COLORADO
Department of Health Care Policy & Financing

Responses to the ACC Request for Information

July 2015

Many thanks to the clients, family members, providers, advocates, and other stakeholders who responded to the Accountable Care Collaborative Request for Information (RFI). The Department received 121 written responses.

We received 3,945 pages of responses. The first RFI response contains the overview and appendix. All other responses contain only the Response Worksheet. Duplicate pages and blank pages of unanswered questions were removed from this document unless the file we received could not be modified.

Table of Responses:

014	Lowry Pediatrics (Medical Homes for Children)	245
015	Brad D. Kurtz, D.O. (Medical Homes for Children)	259
016	Southeast Health Group	273
017	Client Response [1]	312
018	Axis Health System	348
019	Carin' Clinic	378
020	Pueblo Community Health Center	391
021	Rose Pediatrics (Medical Homes for Children)	410

024	Touchstone Health Partners	441
025	David Pacini, MD (Medical Homes for Children)	472
026	Shannon M Murphy (Medical Homes for Children)	486
027	Pediatric Partners of Valley View (Medical Homes for Children)	500
028	Western Colorado Pediatrics (Medical Homes for Children)	514
029	William M Campbell, MD (Medical Homes for Children)	528
030	Western Colorado Pediatric Associates (Medical Homes for Children)	542
031	Lauren Carei, PA-C	556
032	Western Colorado Pediatrics, Claudia Jantzer (Medical Homes for Children)	570
033	Anita Rich	584
034	Northeast Colorado Health Department	617

[1] In order to ensure that nothing that could be considered Protected Health Information (PHI) is released, all client responses were redacted by order of HCPF legal. Department staff reviewing RFI responses had access to the entire responses. All client responses were read and reviewed. Many themes from these responses have appeared in our public presentations on the RFI.

Stakeholder Input

We will continue to seek stakeholder guidance and input through public meetings of the ACC Program Improvement Advisory Committee and its subcommittees. More information about the next iteration of the ACC Program is available via the RCCO RFP webpage, or by contacting Kevin Dunlevy-Wilson at RCCORFP@state.co.us or 303-866-5075.

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

Table of Contents

SECTION 1.0 OVERVIEW

1.1. PURPOSE OF THIS REQUEST FOR INFORMATION (RFI)

1.1.1. The Colorado Department of Health Care Policy and Financing (Department) is issuing this Request for Information (RFI) to solicit input on the next phase of the Accountable Care Collaborative (ACC).

1.1.2. Information provided to the Department in response to this Request for Information will inform the Department's Request for Proposals (RFP) for the Regional Care Collaborative Organizations (RCCO) and the future design of the ACC Program.

1.1.3. Anyone interested in responding is welcome to submit a reply (persons or entities responding to this RFI are called "respondents" throughout this document). The Department encourages everyone with ideas about the ACC to respond.

1.2. DEPARTMENT BACKGROUND

1.2.1. The Department serves as the Medicaid Single State Agency, as defined by Code of Federal Regulations (CFR) Title 45 Section 205.100 (45 CFR §205.100). The Department develops and implements policy and financing for Medicaid and the Children's Health Insurance Program, called Child Health Plan Plus (CHP+) in Colorado, as well as a variety of other publicly funded health care programs for Colorado's low-income families, children, pregnant women, the elderly, and people with disabilities. For more information about the Department, visit www.Colorado.gov/HCPF.

1.3. PROGRAM BACKGROUND

1.3.1. The Accountable Care Collaborative (ACC) Program started in May 2011 with around 500 clients. Since that time, the ACC has grown in many ways. Today, the program covers over 700,000 people. The current phase of the ACC is focused on developing a strong network of contracted providers that can serve as medical homes for Medicaid clients. At the start of the program, enrollment was comprised largely of adults, and the pay-for-performance measures were designed for an adult population.

1.3.2. Over the course of the last three years, the ACC has expanded its focus from the medical home to the whole neighborhood of providers, such as specialists. Program enrollment expanded, increasing the number of children to mirror the overall Colorado Medicaid population. To continue developing the ACC, the Department updated pay-for-performance measures to include children and changed the payment model to support improved medical homes.

1.3.3. The ACC strives to provide the Colorado Medicaid program with a client and family-centered, whole-person approach that improves health outcomes and ensures savings. The program design includes a focus on clinically-effective and cost-effective utilization of services. The ACC works to identify the needs of clients and to use local resources to meet those needs.

1.3.4. The ACC was designed as a platform to transform the Colorado Medicaid program. The upcoming request for proposals (RFP) will build upon the successes of the current program by further developing the ACC to serve more people through greater efficiency and other incremental improvements. In addition to these updates to the program, this RFP will also seek to make bolder, more-comprehensive changes to the ACC through deeper integration, new payment reforms, and the promotion of whole-person/whole-family health.

1.3.5. These improvements will also be strengthened by significant investments in technology, as with the forthcoming Business Intelligence and Data Management (BIDM) system. These new platforms will allow for enhanced program monitoring and evaluation, and will give all parts of the ACC Program better data to improve care and decision-making.

1.3.6. As one of the major parts of the ACC, the RCCOs leverage local infrastructure, relationships, and community resources. The RCCOs' main responsibilities in the first RFP were:

1.3.6.1. Provider network development: developing a formal contracted network of primary care providers and an informal network of specialists and ancillary providers;

1.3.6.2. Care coordination: the RCCOs must ensure that every client has access to an appropriate level of medical management and care coordination;

1.3.6.3. Provider support: supporting providers in delivering efficient, high-quality care by offering clinical tools, client materials, administrative support, practice redesign, etc.; and

1.3.6.4. Accountability and reporting: the RCCOs are responsible for reporting to the Department on the region's progress, and meeting programmatic and Departmental goals.

1.3.7. The RCCOs are responsible for assisting clients with every aspect of their care. This means that they have to assist clients with their physical health and their behavioral health. The state pays providers directly for physical health services. In Colorado, Medicaid behavioral health services are managed by five Behavioral Health Organizations (BHOs) statewide. RCCOs frequently work with the BHOs to coordinate care. Almost all Medicaid clients are enrolled in a BHO when they receive Medicaid. The BHOs get a set amount of money to manage the care for Medicaid clients, and the BHOs reimburse their network of providers for delivering services to those clients. The five regions that the BHOs manage do not match the regions managed by the RCCOs.

1.3.8. Today, there are seven RCCOs, each working in a specific part of Colorado. Each RCCO has adopted a different approach that works in its region. The RCCOs and their leadership play a vital role in the ACC and offer customized and local health care experience to the program. The ACC leverages personal, human connections to build on the strengths of local and regional partners.

1.3.9. Just as the first RCCO RFP initiated the ACC Program in Colorado, this second RFP will launch the next iteration of the ACC. What the program looks like in the future depends upon the RFP, and the content of the RFP depends upon the insight and guidance you offer through opportunities such as this Request for Information.

1.3.10. **For more information on the ACC Program, click here**

1.4. VISION FOR THE NEXT RCCO RFP

1.4.1. The next phase of the ACC Program will build on the strengths and the lessons learned during the first iteration. There are three main goals of the next RFP. The Department welcomes input on these goals and how to achieve them.

1.4.1.1. 1. Transforming our system from a medical model to a health model.

1.4.1.1.1. A person's health is impacted by his or her social situation (for example housing, income, transportation, nutrition, presence of supportive family and friends) as well as medical care. The next phase of the ACC Program aims to promote health by developing systems that support healthy lives, rather than just medical care.

1.4.1.2. 2. Moving toward person-centered, integrated, and coordinated supports and services.

1.4.1.2.1. Person-centered care means that the individual/family/caregiver is an equal participant with the provider in defining health goals and developing treatment plans. These both must address the whole person and be achievable within the context of the person's life. To accomplish this, RCCOs must also be able to coordinate more-closely with non-medical services and other state agencies. In order to do this, RCCOs must understand the community and culture where the person lives.

1.4.1.2.2. Part of a whole-person or person-centered approach is addressing both a person's physical and behavioral health needs in a way that is coordinated and cohesive, often referred to as integration. Taking steps towards integration or better coordination of physical and behavioral health care for Medicaid clients is a primary goal of the next RFP. Behavioral health care refers to all services to treat health conditions that primarily present as alterations in thinking, mood or behavior and changes in emotional (mood), psychological (thinking), or social well-being (behavior) and conditions related to addictions. To create the infrastructure for this integration, the Department seeks input on whether or how the Behavioral Health Organization (BHO) or RCCO maps or functions should be adjusted so that they are aligned.

1.4.1.2.3. This next RFP will aim to continue to build on local strengths of each community. This RFP aims to be sensitive to the diverse needs of clients with Medicaid coverage and will develop specific expectations around meeting the unique needs of subpopulations such as children, adults, the elderly, persons with disabilities, clients involved in the criminal justice system, and all others.

1.4.1.2.4. Incorporating clients' perspectives is an ongoing process. The next RFP aims to strengthen opportunities for clients and advocates to provide input and play an important role in program design and ongoing improvement.

1.4.1.3. 3. Leveraging efficiencies to provide better quality care at lower costs to more people.

1.4.1.3.1. The next RFP aims to capture efficiencies and save money through enhanced technology and by supporting a diverse and changing health care workforce.

1.4.1.3.2. The RFP endeavors to align the financial drivers for all elements of the Medicaid delivery system. Through the RFP process, the Department will explore different ways to pay for care, bend the cost curve, and be as cost-effective as possible.

SECTION 2.0 ADMINISTRATIVE INFORMATION

2.1. RFI TERMS AND CONDITIONS

2.1.1. This RFI is issued solely for information and planning purposes and does not constitute a solicitation. Information about costs and pricing is submitted voluntarily and is non-binding on the respondent. Responses to this RFI will not be considered legal offers nor will they result in an award of any type of contract.

2.1.2. The Department is not responsible for any costs incurred by any respondents for the development and provision of a response to this RFI.

2.1.3. The Department is subject to strict accountability and reporting requirements as a recipient of funds from public sources. Responses to this RFI are subject to disclosure by the Department as required by the Colorado Open Records Act (CORA). The Department plans to make responses to this RFI available for review online.

2.1.4. The Department reserves the right to copy any information provided by respondents for the purposes of facilitating the Department’s review of / use of the information.

2.1.5. The Department reserves the right to use information or ideas that are provided by respondents. By submitting information in response to this RFI, the entity or individual represents that such copying or use of information will not violate any copyrights, licenses, or other agreements with respect to information submitted.

2.1.5.1. The responses received from this RFI may be used for the development of a future solicitation. Should a solicitation be issued, further details on the solicitation process will be provided.

2.2. POINT OF CONTACT

2.2.1. The Department's point of contact for this RFI is:

2.2.1.1. Kevin Dunlevy-Wilson (note: other Department staff may address e-mails or phone calls)

2.2.1.2. Department of Health Care Policy and Financing

2.2.1.3. Accountable Care Collaborative Strategy Unit

2.2.1.4. 1570 Grant Street

2.2.1.5. Denver, CO 80203-1818

2.2.1.6. Phone: 303-866-5351

2.2.1.7. RCCORFP@state.co.us

2.3. NOTICES AND COMMUNICATIONS

2.3.1. Communication with respondents will be via various methods including, but not limited to, e-mail, phone, mail, the Department's ACC RFP Web site at: https://www.colorado.gov/pacific/hcpf/regional-care-collaborative-organizations-rccos-request-proposals-rfp and notices on the CORE Web site at: https://codpa-vss.hostams.com/webapp/PRDVSS1X1/AltSelfService;jsessionid=00007DX5IavpsnQoNcRwuPiYmie:189n1q4b1. Respondents can view information posted on CORE by clicking on the "Public Access" button. It is the respondent's responsibility to periodically check the Colorado CORE Web site or the ACC RFP Web site for notices, changes, additional documents or amendments that pertain to this RFI.

