elevate their strategies around technology so there is at least virtual integration through sharing communications (either medical records or notes, or actual tele-consultation). The interest from the provider community in this piece seems very strong, and it would be imperative to ensure the smooth implementation of that as well.

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☐	☐	
Community Behavioral Health Services Rule	☐	☐	
Covered diagnoses list	☐	☐	
Different behavioral / physical health reimbursement	☐	☐	
Institutions for Mental Diseases exclusion	☐	☐	
OBH rules, reporting, or financing (regulatory differences between agencies)	☐	☐	
PCMP financing structure	☐	☐	
Per-member per-month amount	☐	☐	
Physical space constraints	☒	☐	We have heard about this being a barrier in rural areas where they have small space in their clinics, and not enough funding to expand their space to add other providers.
Privacy Laws (HIPAA, 42 CFR)	☒	☐	This is a barrier. We think that if patients are engaged, they would have a great deal to say about this that would help the effort to change this.
Professional / cultural divisions	☒	☐	Some schools have begun "integrated training," but we think we ought to also do this across existing professionals who have not been in school for quite some time.
RCCO or BHO contracts	☐	☐	
Staff capacity	☐	☐	

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

State/Federal rules or reporting requirements	☐	☐	
Technical resources / data sharing	☐	☐	
Training	☐	☐	
Others	Please type your response here.		

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

The recognition of the whole person is so important, and many creative solutions exist. Standards are important, but what is equally important is balancing those standards with room for innovation, so providers can do what they do best in a way that is most suitable and preferred for their patients and their communities. We recognize that different communities have different cultures, preferences, and strengths, and it is a challenge that we must take up to allow those particularities to shine through as they set out to do good work for patients and communities.

10) Please share any other general advice or suggestions you may have about behavioral health integration.

We recognize that the behavioral health system is lacking in the appropriate workforce, so HCPF's help in getting more investments for that system would be significant. DHS should have the collaborative support of other agencies as they try to gain awareness and traction on their needs.

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination?

Care coordination means coordinating patients across all points relevant to their care. This includes referrals to specialists and other provider types (e.g. behavioral or oral health) as well as assisting patients in addressing their social determinants of health challenges.

b. How should RCCOs prioritize who receives care coordination first?

We are not certain of the best approach to prioritization, but we know that there have been attempts at two approaches that seem logical. One approach entails patients who are accessing care in inappropriate settings, e.g., calling 911 for non-emergent needs, being readmitted to the hospital, going to the ER, and getting set up with a care coordinator who will screen them to figure out what it is they need and guide them through the system in that way. The second approach involves taking into account someone who could potentially become at risk for these behaviors, so they can learn how to navigate the system appropriately before they are high-risk.

There are exceptions to this, of course. There will always be people who "spike" in their usage of the system, not because they do not know how to navigate through the system, but because their health conditions have given them enough trouble that they have to over-utilize the system for a short period of time before they return to health. We need to be sensitive to those patients and give them care coordination resources as well, while working to understand the full picture. The important thing is to be empathetic to the patient's whole experience.

c. How should RCCOs identify clients and families who need care coordination?

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

12) What services should be coordinated and are there services that should not be a part of care coordination?

There are social determinant of health resources that care coordination does not always seem to incorporate, but the evidence is clear on the need. This is a huge determinant in a person's health experience, and we should integrate this throughout the system.

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

As aforementioned, it is important to acquire an understanding of a patient's entire experience of health. In order to know what kind of care coordination a patient requires, it is valuable to be aware of their lived experience outside the walls of a clinic, such as housing and one's ability to access adequate nutritional sources, and how this impacts their health care. We heard in one focus group that a patient was facing a severe health issue in the emergency room, and when she had arrived home afterward, she found that her heat had been turned off. She knew she qualified for a medical exemption, but could not get the needed support from her health care provider to achieve that. She could not recover well at home because of her inability to get her needs met external the medical system, and had to rely on the assistance of her sister who fortunately lived close by. Care coordination resources could have helped her navigate the system more successfully.

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today?

We are aware of EMS/paramedics who are working as patient navigators and community paramedics in a few communities. This is a somewhat new effort, but communities are recognizing the gaps in health care and leveraging existing resources to ensure that their communities' needs are being met. There have been some great results, from reduction of emergency room utilization to lower hospital readmissions.

We also know about *promotoros* and other community health workers (that have a variety of names) who are doing good work. They are trusted community resources who successfully help patients arrive at the most appropriate access points in the system and help them navigate health care visits. There are hundreds of examples that CCMU hears about, ranging from the Bridges to Care project in Aurora to the Be Well Stapleton block captain model, and from the Center for African American Health fairs to the Native American "sisters." They are all accomplishing incredible things within their own communities, and we could learn a few lessons from them.

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

RCCOs should leverage existing relationships rather than duplicating or disrupting them. Community resources have brokered trust over a period of time, so it should not be the RCCOs role to replace those resources.

d. What are the gaps in care coordination across the continuum of care?

15) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

Non-medical	Should the	Should the RCCOs	Should the RCCOS have an additional role

need:	RCCO have a role?		coordinate with community supports and services?	beyond coordinating with these supports? If so, what should that role be?
	Yes	No	Yes	
Abuse, neglect, and trauma	☒	☐	☒	
Affordability (assistance with prescriptions or co-pays)	☒	☐	☒	
Daycare / childcare	☒	☐	☒	
Economic stability & employment	☒	☐	☒	
Education	☒	☐	☒	
Environment	☒	☐	☒	
Food access / nutrition	☒	☐	☒	
Health literacy	☒	☐	☒	
Housing	☒	☐	☒	
Language or translation services	☒	☐	☒	
Literacy	☒	☐	☒	
Transportation	☒	☐	☒	
Other	There are many social determinants of health that CCMU has studied, which are referenced in our video and materials (www.ccmu.org/sdoh). We think that the RCCOs should have a role where appropriate and where there is a gap, but if there are existing community resources, the RCCOS should simply leverage the resources and ensure that patients are able to use the best resources to their advantage.			

16) **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	Coordinate care? Yes	No	In what capacity should these individuals coordinate care in the ACC Program?
Advanced Practice (Registered) Nurses	☐	☐	
Certified Addiction Councilors	☐	☐	
Certified Nurse Midwives	☐	☐	
Community Health Workers	☐	☐	
Generalists (BA/BS/MA/MS)	☐	☐

Clients with a disability	☐	☐	
Clients in a nursing facility	☐	☐	
Elderly clients	☐	☐	
Frail elderly clients	☐	☐	
Clients in palliative care	☐	☐	
Other populations, please comment:			

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

19) How should care coordination be evaluated? How should its outcomes be measured?

Perhaps we should first define why we think we need care coordination. Is it because the data tells us that care is fragmented? Is it because people are over-utilizing more expensive and less appropriate sources of care? Is it because we know there are high rates of non-compliance among patients? Whatever the data is, we should use that as our evaluation tool, but also continue to collect stories. Bridges to Care seems to have figured out a great model of combining quantitative data analysis with individual stories so they can understand their impact on the patients they have engaged through their process. This kind of model should be deployed for measuring the impacts that we want to measure through care coordination.

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

a. What is the PMPM cost for providing care coordination services?

b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

a. **Care coordinator to client ratios.** If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☐
51-100	☐
101-200	☐

3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

Clearly, we would have to look for existing relationships in the community and indication of past experience in problem-solving in a community-collaborative way. CCMU knows the Colorado Network of Health Alliances (28 locally-formed health alliances with the intent of collaboratively addressing local health systems issues using local strengths) would be a key player in determining whether a bidder has that strength.

Moving forward, a bidder would need to recognize that a RCCO is not there to duplicate services or take services away from the groups who do the work well already. Rather, a RCCO does its best work when it leverages existing community resources in a more coordinated way. It would be a requirement that the RCCO assesses the community for work already being done before starting a new project, and engage through a community advisory board or a community stakeholder meeting to best understand whether a project is suitable or if it should be tweaked to better fit the community.

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

This seems like a good idea from CCMU's perspective in an attempt to eliminate some of the confusion that RCCOs currently experience in having their clients across RCCOs. This seems to us like an alternative to number 24, where some key elements are standardized across RCCOs. If there is community push-back to that standardization (and this would be beyond the providers, too), then this proposal would be the better option, so communities can maintain their unique nature in each RCCO, but providers don't face the challenge of working with multiple RCCOs that move operationally in different ways.

27) Should the RCCO region maps change? Why or why not? If so, how?

Yes. We think that there have been some challenges in how certain communities often prefer to collaborate across county lines, but in this most recent iteration, have been assigned to separate RCCO regions. For example, Larimer and Weld counties have worked together in the past, but were separated in the regional map. Again, CCMU's management of the Network of Health Alliances would be a great resource to leverage to better understand how communities define themselves. We also recommend an analysis, if possible, of care patterns of patients to understand how they determine their own communities. Many residents may seek care in the places where they work, and not where they live, or

vice versa, so it would be important to have the data guide us in this matter. However, ultimately, we believe the maps should change so it is far easier for patients to navigate through their regional system.

28) Should the BHO region maps change? Why or why not? If so, how?

We think it should be aligned with the RCCO maps, as it would make integration far easier. Providers can "talk" to each other across the same regional lay-out, rather than overlap multiple regions in the other system. This should eventually move to one system, but before we get there, we should align the maps.

We also think the same suggestions we inserted into question 27 should be considered here.

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

We heard from one focus group that the participants faced challenges in understanding what their Medicaid benefits included, but are told that they cannot use all their relevant benefits with a provider who they are seeing. For example, they knew that varnishes were covered through their kids' dental benefit, but the dentist they visited would do cleanings, but would not do varnishes. We are not sure what the solution is – whether it is having the providers be up-front with what they will treat and will not treat (and in the latter case, make referrals to others who are willing to do the treatment) or requiring providers to do all the treatments that the patient is covered for and the provider is trained for.

Other than navigational difficulty, we heard that in general, the Medicaid benefits seem to be pretty satisfactory. Some focus group participants wished that more cosmetic benefits were covered; however, in terms of medically necessary benefits, they were pleased with their ability to get their needs met.

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

This is an interesting idea. CCMU does not have an opinion one way or another, but wish that the above items will be addressed or considered if HCPF does choose to move in this direction. Also, we know there are advantages and disadvantages to competition—competition could drive more innovative and forward-thinking action, or it could drive down quality. We suggest that national research be engaged, and the literature be heavily consulted before going in this direction, as this would be a major shift from the way it has been done in the past, and this is not a decision to be taken lightly.

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

34) What role should RCCOs play in attributing clients to their respective PCMPs?

RCCOs should assist in helping to find the PCMP that would be right for the client (without "favoring" any PCMP over another). This could involve an evaluation of what that PCMP specializes in (e.g., population-based care, such as kids versus adults, or high-needs adults) so that clients can find out what best suits their needs. Also, RCCOs should discover the client's preference for finding care, such as near their workplace or home, or along a certain bus or train line, so they can easily get to and from appointments, or open certain hours. Perhaps RCCOs can come up with a "short list" for what clients should consider using as their PCMP and what the reasons are for those on the short list, but not strongly recommend or encourage a particular PCMP selection.

If a client is unhappy with their current PCMP, RCCOs should certainly help in finding one that is a better fit for them, and RCCOs should discover why the client is unhappy, to understand if there is a need for changes in how the provider treats his or her patients.

We would also encourage the Department to consider the reasons for the attribution process and to see if there would be a better way to measure clients' linkages to a PCMP. It appears to us that the loose definition of attribution is less helpful, when you measure everything from the client being sent a letter to the client actively signing up with a specific PCMP. If the goal is to measure client's "medical home-ness," then we encourage a stricter definition of attribution so we know exactly where our gaps are in creating medical homes for clients.

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

As CDPHE has an impact on (potential or existing) oversight of patient navigators/community health workers, community paramedics, and local public health agencies, the collaboration should be tight. Staff from CDPHE should share their expertise on what local community resources should be leveraged throughout the work, and what lessons can be learned as we move through the next iteration of the ACC. Often, we see CDPHE staff attending ACC-related meetings, but not contributing actively around their experiences from the groups they regulate. We think there is a missed opportunity here that should be seized moving forward.

Leadership at CDPHE has shown a great commitment to the SIM process, and as the core element of SIM, integration of behavioral health and primary care, is a core piece of the ACC vision in the next iteration, it would be useful if leadership could also show the same commitment to the ACC vision. This could assist in a more thorough partnership between the two agencies.

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

We heard that some community paramedics are paid through the RCCOs as well as through some DHS programs, so there is definite opportunity for tight collaboration here.

Also, if we are truly committed to integration of behavioral health into the ACC model, it is imperative that DHS is involved. We think this is similar to our response in number 35.

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

HCPF and the RCCOs should regularly visit with patients by developing relationships with local housing organizations, family resource centers, other direct service agencies, and community organizers. There is a wealth of opportunities to leverage for stakeholder/patient engagement. CCMU went on a mini-listening tour with 3 focus groups, and we leveraged the relationships we had with these types of organizations. We hosted dinners at existing meetings or times when they usually gather, and made sure it was after work hours. The groups were heavily attended – we had between 9 and 16 people at each group, and it was powerful. We also started with the frame that we genuinely wanted to listen and learn about their experiences and we would keep their names confidential. This allowed them to trust us enough to share in very personal, sensitive health care experiences. It was powerful. While CCMU is happy to do this (as this is part of our work), we strongly, strongly encourage both HCPF and the RCCOs to do this also.

From what we have observed from early RCCO attempts at stakeholder meetings, it seems that hosting town hall meetings does not work. We would advise meeting people where they are to engage them properly, rather than inviting them to a meeting.

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

We are not certain of what the "specific" requirements should be, but there should be substantial and meaningful engagement with each of these stakeholders on a regular basis. Again, we think the best strategy is to go to them and frame the conversation as one where authentic listening will take place. It would be most beneficial if RCCOs regularly checked in with them to not only understand the breadth of everyone's experiences as they participate in the ACC, but also to leverage their expertise on key decisions that will affect them. Here, what is important is listening to them, as opposed to pushing hard a strategy or a change upon them. We recommend trying to guide them through what you're thinking and genuinely get their reactions, and to the best of your ability, incorporate what the majority says. This process will encourage everyone's full and positive participation with and commitment of the ACC.

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

Again, our answer to this question is the same as numbers 39 and 40.

42) How should the Department structure stakeholder engagement for the ACC as a whole?

Again, our answer to this question is the same as numbers 39 and 40.

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

No, we believe that it is currently not adequate.

a. If no, what are the gaps?

We know that the PCMP networks are moving toward adequacy, but are unsure yet if it is quite there. As far as the other essentials, specialists, behavioral health, dental, and non-medical providers, we do not believe that they are adequate and there is much room for improvement.

b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

a. What role should hospitals play in the next iteration of the ACC Program?

We have the opportunity to be closer partners with the hospitals in the next iteration. We know the ER rates are high, and the hospitals could contribute significantly to reducing that rate. They can deploy partnerships with community navigators, community health workers, or community paramedics to reduce ER visits. They can try to work with patients to encourage more appropriate access, while understanding what drives patients to the ER. Is it related to transportation, or the hours or long wait times at the PCMP, etc.? That information can inform other system adjustments we need to make.

b. What role should pharmacies play in the next iteration of the ACC Program?

We know that in some rural communities, pharmacists are the most trusted health care provider and health care resource. We should acknowledge that and leverage that by seeing how they can best educate the patients they come in contact with in order to encourage better health behaviors, and also connect patients with other community resources they might not be aware of.

c. What role should specialists play in the next iteration of the ACC Program?

Specialists in the next iteration will be significant. This has consistently been a challenge throughout the last few years of the ACC as well as historically for general Medicaid access. We continue to hear that PCMPs are frustrated with the inability to successfully refer patients to specialists because it is not guaranteed if the patients will be seen, so it discourages PCMPs from participating in the program.

To fulfill the vision of a medical neighborhood, we desperately need specialists' participation. HCPF's attempts to pilot some technology interventions, like e-consult, will be significant to encouraging that participation.

d. What role should home health play in the next iteration of the ACC Program?

e. What role should hospice care play in the next iteration of the ACC Program?

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

g. What role should counties play in the next iteration of the ACC Program?

Counties have a real opportunity that we believe is not being taken full advantage of, but we have long recommended. When counties assist with the application, they have the opportunity to educate clients on what to expect in terms of communications from HCPF and next steps for getting their care. It would be so impactful if the counties told clients what to expect in the mail from the ACC, and what to do after they get their enrollment information, so clients can most effectively leverage the ACC and the resources there. This way, the clients open the letters they receive, and can trouble-shoot if they somehow miss a piece of mail that they were expecting.

h. What role should local public health agencies play in the next iteration of the ACC Program?

Local public health agencies are a trusted resource of many who are vulnerable to poor health, and much like pharmacists, we see this especially in rural areas. This should be a resource that we will rely on to help patients be navigated to the right resources, as well as raise patient education levels on healthy behaviors.

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

Much like what we have inferred throughout this RFI, there are many trusted touch points already embedded in the community that we should appropriately leverage moving forward. If patients trust a certain health care resource, we need to elevate their knowledge of how to navigate patients through the system and use their benefits. Rather than reinventing the wheel in terms of new health care resources, we need to ensure that we use existing ones that patients are already well-connected to.

As mentioned in earlier questions, EMTs/paramedics are starting to branch out as patient navigators and community health workers in some communities. We have learned about their work and are very supportive of their innovation as it is a creative and effective solution for some

of the medically underserved. Just like we hope that innovations are an option in the RCCOs moving forward, we would hope that these EMS groups will be included.

45) How can RCCOs help to support clients and families in making and keeping appointments?

First and foremost, listen to the patient. If they say that their challenge in making and keeping appointments is transportation, then we need to figure that out. If they say their challenge is getting through a long waiting list, then that's where the focus should be. We see the RCCO being the cornerstone of all these community initiatives and community resources and the RCCO should see how things can be woven together to benefit the patient where there are challenges, and where investments and energy should be focused to address other challenges.

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

We believe that communities know best about what innovations they would like to leverage. Some communities have benefited greatly from innovations like community health workers and/or patient navigators, and we have seen other communities benefit from EMS workers acting as patient navigators or community paramedics. We do not believe the time is right yet for this to become a requirement, but rather, an option for communities to pursue if they find it to be the most effective tool in their toolbox.

47) **Community Health Worker reimbursement**. Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement process	(Please check all that apply)
Independently bill	☐
On staff (salary) at Primary Care Medical Provider Clinic	☐
On staff (salary) at RCCO	☐
Per Member Per Month Payment	☐

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

Since HCPF has contracted with an ACO to manage the dental provider network, we believe it is their responsibility to ensure an adequate network of dental providers. However, it would be useful if the RCCOs could ensure that communications about dental benefits and available dental providers are shared with patients so they can access the oral care they need. Eventually, we should move toward integration of oral health into the RCCOs. We know the timing may not be right at this time, since we just chose an ACO,

but having some of the structures in place soon so we are better prepared for the eventuality of integration writ-large would be strategic.

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you?

Cultural competence means that the patient's specific culture is taken into account as they move through their treatment. It also means being aware of what the patient would respond to, given their particular norms and preferences.

b. What RCCO requirements would ensure cultural competency?

One very clear way to get to cultural competency is to encourage hiring of multilingual personnel at all levels of the ACC: throughout RCCO staff, all provider types, and other resource contractors from the RCCO (e.g. community health workers and care coordinators). When we visited a Spanish-speaking focus group, they told us the most challenging part was getting through the system when no one in a medical office speaks their language. We also know from other patient stories that telephonic interpreters dramatically change the care experience and lower the effectiveness of the care provider, just because the provider cannot directly speak with the patient.

Other resources RCCOs could offer is for providers to be trained in specific cultural understanding. For example, if a provider happens to serve a predominately African-American community, having an understanding of their culture and preferences would be useful.

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

RCCOs could offer seminars around plain language and creative tools on how to work with and address patients who have low health literacy.

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

51) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

52) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

Practice Support

53) **Support for practices.** Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☐	☐	☐	☐
Network provider education	☐	☐	☐	☐
Assistance with practice redesign	☐	☐	☐	☐
Assistance with efficiency-enhancing activities	☐	☐	☐	☐
Provide web-based resources and directories	☐	☐	☐	☐
Provide practice-specific data reports	☐	☐	☐	☐
Provide clinical care guidelines and best practices.	☐	☐	☐	☐
Provide clinical screening tools	☐	☐	☐	☐
Provide health and functioning questionnaires	☐	☐	☐	☐
Provide chronic care templates	☐	☐	☐	☐
Provide registries	☐	☐	☐	☐
Offer client reminders	☐	☐	☐	☐
Offer client self-management tools	☐	☐	☐	☐
Offer educational materials about specific conditions	☐	☐	☐	☐
Supply behavioral health surveys	☐	☐	☐	☐
Supply other self-screening tools	☐	☐	☐	☐
Administer behavioral health surveys	☐	☐	☐	☐
Administer other self-screening tools	☐	☐	☐	☐
Prepare client action plans	☐	☐	☐	☐
Provide training on providing culturally-competent care	☐	☐	☐	☐
Provide training to supporting staff	☐	☐	☐	☐
Provide training on motivational interviewing	☐	☐	☐	☐
Provide tools and software for phone call and appointment tracking	☐	☐	☐	☐
Provide tools and resources for tracking labs, referrals, etc.	☐	☐	☐	☐
Provide referral and transitions of care checklists	☐	☐	☐	☐
Provide visit agendas or templates	☐	☐	☐	☐
Provide standing pharmacy order templates	☐	☐	☐	☐
Provide comprehensive directory of community resources	☐	☐	☐	☐
Provide directory of other resources	☐	☐	☐	☐
Provide materials regarding Nurse Advice Line	☐	☐	☐	☐
Ensure all tools and resources are centrally located on RCCO-specific website	☐	☐	☐	☐

Others	

54) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

55) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

56) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

57) Should the Department require that PCMPs utilize disease registries to manage the health of their population?

58) Please share any other advice or suggestions about provider support in the ACC.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

62) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

63) What role – if any – should the RCCOs play in the distribution of payments to providers?

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

66) **Measuring Client experience.** Please complete the table below to indicate how the Department should measure Client/patient experience:

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☒	☐	
SF-12 Health Survey	☐	☐	
Other types of client interviews / surveys	☐	☐	
Patient Activation Measure	☒	☐	
Focus groups	☒	☐	When CCMU did our focus groups, it was incredibly powerful. We highly recommend HCPF to do this by partnering with folks to attend resident council meetings or parent-teacher trainings at family resource centers, and going when it is the right time (after work hours) for them. Qualitative data and stories are so critical to understanding their experiences. If you do decide to pursue any quantitative data, please do combine it with qualitative interviewing or focus groups to get the full picture.
Other	Please type your response here.		

67) Knowing that, at this time, the Department only has claims data, how should population health be measured?

Tracking ER data is wise, though, we suggest that the data be sliced further to understand more about patient behaviors. Are patients going at a certain time of the day? Are they going for certain conditions that we know should be seen at a PCMP, but perhaps they don't see it that way? It is important to understand that patients may have rational reasons for why they are going to the ER, and what this means for our work within the system.

Other population data is important, such as chronic condition measures, behavioral health measures, etc. However, we need to be strategic to capture the diversity of the patient population. Not one measure can tell us the whole story of all 700,000 within the ACC, but many data across many different populations can help us. For example, children health measures are very different from adult measures, so we need to ensure that the data measures we have can capture the child health experience in the ACC apart from adults.

68) How should quality and performance data be reported to the RCCOs, PCMPs, and the public?

69) **Measures for payment**. Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☐
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

70) What percent of RCCO payments should be tied to measures or performance?

Percentage	
10-20%	☐
21-30%	☐
31-40%	☐
41-50%	☐
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

71) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?

72) Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?

73) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

74) **Incentive payment frequency.** Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	☐
Annually	☐
Other	☐

If you checked the "Other" box, please describe payment frequency below:

75) For potential offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

76) For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

Health Information Technology (HIT)

77) **Types of communication.** For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	☐
Text message	☐	☐
Web portal	☐	☐
Email	☐	☐
Telemedicine / Video chat	☐	☐
Face-to-face meeting	☐	☐
Smartphone app	☐	☐
Other:		

78) **HIT investments by organizations.** For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below:

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	☐	☐
Digital care management tool	☐	☐
Care transitions alerts	☐	☐
Electronic Health Records (EHRs)	☐	☐
Health risk assessment software	☐	☐
Practice assessment tools	☐	☐
Practice management tools (scheduling, billing)	☐	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☐
Patient education/wellness tools	☐	☐
Provider/case manager directory	☐	☐
Shared decision-making tools	☐	☐
Telemedicine software	☐	☐
Other:	☐	☐

Other:	☐	☐

79) **Importance of technology by type.** The Department is working to determine what technology is in place, what technology is needed, and what technology should be standardized. For RCCOs, providers, and other organizations, use the table below to answer what HIT infrastructure outside of the SDAC your organization would use to perform population health management activities. Tools are scored from 1-5, where 1 are those items least-likely to be used, and 5 are items most-likely to be used:

Tool	1 Least	2	3	4	5 Most
Population analytics / reporting / dashboard	☐	☐	☐	☐	☐
Care management tool	☐	☐	☐	☐	☐
Care transitions alerts	☐	☐	☐	☐	☐
Electronic Health Records (EHRs)	☐	☐	☐	☐	☐
Practice assessment tools	☐	☐	☐	☐	☐
Health risk assessment software	☐	☐	☐	☐	☐
Practice management tools (scheduling, billing)	☐	☐	☐	☐	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☐	☐	☐	☐
Patient education wellness tools	☐	☐	☐	☐	☐
Provider/case manager directory	☐	☐	☐	☐	☐
Shared decision-making tools	☐	☐	☐	☐	☐
Telemedicine	☐	☐	☐	☐	☐
Other:	☐	☐	☐	☐	☐

80) What are the primary barriers to RCCOs and providers increasing their use Health Information Technology to improve the performance of Primary Care Practices?

81) How can Health Information Technology support Behavioral Health Integration?

Health information technology could be significant in behavioral health integration, so we can maximize the current workforce we have in the short-term, while making long-term investments to continue building and enhancing our workforce. We think this could be done for consultations, referral communication, as well as provider-to-provider education.

82) In the next iteration of the ACC, should there be a shared resource for data and analytics? Please describe the basic criteria for what a shared data and analytics platform needs to contain in order for it to be useful.

Colorado Coalition for the Medically Underserved

Medicaid Focus Group Engagement: Mercy Housing Decatur Property, Denver
November 11, 2014

CCMU visited Decatur Place and had the opportunity to talk with 11 residents. These residents live at the Decatur property of Mercy Housing, an affordable housing organization, and all women are low-income, single, and have children. CCMU asked general questions about the women's experiences with Medicaid as health coverage, their ability to access health care for themselves and their families, their ability to navigate the enrollment system and care system, among other topics.

As best as we could, we have listed direct quotes organized by topical area for best understanding, but not at an attempt at interpretation or theming. Where we could not write out direct quotes, we have done our best attempt to stay true to their message. We also promised confidentiality, so no names are listed below. Each bullet point identifies a different speaker, though many of them chimed in multiple times throughout the conversation.

Administrative navigation

- "Medicaid is confusing. Up until September, I was covered through my mom, which laid out who I can go to for care. With Medicaid, I can't get a straight answer on whether someone can see me, but it's easy for my daughter. We can just go next door for her care."
- One woman has Medicaid and is a member of Denver Health. She chose to do that, but it is confusing because this is her first time having Medicaid and she is a first time mom and she wants to get her tooth fixed. Sometimes they say they won't cover it because she's over 21 but sometimes it can be covered because she has a baby. She has a tough time knowing if they will cover it, especially as a member of Denver Health. She said: "It seems like they're confused about my benefits because I'm over 21 and I'm a mother."
- "I am on Medicaid and it took me four years to get a Medicaid card and I have applied for one four times. I want my own copies because I don't know where to take my kids, and I haven't even had one for myself."
- "I used to live in Jefferson County which was really difficult but now I live in Denver and it's a whole different ball game."
- Someone else said with Medicaid customer service, you wait a very long time and may not get what you need.
- "If you are not on top of recertifying your stuff, it becomes a real mess."
- A number of residents shared their experiences about eligibility confusion with family members, and others being shifted and changed from different accounts.
- "The county system is complicated."
- "Sometimes it's a pain — in Jefferson County, if you aren't on top of re-certifying your stuff, then you have to take the day off to get it done."

- A participant said about change process of how long it takes to get Medicaid: in Jefferson County, it took 3 months (but another woman said it took her two minutes)
- Arapahoe County is difficult. One woman was pregnant and applied for Medicaid. "I had open Medicaid but they closed it before I became pregnant. They didn't approve me when I went to Arapahoe County, and it took me a month to close that case and I moved back to Denver and it was easy after that."
- Making the transition between counties easier (but two women said they had lived in a different county—Weld and Adams County—and it only took a phone call to switch everything). In the midst of switching, one had to pay $200 for health care needs she had in the transition period.
- "I was told that I could apply for my daughter in November after splitting from the child's dad and they said no, she's on his, and he didn't list my name on the application." She reported that it has been a difficult process sorting that out.
- "I have heard of a RCCO but I wouldn't be able to give you a definition."
- "I don't know ACC, but I can Google it."

Behavioral health integration

- "It would be great to have everything in one building like Kaiser. All you need to do is go there. The convenience would be great with everything you need under one roof. They would have the answers to other questions under one roof, and you wouldn't have to wait two weeks to get an answer. Let's say you are going to one doctor and they want to talk to someone else. It would be nice if within ten minutes you had your answers."
- "The same place would be much easier than just coordinating services."
- "My son now has the PCMP I had when I was a kid, so I still see her. I tell her everything and she helps me through things without medication…she's kind of my therapist."
- One woman said her psychiatrist caught her attention because he would directly get involved with everyone; she heard about people having contradictory medicines. She said: "Contradictory medicines between psychiatry and primary care is problematic."
- "Each care provider has their own specialty and that's the way it should be."
- "It's important for doctors to have that awareness of mental health concerns but recognize when that's not their strength and know when to refer; they need to have that real understanding of how it interacts with other prescriptions you may have."
- "I forgot my midwife wasn't a doctor [chuckles]. She sees me for all my lady needs. I had a therapist come in right after I had my baby to make sure I didn't have depression, and they are all connected to the hospital, which is good."
- "It needs to be joined, but Medicaid should be responsible for having the proper qualified people providing care."

- "Being diabetic and having anxiety makes me eat what I am not supposed to eat, which affects my diabetes, but if I don't eat, I go through depression, because I like cheesecake. I need someone to help me boost my motivation to be healthy."
- "I recently got really involved in my mental health because of MHCD, and they were much more helpful than Medicaid. When I found places where I was interested, they didn't even take Medicaid."
- One woman stated that coordinating would help, because "you don't want someone to say 'go take care of this' and you go do it and it's not even right."

Experiences in care

- "During my pregnancy, care has been consistent but before that, the last time I went somewhere was when I was 6 years old. Medicaid gives me benefits but only through subcontractors, so I have to go through them, making the care feel disjointed. But care isn't disjointed for my kid. It's a piece of cake."
- Another woman said that she has never had a problem getting the care she needs. She has been on Medicaid for a long time, since she was 10 or 12 years old. "It is convenient, but they only give you certain opportunities of places you can go to receive care. Sometimes it is inconvenient. We go to the dentist on 14th, and my son's tooth chipped, and they wanted to send him to Parker, which was super far, and inconvenient, because I would need to take the bus. It is tough, because it is hard to know what you are covered for and who you can go to. It can be confusing and kind of hit or miss. I'm confused; the papers I get are not too self-explanatory."
- "I want a case management approach of people being there to help, so something like a nurse family partnership."
- "Medicaid wouldn't cover a shingles injection, after I was exposed to it, because I'm not 65. They could only give me the pills if you are exposed to it, but there are people my age who have shingles. I was exposed, and the pills don't seem to work as great."
- "If there is one thing you can do, put circumcision back in Medicaid. I don't know why it was taken away in the first place. Without it, babies are at a higher risk of getting infected, because it wasn't covered... I mean, kids don't want to stay clean!"
- "I had the best care provider at West Side, but then they switched me to Denver Health, where I hated it because they made me wait so long."

Emergency room use

- "They [primary care] should stay open after hours. After all, how can you get your kid in for her annual visit when you have to work? My only choice is the ER."
- "I use the ER a lot because of my work schedule."
- "I use the ER sometimes because of location – I went fishing and my daughter had to go to the ER, and Medicaid covered most of it."

Specialty care and dental

- "It's easy to get a specialist for glasses and for dermatology, because my diabetes is messing up my skin, but I have to wait 2 months just to see a specialist only to see them for 2 minutes when I need medical attention."
- "Dental benefits on Medicaid are good. The dental side of Medicaid seems more on top of their stuff than other services."

What works

- "Preventive care is better than letting it get to the point where it is $5000 out of pocket."
- "If you need one prescription, they cover it. Maybe you have a little copay, but it's better than paying way more for that."
- "You need it; they'll cover it. There's a little copay, but it's good."
- "I got my Medicaid within 5 minutes. I got it before I even got my SNAP card."
- "I love my baby's doctor, they call my baby 'friend'."
- "My daughter has sickle cell anemia, and they treat her like top priority at the doctor's office."
- "At the downtown women's clinic, they take really good care of me as a high-risk person."
- "My nurse is the most trusted person. Others never give you a straight answer, and they say that the information is in your Medicaid package."
- "I went to a family nurse partnership and she was super helpful but other than that I was calling a bunch of places. I tried to get contacts the other day, and had a difficult time doing that."
- "The nurse family partnership is consistent, gives full attention, weighs the baby, and does just about everything. She's the main person that helps me know that my baby is okay. When she didn't know something, she went to her supervisor, and when things weren't covered by Medicaid, she would give referrals to other places."
- "Anything you need, she [the nurse] does it.... She went with me to my appointment and helped me."

What should change

- "I just stay there [at Denver Health], and don't move. I don't want to take any risks."
- "I saw a provider and he put me below the belt. Because I am a Medicaid recipient they throw me in the dirt. I see how they treat privately insured people, they get treated like royalty. Regardless of how I am insured, I am insured. Medicaid is insurance. There is no reason to feel discriminated against."
- "Nobody is a trusted source of information. No one gives me a straight answer... they're not helping us understand who we can go to."
- "I'll call here and I'll call there. I jump through all these hoops and I still can't figure it out."

- "Don't make me go all the way to St. Anthony's when Denver Health is close."
- "I want something like Denver Health but closer!"
- "Is there a difference between urgent care and Medicaid?"
- "There is definitely a lack of trust. It's so confusing. It seems like it changes all the time on us."

Colorado Coalition for the Medically Underserved

Medicaid Focus Group Engagement: Together Colorado, Aurora
November 12, 2014

CCMU visited with six participants and five volunteers of the Bridges to Care program in Aurora with the help of Together Colorado. Bridges to Care is a program funded by CMS Innovation grant to match care navigators with patients, who were experiencing highly complex health issues and appeared to not get their needs met (as evidenced by high hospitalization rates and high emergency department overutilization). Bridges to Care provides willing participants with 60 days of multi-disciplinary team-based health care, including care coordination and linking patients to primary care.

As best as we could, we have listed direct quotes organized by topical area for best understanding, but not at an attempt at interpretation or theming. Where we could not write out direct quotes, we have done our best attempt to stay true to their message. We also promised confidentiality, so no names are listed below. Each bullet point identifies a different speaker, though many of them chimed in multiple times throughout the conversation.