2.4. TIMELINE

2.4.1. The timeline for this RFI is as follows:

ACTIVITY	DATE
RFI RELEASE DATE	OCTOBER 21, 2014
INQUIRIES REGARDING THE RFI ACCEPTED UNTIL	OCTOBER 31, 2014 11:00 AM MOUNTAIN TIME
DEPARTMENT RESPONSES TO RFI INQUIRIES (ESTIMATED)	NOVEMBER 10, 2014
RFI RESPONSE SUBMISSION DUE DATE	NOVEMBER 24, 2014 3:00 PM MOUNTAIN TIME

SECTION 3.0 RESPONSES

3.1. INQUIRIES

3.1.1. For inquiries about this RFI, you may send an email to: RCCORFP@state.co.us. If preferred, you may also contact the ACC RFP team by phone at: 303-866-5351. Include the RFI number and title listed in the e-mail subject line.

3.1.1.1. The Department will track the questions that it receives and aggregate the questions into an "Inquiries and Answers" document.

3.1.2. Inquiries received by the Department by the Inquiry Deadline will be responded to by the Department via a posting of the "Inquiries and Answers" document on the CORE Web site and the ACC RFP Web site. Inquiries received after the Inquiry Deadline may not be included in the Department's response.

3.2. PROTECTED HEALTH INFORMATION

3.2.1. Do not include Protected Health Information (PHI) in your response.

3.2.2. If the Department discloses the responses online or via a CORA request, unless the responder explicitly requested otherwise, responses by all Medicaid clients will be identified only by first initial and county of residence. Example: John Doe would be listed as: "'J.' Weld County." Requests for pseudonyms will generally be granted if requested.

3.3. RESPONSE FORMAT

3.3.1. The RFI is broken into the following sections:

3.3.1.1. Basic information about you, the respondent.

3.3.1.2. General Questions

3.3.1.3. Behavioral Health Integration

3.3.1.4. Care Coordination

3.3.1.5. Program Structure

3.3.1.6. Stakeholder Engagement

3.3.1.7. Network Adequacy and Creating a Comprehensive System of Care

3.3.1.8. Practice Support

3.3.1.9. Payment Structure and Quality Monitoring

3.3.1.10. Health Information Technology

3.3.2. The Department is requesting respondents to send any comments or answers, no matter how minor, to the Department. Respondents are encouraged to address the questions listed in the Response Worksheet, but you do not have to reply to all of the questions in a section.

3.3.3. Please note that early responses are appreciated. Respondents do not need to wait until SUBMISSION DATE (see Section 2.4) to submit comments. The Department appreciates receiving any and all comments from respondents.

3.3.4. Reponses should be emailed to RCCORFP@state.co.us. Your answers may be submitted as an attachment or an email. If they cannot be emailed, they may also be sent, in hard copy, to: Colorado Department of Health Care Policy and Financing, Attention: ACC Team, 1570 Grant St., Denver, CO 80203. Following receipt of your response, you should receive a confirmation email within three (3) business days.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Averil Strand
Location: Fort Collins, CO

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Larimer Co. Dept. of Health and Environment
Location: Fort Collins, CO
X Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☐ Medical provider / PCMP / other provider
   i. Type or specialty: Click here to enter text.
   ii. Area of practice: Click here to enter text.
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
X☐ Other (please describe): Public Health Dept

Are you currently involved in the ACC program?

X Yes
☐ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
X 3-4 years
☐ Since before the program was implemented.

How have you been involved in the ACC program and what interaction have you had with RCCOs:
We have had meetings with the two RCCOs in our area to coordinate services. I also participate in the Region 2 Hot Spotter calls.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:
We provide immunization and family planning services for clients on Medicaid. We have the Healthy Communities office in our department.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
X Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

Although we tried in the beginning to be included in providing services, the RCCO decided to hire their own staff to perform care coordination services. They refer to us for things like care coordination for children with special health care needs but do not contract for these services.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

The care coordinators are helping to reduce costs and improving the quality of life of individuals by working with very high risk, high cost patients within the community. This often includes those with multiple emergency room visits and mental health and substance abuse concerns.

2) What is not working well in the ACC Program?

Larimer County is in region 1 but because of the FQHC in Loveland being part of Sunrise, we have region 2 involvement as well. The region designation does not make sense for this Front Range community to be linked to the western slope. Initially it was difficult for new staff to know what already existed within a community so that multiple entities might be involved in care coordination. It also seems unfortunate that the health department gets referrals but no income when we do care coordination. As the services broaden into more women and children's issues, I hope that the ACC will keep in mind that the health department is available to provide Reproductive Health Services, Care Coordination for Children with Special Health Care needs, WIC Services, Immunization services, TB management, etc.

3) What is working best in the Behavioral Health Organization (BHO) system right now?

With the Affordable Care Act in place they are better able to hire additional staff to meet the needs of populations that heretofore were locked out of care.

4) What is not working well in the BHO system?

Screening, referral and treatment services are often not initiated early.

5) What is working well with RCCO and BHO collaboration right now?

Medicaid is helping to cover costs so that more people in need can be served. They are treating people with duel diagnoses.

6) What is not working well with RCCO and BHO collaboration right now?

The support services needed within the community (housing, transportation, etc.) are limited which makes it more difficult to stabilize at risk clients.

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

Helping to find more support options to stabilize living conditions of the at risk populations.

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services**. Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	X	☐	We have no detox center and no funding source to create one. We have inadequate in-patient beds.
Community Behavioral Health Services Rule	☐	☐	
Covered diagnoses list	☐	☐	
Different behavioral / physical health reimbursement	☐	☐	
Institutions for Mental Diseases exclusion	☐	☐	
OBH rules, reporting, or financing (regulatory differences between agencies)	☐	☐	
PCMP financing structure	☐	☐	
Per-member per-month amount	☐	☐	
Physical space constraints	X	☐	
Privacy Laws (HIPAA, 42 CFR)	☐	☐	
Professional / cultural divisions	☐	☐	
RCCO or BHO contracts	☐	☐	
Staff capacity	X	☐	They are hiring – this will help
State/Federal rules or reporting requirements	☐	☐	
Technical resources / data sharing	☐	☐	
Training	☐	☐	
Others	Please type your response here.		

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

Individuals would need to have services available for screening for behavioral health issues and support for their providers to offer resources at the site where they are getting their physical care.

10) Please share any other general advice or suggestions you may have about behavioral health integration.

It is important to get medical providers to have consistent evidence based tools that they use for early identification and referral for services. Although it would be ideal to have behavioral health services always available in general medical offices so that there is not a referral process this is not realistic in small practices. I believe that medical providers need better accessibility to behavioral health specialists and psychiatrists while a patient is in their offices so that some services don't have to be referred out.

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination?

Care coordination involves deliberately organizing patient care activities and sharing information among all of the participants concerned with a patient's care to achieve safer and more effective care. This means that the patient's needs and preferences are known ahead of time and communicated at the right time to the right people, and that this information is used to provide safe, appropriate, and effective care to the patient. Developing relationships with clients and working with them to improve their health by putting supports into place to keep them from needing crisis intervention and prevent exacerbation of disease processes is essential. Care Coordinators need to assure that patients are getting the services needed through a medical home approach.

b. How should RCCOs prioritize who receives care coordination first?

Right now, I think they have focused on high cost clients. This has sorted itself out to mean a lot of low income, high needs people often with drug, alcohol abuse and mental health issues with poor living conditions.

c. How should RCCOs identify clients and families who need care coordination?

By working with Medical Home Providers. By looking at the medical history and cost centers.

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

They could report on who is doing the care coordination the RCCO care coordinator or someone else.

12) What services should be coordinated and are there services that should not be a part of care coordination?

I think that the care coordinators need to think broadly about their clients and coordinate with the services available in their individual communities. So for example if they have a pregnant, drug abusing client, it would be good to get that client into a community program to try to improve the outcome for the baby- these programs may be available through health departments or BHO's. If they have a family situation where there are many children, it would be good for them to think of the family planning needs of the parents so that they can limit the size of their family if they are struggling. If there is a communicable disease involved they need to know what are reportable diseases and involve health departments in those early.

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

What is their health status. Do they have potential for improvement. What are their living conditions and supports.

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

    a. What care coordination is going on today?

Referrals into community and medical services.

    b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

The Health Care Program for Children with Special Needs works in an advocacy position to get the services in place, even if it costs more to meet the client's needs. Often these children will have a lifetime of expenses and clinical services and the families are helped to know how to work with the systems and community organizations to best meet their children's needs to reach their maximum potential in life. Often Health Departments will work with undocumented families who will not initially show up in the RCCO system. For example a woman may not receive Medicaid supported prenatal care, get emergency Medicaid for the delivery but the child is then a citizen. The preventive care needed during the pregnancy is important for the outcome at delivery. The NFP and Prenatal Plus programs are coordinated out of the Health Department. Some private providers feel that they are providing their own care coordination. Healthy Communities helps to work out Medicaid eligibility problems and people who are inadvertently dropped or denied Medicaid services – then they can link them to a medical provider for their care.

    c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

By being sure that their new coordinators get an adequate orientation to the community.

    d. What are the gaps in care coordination across the continuum of care?

Gaps exist when the needed services are not available – for example meeting the needs of the homeless population. Care coordination is focused on high cost users – there probably will never be enough care coordinators to help people navigate unfamiliar systems. When people are moved onto and off of Medicaid and CHP+, care coordination is not on a continuum.

15) **RCCOs' roles in addressing clients' and their families' non-medical needs**. Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	Should the RCCO have a role? Yes	No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma	X	☐	X	They should be mandatory reporters for abuse and neglect.
Affordability (assistance with prescriptions or co-pays)	X	☐	X	The Health District of Northern Colorado has a good prescription assistance service in place. The RCCOs could assist when non-generic drugs should be used – this often happens with mental health diagnoses.
Daycare / childcare	X	☐	X	
Economic stability & employment	X	☐	X	
Education	X	☐	X	Health Education and coordinating with existing programs
Environment	X	☐	X	
Food access / nutrition	X	☐	X	
Health literacy	X	☐	X	
Housing	X	☐	X	
Language or translation services	X	☐	X	
Literacy	☐	☐	☐	
Transportation	X	☐	X	
Other	Please type your response here. Feel free to list as many non-medical factors as you want, and please explain how the RCCO should be involved.			

16) **Requirements about who should be doing care coordination**. Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	Coordinate care? Yes	No	In what capacity should these individuals coordinate care in the ACC Program?
Advanced Practice (Registered) Nurses	x	☐	For those needing a more advanced knowledge in providing complicated care.
Certified Addiction Councilors	X	☐	For those who are struggling with addition.
Certified Nurse Midwives	☐	X	I think this would be a duplication of available services
Community Health Workers	X	☐	For lesser diagnosis or specific subject areas these individuals can be less expensive and still be effective.
Generalists (BA/BS/MA/MS)	☐	X	
Health Coaches	X	☐	Potentially could help with group education
Licensed Clinical Social Workers	X	☐	To coordinated Social Service needs.
Licensed Marriage and Family Therapist	☐	x	
Licensed Mental Health Counselors	/x	☐	They need to be able to identify and refer.
Licensed Professional Counselor	☐	X	I don't know what kind of counseling is in their background
Masters of Public Health	X	☐	Community Development around Health issues.
Medical Doctors / Doctors of Osteopathic Medicine	☐	X	These individuals are more trained in direct care and not so much in care coordination.
Nurse Practitioners	X	☐	For those needing a more advanced knowledge in complicated care. However, if there emphasis is on providing clinical services it is probably not a good fit.
Patient Navigators	X	☐	A lot of clients have no idea how to navigate systems and these people can help.
Peer Advocates	☐	☐	Unsure
Promotoras	X	☐	For lesser diagnosis or specific subject areas these individuals can be less expensive and still be effective.
Psychiatrists	☐	x	These individuals are more trained in direct care and not so much in care coordination.
Psychologists	x	☐	As long as it is not duplicating existing services

Registered Nurses	X	☐	These people have a good concept of cross cutting health issues.
Social Workers	X	☐	Often these individuals are good at accessing resources.
Wraparound facilitators	☐	☐	Unsure
Other	Please type your response here.		

17) **Care coordination requirements for specific populations**. Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and infants	☐	X	We provide post partum home visitation to all women who deliver on Medicaid. Not all county's are able to do this. These families need knowledge and linkages when they come home from the hospital regarding safety issues like safe sleep environments for their babies, breastfeeding, jaundice, etc.
Children	☐	X	
Children who are healthy, but in socially-complex environments	☐	X	
Children involved in the foster care system	☐	X	They should receive services through Human Services. Foster families do need access to health histories so that adequate preventive as well as restorative and mental health services can be provided.
Children with a chronic illness	X	☐	Some children with chronic illnesses can better adapt with direct care coordination. Examples would include children with Asthma or diabetes.
Children with a serious emotional disturbance	X	☐	These children do not always fit with the requirements or focus of providing agencies.
Children with medical complexity	☐	X	
Children or youth with a behavioral health diagnosis or substance use disorder	☐	X	
Transition-age adolescents	☐	X	
Parents and families	☐	X	
Pregnant women	☐	X	
Adults	☐	x	
Adults who are healthy, but in socially-complex situations	☐	x	
Adults with a chronic illness	x	☐	This may require some specific intervention to get them on the right track with follow up for compliance.
Adults with a behavioral health diagnosis or substance use disorder	X	☐	These individuals need monitoring to help them stay on track.
Clients involved in the criminal justice system	☐	X	

Clients with a disability	X	☐	This need would be appropriate with some disabilities.
Clients in a nursing facility	☐	X	
Elderly clients	☐	X	
Frail elderly clients	☐	X	
Clients in palliative care	☐	X	
Other populations, please comment:			

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

They should coordinate with the Health Care program for Children with Special Needs. They should help to assure that these children have access to preventive services not just disease or disability related services. They should help to assure that information is available for children in the foster care system to help with continuity. They may need to be linked into accessing more trauma related services for those in foster care. Kinship care is important to relate to – not just foster care.

19) How should care coordination be evaluated? How should its outcomes be measured?

Health improvement and cost.

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

a. What is the PMPM cost for providing care coordination services?

b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

Yes – there are some very complex patients who are not easily motivated and changed who require a lot more time and effort.

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

I don't know what is reasonable but I think a client ratio should be adequate to assure that people actually get services.

a. **Care coordinator to client ratios**. If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☐
51-100	☐
101-200	☐
201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

That they have the capacity to know and/or learn the community resources and needs.

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

In Larimer County it is difficult to have two RCCO's in the same county.

27) Should the RCCO region maps change? Why or why not? If so, how?

Yes. Larimer County should be included with Front Range communities.

28) Should the BHO region maps change? Why or why not? If so, how?

I don't know.

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

Even though some improvements have been made, churn is a problem when people go onto and off of Medicaid and other insurance products.

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

We already have that in Larimer and it is confusing.

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

34) What role should RCCOs play in attributing clients to their respective PCMPs?

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

There should be agreements in place to refer clients for immunizations to local departments when their provider does not carry vaccine. There should be knowledge of communicable disease reporting requirements and responsibilities. There should be knowledge of and referral to locally based Programs like Nurse Family Partnership, Prenatal Plus, Family Planning, Sexually transmitted disease services, tuberculosis, WIC, Healthy Communities.

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

See 35. NFP and Healthy Communities contracts are no longer with CDPHE

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

They have to work with clients, families and advocates if they expect changes in behavior.

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

RCCOs should have open accessible meetings quarterly to keep updated on changes and should meet with major stakeholders individually to work out systems.

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

Contracting should take place with organizations when appropriate.

42) How should the Department structure stakeholder engagement for the ACC as a whole?

They should provide a website, community meetings and an open opportunity for input.

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

Somewhat – they are not focusing on the entire eligible population.

a. If no, what are the gaps?

We do not have adequate detox or mental health in-patient beds or alcohol and drug abuse treatment centers. I don't know how the ACC deals with this but it is a gap.

b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

ACC's are often focused on cost containment. Health Department programs are focused on accessing needed services for enhancing lives and reaching maximum potential. These can sometimes be at cross purposes.

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

a. What role should hospitals play in the next iteration of the ACC Program?

They should not be in control of the system by having the care coordinators work out of their facilities. This is especially true when multiple hospital systems are in the same community.

b. What role should pharmacies play in the next iteration of the ACC Program?

With adequate oversight, they can be very beneficial in medication management. If they are to be involved with immunizations, it is important to make sure that they have adequately monitored refrigeration.

c. What role should specialists play in the next iteration of the ACC Program?

Consultation

d. What role should home health play in the next iteration of the ACC Program?

Referral for care.

e. What role should hospice care play in the next iteration of the ACC Program?

Referral for care

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

Unsure

g. What role should counties play in the next iteration of the ACC Program?

They should have a knowledge of the costs and savings provided.

h. What role should local public health agencies play in the next iteration of the ACC Program?

There should be coordination, referral and perhaps contracting with these agencies.

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

There are agencies that provide services for high risk youth – referred out of drug court, etc. who do not receive paid services. I think coordination could improve with places like "The Center for Family Outreach" in Larimer County.

45) How can RCCOs help to support clients and families in making and keeping appointments?

Help solve transportation issues, do reminder calls, link to community health workers.

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

Potentially.

47) **Community Health Worker reimbursement**. Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement process	(Please check all that apply)
Independently bill	☐
On staff (salary) at Primary Care Medical Provider Clinic	This could be on staff with a community organization like the Health Department paid through a RCCO contract
On staff (salary) at RCCO	X
Per Member Per Month Payment	☐

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

Assessing that the providers actually routinely take Medicaid – not just one or two who had previously been their patient.

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you?

The ability to interact effectively with people of different cultures, disabilities and socio-economic backgrounds.

b. What RCCO requirements would ensure cultural competency?

Staff should be interviewed when being hired regarding their cultural competency. Training should be provided.

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?

They need to listen to what is meaningful and needed by the participants and use their goals in determining ways of accomplishing improved health. They should not use acronyms and should focus at no higher than a 6th grade level in communications. They should have written materials in other languages than English.

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

The use of language lines, people from targeted cultures and communities. They should test their written materials for reading level.

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

Yes

51) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

Assure that adequate services outside of the ER are available and communicate how to use them. For populations who have only had access through ER's it may take some education with those departments to redirect people when they are not in crises.

52) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

Practice Support

53) **Support for practices**. Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☐	☐	☐	☐
Network provider education	☐	☐	☐	☐
Assistance with practice redesign	☐	☐	☐	☐
Assistance with efficiency-enhancing activities	☐	☐	☐	☐
Provide web-based resources and directories	☐	☐	☐	☐
Provide practice-specific data reports	☐	☐	☐	☐
Provide clinical care guidelines and best practices.	☐	☐	☐	☐
Provide clinical screening tools	☐	☐	☐	☐
Provide health and functioning questionnaires	☐	☐	☐	☐
Provide chronic care templates	☐	☐	☐	☐
Provide registries	☐	☐	☐	☐
Offer client reminders	☐	☐	☐	☐
Offer client self-management tools	☐	☐	☐	☐
Offer educational materials about specific conditions	☐	☐	☐	☐
Supply behavioral health surveys	☐	☐	☐	☐
Supply other self-screening tools	☐	☐	☐	☐
Administer behavioral health surveys	☐	☐	☐	☐
Administer other self-screening tools	☐	☐	☐	☐
Prepare client action plans	☐	☐	☐	☐
Provide training on providing culturally-competent care	☐	☐	☐	☐
Provide training to supporting staff	☐	☐	☐	☐
Provide training on motivational interviewing	☐	☐	☐	☐
Provide tools and software for phone call and appointment tracking	☐	☐	☐	☐
Provide tools and resources for tracking labs, referrals, etc.	☐	☐	☐	☐
Provide referral and transitions of care checklists	☐	☐	☐	☐
Provide visit agendas or templates	☐	☐	☐	☐
Provide standing pharmacy order templates	☐	☐	☐	☐
Provide comprehensive directory of community resources	☐	☐	☐	☐
Provide directory of other resources	☐	☐	☐	☐
Provide materials regarding Nurse Advice Line	☐	☐	☐	☐
Ensure all tools and resources are centrally located on RCCO-specific website	☐	☐	☐	☐
Others				

54) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

55) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

56) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

57) Should the Department require that PCMPs utilize disease registries to manage the health of their population?

58) Please share any other advice or suggestions about provider support in the ACC.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

62) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

63) What role – if any – should the RCCOs play in the distribution of payments to providers?

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

66) **Measuring Client experience**. Please complete the table below to indicate how the Department should measure Client/patient experience:

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☐	☐	
SF-12 Health Survey	☐	☐	
Other types of client interviews / surveys	☐	☐	
Patient Activation Measure	☐	☐	
Focus groups	☐	☐	
Other	Please type your response here.		

67) Knowing that, at this time, the Department only has claims data, how should population health be measured?

68) How should quality and performance data be reported to the RCCOs, PCMPs, and the public?

69) **Measures for payment**. Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☐
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

70) What percent of RCCO payments should be tied to measures or performance?

Percentage	
10-20%	☐
21-30%	☐
31-40%	☐
41-50%	☐
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

71) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?

72) Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?

73) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

74) **Incentive payment frequency**. Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	☐
Annually	☐
Other	☐

If you checked the "Other" box, please describe payment frequency below:

75) For potential offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

76) For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

Health Information Technology (HIT)

77) **Types of communication**. For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	☐
Text message	☐	☐
Web portal	☐	☐
Email	☐	☐
Telemedicine / Video chat	☐	☐
Face-to-face meeting	☐	☐
Smartphone app	☐	☐
Other:		

78) **HIT investments by organizations.** For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below:

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	☐	☐
Digital care management tool	☐	☐
Care transitions alerts	☐	☐
Electronic Health Records (EHRs)	☐	☐
Health risk assessment software	☐	☐
Practice assessment tools	☐	☐
Practice management tools (scheduling, billing)	☐	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☐
Patient education/wellness tools	☐	☐
Provider/case manager directory	☐	☐
Shared decision-making tools	☐	☐
Telemedicine software	☐	☐
Other:	☐	☐
Other:	☐	☐

79) **Importance of technology by type**. The Department is working to determine what technology is in place, what technology is needed, and what technology should be standardized. For RCCOs, providers, and other organizations, use the table below to answer what HIT infrastructure outside of the SDAC your organization would use to perform population health management activities. Tools are scored from 1-5, where 1 are those items least-likely to be used, and 5 are items most-likely to be used:

Tool	1 Least	2	3	4	5 Most
Population analytics / reporting / dashboard	☐	☐	☐	☐	☐
Care management tool	☐	☐	☐	☐	☐
Care transitions alerts	☐	☐	☐	☐	☐
Electronic Health Records (EHRs)	☐	☐	☐	☐	☐
Practice assessment tools	☐	☐	☐	☐	☐
Health risk assessment software	☐	☐	☐	☐	☐
Practice management tools (scheduling, billing)	☐	☐	☐	☐	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☐	☐	☐	☐
Patient education wellness tools	☐	☐	☐	☐	☐
Provider/case manager directory	☐	☐	☐	☐	☐
Shared decision-making tools	☐	☐	☐	☐	☐
Telemedicine	☐	☐	☐	☐	☐
Other:	☐	☐	☐	☐	☐

80) What are the primary barriers to RCCOs and providers increasing their use Health Information Technology to improve the performance of Primary Care Practices?

81) How can Health Information Technology support Behavioral Health Integration?

82) In the next iteration of the ACC, should there be a shared resource for data and analytics? Please describe the basic criteria for what a shared data and analytics platform needs to contain in order for it to be useful.

83) Should there be a shared care management tool? Please describe the basic criteria for what a care management tool would need to contain in order for it to be useful.