Navigating the system

- "For health care to work, you need to know the system, because then you will get what you need. If not, you will be 'played with' by doctors, administration, etc. People who I have interviewed, when they know the system, they say it is easy to get care. If they don't know the system, they say it is not easy to get care. Knowing the system can range from knowing how to talk so that you are heard or knowing where you can go to so that you get the right help, or knowing how to use the two to get what you need. If you are clueless, like fellow immigrants with a language barrier, they don't know where to go or who to talk to or how to talk."
- "Sometimes you can't even get past the secretary to make the changes you need to make."
- "I had a very bad day today. My sister called me. She had just left the ER on Saturday, and they said they found blood in her brain. At the ER, they told her to call a family member, and she wouldn't at the time, but she called me finally and asked for help. When she got home from the hospital, she found that her electricity had been turned off. I called University of Colorado Hospital and everybody was so rude. I wanted their help getting her heat back on. Excel Energy is asking for a form to be filled out and nobody will fill it out because they are saying this other doctor saw her, but when we tried to get the doctor's office and drove to UC Health, even with my connections, I couldn't do anything. They were so unhelpful. She was poorly treated, especially when we told them she doesn't have insurance."
- "I lost my job, and the harassment you get from the games they play makes it hard to get help for things, like lighting. For heat, maybe there is a little help. If health systems could give you connections to those social determinants of health, that would be great. I needed to go on disability, so I needed a letter, so I didn't have to volunteer, and it was easy to get it from my PCMP, but then it goes through this crazy administrative process."

- "It'd be awesome to have those other supports, especially if you need a signature from someone in the health care system."
- "If there was someone like a social worker who could evaluate people and their needs, and what they are eligible and not eligible for, and then direct them to those agencies, then that would be great. I am not sure how to address it with people with language barriers though. An initial evaluation would be a step forward."
- (As translated into English) "I've been here for 5 years, and used to have benefits with Kaiser. When I lost my insurance, four months later, I felt sick and I went to the emergency room. I had to wait for a long time, and after an hour, someone went to get me and see me. They did all these tests, and then gave me a bunch of pills. A few weeks later, I get the bill. It was $4000. I wondered why I needed to pay $4000, so I called them, and told them I had no insurance and no money. They said that's my bill. I didn't know I could apply for Medicaid, because I didn't have that information. With the bill, I even called people back home to ask for help to pay, and that's how I found out that I could apply for Medicaid. I didn't even know how to start applying, and a friend of mine gave me number [of a Bridges to Care volunteer navigator], so I went to see her and she asked if I was legal here. Since I am, she took my paperwork, and then she applied for me online. I then had an emergency, so I had to travel back home, and spend 3 months there. When I came back, I found the letter saying I was enrolled in Medicaid. I called them three days ago, and they told me they sent me a Medicaid card in the mail, but I never saw it. People need to be informed, because if I wasn't sick to go to the doctor, and then received this bill, I would've never known that I couldn't apply for public assistance with Medicaid. I found out I could see the doctor, and I wouldn't really pay anything, and I thought that Medicaid is a good thing."
- "If the state could do something better, it could give better information."
- "How does it work to get appointments in clinics? Is it prioritized for a reason? Can they even tell us?"
- "I want a central location for information and direction."

Care experiences

- "My biggest thoughts about health care and how it's managed, and the fact that it is not managed is that you go to a primary care provider, and they refer you out, and you're lucky if you can get an appointment 6 months to ten months out. I'm here in Colorado, because I got really sick and I went to a doctor, and not knowing me or my history, as I am a diabetic, he took me off all my insulin and put me on pills. A month later, I was in the hospital in a coma for six weeks. Since then, I've been hospitalized 7 additional times. The one thing that helped me through all that is Bridges to Care. They came to my home, talked to me, asked me what I was looking for, and said how I could get it. A lot of times I didn't have to do anything because they did it for me, and I'm happy to say that even though I'm not 100% yet, I'm much better than when I landed here."

- "Doctors are sparing with their time. They rely too heavily on personal assistance. It takes 3-4 weeks to schedule an appointment. Between the time you schedule your doctor's appointment and the time you show up, it's not uncommon for them to call and reschedule two or three times. Then you're stuck playing phone tag. Is the root cause money? To marginalize and put you into a palliative situation where they just throw lots of medicines at you, and don't monitor you or ask you how you are doing or not doing. Physicians at MCPN make it feel rushed."
- "If something goes wrong with your meds, you have to go to the ER. Because of Medicare price reduction, you get dropped to a cheaper medication and supposedly it's the same thing as the original, but my body thought otherwise. The folks from Bridges to Care got in touch with my doctor, and said this medicine is wrong, and it's doing something it's not supposed to do. Medicaid can't just shove you into the cheaper insulin. It may be cheaper, but it's not great for my health."
- "When a doctor is seeing you, he needs to read your whole chart, and also needs to do specific tests, regardless of the expense of the test to find out the real problem. And they need to talk to you if they plan to change your prescriptions."
- "They [doctors] need to make connections to what you need."
- "Pharmaceutical companies need to get out of the business of diagnosing people they haven't seen before."

Specialty care

- "Getting in to see a specialist is easy, since you can just go to the hospital. But getting primary care is really hard. I sat on a waiting list for 6 months, and Bridges to Care helped me with primary care access."

Benefits of Bridges to Care:

- "Bridges to Care put me right in the seat after 9 years of congestive heart failure and in a short period of time it was all done."
- "Bridges to Care is a good stop-gap measure. I've seen them [MCPN] go down steadily since the 1990s with doctor turnover. You often end up with PAs when you can't get in to see a doctor. You have to bring your own records, because they call in your medication wrong and you won't even know. They helped me with insulin, and the referrals they give you have to come from a doctor, because the doctors aren't there, so it takes forever to get a referral, and that's not counting the waiting list at University Hospital. It's scary and it's getting scarier, because people are waiting and it's getting worse."
- "Most things that are working well had to be supported by an outside group; it takes some sort of systems approach to help with that."
- "When I first came here [to Colorado], I went to this doctor and got into Bridges to Care. Through the multiple hospitalizations, I questioned the fact that I was a type 2 diabetic. I got tested and found out for 20 years I've been treated as a type 2 diabetic when I am actually a type 1. That in itself was scary. The people at University were at a loss as to

why some other things were happening to me, and I think my body just dealt with it until it couldn't anymore, leading to hospitalizations. Now I'm back into recovery. Everything I've needed is due to the stuff I'd been through, having moved to Colorado, and just feeling lousy all the time. The people at Bridges to Care actually care about how you feel. One of the nurse practitioners is amazing. She actually listened, which made a difference, which is a big problem with doctors. I've been in situations where a doctor and a pharmacist were doing my appointment, and my doctor was in and out and on his phone. He wasn't fully present."

- "At Bridges to Care, they do health care *with* you instead of telling you. They can help you with some of it but the rest is up to you which is good."
- "They really hear what you say, which makes a difference because you know yourself well and everybody is not typical."
- "Bridges to Care gets at some of that [patient navigation and supports]. They want to look at the whole picture."
- "At Bridges to Care, the nurse looked a lot at my medications, and made some decisions with respect to the dosages. They tried to figure out what I really needed. She is very alert, and they look at the whole person."

Behavioral health

- "Bridges to Care is connected with many different mental health organizations, and I go to Aurora Mental Health. I worked as a nurse for 20 years, and I'm only 59 years old, and I can't work anymore, so I have anxiety and overwhelming depression."
- "Any type of consolidation is good, so you don't have to run all over the city."
- "Please don't have Medicaid be with Kaiser, because Kaiser doesn't accept behavioral health from Medicaid. You are on your own, which is outrageous."
- "I have a lady who calls me once a month and asks how everything is going, which was very helpful."
- "A one-stop shop would be great."
- "Consolidation would be great because doctors are not getting the whole picture when they work in different places."

Dental health & care

- "You have to go to the University dental school and see if you are eligible to get treated for a root canal or infection."
- "I knew that Medicaid just added dental care for adults under DentaQuest. Prior to July of this year, if you had oral issues all you could do was pull the tooth out."
- "My daughter just got approved for a wisdom tooth removal."
- "I go to Comfort Dental and Medicaid doesn't even pay for cleaning anymore but they said they could send a request letter to them and see if they could approve it to pay a sliding scale fee."

Colorado Coalition for the Medically Underserved

Medicaid Focus Group Engagement: La Familia Family Resource Center, Fort Collins
November 20, 2014

CCMU visited La Familia Family Resource Center in Fort Collins. La Familia provides a variety of services including Family Strengthening Services, Healthy Living Programs, Early Childhood Education, Youth Programs, Adult Education, and Resource Referral. This focus group was conducted with 18 participants in the Parents as Teachers (PaT) class, mostly mothers and one father. Not all participants were covered by Medicaid, but the majority uses the system either for their children, themselves, or both.

CCMU asked general questions about their experiences with Medicaid coverage when applicable, their ability to access health care for themselves and their families, among other topics.

As best as we could, we have listed direct quotes organized by topical area for best understanding, but not at an attempt at interpretation or theming. Where we could not write out direct quotes, we have done our best attempt to stay true to their message. Almost all of the focus group was conducted in Spanish, with the help of a translator of the staff of La Familia, which made this especially tricky for directly quoting the participants.

We also promised confidentiality, so there are no names listed below. Each bullet point identifies a different speaker, though many of them chimed in multiple times throughout the conversation.

Navigating the system of care:

- About half of the participants in the room the room said they had a provider they liked and visited regularly.
- In the Salud Clinic in the area, the providers are great. It is the receptionists who are rude, and have a poor attitude.
- Parents went for a physical for one of their children, and asked if the providers could see their other two children as well because they were sick, and they were told no.
- One participant brought her daughter to the emergency room for an ear infection, and was given antibiotic drops. The ER staff said that they should follow up with their primary care provider in three days. But they wouldn't see her at Salud in that short notice, so she had to go back to the ER.
- "They told me the same thing. To follow up within three days. But at PVP [Poudre Valley Hospital, which is now University of Colorado Hospital], even if I call at about 1:00 in the afternoon, I can see them the same day."
- One participant noted that there are so many people on Medicaid who need care, so people tend to go to places with bad services, because the places with good service cannot support everyone.
- Other clinics are not accepting new patients, so La Familia staff struggle to refer to other locations with better services.

- It is very hard to bring both of one parent's kids into Salud Clinic, as they could not make two appointments in one day.
- "I have the same problem. It is the only bad thing about the clinic."
- "I would change my clinic."
- One participant believed the issue was that the way the clinics are managed are the reason they are so full. They are not efficient enough.
- Other participants believed they just need more clinics in the community.

Using Medicaid benefits:

- One participant said that Clinica de Salud always has good service. She clarified that the physical health care has been good, but dental is not covered by Medicaid.
- Many participants reported that some of the dentists in the community are charging people with Medicaid for services that other dentists are not.
- One woman stated that she had been told by her dental provider's staff that Medicaid has cut down on some of the budgeting for the service, and will cover less now. Others in the room agreed that they have started needing to pay more for their services.
    - NOTE: Participants were asking CCMU why Medicaid had "cut" dental services. We could not answer that question, because to our knowledge, dental has not been cut.
- "I went to the dentist [at ToothZone] and the cleaning was covered and the varnish was not covered so my children did not get a varnish."
- "North Beach [another local clinic] covers everything."
- "I used to go through ToothZone. They told me 'You need to pay for this, and you have to pay for certain amount of things out of your pocket.' And then I went to North Beach and I don't have to pay for nothing. And they recommended me to a good person for my daughter's braces who accepts Medicaid."
- One participant asked if there are clinics where Medicaid will cover everything for kids dental.
- Another participant shared that Mountain Clinic covered braces and all the services her kids needed.
- A participant said that her daughter has three vision visits covered for every year. However, when her daughter was identified as needing vision therapy, Medicaid won't cover it.
- One woman noted that Medicaid won't cover any of the sun protection needed for her daughter's glasses at the same place where they do cover her daughter's visits. The sun protection was prescribed by the doctor.
- Participant said that one of the problems with Medicaid is that it is not accepted all the clinics.
- "Medicaid covers the same percentage of the mental health appointments as physical health. If they cover 20 and I pay 20 for a physical health appointment, they cover the same. If it's 50/50, that's what they cover."

  - NOTE: CCMU believes that they were referring to copayment versus how the clinic is paid by Medicaid. If the patient has to pay 20, the clinic will get 20, and same with 50/50. We were unable to clarify this point.
- One participant asked if she had to renew Medicaid every year.
- "I always receive dos [two] copies of the letters."
- "Sometimes my children have two prescriptions given to them by a doctor of the same medication but Medicaid only covers one. [And he needs to take both doses in a month]. This happens at Walgreens."
- Many participants agreed they wanted better coverage of services in the clinics and the hospital, and better treatment.
- One participant said at the end of the session: "Thank you very much for being here. Sometimes, we feel like things will never be changed. Maybe now they will be changed."

Language barriers:

- One participant shared that the Family Medicine Center does not speak Spanish but has great service. The receptionists are nice and the doctors are very nice.
- "When I was pregnant, I had a psychological issues... they [Salud] gave me phone numbers for a referral, but I could not find anyone who spoke Spanish."
- "I had the same experience at PVP but they were very quickly gave me numbers for people who spoke Spanish."
- "The biggest issue is that the language. It is the only thing."

Perspectives from La Familia Staff:

NOTE: Since La Familia is so heavily involved in assisting their constituents through the system, we wanted to learn their perspectives on how Medicaid is doing.

- "When we call the customer service line for Medicaid, which we do for our clients, we are on the line for hours. We often get disconnected and have to start all over again. It is incredibly frustrating."
- "I do the bilingual application process. The Spanish application is okay. For the most part, the Spanish is okay... I mean, there are some weird things on it. Whether or not, people would be able to fill it out themselves would be based on their comfort with filling out forms... So they write things on the wrong line. They're just not familiar with the amount of paperwork we fill out in our culture. But if you just immigrated here, then you might not know how to fill that out. PEAK, on the other hand, is totally user-friendly... I like PEAK...and they do have it in Spanish. But then we have a problem with computer literacy."
- "I guess I would say my biggest complaint is the wait time. I don't think I have *ever* been waiting on hold for less than 45 minutes minimum. Now, at least I get paid to wait on the phone for people. I cannot imagine how hard it must be for folks that work full-time and cannot afford to take that time out of their day to make those calls. For this, I have a couple of suggestions. Obviously, if there was the ability to hire more phone technicians, that would help things. Also, I called a different hotline the other day, though I can't remember what it was, and they had some sort of system where they would put you on

the waitlist and then call you back when it was your turn. So brilliant! It gave me more freedom to get other work done while I was waiting. Yes, I still had to have my phone on me but at least I was able to leave the room, use the restroom, and other things like that."

- "As far as the technicians themselves, I have had overwhelmingly positive experiences. Aside from maybe one or two people, everyone I have spoken to has been very nice and helpful. The few times that were unpleasant, the DHS technicians refused to help me because my information was not directly listed on the application even though I'm calling from an organization, I know all of the client's personal information, and I list my information on the cover letter when I drop off a paper application at DHS. I understand that they are probably following protocol; it's just frustrating for me because I waited so long and now I can't help the client. There's a form that some technicians have told me to have the client fill out so then I will be able to access that information. However, I cannot find the form anywhere. A technician had to email it to me personally and she only sent it to me in English. Not very helpful. Like I said, however, those experiences have thankfully been few. The majority of the time, the technicians do everything they can to help me and my clients to make sure that everything works out for them. They have all seemed compassionate and like they care about what happens to folks as well."
- "I have also called Maximus maybe once or twice. In case you don't know, this is the company that DHS contracts out some applications to. I get the sense that they are an even larger conglomerate so it's even more difficult reaching anyone from there and those that I have spoken to did not come across as friendly or helpful."

Colorado Department of Health Care Policy and Financing

RFI Response Received and Recorded.

Notes:

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Venus Mann, Department of Family Medicine
Location: Aurora, CO

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: University Physicians, Inc.
Location: AF Williams Family Medicine
☒ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☒ Medical provider / PCMP / other provider
  i. Type or specialty: Primary Care
  ii. Area of practice: Family Medicine and Behavioral Health
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☐ Other (please describe): Click here to enter text.

Are you currently involved in the ACC program?

☒ Yes
☐ No

If you answered "yes" above, how long?

☒ 3-4 years

How have you been involved in the ACC program and what interaction have you had with RCCOs:

I have been the key point person for UPI with Co Access and have been actively engaged and represented the PCMPs that are part of UPI

Please briefly describe your involvement with Medicaid, either in Colorado or another state:

I am a participant of the HCPF ACC Statewide Shared Savings Payment Committee

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☒ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

Our relationship with CO Access is working extremely well and their organization has done an incredible job as the RCCO for regions 2, 3 and 5. They personify the meaning of care collaborative and their organization has evolved to accommodate all of the changes, has been service oriented and has strong executive leadership at the helm.

2) What is not working well in the ACC Program?

For UPI, we have been struggling with attribution and have been working to find a solution since inception. UPI has a challenging situation whereby we have one tax ID # as an organization but multiple primary care clinic locations that cross separate hospital system we are challenged by tracking our respective membership attribution, tracking our KPIs and dividing up the dollars at the end of the day. We were informed that the enrollment broker, Health Colorado, might have the ability to assign a two digit identifier to each clinic location for clients who call in to select a PCMP, but we've been unable to determine if this is possible and/or affect this change.

3) What is working best in the Behavioral Health Organization (BHO) system right now?

4) What is not working well in the BHO system?

5) What is working well with RCCO and BHO collaboration right now?

6) What is not working well with RCCO and BHO collaboration right now?

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

   a) We would like for the ACC to reimburse our behavioral health providers for Health and Behavior (H&B) Codes; we have a fully integrated BH model embedded at AF Williams and are unable to receive reimbursement for H&Bs which defeats the purpose of our model.
   b) For the SIM grant to be awarded to the State of Colorado!

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	Barrier? No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☒	☐	Reimburse for Health and Behavior Codes or reimburse based on a pmpm amount.
Community Behavioral Health Services Rule	☐	☐	
Covered diagnoses list	☐	☐	
Different behavioral / physical health reimbursement	☒	☐	See above; reimburse for TelePysch.
Institutions for Mental Diseases exclusion	☐	☐	
OBH rules, reporting, or financing (regulatory differences between agencies)	☐	☐	
PCMP financing structure	☐	☐	
Per-member per-month amount	☒	☐	A PMPM payment for behavioral health would help defray our costs and assist other PCMPs in their ability to provide behavioral health services
Physical space constraints	☐	☐	
Privacy Laws (HIPAA, 42 CFR)	☐	☐	
Professional / cultural divisions	☒	☐	If Specialists were also paid more favorably we would have an easier time getting our patients access. Additionally, if the Hospital partnered organizations that run our clinics were also paid differentially it would incentivize them to take more Medicaid patients and encourage a level playing field.
RCCO or BHO contracts	☐	☐	
Staff capacity	☐	☐	
State/Federal rules or reporting requirements	☐	☐	

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

Technical resources / data sharing	☒	☐	Need to incorporate COHRIO data and clinical data to round out data outcomes/data sets
Training	☐	☐	
Others	Please type your response here.		

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

PCMH 2014 Level 3 Recognition or CPCI practice with embedded BH providers.

10) Please share any other general advice or suggestions you may have about behavioral health integration.

Pay for TelePsych.

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination?

The best definition is multifaceted and the following lumps care coordination and care management together:

- Attend clinic visits with patients for agenda setting and care coaching.
- Liaison with patients, families, providers, and specialists to ensure adequate and appropriate care.
- Assist with coordination of care and access to care (particularly with UCH specialists).
- Coordinate care with Colorado Access Care Managers for RCCO and AA members.
- Coordinate communication with community providers (APS, Dialysis SW, housing facilities)
- Provide patients with community resource information (Dental, food, MH, financial assistance, etc).
- Housing information (largest social need for AFW patients).
- Arrange transportation via First Transit and Access-A-Ride.
- Assist with transitions of care and necessary medical follow-up.
- Assist with developing Shared Care Plans in EPIC.

b. How should RCCOs prioritize who receives care coordination first?

c. How should RCCOs identify clients and families who need care coordination?

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

There should be a shared platform or a link between our EHR and CO Access' care coordination software. Another option would be to actually embed a care manager in the practices.

12) What services should be coordinated and are there services that should not be a part of care coordination?

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today?

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

d. What are the gaps in care coordination across the continuum of care?

For the University outpatient practices we are in need of social workers to help arrange services for the RCCO members. Currently there are no resources available for the outpatient clinics.

15) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	Should the RCCO have a role? Yes	No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma	☐	☒	☐	
Affordability (assistance with prescriptions or co-pays)	☐	☒	☐	
Daycare / childcare	☐	☒	☐	
Economic stability & employment	☐	☒	☐	
Education	☐	☒	☐	
Environment	☐	☒	☐	
Food access / nutrition	☐	☒	☐	

Health literacy	☐	☒	☐	
Housing	☐	☒	☐	
Language or translation services	☐	☒	☐	
Literacy	☐	☒	☐	
Transportation	☐	☒	☐	
Other	Please type your response here. Feel free to list as many non-medical factors as you want, and please explain how the RCCO should be involved.			

16) **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	**Coordinate care?** Yes	No	**In what capacity should these individuals coordinate care in the ACC Program?**
Advanced Practice (Registered) Nurses	☐	☒	
Certified Addiction Councilors	☒	☐	
Certified Nurse Midwives	☐	☐	
Community Health Workers	☐	☐	
Generalists (BA/BS/MA/MS)	☒	☐	
Health Coaches	☒	☐	
Licensed Clinical Social Workers	☒	☐	
Licensed Marriage and Family Therapist	☐	☐	
Licensed Mental Health Counselors	☐	☒	
Licensed Professional Counselor	☐	☐	
Masters of Public Health	☐	☐	

Medical Doctors / Doctors of Osteopathic Medicine	☐	☒	
Nurse Practitioners	☐	☒	
Patient Navigators	☒	☐	
Peer Advocates	☒	☐	
Promotoras	☐	☐	
Psychiatrists	☐	☒	
Psychologists	☐	☒	
Registered Nurses	☐	☒	
Social Workers	☒	☐	
Wraparound facilitators	☒	☐	
Other	Care Managers.		

17) **Care coordination requirements for specific populations.** Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and infants	☐	☐	
Children	☐	☐	
Children who are healthy, but in socially-complex environments	☐	☒	
Children involved in the foster care system	☐	☐	
Children with a chronic illness	☐	☒	
Children with a serious emotional disturbance	☐	☒	
Children with medical complexity	☐	☐	
Children or youth with a behavioral health diagnosis or substance use disorder	☐	☒	
Transition-age adolescents	☐	☒	
Parents and families	☐	☒	
Pregnant women	☐	☒	
Adults	☐	☐	
Adults who are healthy, but in socially-complex situations	☐	☒	
Adults with a chronic illness	☐	☒	

Adults with a behavioral health diagnosis or substance use disorder	☐	☒	
Clients involved in the criminal justice system	☐	☐	
Clients with a disability	☐	☒	
Clients in a nursing facility	☐	☐	
Elderly clients	☐	☒	
Frail elderly clients	☐	☒	
Clients in palliative care	☐	☒	
Other populations, please comment:			

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

19) How should care coordination be evaluated? How should its outcomes be measured?

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

a. What is the PMPM cost for providing care coordination services?

$6-8pmpm

b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

Wouldn't recommend it. Would make payment tracking within UPI too complicated.

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

a. **Care coordinator to client ratios.** If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐

26-50	☐
51-100	☐
101-200	☐
201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

Data reporting; embedding care managers into larger clinics

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

Our outlying clinics (that are part of UPI but operate in other Regions with different RCCOs) would potentially participate but our organization doesn't have the capacity or desire to participate in 3 different RCCOs.

27) Should the RCCO region maps change? Why or why not? If so, how?

It would be incredible helpful to our organization if there was only one RCCO for Regions 1-7.

28) Should the BHO region maps change? Why or why not? If so, how?

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

SIM Grant award.

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

No, absolutely not.

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

34) What role should RCCOs play in attributing clients to their respective PCMPs?

A much more active role, particularly for UPI due to our attribution difficulties.

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

The PCMPs and the RCCOs should have direct access to communication with Connect for Health Clorado.

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

The option to provide a patient navigator embedded social worker/care manager in the clinic itself.

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

42) How should the Department structure stakeholder engagement for the ACC as a whole?

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

a. If no, what are the gaps?

b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

a. What role should hospitals play in the next iteration of the ACC Program?

They should have some sort of skin in the game; especially since our hospital manages and staffs the clinics.

b. What role should pharmacies play in the next iteration of the ACC Program?

c. What role should specialists play in the next iteration of the ACC Program?

d. What role should home health play in the next iteration of the ACC Program?

e. What role should hospice care play in the next iteration of the ACC Program?

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

g. What role should counties play in the next iteration of the ACC Program?

h. What role should local public health agencies play in the next iteration of the ACC Program?

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

45) How can RCCOs help to support clients and families in making and keeping appointments?

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

47) **Community Health Worker reimbursement.** Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement process	(Please check all that apply)
Independently bill	☐
On staff (salary) at Primary Care Medical Provider Clinic	☐
On staff (salary) at RCCO	☐
Per Member Per Month Payment	☐

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you?

b. What RCCO requirements would ensure cultural competency?

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

51) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

52) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

Practice Support

53) **Support for practices.** Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☒	☐	☐	☐
Network provider education	☒	☐	☐	☐
Assistance with practice redesign	☐	☐	☐	☐
Assistance with efficiency-enhancing activities	☐	☐	☐	☐
Provide web-based resources and directories	☒	☐	☐	☐
Provide practice-specific data reports	☒	☐	☐	☐
Provide clinical care guidelines and best practices.	☒	☐	☐	☐
Provide clinical screening tools	☐	☐	☐	☐
Provide health and functioning questionnaires	☐	☐	☐	☐
Provide chronic care templates	☐	☐	☐	☐
Provide registries	☒	☐	☐	☐
Offer client reminders	☐	☐	☐	☐
Offer client self-management tools	☒	☐	☐	☐
Offer educational materials about specific conditions	☐	☐	☐	☐
Supply behavioral health surveys	☐	☐	☐	☐
Supply other self-screening tools	☐	☐	☐	☐
Administer behavioral health surveys	☐	☐	☐	☐
Administer other self-screening tools	☐	☐	☐	☐
Prepare client action plans	☐	☐	☐	☐
Provide training on providing culturally-competent care	☐	☐	☐	☐
Provide training to supporting staff	☐	☐	☐	☐
Provide training on motivational interviewing	☐	☐	☐	☐
Provide tools and software for phone call and appointment tracking	☐	☐	☐	☐
Provide tools and resources for tracking labs, referrals, etc.	☐	☐	☐	☐
Provide referral and transitions of care checklists	☐	☐	☐	☐
Provide visit agendas or templates	☐	☐	☐	☐
Provide standing pharmacy order templates	☐	☐	☐	☐
Provide comprehensive directory of community resources	☒	☐	☐	☐
Provide directory of other resources	☐	☐	☐	☐
Provide materials regarding Nurse Advice Line	☐	☐	☐	☐
Ensure all tools and resources are centrally located on RCCO-specific website	☒	☐	☐	☐
Others				

54) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

55) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

56) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

A PMPM.

57) Should the Department require that PCMPs utilize disease registries to manage the health of their population?

58) Please share any other advice or suggestions about provider support in the ACC.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

See Answers to questions 1-10.

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

Yes. We would prefer a separate capitation payment for primary care and additional payment for behavioral health services. The services under primary care would include, but not be limited to:

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

62) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

63) What role – if any – should the RCCOs play in the distribution of payments to providers?

A major role – instead of HCPF.

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

Implement something similar to the CPCI project and pay the PCMPs an enhanced pmpm for providing those specified services to clients

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

Being recognized as a PCMH and having clear clinically important conditions that the PCMPs can have a direct impact on other than the current KPIs.

66) **Measuring Client experience.** Please complete the table below to indicate how the Department should measure Client/patient experience:

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☒	☐	
SF-12 Health Survey	☐	☐	
Other types of client interviews / surveys	☐	☐	
Patient Activation Measure	☒	☐	
Focus groups	☒	☐	
Other	Please type your response here.		

67) Knowing that, at this time, the Department only has claims data, how should population health be measured?

Need to incorporate COHRIO data and clinical data to round out data outcomes/data sets. Should be tracking patients longitudinally.

68) How should quality and performance data be reported to the RCCOs, PCMPs, and the public?

69) **Measures for payment.** Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☒
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐

None	☐

70) What percent of RCCO payments should be tied to measures or performance?

Percentage	
10-20%	☒
21-30%	☐
31-40%	☐
41-50%	☐
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

71) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?

Ideally yes, but depends on the population age range.

72) Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?

That's an intriguing idea. It would support skin in the game.

73) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

Yes.

74) **Incentive payment frequency.** Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	☒
Annually	☐
Other	☐

If you checked the "Other" box, please describe payment frequency below:

75) For potential offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

N/A.

76) For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

The following criteria are considered Key Performance Indicators and if we meet the established benchmarks for performance, we receive a prorate portion of the $1pmpm withhold for KPIs.

- Well Child Checks
- ER Visits
- Hospital Readmissions
- High Cost Imaging

Health Information Technology (HIT)

77) **Types of communication.** For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	☐
Text message	☐	☐
Web portal	☐	☐
Email	☐	☐
Telemedicine / Video chat	☐	☐
Face-to-face meeting	☐	☐
Smartphone app	☐	☐
Other:		

78) **HIT investments by organizations.** For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below:

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	☐	☒
Digital care management tool	☐	☐
Care transitions alerts	☐	☐
Electronic Health Records (EHRs)	☒	☐
Health risk assessment software	☐	☐
Practice assessment tools	☐	☐
Practice management tools (scheduling, billing)	☒	☐
Client web portal for communicating care plan, services, benefit enrollment	☒	☐
Patient education/wellness tools	☒	☐
Provider/case manager directory	☐	☐
Shared decision-making tools	☐	☐
Telemedicine software	☐	☒
Other:	☐	☐
Other:	☐	☐

79) **Importance of technology by type.** The Department is working to determine what technology is in place, what technology is needed, and what technology should be standardized. For RCCOs, providers, and other organizations, use the table below to answer what HIT infrastructure outside of the 5DAC your organization would use to perform population health management activities. Tools are scored from 1-5, where 1 are those items least-likely to be used, and 5 are items most-likely to be used:

Tool	1 Least	2	3	4	5 Most
Population analytics / reporting / dashboard	☐	☐	☐	☐	☒
Care management tool	☐	☐	☐	☐	☒
Care transitions alerts	☐	☐	☐	☐	☒
Electronic Health Records (EHRs)	☐	☐	☐	☐	☐
Practice assessment tools	☐	☐	☐	☐	☐
Health risk assessment software	☐	☐	☐	☐	☒
Practice management tools (scheduling, billing)	☐	☐	☐	☐	☐

Provider/case manager directory	☐	☐	☐	☐	☒
Shared decision-making tools	☐	☐	☐	☐	☐
Telemedicine	☐	☐	☐	☐	☒
Other:	☐	☐	☐	☐	☐

80) What are the primary barriers to RCCOs and providers increasing their use Health Information Technology to improve the performance of Primary Care Practices?

81) How can Health Information Technology support Behavioral Health Integration?

82) In the next iteration of the ACC, should there be a shared resource for data and analytics? Please describe the basic criteria for what a shared data and analytics platform needs to contain in order for it to be useful.

83) Should there be a shared care management tool? Please describe the basic criteria for what a care management tool would need to contain in order for it to be useful.

84) 5hould there be a shared population health management tool? Please describe the basic criteria for what a population health management tool would need to contain in order for it to be useful.

85) Please describe the functionality that a common Medicaid provider directory would need to contain in order for it to be useful.

86) How can the RCCOs support providers' access to actionable and timely clinical data?

87) What are the HIT solutions that would benefit clients, providers, and RCCOs? Please comment on the parameters these tools or platforms would need to possess and the ways in which they could be used.

88) What technical assistance or resources related to HIT infrastructure should the RCCOs supply? This assistance or these resources could be for providers, social service organization, clients/families, or for others.

89) What role should health information exchange platforms like CORHIO or QHN play in the next iteration of the ACC?

90) Please share any information, advice, and suggestions you have about health information technology in the ACC Program.

Colorado Department of Health Care Policy and Financing

RFI Response Received and Recorded.

Notes:

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Todd J. Lessley
Location: Fort Lupton, Weld, Colorado

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Salud Family Health Centers
Location: Fort Lupton, Weld, Colorado
☒ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☒ Medical provider / PCMP / other provider
  i. Type or specialty: Click here to enter text.
  ii. Area of practice: Click here to enter text.
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☐ Other (please describe): Click here to enter text.

Are you currently involved in the ACC program?

☒ Yes
☐ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☐ 3-4 years
☒ Since before the program was implemented.

How have you been involved in the ACC program and what interaction have you had with RCCOs:

Salud is a Primary Care Medical Provider in four of seven ACC regions and has formal Care Management delegation agreements with Colorado Access (RCCO 2 and 3) and Colorado Community Health Alliance (RCCO 6). In region 1, Salud has partnered with Rocky Mountain Health Plans (RCCO 1) and delegated the role of Care Management in Fort Collins to an interdisciplinary Care Management effort called the Medicaid Accountable Care Collaborative (MACC) Team.

Collaborative RCCO partnerships allow Salud to insure care is efficiently coordinated and attributed members access a full spectrum of integrated care both in Salud's clinics and the community. Through participation in multiple ACC advisory committees, Salud helps provide guidance to HCPF and RCCO partners on innovative methods of clinical transformation and integration. Salud is committed to ACC implementation and believes that continued RCCO collaboration is essential to the future of health care delivery and Medicaid payment reform in Colorado.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:

Salud is a Federally Qualified Health Center (FQHC) and receives funding under Section 330 of the Public Health Service Act (PHS) to provide care to underserved populations including Medicaid recipients in Colorado. Salud has a longstanding commitment to the Medicaid population and is the healthcare home to tens of thousands of Colorado Medicaid recipients. Salud is committed to providing medical, dental and behavioral health services are coordinated and integrated to best respond to the needs of each patient.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☒ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

Please feel welcome to describe why or why not using the space below.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

The per member per month (PMPM) poyments thot ollow us to develop innovotive progroms not bosed on foce-to-foce visits by licensed providers but insteod bosed on whot potients need to improve heolth ond decreose costs to the system.

2) What is not working well in the ACC Program?

We ore not olwoys sure whot the money thot goes to the RCCOs is being spent on. More money should go to where the work is being performed ond where the innovotion is hoppening.

3) What is working best in the Behavioral Health Organization (BHO) system right now?

The BHOs ore doing o better job of working colloborotively with Community Heolth Centers (CHC). Some ore oheod of others in this regord, but the best ore plocing stoff within the CHCs ond developing fully integroted progroms bosed on potient need, not on odministrotive poperwork like the Colorodo Client Assessment Record (CCAR).

4) What is not working well in the BHO system?

The CCAR is still required ofter o few visits, which ties up provider time ond odds nothing to quolity of core. Some BHOs ore behind in colloboroting with CHCs. We continue to believe thot money should go to where the work is being done. For most potients with mentol heolth disorders, thot meons the money should go to providers working in primory core clinics. It doesn't motter to us whether thot provider is employed by the Community Mentol Heolth Center (CMHC) or the CHC os long os they ore working within the wolls of the primory core clinic. As with RCCOs in the ACC progrom, we wonder obout the volue of BHOs. Are the BHOs necessory ond the odministrotive (overheod) cost of these entities odding volue?

5) What is working well with RCCO and BHO collaboration right now?

It seems to us thot the colloborotion hoppens below the level of the RCCOs ond BHOs. It hoppens ot the level of the individuol institutions. We don't see much, if ony colloborotion ot the RCCO ond BHO level.

6) What is not working well with RCCO and BHO collaboration right now?

See obove

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

The BHOs odministrotive costs move o lot of money owoy from octuol heolthcore, ond offer very little if onything in return. To improve behoviorol heolth integrotion, Colorodo should direct funding towords the institutions octuolly doing the work, including the CMHCs ond the CHCs.