84) Should there be a shared population health management tool? Please describe the basic criteria for what a population health management tool would need to contain in order for it to be useful.

85) Please describe the functionality that a common Medicaid provider directory would need to contain in order for it to be useful.

86) How can the RCCOs support providers' access to actionable and timely clinical data?

87) What are the HIT solutions that would benefit clients, providers, and RCCOs? Please comment on the parameters these tools or platforms would need to possess and the ways in which they could be used.

88) What technical assistance or resources related to HIT infrastructure should the RCCOs supply? This assistance or these resources could be for providers, social service organization, clients/families, or for others.

89) What role should health information exchange platforms like CORHIO or QHN play in the next iteration of the ACC?

90) Please share any information, advice, and suggestions you have about health information technology in the ACC Program.

Appendix: Definitions and Acronyms

The following words have been defined for the purpose of this RFI.

42 CFR is a federal regulation outlining when information about someone's Substance Use Disorder (SUD) treatment may be disclosed with or without his or her consent.

Accountable Care Collaborative (ACC) Program is Colorado Medicaid's program designed to affordably optimize Client health, functioning, self-sufficiency, and well-being. The primary goals of the ACC Program are to improve Medicaid Client health outcomes and to control costs.

Attribution is the process of connecting Clients to primary care medical providers in the ACC Program.

Behavioral Health Organizations (BHOs) are the five regional entities responsible for arranging mental health and substance use disorder services for Colorado Medicaid Clients. Almost all Medicaid clients are enrolled in a BHO when they receive Medicaid. The BHOs get a set amount of money to manage the care for Medicaid clients. The BHOs reimburse their network of providers for delivering services to those clients.

Behavioral Health Integration is the process of delivering behavioral and physical health care together. When a Client is a partner in integrated care, he or she (along with his or her family or other support structure) has access to broader, more comprehensive care.

Care Coordinator is someone responsible for the coordination of a person's medical and non-medical care. In the ACC, care coordinators may either work for RCCOs or at primary care clinics.

Client is a person who is enrolled in the Colorado Medicaid program.

Clinical Quality Measures are used to assess the performance of individual clinicians, RCCOs, providers, or programs. Measures are often backed by evidence to support their association with improved health outcomes.

Colorado Regional Health Information Organization (CORHIO) is a non-profit organization in Colorado that serves the health care industry with health information technology functionality. It is a Health Information Exchange (HIE) which helps to securely transmit all kinds of health care data between providers, hospitals, pharmacies, and other entities.

Community Behavioral Health Services Rule is the name of the state's regulation which governs community mental health services. It defines the populations which are, and are not, eligible to receive services, the service types which are covered, and the structure through which payments are made. It is found in the Colorado Code of Regulations, 8.212.

Community Centered Boards (CCBs) are Colorado's 20 private, non-profit organizations that serve as single entry points into the long-term service and support system for persons with developmental disabilities. Community Centered Boards may also provide services.

Community Health Workers (CHW) are non-traditional, lay health workers who provide coordination or education, assist people in managing their health, or help people to navigate the health care system in their community.

Community Mental Health Center (CMHC) is an entity that provides behavioral health services for Medicaid clients. In Colorado, In Colorado, CMHCs are generally paid by the Behavioral Health Organizations, essentially on a per-capita basis, rather than reimbursement for each service rendered.

Covered diagnoses list is a list of roughly 350 behavioral health diagnoses. Any client may be assessed by a BHO provider, regardless of diagnosis, but in order to have ongoing services paid by the BHOs, clients must have a covered diagnosis.

Department of Health Care Policy and Financing (the Department) is the state agency that administers the Medicaid and Child Health Plan *Plus* programs as well as a variety of other programs for Colorado's low-income families, the elderly, and people with disabilities. Our mission is to improve health care access and outcomes for the people we serve while demonstrating sound stewardship of financial resources. This means that we work to make our clients healthier while getting the most for every dollar that is spent.

Fee-For-Service (FFS) is a way of paying for services where providers are reimbursed a set amount for each service they provide such as an office visit, test, procedure, or other health care service.

Health Insurance Portability and Accountability Act (**HIPAA)** is a federal law designed to provide privacy and security standards to protect patients' medical records and other health information. These standards provide patients with access to their medical records and more control over how their personal health information is used and disclosed.

Health Information Exchange (HIE) is an electronic system capable of sharing secure health care records and information between different providers or other entities in the health care system.

Health Information Technology (HIT) is any computerized system for health care data or records.

Health literacy is a term used to describe how comfortable and capable a person is obtaining, understanding, and using health care information to make decisions about his or her health.

Institutions for Mental Diseases (IMD) exclusion is a federal regulation that prohibits Federal Medicaid payments for clients aged 21-64, receiving care in institutions with more than 16 beds, when more than half of the people being served have a serious mental illness or substance use disorder.

Key Performance Indicators (KPIs) are utilization and quality measures which are tied to payment in the ACC Program. KPIs are used to incentivize RCCOs and providers.

Medical Home is the focal point of care for a client. Medical Homes provide coordinated and comprehensive primary care services. Throughout the RFI, the term "Medical Home" is used in a general sense. It does not refer to a specific model or licensure requirement. However, there are some common qualities that Medical Homes should have. These include: improved Client access to care that is coordinated, integrated, whole-person/family-oriented, culturally competent, and outcomes-focused.

Member is any Medicaid Client who is enrolled in the ACC Program.

Office of Behavioral Health (OBH) is a state office which is part of the Department of Human Services. OBH is tasked with monitoring, evaluation, and oversight of Colorado's public behavioral health system.

Payment Reform is the term used to describe the process of moving away from paying for volume and towards paying for value in the health care system.

Per-Member Per-Month (PMPM) is a per-person payment method that makes a fixed payment per enrollee each month, regardless of actual number or nature of services provided.

Practice Support is the process of supporting a provider in the transition towards becoming a more effective Medical Home.

Primary Care Medical Provider (PCMP) is a primary care provider contracted with the ACC Program. These providers may be FQHCs, RHCs, clinics, or other practices that provide the majority of a Member's comprehensive primary, preventive, and sick care. PCMPs are reimbursed fee-for-service, but they also receive a per-member per-month payment and can receive KPI incentive payments.

Quality Health Network (QHN) is a Colorado-based nonprofit operating in the field of health information technology. QHN operates a health information exchange platform which serves people living in Western Colorado.

Regional Care Collaborative Organizations (RCCOs) are the regionally-based entities responsible for ensuring care coordination, achieving improved health outcomes and improved well-being for their clients, and ensuring cost savings for the ACC Program. RCCOs leverage local infrastructure, relationships, and community resources to ensure clients receive the right care, at the right time, in the right setting. RCCOs are paid by the State on the basis of a per-member per-month payment which covers all of their responsibilities.

Single Entry Points (SEPs) are usually county agencies which provide case management, referrals, and care planning to Clients receiving Long Term Services and Supports.

Statewide Data and Analytics Contractor (SDAC) is the entity with which the Department contracts to provide data aggregation, analysis, and distribution in support of the ACC Program.

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Irene Aguilar
Location: Denver County, SD 32

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Click here to enter text.
Location: City, County, State.
☐ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☐ Medical provider / PCMP / other provider
  i. Type or specialty: Click here to enter text.
  ii. Area of practice: Click here to enter text.
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☒ Legislator or elected official
☐ Other (please describe): Click here to enter text.

Are you currently involved in the ACC program?

☐ Yes
☐ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☐ 3-4 years
☐ Since before the program was implemented.

How have you been involved in the ACC program and what interaction have you had with RCCOs:
Click here to enter text.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:
Click here to enter text.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

Please feel welcome to describe why or why not using the space below.

General Questions

- I think the ACC and BHO areas should be one and the same. They should be required to work together;
- Consideration should be made of making these areas the same as the insurance geographic rating areas.
- I am concerned about having DHHA both in and outside of the RCCO (managed care and RCCO). Seems to add a layer of confusion and complexity.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Bebe Kleinman
Location: Littleton, Colorado

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Doctors Care
Location: Littleton, Colorado
☒ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☒ Medical provider / PCMP / other provider
  i. Type or specialty: Click here to enter text.
  ii. Area of practice: family practice
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☐ Other (please describe): Click here to enter text.

Are you currently involved in the ACC program?

☒ Yes
☐ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☒ 3-4 years
☐ Since before the program was implemented.

How have you been involved in the ACC program and what interaction have you had with RCCOs:
We are a pcmp and have a staff member on the RCCO committee

Please briefly describe your involvement with Medicaid, either in Colorado or another state:
90% of our patients are insured by Medicaid

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☒ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

Please feel welcome to describe why or why not using the space below.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

Active participation by Medicaid and community

2) What is not working well in the ACC Program?

Not enough access to many physician types or specialty care

3) What is working best in the Behavioral Health Organization (BHO) system right now?

4) What is not working well in the BHO system?

We need to credential more providers more quickly, especially Spanish speaking.

5) What is working well with RCCO and BHO collaboration right now?

They are talking to each other

6) What is not working well with RCCO and BHO collaboration right now?

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

We need to open up a code for navigation as this would help link the needs of the physical, mental, and social needs of our patients.

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☐	☐	
Community Behavioral Health Services Rule	☐	☐	
Covered diagnoses list	☐	☐	
Different behavioral / physical health reimbursement	☒	☐	Reimbursements don't motivate private providers to take MC patients.
Institutions for Mental Diseases exclusion	☐	☐	
OBH rules, reporting, or financing (regulatory differences between agencies)	☐	☐	
PCMP financing structure	☒	☐	We need access, even phone access to psychiatrists. The CPACK pilot is wonderful. This needs to be expanded to patients through the age of 30.
Per-member per-month amount	☐	☐	
Physical space constraints	☐	☐	
Privacy Laws (HIPAA, 42 CFR)	☐	☐	
Professional / cultural divisions	☒	☐	We need more Spanish speaking staff
RCCO or BHO contracts	☐	☐	
Staff capacity	☒	☐	Improve reimbursements and more providers will join the network.
State/Federal rules or reporting requirements	☐	☐	
Technical resources / data sharing	☐	☐	
Training	☐	☐	

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

Others	Please type your response here.

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

The BH therapist works directly with the medical providers within the clinical setting.

10) Please share any other general advice or suggestions you may have about behavioral health integration.

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination?

Follow up with high utilizers

b. How should RCCOs prioritize who receives care coordination first?

High utilizers is a good place to start but it does not focus enough on meeting the patients psycho social needs which may cause the patient to use health care in a certain way.

c. How should RCCOs identify clients and families who need care coordination?

Unless the clinics are reimbursed to provide wrap around services for patients it is difficult to ask the clinics to identify even more patients that need the services.

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

12) What services should be coordinated and are there services that should not be a part of care coordination?

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

We need to ask the patient what they believe are the biggest challenges they face that seem to be contributing to their high utilization of ER's, imaging, etc.

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today?

Absolutely this is happening. Maybe care coordination needs to be identified in the medical record and then this information would be shared through the HIE so hospital, mental health, pcmp offices will know what else is being provided elsewhere.

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

So much is happening outside the RCCO. As a safetynet provider we are looking at food, housing, managing the bills that pile up and overwhelm people. We are looking at family stress, job stress, and literacy challenges. These all impact the health and health access of the patient.

c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

Insure that messaging to the patients and the providers are transparent and easy to read and follow. It is shocking to see some of the letters sent to patients that are written in a way that is so confusing. Send clear messages and then let the providers know what you are telling the patients.

d. What are the gaps in care coordination across the continuum of care?

Often there is very little link between the 'medical care coordination' mandated by the ACO and the 'social' navigation work that is being done.

15) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	Should the RCCO have a role? Yes	No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma	☒	☐	☒	
Affordability (assistance with prescriptions or co-pays)	☒	☐	☒	
Daycare / childcare	☒	☐	☒	
Economic stability & employment	☒	☐	☒	
Education	☒	☐	☒	
Environment	☒	☐	☒	
Food access / nutrition	☒	☐	☒	
Health literacy	☒	☐	☒	
Housing	☒	☐	☒	
Language or translation services	☒	☐	☒	
Literacy	☒	☐	☒	
Transportation	☒	☐	☒	

Other	Please type your response here. Feel free to list as many non-medical factors as you want, and please explain how the RCCO should be involved.