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	Barrier? No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☒	☒	*This is nat a borrier far the mare pragressive CMHCs, however funding that should be gaing ta mental health care is being directed ta BHO administrotive casts. To imprave behaviaral health integratian, Colarada should direct funding tawards the institutians actually daing the wark (i.e. CMHCs).*
Community Behavioral Health Services Rule	☐	☐	
Covered diagnoses list	☒	☐	
Different behavioral / physical health reimbursement	☒	☐	*Behaviaral healthcare takes mare time and is aften mare camplicated than physical health care, yet it reimburses as a lawer rate. The funding af Medicaid behaviaral and physical health shauld be integrated ta make primary, preventive and behaviaral health services mare efficient and patient centric. The maney shauld fallaw the patient; thus, if a patient receives his/her behaviaral health care at a CHC, the CHC shauld be able to bill HCPF directly.*
Institutions for Mental Diseases exclusion	☐	☐	
OBH rules, reporting, or financing (regulatory differences between agencies)	☒	☐	*This is a borrier, but not a major one becouse we con come up with ways oround it.*
PCMP financing structure	☐	☒	
Per-member per-month amount	☐	☒	
Physical space constraints	☐	☒	
Privacy Laws (HIPAA, 42 CFR)	☒	☒	*In an effart ta enhance integratian and caardinatian af physical and behaviaral healtn and build an effective medical neighborhaad, the department shauld provide direction beyond just the RCCO – Medicaid pravider relatianship. Additianal clarity shauld be pravided regarding infarmatian sharing araund behaviaral health and substance use issues.*

[2] Mare infarmatian abaut these rules, payment types, and entities can be faund in the Appendix at the end af the dacument.

Professional / cultural divisions	☒	☐	*Definitely surmountoble.*
RCCO or BHO contracts	☒	☐	*Colorodo should minimize RCCO or BHO odministrotive costs ond direct funding towords the institutions providing potient core.*
Staff capacity	☐	☒	
State/Federal rules or reporting requirements	☐	☒	
Technical resources / data sharing	☐	☒	
Training	☐	☒	
Others	Please type your response here.		

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

They should meet the integration criteria outlined by CJ Peek, et al. Whole person primary care requires that the entity meet the definition of primary care, meaning that the organization is accountable 24/7 for the vast majority of needs for which people make first contact with the healthcare system. Having a Physician Assistant (PA) in a clinic one half day per week does not make you a primary care clinic.

10) Please share any other general advice or suggestions you may have about behavioral health integration.

Be careful about what they call 'reverse integration.' The requirements to be a Patient Centered Medical Home (PCMH) are the same whether one starts as a CHC or as a CMHC. The standard is not lower for a CMHC adding a part time PCP.

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination?

The deliberate organization of patient care activities between two or more participants (including the patient) involved in a patient's care to facilitate the appropriate delivery of health care services. Organizing care involves the marshaling of personnel and other resources needed to carry out all required patient care activities, and is often managed by the exchange of information among participants responsible for different aspects of care.

Reference:

- *NCQA 2014 6:B1 "At least two measures related to care coordination"*

b. How should RCCOs prioritize who receives care coordination first?

RCCO's should follow evidence-based guidelines and national standards when prioritizing patients to receive care coordination. Special attention should be paid to vulnerable populations or those who are made vulnerable by their financial circumstances or place of residence, health, age, personal characteristics, functional or developmental status, ability to communicate effectively and presence of chronic illness or disability and include people with multiple co-morbid conditions or who are at high risk for frequent hospitalization or ER visits.

Reference:

- *NCQA 2014 6:A4 "Performance data stratified for vulnerable populations"*

c. How should RCCOs identify clients and families who need care coordination?

RCCOs and delegated practices should establish systematic processes and criteria for identifying and prioritizing patients who may benefit from care coordination.

This process should consider:

Behavioral health conditions: *May include the following or a combination of the following; diagnosis of behavioral health issue, psychiatric hospitalizations, substance use treatment, positive behavioral health screening (from a standardized tool including substance use).*

High cost/high utilization: *The Department should agree on specific and standardized criteria related to high cost and utilization that may include – potentially preventable ER visits, 30 day hospital readmissions, unusually high numbers of lab tests or diagnostic imaging, unusually high number of prescriptions, high-cost medications, secondary specialist referrals and/or alerts from hospitals indicating high cost or high utilization.*

Poorly controlled or complex conditions: *This may include patients who consistently fail to meet treatment goals or have multiple comorbid conditions (i.e. continued abnormally high hemoglobin A1C, high blood pressure or high cholesterol).*

Social determinants of health: *Processes should be developed to identify patients based on social determinants of health.*

Referrals by outside organizations: *A standardized process should exist by which external entities, practice staff or patients, families and caregivers can request care coordination.*

Cross RCCO evidence-based risk stratification methodology: *This methodology could include a combination of the aforementioned considerations and would be standardized across RCCO's to ensure comparable identification for care coordination.*

Reference:

- *NCQA 2014 4:A "Identify Patients for Care Management"*

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

Monthly core coordination metrics (standard across RCCOs), annual Health Services Advisory Group (HSAG) audits and quarterly RCCO meetings to ensure alignment of care coordination population management efforts.

12) What services should be coordinated and are there services that should not be a part of care coordination?

All services in the patients care should be coordinated and integrated to best meet the individual needs of the patient and family.

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

Core Coordination Data: *In order to effectively identify patients who may benefit from core coordination a practice must have information related to behavioral health conditions, hospital and specialist reports, lab data and pharmacy information.*

Health Assessment: *A comprehensive health assessment is necessary to understand the unique needs of patients and their families. Individuals providing core coordination should complete comprehensive health assessments including information regarding: characteristics of family/social structure and culture, communication needs, medical history, advanced directives, behaviors affecting health, mental health and substance use. Developmental screening, depression screening and assessments of health literacy would also provide useful information to assist in care coordination.*

Reference:

- *NCQA 2014 3:C "Comprehensive Health Assessment" & NCQA 2014 4:A "Identify Patients for Care Management"*

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today?

Today there are multiple care coordination models occurring across the State and RCCO communities. The Solid Care Management Program is committed to improving health and reducing healthcare costs by offering comprehensive, individualized Care Management that empowers high-risk patients with the ability to make healthy choices, improve health outcomes and enhance the client experience. The Solid Care Management team insures that care is coordinated to address the medical, dental, behavioral and social needs of all patients.

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

Many non-PCMP providers offer care coordination that may differ from RCCO or ACC care coordination; a primary difference is that outside care coordination is not driven by RCCO or ACC key performance indicators (KPI) or incentives.

c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

Reducing fragmentation is essential to effective care coordination across the medical neighborhood. The ACC could avoid duplication and disruption of current care coordination relationships through:

***Facilitation of collaboration and accountability** – All members of the medical neighborhood including but not limited to; PCMPs, hospitals, specialists and community agencies must collaborate and determine who will assume overall responsibility for organizing care.*

***Member support** – Patients and families must have access to dedicated staff that can assist in answering questions, minimize confusion and address the logistical challenges of care coordination. If support is telephonic, wait times should be minimal (≤1 minute).*

***Relationships and agreements** – All organizations involved in care coordination must agree on the purpose of care coordination and the role each will play in providing care. Relationships should be identified and standardized agreements should be developed to promote seamless communication.*

***Connectivity** – A cross RCCO information transfer system should be created to allow care coordinators to securely transfer electronic information across RCCOs.*

Reference:

- *Reducing Care Fragmentation: A Toolkit for Coordinating Care. (Prepared by Group Health's MacColl Institute for Healthcare Innovation, supported by The Commonwealth Fund), April 2011.*

d. What are the gaps in care coordination across the continuum of care?

Gaps in care coordination may include but are not limited to:

- *Standardized real-time hospital admission and emergency department notifications*
- *Standardized cross disciplinary information sharing platform*

- *Effective and accessible health infarmotion exchonge*
- *Hospital olignment with KPIs reloted ta hospitol odmissians ond emergency department use*

15) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	Should the RCCO have a role? Yes	No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma	☒	☐	☒	
Affordability (assistance with prescriptions or co-pays)	☒	☐	☒	
Daycare / childcare	☒	☐	☒	
Economic stability & employment	☒	☐	☒	
Education	☒	☐	☒	
Environment	☒	☐	☒	
Food access / nutrition	☐	☐	☒	
Health literacy	☒	☐	☒	
Housing	☒	☐	☒	
Language or translation services	☒	☐	☒	
Literacy	☒	☐	☒	
Transportation	☒	☐	☒	*The Non-Emergent Medical Transportotian (NEMT) Medicaid benefit is not odequotely meeting tronspartotion needs ond steps*

			should be taken to address this problem at a RCCO and Department level.

Other

Please type your response here. Feel free to list as many non-medical factors as you want, and please explain how the RCCO should be involved.

RCCOs should have a role AND coordinate with community supports and services in all above listed categories. The most important role for the RCCO should be to work on the social determinants of health, the RCCOs should coordinate services that fall outside of primary care services.

16) **Requirements about who should be doing care coordination**. Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	Coordinate care? Yes	Coordinate care? No	In what capacity should these individuals coordinate care in the ACC Program?
Advanced Practice (Registered) Nurses	☒	☐	
Certified Addiction Councilors	☒	☐	
Certified Nurse Midwives	☒	☐	
Community Health Workers	☒	☐	
Generalists (BA/BS/MA/MS)	☒	☐	
Health Coaches	☒	☐	
Licensed Clinical Social Workers	☒	☐	
Licensed Marriage and Family Therapist	☒	☐	
Licensed Mental Health Counselors	☒	☐	
Licensed Professional Counselor	☒	☐	
Masters of Public Health	☒	☐	
Medical Doctors / Doctors of Osteopathic Medicine	☒	☐	

Nurse Practitioners	☒	☐	
Patient Navigators	☒	☐	
Peer Advocates	☒	☐	
Promotoras	☒	☐	
Psychiatrists	☒	☐	
Psychologists	☒	☐	
Registered Nurses	☒	☐	
Social Workers	☒	☐	
Wraparound facilitators	☒	☐	
Other	Please type your response here. *Everyone who has contact with a patient should be at least partly responsible for care coordination.*		

17) **Care coordination requirements for specific populations.** Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and infants	☐	☐	
Children	☐	☐	
Children who are healthy, but in socially-complex environments	☐	☐	
Children involved in the foster care system	☐	☐	
Children with a chronic illness	☐	☐	
Children with a serious emotional disturbance	☐	☐	
Children with medical complexity	☐	☐	
Children or youth with a behavioral health diagnosis or substance use disorder	☐	☐	
Transition-age adolescents	☐	☐	
Parents and families	☐	☐	
Pregnant women	☐	☐	
Adults	☐	☐	
Adults who are healthy, but in socially-complex situations	☐	☐	
Adults with a chronic illness	☐	☐	

Adults with a behavioral health diagnosis or substance use disorder	☐	☐	
Clients involved in the criminal justice system	☐	☐	
Clients with a disability	☐	☐	
Clients in a nursing facility	☐	☐	
Elderly clients	☐	☐	
Frail elderly clients	☐	☐	
Clients in palliative care	☐	☐	
Other populations, please comment: *High Risk populations have unique needs that may require specific care coordination; low risk populations have general needs that may not require care coordination.*			

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

RCCOs should place an emphasis on vulnerable populations. Agencies that deliver care to medically or socially underserved children should be actively involved in RCCO care coordination.

19) How should care coordination be evaluated? How should its outcomes be measured?

The purpose of assessing care coordination activities should be clear to drive decisions about measure selection, data collection and reporting. Care coordination should be evaluated using standardized measures that are consistent across RCCOs. Metrics should be designed using nationally recognized care coordination measures (i.e. AHRQ, NCQA, NQF etc.)

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

a. What is the PMPM cost for providing care coordination services?

The cost for providing care coordination services will vary depending on the level of staff rendering care coordination services and the total population. For example, if a health coach provides care coordination the expense will differ significantly from a mid-level medical provider. Appropriate PMPM costs will depend on the total population of patients attributed to a practice. There should be a cap on RCCO administrative costs and/or a required medical loss ratio and RCCO financial performance of should be transparent.

b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

Higher risk and more complex populations should have a higher associated PMPM.

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

No

a. **Care coordinator to client ratios.** If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☐
51-100	☐
101-200	☐
201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

Core coordination should be evaluated using standardized measures that are consistent across RCCOs. Metrics should be designed using nationally recognized care coordination measures (i.e. AHRQ, NCQA, NQF etc.).

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

CHCs should have a role in governance in all RCCOs due to the volume of patients we serve in each region. RCCOs should provide PCMPs with standardized real-time hospital data to promote responsive PCMP care coordination and transitions. The RCCO governance structure should be uniform and ACC program implementation (i.e. Medicaid-Medicare Program, Enhanced PCMP payments, RCCO referral protocols etc.) should be standardized across all RCCOs.

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

RCCOs should complete community needs assessments to identify the unique strengths and needs of each community and be held accountable to act upon the findings of these assessments.

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

We agree. Practices know how their patients use the healthcare system and they should decide which RCCO to belong to. CHCs that have patients in more than one RCCO region should be allowed to choose which RCCO they can enroll their patients in. This would assure a standardization of care within the CHC delivery model.

27) Should the RCCO region maps change? Why or why not? If so, how?

RCCOs should reflect natural referral patterns and clinical appropriateness, not administrative simplification. If counties have overlap between providers, hospital systems and referral patterns they should not be divided.

28) Should the BHO region maps change? Why or why not? If so, how?

BHO regions should reflect referral patterns and clinical appropriateness, not administrative simplification. At times, BHO separation is a barrier to care, especially with clients living on regional borders; any regional separation should be based an increasing access to behavioral health.

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

If the new vendor needs a significant transition period they should not be awarded a contract.

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

CHC's play a vital role in Medicaid and in the ACC serve as the PCMP for nearly one-half of all attributed ACC enrollees; up to 72% of the individuals expected to gain Medicaid coverage in 2014 are current CHC

potients. As o key player in the ACC, we support ony legislotion, policy, rule or procedure thot supports: maintoining services ond resources currently provided by CHC's, effarts ta increose occess to comprehensive primary heolthcore for oll Colorodons, increasing funding necessory to expond occess ta heolth core and impravements to Medicoid enrollment, eligibility ond delivery systems.

31) What are the limitatians af the current benefit structure and what – if any – changes are needed?

The Medicoid medical subspeciolty network does not odequately meet the needs af the grawing Medicoid populotion. Accessing behavioral health care services in the Medicoid network continues ta be o challenge and treatment far substonce use ond chronic pain is limited ta non-existent. Dentol services are avoiloble but hove limitations specificolly omong the adult populotian and non-medical resources like housing ond transpartotion.

32) Should there be multiple RCCOs per region? This would invalve twa or mare entities operating in the same region and competing for clients and praviders. If so, why? If so, how many and where? What issues would this address?

Na

Subsets of ACOs shauld be ollowed within eoch RCCO region. CHCs due ta their volume of Medicaid potients should be ollowed to be their own ACO within o RCCO region. Current doto demonstrotes that CHCs ore more cast effective ond should be oworded through shared sovings models far their perfarmance.

33) If you ar yaur practice pravide services to clients referred through a BHO, but you are not a Medicaid pravider, would you be willing ta become a Medicaid provider? If so, what has prevented you fram becoming a pravider in the past? If nat, why not?

N/A

34) What role should RCCOs play in attributing clients to their respective PCMPs?

Stondords should be established for ottributian. RCCOs should be ollowed a minimum af 3 months to ottribute o potient. Once ottribution is determined, the core manogement dollors for the 3 months the potient wos not attributed should flow to the entity praviding core monagement services to these potients.

RCCOs should use their level af dato access to pravide onolytics ta assist PCMPs in the ottribution process obove ond beyond the monthly cloims-bosed attribution process. Data onolytics ond ottribution strotegies should be stondardized ocrass RCCOs to oid providers in multiple ACC regions.

RCCO's should prioritize ottributian ta high performing PCMPs who ore open to new Medicoid patients, have o core delegation ogreement in ploce, meet notionolly recagnized occreditotion standords ond meet o minimum threshold af Medicoid clients ar o percent of the overoll overoge.

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

The ACC Program and the Colorado Department of Public Health and Environment should work together to pursue local partnerships with public health departments, and collaborate on programs related to prevention, health disparities, health care access and other opportunities concerning population health.

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

No comment

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

Improvements are still needed to ensure correct and timely attribution. The ACC Program should work with the insurance marketplace/Connect for Health Colorado and PEAK to help develop a method to allow patients to choose a PCMP when enrolling in Medicaid.

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

No comment

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

RCCOs should be required to engage stakeholders via public forums, sotisfactian surveys ond telephanic customer service assistance that is reodily available to ACC members with minimol woit times (≤1 minute).

40) What specific requirements should RCCOs have for stakeholder engagement with praviders, community organizations, social service providers, and athers in their region?

RCCOs should reach aut to oll community stakehalders in the regian ond estoblish ongaing cammunication with cammunity leaders in an effort to maintain bidirectianal cammunicatian and increase continuity of core across the medical neighborhaad.

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

See obave

42) How should the Department structure stakeholder engagement for the ACC as a whole?

The Department should cantinue engaging stokeholders as per previaus ACC octivity and create a telephanic customer service line that is readily avoilable to ACC members with minimol woit times (≤1 minute).

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

No

a. If no, what are the gaps?

The Medicaid medicol subspecialty network does not odequately meet the needs of the growing Medicaid populotion. Accessing behoviorol heolth core services in the Medicoid network continues to be o chollenge ond treatment for substance use and chronic poin is limited to non-existent. Dentol services ore ovoiloble but have limitations specifically among odults; ond o lack of non-medicol resources like housing ond transportation continue to present chollenges to the Medicoid populotion.

b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

There ore gops in services for both children and odults with cognitive disobilities, develapmental delays ond the outism spectrum diognoses. Theses subpopulations need more occess to resources for assessment and treotment. Primory care can ond should still be the medical home for these clients with odditional options for externol referral's and speciolized core.

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

a. What role should hospitals play in the next iteration of the ACC Program?

Hospitol systems must be octive participonts in the ACC Progrom. Without hospitol involvement ond reol-time doto sharing we will see minimol success in previous and current ACC KPIs. Hospitals should be incentivized for reducing re-hospitolizotions ond they should be penolized for inopprapriote ER visits.

b. What role should pharmacies play in the next iteration of the ACC Program?

Phormocies con help olert providers when potients are prescribed brond-nome drugs instead of generic olternotives and ossist with communication around medicotion informotion. The ACC should support phormocy integration in primary care offices, including on-site clinicol pharmacists; this intervention hos been proven to increase heolth outcomes omong the Medicoid populotion.

c. What role should specialists play in the next iteration of the ACC Program?

The Medicoid subspeciolty network does not odequotely meet the needs of the growing Medicoid populotion. Before we identify what role speciolist will ploy in the ACC progrom, we must oddress the deficient subspeciolty network.

d. What role should home health play in the next iteration of the ACC Program?

The ACC should continue to support home health as an essential service available to Medicaid recipients.

e. What role should hospice care play in the next iteration of the ACC Program?

The ACC should continue to support hospice care as an essential service available to Medicaid recipients.

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

Resources for CCBs should be expanded to provide better care to patients with cognitive disabilities, developmental delays and the autism spectrum diagnosis without the patient needing to be on a waitlist that can be up to 8 – 12 years.

g. What role should counties play in the next iteration of the ACC Program?

County offices play an important role in helping Medicaid recipient's access benefits and resources; yet communication often breaks down between counties and the ACC program. Counties should be key participants in the ACC program to ensure clients access county services in a meaningful and efficient manner. RCCOs should partner with county offices to ensure access is coordinated and integrated to best meet the individual needs of the patient and family.

h. What role should local public health agencies play in the next iteration of the ACC Program?

Local public health agencies should collaborate with RCCOs and PCMPs on programs related to prevention, health disparities, health care access and other opportunities concerning population health.

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

Community organizations and non-profits are critical members of the medical neighborhood and should be included in the next iteration of the ACC.

45) How can RCCOs help to support clients and families in making and keeping appointments?

Transportation is often a barrier that prevents clients and families from making and keeping appointments. The Department must address deficiencies with the NEMT Medicaid benefit and RCCOs could play an important role in holding NEMT accountable and ensuring regional transportation is efficiently functioning to meet the needs of ACC members.

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

The Department should require anything that the evidence has shown to be effective, and they should encourage innovation where there is no evidence.

47) **Community Health Worker reimbursement.** Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement process	(Please check all that apply)
Independently bill	☐
On staff (salary) at Primary Care Medical Provider Clinic	☒
On staff (salary) at RCCO	☐
Per Member Per Month Payment	☒

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

RCCOs should promote access to PCMPs who offer co-located dental care to children and adult ACC clients and ensure access to adult, pediatric and specialty dentistry to all ACC members.

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you?

According to the National Institute of Health, the concept of cultural competency has a positive effect on patient care delivery by enabling providers to deliver services that are respectful of and responsive to the health beliefs, practices and cultural and linguistic needs of diverse patients. Among many other things this may include the ability to provide services across the entire patient experience in the patient's primary language and limit the use of interpretation services.

Reference:

- *National Institute of Health "Cultural Competency"*

b. What RCCO requirements would ensure cultural competency?

RCCOs should promote and offer standardized cross regional training on cultural awareness and sensitivity. RCCOs should require that all PCMPs follow NCQA PCMH standards around culturally and linguistically appropriate services. In the event that any provider or resource does not offer culturally

ond linguisticolly oppropriote core the RCCO should provide ot minimum, foce-to-foce interpretotion services to meet the member's longuoge needs.

Reference:

- *NCQA 2014 2:C "Culturolly ond Linguisticolly Appropriote Services"*

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?

Providers ond stoff must hove the obility to ossess the diversity ond longuoge needs of its populotion, provide interpretotion or bilinguol services to meet the longuoge needs of its populotion ond provide printed moteriols to clients in their preferred longuoge.

Reference:

- *NCQA 2014 2:C "Culturolly ond Linguisticolly Appropriote Services"*

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

RCCOs should promote troining on effective communicotion with oll segments of the potient populotion, but porticulorly vulneroble populotions; troining moy include heolth literocy or other opprooches to oddressing communicotion needs. Additionolly, RCCOs should require PCMPs ossess heolth literocy to ensure the potient, fomily, or coregiver understond the concepts ond core requirements ossocioted with monoging their heolth. Finolly, when necessory, RCCOs should require PCMPs provide the potient, fomily or core giver core plons thot ore toilored to occount for heolth literocy ond longuoge considerotions.

Reference:

- *NCQA 2014 4:B5 "Core plon is provided in writing to the potient/fomily/coregiver"*
- *NCQA 2014 2:C "Culturolly ond Linguisticolly Appropriote Services"*
- *NCQA 2014 2:D7 "Troining ond ossigning members of the core teom to monoge the potient populotion."*

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

Only if this increoses occess to speciolty, focility or oncillory core without increosing cost.

51) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

The ACC must support policy chonges thot disincentive hospitols from providing emergency services for non-emergent conditions ond incentivize PCMPs for increosing occess. RCCOs should incentivize providers who meet notionolly occredited occess stondords ond provide urgent core ond routine visits on the some doy they ore requested ond outside regulor business hours. Lorge hospitol systems thot see Medicoid

recipients should be actively involved in ACC PIAC ond subcommittee work araund inappropriote utilizotian of the hospitol and effective care coardinotion across the medicol neighbarhoad.

Reference:

- *NCQA 2014 1:A "Patient-Centered Appointment Access"*

52) Please feel welcame to share ather general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

Practice Support

53) **Support for practices.** Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☒	☐	☐	☐
Network provider education	☒	☐	☐	☐
Assistance with practice redesign	☒	☐	☐	☐
Assistance with efficiency-enhancing activities	☒	☐	☐	☐
Provide web-based resources and directories	☒	☐	☐	☐
Provide practice-specific data reports	☒	☐	☐	☐
Provide clinical care guidelines and best practices.	☒	☐	☐	☐
Provide clinical screening tools	☒	☐	☐	☐
Provide health and functioning questionnaires	☒	☐	☐	☐
Provide chronic care templates	☒	☐	☐	☐
Provide registries	☒	☐	☐	☐
Offer client reminders	☒	☐	☐	☐
Offer client self-management tools	☒	☐	☐	☐
Offer educational materials about specific conditions	☒	☐	☐	☐
Supply behavioral health surveys	☒	☐	☐	☐
Supply other self-screening tools	☒	☐	☐	☐
Administer behavioral health surveys	☒	☐	☐	☐
Administer other self-screening tools	☒	☐	☐	☐
Prepare client action plans	☒	☐	☐	☐
Provide training on providing culturally-competent care	☒	☐	☐	☐
Provide training to supporting staff	☒	☐	☐	☐
Provide training on motivational interviewing	☒	☐	☐	☐
Provide tools and software for phone call and appointment tracking	☒	☐	☐	☐
Provide tools and resources for tracking labs, referrals, etc.	☒	☐	☐	☐
Provide referral and transitions of care checklists	☒	☐	☐	☐
Provide visit agendas or templates	☒	☐	☐	☐
Provide standing pharmacy order templates	☒	☐	☐	☐
Provide comprehensive directory of community resources	☒	☐	☐	☐
Provide directory of other resources	☒	☐	☐	☐
Provide materials regarding Nurse Advice Line	☒	☐	☐	☐
Ensure all tools and resources are centrally located on RCCO-specific website	☒	☐	☐	☐

Others	*Proctices thot connot perform these functions should not be considered PCMP's in the ACC.*

54) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

N/A

55) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

Doto onolysis ond reol-time hospitol notificotions for hospitol follow-up ond cooching oround the pursuit of notionolly recognized medicol home stondords ond guidelines.

56) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

Provide enhonced poyment to PCMPs who meet notionolly recognized medicol home criterio.

57) Should the Department require that PCMPs utilize disease registries to manage the health of their population?

Yes

58) Please share any other advice or suggestions about provider support in the ACC.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

PCMPs responsible for care improvement and cost savings should be rewarded with shared savings and incentive payments and the ACC should continue to move away from fee for service (FFS) towards population-based payment with a path towards taking on risk over time. Incentives should be aligned with outcomes, real KPI performance and best practices.

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

Yes

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

Yes, but continued efforts must be invested in providing PCMPs with more complete patient care and cost data. Data must be real-time in order to provide meaningful coordination of care.

62) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

No comment

63) What role – if any – should the RCCOs play in the distribution of payments to providers?

RCCOs should not have a role in the distribution of payments to providers.

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

We support payment reform measures and get away from FFS. Any payment reform would have to protect the CHCs FQHC payment methodology. We do support payment for direct services going through the RCCO. Furthermore, the financial performance of the RCCOs and BHOs should be transparent and limit administrative costs.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

A required medical loss standard should be established to limit administrative costs and profits at the RCCO level. Nationally recognized quality measures based on health outcomes and evidence-based best practices should be used for the ACC and dollars should flow to the entities providing the direct services.

However, this is o major question thot wauld require significont conversation ond negotiotion with pragram participonts.

66) **Measuring Client experience.** Please complete the table below to indicate how the Department should measure Client/patient experience:

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☒	☐	
SF-12 Health Survey	☐	☒	
Other types of client interviews / surveys	☒	☐	
Patient Activation Measure	☐	☒	
Focus groups	☒	☐	
Other	Please type your response here.		

67) Knowing that, at this time, the Department only has claims data, how should population health be measured?

It should be meosured using notionolly recognized quolity meosures proven to decreose cost ond improve heolth outcomes.

68) How should quality and performance data be reported to the RCCOs, PCMPs, and the public?

Quolity ond performonce doto should be tronsporent ollowing RCCOs ond PCMPs to leorn from one onother ond shore best proctices in on effort to collectively improve potient outcomes, increose potient sotisfoction ond positively impoct totol cost of core.

69) **Measures for payment.** Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☐
8-10	☒
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐

None	☐

70) What percent of RCCO payments should be tied to measures or performance?

Percentage	
10-20%	☐
21-30%	☒
31-40%	☐
41-50%	☐
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

71) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?

Yes

72) Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?

Both. RCCOs should be reimbursed bosed on improvement until notionol stondords ore reoched, then reimbursement should be tied to future stondords, then stoy the some. Once you hit o certoin level of performonce you con't improve ony more, but you should not lose your reimbursement incentive.

73) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

No

74) **Incentive payment frequency**. Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	☒
Annually	☐
Other	☐

If you checked the "Other" box, please describe payment frequency below:

75) For potential offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

Fixed cost (administrative) should be limited to 10 – 15%.

76) For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

Solud's Quality Impravement Program is dedicoted to ongoing excellence in the quality ond sofety of core ond services delivered. We measure quality in oll facets of the organization including clinicol, monagerial, odministrotive ond facilities. Quolity meosures are bosed on notionol standords including: Bureou of Primory Heolth Care, Federol Tort Cloims Act, Health Resources and Service Administrotion, Meaningful Use criterio, NCQA, PCMH ond U.S. Preventive Services Tosk Force.

Exomples of current quolity improvement projects include but ore not limited to: cancer screening, chronic disease monogement, tobacco screening, medicotion monogement, well child checks, depression screening and pediotric/odolescent weight monagement.

Health Information Technology (HIT)

77) **Types of communication.** For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	☐
Text message	☐	☐
Web portal	☐	☐
Email	☐	☐
Telemedicine / Video chat	☐	☐
Face-to-face meeting	☐	☐
Smartphone app	☐	☐
Other:		

78) **HIT investments by organizations.** For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below:

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	☒	☐
Digital care management tool	☒	☐
Care transitions alerts	☒	☐
Electronic Health Records (EHRs)	☒	☐
Health risk assessment software	☒	☐
Practice assessment tools	☒	☐
Practice management tools (scheduling, billing)	☒	☐
Client web portal for communicating care plan, services, benefit enrollment	☒	☐
Patient education/wellness tools	☒	☐
Provider/case manager directory	☒	☐
Shared decision-making tools	☐	☒
Telemedicine software	☒	☐
Other:	☐	☐
Other:	☐	☐

79) **Importance of technology by type.** The Department is working to determine what technology is in place, what technology is needed, and what technology should be standardized. For RCCOs, providers, and other organizations, use the table below to answer what HIT infrastructure outside of the 5DAC your organization would use to perform population health management activities. Tools are scored from 1-5, where 1 are those items least-likely to be used, and 5 are items most-likely to be used:

Tool	1 Least	2	3	4	5 Most
Population analytics / reporting / dashboard	☐	☐	☐	☐	☒
Care management tool	☐	☐	☐	☐	☒
Care transitions alerts	☐	☐	☐	☐	☒
Electronic Health Records (EHRs)	☐	☐	☐	☐	☒
Practice assessment tools	☐	☐	☐	☐	☒
Health risk assessment software	☐	☐	☐	☐	☒
Practice management tools (scheduling, billing)	☐	☐	☐	☐	☒
Client web portal for communicating care plan, services, benefit enrollment	☐	☐	☐	☐	☒
Patient education wellness tools	☐	☐	☐	☐	☒
Provider/case manager directory	☐	☐	☐	☐	☒
Shared decision-making tools	☐	☐	☐	☐	☒
Telemedicine	☐	☐	☐	☐	☒
Other:	☐	☐	☐	☐	☐

80) What are the primary barriers to RCCOs and providers increasing their use Health Information Technology to improve the performance of Primary Care Practices?

Borriers include bondwidth limitotions, difficulty integroting HIT with EHRs, inodequote IT infrostructure, inobility to bill for HIT services, minimol resources ovoiloble to troubleshoot ond ossist consumers of HIT ond high monthly costs of HIT solutions.

81) How can Health Information Technology support Behavioral Health Integration?

HIT con be used for behoviorol heolth integrotion through integroted EHR documentotion, potient portol occess ond communicotion, heolth informotion exchonge, populotion onolytics ond tele-heolth.

82) In the next iteration of the ACC, should there be a shared resource for data and analytics? Please describe the basic criteria for what a shared data and analytics platform needs to contain in order for it to be useful.

Yes. An onolytics plotform should contoin KPI doto, stondordized core coordinotion risk strotificotion criterio ond informotion on specific quolity meosures.

83) Should there be a shared care management tool? Please describe the basic criteria for what a care management tool would need to contain in order for it to be useful.

No

84) Should there be a shared population health management tool? Please describe the basic criteria for what a population health management tool would need to contain in order for it to be useful.

Yes. Criterio could include: KPI doto, stondordized core coordinotion risk strotificotion criterio ond informotion on specific quolity meosures.

85) Please describe the functionality that a common Medicaid provider directory would need to contain in order for it to be useful.

Avoiloble online ond in poper form in multiple longuoges; online version should contoin seorchoble fields reloted to provider/speciolty type, locotion ond if the provider is occepting new Medicoid clients.

86) How can the RCCOs support providers' access to actionable and timely clinical data?

RCCOs should work with hospitols to provide PCMPs with stondordized reol-time hospitol doto ovoiloble from o centrolized source os opposed to multiple doto sources.

87) What are the HIT solutions that would benefit clients, providers, and RCCOs? Please comment on the parameters these tools or platforms would need to possess and the ways in which they could be used.

RCCOs should work with hospitols to provide PCMPs with stondordized reol-time hospitol doto. This doto should be mode ovoiloble from o centrolized source to ovoid frogmentotion of hospitol doto. Heolth informotion exchonges could serve os plotforms to distribute this doto however the technology needs to be improved to ossure PCMPs ore receiving reol-time doto from oll hospitols for every potient.

88) What technical assistance or resources related to HIT infrastructure should the RCCOs supply? This assistance or these resources could be for providers, social service organization, clients/families, or for others.

RCCOs should work with hospitols to provide PCMPs with stondordized reol-time hospitol doto ovoiloble from o centrolized source os opposed to multiple doto sources.

89) What role should health information exchange platforms like CORHIO or QHN play in the next iteration of the ACC?

Heolth informotion exchonges could ploy on importont role in the next iterotion of the ACC, however they must moke technicol improvements to enoble system integrotion with EHRs, the obility to olert providers when potients orrive ot o hospitol focility ond they must not be o finonciol burden for PCMPs.

90) Please share any information, advice, and suggestions you have about health information technology in the ACC Program.

Colorado Department of Health Care Policy and Financing

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Elaina Hockaday, Barbara Selter
Location: Denver, Denver, Colorado

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: MAXIMUS
Location: Denver, Denver, Colorado
X Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☐ Medical provider / PCMP / other provider
  i. Type or specialty: Click here to enter text.
  ii. Area of practice: Click here to enter text.
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
X Other (please describe): Enrollment Broker, Ombudsman for Colorado Medicaid

Are you currently involved in the ACC program?
X Yes as an administrative support organization to HCPF
☐ No

If you answered "yes" above, how long?
X Since before the program was implemented.

How have you been involved in the ACC program and what interaction have you had with RCCOs:
As the Enrollment Broker and Ombudsman for HCPF, MAXIMUS enrolls the clients into the RCCOS; As the Ombudsman, we field consumer calls and assist with problems.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:
MAXIMUS is the Enrollment Broker and Ombudsman in Colorado and 17 other states and the District of Columbia. We administer the CHIP program in eight states, and support State-Based Exchange operations in six States.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?
☐ Very likely
☐ Likely
X Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

Should the State decide to separate administrative functions from clinical care coordination functions, MAXIMUS would consider bidding on any administrative functions that may be in our area of expertise.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

The core premise of the Accountable Care Collaborative is local control and delivery of medical and non-medical services, and this remains the most compelling feature of the ACC. The creation of sustainable medical homes through which clients receive the full range of care from coordinated and commonly incented providers is the clear strength of the program to improve the quality and client satisfaction with the care delivered. Early returns on cost improvements through this delivery model of $100 million in gross, and $30 million in net savings are testament to the ACC model. While savings have been impressive, improvements in reducing ER visits, high-cost imaging services and 30-day all cause readmissions demonstrate the efficacy of coordinated care delivery through a medical home model.