16) **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	Coordinate care? Yes	No	In what capacity should these individuals coordinate care in the ACC Program?
Advanced Practice (Registered) Nurses	☐	☒	To be financial efficient, everyone should work at the top of their license but they need to have access to these services, and it is helpful when it can be in the clinical setting
Certified Addiction Councilors	☐	☒	To be financial efficient, everyone should work at the top of their license but they need to have access to these services, and it is helpful when it can be in the clinical setting
Certified Nurse Midwives	☐	☒	To be financial efficient, everyone should work at the top of their license but they need to have access to these services, and it is helpful when it can be in the clinical setting
Community Health Workers	☒	☐	
Generalists (BA/BS/MA/MS)	☒	☐	
Health Coaches	☒	☐	
Licensed Clinical Social Workers	☐	☒	To be financial efficient, everyone should work at the top of their license but they need to have access to these services, and it is helpful when it can be in the clinical setting
Licensed Marriage and Family Therapist	☐	☒	To be financial efficient, everyone should work at the top of their license but they need to have access to these services, and it is helpful when it can be in the clinical setting
Licensed Mental Health Counselors	☐	☒	To be financial efficient, everyone should work at the top of their license but they need to have access to these services, and it is helpful when it can be in the clinical setting
Licensed Professional Counselor	☐	☒	To be financial efficient, everyone should work at the top of their license but they need to have access to these services, and it is helpful when it can be in the clinical setting

Masters of Public Health	☒	☐	
Medical Doctors / Doctors of Osteopathic Medicine	☐	☒	To be financial efficient, everyone should work at the top of their license but they need to have access to these services, and it is helpful when it can be in the clinical setting
Nurse Practitioners	☐	☒	To be financial efficient, everyone should work at the top of their license but they need to have access to these services, and it is helpful when it can be in the clinical setting
Patient Navigators	☒	☐	
Peer Advocates	☒	☐	
Promotoras	☒	☐	
Psychiatrists	☐	☒	To be financial efficient, everyone should work at the top of their license but they need to have access to these services, and it is helpful when it can be in the clinical setting
Psychologists	☐	☐	To be financial efficient, everyone should work at the top of their license but they need to have access to these services, and it is helpful when it can be in the clinical setting
Registered Nurses	☐	☐	To be financial efficient, everyone should work at the top of their license but they need to have access to these services, and it is helpful when it can be in the clinical setting
Social Workers	☒	☐	
Wraparound facilitators	☒	☐	
Other	Please type your response here.		

17) **Care coordination requirements for specific populations.** Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and infants	☐	☐	The care coordinators need to be skilled in transferring to other services quickly and efficiently. I would say this for every specific group. They need to be generalists.
Children	☐	☐	
Children who are healthy, but in socially-complex environments	☐	☐	
Children involved in the foster care system	☐	☐	
Children with a chronic illness	☐	☐	
Children with a serious emotional disturbance	☐	☐	
Children with medical complexity	☐	☐	
Children or youth with a behavioral health diagnosis or substance use disorder	☐	☐	
Transition-age adolescents	☐	☐	
Parents and families	☐	☐	
Pregnant women	☐	☐	
Adults	☐	☐	
Adults who are healthy, but in socially-complex situations	☐	☐	
Adults with a chronic illness	☐	☐	
Adults with a behavioral health diagnosis or substance use disorder	☐	☐	
Clients involved in the criminal justice system	☐	☐	
Clients with a disability	☐	☐	
Clients in a nursing facility	☐	☐	
Elderly clients	☐	☐	
Frail elderly clients	☐	☐	
Clients in palliative care	☐	☐	
Other populations, please comment:			

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

Foster children need flexibility so they can be placed in the most appropriate home, not limited by the boundaries of the RCCO or the county. It is very frustrating when a child that comes out of Denver is placed in another county and then the Foster Parent can't take the child to their local provider. It is not good for the child nor the foster parents.

19) How should care coordination be evaluated? How should its outcomes be measured?

Let's ask the patient if they are better off today then they were before they met with care coordinators.

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

a. What is the PMPM cost for providing care coordination services?

This PMPM does not cover the cost of navigation support which we define as non medical in nature.

b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

Each person's needs is so individualized that it would be difficult to place a price tag on different populations. A 20 year old male may have as many needs as a 55 year cancer patient, or an 8 year old with ADHD. It is not the disease or condition that defines the individual.

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

I just don't have an answer for this.

a. **Care coordinator to client ratios.** If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☐
51-100	☐
101-200	☐
201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

All these are good

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

Relationships and strong connections are valuable. Most RCCOs can be active participants in their local health alliances.

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

This may help us avoid the current challenge many of us face that Denver Health automatically enrolls everyone from Denver. This is not best for the patients.

27) Should the RCCO region maps change? Why or why not? If so, how?

Maps should all align as much as possible. Physical, behavioral, dental.

28) Should the BHO region maps change? Why or why not? If so, how?

Maps should all align as much as possible Physical, behavioral, dental.

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

34) What role should RCCOs play in attributing clients to their respective PCMPs?

Give all practices an incentive to help patients enroll.

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

The lack of cooperation during the first year of enrollment was obvious and made the work to gain coverage a challenge. We are all hoping that these two entities do a better job working together during this next open enrollment period.

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

Yes we must hear from the patients in some meaningful way.

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

Yes we must hear from the patients in some meaningful way.

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

Work closely with the health alliances in each community and the safetynet.

42) How should the Department structure stakeholder engagement for the ACC as a whole?

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

a. If no, what are the gaps?

Specialty care is a very real challenge. Medicaid must figure out how to rebrand. Reduce the paperwork. If this survey is any example, community feedback will be very limited. Instead of focusing your questions on what you need to know, you ask the same questions over and over and alienate the same folks you need advice from. This survey illustrates how out of touch you are from the real world.

b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

a. What role should hospitals play in the next iteration of the ACC Program?

b. What role should pharmacies play in the next iteration of the ACC Program?

c. What role should specialists play in the next iteration of the ACC Program?

d. What role should home health play in the next iteration of the ACC Program?

e. What role should hospice care play in the next iteration of the ACC Program?

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

g. What role should counties play in the next iteration of the ACC Program?

h. What role should local public health agencies play in the next iteration of the ACC Program?

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

45) How can RCCOs help to support clients and families in making and keeping appointments?

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

This could be really wonderful.

47) **Community Health Worker reimbursement**. Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement process	(Please check all that apply)
Independently bill	☒
On staff (salary) at Primary Care Medical Provider Clinic	☒
On staff (salary) at RCCO	☐
Per Member Per Month Payment	☒

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

This is a major crisis. The network cannot support all the newly insured. Help the safetynet expand. These are the low hanging fruit. Asking private dentists to take on 5 more MC patients will not meet the needs.

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you?

b. What RCCO requirements would ensure cultural competency?

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

51) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

We need to look upstream to figure out what is causing this increase in ER utilization. No one is doing this.

52) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

Practice Support

53) **Support for practices.** Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☐	☒	☐	☐
Network provider education	☐	☒	☐	☐
Assistance with practice redesign	☐	☐	☐	☐
Assistance with efficiency-enhancing activities	☒	☐	☐	☒
Provide web-based resources and directories	☒	☐	☐	☒
Provide practice-specific data reports	☒	☐	☐	☐
Provide clinical care guidelines and best practices.	☒	☐	☐	☐
Provide clinical screening tools	☒	☐	☐	☐
Provide health and functioning questionnaires	☒	☐	☐	☐
Provide chronic care templates	☒	☐	☐	☐
Provide registries	☒	☐	☐	☐
Offer client reminders	☒	☐	☐	☐
Offer client self-management tools	☒	☐	☐	☐
Offer educational materials about specific conditions	☒	☐	☐	☐
Supply behavioral health surveys	☒	☐	☐	☐
Supply other self-screening tools	☒	☐	☐	☐
Administer behavioral health surveys	☐	☒	☐	☐
Administer other self-screening tools	☐	☒	☐	☐
Prepare client action plans	☐	☒	☐	☐
Provide training on providing culturally-competent care	☒	☐	☐	☐
Provide training to supporting staff	☒	☐	☐	☐
Provide training on motivational interviewing	☒	☐	☐	☐
Provide tools and software for phone call and appointment tracking	☐	☒	☐	☐
Provide tools and resources for tracking labs, referrals, etc.	☐	☒	☐	☐
Provide referral and transitions of care checklists	☒	☐	☐	☐
Provide visit agendas or templates	☒	☐	☐	☐
Provide standing pharmacy order templates	☒	☐	☐	☐
Provide comprehensive directory of community resources	☒	☐	☐	☐
Provide directory of other resources	☒	☐	☐	☐
Provide materials regarding Nurse Advice Line	☒	☐	☐	☐
Ensure all tools and resources are centrally located on RCCO-specific website	☒	☐	☐	☐
Others	All these items exist in the free market but because of cost we don't always use or access them.			

54) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

All the items would improve care but if you require them then you will alienate even more private practices from taking MC.

55) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

A place to start may be to share best practices.

56) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

57) Should the Department require that PCMPs utilize disease registries to manage the health of their population?

Require is a high expectation and you will alienate more docs.

58) Please share any other advice or suggestions about provider support in the ACC.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

Health coaches or navigators would support the patients needs.

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

62) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

63) What role – if any – should the RCCOs play in the distribution of payments to providers?

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

66) **Measuring Client experience.** Please complete the table below to indicate how the Department should measure Client/patient experience:

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☒	☐	
SF-12 Health Survey	☐	☐	
Other types of client interviews / surveys	☒	☐	
Patient Activation Measure	☐	☐	
Focus groups	☐	☐	
Other	Please type your response here.		

67) Knowing that, at this time, the Department only has claims data, how should population health be measured?

68) How should quality and performance data be reported to the RCCOs, PCMPs, and the public?

69) **Measures for payment.** Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☒
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

70) What percent of RCCO payments should be tied to measures or performance?

Percentage	
10-20%	☒
21-30%	☐
31-40%	☐
41-50%	☐
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

71) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?

72) Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?

National standards.

73) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

74) **Incentive payment frequency**. Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	☒
Annually	☐
Other	☐

If you checked the "Other" box, please describe payment frequency below:

75) For potential offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

76) For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

Health Information Technology (HIT)

77) **Types of communication.** For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	☒
Text message	☐	☐
Web portal	☐	☒
Email	☐	☒
Telemedicine / Video chat	☐	☒
Face-to-face meeting	☐	☒
Smartphone app	☐	☐
Other:		

78) **HIT investments by organizations.** For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below:

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	☐	☐
Digital care management tool	☐	☐
Care transitions alerts	☐	☐
Electronic Health Records (EHRs)	☐	☐
Health risk assessment software	☐	☐
Practice assessment tools	☐	☐
Practice management tools (scheduling, billing)	☐	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☐
Patient education/wellness tools	☐	☐
Provider/case manager directory	☐	☐
Shared decision-making tools	☐	☐
Telemedicine software	☐	☐
Other:	☐	☐
Other:	☐	☐

79) **Importance of technology by type.** The Department is working to determine what technology is in place, what technology is needed, and what technology should be standardized. For RCCOs, providers, and other organizations, use the table below to answer what HIT infrastructure outside of the SDAC your organization would use to perform population health management activities. Tools are scored from 1-5, where 1 are those items least-likely to be used, and 5 are items most-likely to be used:

Tool	1 Least	2	3	4	5 Most
Population analytics / reporting / dashboard	☐	☐	☐	☐	☐
Care management tool	☐	☐	☐	☐	☐
Care transitions alerts	☐	☐	☐	☐	☐
Electronic Health Records (EHRs)	☐	☐	☐	☐	☐
Practice assessment tools	☐	☐	☐	☐	☐
Health risk assessment software	☐	☐	☐	☐	☐
Practice management tools (scheduling, billing)	☐	☐	☐	☐	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☐	☐	☐	☐
Patient education wellness tools	☐	☐	☐	☐	☐
Provider/case manager directory	☐	☐	☐	☐	☐
Shared decision-making tools	☐	☐	☐	☐	☐
Telemedicine	☐	☐	☐	☐	☐
Other:	☐	☐	☐	☐	☐

80) What are the primary barriers to RCCOs and providers increasing their use Health Information Technology to improve the performance of Primary Care Practices?