2) What is not working well in the ACC Program?

The Regional Care Collaborative Organizations (RCCO) are vested with the responsibilities of ensuring a medical home level of care for every member; developing, managing and supporting a high-quality provider network; delivering medical management and care coordination across the provider teams; and overall program accountability and reporting. With only 69% of the 720,000 members attributed to a medical home, we believe this is an area for improvement. Specifically, the HealthColorado staff could be performing primary care medical provider (PCMP) attributions as an extension of the current enrollment broker function. In other states where MAXIMUS functions as the enrollment broker we play a vital role in providing unbiased choice counseling to help clients identify the PCMP best suited to meet their individual needs at the time of enrollment into the Medicaid plan. In many cases, MAXIMUS achieves attribution in excess of 90%.

This is but one example of the improvement opportunity available to the ACC model: the unification and centralization of certain administrative functions in support of all the RCCOs. Eliminating the duplicative and redundant processes (and the costs) across the RCCOs will enable them to focus their efforts on provider network development, management, and support of local care coordination and delivery.

Through our work as the Enrollment Broker and Ombudsman in Colorado, we have had an opportunity to speak with Medicaid clients receiving services through the ACC structure. From these stakeholder conversations, we have been privy to information about the challenges presented by the ACC organizational structure from both the recipient and provider perspectives:

- **From the perspective of recipients:** Network adequacy is a problem, especially in the behavioral health system. The ability to seek treatment from a provider of choice, who may or may not be in the client's selected RCCO leads to confusion and at times, limitation on the individual's ability to be seen by a given provider, who may be reluctant to take on a patient outside the RCCO of the provider's affiliation.

- **From the provider's perspective:** The ability of a client to see any provider regardless of their RCCO affiliation also is problematic. Many providers are unhappy with the RCCO policy that permits Medicaid clients to see any provider, whether or not they are enrolled in a RCCO different from the one with which the provider is registered. In this situation, PCMPs may be providing service to patients outside their designated RCCO. Because there are not standardized rules across the various RCCOs, providers who see patients outside their enrolled RCCO may lose the "shared savings" associated with high performance, and therefore be penalized financially for seeing the client. As the rules vary across RCCOs, it becomes problematic for the providers who could potentially be penalized for serving certain patients, while the patient may realize difficulties in receiving services from a desired provider.

3) What is working best in the Behavioral Health Organization (BHO) system right now?

4) What is not working well in the BHO system?

5) What is working well with RCCO and BHO collaboration right now?

6) What is not working well with RCCO and BHO collaboration right now?

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☐	☐	
Community Behavioral Health Services Rule	☐	☐	
Covered diagnoses list	☐	☐	
Different behavioral / physical health reimbursement	☐	☐	
Institutions for Mental Diseases exclusion	☐	☐	
OBH rules, reporting, or financing (regulatory differences between agencies)	☐	☐	
PCMP financing structure	☐	☐	
Per-member per-month amount	☐	☐	
Physical space constraints	☐	☐	
Privacy Laws (HIPAA, 42 CFR)	☐	☐	
Professional / cultural divisions	☐	☐	
RCCO or BHO contracts	☐	☐	
Staff capacity	☐	☐	
State/Federal rules or reporting requirements	☐	☐	
Technical resources / data sharing	☐	☐	
Training	☐	☐	
Others	Please type your response here.		

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

10) Please share any other general advice or suggestions you may have about behavioral health integration.

The Enrollment Broker can play an important role in the initial enrollment of individuals into coordinated care. Currently, we perform an "Expedited Screen," which is a very limited health risk assessment performed when the Medicaid client is selecting a RCCO; this tool could be expanded to include various behavioral health needs indicators.

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination?

"Care coordination delivers health benefits to those with multiple needs, while improving their experience of the care system and driving down overall health care (and societal) costs" is the definition posited by Craig, Eby and Whittington from their 2011 Institute for Healthcare Improvement white paper Care Coordination Model: Better Care at Lower Cost for People with Multiple Health and Social Needs. MAXIMUS subscribes to this definition in the development of operating and service delivery models in support of our state clients precisely because it recognizes the Gordian knot of social determinants to health and health outcomes that typifies the population served by Medicaid. Through the use of this definition, the opportunities apparent in separating the concerns of the RCCO medical delivery role and the potential expanded role of the HealthColorado capabilities to marshal a state-wide care coordination capability to the RCCO are revealed.

b. How should RCCOs prioritize who receives care coordination first?

HealthColorado has the perfect opportunity when enrolling clients to perform a health risk assessment, which could be forwarded directly to the RCCO. This assessment would capture both medical and social determinants to ascribe initial triage and actions through the ACC. By having this data upon initial enrollment of the individual, the RCCO could identify those who need care coordination earlier than if the RCCO had to wait until the individual made an initial appointment with the provider.

c. How should RCCOs identify clients and families who need care coordination?

HealthColorado currently completes an expedited appointment screen for those who call to enroll. This screening could be modified to be more useful in identifying clients and families who need care coordination. HealthColorado could collect and send this enhanced assessment data to the RCCOs that in turn could utilize this information for managing their population.

The use of "up front" health assessments and health risk assessment data analysis, performed by the data analytics contractor, would likely result in more quickly identifying those who are in most need of care coordination. Those Medicaid clients with co-morbidities, chronic conditions, or behavioral health issues would be most likely to benefit from care coordination.

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

Managing the beneficiary's relationship to the Medicaid program across the RCCO entities is fundamental to having an expanded role of a central coordinating entity. The concept of active

relationship management, one which understands where the individual falls across the continuum of coverage and benefits delivery is critical to maintaining high degrees of client satisfaction, utilization management, and cost control. MAXIMUS has coined the phrase Citizen Journey™ to capture this active management concept. Leveraging existing technologies – the Health Information Exchange, the electronic health records of providers, and the core Medicaid systems environment – the ability to track and manage a beneficiary's journey through the delivery of care across the continuum of delivery networks is achievable. At a very high level, the initial capture of the individual care plan, the distillation of the care plan into discrete, forecasted and time-bound 'events', and the message-based tracking of the plan over the course of the treatment episodes is the basis for achieving active management. Centralizing this capability at HealthColorado rather than devolving it to the RCCO and attempting to recompile each action across the RCCO at the SDAC, represents a more efficient and cost effective means for the State to achieve this fundamental need.

12) What services should be coordinated and are there services that should not be a part of care coordination?

Some care coordination activities are performed most effectively in a localized environment. However, there are some care coordination functions that could be cost-effectively delivered through a clearinghouse environment. For example, outbound reminder calls is a capability best suited for a statewide clearinghouse environment. Using this approach for diabetics, as an example, multiple small providers could provide a file of diabetic patients who are overdue for Hemoglobin A1c testing. MAXIMUS contact center agents could provide an outbound calling campaign centrally to remind patients from many different providers (and different RCCOs around the state) to schedule such testing with their PCMP. Many providers do not have the resources to perform this outbound calling cost efficiently within their own practices. Again, this is something that could be centralized, so that existing telephony and staffing capacity could be shared among multiple providers for these outbound care reminders.

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

HealthColorado could assess urgent needs immediately with a new client during that first phone call, asking questions not only of medical needs such as what prescriptions someone is using and whether they are going to need a refill before their first appointment with the PCMP; but also to check with new clients on their social needs such as whether they need urgent help with housing or food. It may be best to start with a simple question: "What would be the most helpful thing for a case manager or RCCO to help you with today?" Addressing the individual's most urgent needs is critical; if they are homeless and hungry, a care coordinator or social worker needs to help with that first. There are categories of care and clinical indicators such as diabetes, COPD, short or long-term disabilities, and so forth– to which best practices protocols can be established and proactively trigger action based on the diagnosis.

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today?

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

d. What are the gaps in care coordination across the continuum of care?

15) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	Should the RCCO have a role? Yes	No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma	X	☐	X	
Affordability (assistance with prescriptions or co-pays)	X	☐	X	
Daycare / childcare	X	☐	X	
Economic stability & employment	X	☐	X	
Education	X	☐	X	
Environment	X	☐	X	
Food access / nutrition	X	☐	X	
Health literacy		X	X	This is something that could be done centrally by the MAXIMUS Center for Health Literacy that could provide materials to all of the RCCOs operating across the State
Housing	X	☐	X	

Language or translation services		X	X	The MAXIMUS Center for Health Literacy could use its Translations Group to provide adaptive translations for all RCCOs centrally
Literacy	☐	X	X	The MAXIMUS Center for Health Literacy could provide literacy services for all RCCOs centrally
Transportation	X	☐	X	
Other	To the extent that any administrative functions, such as maintenance of statewide databases of community supports and services, can be facilitated through centralized processing, we believe that can result in greater efficiencies for the ACC.			

16) **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	Coordinate care? Yes	No	**In what capacity should these individuals coordinate care in the ACC Program?**
Advanced Practice (Registered) Nurses	X	☐	A coordinated, multi-disciplinary team to perform care coordination is most likely to be effective. Most importantly, to obtain the greatest value for the health care dollar, we recommend use of the "right" resources for the needed level of care coordination. This might mean use of non-clinically trained staff for certain functions such as follow up, health education, and other non-clinical functions with planning and oversight being provided by staff with more clinical training.
Certified Addiction Councilors	X	☐	
Certified Nurse Midwives	X	☐	
Community Health Workers	X	☐	
Generalists (BA/BS/MA/MS)	X	☐	
Health Coaches	X	☐	
Licensed Clinical Social Workers	X	☐	
Licensed Marriage and Family Therapist	X	☐	

Licensed Mental Health Counselors	X	☐	
Licensed Professional Counselor	X	☐	
Masters of Public Health	X	☐	
Medical Doctors / Doctors of Osteopathic Medicine	X	☐	
Nurse Practitioners	X	☐	
Patient Navigators	X	☐	
Peer Advocates	X	☐	
Promotoras	X	☐	
Psychiatrists	X	☐	
Psychologists	X	☐	
Registered Nurses	X	☐	
Social Workers	X	☐	
Wraparound facilitators	X	☐	
Other	We recommend the use of non-clinical call center staff to do centralized appointment scheduling for different members of the care coordination team. These call center staff can also provide cost effective outbound reminders for overdue tests, vaccines, or medication management.		

17) **Care coordination requirements for specific populations.** Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and infants	☐	☐	
Children	☐	☐	
Children who are healthy, but in socially-complex environments	☐	☐	
Children involved in the foster care system	☐	☐	
Children with a chronic illness	☐	☐	
Children with a serious emotional disturbance	☐	☐	
Children with medical complexity	☐	☐	

Children or youth with a behavioral health diagnosis or substance use disorder	☐	☐	
Transition-age adolescents	☐	☐	
Parents and families	☐	☐	
Pregnant women	☐	☐	
Adults	☐	☐	
Adults who are healthy, but in socially-complex situations	☐	☐	
Adults with a chronic illness	X	☐	
Adults with a behavioral health diagnosis or substance use disorder	☐	☐	
Clients involved in the criminal justice system	☐	☐	
Clients with a disability	X	☐	Outbound reminders for this and the following checked groups could be a cost effective mechanism for reaching this population in a home and community-based environment.
Clients in a nursing facility		☐	
Elderly clients	X	☐	
Frail elderly clients	X	☐	
Clients in palliative care	☐	☐	
Other populations, please comment:			

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

19) How should care coordination be evaluated? How should its outcomes be measured?

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

a. What is the PMPM cost for providing care coordination services?

For all intents, the underlying driver of the cost is the level of services offered, which to the second question, does vary by population served. In this way, the State may wish to consider a 'core' administrative PMPM for the category of 'care coordination services' and a population/needs-based 'rate card' PMPM approach for specific populations.

b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population? No, in practice MAXIMUS has seen States achieve improved management of service outcomes through their contractors by requesting the client ratios they intend to establish, and their rational for the ratios. This enables the State to solicit the best offer based not on an external variable that may (or may not) comport to a contractor's business model, but based solely on the expertise and understanding of the contractors offers. We do believe that establishing reasonable metrics for delivery against these ratios, however, do become a negotiated item at contracting to ensure the State is receiving the value for which it bargained.

a. **Care coordinator to client ratios.** If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☐
51-100	☐
101-200	☐
201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

From our research and work in formulating telecare and telemedicine strategies, we believe there is a great potential to combine remote monitoring technologies with call center capacity to provide low cost reminder interventions that can identify needs for actions without involving more costly personnel. Using an Independence Coach to set up the system and teach the elderly or those with disabilities living in the community to use a platform that include vital sign monitoring, remote monitoring sensors, and video conferencing, we can expand the number of clients receiving care coordination through use of virtual visits. Call center agents can be trained to follow physician developed protocols, which indicate when vital sign collection devices and remote monitors are showing values outside of established norms. These call center agents could then take designated follow-up actions with Medical Home Case Managers, RCCO Care Coordinators, family caregivers, or other designated parties. This approach allows the Medicaid program

and the RCCOs to better target their care coordination resources where and when they are most needed. The technical platform could also be used to provide chronic disease management health education to Medicaid clients and/or their family caregivers, enhancing the experience for all participants in the RCCO healthcare delivery system.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

From the input we have received from our Medicaid clients, MAXIMUS believes that all of the functions mentioned above - care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies, as well as attribution efforts should be standardized. By centralizing a range of administrative functions, the RCCOs could achieve their real purpose: – providing clinical case coordination that achieves better care outcomes. Now there are different performance metrics, quality indicators, and payments for each RCCO, so providers are penalized for seeing patients outside their established RCCO relationships. The providers would benefit from standardizing the contracts across RCCOs, because by standardizing the process for earning and paying incentive payments across all RCCOs, providers can be appropriately compensated for the services they are actually providing to patients. Therefore, we recommend that contracts be standardized, enabling requirements to be similar across RCCOs. Administrative functions that could be centralized include:

- **Provider Attribution:** The process for attributing patients to PMCPs is currently performed by individual RCCOS, and it is time consuming for these entities to perform this function. By incorporating this function as part of the Enrollment Broker services, a centralized call center can provide this capability when the client is first contacted with information about enrolling in the ACC infrastructure.
- **Provider Support Services:** Currently, there is some reluctance of providers to participate in the RCCOs because of the differences in "shared savings" arrangements and having to include treatment of patients outside their own RCCO. Providers are concerned about the impact of these patients on the "shared savings" model. Additionally, providers have issues with not being able to "open and close" their panels as they see fit. To address some of the providers' concerns and encourage provider participation in the RCCOS, the State could provide a centralized set of administrative services for all providers regardless of their RCCO affiliation, including credentialing, education, outreach, payment processing, and a provider service center that offers providers a single number to call to get information about and from the program. This approach would make participation in RCCOs and receipt of payment easier, encouraging providers to participate in the ACC structure.
- **Scheduling:** By centralizing the scheduling of in-home assessments for dual eligibles, the State can achieve more efficient utilization of staff resources, as well as better coordination of field-based assessment staff located across the state. In our projects in Pennsylvania and New York, where we perform in-home functional assessments for clients needing Long Term Services and Supports, we have used geo-mapping capabilities to achieve more efficient utilization of our assessment staff, moving from being able to administer one to performing two or more assessments per day by just enhancing our scheduling software. We can also centrally schedule provider appointments and make outbound reminder calls to discourage "no shows". This will improve the utilization of limited providers, particularly in rural areas with a limited supply of behavioral health clinicians.

- **Outbound Calling and Reminders:** A centralized call center can provide convenient, cost effective outbound calling and reminders to patients who may go to multiple providers or to providers in different RCCOs. By providing this as a centralized service, smaller practices without the staff to perform these functions can realize the benefits of such outbound reminders, education calls, and alerts with little economic impact.
- **Payment Processing:** By creating a centralized payment structure, it would be easier to pay providers for seeing patients outside of the RCCO with which the provider is affiliated. This would allow providers to gain shared savings based on the same quality metrics and incentive payments, regardless of with which RCCO they or their patients are affiliated.

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

RCCOs must recruit staff that has connections in the local community. Depending upon the nature of the community, the RCCO should have staffs that speak the languages that Limited English Proficiency (LEP) clients speak in a given community. RCCOS should develop culturally and linguistically appropriate materials that are easy to understand and can be read by those with low literacy levels. RCCOs should demonstrate they have meaningful and formal partnerships with community support organizations, particularly for long-term care support services and for clients who have special health care and social support needs. They should demonstrate via contracts and reimbursements that they truly value the role of the organizations and include them as part of the care provided to clients, many of whom have depended highly on these organizations prior to their acquiring Medicaid.

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

This approach could cause complexity for the state systems, especially in the areas of attribution and passive enrollment. This approach would also make it much harder for specific RCCOs to serve their clients. For example, if a client lives in Jefferson County, but that client is in RCCO 2, RCCO 2 would have a much harder time helping the client with all other services. If such an arrangement were to be put in place, each RCCO would have to maintain state-wide relationships and provide referrals rather than being able to focus on their particular region. Therefore, we recommend having a standardization of contracting arrangements for all RCCOs. Our preferred approach is to maintain the localized care management concept, which is one of the strengths we see in the RCCO concept.

27) Should the RCCO region maps change? Why or why not? If so, how?

28) Should the BHO region maps change? Why or why not? If so, how?

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

Should the State determine that they want to centralize some of the suggested functions, the transition to new vendors would take a shorter time, as these administrative functions could be put in place once, leveraging an existing facility in Denver, rather than having to implement them in each RCCO region. This approach could save both time and money for the State.

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

By standardizing contractual requirements and shared savings payment structures for all RCCOs, the State could avoid many of the provider concerns around treating patients belonging to a different RCCO, so that the shared savings could be calculated based upon the patient panel, rather than by RCCO, allowing providers to receive credit for good outcomes on patients belonging to different RCCOs. This will encourage more providers to participate, and reduce the shortage of providers in some areas.

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

One area in which we would recommend assistance is in lowering co-pays for clients.

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

34) What role should RCCOs play in attributing clients to their respective PCMPs?

In our experience as an Enrollment Broker in a number of states, many Medicaid clients select managed care organizations based upon the affiliation of their PCMPs rather than the other way around. Therefore, we believe in areas where there are more than one RCCO, should the state move to that model, it would be very important for an unbiased choice counselor to manage the attribution.

Further, by assuming responsibility for the attribution of clients to their respective PCMPs, HealthColorado could improve the efficiency of operations. HealthColorado already captures information about the client and the client's RCCO choice. By sending the information to the RCCO and then having the RCCO reestablish contact with the client, the State is wasting time and money. If the client does not call the call center and make a choice, the HealthColorado staff could easily follow up with the non-callers performing an outbound call. This approach would reduce the time spent by the RCCOs on this administrative function, and allow them more time to provide care coordination and community outreach.

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

The ACC Program should be collaborating with the CO Department of Public Health and Environment on "healthy communities" programs. The local nature of the RCCO puts it in the perfect position to work individually with stakeholders in the region to develop health goals for the community. If administrative responsibilities were removed from the RCCOs, these organizations could concentrate more on the most important health goals of the community.

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

Again, the RCCOS functioning in a local capacity are well-positioned to coordinate the social services needed to ensure healthy outcomes. The social determinants of health are critical, and by removing administrative functions from the responsibilities of these organizations, perhaps they could concentrate more on working collaboratively with housing, social services, and other resources in the community that directly could have bearing on the well-being of the Medicaid clients in the local community.

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

The local nature of the RCCOs put them in the best position to engage with clients, client's families, and client advocates. The coordination of care in a broad sense – through health education, healthy communities projects, and close collaboration among the clients and their advocates—is a critical role for RCCOs to play to achieve the outcomes that the State is seeking. Again, by re-directing administrative functions that can be performed most efficiently in a centralized environment to a statewide entity, RCCOs would more likely have the resources to devote to stakeholder engagement, a more logical function for them to perform.

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

Because of the importance of social determinants of health, we strongly recommend that the RCCOs have stringent requirements for stakeholder engagement with providers, community organizations, social service providers, and others in their region. In a project we are planning in rural California, MAXIMUS is testing the concept of Independence Coaches and Community Assistors to help low income, medically underserved seniors remain in their homes. The Independence Coaches are individuals who act as health educators, "problem solvers," and coaches to enable these seniors to receive the services and socialization they need to remain safe and healthy in their homes. When needed, Community Assistors are part time workers who can be dispatched to perform various tasks (such as going to the grocery store, picking up prescriptions, providing rides to the doctor and so on) to assist the senior in the local community. We believe this model of emphasis on both the social and medical aspects of care can result in improved health outcomes, especially in rural areas.

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

In many of our projects, MAXIMUS has outreach workers who work collaboratively with community groups to reach "hard to reach" constituents. The RCCOs should employ similar outreach workers who are specifically trained to perform outreach functions in the local communities. We recommend recruiting staff from local areas that have knowledge of the communities in which they will be serving.

42) How should the Department structure stakeholder engagement for the ACC as a whole?

Stakeholder engagement should be locally determined. The needs of the individual communities should be driving the goals for "healthy communities" and the best ways of delivering care in these local communities. While administrative functions can be enhanced through economies of scale, stakeholder engagement will flourish if it is closely tied to the culture and needs of the communities the RCCO is serving.

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

a. If no, what are the gaps?

b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

a. What role should hospitals play in the next iteration of the ACC Program?

b. What role should pharmacies play in the next iteration of the ACC Program?

c. What role should specialists play in the next iteration of the ACC Program?

Telecare and telemedicine are coming to play an increasingly important role in the delivery of health care and the increase of access to care in the rural communities. The State should carefully consider the role of telemedicine in delivering access to specialty care in rural parts of the state.

d. What role should home health play in the next iteration of the ACC Program?

e. What role should hospice care play in the next iteration of the ACC Program?

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

g. What role should counties play in the next iteration of the ACC Program?

h. What role should local public health agencies play in the next iteration of the ACC Program?

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

Partnerships with local community groups have always played a major role in MAXIMUS Medicaid projects. We strongly recommend that the RCCOs establish a network of social, community, religious, business and professional, and ethnic organizations with which to work in their local areas. This provides an effective mechanism for reaching "hard to serve" constituencies. These resources should be available through a centralized directory of resources.

45) How can RCCOs help to support clients and families in making and keeping appointments?

MAXIMUS has tested centralized appointment scheduling and outbound reminder calling in several of our projects performing assessments for Long Term Services and Supports. We use a "hub and spoke" model, where the scheduling is centralized and the assessments are performed locally. We have found that there are significant advantages to performing appointment scheduling centrally. By using geo-mapping capabilities, we are better able to select the nearest assessor and reduce the time and cost of travel. Using centralized scheduling, we are also able to perform many more assessments in a single day, reducing the cost of the staffing for performing these assessments. By providing centralized appointment outbound calling, the RCCOs can leverage an existing State resource, providing inexpensive outreach that would be impossible if performed by each provider's office. Using our existing telephony infrastructure, MAXIMUS can create outbound calling routines that provide automated reminders and can significantly reduce no show rates, saving money for providers and increasing the availability of provider hours.

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

In several of our projects, MAXIMUS is testing the use of Patient Navigators, especially in the area of assisting persons to select appropriate health insurance plans to meet their individual needs. We have found in–person assistors to be invaluable in helping people to navigate the health care system. We are further working on combining the use of Community Health Workers or Patient Navigators, telecare remote monitoring platforms, and call centers to provide enhanced services to seniors aging in place. We recommend that the State consider the use of these less expensive, but oftentimes highly effective workers to augment the services already being provided by the RCCOs.

47) **Community Health Worker reimbursement.** Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement process	(Please check all that apply)
Independently bill	X
On staff (salary) at Primary Care	☐

Medical Provider Clinic	
On staff (salary) at RCCO	X
Per Member Per Month Payment	X

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you?

b. What RCCO requirements would ensure cultural competency?

c. What skills must providers and staff have in order to provide culturally and linguistically responsive care to all Clients/families including those with low health literacy?

Statistics abound showing that low literate and Limited English Proficiency (LEP) clients often have poorer outcomes than their English-speaking counterparts. The MAXIMUS Center for Health Literacy (the Center) was created specifically to deal with the problem of limited health literacy in the Medicaid population. The Center can provide educational materials, translation services, websites, and other communication strategies to help providers communicate with their culturally and linguistically diverse clients. One service that we could provide centrally to all RCCOs is the ability to perform real time translations for individual providers seeing LEP patients. These services could be particularly effective using telemedicine consults where the translators and the providers are simultaneously speaking with the patient.

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

The State should require that the RCCOs provide culturally and linguistically appropriate materials, including health education and promotional materials, translation services, and communication strategies that are designed to address the needs of low literate, LEP, and culturally diverse populations.

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

51) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

Pro-active health prevention strategies are key to reducing emergency room usage and hospital re-admissions. MAXIMUS is currently working on a pilot to use remote monitoring technology, call centers, and telehealth home consults to reduce adverse events including emergency room usage, re-hospitalization, and falls in the home. This proactive approach to managing chronic conditions can be effective in reducing emergency room utilization.

52) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

We recommend that the State consider the use of in-home telehealth consults, especially from specialists and behavioral health providers to augment areas where there are limited supplies of certain types of specialties and mental health providers.

Practice Support

53) **Support for practices**. Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	X	☐	☐	X
Network provider education	X	☐	☐	X
Assistance with practice redesign	X	☐	☐	X
Assistance with efficiency-enhancing activities	X	☐	☐	X
Provide web-based resources and directories	X	☐	☐	X
Provide practice-specific data reports	X	☐	☐	X
Provide clinical care guidelines and best practices.	☐	☐	☐	☐
Provide clinical screening tools	X	☐	☐	X
Provide health and functioning questionnaires	☐	☐	☐	☐
Provide chronic care templates	☐	☐	☐	☐
Provide registries	X	☐	☐	X
Offer client reminders	X	☐	☐	X
Offer client self-management tools	X	☐	☐	X
Offer educational materials about specific conditions	X	☐	☐	X
Supply behavioral health surveys	X	☐	☐	X
Supply other self-screening tools	X	☐	☐	X
Administer behavioral health surveys	X	☐	☐	X
Administer other self-screening tools	X	☐	☐	X
Prepare client action plans	X	☐	☐	X
Provide training on providing culturally-competent care	X	☐	☐	X
Provide training to supporting staff	X	☐	☐	X
Provide training on motivational interviewing	X	☐	☐	X
Provide tools and software for phone call and appointment tracking	☐	☐	☐	☐
Provide tools and resources for tracking labs, referrals, etc.	☐	☐	☐	☐
Provide referral and transitions of care checklists	☐	☐	☐	☐
Provide visit agendas or templates	☐	☐	☐	☐
Provide standing pharmacy order templates	☐	☐	☐	☐
Provide comprehensive directory of community resources	X	☐	☐	X
Provide directory of other resources	X	☐	☐	X
Provide materials regarding Nurse Advice Line	☐	☐	☐	☐
Ensure all tools and resources are centrally located on RCCO-specific website	☐	☐	☐	☐
Others	Centralized outbound reminder calling			

54) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

55) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

The State should consider the use of centralized data mining and call centers to provide care reminders across multiple practices. While large practices may have the resources to provide such analysis and outbound calling, this is often expensive or requires far more staff than is typically available in a small practice or a Federally Qualified Health Center. To address the need to follow up with clients inexpensively, we suggest use of centralized outbound reminder calls.

56) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

57) Should the Department require that PCMPs utilize disease registries to manage the health of their population?

58) Please share any other advice or suggestions about provider support in the ACC.

Provide reminder and outbound calls centrally, especially for smaller practices that might not have the resources to provide these services on their own.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

The expense for some provider practices for putting such an infrastructure in place. Provide this as a fee-based service so smaller practices can share the costs for such an infrastructure among multiple practices.

62) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

63) What role – if any – should the RCCOs play in the distribution of payments to providers?

Either a centralized administrative entity or a RCCO should be involved in processing payments to providers, based upon standardized rules for quality metrics.

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

66) **Measuring Client experience.** Please complete the table below to indicate how the Department should measure Client/patient experience:

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☐	☐	
SF-12 Health Survey	☐	☐	
Other types of client interviews / surveys	☐	☐	
Patient Activation Measure	☐	☐	
Focus groups	☐	☐	
Other	Please type your response here.		

67) Knowing that, at this time, the Department only has claims data, how should population health be measured?

68) How should quality and performance data be reported to the RCCOs, PCMPs, and the public?

69) **Measures for payment.** Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☐
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

70) What percent of RCCO payments should be tied to measures or performance?

Percentage	
10-20%	☐
21-30%	☐
31-40%	☐
41-50%	☐
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

71) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?

72) Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?

73) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

74) **Incentive payment frequency.** Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	☐
Annually	☐
Other	☐

If you checked the "Other" box, please describe payment frequency below:

75) For potential offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

76) For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

Health Information Technology (HIT)

77) **Types of communication.** For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	☐
Text message	☐	☐
Web portal	☐	☐
Email	☐	☐
Telemedicine / Video chat	☐	☐
Face-to-face meeting	☐	☐
Smartphone app	☐	☐
Other:		

78) **HIT investments by organizations.** For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below:

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	☐	☐
Digital care management tool	☐	☐
Care transitions alerts	☐	☐
Electronic Health Records (EHRs)	☐	☐
Health risk assessment software	☐	☐
Practice assessment tools	☐	☐
Practice management tools (scheduling, billing)	☐	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☐
Patient education/wellness tools	☐	☐
Provider/case manager directory	☐	☐
Shared decision-making tools	☐	☐
Telemedicine software	☐	☐
Other:	☐	☐
Other:	☐	☐

79) **Importance of technology by type**. The Department is working to determine what technology is in place, what technology is needed, and what technology should be standardized. For RCCOs, providers, and other organizations, use the table below to answer what HIT infrastructure outside of the 5DAC your organization would use to perform population health management activities. Tools are scored from 1-5, where 1 are those items least-likely to be used, and 5 are items most-likely to be used:

Tool	1 Least	2	3	4	5 Most
Population analytics / reporting / dashboard	☐	☐	☐	☐	☐
Care management tool	☐	☐	☐	☐	☐
Care transitions alerts	☐	☐	☐	☐	☐
Electronic Health Records (EHRs)	☐	☐	☐	☐	☐
Practice assessment tools	☐	☐	☐	☐	☐
Health risk assessment software	☐	☐	☐	☐	☐
Practice management tools (scheduling, billing)	☐	☐	☐	☐	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☐	☐	☐	☐
Patient education wellness tools	☐	☐	☐	☐	☐
Provider/case manager directory	☐	☐	☐	☐	☐
Shared decision-making tools	☐	☐	☐	☐	☐
Telemedicine	☐	☐	☐	☐	☐
Other:	☐	☐	☐	☐	☐

80) What are the primary barriers to RCCOs and providers increasing their use Health Information Technology to improve the performance of Primary Care Practices?

81) How can Health Information Technology support Behavioral Health Integration?

82) In the next iteration of the ACC, should there be a shared resource for data and analytics? Please describe the basic criteria for what a shared data and analytics platform needs to contain in order for it to be useful.

83) Should there be a shared care management tool? Please describe the basic criteria for what a care management tool would need to contain in order for it to be useful.

84) Should there be a shared population health management tool? Please describe the basic criteria for what a population health management tool would need to contain in order for it to be useful.

85) Please describe the functionality that a common Medicaid provider directory would need to contain in order for it to be useful

86) How can the RCCOs support providers' access to actionable and timely clinical data?

87) What are the HIT solutions that would benefit clients, providers, and RCCOs? Please comment on the parameters these tools or platforms would need to possess and the ways in which they could be used.

88) What technical assistance or resources related to HIT infrastructure should the RCCOs supply? This assistance or these resources could be for providers, social service organization, clients/families, or for others.

89) What role should health information exchange platforms like CORHIO or QHN play in the next iteration of the ACC?

90) Please share any information, advice, and suggestions you have about health information technology in the ACC Program.

The ACC Program in Colorado has the potential for testing very innovative approaches to health care delivery, using emerging telecare and telehealth technologies. To this end, MAXIMUS has tremendous interest in testing a model that brings together remote access technologies, Long-Term Services and Supports (LTSS), and behavioral health in a single model. This type of model, hereafter referred to as a "LTSS Telehealth" model, would integrate services to at-risk low-income seniors with chronic conditions and Serious Mental Illness (SMI). We would welcome the opportunity to work collaboratively with a RCCO to implement such a model.

In short, a LTSS Telehealth model would seek to improve preventive healthcare, access to care, and social engagement for underserved beneficiaries with chronic diseases and SMI. We believe a telehealth platform, as well as recruiting, hiring, and training a coordinated team of Telecare Support Navigators, Independence Coaches, and Community Assisters, can result in an innovative, integrated LTSS care delivery system that at once improves outcomes while reducing costs. The model's telehealth technology would enable beneficiaries to stay connected and allow appropriate care measures to manage and prevent incidents before they become life threatening or require hospitalization. The RCCO model being used in Colorado offers an excellent test bed to determine the efficacy of this approach.

The goals of the model would be to:

- Help beneficiaries remain in their homes longer and delay costly nursing home admission
- Preemptively prevent adverse events including hospital admission, re-admission, emergency room usage, falls, chronic disease complications, and other incidents
- Better target the growing scarcity of Personal Care Assistants (PCAs) and enable the existing supply to be used more effectively across a greater number of seniors
- Encourage the use of family caregivers by providing safe and responsible respite so family caregivers can address their own needs, and therefore be more likely to take on this responsibility.

Components of the model could include:

- **Technology Platform:** We would use a technical platform that includes three components: remote sensors, vital sign monitoring, and video conferencing. The remote monitoring includes sensors in people's homes, which are non-intrusive monitors that monitor sleep patterns, toileting, food spoilage, and movement within the home. Additionally the platform allows the plug in of a variety of devices to monitor vital signs. A data hub aggregates and reports on this data, creating various types of alerts to identify readings that are normal, of concern and requiring closer monitoring, or indicating need for immediate action. Using the video conferencing functionality, Case Managers can schedule and conduct telehealth consults with remote providers from Medicaid client homes, as well as access video presentations and distance learning resources on chronic conditions self-management. It also includes capabilities to enhance social interaction, supplying music, pictures, memory games, and other forms of entertainment to address social isolation.
- **Call Centers:** By adding some appropriately trained staff to an in-place call center, piggybacking on the existing infrastructure, we can provide conflict-free monitoring services. Telecare Support Navigators monitor reports via the web, and receive specific alerts that result in placing a call to the individual at home, and, depending upon the results of the follow-up call, initiating some type of action. Pre-determined physician-developed protocols specify the appropriate actions – dispatch of emergency services, consultation with a medical home case manager or community health team, call to a family caregiver or Personal Care Assistant (PCA), reminders to take a medication or initiate capture of a vital sign, or scheduling a telehealth consult.
- **Independence Coaches:** Independence Coaches address the social issues limiting the ability of the elderly to age in place. Recruited from the local community, they provide counseling, problem solving, and health coaching to assist participants with maintaining their independence and safety in the home and community. Independence Coaches provide information and access to a range of services – while acting as a key resource to fight social isolation and promote independence. Coaches configure the telecare platform to meet specific needs of individual participants; train them on the use of this technology; conduct weekly or more frequent virtual visits with their assigned participants; help the participant sign up for relevant distance learning, discussion groups, and webinars; and instruct their participants on the use of the secure video conferencing to help them communicate with family members or others in the community with shared interest. They are also responsible for helping the participant to arrange temporary services, as needed, and dispatching the appropriate service provider.
- **Community Assistors:** To make appropriate services available "as needed", we recruit local individuals available to provide paid part-time and/or volunteer assistance, using software to identify resources that best match participant need and assistor availability. The Independence Coach can identify and dispatch a resource to provide the assistance when and where it is needed. The software maintains the hours each "assistor" is available and the duties the assistor is willing to perform (such as shopping, cooking a meal, going to the drug store, doing laundry, installing a hold bar, or providing transportation to a doctor or therapy appointment), enabling the participant to get the in-person assistance when it is most needed. Community Assistors can be dispatched by text messages based upon proximity to the participant, providing a convenient resource to supplement PCAs.

Importantly, a LTSS Telehealth model could bring together technologies, care coordination strategies, health education, and community assistance to help people age in their home and more successfully overcome the challenges of chronic diseases and behavioral health issues. While other programs have focused on some aspect of this model (telehealth, care coordination, health education, community supports, and so on), virtually no other program brings together all of the different components into an integrated approach to aging in place.

We believe it is critical for such a model to address both medical and social determinants of health. While there have been multiple projects that include some aspect of tele-monitoring, none combine all of the components proposed in our approach. A pilot could combine monitoring of chronic diseases with the education, support, and coaching needed to engage beneficiaries actively in the management of their own health conditions, allowing themselves, their caretakers, and their providers to work collaboratively to take necessary preventive measures to avoid more costly medical interventions. A technology platform and call center could provide the ability to monitor chronic conditions continuously, ensuring compliance with treatment regimens through virtual monitoring and outbound reminder calls, while alerting a Medical Home immediately when adjustments to treatment may be needed because vital signs are outside established norms. By enabling in-home primary and specialty care consults via the video conferencing, beneficiaries can get the health care they need quickly and cost effectively, eliminating missed appointments due to long drives to the clinic, lack of transportation, and limited access to specialty providers. These factors often adversely affect the health of beneficiaries in rural environments and lead to more complex, costly medical interventions.

In addition to the successful use of technology, there should be an emphasis on the "human element" to further drive technology adoption. From our research, we found that several pilots providing just technology for senior's use have been less successful than anticipated. In fact, one specific pilot in California was discontinued because the seniors were reluctant to make use of the technology platform. In response to these negative outcomes, models should include a good deal of human interaction and support for use of the technology. Telecare Support Navigators, Independence Coaches, and Community Assistors could be a vital part of a model design.

As an example, although the technology platform can provide automated medication reminders, Telecare Support Navigators can perform outbound calls to ascertain why medication was being missed and encourage beneficiaries to take the missed medication. The purpose of the Independence Coach is to focus on the social needs of the beneficiaries. The Independence Coaches can customize the platforms with social activities, pictures, music, and memorabilia relevant to the specific beneficiaries to encourage them to use and benefit from the platform. Further, Independence Coaches can go into beneficiaries' homes and make sure they understand how to use the technical platform for multiple purposes and provide hands-on coaching to encourage its ongoing use. Through the virtual visits, the Independence Coach can continuously follow-up with the beneficiary, establishing a real relationship with the individuals, helping them to address problems as they arise that may prevent them from remaining in their homes, and finding ongoing ways to use the technology to keep the beneficiary engaged in social and intellectual pursuits that address social isolation and other negative social determinants. Finally, the Community Assistors can provide "on the spot" services when and where they are needed – using technology, but providing capabilities that would not otherwise be available if only the technology were in place.

MAXIMUS would welcome the opportunity to work with the ACC infrastructure to implement such a model to test its effectiveness in this environment.

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

ACC Request for Information

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Greg Hill, Executive Director
Location: Greenwood Village, Arapahoe County, Colorado

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Colorado Dental Association
Location: Greenwood Village, Arapahoe County, CO
☑ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☐ Medical provider / PCMP / other provider
  i. Type or specialty: Click here to enter text.
  ii. Area of practice: Click here to enter text.
☑ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☐ Other (please describe): Click here to enter text.

Are you currently involved in the ACC program?

☐ Yes
☑ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☐ 3-4 years
☐ Since before the program was implemented.

How have you been involved in the ACC program and what interaction have you had with RCCOs:

Click here to enter text.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:

In Colorado, children have had a long-standing comprehensive dental benefit under Medicaid. The children's benefit does not have an annual dollar limit (though there are certain frequency limitations on services). In July 2014, Medicaid added a limited dental benefit for adults, capped at $1,000 per fiscal year (dentures, when applicable, fall under a separate cap). Based on this new benefit, the dental profession has been increasing capacity to see Medicaid patients. The Colorado Dental Association has supported these efforts through recruitment and communications efforts.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

Care Coordination

12) What services should be coordinated and are there services that should not be a part of care coordination?

Oral health is a critical part of overall health for both children and adults, and should be included in care coordination. See Response to Question 48 below.

Network Adequacy and Creating a Comprehensive System of Care

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

Oral health is a critical part of overall health for both children and adults, and the Colorado Dental Association is pleased that the Department has recognized a need to increase the integration of oral health with other healthcare services (physical and behavioral health) in its most recent RFI.

Oral health has historically been approached as if it was disconnected from the rest of the body. As a result, oral health is often segregated from the other health professions. In 2000, the Surgeon General reported on the epidemic of oral diseases in the country. The report raised awareness about the scientific evidence linking oral health to other chronic diseases (diabetes, heart disease, and others), general health and quality of life. Despite this evidence and awareness, little has been done to integrate oral health into the health care system and consequently "bring the mouth back to the body".

Much time and energy has been invested in implementing the "medical home" concept defined by the American Academy of Pediatrics in 1992. Health care provided to patients in a medical home environment has been shown to be more effective and less costly in comparison to emergency care facilities or hospitals. A parallel concept exists in oral health and is known as the "dental home." The establishment of a dental home may follow the medical home model as a cost-effective and higher quality alternative to emergency care situations. A "Dental Home" means oral health care that is delivered in a comprehensive, continuously accessible, coordinated and family-centered way by a licensed dentist. Additionally, a Dental Home includes referral to other dental specialists when the pediatric or general dentist cannot provide the needed care. Children and adults who have a dental home are more likely to receive appropriate preventive and routine oral health care. While dental home initiatives are often focused on children, they can also be extended to other at-risk populations and the population at large. Referral by the primary care physician is a primary means by which the dental home is established.

In the upcoming ACC rebid, Colorado has a prime opportunity to begin to integrate oral health into the overall health equation through concepts like the dental home, as well as initiatives to coordinate dental care. The Colorado Dental Association would like to see the RCCOs charged with beginning to integrate not only physical and behavioral health, but also oral health in the next phase of the ACC. Realizing that dental care has typically been segregated from the rest of healthcare, there are a number of barriers to overcome such as:

- Oral health is often not considered a central component of primary care in the US.
- Patients are often unaware of the impact of oral health on their general health.
- Care coordination between dental and medical offices is often unavailable, even if such offices are co-located.
- Dental insurance is usually separated from medical insurance. (Or in the case of Medicaid, the administration of the programs is handled separately.)
- Dental and medical electronic records do not communicate with each other.

Given these and other barriers, we would recommend some basic standards around dental care integration for this next phase of the ACC. For example, the RFP could require applicants to detail how they plan to begin to integrate oral health care into the PCMH (with an outlook towards having every patient connected with a dental home in the future).

Some ideas from other markets for current consideration by the RCCOs may include:

- Incentivizing colocation projects where full dental services or just prevention and screenings are provided within the primary care office (some locations even joint schedule "max-packed preventative visits" where, for example, an annual or well child exam involves medical, dental and behavioral health screenings as well as vaccinations all in one visit)
- Adding oral health to case management services (even if targeted to specific populations to start, such as children, developmentally disabled, adults with concurrent conditions, nursing home residents or elderly, etc.)
  For example, in Tompkins County, NY, a dental case management program was piloted to increase dental access for children under 6 years old enrolled in Medicaid. This program utilized a dedicated case manager to alleviate administrative burdens on health care providers and maintain a communication portal for families. The case manager provided a variety of services including resolving billing and payment problems, educating patients, and assisting with patient transportation to appointments. The program showed an increase in access to dental care for Medicaid-enrolled families from 9% to 41%. This program also resulted in an increase in the number of dentists accepting Medicaid patients in the county. The case manager was also able to increase oral health literacy and treatment compliance among patients.

However, we would also recommend that the RCCOs be given sufficient flexibility to allow innovation and creativity in their approaches. The "pilot programs" pursued by the RCCOs in this next phase of the ACC could be evaluated and best practices incorporated as requirements in future rebids.

To ensure oral health integration is a priority, the Department should consider providing an appropriate PMPM to the RCCOs for dental care coordination.

In terms of network adequacy and attracting a robust network of high quality providers, it is also critical that dental reimbursements be evaluated. In 2013, the CDA launched a program called "Take 5" to recruit dentists to enroll as Medicaid providers to help treat the underserved in our state. While many dentists want to help and have agreed to treat a limited number of Medicaid patients in their communities, one of the biggest barriers to broad dental provider participation in Medicaid is very low provider reimbursement rates (see data included below). Accepting a large volume of Medicaid patients is unsustainable for many practices due to this financial imbalance. Colorado Medicaid reimbursements are below the national average reimbursement for Medicaid. The overhead costs of an efficiently run dental or dental hygiene office are usually at least 65% of the practice's operating budget. (Overhead costs for dental offices more closely mirror the overhead costs of hospitals or surgical facilities than those of physicians due to the surgical and technical procedures that are routinely performed in dental offices.) However, Medicaid reimbursement for dental procedures in Colorado is less than 50% of the average usual and customary fees for the region – fees that are based on the costs of sustainably operating a practice. (In contrast, most primary care medical practices are being reimbursed at the Medicare rate of approximately 85% of usual and customary fees though overhead expenses are typically reported to be much lower for these practices). These low rates mean that a dentist or dental hygienist must often lose money on a procedure in order to treat a Medicaid patient. Given these factors, dental professionals too often face the difficult

decision of limiting the number of Medicaid patients they can treat in their practice or choosing not to participate in the program at all. States that have increased Medicaid dental reimbursements closer to market levels typically avoid these challenges and easily maintain a robust provider network.

Adult Dental Medicaid Reimbursement Rates in 2014

- **Colorado's dentists are committed to reducing barriers to dental care for all Coloradans.**
- **In the past, many dentists have provided uncompensated care to Medicaid-eligible Coloradans because of billing issues and low reimbursement rates. As a new dental benefit is launched for Medicaid adults, we have sought to address many of the administrative barriers that prevent dentists from participating as Medicaid providers. Improvements include outsourcing administration of the Medicaid dental benefit to a private vendor (an administrative services organization).**
- **<u>But still, in 2014, Dental Medicaid pays dentists in private practice less than 50 cents on the dollar for providing care to Medicaid-eligible adults.</u>**
- **Dentists will treat more Medicaid-eligible adults if barriers to care, like very low reimbursement, are addressed.**

Common Dental Visits	Medicaid Reimbursement Rate for Private Practitioners[1]	Community Health Center Reimbursement Range[2]	CHP+ Reimbursement Rate[3]	Average Private Market Reimbursement Rate[4]
Emergent Care Visit[5] (Extraction)	$112	$140 – 230	$144	$226
Restorative Care Visit[6] (Dental Filling)	$83	$140 – 230	$119	$171
Preventive Care Visit[7] (Cleaning and Exam)	$86	$140 – 230	$136	$180

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Elizabeth Hickman, Ph.D.
Location: Yuma, Yuma, CO

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Centennial Mental Health Center
Location: Admin office Sterling, CO, but providing services to Cheyenne, Elbert, Kit Carson, Lincoln, Logan, Morgan, Phillips, Sedgwick, Washington and Yuma Counties
☒ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☒ Medical provider / PCMP / other provider
  i. Type or specialty: Mental Health and Substance Use Disorder treatment provider organization
  ii. Area of practice: Community behavioral health
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☒ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☐ Other (please describe): Click here to enter text.

Are you currently involved in the ACC program?
☒ Yes

If you answered "yes" above, how long?
☒ Since before the program was implemented.

How have you been involved in the ACC program and what interaction have you had with RCCOs:
Centennial has participated in care coordination teams whenever possible within RCCO 2; we have shared population data to "match" for RCCO 2 attributed members who have history of treatment at our agency. In both RCCO 2 and 7, we have engaged in higher level discussions about how to optimize positive impact of the ACC principles in our rural/frontier counties, and in RCCO 2 we join the Northern Colorado Health Alliance in monthly review and planning regarding RCCO functions.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:
Past provider and co-owner of Northeast Behavioral Health Partnership (BHO); current provider within Colorado Access Northeast BHO.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?
☒ Very likely

We are strong believers in the value of effective integration and care coordination to help maximize positive impact on both individual client care and population health. We have participated as actively as we were able, given the structure of the RCCO and "PCMP" options up to now and look forward to additional roles we can take in the future.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

At least in RCCO 2, it took a very long time to really build out the network of associated primary care practices for attributed members beyond Weld County. The good news is that I believe all counties are finally represented by primary care options, and at least in some of our counties, our center is actively represented in the care coordination team.

In RCCO 7, our agency is finally getting looped into efforts in Elbert County, which was at best an afterthought in that region's implementation. The good news there is that Peak Vista has now acquired the smaller FQHC that previously served Elbert (and Lincoln) County, so there will likely be better engagement of the RCCO 7 efforts in Elbert County.

2) What is not working well in the ACC Program?

There are challenges in developing the ACC framework in our rural/frontier counties and I believe there have been perhaps unintended barriers to really fully integrating efforts with our agency which is the "face" and practical reality of the BHO in the Northeast. I think there is a good chance that allowing for earlier involvement of community mental health centers (CMHC's) as designated PCMH's could have moved such enhanced care coordination into all of our counties much quicker. Even now, unless the contracted PCMH is part of a much bigger system (e.g. Salud or Banner Health), they are unlikely to have the local staff to serve direct care coordination functions, and there does not seem to be a smooth way that CMHC's can quickly contribute to the boots on the ground care coordination, even around our own clients. I believe some of the other RCCO's have found ways to bring CMHC's into the service and care coordination "mix" in some different and likely more effective ways, but in RCCO 2, we have been eager from the beginning to contribute more than we've been able to do.

The lack of alignment of regional boundaries from the ACC to the BHO system has been a barrier to the best coordination of care in those counties caught between, including Elbert County that for the first several years of ACC implementation was largely forgotten in the RCCO 7 effort. Until the major FQHC in RCCO 7 acquired the smaller FQHC serving Elbert County, there was really no logical pattern of medical services tying Elbert County Medicaid members to the rest of RCCO 7. Such "illogical" boundaries around the original ACC regions is even more pronounced in Larimer County which got cut off from the rest of the northeast region and paired with the Western Slope, in complete disregard for both geography and natural flow of medical services in the area.

3) What is working best in the Behavioral Health Organization (BHO) system right now?

The BHO risk-based model has for many years been an effective structure to help ensure availability of quality services in the community for individuals in need, and to do so in a cost-effective way. As a consequence, the cost curve for Medicaid BH services has been much lower than healthcare as a whole. Although the capitation model continues to tie back closely to overall "encounters", at least it has provided a base to operate from, even in our widely dispersed rural/frontier counties. That same encounter based model initially complicated tracking and justification for more and more "integrated" services bringing BH into primary care practices, but the "carve out" contract has nonetheless allowed BHO's and their providers to take the risk to develop these alternative service sites and ways of delivering care to more Medicaid members. We worry that consideration of a "carve in" model of the future would fair very poorly, especially in our rural communities, where the breadth and depth of services needed for Medicaid members would be impossible to ensure. Ultimately, we believe that there may be an answer somewhere between that will allow the "best" of the BHO functions to remain, yet allowing for the necessary flexibility and coordination to best operationalize integrated care in our communities.

4) What is not working well in the BHO system?

The BHO major providers like CMHC's are facing workforce challenges across virtually all provider types who provide both MH and Substance Use Disorder services. Some barriers exist in getting folks from out of state quickly credentialed, and we could absolutely make good use of increased programs for health shortage areas like loan repayment. Retention of good providers is also made more difficult by increased competition for the same workforce from broader health care systems that tend to pay at a higher level commensurate with long-standing higher "value" of medical vs. MH procedures.

Safety net funding in the state (Medicaid and OBH) could, and should, be better aligned so that goals toward best outcomes and overall population health would be consistent and supportive of integration.

5) What is working well with RCCO and BHO collaboration right now?

Although slow to really develop in our rural counties, there gradually is more collaboration and intent to coordinate care well, at least for those highest in medical need. Initial efforts to share BHO, CMHC-specific and RCCO 2 data to identify common members languished, but have now been rekindled and will hopefully lead us forward more productively.

In RCCO 7, our BHO/CMHC is becoming more involved in active collaboration around BH service delivery and care coordination as well.

6) What is not working well with RCCO and BHO collaboration right now?

In RCCO 2, even with both the RCCO and BHO now being contracted with Colorado Access, there is too much separation and potential redundancy around aspects of care coordination that I believe could more effectively and efficiently be done by local CMHC staff, who could provide more regular in person contact, versus RCCO care coordinators that travel out to our rural/frontier counties once a month. I hope that future RCCO guidance will incentivize if not mandate such coordination with local providers.

Challenges also remain around the sharing of data, partly due to limitations in the SDAC system, but also around barriers to CMHC's being able to get relevant health care data on their populations and specifically

on the clients they are serving. If CMHC's are allowed to become designed PCMH's, that barrier would be reduced.

There also remain issues around member-specific sharing of substance use data due to 42-CFR part 2 that ultimately may need Federal level change, but can generally be worked around with appropriate releases for actual care coordination.

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

Ideally, we would be working toward alignment of goals and systems across all major players in health care in the state, including BHO, RCCO and health insurers—hopefully with the support of the pending "SIM' grant—where services, finance, and data all are aimed toward the best health outcomes that serve both the individual patient and population health. However, such alignment in processes needs to be "lean" and only what is truly necessary to monitor effective outcomes and overall oversight for public dollars, as over regulation will not serve either the state or population goals.

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	Barrier? No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☒	☐	OBH funding does not really support effective integration of BH into physical health care. BHO funding is more robust, but we still need to work on opening up all relevant codes and move past limitations of covered diagnoses.
Community Behavioral Health Services Rule	☒	☐	They are generally aimed at traditional outpatient CMHC type clinics, so sometimes just miss the mark in an integrated care situation.
Covered diagnoses list	☒	☐	BH providers should be able to effectively assist with behavioral challenges across all diagnoses, including but not limited to MH or SUD disorders. With the overall goals of Medicaid in our state, exclusions of individuals with TBI, autism spectrum, developmental disabilities and the like are misplaced.
Different behavioral / physical health reimbursement	☒	☐	I believe that ultimately physical health care will need to incorporate more of a risk-based reimbursement model as the BHO's have operated with for years.
Institutions for Mental Diseases exclusion	☐	☐	unsure
OBH rules, reporting, or financing (regulatory differences between agencies)	☒	☐	At least some aspects on the OBH side are redundant, often irrelevant to goals of population health and at times burdensome; HCPF and BHO contracts have some rules and requirements that still get in the way (see above) but generally are a bit easier to work with.
PCMP financing structure	☒	☐	Up to now, it has left out the possibility that CMHC clients could prefer to have all of their health care coordinated through the CMHC, whether or not the physical health care is actually delivered on site at the CMHC.
Per-member per-month amount	☒	☐	It is enough to help support efforts, but without being able to blend in some of our same staff and resources supported from the BHO side, I'm not sure how our CMHC would be able to "play" in the overall effort.
Physical space constraints	☒	☐	We are building a new facility in one of our biggest population counties (Morgan) that will be able to house a physical health care unit, but in our existing facilities,

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

			finding space to conduct more than routine health screenings is a significant challenge.
Privacy Laws (HIPAA, 42 CFR)	☒	☐	As mentioned above, 42 CFR part 2 requirements around release of SUD specific information on clients is still challenging. OHCA and BAA arrangements seem satisfactory in addressing most HIPAA requirements.
Professional / cultural divisions	☒	☐	There is no doubt still a bit of a divide between behavioral health and physical health providers, but the only way past that is a bit of training and a lot of experience in the trenches together.
RCCO or BHO contracts	☒	☐	I would suggest future RCCO contracts include even more clear expectations to work closely with the BHO and its primary provider network in order to meet the expectations for care coordination and effective interventions for behavioral health. I am not sure if it is possible, but I would recommend you consider requiring the BHO through its providers to be the "default" source of care coordination out in the field.
Staff capacity	☒	☐	Every CMHC in the state is challenged with gearing up its workforce at the present time, but we are all investing more all the time in integrated care directions. Ideally, our local state colleges would get in tune with integration and do a better job in the future of training professionals for this work as well!
State/Federal rules or reporting requirements	☒	☐	See above regarding OBH rules/reporting specifically.
Technical resources / data sharing	☒	☐	SDAC has its own limitations, but we recognize that our current EMR also has gaps that our next generation electronic record will help us address. "Meaningful use" will hopefully be more than a concept in the future!
Training	☒	☐	In addition to better new professional training in this integrated care world, we are in process of identifying the right level of training to gear up our existing work force to better interface with our primary care colleagues in general, as well as training for our staff serving in primary care clinics. I think this is a realm ripe for cross-fertilization in Colorado.
Others	Please type your response here.		

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

There are wonderful models out there for integrated care that typically involve a continuum from a position of disconnected entities providing uncoordinated care to a person, up to a level where there is a completely integrated service in one location supported by integrated funding. The SAMHSA-HRSA six-level model is one such approach that gives us a great way to gauge where we are and an idea of what to strive for.

However, this should not become the only way in which HCPF recognizes a health care entity as a Patient Centered Medical Home/Provider. Any health care entity, including but not limited to CMHC's, willing to provide a significant portion of an individual's health care services and actively coordinate the rest should be eligible. HCPF historically has used a "medical home" designation that was achieved through demonstration of active care coordination and collaboration in behalf of children served, a concept that reflects well what is required to bring care together to the benefit of the "whole person". A simple expansion of the age range would provide an alternative way to recognize a given clinic in this vein.

10) Please share any other general advice or suggestions you may have about behavioral health integration.

Behavioral health integration will look differently across the state based on many factors, including resources and demographics. It should be a goal that is more "process" than a specific place on a continuum.

We also need to make sure that telehealth delivery of behavioral health is considered equivalent, as this is one very efficient and effective way to provide virtual on-site behavioral health support to primary care practices across the big geography of Colorado.

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination?

At a system level, it involves ways of identifying which clients may benefit from additional support. At the client level, it is in essence getting to know the "whole person" well enough to help them identify additional needs based on their personal goals for their health and functioning, then helping them get connected to other medical, behavioral and/or community resources that will address those needs.

b. How should RCCOs prioritize who receives care coordination first?

It is my understanding that RCCOs typically use medical cost data to help identify individuals with high needs (e.g. the "hot spotter" model), and for overall purposes that probably works okay. However, there should certainly be an alternative referral path, including provider or self-referral, as well as consideration of other factors beyond system cost that drive the setting of priorities.

c. How should RCCOs identify clients and families who need care coordination?

See answer to b. above. Ideally the identification process can be multi-faceted, and cost factor is just one consideration in establishing "priority".

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

I am not familiar with how this may be happening now, but would hope that such tracking could be done, as much as possible, within the existing records and reporting requirements that the delegated provider already provides for their Medicaid clients.

12) What services should be coordinated and are there services that should not be a part of care coordination?

If care coordinators are really coming to understand the whole person and their needs, there may well be assistance needed in ways that are far outside the typical health care "box", and as long as the solution is legal and within reason of cost/time, I believe the more flexibility the better.

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

Overall known/suspected health care challenges, a survey of their family/social resources, ability to transport oneself, any other self-perceived barriers to following through on health goals, and what the local array of formal and informal resources are in the community.

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today?

We are already often crossing care coordination pathways, which potentially can be problematic and redundant at best. For some of our clients, they have may have coordination within their SEP or community centered board, our CMHC and/or the BHO, as well as the RCCO.

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

Care coordination within the CMHC environment has historically focused on helping that client recover optimal functioning by looking at all aspects of their life and assisting them to make best use of the appropriate (or mandated) community resources. The latter, depending on age and/or situation, might involve schools, courts, probation, human services, family resource centers, etc., along with health care providers.

c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

Quickly identify if there is an existing or better point of contact for a particular client to serve as the care coordinator. In some situations, I could imagine a need for the RCCO to also have some follow up with a client, but I think in the great majority of circumstances, clients would be better served by having ONE care coordinator that is supported behind the scenes around details that they may not have immediate knowledge of.

d. What are the gaps in care coordination across the continuum of care?

Primary care has historically not been strong in "whole person" care, and unless they were part of a big enough system to have a hospital social worker, there was seldom an identified resource person to meet the needs that did arise. This is improving, through RCCO efforts and otherwise, but there are still gaps there, particularly if the client's medical needs have not pushed them to the "hot spot".

15) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	Should the RCCO have a role? Yes	No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma	☒	☐	☒	
Affordability (assistance with prescriptions or co-pays)	☒	☐	☒	Knowledge of any programs that provide added support and/or assistance in applications needed; linkage if needed regarding formulary issues.
Daycare / childcare	☒	☐	☒	
Economic stability & employment	☒	☐	☒	
Education	☒	☐	☒	
Environment	☒	☐	☒	
Food access / nutrition	☒	☐	☒	Source of information if not available from local resources.
Health literacy	☒	☐	☒	Ditto food access.
Housing	☒	☐	☒	
Language or translation services	☒	☐	☒	
Literacy	☒	☐	☒	
Transportation	☒	☐	☒	An important support as needed in rural counties where public options may be non-existent.
Other	Please type your response here. Feel free to list as many non-medical factors as you want, and please explain how the RCCO should be involved.			

16) **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	Coordinate care? Yes	No	In what capacity should these individuals coordinate care in the ACC Program?
Advanced Practice (Registered) Nurses	☒	☐	
Certified Addiction Councilors	☒	☐	Counselors please...
Certified Nurse Midwives	☒	☐	
Community Health Workers	☒	☐	
Generalists (BA/BS/MA/MS)	☒	☐	
Health Coaches	☒	☐	
Licensed Clinical Social Workers	☒	☐	
Licensed Marriage and Family Therapist	☒	☐	
Licensed Mental Health Counselors	☒	☐	
Licensed Professional Counselor	☒	☐	
Masters of Public Health	☒	☐	
Medical Doctors / Doctors of Osteopathic Medicine	☒	☐	
Nurse Practitioners	☒	☐	
Patient Navigators	☒	☐	
Peer Advocates	☒	☐	
Promotoras	☒	☐	
Psychiatrists	☒	☐	
Psychologists	☒	☐	
Registered Nurses	☒	☐	
Social Workers	☒	☐	
Wraparound facilitators	☒	☐	

Other	OVERALL COMMENT: The ROLE of a care coordinator could be met by any of the above individuals. The core quality is probably not degree dependent, but rather has to do with the level of empathic connection and ability to help motivate and encourage the individual toward more healthful choices, as well as the knowledge base to steer them toward other health, human service and community resources that can help them.

17) Care coordination requirements for specific populations. Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and infants	☒	☐	
Children	☒	☐	
Children who are healthy, but in socially-complex environments	☒	☐	
Children involved in the foster care system	☒	☐	
Children with a chronic illness	☒	☐	
Children with a serious emotional disturbance	☒	☐	
Children with medical complexity	☒	☐	
Children or youth with a behavioral health diagnosis or substance use disorder	☒	☐	
Transition-age adolescents	☒	☐	
Parents and families	☒	☐	
Pregnant women	☒	☐	
Adults	☒	☐	
Adults who are healthy, but in socially-complex situations	☒	☐	
Adults with a chronic illness	☒	☐	
Adults with a behavioral health diagnosis or substance use disorder	☒	☐	
Clients involved in the criminal justice system	☒	☐	
Clients with a disability	☒	☐	
Clients in a nursing facility	☒	☐	
Elderly clients	☒	☐	
Frail elderly clients	☒	☐	
Clients in palliative care	☒	☐	
Other populations, please comment: OVERALL COMMENT: The best care coordination for any and all of the above populations is going to be enhanced by someone with at least some familiarity with some of the specific needs and/or barriers to care for these populations. That does NOT necessarily mean that each of the above populations would need someone only providing care coordination for others in that same realm, but some basic familiarity would be needed. Some of them also group naturally together, for example in the array of specific children populations noted. As noted above in # 16, if care coordination is conducted by the person/system most relevant to the client, this issue will naturally be addressed.			

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

As stated above, it is our belief that care coordination will best be conducted by, or in very close concert with, the health care provider system closest to that individual. In the case of foster children, some human service entities may also have capacity, but at the very least, need to be providing a lot of information and support to make sure the care coordinator has the big picture for the client.

19) How should care coordination be evaluated? How should its outcomes be measured?

Some of the existing outcome measures (e.g. reduction in cost) are valuable, but there are also client perceptions that are likely important to the continued optimal delivery of health care to that client—not just "satisfaction" per se, but variables like increased knowledge of their condition and reported decrease in barriers to medical compliance.

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

a. What is the PMPM cost for providing care coordination services?

Unsure, as BH providers our care management/coordination is delivered under a much different "at risk" capitation model, and one of many services delivered to a specific client. Our center probably spends conservatively $35/month for targeted clients (e.g. those with SPMI) for care coordination, and much more than that when an individual is going through a situation requiring much more support and coordination efforts.

b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

If care coordination is going to be targeted to specific populations, it certainly makes good common sense to acknowledge the differential time and hence cost of providing care to high needs clients vs. routine health care, but I have no specific recommendation on how much this PMPM should vary.

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

Unsure, and in general, the less RCCO's are tied to specific requirements and the more their success is measured by outcomes, the better.

a. **Care coordinator to client ratios.** If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Fewer than 25, if considering active "high risk", "high cost" during the targeted period; possibly closer to 51-100 if totaled over a year's time.

Clients	
Fewer than 25	☒
26-50	☐
51-100	☒
101-200	☐
201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

Improvement in client's objective health status

Improvement in client's reduction in isolation and/or suffering in dealing with their health condition; or in other words, their sense of encouragement and support.

Reduction in overall health care costs

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Keep the option for care coordination to be conducted closest to the client and their main source of health care, including CMHC's as appropriate to a given client. Keep the ACC/RCCO framework as flexible as possible for what works best for a given region AND a given client or patient. Don't over-regulate, but instead develop a framework where the health care providers and the RCCO have "skin in the game" to positively incentivize offering the most effective and efficient care.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

As much as possible, local flexibility should be allowed so that the RCCO and contracted providers can best address the needs of their communities. Regulations should be "lean" and aim at the big picture requirements instead of specific functional requirements.

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

The real ability to create such community relationships in a similar (if not the same) targeted RCCO area. Urban expertise is not equivalent to rural expertise, just as one case in point.

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

I cannot imagine that this would lead to a stronger regional system.

27) Should the RCCO region maps change? Why or why not? If so, how?

Consider redrawing boundaries to match obvious geography and/or patterns of seeking healthcare. Elbert County and Larimer County should never have been moved away from the rest of the Northeast that became RCCO 2.

28) Should the BHO region maps change? Why or why not? If so, how?

The BHO regions were historically established around prior MHASA's which were groupings of MHC's. I would see no value in them changing at this point.

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

Unsure.

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

Unsure, other than resolution of 42 CFR as noted in previous question.

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

Continuous benefits are critical to continuity of care and hence better health outcomes.

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

This does not make sense to me. I don't believe this arena of health care needs "competition" to work better.

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

We have been a Medicaid provider for many years.

34) What role should RCCOs play in attributing clients to their respective PCMPs?

Clients should be attributed to the PCMP that can best meet their needs, including a CMHC when appropriate, so the RCCO role would be one of providing information on options and helping, as needed, with the logistics to make that happen.

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

Programs that address population health goals across the region.

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

Some human services may be an integral part of improving a client's health and functioning in the community. Both DHS and HCPF funding should support this interface.

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

At the very least, cross referral to make sure that all Colorado residents are ultimately covered by health care benefits from Medicaid or 3rd party insurers.

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

The ACC program is in unique position to help identify and recommend solutions to unintentional barriers to effective integration, including ways to streamline regulatory requirements between physical and behavioral health systems. The ACC can also work with DORA to help streamline and speed up licensure of qualified health care professionals moving into Colorado from other jurisdictions.

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

RCCOs at least via their care coordinators should have active and ongoing involvement from clients, families and advocates; this will be easier if care coordinators have an established local presence.

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

Each community has some unique qualities, and RCCOs would be well served to bring these community groups together to help "design" the community implementation of the RCCO.

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

Get input and feedback on the community RCCO back to the broader community and not just the PCMP(s).

42) How should the Department structure stakeholder engagement for the ACC as a whole?

Make sure that systems that overlap with the ACC for the benefit of members are all involved in refining the second RCCO contracts, including systems like BHO, SEP, CCB, etc.

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

a. If no, what are the gaps?

b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

There are shortages of virtually every licensed behavioral health provider, including psychiatrists and mid-level prescribers. As noted previously, the ACC's should help address barriers with DORA. Additionally, telehealth provision of services is an essential "gap-filler", so bidders and providers should be acknowledged for such capability.

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

a. What role should hospitals play in the next iteration of the ACC Program?

b. What role should pharmacies play in the next iteration of the ACC Program?

c. What role should specialists play in the next iteration of the ACC Program?

d. What role should home health play in the next iteration of the ACC Program?

e. What role should hospice care play in the next iteration of the ACC Program?

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

g. What role should counties play in the next iteration of the ACC Program?

h. What role should local public health agencies play in the next iteration of the ACC Program?

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

My response for all of the above is virtually identical, so I will respond generally here. All of the above service entities/providers potentially play absolutely key roles in achieving the "triple aim" and should, at a minimum, be surveyed and invited to local/regional stakeholder participation to help refine the next RCCO contracts. After contracting, these groups similarly should all be part of development of additional aspects of the RCCO implementation, and ongoing program monitoring for success.

45) How can RCCOs help to support clients and families in making and keeping appointments?

This is something that CMHC's have addressed for years, including actively helping remove barriers for clients keeping appointments. Perhaps these "lessons learned" would be of value to the RCCO and/or PCMP's.

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

I do think there is great value in CHW's and/or navigators that are very well informed about the community the client lives in. Generally, at least in the systems I'm at all familiar with, these individuals are part of a team in conjunction with the RCCO and/or BHO-CMHC provider so they also have support beyond themselves.

47) **Community Health Worker reimbursement.** Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement process	(Please check all that apply)
Independently bill	☐
On staff (salary) at Primary Care Medical Provider Clinic (inc. **CMHC)**	☒
On staff (salary) at RCCO	☒
Per Member Per Month Payment	☐

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

Helping to encourage other dental practices to participate, identify regional resources, bring mobile services in regularly to communities without Medicaid dental providers and assisting with transports.

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you?

Familiarity and ability to speak and relate well to individuals from the local population "mix" across not only racial and ethnic identities, but also predominant work, socio-economic, industry groups.

b. What RCCO requirements would ensure cultural competency?

   Close working relationships not just with PCMP's in the region, but other providers, resource groups in the local area.

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?

   A general attitude and approach of openness and non-judgmental response is just one aspect. Multi-language capacity is obviously needed, whether through bilingual staff or portable translation technology. Translating the medically complex into common "lay" language is also an essential skill.

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

   At the very least, the RCCO would need to describe and delineate how they would intend to address those barriers themselves, or through their community partners.

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

Unsure

51) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

If RCCO's could assist with making real-time connections between the ER and the community providers involved with a client, this would help redirect such individuals back into their more effective and less costly community-based care.

52) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

Practice Support

53) **Support for practices.** Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☐	☐	☐	☐
Network provider education	☐	☐	☐	☐
Assistance with practice redesign	☐	☐	☐	☐
Assistance with efficiency-enhancing activities	☐	☐	☐	☐
Provide web-based resources and directories	☐	☐	☐	☐
Provide practice-specific data reports	☐	☐	☐	☐
Provide clinical care guidelines and best practices.	☐	☐	☐	☐
Provide clinical screening tools	☐	☐	☐	☐
Provide health and functioning questionnaires	☐	☐	☐	☐
Provide chronic care templates	☐	☐	☐	☐
Provide registries	☐	☐	☐	☐
Offer client reminders	☐	☐	☐	☐
Offer client self-management tools	☐	☐	☐	☐
Offer educational materials about specific conditions	☐	☐	☐	☐
Supply behavioral health surveys	☐	☐	☐	☐
Supply other self-screening tools	☐	☐	☐	☐
Administer behavioral health surveys	☐	☐	☐	☐
Administer other self-screening tools	☐	☐	☐	☐
Prepare client action plans	☐	☐	☐	☐
Provide training on providing culturally-competent care	☐	☐	☐	☐
Provide training to supporting staff	☐	☐	☐	☐
Provide training on motivational interviewing	☐	☐	☐	☐
Provide tools and software for phone call and appointment tracking	☐	☐	☐	☐
Provide tools and resources for tracking labs, referrals, etc.	☐	☐	☐	☐
Provide referral and transitions of care checklists	☐	☐	☐	☐
Provide visit agendas or templates	☐	☐	☐	☐
Provide standing pharmacy order templates	☐	☐	☐	☐
Provide comprehensive directory of community resources	☐	☐	☐	☐
Provide directory of other resources	☐	☐	☐	☐
Provide materials regarding Nurse Advice Line	☐	☐	☐	☐
Ensure all tools and resources are centrally located on RCCO-specific website	☐	☐	☐	☐
Others	OVERALL COMMENT: Many if not all of the above have their corollaries in the BHO system and/or have been otherwise developed in the statewide CMHC's. They would have benefit to the PCMP's beyond their Medicaid role, but may well be worth supplying or supporting adequately.			

One additional BASIC point of assistance from the RCCO would be around education with medical lproviders around behavioral health treatment, as they are generally not very familiar with how BH supports the broader health care goals and reduce medical costs.

54) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

55) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

56) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

Based on BHO experience, I'd say to incentivize the PCMP's to take financial risk in the health outcomes of their clients.

57) Should the Department require that PCMPs utilize disease registries to manage the health of their population?

Unsure

58) Please share any other advice or suggestions about provider support in the ACC.

None at this time

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

Moving toward more of a risk-based model will further incentivize good coordination and good care.

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

Centennial MHC within the BHO structure has been operating within such a capitation payment environment successfully for many years. It is a tested design for Colorado and help us meet goals of the triple aim with regional and local flexibility in implementation.

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

Yes, as long as value is truly outcome based and valid versus just counting services.

62) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

Centennial is not licensed in this fashion, but is part of a regional entity that holds a LSLPN license.

63) What role – if any – should the RCCOs play in the distribution of payments to providers?

Unsure

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

None at this time.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

Improvement in health measures, increased client engagement, provider success, as objectively measured as possible.

66) **Measuring Client experience**. Please complete the table below to indicate how the Department should measure Client/patient experience:

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☐	☐	Not familiar with the specific measure
SF-12 Health Survey	☐	☐	Ditto
Other types of client interviews / surveys	☐	☐	Helpful, but tend to underreport as many clients decline participation
Patient Activation Measure	☐	☐	In other words, "engagement" in one's own health? If so, yes!
Focus groups	☐	☐	Something like "appreciative inquiry" would be more highly recommended! Talk to High Plains Research Network.
Other	Please type your response here.		

67) Knowing that, at this time, the Department only has claims data, how should population health be measured?

Work with specific communities and stakeholder groups to identify needs and ways to monitor progress; perhaps an effort that could be combined with health departments.

68) How should quality and performance data be reported to the RCCOs, PCMPs, and the public?

Stakeholder meetings and updates via email, links to public websites, and the like. Newspaper and other media efforts that attempt to bring the "value" statement back down to the community level and not just at the state level.

69) **Measures for payment**. Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☒
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐

S1+	☐
None	☐

Somewhat unsure about what to recommend here, but generally believe that such measures are best kept few and simple.

70) What percent of RCCO payments should be tied to measures or performance?

Percentage	
10-20%	☐
21-30%	☐
31-40%	☐
41-50%	☐
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

Unsure

71) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?

Perhaps most should be in common, but at least some regional/local variability would also provide some helpful flexibility.

72) Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?

Both! Use national standards as a baseline and incentivize improvement within reasonable boundaries.

73) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

Unsure, but probably at least quarterly.

74) **Incentive payment frequency**. Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	☒
Annually	☒
Other	☒

If you checked the "Other" box, please describe payment frequency below:

Perhaps a mix of quarterly and annually, depending on the measure and the fluctuations to be expected over short periods of time.

75) For potential offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

Unsure

76) For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

Centennial participates in managed care contracts with both BHO and MSO entities and receives reimbursement in part related to measures such as access to care and/or reduction in symptoms.

Health Information Technology (HIT)

77) **Types of communication.** For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	☐
Text message	☐	☐
Web portal	☐	☐
Email	☐	☐
Telemedicine / Video chat	☐	☐
Face-to-face meeting	☐	☐
Smartphone app	☐	☐
Other:		

78) **HIT investments by organizations.** For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below:

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	☐	☒
Digital care management tool CONSIDERING	☐	☐
Care transitions alerts CONSIDERING	☐	☐
Electronic Health Records (EHRs)	☒	☐
Health risk assessment software	☐	☒
Practice assessment tools	☒	☐
Practice management tools (scheduling, billing)	☒	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☒
Patient education/wellness tools	☒	☐
Provider/case manager directory	☐	☐
Shared decision-making tools	☐	☒
Telemedicine software	☒	☐
Other:	☐	☐

Other:	☐	☐

79) **Importance of technology by type**. The Department is working to determine what technology is in place, what technology is needed, and what technology should be standardized. For RCCOs, providers, and other organizations, use the table below to answer what HIT infrastructure outside of the SDAC your organization would use to perform population health management activities. Tools are scored from 1-5, where 1 are those items least-likely to be used, and 5 are items most-likely to be used:

Tool	1 Least	2	3	4	5 Most
Population analytics / reporting / dashboard	☐	☐	☐	☒	☐
Care management tool	☐	☐	☐	☒	☐
Care transitions alerts	☐	☐	☐	☒	☐
Electronic Health Records (EHRs)	☐	☐	☐	☐	☒
Practice assessment tools	☐	☐	☒	☐	☐
Health risk assessment software	☐	☐	☐	☐	☒
Practice management tools (scheduling, billing)	☐	☐	☐	☐	☒
Client web portal for communicating care plan, services, benefit enrollment	☐	☐	☐	☐	☒
Patient education wellness tools	☐	☐	☐	☐	☒
Provider/case manager directory	☐	☐	☒	☐	☐
Shared decision-making tools	☐	☐	☐	☒	☐
Telemedicine	☐	☐	☐	☐	☒
Other:	☐	☐	☐	☐	☐

80) What are the primary barriers to RCCOs and providers increasing their use Health Information Technology to improve the performance of Primary Care Practices?

Real time information sharing capacity and some remaining privacy issues (esp. 42 CFR part 2)

81) How can Health Information Technology support Behavioral Health Integration?

The ACC Program should look for bidders willing to invest in technology that fosters integration and can overcome the challenges of the State's data system.

82) In the next iteration of the ACC, should there be a shared resource for data and analytics? Please describe the basic criteria for what a shared data and analytics platform needs to contain in order for it to be useful.

Both physical health and behavioral health (mental health and SUD) must be addressed.

83) Should there be a shared care management tool? Please describe the basic criteria for what a care management tool would need to contain in order for it to be useful.

Ability to cross over from primary care to behavioral health and/or other systems supporting a client's care.

84) Should there be a shared population health management tool? Please describe the basic criteria for what a population health management tool would need to contain in order for it to be useful.

Unsure

85) Please describe the functionality that a common Medicaid provider directory would need to contain in order for it to be useful.

All providers and provider types should be contained.

86) How can the RCCOs support providers' access to actionable and timely clinical data?

Allow the RCCOs to share data outside the existing state data system with provider entities as needed to enable the use of timely clinical data to improve care.

87) What are the HIT solutions that would benefit clients, providers, and RCCOs? Please comment on the parameters these tools or platforms would need to possess and the ways in which they could be used.

For clients – very user friendly and smartphone accessible, as well as obviously relevant to their own health goals. For providers and the RCCO – secure but still open enough platform to be able to be used and accessed by range of tech-savvy (or not) providers.

88) What technical assistance or resources related to HIT infrastructure should the RCCOs supply? This assistance or these resources could be for providers, social service organization, clients/families, or for others.

Ideally, live IT support.

89) What role should health information exchange platforms like CORHIO or QHN play in the next iteration of the ACC?

It's essential that exchange platforms are available to both physical and behavioral health providers. Also, it's critical that the platforms allow for the easy exchange of information, including real-time data that can be used to change the course of a client/patient's treatment.

90) Please share any information, advice, and suggestions you have about health information technology in the ACC Program.

Keep it as simple as possible and support it.

PEDIATRIX MEDICAL GROUP

COMMENTS ON BEHALF OF PEDIATRIX MEDICAL GROUP
CO HCPF- RFI UHAA 2015000017
Accountable Care Collaborative Request for Information

November 24, 2014

Kevin Dunlevy-Wilson
Colorado Department of Health Care Policy and Financing
Accountable Care Collaborative Strategy Unit
1570 Grant Street
Denver, CO 80203-1818

Dear Mr. Dunlevy-Wilson:

On behalf of Pediatrix Medical Group and our affiliated physicians and other clinicians, we are providing the following information and comments regarding your Accountable Care Collaborative Request for Information (RFI UHAA 2015000017).

Introductory Response Worksheet Basics

Name:	John Savino, Regional Director, Managed Care; Sam Grossmann, Director Government Relations
Location:	Pediatrix Medical Group- Regional Office 4722 North 24th Street, Suite 150 Phoenix, AZ 85016

The best description for our organization is: Medical Provider- Pediatric Subspecialty Care and Maternal Fetal Medicine.

We are not currently involved in the ACC program. We have had interaction with RCCCOs through the CHIP program. We are interested in learning more about this next iteration of the program. Please ensure that our representatives above are included on any public correspondence about the ACC, including hearings, provider notices and other pertinent information relevant to physicians and other advanced practitioners.

As one of the largest providers of pediatric specialty care across the country, we would like to be involved in the evolution of the ACC program. We may be able to assist with your efforts, as our practices have collected significant clinical data and other valuable experiences in our clinical fields.

ACC Program Vision- Our Understanding of Core Measures

Our Colorado physicians (and national group colleagues from 33 other states) respect your efforts for delivery system reform. These desired measures of improved health outcomes, reduction of costs, best practices, and use of data and analytics align closely with similar efforts that we have developed in our areas of practice. We are interested in learning more about the various ACC Advisory Committees and Subcommittees designed to deliver improved care and meet quality measures.

Pediatrix Medical Group- Our Experience

As the ACC program evolves, Pediatrix will evaluate the role we need to play within these models. Our organization has always been a "patient centric" organization. As such, our focus on high quality clinical practice and care coordination have always been hallmarks of our service. We have proven experience in utilizing the resources associated with being a national group of physicians and advanced practitioners to improve quality with numerous activities including: data collection, analysis, feedback with remeasurement, clinical education experiences, and collaborative multisite studies to investigate specific clinical problems.

Comments to Specific Applicable Questions on Behalf of Pediatrix Medical Group

Question #40: In terms of specific requirements that RCCOs should have with providers, we believe that the current format with provider representatives has been an adequate model. Our experience in this area has been that "provider representatives" have assisted capably as issues arise. One idea to strengthen the current environment or format would be to have standing quarterly meetings to discuss issues.

Question #44 (c): We are unsure of the exact role that specialists may play in the next iteration of the ACC Program. Our neonatologists do provide care coordination and act as a primary care provider while the baby is under our care.

Question #50: If "preferred networks" is similar to "narrow network", no we would not support having a narrow network because of access to care concerns.

Question #52: We believe that it is important to have access to care, and the state needs to continue to promote adequate networks. Adequate levels of compensation for physicians will create a robust network and ease many access to care issues.

Question #59: The ACC must provide good levels of compensation so that robust networks can be developed and maintained. Incentives based upon quality derived for each specialty is a laudable goal.

Question #61: Providers are in the process of developing the infrastructure of payments being tied to quality. The need for data here along with infrastructure development will be critical. There may be a need for state dollars to assist in this development.

Question #63: Regarding distribution of payments to providers, we believe that the RCCOs should employ the most efficient means of delivering the payments to providers.

Question #65: The type of measures tied to payment is really dependent on the particular specialty under consideration.

Question #69: Our group supports utilizing Key Performance Indicators. One suggestion would be to keep measures to a minimum in the beginning of the program. In this regard, performance measures could be proven before unnecessary expenditure of state funds.

Question #70: Our thought would be 10%-20% of the RCCCO pay should be tied to measures.

Thank you for your consideration of this important matter. If you have any questions about these comments, please contact John Savino, Regional Director, Managed Care at (602) 256-4628, ext. 662 or Sam Grossmann, Director Government Relations at (615) 519-0123.

ACC Request for Information

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Jason Greer
Location: Denver, CO

Serial # 096

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Colorado Community Managed Care Network (CCMCN)
Location: Denver, Colorado
☒ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☐ Medical provider / PCMP / other provider
  i. Type or specialty: Click here to enter text.
  ii. Area of practice: Click here to enter text.
☒ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☒ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☐ Other (please describe): Click here to enter text.

Are you currently involved in the ACC program?

☒ Yes
☐ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☐ 3-4 years
☒ Since before the program was implemented.

How have you been involved in the ACC program and what interaction have you had with RCCOs:

The Colorado Community Managed Care Network (CCMCN) is a statewide membership association for 13 out of the 18 Federally Qualified Community Health Centers (FQHCs or CHCs). CHCs provide a health care home for almost 650,000 Coloradans, including 28% of all Medicaid enrollees in 2013. CCMCN is a founding partner and Board member in 2 organizations that run 4 out of 7 RCCOs, Integrated Community Health Partners (ICHP, RCCO 4) and Colorado Access (RCCO 2,3 and 5). CCMCN provides data analytics, shared care coordination software and population health strategy for ICHP.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:

See response above.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☒ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

General Questions

1) **What is working best in the Accountable Care Collaborative (ACC) right now?**

The ACC has made important progress by making strategic investments in the delivery system. It has been a positive step towards improving care coordination and establishing more accountability for outcomes, most notably:

- Financial support for care management has brought focus to high risk populations.
- Partnerships with local hospitals and community partners have been strengthened in some regions, particularly around the Key Performance Indicators (KPIs).
- Medicaid, RCCOs and PCMPs are engaging to improve outcomes and contain cost growth.
- Payment reform is being piloted and conversations are underway about how and when to include additional regions and/or providers.

2) **What is not working well in the ACC Program?**

The following areas for improvement are being actively solved for today:

- Attribution:
  - Too many Medicaid enrollees remain unattributed to a PCMP for too long, decreasing the ability of PCMPs to engage patients and begin implementing interventions to improve outcomes and contain costs. While monthly attribution has addressed some of these concerns, the ACC program should move to auto-assignment for those that remain unattributed after attempts have been made to have them select a PCMP.
  - The process to change PCMP attribution is too burdensome on the patient, and as a result some providers serve as a patient's PCMP without the recognition and financial support provided by accurate attribution. This process needs to be refined to allow patients to change PCMPs in a timely fashion.
- Timely and accurate data is central to a provider's ability to successfully manage population health and make adjustments to improve outcomes. PCMPs and their membership organizations should be allowed to receive the raw claims data as long as they have an appropriate data use agreement and the ability to work successfully with the data.
- RCCO and PCMP relationships vary by region and present challenges for large PCMP systems located in multiple regions. These large PCMPs often find themselves stretched between differing requests and requirements, and varying priorities and strategies which are not always consistent between regions.
- The ACC program could require that a minimum percent of the RCCO budget be allocated to providing care and not for admin to be assured that there are adequate dollars going to provide support to providers.
- Hospitals will need to begin playing a significant role in the ACC to achieve the desired outcomes of better health care at a lower cost. Incentives for hospitals could be included in the next iteration of the program.

3) **What is working best in the Behavioral Health Organization (BHO) system right now?**

Similar to the ACC, CHCs have seen both areas of success with the BHO system and areas in need of significant change. A few successes to highlight:

- Access to behavioral health care is expanding in some areas as Community Mental Health Centers (CMHCs) are hiring staff and working to meet the increased demand created by Medicaid expansion.
- Partnerships between CMHCs and CHCs are very strong in some areas, resulting in improved access to behavioral health services through the integration of CMHC staff into CHC care teams, and in a few places, improved access to primary care by bringing CHC staff to the CMHC.
- The launch of the statewide crisis response system is filling a gap and providing a service that was not available in the state before now.

4) **What is not working well in the BHO system?**

Overall, the focus of the BHO program on covered diagnosis and procedures does little to support integration in the primary care setting, where the behavioral health needs of patients don't always fall neatly into a diagnosis. PCMPs are ideally situated for providing preventative care and early interventions, but PCMPs must navigate complicated and varied CMHC/BHO relationships and billing procedures to receive payment for this care. Access to behavioral health care for Medicaid patients seems to be improving but continues to vary by community.

The separation of funding for behavioral health care from medical health care, does not allow for the alignment of incentives to improve care. Integrating the funds for medical and behavioral care (e.g. ending the carve-out) will make both service provision and access to care more efficient and patient centric. Money should follow the patient, meaning if a patient receives their behavioral health care at a CHC, the CHC should be able to bill a single entity for care. In addition to the need to integrate funding, the following issues need to be addressed:

- Access to psychiatric care for Medicaid patients continues to be limited. In particular this is true for patients with intermediate level needs, as the focus has been placed on providing care for patients with the highest needs.
- The CCAR is not designed to assess and report progress on behavioral health issues that are typically addressed in the primary care setting. Further, the lengthy CCAR, in combination with other requirements to "open" a case with the BHO, is not compatible with the fast pace of the primary care setting, where increasingly behavioral health providers are utilized to assist with brief interventions in the exam room. Generally in the primary care setting, patients are "enrolled" indefinitely and may receive care across their lifespan without regard to acuity or diagnosis, and at CHCs, even as their insurance status moves from Medicaid, to uninsured or commercially insured.
- The requirement that CMHCs ensure co-location at high volume practices needs to be reviewed for compliance and enforced.
- There is a lack of clarity on the intended relationships between BHOs and RCCOs, so these relationships vary greatly depending upon the region.
- The rules and regulations of the BHO system are cumbersome in integrated care settings, creating barriers to creative integration opportunities. Additionally, for behavioral and medical care to become more integrated, incentives need to be aligned for both sets of providers.
- PCMPs contributing to positive care outcomes and cost avoidance on the BHO side of Medicaid have no ability to share in the savings generated.

5) **What is working well with RCCO and BHO collaboration right now?**

Discussions about how RCCOs and BHOs can consolidate in the RCCO rebid have begun.

6) **What is not working well with RCCO and BHO collaboration right now?**

Without a specific requirement to collaborate, integration seems to be a locally driven effort and appears minimal at this point.

Behavioral Health Integration

7) **What should be the next steps in behavioral health integration in Colorado?**[1]

Central to successful behavioral health integration is the integration of funding. The RCCO rebid process is an opportunity to begin developing alternative payment structures. Blended RCCO and BHO funding will likely lead to the best patient care.

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	Barrier? No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☒	☐	Carving out behavioral health funding creates silos which are an inherent barrier to integration.
Community Behavioral Health Services Rule	☒	☐	Rule places too much emphasis on providing high level care. To encourage preventative care and early intervention it should authorize receiving care through patient chosen providers, including PCMPs.
Covered diagnoses list	☒	☐	Too focused on severe and persistently mentally ill
Different behavioral / physical health reimbursement	☒	☐	This creates different systems of service with different outcome measures and objectives.
Institutions for Mental Diseases exclusion	☐	☐	
OBH rules, reporting, or financing (regulatory differences between agencies)	☒	☐	The CCAR is overly burdensome in primary care settings. The requirement to license substance abuse providers and facilities (vs. just providers as in other areas of behavioral health) creates a burden for primary care providers that could otherwise expand SA services on site.
PCMP financing structure	☐	☐	
Per-member per-month amount	☐	☒	PMPM itself is not a barrier, but the amount can be if it does not sufficiently cover expenses of required services.
Physical space constraints	☐	☒	
Privacy Laws (HIPAA, 42 CFR)	☒	☐	The complexity of 42 CFR in particular is a barrier, including over application/mis-application of current rules.
Professional / cultural divisions	☒	☐	CHCs providing onsite, integrated care have found that many behavioral health professionals need additional training to function in team based care models. Moving from the intensity of counseling sessions to brief interventions and opening and closing cases based on strict criteria to providing a broader range of

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

		behavioral health (vs. mental health) interventions is challenge for BH professionals new to the primary care setting.
RCCO or BHO contracts	☒	☐ The different payment models in each contract create natural barriers
Staff capacity	☒	☐ CHCs face recruitment challenges for qualified staff.
State/Federal rules or reporting requirements	☒	☐ The narrow definition of behavioral health providers that are billable to a BHO create difficulty when partnership with CMHC is not possible.
Technical resources / data sharing	☒	☐ Data sharing between disparate EHRs is currently cost prohibitive and is a limitation throughout the industry. The business drivers for an integrated model don't currently generate enough revenue to justify the cost of effective data sharing.
Training	☒	☐ Training on how to work as a member of an integrated team is not readily available, so integrated practices are recruiting from a narrow group of behavioral health providers who already have the needed experience.
Others		

9) **What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?**

The state needs to maintain consistency between the ACC expectation regarding integration and what is contained in the State Innovation Model (SIM) proposal presented to CMS. Of particular importance in the SIM proposal is the expectation that integrated care requires integrated, on-site teams of behavioral and physical health clinicians working on a unified care plan. Additionally, medication management, integrated health records, and providing for the majority of a member's comprehensive primary, preventive and sick care is necessary for a practice to be integrated.

It is also worth noting, that without the inclusion of oral health care, true whole-person/whole-family care is not achieved. Across the state CHCs are demonstrating how it is possible to care for the whole person through our focus on all three elements: physical, behavioral and oral health. While not every clinic is providing all services on site, they are all committed (and federally required) to address the needs of their patients in a comprehensive way through service provision and community partnerships.

10) **Please share any other general advice or suggestions you may have about behavioral health integration.**

Integration of funding in Medicaid for behavioral and physical health is required to make primary, preventative and behavioral health services more efficient and patient centered. Money should follow the patient – if a patient receives his/her mental health care at a CHC, the CHC should be able to bill HCPF directly for those services. Payment systems and contracts for behavioral and physical health should reimburse for preventative efforts.

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination?

The Safety Net Medical Home Initiative (SNMHI) provides the most comprehensive definition of care management, and the National Committee for Quality Assurance (NCQA) provides the most comprehensive tool to measure the implementation of care management in a practice.

SNMHI defines the key charges of care coordination as: linking patients with community resources to facilitate referrals and respond to social service needs; integrate behavioral health and specialty care into care delivery through co-location or referral agreements; track and support patients when they obtain services outside the practice; follow-up with patients within a few days of emergency room visit or hospital discharge; and communicate test results and care plans to patients/families.

NCQA's assessment of a provider's care coordination and care transition system focus on three elements: test tracking and follow-up; referral tracking and follow up; and coordinating care transitions. The specific elements outlined in these three areas provide a comprehensive image of whether the organization providing care coordination has the procedures and mechanisms in place to provide the care as defined by SNMHI.

b. How should RCCOs prioritize who receives care coordination first?

RCCOs are currently maturing their ability to create intervention strategies with their populations. It should be up to the clinical leadership teams within the RCCO partnerships to decide how to best intervene with the members in their community.

c. How should RCCOs identify clients and families who need care coordination?

The RCCO clinical leadership teams should be responsible for creating care coordination strategies based on the priorities of the program, available resources and the needs of their communities.

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

PCMPs and RCCOs should work together to develop systems for identifying those most in need of care coordination supports.

12) What services should be coordinated and are there services that should not be a part of care coordination?

No service should be explicitly excluded from care coordination, though there are several areas that require further development including:

- Pharmaceutical care coordination has primarily been focused on punitive measures that identify abuse in the system. Incorporating medication management more fully into care coordination will address those concerns while also reaching patients in need of further support with their medication.

- Communication between specialist and primary care providers needs improvement: Completing the communication loop between the PCMP and specialist is necessary to ensure that care coordinators have full information on patient needs and an up to date care plan.
- Reducing use of emergency room care for non-emergent needs continues to be a focus to reduce costs in health care, but not all regions have built systems that allow care coordinators to know when a patient has presented in the emergency room so follow up can be completed. Additionally, hospital systems tend to focus on what is needed to discharge a patient, not on connecting with providers who will continue care after discharge. Focusing on the relationship between PCMP and RCCO care coordinators and hospital systems will help address both of these issues.

13) **What pieces of information are most important to have about someone in order to know what care coordination he or she needs?**

Psychosocial information such as where the patient lives, with whom the patient lives, and what resources he or she has are key to understanding what kind of care coordination he or she needs. While access to the patient's medical and behavioral health records are also essential, these often do not include the information that needs to be a part of the patient record for successful care management. CCMCN is currently configuring an enterprise care coordination software application intended to be used by the community. In order for the application to be a valued community resource, we are identifying the necessary data elements to import from the practice EHR, from claims and from the hospitals via HIE.

14) **Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.**

a. **What care coordination is going on today?**

Care coordination today is either disease specific or event driven, such as when a hospital discharge occurs. Patients with disease specific care coordination may have more than one care coordinator within the same health system. Ideally care coordinators are integrated into the care team, across diseases or issues.

b. **What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?**

Different organizations have coordinators dealing with different issues (i.e. housing, food access, etc.) whom may also be dealing with health care issues. The work being done by those organizations may have profound impacts on the health of a patient, but if a relationship is not present between the PCMP and the outside organization there is no way to identify those potential impact areas. To address this issue there may be a role for RCCOs in convening coordinators across communities to increase communication and reduce duplication. Our solution for this is by providing a shared community care coordination software application.

c. **How can the ACC avoid duplicating or disrupting current care coordination relationships?**

It is important to recognize that care coordination is often done by individuals with a variety of titles and training, such as Transition Coordinator, Promotoras, and Case Managers. In exploring what is already in place in a community it is important to focus on their functions and measurable outcomes.

d. What are the gaps in care coordination across the continuum of care?

Care coordinators need access to real-time patient care event data, outcomes and cost information in order to providing meaningful care coordination. We are currently building more sophisticated and integrated data systems to accomplish this.

15) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

The areas identified in the table below are functions that the organization providing care coordination should be providing. Across the state, CHCs have care delegation agreements with RCCOs and in those situations the responsibility for coordinating with community supports and services on these issues would typically be delegated along with other responsibilities to the PCMP. In instances in which the RCCO is providing the care management (no care delegation in place, non-attributed patient, or patients attributed to PCMPs without a delegation agreement), the RCCO does have the responsibility for coordinating on each of these issues as needed within the region. The RCCO should have the responsibility for whole person care and the RCCO has the ability to delegate the responsibility to the PCMP or other organization as appropriate. The RCCO or delegated agency will need the financial resources to be able to provide this level of support.

Non-medical need:	Should the RCCO have a role? Yes	No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma	☒	☐	☐	See narrative above for this table

16) **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Care coordination models should be directed by the clinician leadership that exists within each RCCO. Focus should be placed on the outcomes desired and on the resources available to provide support. RCCOs and PCMPs with care coordination delegation should have the flexibility to create a system that works for their population in achieving those outcomes.

Type:	**Coordinate care?** Yes	No	**In what capacity should these individuals coordinate care in the ACC Program?**
Advanced Practice (Registered) Nurses	☐	☐	See narrative above for this table

Clients in palliative care	☐	☐	
Other populations, please comment:			

18) **How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?**

RCCOs should work with existing resources to understand the best approach for their community.

19) **How should care coordination be evaluated? How should its outcomes be measured?**

It's the RCCO's responsibility to create relevant metrics for evaluating the effectiveness of their care coordination strategy. Strategies will likely be different between RCCOs. Clinical leaders within each RCCO should choose short and long term intervention strategies for their populations and measuring the effectiveness of care coordination is only a piece of the strategy.

20) **Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.**

   a. **What is the PMPM cost for providing care coordination services?**

The cost of providing care coordination services varies depending on a number of factors, including volume of clients, the complexity of their needs, economies of scale by centralizing resources and the clinical intervention strategy established by the RCCO.

b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

Possibly, if it can be based on an estimate of touches that drive the care coordinators work load. A population that requires more interaction will be more expensive because the care coordinators panel sizes will need to be smaller.

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

The next RFP could require that the RCCOs come up with intervention strategies and care coordination panel sizes but because every RCCOs strategy could be different, these requirements shouldn't be defined outside of the RCCO. The clinical leaders within each RCCO are in the best position to define an expected number of members that can be managed by the care coordination teams. RCCOs and PCMPs with care coordination delegation should have the flexibility to create strategies that work for their population.

a. **Care coordinator to client ratios.** If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☐
51-100	☐
101-200	☐
201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

The Department should choose metrics that are of highest value to the Department to know and leave the operational metrics up to the RCCOs to define the best intervention strategies and metrics for their region. It will be up to the RCCO to ensure that their intervention strategies are aligned with the metrics that are important to the Department. The Department should evaluate the effectiveness and outcomes of the RCCOs and the RCCOs can be responsible for evaluating their own care coordination strategies.

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Creating new, innovative and data driven approaches to care coordination is going to be one of the key elements of a successful Medicaid population health and cost strategy in Colorado. The Department will need to empower the RCCOs by holding them accountable for developing, implementing and measuring these strategies.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

The following functions could be standardized across RCCOs:

- A population health and cost strategy could be required to be submitted by all RCCOs
- Reporting from the Department about the effectiveness of the RCCOs should be standardized
- PCMPs could be required to be using an HIE, making progress on Meaningful Use and PCMH to be eligible for PMPM payments
- Referral protocols - currently the referral protocols submitted by the RCCOs are highly variable
- As the state moves forward with payment reform, consistency will be needed in how providers are paid

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

The RFP could require applicants to include letters of support from community organizations, safety-net providers and hospitals. To evaluate the strength of those relationships, applicants could include information on the length and extent of their relationship with those partners. Additionally, a clear plan for or explanation of their community engagement process could be included, contain what community meetings are attended and the RCCOs advisory committee structure.

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

Large PCMPS with sites in multiple regions should be able to select a single RCCO that holds the majority of their members. Working with multiple RCCOs creates administrative complexities and presents barriers to future innovations to improve patient centered care, particularly around payment reform.

RCCOs themselves are very diverse organizations with different approaches to payment reform, referral processes, care coordination, and willingness to partner on innovative approaches to care. When working with multiple RCCOs, PCMPs are faced with challenges as simple as the time commitment required to attend multiple meetings on similar topics, to the difficulties of aligning systems, including billing systems should the RCCOs become a payer. Being able to work with a single RCCO would eliminate the complexities and allow large provider systems to work more closely with that RCCO to identify areas for improvement and innovation.

We recognize that this is a departure from the way the program is currently structured and there are several considerations that will need to be discussed. One of the original principles of the regional distribution was the equitable distribution of lives, so the issue to consider now is if with the increased number of patients covered whether equitable distribution is still necessary to the success of the program. A second area to consider is attribution. There would need to be a mechanism in place to ensure that RCCOs attribute to providers within their region, even if they are not the CHC-designated RCCO the provider is working with. Additionally,

attribution to RCCOs is currently done based on the patient, so the criteria for how large provider systems would be attributed to a RCCO have not been established.

27) **Should the RCCO region maps change? Why or why not? If so, how?**

Regions should reflect the natural referral pattems and clinical appropriateness rather than administrative simplicity concerns. As an example, Larimer and Weld counties have a lot of overlap between providers, hospital systems, and referral pattems between Loveland, Greeley and Fort Collins, yet are divided between RCCOs. These divisions may not have an impact on referral pattems or access to care currently, but as RCCOs develop medical neighborhoods they could increasingly become an issue.

In addition to the example above regarding community referral patterns, the division of natural communities, such as metro areas, creates difficulties in establishing community relationships and partnerships. For example, the Denver metro area is divided between three RCCO regions. Two of those regions share an administrative organization, but with the patient population served by Medicaid it is a recurring issue that patients move, and in doing so change RCCOs which creates communication issues.

The RCCO region map could be evaluated based on the concems of providers in those regions. Another consideration is to combine regions for organizations that hold the contracts for multiple regions.

28) **Should the BHO region maps change? Why or why not? If so, how?**

If the Department's motivation is to combine the BHOs and the RCCOs, matching the regional boundaries could be helpful. Behavioral and physical health cannot be fully integrated until payment systems are integrated, so alignment of regions is a logical first step to integration of care.

29) **Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?**

The required time for successful transition will largely depend on the structure of the new vendor. If the vendor selected is currently serving as a RCCO in a different region, the transition should take less than three months as attention can focus on changes to contracts with providers and care coordination delegation. If the organization is a new RCCO contractor without systems in place, it will take at least six months to establish both IT systems and the contracts with providers and care coordination organizations, but many these activities can occur prior to the start of the next contract period.

30) **What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?**

In order for patient designated attribution to work better, Health*Colorado*'s contract should include the following:

- Funding and accountability to assure efficient and accurate patient designated attribution.
- The ability for clients to designated their PCMP on the Medicaid application, both on paper and through PEAK.

- Ability for all Medicaid clients, new and those previously enrolled, to submit PCMP selection and changes through a fax or online form which receives a confirmation receipt for both the patient and selected PCMP.
- Appropriate call center staffing levels to minimize wait times to under 5 minutes and a system implemented which allows patients to leave a number and be called back by a representative rather than remaining on hold.
- If a patient does not select a PCMP after a designated time period, auto attribution to a narrow group of high volume, high quality providers is implemented. Screening criteria for eligible providers should include items such as: practice open to new Medicaid patients, practices with delegated care coordination agreements with the RCCO, practices with national Patient Centered Medical Home recognition or other similar standards, practices with electronic medical records capable of running reports for patient population health management and quality improvement, and practices contracted with CORHIO.

In addition to the changes to the Health*Colorodo* contract regarding attribution, HCPF should implement policy in which providers that can demonstrate having served as the PCMP between enrollment and attribution receive retroactive PMPM payment.

The following waivers or SPAs should be sought from CMS:

- Waiver to allow patient assignment or lock in to providers. This will be necessary to move forward with payment reform because providers cannot be held responsible for managing patient health outcomes if the patient does not have an obligation to utilize the assigned provider.
- SPA to utilize projected annual income for Medicaid determination.
- Waiver to allow 12 months continuous eligibility for adults in order to address issues of churn.
- SPA for alternative payment mechanism for CHC payment once the methodology is developed and agreed to.

31) **What are the limitations of the current benefit structure and what – if any – changes are needed?**

The two primary limitations that need changes are regarding the cap on dental services for adults and case management restrictions.

- The need for dental care exceeds the $1,000 cap and is limiting the ability of providers to provide high quality care in an efficient time frame in order to reduce further cost implications in the future. If patients cannot afford to continue treatment after the cap the state risks those needs elevating from a simple dental procedure to an emergency room case.
- Case management is not included in the benefit structure, though it is provided by CHCs and reduces the overall cost of care. Adding case management to covered benefits would allow expansion of the service, ultimately decreasing the overall cost of caring for the population.

Additionally, the current benefit structure does not incentivize patients to utilize less expensive, more appropriate care settings. A lot can be accomplished through providers and care coordinators, but structuring the benefit to further incentivize patient choice would further these efforts.

32) **Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?**

No, PCMPs have already experienced the complications of working with multiple RCCOs and expanding the number per region would only accentuate the problem. Additionally, multiple RCCOs per region adds a degree of complexity to not only the provider level, but processes such as attribution.

33) **If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?**

All CHCs are Medicaid providers.

34) **What role should RCCOs play in attributing clients to their respective PCMPs?**

RCCOs should be responsible for ensuring that everyone selects a PCMP within the first three months of enrollment.