81) How can Health Information Technology support Behavioral Health Integration?

82) In the next iteration of the ACC, should there be a shared resource for data and analytics? Please describe the basic criteria for what a shared data and analytics platform needs to contain in order for it to be useful.

83) Should there be a shared care management tool? Please describe the basic criteria for what a care management tool would need to contain in order for it to be useful.

84) Should there be a shared population health management tool? Please describe the basic criteria for what a population health management tool would need to contain in order for it to be useful.

85) Please describe the functionality that a common Medicaid provider directory would need to contain in order for it to be useful.

86) How can the RCCOs support providers' access to actionable and timely clinical data?

87) What are the HIT solutions that would benefit clients, providers, and RCCOs? Please comment on the parameters these tools or platforms would need to possess and the ways in which they could be used.

88) What technical assistance or resources related to HIT infrastructure should the RCCOs supply? This assistance or these resources could be for providers, social service organization, clients/families, or for others.

89) What role should health information exchange platforms like CORHIO or QHN play in the next iteration of the ACC?

90) Please share any information, advice, and suggestions you have about health information technology in the ACC Program.

This survey illustrates why it is so difficult for the ACO and the RCCO's to build relationships with providers. You built a bureaucracy in this 36 page document. This should have been divided into manageable surveys for different types of people you want feedback from. Patients, community workers, practices, potential RCCO partners, business community, general public. Let people define where they best fit using a decision support tool. Each survey gets to be no longer than 25 questions. I would not recommend anyone take the time to fill this out because it is so unwieldy and exhaustive and it doesn't feel like anyone will analyze my answers. I skipped a bunch of questions as I don't have enough solid information or experience to attempt an answer.

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: William S. Hildenbrand
Location: City, County, State.

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Savio House Inc.
Location: Denver, CO
☐ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☐ Medical provider / PCMP / other provider
  i. Type or specialty: Click here to enter text.
  ii. Area of practice: Click here to enter text.
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☐ Other (please describe): Click here to enter text.

Are you currently involved in the ACC program?

☐ Yes
☐ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☐ 3-4 years
☐ Since before the program was implemented.

How have you been involved in the ACC program and what interaction have you had with RCCOs:
Click here to enter text.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:
Click here to enter text.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

Please feel welcome to describe why or why not using the space below.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

2) What is not working well in the ACC Program?

There haven't been opportunities for providers to integrate with the ACC efforts.

3) What is working best in the Behavioral Health Organization (BHO) system right now?

Colorado Access is determined to use evidence based programs and other services where measured outcomes show positive and sustainable outcomes. They reach out to community providers for the services. They don't confuse roles between being a BHO and service providers. Others not so much.

4) What is not working well in the BHO system?

The problem comes about when the BHO or their affiliates become providers of the Medicaid services. Roles become blurred and conflict of interest issues appear. It should be if you are a BHO or MCO, you aren't a provider.

Secondly, As soon as a child/family show improvement, medical necessity in the eyes of the BHO goes away and payments stop. They don't seem to understand, if you want the successful outcome of an evidence based program, you have to give it in full dose. I understand their goal is to manage care and prevent endless services, but EBPs give everything that is needed and not one more moment of service.

5) What is working well with RCCO and BHO collaboration right now?

I can't comment on this question or the one below as opportunities to interact haven't been available.

6) What is not working well with RCCO and BHO collaboration right now?

I can't comment on this question or the one below as opportunities to interact haven't been available.

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

All parties including providers at the table. The goal as outline in the recent ACC webinar sounds great. The proof is in the outcome, ie, how is it implemented?

[1] Many terms and definitions can be found in the Appendix at the end of this document.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Dorothy Perry, PhD
Location: Pueblo, CO

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: BHO - Colorado Health Partnerships & RCCO 4 – Integrated Community Health Partnership
Location: Western/Southern CO
☐ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☐ Medical provider / PCMP / other provider
  i. Type or specialty: Click here to enter text.
  ii. Area of practice: Click here to enter text.
☐ Provider advocate (e.g. medical society)
☒ Potential bidder for RCCO contract
☒ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☐ Other (please describe): Click here to enter text.

Are you currently involved in the ACC program?

☒ Yes
☐ No

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☐ 3-4 years
☒ Since before the program was implemented.

How have you been involved in the ACC program and what interaction have you had with RCCOs:

The Western Southern region of the BHO Colorado Health Partnerships (CHP) is in the geographic region of RCCO 4, of which Spanish Peaks Behavioral Health Centers is a partner in both organizations.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:

Spanish Peaks BHC covers three counties in both the BHO and the RCCO regions referenced above.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☒ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

Please feel welcome to describe why or why not using the space below.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

   - Whole person healthcare encompassing both the body and the mind for individuals seeking healthcare services.

   - RCCO administrative and clinical services are being provided by managed care organizations and providers who live and work in the same communities as those they care for under this contract. Services and resources are customized based on patient need, community assets and deficits, as well as local community culture.

2) What is not working well in the ACC Program?

   - Payment reforms are moving too cautiously to have substantial impact on cost and quality of care. We are still largely tied to a fee for service system that is volume driven and not focused on quality and cost outcomes.

   - Often times healthcare professionals change the definition of healthcare integration rather than changing the way they practice. Small convenient changes will not achieve true integration within our healthcare systems. Instead we need to invest in those we look to for leadership in the process, our primary care providers. We cannot assume because they are a physician and have a medical degree that they have a true understanding or investment in integrated care, nor that they have the necessary leadership skills to lead an integrated team of multi-specialty providers.

   - Allowing medical providers to have lower expectations on work performance and documentation than behavioral health providers is counterproductive. Often time's medical providers have no requirements or expectations of developing and carrying out treatment plans, minimal documentation requirements, and avoid various other mandates that the BHO Medicaid contract requires (e.g., CCAR, mobile crisis, appointment timeliness, etc.). Having integrated standardized expectations will improve patient treatment and will help to build a more cohesive treatment team for patient care.

3) What is working best in the Behavioral Health Organization (BHO) system right now?

   The BHOs have been able to control costs since capitation's inception in 1995 while providing access to more members while managing ever increasing administrative and clinical mandates. BHOs have successfully managed provider risk which must be a key component of any payment reform initiative.

4) What is not working well in the BHO system?

   - In a fee-for-service system payors are worried that providers will provide more service than is medically necessary, in an effort to earn more revenue. In a capitated system payors are concerned that providers will provide fewer services than is medically necessary as a means to pocket excess capitated revenue. In Colorado, due to the latter concern, HCPF and CMS are focused on counting

widgets (i.e., billing codes, units of service, RVUs, and dollars) to hold providers accountable for the revenue received in the capitated system. What's not being address is if those we are treating are improving, maintaining their illness without an escalation in symptoms, or if in spite of a patient's illness has found ways to improve their quality of life.

Most will not be able to terminate their illness, although some will. Many in spite of their illness can learn coping skills or to manage their illness in a manner that allows them to live in their chosen community, care for themselves, and have relationships with family and friends. This is what providers need to be paid for – patient outcomes. What we are in need of an outcome based reimbursement model that measures:

- Physical Health:
  - Symptoms - pain, fatigue, dyspnea, gastro-intestinal, physical stress experiences
  - Functions – physical activity, sedentary behavior, strength, sleep, sexual
- Behavioral Health:
  - Affect – negative and positive
  - Behavior – substance use, self-harm, isolation, anxiety, depression, violence
- Social Health:
  - Relationships – social isolation, quality of social support, peer relationships
  - Family – level of support, involvement, access
  - Function – ability to participate in relationships and social functions
  - Satisfaction – relationships, social activities, quality of life
- Daily Living
  - Housing, food, clothing
  - Employment and education

http://www.nihpromis.org

- When patient outcomes improve, healthcare cost will go down or at least be maintained. There are no billing codes for many of the above items and the interventions they may require. My guess is that CMS will still want to count widgets, so in our global capitation waiver we need to have an additional avenue to measure success rather than billable units, RVUs and cost – we will need a quantitative way to measure our investment and outcomes in the above whole person care factors.

5) What is working well with RCCO and BHO collaboration right now?

- The joint RCCO and BHO meetings have been beneficial. In our BHO we have three different relationships with the RCCOs in our region, RCCOs 1, 4 and 7. What is working is the flexibility to develop local solutions. This feature must be an essential feature of the next RCCO bid.

6) What is not working well with RCCO and BHO collaboration right now?

- There is no SDAC data collaboration with the BHOs. This obstructs opportunities for improved relationships with medical providers and the ability to work collaboratively on patient care and monitor outcomes.

- There is some animosity by some behavioral health providers regarding being held to more rigorous standards under the BHO contract than medical providers, and assumptions that medical providers will never be held to the same rigorous standards as providers in behavioral health.

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

- The RCCO RPF should encourage integration. Bidders should be rewarded with higher scores for closer integration of programs, data and finances.

- An essential aspect of the transition to integration requires tying together levels of integration, governance, and payment reforms, including incentives and performance. Without the combination of all components, we will end up working against ourselves and force movement on one or more dimension without alignment with the others.

- For decades, the body and the mind have been treated separately by various healthcare professions. The treatment of the brain is a major component of primary care. Its blood flow, oxygen level, injuries and physical health affects the five senses, hormones, heart rate, respiration and more. Yet the mind is about the mental faculties and what the mind does in terms of awareness of the world and one's experiences to think, feel, reason, enable judgment, make choices, to have perceptions, memory, and imagination. If we strive to provide integrated healthcare in a manner that 'completes' and 'makes one whole,' we have an obligation to consider that primary care, family practice, and internal medicine must work in a partnership with those who have knowledge and understanding of the mind, and not merely consider them another specialty provider.

[1] Many terms and definitions can be found in the Appendix at the end of this document.