35) **What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?**

The Department of Public Health and Environment (CDPHE) already tracks many population level health trends which would be of use to the ACC Program. Likewise, information gathered regarding the Medicaid population through the ACC would be beneficial to CDPHE in expanding their data set. Additionally, CDPHE tracks data regarding emerging public health issues which would be beneficial to share in a timely fashion with providers, and providers could be a useful resource to CDPHE in responding to emergency situations. Collaboration around bi-directional data sharing should be built for the benefit of both programs.

36) **What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?**

The ACC and DHS should, at a minimum, compare goals to ensure alignment. This would be accomplished best at the Governor's Cabinet level.

37) **What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?**

The two programs should align eligibility determination methodology. For example, the two should align income requirements to annual income projections, and Medicaid adults should receive 12 months continuous eligibility. Aligning these two elements will reduce chum between the programs and increase consistency of care for patients.

Until the necessary alignments can be accomplished, Connect for Health Colorado and the ACC Program should work closely to ensure that patients whose eligibility changes and movement between the programs is necessary have consistent access to primary care.

38) **What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?**

The DOI should be an active participant in payment reform discussions and evaluation of models if the RCCO are anticipated to move into risk.

Stakeholder Engagement

39) **What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?**

Defining a stakeholder engagement strategy should be the responsibility of the RCCO leadership teams because regional strategies will vary based on the population and available resources.

40) **What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?**

It could be an expectation that the RCCO become integrated and aligned with all appropriate community resources.

41) **Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?**

See response to question 40.

42) **How should the Department structure stakeholder engagement for the ACC as a whole?**

The Department should continue to host regional stakeholders meetings.

Network Adequacy and Creating a Comprehensive System of Care

43) **Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?**
   a. **If no, what are the gaps?**
   b. **Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.**

A large part of the problem with accessing care is the lack of providers accepting Medicaid, and part of that is due to the lack of incentives for hospitals and specialists to engage patients and respond to the population needs. RCCOs should have the flexibility and the charge to work with providers in their regions to develop these incentives.

44) **ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.**

   a. **What role should hospitals play in the next iteration of the ACC Program?**

Hospital care coordinators can be better integrated with RCCO care coordination staff. If RCCOs move toward shared savings and risk contracts, it will be important to bring the hospitals into the conversation in a meaningful way.

   b. **What role should pharmacies play in the next iteration of the ACC Program?**

Pharmacy is an area that could be increased in care coordination work. Pharmacists can be contributing to care coordination through medicine reconciliation for patients and working with care coordinators to educate patients.

   c. **What role should specialists play in the next iteration of the ACC Program?**

As RCCOs start to tune their ability to create more efficient community systems, they will want to create more efficient referral and care coordination systems with specialists.

   d. **What role should home health play in the next iteration of the ACC Program?**

RCCOs should be required to create a care transition system that includes specialists, hospitals, pharmacies, home health, hospice and PCMPs. The patient would greatly benefit from each of these organizations using a shared care coordination platform.

   e. **What role should hospice care play in the next iteration of the ACC Program?**

RCCOs should be required to create a care transition system that includes specialists, hospitals, pharmacies, home health, hospice and PCMPs. The patient would greatly benefit from each of these organizations using a shared care coordination platform.

f. **What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?**

RCCOs could consider having community advisory boards which include representation from SEPs, CCBs, counties, local public health agencies, and other community health organizations and nonprofits.

g. **What role should counties play in the next iteration of the ACC Program?**

RCCOs could consider having community advisory boards which include representation from SEPs, CCBs, counties, local public health agencies, and other community organizations and nonprofits.

h. **What role should local public health agencies play in the next iteration of the ACC Program?**

Public health could be instrumental in developing data driven population health interventions.

i. **What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?**

How to best align the RCCO with community non-profits should be the decision of the RCCO leadership teams. Colorado is fortunate to have a sophisticated network of healthcare non-profits that are ready and willing to align with the RCCO program.

45) **How can RCCOs help to support clients and families in making and keeping appointments?**

RCCOs should work with their delegated practices on how to partner around no shows. If needed, RCCOs could support PCMPs in implementing practice level interventions, such as implementing recall or appointment reminder systems, through technical and financial support.

46) **Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?**

The functions described should be included in each region's care coordination approach, but the specifics of job titles and the mix of providers should not be prescriptive. Community Health Workers are most effective at the PCMP level within the community, so it should be an option for PCMPs and organizations with care coordination delegation but it should not be a requirement. The focus should be on developing locally appropriate systems that fulfil the functions and meet identified outcomes.

47) **Community Health Worker reimbursement.** Please use the table below to detail how Community Health Workers should be reimbursed:

All options could be viable options for reimbursing for the work done by Community Health Workers, but see question 46 for thoughts on the appropriate level for utilizing these workers.

Reimbursement process	(Please check all that apply)
Independently bill	☐
On staff (salary) at Primary Care Medical Provider Clinic	☒
On staff (salary) at RCCO	☒
Per Member Per Month Payment	☒

48) **Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?**

Since the RCCOs are more locally focused and have established relationships in the community, they would be a good partner for the ASO to utilize in establishing those local relationships and identifying providers.

Resources permitting, RCCO care coordinators could include oral health and accessing dental services in their efforts to get patients appropriate and timely care. Additionally, RCCO care coordinators could be providing encouragement and education to patients about the importance of regular, preventative oral health care.

49) **Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.**

a. **What does cultural competence mean to you?**

The National Committee for Quality Assurance define cultural competency as not only having empathy, but expressing it towards patients regardless of the patient or provider's cultural background. In order to do so, clinical and non-clinical staff must have an adequate understanding of their patient population including its diversity, health literacy, language needs, etc. With understanding of the patient population, providers are encouraged to utilize motivational interviewing as a technique to facilitate culturally competent conversations.

b. **What RCCO requirements would ensure cultural competency?**

All clinical staff could be trained in motivational interviewing and enroll in cultural competency trainings with continual follow up, both of which RCCOs can provide or facilitate connections to. RCCOs could also require practices to determine cultural competency standards and hold them accountable for meeting training all staff about and meeting those standards.

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all clients/families including those with low health literacy?

See response to b.

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

Bilingual or translation services, on-site staff with expertise in cultural competency, and ensuring that every patient completes a health literacy assessment are factors that contribute to enhanced cultural competency. Skills learned during trainings would incorporate the ability to refrain from making assumptions and would ideally educate participants on what it means to have implicit and explicit biases.

50) **Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?**

Preferred networks help manage population health and generally help reduce waste in the continuum of care, but without movement towards payment reform RCCOs will not have the ability to develop or enforce these networks.

If payment reform options with any element of risk, even if only partial, are to be considered in the next RFP, networks of preferred specialist, facility and ancillary providers must be allowed. The development of these networks will need to be coupled with enhanced prior authorization processes to allow RCCOs and PCMPs to reduce total costs, improve outcomes and improve patient care.

51) **Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?**

At the patient level the ACC could evaluate options for slight changes to patient co-pays which could create disincentives for frequent and inappropriate use of emergency rooms, particularly where other care options are available. Additionally, not all hospitals are actively participating in ACC. A combined effort by RCCOs and the state should build additional mechanisms into the ACC which will engage more hospitals.

At the regional level, RCCOs should be developing community diversion strategies where one is not in place. Partnerships between PCMPs and hospitals have been highly successful in redirecting patients to primary care

when more appropriate and making that care available, and RCCOs could be bringing community partners to the table to begin these discussions.

52) **Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.**

The specialist network for Medicaid patients is highly limited. RCCOs could have the resources to develop incentives to encourage specialist and hospital participation.

Practice Support

53) **Support for practices.** Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

A high functioning RCCO should be able to provide all of these supports as needed to practices, though it should be recognized that not all practices will need these supports and therefore none should be tied to a specific tool. As PCMPs who have care management delegated, our members have most of these elements in place, and requiring a specific tool would require additional administrative work to utilize both the PCMPs process and the RCCOs, and would likely require financial investments to incorporate a duplicative function.

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☒	☐	☐	☐
Network provider education	☒	☐	☐	☐
Assistance with practice redesign	☒	☐	☐	☐
Assistance with efficiency-enhancing activities	☒	☐	☐	☐
Provide web-based resources and directories	☒	☐	☐	☐
Provide practice-specific data reports	☒	☐	☐	☐
Provide clinical care guidelines and best practices.	☒	☐	☐	☐
Provide clinical screening tools	☒	☐	☐	☐
Provide health and functioning questionnaires	☒	☐	☐	☐
Provide chronic care templates	☒	☐	☐	☐
Provide registries	☒	☐	☐	☐
Offer client reminders	☒	☐	☐	☐
Offer client self-management tools	☒	☐	☐	☐
Offer educational materials about specific conditions	☒	☐	☐	☐
Supply behavioral health surveys	☒	☐	☐	☐
Supply other self-screening tools	☒	☐	☐	☐
Administer behavioral health surveys	☒	☐	☐	☐
Administer other self-screening tools	☒	☐	☐	☐

Provide comprehensive directory of community resources	☒	☐	☐	☐

Provide directory of other resources	☒	☐	☐	☐
Provide materials regarding Nurse Advice Line	☒	☐	☐	☐
Ensure all tools and resources are centrally located on RCCO-specific website	☒	☐	☐	☐
Others				

54) **If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.**

No specific tool should be required but using centrally managed tools could be encouraged. Smaller practices and those without care delegation may need higher levels of support, but practices that have care management delegation and existing processes in place should not have to change tools or duplicate work and financial investments to meet a RCCO specific requirement. In particular for situations in which providers serve patients from multiple RCCOs, requirements of specific tools would create additional barriers to providing patient focused and cost effective care. Because PCMPs don't see 100% Medicaid patients, providers can't be expected to use tools designated for only specific payer populations. Tools provided to the providers should be intended for their entire population.

55) **What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?**

Assuming that the financial resources exist, RCCOs should provide technical support as requested by practices. Practices that are already engaged in medical home efforts should be able to evaluate their practice's needs and drive the support needed from the RCCO in addressing those areas.

56) **What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?**

Established national standards, such as the National Committee for Quality Assurance's Patient-Centered Medical Home Recognition, are the most effective way to recognize a PCMP's capacity to service as a medical home for patients. These standards set expectations of what is expected of a medical home that are consistent regardless of the region and have an established process for recognition.

Practices could be compensated for their level of recognition through these national standards, with practices incentivized to improve their rate because it is tied to increased PMPM or capitation payments.

57) **Should the Department require that PCMPs utilize disease registries to manage the health of their population?**

All PCMPs should utilize a registry or electronic medical record that has the capability of running reports for population health management and quality improvement as that is the standard of care.

58) **Please share any other advice or suggestions about provider support in the ACC.**

High performing PCMPs need to be rewarded based on their performance. Currently in the ACC recognition is primarily at a regional level, which does not encourage further development of those high performing practices. RCCOs should be required to report and reward individual practices.

Payment Structure and Quality Monitoring

S9) **Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?**

No, the current payment structure is still paying for volume, not quality. As discussed in response to question 58, providers are not being rewarded or tracked by their own individual performance which is not providing incentives to low performers to improve or for high performers to continue to develop. Additionally, as discussed in response to questions 4, 43, and 52 there is no incentive for specialists to participate and engage with patients in a meaningful way.

The Shared Savings component of the ACC is particular limited in its ability to recognize and reward high performers – many measures can only be attributed to the region, which may result in a high performer being left out of payments due to poor performance by providers elsewhere in the region. The size and geographic diversity of many of the regions prevent meaningful coordination and care improvements between providers.

60) **If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?**

CHCs are interested in working with HCPF to develop and pilot an Alternative Payment Methodology (APM) that moves away from FFS and towards population-based payment. Many CHCs are interested in taking on additional risk over time. Other states are piloting converting the PPS rate into a PMPM for primary care.

In a capitated payment structure, the initial PCMP cap should include physician services, non-E&M PCP services, and OP Labs/Pathology as these are services primarily handled by PCMPs. In later years the program could begin to expand into additional services, such as diagnostic imaging, PT/OT/ST, DME (with agreed upon carve outs), and OP Radiology (professional services only). Ideally all three elements of integrated, whole person care (physical, behavioral, and oral health) would be included.

61) **Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?**

CHCs as providers do have the infrastructure to support value based payments, however additional resources would be needed to add expertise at the State and RCCO level for rate setting. Without rate setting expertise and third party validation, CHCs cannot risk PPS/APM and expect to remain viable.

62) **The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?**

There are models utilized, both partial risk and capitation, which do not require a DOI license if sufficient reserves are held. The Department should evaluate options for payment reform models which do and don't require DOI licensure and decide which approach is best for the Department. The need for risk based capital reserves will require partnerships with potentially new organizations that have the ability to financially back the risk. Knowing the Departments position and timing on allowing risk contracts that require reserves will be very helpful as we prepare for the rebid.

63) **What role – if any – should the RCCOs play in the distribution of payments to providers?**

For CHCs, it may make sense for the state to remain the payer to resolve the potential of large PCMP systems being subject to different payment pilots or methodologies in each region where they have patients. This could also be resolved by allowing PCMPs to choose a single RCCO. Regardless of the direction taken, all parties involved (CHCs, RCCOs and the state) will need to work together closely to determine the appropriate role of the RCCO in payment distribution.

64) **Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.**

High performing PCMPs are not currently incentivized to continue to improve their practice, a concern that payment reform needs to take into account. Providers who are responsible for care improvement and cost savings should be rewarded with shared savings and incentive payments.

The vision of RCCOs is to increase system effectiveness, but the care and decisions made regarding payment and practice reform most greatly impact the PCMP. To address this negotiations regarding payment reform need to be with the PCMP providers with RCCOs as a partner.

65) **What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?**

Measurements such as clinical data on behavioral health, oral health, chronic and acute care services, unhealthy behavior, and factors that contribute to care such as social determinants of health and assessment of health literacy could be used to measure impact.

66) **Measuring Client experience**. Please complete the table below to indicate how the Department should measure Client/patient experience:

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☒	☐	The full CAHPS survey is composed of 52 questions and the administration of it in entirety is felt to be too administratively difficult to implement. CHCs did agree to utilize and report on 5 questions from CAHPS, and we would advocate considering this shortened version to evaluate patient satisfaction: 1. In the last 12 months, how many days did you usually have to wait for an appointment when you needed care right away? (a. Same day, b. 1 day, c. 2 to 3 days, d. 4 to 7 days, e. More than 7 days) 2. In the last 12 months, how often did this provider explain things in a way that was easy to understand? (a. Never, b. Sometimes, c. Usually, d. Always) 3. In the last 12 months, did anyone in this provider's office talk with you about specific goals for your health? (a. Yes, b. No) 4. Specialists are doctors like surgeons, heart doctors, allergy doctors, skin doctors, and other doctors who specialize in one area of health care. In the last 12 months, did you see a specialist for a particular health problem? (a. Yes, b. No – if no, skip question 5) 5. In the last 12 months, how often did your provider seem informed and up-to-date about the care you got from specialists? (a. Never, b. Sometimes, c. Usually, d. Always)
SF-12 Health Survey	☒	☐	This tool is not used by CHCs at this time, so while we have no objection to it being an option, it should not be the only tool available.
Other types of client interviews / surveys	☒	☐	
Patient Activation Measure	☐	☒	The tool is not used for patient satisfaction, primarily a patient education tool
Focus groups	☒	☐	
Other	The state could focus on patient satisfaction tools, not patient education tools. Additionally, as referenced in other questions, tools should not be prescriptive and requiring practices to implement duplicative efforts.		

67) **Knowing that, at this time, the Department only has claims data, how should population health be measured?**

The Department should look beyond claims data to other partnerships that could be provided to develop data on population health, in particular through partnership with the Colorado Department of Public Health and Environment (CDPHE). Claims data, lab and pharmacy data, CDPHE's health survey data, and outside data sources such as the Colorado Health Access Survey could be utilized to measure population health until more robust and timely data tracking and measurement tools are in place. CCMCN has a clinical data warehouse for the FQHCs that could easily be expanded to include other PCMP EHR data.

68) **How should quality and performance data be reported to the RCCOs, PCMPs, and the public?**

Quality and performance data should be reported to PCMPs consistently across RCCOs so that those who serve patients across multiple regions can better understand their impact on their patient population. Additionally, this data should be provided on a regular basis and should include comparison information demonstrating not only how the PCMP is performing in relation to itself, but also in relation to comparable practices and the region as a whole. Presenting comparison data is the only way to identify top performers and ways to learn from their system to achieve the triple aim.

69) **Measures for payment.** Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☒
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

Impact is difficult to be measured over time if the measures do not remain consistent. Ideally the Department would pick a small set of measures that are important to the Department to know and publish.

70) **What percent of RCCO payments should be tied to measures or performance?**

Percentage	
10-20%	☒
21-30%	☐

31-40%	☐
41-50%	☐
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

It depends on the measure. The percentage should start low and be increased over the period of the contract as policies and reporting systems need to be established in order to tie payment to performance.

71) **Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?**

Yes, all regions should have the same KPIs, and RCCOs and providers should be working toward the same statewide goals.

72) **Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?**

Reimbursement should be based on progress toward meeting national standards, with ongoing rewards for those who meet or beat the standards. While it might be necessary to create incentives that are based on individual improvement to encourage movement towards national standards, payment systems should more heavily reward those that have meet and continue to beat national standards.

73) **Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.**

Yes

74) **Incentive payment frequency**. Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	☒
Annually	☐
Other	☐

If you checked the "Other" box, please describe payment frequency below:

75) For potential offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

RCCO's should have a fixed percent for administrative costs.

76) For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

CHCs monitor and report performance publicly via the Uniform Data System and small amounts of funding are increasingly tied to quality payments, including:

- Performance in Medicare Advantage
- Meaningful Use has paid practices based on meeting quality outcomes with HIT PCMH attainment

CHCs are increasingly seeking and occasionally receiving reimbursement for performance on patient satisfaction, provider satisfaction, services and screening rates, and access and availability measures.

Health Information Technology (HIT)

77) **Types of communication.** For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	☐
Text message	☐	☐
Web portal	☐	☐
Email	☐	☐
Telemedicine / Video chat	☐	☐
Face-to-face meeting	☐	☐
Smartphone app	☐	☐
Other: As providers, CHCs find phone calls and face-to-face meetings to have the most success in communicating with patients. Some CHCs have begun to use text messages and all are working to get patients to use web portals.		

78) **HIT investments by organizations.** For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below:

CCMCN is heavily investing in data systems to support population health and cost management as well as care coordination and business intelligence systems.

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	☒	☐
Digital care management tool	☒	☐
Care transitions alerts	☒	☐
Electronic Health Records (EHRs)	☒	☐
Health risk assessment software	☒	☐
Practice assessment tools	☒	☐
Practice management tools (scheduling, billing)	☒	☐
Client web portal for communicating care plan, services, benefit enrollment	☒	☐
Patient education/wellness tools	☒	☐
Provider/case manager directory	☒	☐
Shared decision-making tools	☒	☐
Telemedicine software	☐	☐
Other:	☐	☐

79) **Importance of technology by type.** The Department is working to determine what technology is in place, what technology is needed, and what technology should be standardized. For RCCOs, providers, and other

organizations, use the table below to answer what HIT infrastructure outside of the SDAC your organization would use to perform population health management activities. Tools are scored from 1-5, where 1 are those items least-likely to be used, and S are items most-likely to be used:

Tool	1 Least	2	3	4	5 Most
Population analytics / reporting / dashboard	☐	☐	☐	☐	☒
Care management tool	☐	☐	☐	☐	☒
Care transitions alerts	☐	☐	☐	☐	☒
Electronic Health Records (EHRs)	☐	☐	☐	☐	☒
Practice assessment tools	☐	☐	☐	☐	☒
Health risk assessment software	☐	☐	☐	☐	☒
Practice management tools (scheduling, billing)	☐	☐	☐	☐	☒
Client web portal for communicating care plan, services, benefit enrollment	☐	☐	☐	☒	☐
Patient education wellness tools	☐	☐	☐	☐	☒
Provider/case manager directory	☐	☐	☐	☐	☒
Shared decision-making tools	☐	☐	☐	☐	☒
Telemedicine	☐	☐	☐	☒	☐
Other:	☐	☐	☐	☐	☐

80) What are the primary barriers to RCCOs and providers increasing their use Health Information Technology to improve the performance of Primary Care Practices?

Timely, updated and accurate information regarding care sought outside of a PCMPs practice are needed to be actionable for care transitions and it isn't currently available today. The lack of shared data systems is a barrier to this, but CCMCN and CORHIO are quickly developing solutions that should be utilized and encouraged.

81) How can Health Information Technology support Behavioral Health Integration?

CCMCN is currently implementing a community care coordination application that is intended to bring together all community resources into a shared record with shared care plans that cross between primary care and behavioral health. Leveraging a shared care coordination resource will naturally create integration. CORHIO has been able to develop mechanisms to bridge gaps between different systems in order to facilitate access to real time data. However, CORHIO is currently addressing the barriers related to sharing behavioral health information as the federal regulatory requirements on sharing this information are more burdensome. Changes are needed to the regulations that are preventing data sharing from behavioral health.

82) **In the next iteration of the ACC, should there be a shared resource for data and analytics? Please describe the basic criteria for what a shared data and analytics platform needs to contain in order for it to be useful.**

Possibly. The Department will certainly need its own data and analytics for internal operations but the RCCOs will also need tools as they build population health and cost strategies within their communities. If the RCCOs are moving into risk contracts, they will probably want the ability to choose their own tools to run their businesses.

83) **Should there be a shared care management tool? Please describe the basic criteria for what a care management tool would need to contain in order for it to be useful.**

Yes, but it needs to be payer agnostic and available for the entire community. The most effective tools to facilitate more coordinated care will receive clinical data from PCMP EHRs, admit and discharge data from hospitals and claims data so that it can create alerts and tasks based on predefined interventions.

84) **Should there be a shared population health management tool? Please describe the basic criteria for what a population health management tool would need to contain in order for it to be useful.**

Possibly. The Department will certainly need its own tools for internal operations but the RCCOs will also need tools as they build population health and cost strategies within their communities. If the RCCOs are moving into risk contracts, they will probably want the ability to choose their own tools to run their businesses.

85) **Please describe the functionality that a common Medicaid provider directory would need to contain in order for it to be useful.**

A provider directory should be searchable by provider, site, and/or entity; contain information on if they are currently accepting new ACC enrollees; and contain accessibility information such as hours of operation and languages spoken. Additionally, the provider interface should have a way to easily update information, contain provider contact information, and contain information regarding making referrals to the practice. On the patient side it should also contain quality information about the provider.

86) **How can the RCCOs support providers' access to actionable and timely clinical data?**

Access to actionable data is a priority for data driven decision support. The RCCOs should be creating the infrastructure to get this functionality to the PCMPs as appropriate.

87) **What are the HIT solutions that would benefit clients, providers, and RCCOs? Please comment on the parameters these tools or platforms would need to possess and the ways in which they could be used.**

There are many HIT solutions which would provide benefits to clients, providers and RCCOs. Patient access to web portals to track their health information and direct messaging with providers would be useful in engaging patient in their health. Telemedicine, especially in relation to accessing specialists, would beneficial in

expanding access to care. Instant communication in the form of email or text when a patient presents in the ER would be beneficial to case managers.

In order for any of these to be utilized to the full extent of their possibilities, there needs to be a system in place for sharing data across systems. CCMCN and CORHIO are actively developing solutions that are intended to address the needs of the RCCOs.

88) **What technical assistance or resources related to HIT infrastructure should the RCCOs supply? This assistance or these resources could be for providers, social service organization, clients/families, or for others.**

The RCCOs could become a centralized vehicle for many kinds of technical assistance as long as they have enough financial resources to provide it.

89) **What role should health information exchange platforms like CORHIO or QHN play in the next iteration of the ACC?**

The HIEs have an important role to play in successfully developing the systems which will allow real-time, clinical data to be shared, which is required to fully realize the benefits of care coordination. Colorado's HIEs are actively building solutions, so they should be included as a partner in these efforts.

90) **Please share any information, advice, and suggestions you have about health information technology in the ACC Program.**

Colorado Department of Health Care Policy and Financing

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Kerry Cogan for CHPA
Location: Denver, CO

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Community Health Provider Alliance
Location: Denver, Colorado
☒ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☐ Medical provider / PCMP / other provider
  i. Type or specialty: Click here to enter text.
  ii. Area of practice: Click here to enter text.
☒ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☐ Other (please describe): Click here to enter text.

Are you currently involved in the ACC program?

☒ Yes
☐ No
☐ I don't know

If you answered "yes" above, how long?

☒ Less than one year
☐ 1-2 years
☐ 2-3 years
☐ 3-4 years
☐ Since before the program was implemented.

How have you been involved in the ACC program and what interaction have you had with RCCOs:

The Community Health Provider Alliance (CHPA) is a statewide integrated accountable care network of Federally Qualified Community Health Centers (FQHCs or CHCs) in Colorado. CHCs are integral to the success of the ACC and provided a health care home for 28% of all Medicaid enrollees in 2013. CHCs helped launch the ACC by taking the first enrollees in 2011, and formed or serve in a governance role in several RCCOs. Several of CHPA's members have been active participants in the ACC performance improvement advisory committee (PIAC) and various subcommittees.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:

See response above.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☒ Very likely
☒ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

The ACC is a positive step towards improving care coordination, allows for innovation and flexibility within regions, and establishes more accountability for improved outcomes. Specifically, the benefits of the ACC include:

- Care management financial support has brought much needed care coordination efforts to high risk populations.
- Improved partnerships with local hospitals and community partners in some regions, particularly with focused alignment around the Key Performance Indicators (KPIs).
- Medicaid, RCCOs and PCMPs are engaged and focused on improving outcomes and containing healthcare costs.
- More focus on implementing payment reform that values outcomes versus output with innovative models being piloted that may expand to additional regions/providers.

2) What is not working well in the ACC Program?

While the ACC has led to some improvements in care, there are a number of areas in need of further development.

- Attribution:
    - Too many Medicaid enrollees remain unattributed to a PCMP for too long, decreasing the ability of PCMPs to engage patients and begin implementing interventions to improve outcomes and contain costs. While monthly attribution has addressed some of these concerns, the ACC program should move to auto-assignment for those that remain unattributed after attempts have been made to have them select a PCMP. See question 30 for specific recommendations about auto assignment.
    - The process to change PCMP attribution is too burdensome on the patient, and as a result some providers serve as a patient's PCMP without the recognition and financial support provided by accurate attribution. This process needs to be refined to allow patients to change PCMPs in a timely fashion.
- Timely and accurate data is central to a provider's ability to successfully manage population health and make adjustments to improve outcomes. Current data provided to PCMPs is not timely, not actionable, and not presented in a way that allows providers to validate that their data is accurately represented. Additionally, data provided varies by RCCO and therefore cannot be aggregated across regions, preventing PCMPs serving patients from multiple RCCOs to accurately understand their performance. Specific recommendations regarding data are included throughout this response, but in particular see the Program Structure and Health Information Technology sections.
- RCCO and PCMP relationships vary by region and present challenges for large PCMP systems located in multiple regions. These large PCMPs often find themselves stretched between differing requests and requirements, and varying priorities and strategies which are not always coherent. In one example, a CHC serving multiple RCCOs was able to launch a diabetes intervention program in one region with a RCCO, but not another, which resulted in participation being dictated by the county the patient lived in even when they utilized the same clinic and saw the same provider. In addition to increased

standardization of expectations across RCCOs, RCCOs need to be held to a high standard of engaging PCMPs in discussions that will impact clinical practice or reimbursement. See Program Structure section for specific recommendations.

- The ACC program should require more transparency from RCCOs in governance, operations and financing to be assured that there are adequate dollars going to impact care and provide support to providers.
- Hospitals must play a significant role in the ACC to achieve the desired outcomes of better health care and healthier patients at a lower cost, but there are not enough incentives currently to participate, nor disincentives for not participating in these efforts. Isolated, local relationships may be strong enough to create some impact in a single community, but incentives are lacking in the current ACC and should be included in the next iteration.

3) What is working best in the Behavioral Health Organization (BHO) system right now?

Similar to the ACC, CHCs have seen both areas of success with the BHO system and areas in need of significant change. A few successes to highlight:

- Access to behavioral health care is expanding in some areas as Community Mental Health Centers (CMHCs) are hiring staff and working to meet the increased demand created by Medicaid expansion.
- Partnerships between CMHCs and CHCs are very strong in some areas, resulting in improved access to behavioral health services through the integration of CMHC staff into CHC care teams, and in a few places, improved access to primary care by bringing CHC staff to the CMHC.
- The launch of the statewide crisis response system is filling a gap and providing a service that was not available in the state before now.

4) What is not working well in the BHO system?

Overall, the focus of the BHO program on covered diagnosis and procedures does little to support integration in the primary care setting, where the behavioral health needs of patients don't always fall neatly into a diagnosis. PCMPs are ideally situated for providing preventative care and early interventions, but PCMPs must navigate complicated and varied CMHC/BHO relationships and billing procedures to receive payment for this care. Access to behavioral health care for Medicaid patients seems to be improving where there have been issues, but continues to vary by community and region and is overly dependent on local contractual relationships.

The separation of funding for behavioral health care from medical health care, does not allow for the alignment of incentives to improve care. Integrating the funds for medical and behavioral care (e.g. ending the carve-out) will make both service provision and access to care more efficient and patient centric. Money should follow the patient, meaning if a patient receives their behavioral health care at a CHC, the CHC should be able to bill a single entity for care. In addition to the need to integrate funding, the following issues need to be addressed:

- Access to psychiatric care for Medicaid patients continues to be highly limited. In particular this is true for patients with intermediate level needs, as the focus has been placed on providing care for patients with the highest needs. Additionally, to increase access to care, the following need to be included as

performance measures: wait time for an appointment, underutilization monitored by comparing disease prevalence rates to penetration rates, and network/provider experience reporting.

- The CCAR is not designed to assess and report progress on behavioral health issues that are typically addressed in the primary care setting. Further, the lengthy CCAR, in combination with other requirements to "open" a case with the BHO, is not compatible with the fast pace of the primary care setting, where increasingly behavioral health providers are utilized to assist with brief interventions in the exam room. Generally in the primary care setting, patients are "enrolled" indefinitely and may receive care across their lifespan without regard to acuity or diagnosis, and at CHCs, even as their insurance status moves from Medicaid, to uninsured or commercially insured.
- The requirement that CMHCs ensure co-location at high volume practices needs to be reviewed for compliance and enforced.
- There is no clarity or direction on the intended relationships between BHOs and RCCOs, so these relationships vary greatly depending upon the region.
- The rules and regulations of the BHO system are cumbersome in integrated care settings, providing reasons to resist creative integration opportunities. Additionally, for behavioral and medical care to become more integrated, incentives need to be aligned for both sets of providers.
- PCMPs contributing to positive care outcomes and cost avoidance on the BHO side of Medicaid have no ability to share in the savings generated.

5) What is working well with RCCO and BHO collaboration right now?

In one region the BHO and RCCO are collaborating closely to make care transitions seamless, but this is not the experience across the state. BHO and RCCO relationships appear to be limited, as CHCs are not aware of much collaboration at the patient level that could impact care.

6) What is not working well with RCCO and BHO collaboration right now?

Without a specific requirement to collaborate, integration seems to be a locally driven effort, and is not being mirrored in the relationship between RCCOs and BHOs as stated in question four. Having discussions at the regional level could lead to consistency across the region and assist in extending partnerships to all providers. Without regional level leadership, access to care depends upon local relationships; this creates gaps in access to services where relationships are not strong.

Sharing of data is a barrier at the practice level, and it is unknown what, if any, data is being shared between RCCOs and BHOs. Increased partnership regarding data sharing between systems could greatly benefit clients by improving patient centered care.

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

Integration of funding is central to a successful behavioral health integration, as stated in question 4. The RCCO rebid process should be used to begin developing alternative payment structures to accomplish this. Blended funding will lead to the best patient care by removing barriers to providing needed care, and it would be a good start to payment reform.

Both RCCO and BHO contracts should be required to demonstrate partnerships at the regional and practice levels, with transparent real-time actionable data to improve patient health. It would also be helpful for the RCCO and BHOs to work together to eliminate any perceived barriers to sharing patient level healthcare data to coordinate care.

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☒	☐	Carving out behavioral health funding creates silos which are an inherent barrier to integration.
Community Behavioral Health Services Rule	☒	☐	Rule places too much emphasis on providing high level care. To encourage preventative care and early intervention it should authorize receiving care through patient chosen providers, including PCMPs.
Covered diagnoses list	☒	☐	Too focused on severe and persistently mentally ill
Different behavioral / physical health reimbursement	☒	☐	This creates different systems of service with different outcome measures and objectives.
Institutions for Mental Diseases exclusion	☐	☐	
OBH rules, reporting, or financing (regulatory differences between agencies)	☒	☐	The CCAR is overly burdensome in primary care settings. The requirement to license substance abuse providers and facilities (vs. just providers as in other areas of behavioral health) creates a burden for primary care providers that could otherwise expand SA services on site.
PCMP financing structure	☐	☐	
Per-member per-month amount	☐	☒	PMPM itself is not a barrier, but the amount can be if it does not sufficiently cover expenses of required services.
Physical space constraints	☐	☒	
Privacy Laws (HIPAA, 42 CFR)	☒	☐	42 CFR in particular is a barrier, including over application/mis-application of current rules.
Professional / cultural divisions	☒	☐	CHCs providing onsite, integrated care have found that many behavioral health professionals need additional training to function in team based care models. Moving from the intensity of counseling sessions to brief interventions and opening and closing cases based on strict criteria to providing a broader range of

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

			behavioral health (vs. mental health) interventions is challenge for BH professionals new to the primary care setting.
RCCO or BHO contracts	☒	☐	See responses to questions 5-7
Staff capacity	☒	☐	CHCs face recruitment challenges for qualified staff.
State/Federal rules or reporting requirements	☒	☐	The narrow definition of behavioral health providers that are billable to a BHO create difficulty when partnership with CMHC is not possible.
Technical resources / data sharing	☒	☐	The systems are often not in place or extremely expensive to implement and maintain to share data between providers. Data sharing between RCCOs and BHOs if done, is not shared with PCMPs.
Training	☒	☐	Training on how to work as a member of an integrated team is not readily available, so integrated practices are recruiting from a narrow group of behavioral health providers who already have the needed experience.
Others			

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

It is also important to include oral health care to achieve whole-person/whole-family care. Across the state, CHCs demonstrate how to care for the whole person by focusing on all three elements: physical, behavioral and oral health. While not every clinic is providing all services on site, they are all committed (and federally required) to addressing the needs of their patients in a comprehensive way through service provision and community partnerships.

Not only are CHCs demonstrating the possibility of comprehensive care, but the benefits: Colorado Department of Health Care Policy and Financing data shows that CHC patients have one-third few emergency room visits, hospital admissions and primary care preventable hospital admissions than private FFS providers.

It would be helpful for the state to maintain consistency between the ACC expectation regarding integration and what is contained in the State Innovation Model (SIM) proposal presented to CMS. Of particular importance in the SIM proposal is the expectation that integrated care requires integrated, on-site teams of behavioral and physical health clinicians working on a unified care plan. Pharmaceutical management, integrated health records, and providing comprehensive primary, preventive and sick care are also necessary for a practice to be integrated.

10) Please share any other general advice or suggestions you may have about behavioral health integration.

Integration of funding in Medicaid for mental and physical health is required to make primary, preventative and behavioral health services more efficient and patient centered. The money should follow the patient – if a patient receives his/her mental health care at a CHC, the CHC should be able to bill HCPF directly for those services. Payment systems and contracts for behavioral and physical health must reimburse for preventative services. The current behavioral health payment system is designed to respond primarily to individuals with behavioral health diagnoses, as opposed to paying for early psychosocial and behavioral intervention for individuals and families with risk factors. Behavioral health prevention and health promotion efforts are critically important to cost effective, patient centered care.