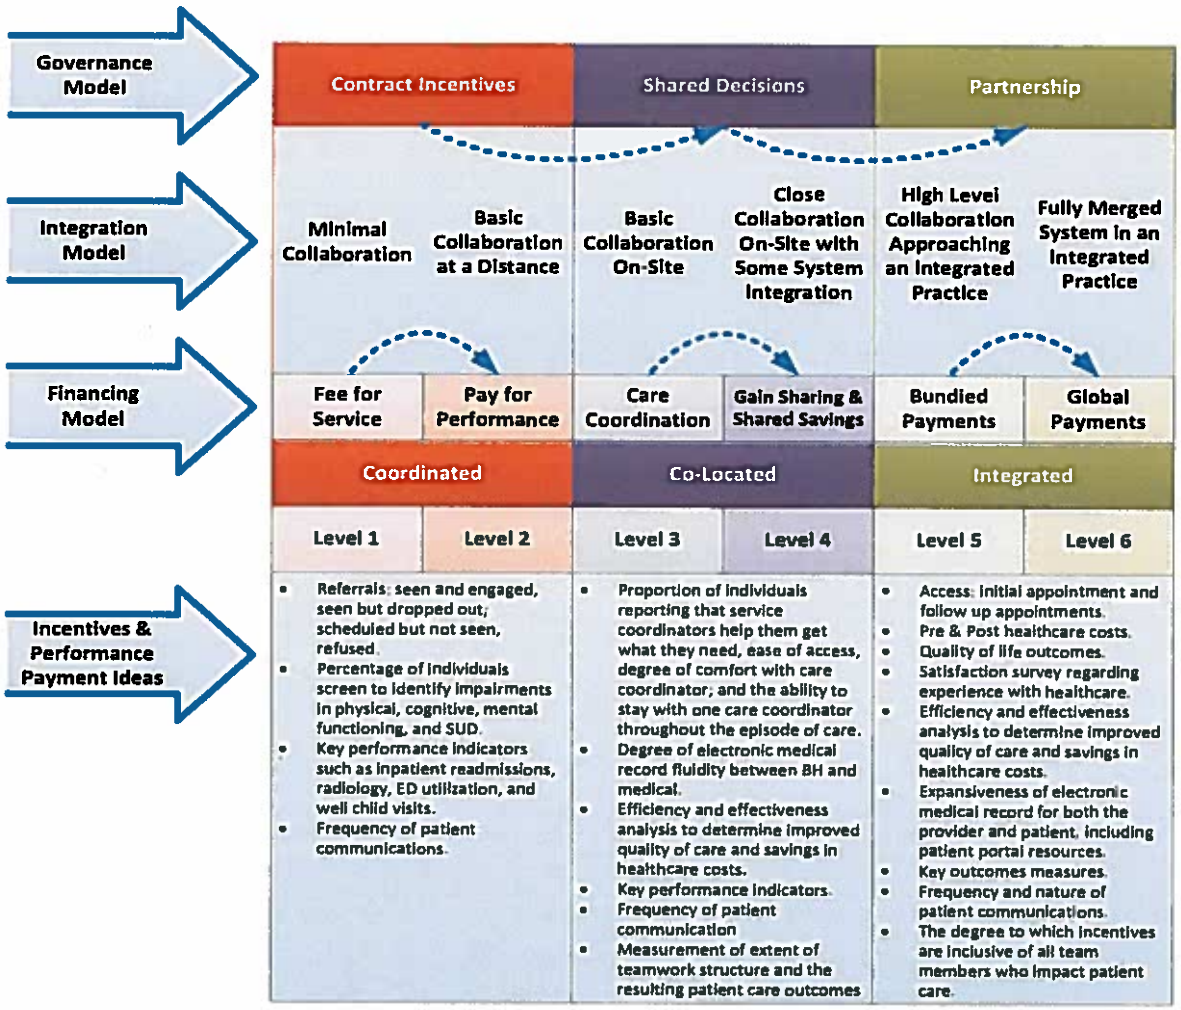
8) **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	Barrier? No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☐	☒	
Community Behavioral Health Services Rule	☐	☒	
Covered diagnoses list	☒	☐	An expansion on the covered diagnosis list may help with integration, but it also must be managed carefully as opening this up could cause substantial unforeseen costs.
Different behavioral / physical health reimbursement	☐	☒	
Institutions for Mental Diseases exclusion	☒	☐	Although this is an issue, the 1915(b)(3) waiver offers some flexibility through the Medicaid Managed Care program.
OBH rules, reporting, or financing (regulatory differences between agencies)	☒	☐	Very problematic. It would be much better if OBH and HCPF were integrated prior to requiring providers to integrate.
PCMP financing structure	☒	☐	Restrictions on BH physicians receiving payment as the medical PCMC have promotes more of the animosity referred to earlier and obstructs integration.
Per-member per-month amount	☐	☒	
Physical space constraints	☐	☒	
Privacy Laws (HIPAA, 42 CFR)	☒	☐	42 CFR is problematic in providing care coordination services; HIPAA is not an issue.
Professional / cultural divisions	☒	☐	This is a significant challenge, not only with providers, but with executive staff of medical organizations and behavioral health organizations. Because primary care has been heralded as the RCCO lead, they often completely disregard input, ideas, and experience sharing from the BHOs.

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

RCCO or BHO contracts	☐	☒	
Staff capacity	☒	☐	Staff capacity is an issue for all of health care organizations in Colorado.
State/Federal rules or reporting requirements	☒	☐	The rules and reporting requirements need to be aligned, not doing so negatively effects patient care and relations between medical and behavioral health providers.
Technical resources / data sharing	☒	☐	We have found that many medical providers are at a more entry level than BH in the technology arena. For example our local FQHC pharmacy does not accept electronic Rx from our BH medical staff.
Training	☐	☒	
Others	Please type your response here.		

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?



10) Please share any other general advice or suggestions you may have about behavioral health integration.

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination?

Care coordination is the deliberate organization of patient care activities between two or more participants (including the patient) involved in a patient's care to facilitate the appropriate delivery of health care services. Care coordination is a function that supports information-sharing across providers, patients, types and levels of service, sites and time frames. The goal of coordination is to

ensure that patients' needs and preferences are achieved and that care is efficient and of high quality. Care coordination is most needed by persons who have multiple needs that cannot be met by a single provider or by a single clinical organization, and which are ongoing, with their mix and intensity subject to change over time.

b. How should RCCOs prioritize who receives care coordination first?

In a perfect world there would be no prioritization of who gets care coordination, however, resources dictate that there must be some sort of ordering. We have a department of 14 care coordinators in our BH center. Our focus is primarily on two populations, with some exceptions. The first population includes those with serious illnesses in early stages that could exacerbate into more symptomatic and costly conditions if early intervention is not provided. The second population includes those with advanced illnesses that are currently costly, but with intervention we can assist the client in improving the quality of their life and reducing or maintaining costs (these do not include those who are in late stage end of life care).

c. How should RCCOs identify clients and families who need care coordination?

- Collaboration among healthcare providers (i.e., referrals, case staffing's).
- Data reports (i.e., cost, illness, comorbid factors, and outcome measures).

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

Delegated providers should be tracked through periodic onsite audits and data reports.

12) What services should be coordinated and are there services that should not be a part of care coordination?

All services should be coordinated for those needing this type of intervention.

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

- Identified concerns.
- The patient's goals.
- Medical, behavioral, and social assessment.

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today?

RCCO care coordinators, physician care coordinators, physicians who contract with others, including the RCCOs for care coordination services, and care coordination for clients who accept this service

offered to them by a RCCO care coordinator, yet the treating physician is not engaged with this process or type of service.

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

By centralizing care coordination with the RCCO

d. What are the gaps in care coordination across the continuum of care?

Volume of patients and healthcare provider resources

15) **RCCOs' roles in addressing clients' and their families' non-medical needs**. Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	Should the RCCO have a role? Yes	Should the RCCO have a role? No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma	☐	☒	☒	
Affordability (assistance with prescriptions or co-pays)	☒	☐	☐	
Daycare / childcare	☐	☒	☒	
Economic stability & employment	☐	☒	☒	
Education	☐	☒	☒	
Environment	☐	☒	☒	
Food access / nutrition	☐	☒	☒	
Health literacy	☒	☐	☐	
Housing	☐	☒	☒	

Language or translation services	☒	☐	☐	
Literacy	☐	☒	☒	
Transportation	☐	☒	☒	
Other	Please type your response here. Feel free to list as many non-medical factors as you want, and please explain how the RCCO should be involved.			

16) **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	Coordinate care? Yes	No	In what capacity should these individuals coordinate care in the ACC Program?
Advanced Practice (Registered) Nurses	☒	☐	Part of the CC team, as needed.
Certified Addiction Councilors	☒	☐	Part of the CC team, as needed.
Certified Nurse Midwives	☐	☒	
Community Health Workers	☒	☐	Primary responsibly.
Generalists (BA/BS/MA/MS)	☒	☐	Primary responsibly.
Health Coaches	☒	☐	Primary responsibly.
Licensed Clinical Social Workers	☒	☐	Part of the CC team, as needed.
Licensed Marriage and Family Therapist	☒	☐	Part of the CC team, as needed.
Licensed Mental Health Counselors	☒	☐	Part of the CC team, as needed.
Licensed Professional Counselor	☒	☐	Part of the CC team, as needed.
Masters of Public Health	☐	☒	
Medical Doctors / Doctors of Osteopathic Medicine	☒	☐	Part of the CC team, as needed.
Nurse Practitioners	☒	☐	Part of the CC team, as needed.
Patient Navigators	☒	☐	Primary responsibly.

Peer Advocates	☒	☐	Part of the CC team, as needed.
Promotoras	☐	☒	
Psychiatrists	☒	☐	Part of the CC team, as needed.
Psychologists	☒	☐	Part of the CC team, as needed.
Registered Nurses	☒	☐	Primary responsibly.
Social Workers	☒	☐	Part of the CC team, as needed.
Wraparound facilitators	☒	☐	Part of the CC team, as needed.
Other	Please type your response here.		

17) **Care coordination requirements for specific populations.** Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and infants	☐	☒	
Children	☐	☒	
Children who are healthy, but in socially-complex environments	☐	☒	
Children involved in the foster care system	☐	☒	
Children with a chronic illness	☐	☒	
Children with a serious emotional disturbance	☒	☐	BH involvement/interventions.
Children with medical complexity	☐	☒	
Children or youth with a behavioral health diagnosis or substance use disorder	☒	☐	BH involvement/interventions.
Transition-age adolescents	☐	☒	
Parents and families	☐	☒	
Pregnant women	☐	☒	
Adults	☐	☒	
Adults who are healthy, but in socially-complex situations	☐	☒	
Adults with a chronic illness	☐	☐	
Adults with a behavioral health diagnosis or substance use disorder	☒	☐	BH involvement/interventions.
Clients involved in the criminal justice system	☐	☒	
Clients with a disability	☐	☒	
Clients in a nursing facility	☐	☒	
Elderly clients	☐	☒	
Frail elderly clients	☐	☒	

Clients in palliative care	☐	☒	
Other populations, please comment:			

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

The RCCO should only be involved if there are medical issues.

19) How should care coordination be evaluated? How should its outcomes be measured?

- By a demonstrated reduction of duplicated care and the resulting reduction in medical expenses.
- By a demonstrated improvement in the management of the illness.

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

a. What is the PMPM cost for providing care coordination services?

This would require an actuarial analysis.

b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

Yes, but it would require an actuarial analysis.

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

Yes, it should vary by population but needs to be set by an actuarial analysis.

a. **Care coordinator to client ratios.** If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☐
51-100	☐
101-200	☐
201-500	☐
501-1,000	☒
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐

4,001-5,000	☐
More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

- Cost of care – reduction in wasted care because of un-coordinated care.
- Management of illness – a measurement of alternative illness management solutions (e.g., reduction of Rx usage and increase in activity therapy; reduction of diabetic complication issues and improvement in weight management).

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

I would agree with the list provided above with the exception of provider contracts. Provider contracting creates a competitive edge that saves money for the state and should be left to the RCCO to manage.

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

There is a risk in being too authoritarian in the RFP by requiring RCCOs to have specific community relationships. It would be better to have RCCOs bidders describe the relationships they have and how they will enhance those relationships.

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

This is a large population driven approach and would be unsuccessful in rural and frontier areas of the state. There is not enough population in many areas of RCCO 4 to make this work.

27) Should the RCCO region maps change? Why or why not? If so, how?

The state should go to fewer RCCOs and should consider combining RCCO regions 4 and 7. Most care in this part of the state is accessed through two major hubs, Pueblo and Colorado Springs. Having these regions in one RCCO will make care coordination much more effective.

28) Should the BHO region maps change? Why or why not? If so, how?

If the BHO maps were changed a new BHO RFP would have to be issued. I don't think the BHO maps can be change unless the state is ready to combine both the BHO and RCCO programs. To change the BHO maps without combing the programs would be very disruptive to the BHO patients and providers.

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

Six months

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

Moving to risk contracts would make the ACC more effective and produce saving more quickly. Allowing RCCOs to manage a PMPM for care could show significant saving.

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

- The addition of 9900 codes that allow integrated sights to provide services that are needed would be a major improvement.
- We need to have an additional avenue to measure success rather than covered codes, units, RVUs and cost – we need a quantitative way to measure our investment and outcomes in whole person care factors (i.e., symptoms, functioning, affect, behaviors, social health, and daily living).

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

This is a large population driven approach and would be unsuccessful in rural and frontier areas of the state. There is not enough population in RCCO 4 to make this work.