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination?

The Safety Net Medical Home Initiative (SNMHI) provides the most comprehensive definition of care management, and the National Committee for Quality Assurance (NCQA) provides the most comprehensive tool to measure the implementation of care management in a practice.

SNMHI defines the key charges of care coordination as: linking patients with community resources to facilitate referrals and respond to social service needs; integrate behavioral health and specialty care into care delivery through co-location or referral agreements; track and support patients when they obtain services outside the practice; follow-up with patients within a few days of emergency room visit or hospital discharge; and communicate test results and care plans to patients/families.

NCQA's assessment of a provider's care coordination and care transition system focus on three elements: test tracking and follow-up; referral tracking and follow up; and coordinating care transitions. The specific elements outlined in these three areas provide a comprehensive image of whether the organization providing care coordination has the procedures and mechanisms in place to provide the care as defined by SNMHI.

b. How should RCCOs prioritize who receives care coordination first?
c. How should RCCOs identify clients and families who need care coordination?
d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

We do not recommend a prescriptive approach to care coordination as it has been the experience of our members that State requirements are often pushed down to the PCMP, often without regard for the PCMP's system of care. PCMPs and RCCOs should work together to develop systems for identifying those most in need of care coordination supports, and the value of having a local care coordination provider should always be considered in identifying if the service is best offered by the RCCO or the PCMP.

12) What services should be coordinated and are there services that should not be a part of care coordination?

We don't believe that any services should be explicitly excluded from care coordination. There are however several areas that require further development:

- Specialist Communication: Communication between specialist and primary care providers needs improvement. Closing the communication gap between the PCMP and specialist is necessary to ensure that care coordinators have full information on patient needs and an up to date care plan.
- Pharmaceutical care coordination has primarily been focused on punitive measures that identify abuse in the system. Incorporating medication management more fully into care coordination will address those concerns, while also reaching patients in need of further support with their medication.

- Reducing emergency room utilization for non-emergent care continues to be an area of focus to reduce costs. All regions do not have systems that allow care coordinators to know when a patient has presented in the emergency room so follow up can be completed. Additionally, hospital systems tend to focus on what is needed to discharge a patient, not on connecting patients with providers who will continue care after discharge. Focusing on the relationship between PCMP and RCCO care coordinators and hospital systems will help address both of these issues.

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

Psychosocial information such as where the patient lives, with whom the patient lives, and what resources he or she has are key to understanding what kind of care coordination is needed. While access to the patient's medical and behavioral health records are essential, these often do not include the information that needs to be a part of the patient record for successful care management.

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

    a. What care coordination is going on today?

From the experience of CHCs, two predominate models of care coordination have been identified. The first is care coordination which is disease-specific. Patients with disease-specific care coordination may have more than one care coordinator within the same health system. The second predominant model incorporates care coordinators into the care team, across diseases and various community partners. Regardless of which model is being used, it is likely that patients are engaging with other health care providers and care coordinators. To reduce duplication and improve outcomes, PCMPs need access to more complete and timely patient care data to provide meaningful care coordination across oftentimes disparate systems.

    b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

Different organizations have coordinators dealing with different issues (i.e. housing, food access, etc.) and the work being done by those organizations may have a profound impact on the overall health of a patient. Unfortunately, if a relationship doesn't exist between the PCMP and the outside organization(s), there is no way to identify those potential impact areas, or for the primary care provider to coordinate care for the whole person/family. To address this issue, there may be a role for RCCOs in convening coordinators across community and social service agencies to increase communication, share data, and reduce duplication of services.

    c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

It is important to recognize that care coordination happens at the local community level, and not at the ACC program level. Care coordination is often done by individuals with a variety of titles and training, such as Transition Coordinator, Care Navigators/Coordinators, and Case or Care Managers. In exploring what is already in place in a community, it is important to focus on the functions and outcomes, not titles.

d. What are the gaps in care coordination across the continuum of care?

PCMPs need access to real-time patient clinical information in order to providing meaningful care coordination. This is lacking in the current model in many regions. Access to real-time, actionable data needs to be prioritized in the RFP.

15) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

The areas identified in the table below are functions that the organization providing care coordination should be providing. Across the state, CHCs have care delegation agreements with RCCOs and in those situations the responsibility for coordinating with community supports and services on these issues would typically be delegated along with other responsibilities to the PCMP. In instances in which the RCCO is providing the care management (no care delegation in place, non-attributed patient, or patients attributed to PCMPs without a delegation agreement), the RCCO does have the responsibility for coordinating on each of these issues as needed within the region.

Non-medical need:	**Should the RCCO have a role?** Yes	No	**Should the RCCOs coordinate with community supports and services?** Yes	**Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?**
Abuse, neglect, and trauma	☐	☐	☐	See narrative above for this table

Transportation	☐	☐	☐	
Other				

16) **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Care coordination models should not be dictated by the state or RCCO. Focus should be placed on the outcomes desired (see response to question 19), not on restricting or defining the providers or provider team. RCCOs and PCMPs with care coordination delegation should have the flexibility to create a system that works for their population in achieving those outcomes.

Type:	**Coordinate care?** Yes	No	**In what capacity should these individuals coordinate care in the ACC Program?**

Elderly clients	☐	☐	
Frail elderly clients	☐	☐	
Clients in palliative care	☐	☐	
Other populations, please comment:			

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

RCCOs should connect with and complement existing resources to support children today. There should not be duplication or replacement of existing structures. RCCOs should be connecting with regional resources and supporting PCMPs with delegated care coordination in accessing existing resources and structures for this population.

19) How should care coordination be evaluated? How should its outcomes be measured?

KPIs should continue to be used to evaluate outcomes. Additional measures that could be used are reductions in the cost of total cost of care, reduction in number of emergency room visits for non-urgent issues, and patient experience and satisfaction.

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

a. What is the PMPM cost for providing care coordination services?

The cost of providing care coordination services varies depending on a number of factors, including volume of clients. In particular, rural areas can be more expensive because of lower volume. Budgetary constraints should not be the only consideration in setting PMPM rates, rather these amounts need to be justifiable

through a valid actuarial process. As payment reform moves forward, transparency in what is included in delegation contracts and the justification for the PMPM amount will need to be established.

b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

Yes, but only if the variation in PMPM by population or age is actuarially sound.

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

We do not believe that care coordination models should be dictated by the state or RCCO. Focus should be placed on the outcomes desired (see response to question 19), not on the allowed providers or provider team requirements. RCCOs and PCMPs with care coordination delegation should have the flexibility to create a system that works for their population in achieving those outcomes.

a. **Care coordinator to client ratios.** If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☐
51-100	☐
101-200	☐
201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

The Department should continue to utilize KPIs to demonstrate the effectiveness of care coordination. Evaluation metrics that are based on national accreditation and that are consistent with other programs (such as Medicare, CHP+, etc) are ideal, so as to not create multiple workflows within clinics measuring metrics across various populations and payors. 5ee response to question 19 for specific outcome measure examples.

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Care coordination models should not be dictated by the state or RCCO. Focus should be placed on the outcomes desired, not on the allowed providers or provider team requirements.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

Colorado's CHCs have 169 sites spread throughout the state and several CHC span across multiple RCCO regions. Given this, some of our CHCs must manage relationships with up to 4 different RCCOs. Due to this fragmentation, there are many areas where consistencies across RCCOs would improve system efficiency.

Uniform RCCO governance structure is one area that should be addressed. We suggest that RCCOs be required to include:

- Consumer representation within the governance structure;
- Governance seats designated for large volume providers within the RCCO, such as CHCs; and
- Administrative expenses reported transparently and be limited to no more than a 10% administrative cost threshold (further information in Question 25).

The following functions should be standardized across RCCOs:

- PCMP reporting to RCCOs and standards for reporting needs to be standardized. It is administratively burdensome to large provider systems that serve patients in multiple RCCOs to meet varying requirements on what data and how it is provided.
- RCCO reporting to PCMPs needs to be standardized and presented in a way that allows practices providing services in multiple RCCOs to analyze their overall impact on the Medicaid population served.
    - This data should be real time to ensure care coordination and quality improvement efforts are meaningful
    - RCCOs should provide comparison data to all providers based on provider type (e.g. CHC, non-CHC, practice size, etc.)
- Referral protocols - currently the referral protocols submitted by the RCCOs vary in intensity, creating an unmanageable system of expectations for PCMPs and specialists serving patients in multiple RCCOs.
- Communication from RCCOs to PCMPs should be streamlined and RCCOs encouraged to partner in communicating to providers that serve multiple regions. In particular, attending meetings for multiple RCCOs which cover the same or similar information is administratively burdensome and unnecessary. Cross RCCO communication would allow RCCOs to identify areas in which they do not align to communicate differences to PCMPs more effectively and allow conversation regarding areas to create alignment.

Finally, as the state moves forward with payment reform, consistency will be needed in how providers are paid and large systems need to have the flexibility to choose a single RCCO with which to contract. Our response to question 26 contains further discussion of the complications of a single system managing multiple payment methodologies for a single population.

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

Transparency is central to being successful in establishing community relationships. Transparency should include RCCOs reporting all real and perceived conflicts of interest, reporting regularly on how state funds are being spent within the region, and including provider and consumer representation in the decision making process. Reporting on how funds are allocated and spent by the RCCO, and capping administrative spending by the RCCO to 10 percent, would provide additional accountability and ensuring that 90 percent of funds are spent improving patient care and access to care.

In addition to expectations regarding transparency, we recommend setting the expectation for community relationships in the RFP process by requiring applicants to include letters of support from community organizations and safety-net providers and hospitals, including CHCs. To evaluate the strength of those relationships, applicants should include information on the length and extent of their relationship with those partners. Additionally, a clear plan for or explanation of their community engagement process should be included, contain what community meetings are attended and the RCCOs advisory committee structure. These processes should include a mechanism for improving community level care decisions.

Finally, require clear contract oversight and enforcement to ensure that RCCOs successfully engage the communities in their region.

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

Large PCMPs with sites in multiple regions should be able to select a single RCCO. The Department has stated that simplicity is one of the pillars of the ACC, and the ability to select a single RCCO decreases complexity both for CHCs and the state. As discussed in earlier questions, working with multiple RCCOs creates administrative complexities and presents barriers to future innovations to improve patient centered care, particularly around payment reform.

RCCOs themselves are very diverse organizations with different approaches to payment reform, referral processes, care coordination, and willingness to partner on innovative approaches to care. When working with multiple RCCOs, PCMPs are faced with challenges as simple as the time commitment required to attend multiple meetings on similar topics, to the difficulties of aligning systems with multiple systems, including billing systems should the RCCOs become a payer. Being able to work with a single RCCO would eliminate the complexities and allow large provider systems to work more closely with that RCCO to identify areas for improvement and innovation.

In addition to the efficiencies created, the ability to work with a single RCCO is a requirement for CHCs to pilot payment reform. A Medicaid payment pilot would have to involve all or most Medicaid patients in a single CHC system to be successful.

We recognize that this is a departure from the way the program is currently structured and there are several considerations that will need to be discussed. One of the original principles of the regional distribution was the equitable distribution of lives, so the issue to consider now is if equitable distribution is still necessary with the increased number of patients covered in the program.

A second area to consider is attribution. There would need to be a mechanism in place to ensure that RCCOs attribute patients to providers within their region fairly and equitably among PCMPs with capacity for more

patients. Additionally, attribution to RCCOs is currently done based on the patient, so the criteria for how large provider systems would be attributed to a RCCO have not been established. We are interested in continuing this conversation with the Department to ensure that the implications for either the decision to maintain status quo or allow this change are understood by all impacted. We believe there are options to address each of the concerns that would lead to an equitable solution that will be beneficial to RCCOs, PCMPs and patients.

If this change is determined to not be feasible, we would ask that the Department work directly with CHCs to pilot CHC payment reform, and work with the CHCs/CHPA and the RCCOs to determine how and whether RCCOs would be involved.

27) Should the RCCO region maps change? Why or why not? If so, how?

Regions should reflect the natural referral patterns and clinical appropriateness rather than administrative simplicity concerns. As an example, Larimer and Weld counties have a lot of overlap between providers, hospital systems, and referral patterns between Loveland, Greeley and Fort Collins, yet are divided between RCCOs. These divisions may not have an impact on referral patterns or access to care currently, but as RCCOs develop medical neighborhoods they could increasingly become an issue.

In addition to the example above regarding community referral patterns, the division of natural communities, such as metro areas, creates difficulties in establishing community relationships and partnerships. For example, the Denver metro area is divided between three RCCO regions. Two of those regions share an administrative organization, but with the patient population served by Medicaid it is a recurring issue that patients move, and in doing so change RCCOs which creates communication issues.

We believe that the RCCO region map should be evaluated based on the concerns of providers in those regions. Therefore, we are not making specific recommendations regarding changes, but have asked CHCs to submit comments regarding the challenges and strengths of the region(s) they serve.

28) Should the BHO region maps change? Why or why not? If so, how?

Payment systems must be integrated in order for behavioral and physical health to be fully integrated, so alignment of regions is a logical first step to integration of care.

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

The required time for successful transition will largely depend on the structure of the new vendor. If the vendor selected is currently serving as a RCCO in a different region, the transition should take less than three months as attention can focus on changes to contracts with providers and care coordination delegation. If the organization is a new RCCO contractor, systems not already in place would be implemented upon contract

award, but it may take up to six months to establish IT systems with partners including hospital, PCMPs, specialists and care coordination organizations.

In either scenario, CHPA feels that the following requirements should be established:

- There is no disruption in payment to providers,
- There is no reattribution of patients to PCMPs, and
- A successful transition should be measured by provider feedback.

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

In order for patient designated attribution to work better, Health*Colorodo*'s contract should include the following:

- If a patient does not select a PCMP after a designated time period, auto attribution to a narrow group of high volume, high quality providers is implemented. Screening criteria for eligible providers should include items such as: practice open to new Medicaid patients, practices with delegated care coordination agreements with the RCCO, practices with national Patient Centered Medical Home recognition or other similar standards, practices with electronic medical records capable of running reports for patient population health management and quality improvement, and practices contracted with CORHIO.
- Appropriate call center staffing levels to minimize wait times to under S minutes and a system implemented which allows patients to leave a number and be called back by a representative rather than remaining on hold.
- Funding and accountability to assure efficient and accurate patient designated attribution.
- The ability for clients to designate their PCMP on the Medicaid application, both on paper and through PEAK.
- Ability for all Medicaid clients, new and those previously enrolled, to submit PCMP selection and changes through a fax or online form which receives a confirmation receipt for both the patient and selected PCMP.

In addition to the changes to the Health*Colorodo* contract regarding attribution, HCPF should implement policy in which providers that can demonstrate having served as the PCMP between enrollment and attribution receive retroactive PMPM payment.

The following waivers or SPAs should be sought from CMS:

- Waiver to allow patient assignment or lock in to providers. This will be necessary to move forward with payment reform because providers cannot be held responsible for managing patient health outcomes if the patient does not have an obligation to utilize the assigned provider.
- SPA to utilize projected annual income for Medicaid determination.
- Waiver to allow 12 months continuous eligibility for adults in order to address issues of churn.
- SPA for alternative payment mechanism for CHC payment once the methodology is developed and agreed to.

Suggested changes to the RCCO contracts have been outlined in Questions 24 and 25.

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

The two primary limitations that need changes are regarding the cap on dental services for adults and case management restrictions.

- The need for dental care exceeds the $1,000 cap and is limiting the ability of providers to provide high quality care in an efficient time frame in order to reduce further cost implications in the future. If patients cannot afford to continue treatment after the cap the state risks those needs elevating from a simple dental procedure to an emergency room case.
- Case management is not included in the benefit structure, though it is provided by CHCs and reduces the overall cost of care. Adding case management to covered benefits would allow expansion of the service, ultimately decreasing the overall cost of caring for the population.

Additionally, the current benefit structure does not incentivize patients to utilize less expensive, more appropriate care settings. A lot can be accomplished through providers and care coordinators, but structuring the benefit to further incentivize patient choice would further these efforts.

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

No, CHCs have already experienced the complications of working with multiple RCCOs and expanding the number per region would only accentuate the problem. Additionally, multiple RCCOs per region adds a degree of complexity to not only the provider level, but processes such as attribution.

While multiple RCCOs in an individual region should not be an option, there should be the ability for providers, such as CHCs, within a RCCO to partner and be acknowledged as a separate provider group or type within the RCCO. This would be beneficial in providing a mechanism for practices to track impacts and savings on a more localized level.

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

All CHCs are Medicaid providers.

34) What role should RCCOs play in attributing clients to their respective PCMPs?

RCCOs should be responsible for ensuring that everyone selects a PCMP within the first three months of enrollment. As enforcement of this responsibility, RCCOs should lose PMPM entirely for those who remain unattributed after three months. Patients should be attributed to all high-quality PCMPs meeting specific requirements (stated above) with capacity to take on additional patients.

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

The Department of Public Health and Environment (CDPHE) already tracks many population level health trends which would be of use to the ACC Program. Likewise, information gathered regarding the Medicaid population through the ACC would be beneficial to CDPHE in expanding their data set. Additionally, CDPHE tracks data regarding emerging public health issues which would be beneficial to share in a timely fashion with providers, and providers could be a useful resource to CDPHE in responding to emergency situations. Collaboration around bi-directional data sharing should be built for the benefit of both programs.

Perhaps even more impactful is the relationships at the local level. RCCOs should have a requirement to collaborate with Local Public Health Departments.

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

The ACC and DHS should, at a minimum, compare goals to ensure alignment. This would be accomplished best at the Governor's Cabinet level.

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

The two programs should align eligibility determination methodology. For example, the two should align income requirements to annual income projections, and Medicaid adults should receive 12 months continuous eligibility. Aligning these two elements will reduce churn between the programs and increase consistency of care for patients.

Until the necessary alignments can be accomplished, Connect for Health Colorado and the ACC Program should work closely to ensure that patients whose eligibility changes and movement between the programs is necessary have consistent access to primary care.

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

The ACC Program should collaborate with DOI to utilization of the Medicaid definition of Essential Community Providers is consistent with the definition in the private insurance market to ensure consistent access to ECP providers in both public and private insurance settings. Additionally, the DOI should be an active participant in payment reform discussions and evaluation of models which include risk.

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

As referenced in response to question 24, RCCOs should have a uniform governance structure which requires at least two consumer representatives. These representatives should be clients, client family members or client advocates.

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

Please see question 24. RCCOs should have a uniform governance structure which requires representation from providers, community organizations and others in the region.

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

See response to question 40.

42) How should the Department structure stakeholder engagement for the ACC as a whole?

The Department should continue to host one to two regional stakeholders meetings per year like those hosted spring, 2014 which were well attended. It is important that HCPF leadership and ACC staffs have a presence in each region at least once per year.

ACC PIAC and subcommittee meeting materials should be posted at least two business days in advance of meetings. Agendas for these meetings should have items for public input clearly articulated so stakeholders can come prepared to meetings to share their input.

Finally, to encourage and ensure stakeholder engagement, the Department must have technology that allows stakeholders outside of the Denver metro area to actively participate in meetings. Current call-in systems do not support active participation.

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?
    a. If no, what are the gaps?
    b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

The increased enrollment in Medicaid has exacerbated the issue of obtaining timely access to behavioral health treatment and therapy, dental care and specialist care. CHC dental programs are overwhelmed with the pent up need among both those previously enrolled in Medicaid and the expansion population. Additionally, the expansion of Medicaid has made waiting lists for specialty care longer, which is particularly true in rural areas.

A large part of the problem with accessing care is the lack of providers accepting Medicaid, and part of that is driving by the lack of incentives for hospitals and specialists to engage patients and respond to the population needs. RCCOs should have the flexibility and the charge to work with providers in their regions to develop these incentives.

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

    a. What role should hospitals play in the next iteration of the ACC Program?

One of the central roles that hospitals need to play is engaging with the RCCO to remove roadblocks to sharing information with PCMPs. Having access to real-time data about patient access of services in a hospital setting is essential to care coordination and engaging patients to utilizing PCMP services before an issue requires emergency care. RCCOs should develop plans to incentivize hospitals to engage in this work, to engage patients beyond just providing emergency care, and mechanisms to dis-incentivize not participating.

    b. What role should pharmacies play in the next iteration of the ACC Program?

Pharmacists should have increased representation at RCCO/regional meetings. As mentioned in response to question 12, pharmacy is an area that needs to be increased in care coordination work. Pharmacists can be contributing to care coordination through medicine reconciliation for patients and working with care coordinators to educate patients.

    c. What role should specialists play in the next iteration of the ACC Program?

RCCOs should be required to create a care transition system that includes specialists, hospitals, pharmacies, home health, hospice and PCMPs.

d. What role should home health play in the next iteration of the ACC Program?

RCCOs should be required to create a care transition system that includes specialists, hospitals, pharmacies, home health, hospice and PCMPs.

e. What role should hospice care play in the next iteration of the ACC Program?

RCCOs should be required to create a care transition system that includes specialists, hospitals, pharmacies, home health, hospice and PCMPs.

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

RCCOs should have community advisory boards which include representation from SEPs, CCBs, counties, local public health agencies, and other community health organizations and nonprofits.

g. What role should counties play in the next iteration of the ACC Program?

RCCOs should have community advisory boards which include representation from SEPs, CCBs, counties, local public health agencies, and other community organizations and nonprofits.

h. What role should local public health agencies play in the next iteration of the ACC Program?

RCCOs should have community advisory boards which include representation from SEPs, CCBs, counties, local public health agencies, and other community organizations and nonprofits.

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

Provider associations, including CHPA, and organizations that provide care coordination and management services should be included at the ACC and RCCO levels.

45) How can RCCOs help to support clients and families in making and keeping appointments?

RCCOs should utilize client no show rates to identify those patients potentially in need of care management and use their care management teams to find and address their root problems. RCCOs should work with their delegated practices on how to partner around no shows. Additionally, RCCOs could support PCMPs in

implementing practice level interventions, such as implementing recall or appointment reminder systems, through technical and financial support.

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

The functions described should be included in each region's care coordination approach, but the specifics of job titles and the mix of providers should not be prescriptive. Community Health Workers are most effective at the PCMP level within the community, so it should be an option for PCMPs and organizations with care coordination delegation but it should not be a requirement. The focus should be on developing locally appropriate systems that fulfil the functions and meet identified outcomes.

47) **Community Health Worker reimbursement.** Please use the table below to detail how Community Health Workers should be reimbursed:

All options could be viable options for reimbursing for the work done by Community Health Workers, but see question 46 for thoughts on the appropriate level for utilizing these workers.

Reimbursement process	(Please check all that apply)
Independently bill	☐
On staff (salary) at Primary Care Medical Provider Clinic	☒
On staff (salary) at RCCO	☒
Per Member Per Month Payment	☒

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

The dental ASO's contract contains the responsibility for ensuring an adequate network of providers, so this should not be a focus of the RCCO. However, as the RCCOs are more locally focused and have established relationships in the community, they would be a good partner for the ASO to utilize in establishing those local relationships and identifying providers.

RCCO care coordinators should include oral health and accessing dental services in their efforts to get patients appropriate and timely care. To accomplish this, the RCCO should have established relationships with the

appropriate ASO staff. Additionally, RCCOs should be providing encouragement and education to patients about the importance of regular, preventative oral health care.

The CHC model of care integrates physical, behavioral, and oral health care in a patient centered setting. Throughout this RFI there is significant focus on the first two components, but little on oral health. As RCCOs provide support and trainings to practices regarding integrated care, they should be highlighting the importance of oral health in whole-person care, total cost of care and quality improvement. Additionally, RCCOs should be educating providers on options for including oral health in medical practices, including independent practice dental hygienists as an option in Colorado.

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you?

The National Committee for Quality Assurance define cultural competency as not only having empathy, but expressing it towards patients regardless of the patient or provider's cultural background. In order to do so, clinical and non-clinical staff must have an adequate understanding of their patient population including its diversity, health literacy, language needs, etc. With understanding of the patient population, providers are encouraged to utilize motivational interviewing as a technique to facilitate culturally competent conversations.

b. What RCCO requirements would ensure cultural competency?

All clinical staff should be trained in motivational interviewing and enroll in cultural competency trainings with continual follow up, both of which RCCOs can provide or facilitate connections to. RCCOs should also require practices to determine cultural competency standards and hold them accountable for meeting training all staff about and meeting those standards.

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all clients/families including those with low health literacy?

See response to b.

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

Bilingual or translation services, on-site staff with expertise in cultural competency, and ensuring that every patient completes a health literacy assessment are factors that contribute to enhanced cultural competency.

Skills learned during trainings would incorporate the ability to refrain from making assumptions and would ideally educate participants on what it means to have implicit and explicit biases.

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

Yes, these should be allowed to enable payment reform. Preferred networks help manage population health and generally help reduce waste in the continuum of care, but without movement towards payment reform, RCCOs will not have the ability to develop or enforce these networks.

If payment reform options with any element of risk, even if only partial, are to be considered in the next RFP, networks of preferred specialist, facility and ancillary providers must be allowed. The development of these networks will need to be coupled with enhanced prior authorization processes to allow RCCOs and PCMPs to reduce total costs, improve outcomes and improve patient care.

51) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

At the patient level the ACC should evaluate options for slight changes to patient co-pays which would disincentive inappropriate use of emergency rooms, particularly where other care options are available. Additionally, not all hospitals are actively participating in ACC. A combined effort by RCCOs and the state should build additional mechanisms into the ACC which will engage more hospitals.

At the regional level, RCCOs should be developing community diversion strategies where one is not in place. Partnerships between PCMPs and hospitals have been highly successful in redirecting patients to primary care when more appropriate and making that care available, and RCCOs could be bringing community partners to the table to begin these discussions. Additionally, RCCOs have access to data which would allow them to analyze emergency room practices to identify outliers. Understanding if there are emergency rooms that cost significantly more than others in the region or extensive use of tests without clinical reasons would identify opportunities to reduce unnecessary care.

52) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

The specialist network for Medicaid patients is highly limited. RCCOs need to have the authority and charge to develop incentives to encourage specialist and hospital participation.

Practice Support

53) **Support for practices.** Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

A high functioning RCCO should be able to provide all of these supports as needed to practices, though it should be recognized that not all practices will need these supports and therefore none should be tied to a specific tool. As PCMPs who have care management delegated, our members have most of these elements in place, and requiring a specific tool would require additional administrative work to utilize both the PCMPs process and the RCCOs, and would likely require financial investments to incorporate a duplicative function.

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?

Others				

54) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

No specific tool should be required. Smaller practices and those without care delegation may need higher levels of support or templates to use, but practices that have care management delegation and existing processes in place should not have to change or duplicate work and financial investments to meet a RCCO specific requirement. In particular for situations in which providers serve patients from multiple RCCOs, requirements of specific tools would create additional barriers to providing patient focused and cost effective care.

55) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

RCCOs should provide resources and support as requested by practices, but they should not be prescriptive. Especially practices that are already engaged in medical home efforts, such as CHCs engaged in Patient Centered Medical Home certification, should be able to evaluate their practice's needs and drive the support needed from the RCCO in addressing those areas. In order to accommodate both practices such as CHCs that are actively engaged in advancing the medical home model and those practices which are newer, RCCOs could consider a grant program that would allow practices to propose changes and needed supports from the RCCO.

56) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

Established national standards, such as the National Committee for Quality Assurance's Patient-Centered Medical Home Recognition, are the most effective way to recognize a PCMP's capacity to service as a medical home for patients. These standards set expectations of what is expected of a medical home that are consistent regardless of the region and have an established process for recognition.

Practices should be compensated for their level of recognition through these national standards, with practices incentivized to improve their rate because it is tied to increased PMPM or capitation payments.

57) Should the Department require that PCMPs utilize disease registries to manage the health of their population?

All PCMPs should utilize a registry or electronic medical record that has the capability of running reports for population health management and quality improvement as that is the standard of care. This should be a requirement for practices to be eligible for auto-attribution as discussed in response to question 30.

58) Please share any other advice or suggestions about provider support in the ACC.

High performing PCMPs need to be rewarded based on their performance. Currently in the ACC recognition is primarily at a regional level, which does not encourage further development of those high performing practices. RCCOs should be required to report and reward individual practices.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

No, the current payment structure is still paying for volume, not quality. As discussed in response to question 58, providers are not being rewarded or tracked by their own individual performance which is not providing incentives to low performers to improve or for high performers to continue to develop. Additionally, as discussed in response to questions 4, 43, and 52 there is no incentive for specialists to participate and engage with patients in a meaningful way.

The Shared Savings component of the ACC is particular limited in its ability to recognize and reward high performers – many measures can only be attributed to the region, which may result in a high performer being left out of payments due to poor performance by providers elsewhere in the region. The size and geographic diversity of many of the regions prevent meaningful coordination and care improvements between providers, and it must be recognized that in most cases, these providers never agreed to work together or to be at risk for another provider's performance.

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

CHCs are interested in working with HCPF to develop and pilot an Alternative Payment Methodology (APM) that moves away from FFS and towards population-based payment. Many CHCs are interested in taking on additional risk over time. Other states are piloting converting the PPS rate into a PMPM for primary care.

In a capitated payment structure, the initial PCMP cap should include physician services, non-E&M PCP services, and OP Labs/Pathology as these are services primarily handled by PCMPs. In later years the program could begin to expand into additional services, such as diagnostic imaging, PT/OT/ST, DME (with agreed upon carve outs), and OP Radiology (professional services only). Ideally all three elements of integrated, whole person care (physical, behavioral, and oral health) would be included.

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

CHCs as providers do have the infrastructure to support value based payments, however additional resources would be needed to add expertise at the State and RCCO level for rate setting. Without rate setting expertise and third party validation, CHCs cannot risk PPS/APM and expect to remain viable.

One of the other large barriers to managing a population successfully and being paid based on value is the lack of real time, meaningful data as has been mentioned in response to questions 2, 6, 8, 14, 24, and 44. Helping to facilitate real-time data sharing between PCMPs, facilities, specialists, and community providers must be a requirement of RCCOs in order for value based payments to be accomplished.

62) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

For providers, the need to obtain licensure will be prohibitive to participation in a model involving risk. There are models utilized, both partial risk and capitation, which do not require a DOI license if sufficient reserves are held. The Department should evaluate options for payment reform models which will not require DOI licensure.

63) What role – if any – should the RCCOs play in the distribution of payments to providers?

For CHCs, it may make sense for the state to remain the payer to resolve the potential of large CHC systems being subject to different payment pilots or methodologies in each region where they have patients. This could also be resolved by allowing CHCs to choose a single RCCO. Regardless of the direction taken, all parties involved (CHCs, RCCOs and the state) will need to work together closely to determine the appropriate role of the RCCO in payment distribution. See also the response to question 25, 50, 68 and 75.

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

As discussed in response to questions 58 and 59, high performing PCMPs are not currently incentivized to continue to improve their practice, a concern that payment reform needs to take into account. Providers who are responsible for care improvement and cost savings should be rewarded with shared savings and incentive payments.

The vision of RCCOs is to increase system effectiveness, but the care and decisions made regarding payment and practice reform most greatly impact the PCMP. To address this negotiations regarding payment reform need to be with the PCMP providers with RCCOs as a partner.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

Measurements such as clinical data on behavioral health, oral health, chronic and acute care services, unhealthy behavior, and factors that contribute to care such as social determinants of health and assessment of health literacy should be used to measure impact.

66) **Measuring Client experience.** Please complete the table below to indicate how the Department should measure Client/patient experience:

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☒	☐	In 2012, CHPA worked with our members to establish patient satisfaction measures that would meet the NCQA PCMH requirements. The full CAHPS survey is composed of S2 questions and the administration of it in entirety was felt to be too administratively difficult to implement. CHCs did agree to utilize and report on S questions from CAHPS, and we would advocate considering this shortened version to evaluate patient satisfaction: 1. In the last 12 months, how many days did you usually have to wait for an appointment when you needed care right away? (a. Same day, b. 1 day, c. 2 to 3 days, d. 4 to 7 days, e. More than 7 days) 2. In the last 12 months, how often did this provider explain things in a way that was easy to understand? (a. Never, b. Sometimes, c. Usually, d. Always) 3. In the last 12 months, did anyone in this provider's office talk with you about specific goals for your health? (a. Yes, b. No) 4. Specialists are doctors like surgeons, heart doctors, allergy doctors, skin doctors, and other doctors who specialize in one area of health care. In the last 12 months, did you see a specialist for a particular health problem? (a. Yes, b. No – if no, skip question 5) S. In the last 12 months, how often did your provider seem informed and up-to-date about the care you got from specialists? (a. Never, b. Sometimes, c. Usually, d. Always)
SF-12 Health Survey	☒	☐	This tool is not used by CHCs at this time, so while we have no objection to it being an option, it should not be the only tool available.
Other types of client interviews / surveys	☒	☐	
Patient Activation Measure	☐	☒	The tool is not used for patient satisfaction, primarily a patient education tool
Focus groups	☒	☐	
Other	The state should focus on patient satisfaction tools, not patient education tools. Additionally, as referenced in other questions, tools should not be prescriptive and requiring practices to implement duplicative efforts.		

67) Knowing that, at this time, the Department only has claims data, how should population health be measured?

The Department should look beyond claims data to other partnerships that could be provided to develop data on population health, in particular through partnership with the Colorado Department of Public Health and Environment (CDPHE). Claims data, lab and pharmacy data, CDPHE's health survey data, and outside data sources such as the Colorado Health Access Survey could be utilized to measure population health until more robust and timely data tracking and measurement tools are in place.

In developing ways to measure population health the Department should not develop prescriptive tools for implementation in PCMPs, but should look for ways to mine data from what is already tracked by PCMPs.

68) How should quality and performance data be reported to the RCCOs, PCMPs, and the public?

PCMPs should be included in the development of reporting models in order to ensure transparency in how their data is utilized and that reports are presented in a way that can be utilized to facilitate further improvements in their system. To address these concerns, a review system should be established to create and maintain transparency and integrity of data, and large PCMP systems, such as CHCs, should have representation in that system.

Quality and performance data should be reported to PCMPs consistently across RCCOs so that those who serve patients across multiple regions can better understand their impact on their patient population. Additionally, this data should be provided on a regular basis and should include comparison information demonstrating not only how the PCMP is performing in relation to itself, but also in relation to comparable practices and the region as a whole. Presenting comparison data is the only way to identify top performers and ways to learn from their system to achieve the triple aim.

69) **Measures for payment**. Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☒
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

The problem has been the frequency with which the Department has changed measures. Impact cannot be measured over time if the measures do not remain consistent. Over time it would be feasible to add additional measures, but at the moment the Department needs to identify a set of core measures that will be maintained.

70) What percent of RCCO payments should be tied to measures or performance?

Percentage	
10-20%	☒
21-30%	☐
31-40%	☐
41-50%	☐
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

The percentage should start low and be increased over the period of the contract as policies and reporting systems need to be established in order to tie payment to performance. As referenced in response to questions 61 through 63, CHCs are interested in the development of models with capitation and risk corridors, but in developing those models we are opposed to a fixed formula regarding the percentage of payment tied to performance. The question should be regarding how to accelerate payment to high performing RCCOs.

71) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?

Yes, all regions should have the same KPIs, and RCCOs and providers should be working toward the same statewide goals. This is necessary because to achieve KPI performance large PCMP systems, such as CHCs, adopt organization wide quality initiatives which will impact sites across multiple RCCO regions.

72) Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?

Reimbursement should be based on progress toward meeting national standards, with ongoing rewards for those who meet or beat the standards. While it might be necessary to create incentives that are based on individual improvement to encourage movement towards national standards, payment systems should more heavily reward those that have meet and continue to beat national standards.

73) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

Yes

74) **Incentive payment frequency**. Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	☒
Annually	☐
Other	☐