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

34) What role should RCCOs play in attributing clients to their respective PCMPs?

Patient choice is of course the first option. Second it past history of the patient – who did they last see (if the patient has no objection to returning to this provider. If they do not have a preference, then an unbiased assignment system needs to be incorporated.

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

DOI - only if there is a need for a license because of a risk contract.

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

There is a tendency by the state to over burden programs with stakeholder processes and engagement that rarely produces any meaningful outcomes, but may allow the state feel like they have done their due diligence. Most outreach or focus group meetings are poorly attended with input coming from a small population of the same stakeholders who often provide input directly. Suggest that the RPF allow bidders to propose a meaningful stakeholder input process that works for their area.

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

Same as above

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

This can be accomplished through the RFP awarding points for community involvement and/or providing incentives.

42) How should the Department structure stakeholder engagement for the ACC as a whole?

See question 39 above

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

No

a. If no, what are the gaps?

Access to specialty care in rural/frontier parts of Colorado is a problematic, as well as assisted living and long term care for those with co-occurring medical and behavioral health conditions.

b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

The gaps in our area do not seem to be population based.

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

a. What role should hospitals play in the next iteration of the ACC Program?

The fact is that money needs to be directed away from over utilization expensive hospital care as any real cost savings in healthcare lies that their door ($10 for a single aspirin; $15 for a bandaid?). That is not to say they do not provide a valuable service, but more emphasis on funding models for hospitals that are not fee-for-service must be implemented. As new models of funding are implemented, it would be beneficial to collaborate with hospitals for other types of needed care and services that would help to alleviate the drop in fee-for-service inpatient care for hospitals, as well as provide an avenue for meaning collaboration with hospitals. Areas of possible collaboration could be on alternatives to ER utilization, transitional services from higher levels of care, and specialized services for those with co-occurring medical and behavioral health conditions.

b. What role should pharmacies play in the next iteration of the ACC Program?

c. What role should specialists play in the next iteration of the ACC Program?

Specialty care needs to be more accessible in rural/frontier counties. The ACC program should provide incentives to specialists to provide care in these areas.

d. What role should home health play in the next iteration of the ACC Program?

Home health should be a central part of care planning.

e. What role should hospice care play in the next iteration of the ACC Program?

Hospice care should be readily available to all patients in the ACC program.

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

g. What role should counties play in the next iteration of the ACC Program?

h. What role should local public health agencies play in the next iteration of the ACC Program?

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

We should use caution in over reaching and involving too many players in the ACC process thus making it burdensome to carry out the main mission of the program to deliver better, more coordinated, cost efficient care to Medicaid members.

45) How can RCCOs help to support clients and families in making and keeping appointments?

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

Please do not loose site of the primary objectives of an ACC. This should be an option proposed by the respondents to the RFP based on patient and community needs and resources. HCPF should be careful not to be too prescriptive in how the RFP requirements are developed. Leaving room for communities to offer meaningful community based solutions should be a key theme of the RPF.

47) **Community Health Worker reimbursement.** Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement should be at the discretion of the RCCO and should not be prescribed by HCPF in the RFP.

Reimbursement process	(Please check all that apply)
Independently bill	☐
On staff (salary) at Primary Care Medical Provider Clinic	☐
On staff (salary) at RCCO	☐
Per Member Per Month Payment	☐

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

The RCCOs should have a role in coordinating oral health. Oral health need to be a part of overall health care and needs also be integrated.

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you?

It is exemplary customer service that understands local customs, values, goals, and traditions.

b. What RCCO requirements would ensure cultural competency?

The predicament of this question is that any type of requirements cannot attain or improve cultural competency. Asking bidders to describe the uniqueness of their community culture and how they plan to address those needs will give HCPF insight into the bidder's ability to ensure culturally competent services. These values must be imbedded in the organization's culture, and not due to some type of mandate.

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all clients/families including those with low health literacy?

Within the limitations of the healthcare workforce shortage, an organization must be as broad based as possible, and what they do not have in-house, they need cultivate within the community.

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

Please see b. above

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

This should be at the discretion of the RCCO to address regional issues and should not be prescribed by HCPF.

51) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

The RCCO bid should reward the RCCOs for diverting patients from emergency rooms for routine care by developing and implementing more clinical effective and cost efficient services that keep patients from accessing expensive emergency room care.

52) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

Practice Support

53) **Support for practices.** Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if **the state, rather than the RCCOs, should offer a platform of support:**

The state should avoid designing a 'package program' for the entire state. While many of these tools, programs, and services are useful, it should be up to the bidders to make a case to HCPF on how these fit the specific community needs and what benefit they believe can result from their use. The state could list these as items of interest from the state, and ask they bidder why/why not these would be beneficial in their community.

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☐	☒	☐	☐
Network provider education	☐	☒	☐	☐
Assistance with practice redesign	☐	☒	☐	☐
Assistance with efficiency-enhancing activities	☐	☒	☐	☐

Provide directory of other resources	☐	☒	☐	☐
Provide materials regarding Nurse Advice Line	☐	☒	☐	☐
Ensure all tools and resources are centrally located on RCCO-specific website	☐	☒	☐	☐
Others				

54) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

55) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

Again, ask the bidders to propose methods that would address this question.

56) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

Rate enhancements for participation

57) Should the Department require that PCMPs utilize disease registries to manage the health of their population?

No, again ask the bidder how they plan to manage the health of their population.

58) Please share any other advice or suggestions about provider support in the ACC.

This section is very heavy on requirements and mandates. If these requirements are implemented as RFP requirements it leaves little or no room for creativity, innovation, or meaningful community based opportunities. In a mandated contract, the winning bidder need only to focus on meeting the requirements to be successful rather than focus on solutions that meet the overall goal of population health and community needs. It would be better if the State allows bidder to offer solutions to improve population health and then monitor progress. Publication of outcomes statewide can then allow lower performing providers to learn from others.

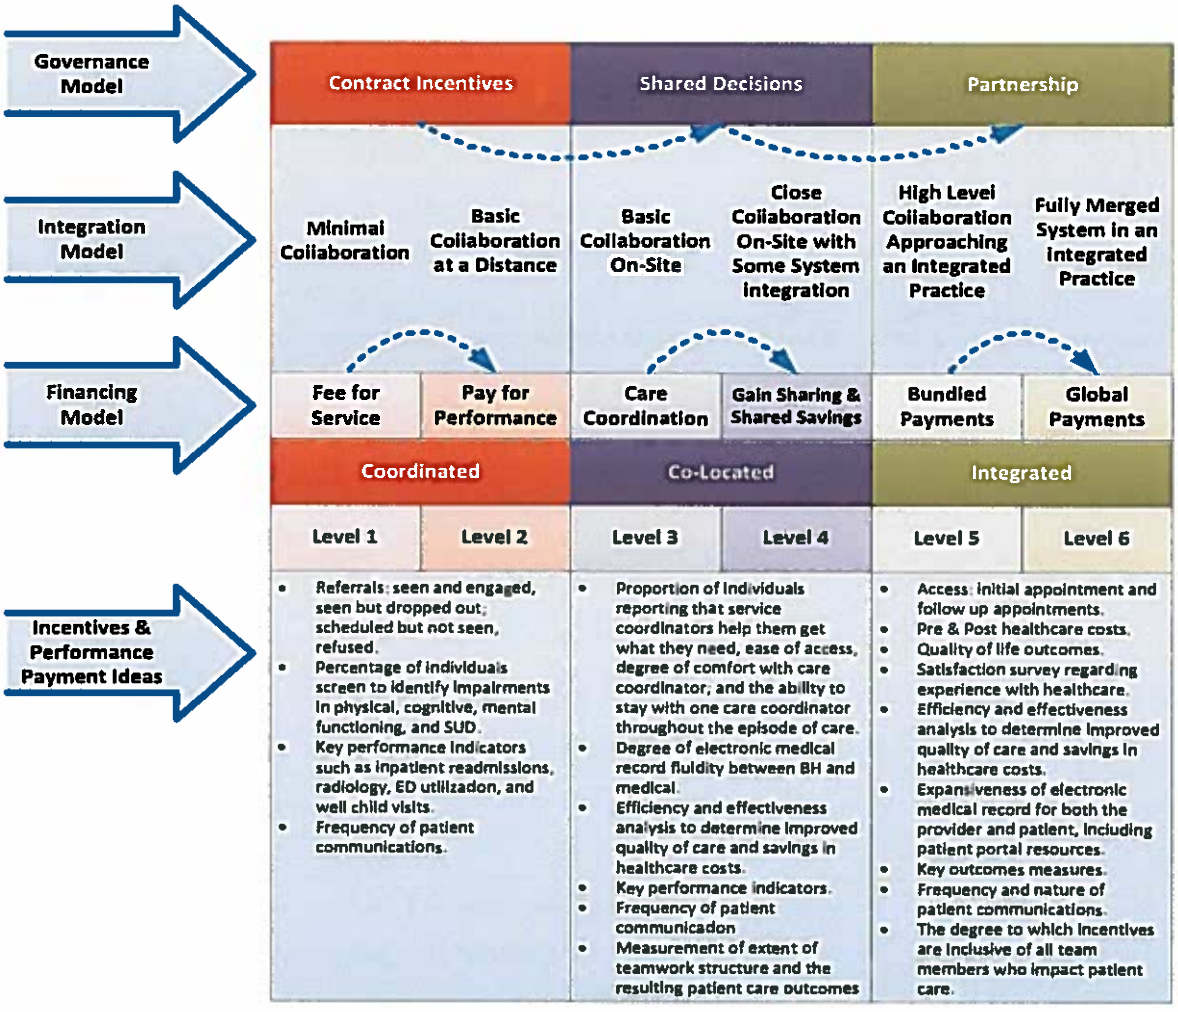
Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

It would be beneficial if the RCCOs moved to risk contracts that provide a PMPM that can be managed against goals for improved population health at a lower or maintained cost.

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

As shown below, implementing a payment model that can be gradually transition into from fee-for-service to at least a Level four or five, will promote cost savings and investment in the integrated healthcare model. Depending on population size, some independent private practitioners in rural and frontier areas may have more difficulty in transitioning to a capitation model due to patient volume, as the higher the volume, the more moderated the risk.



61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

Not without a transition period. The biggest barrier is the fee for service system of reimbursement. The medical system in place currently is set up to generate volume not value. It will take time, education, and strategic planning for some practices to transition to an at risk model.

62) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

Our BHO organization is licensed by the DOI and we are ready and able to acquire any needed license and the required reserves. A license would not preclude us from bidding. Currently our RCCO is not licensed, but could obtain a license should it be required through additional partnerships or supporting our current managed care partner in becoming an HMO.

63) What role – if any – should the RCCOs play in the distribution of payments to providers?

RCCOs should be completely responsible for reimbursing providers they are required to manage.

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

66) **Measuring Client experience.** Please complete the table below to indicate how the Department should measure Client/patient experience:

The State should allow broad measures of success for all RCCOs and should allow RCCOs to suggest additional measure that address local needs, at-risk populations in their area, and other innovative customer service projects.

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☒	☐	This could be the one standardized instrument used across all RCCOs.
SF-12 Health Survey	☐	☒	Allow the bidder to identify outcome measure tools.
Other types of client interviews / surveys	☐	☒	Allow the bidder to identify outcome measure tools.

Patient Activation Measure	☐	☒	Allow the bidder to identify outcome measure tools.
Focus groups	☐	☒	Allow the bidder to identify outcome measure tools.
Other	Please type your response here.		

67) Knowing that, at this time, the Department only has claims data, how should population health be measured?

This needs to be the responsibility of the RCCOs, with a requirement to provide outcome data to the State, with periodic audits to assure responsible collecting and reporting of data.

68) How should quality and performance data be reported to the RCCOs, PCMPs, and the public?

Open and transparent though a website

69) **Measures for payment.** Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7 at most	☒
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

70) What percent of RCCO payments should be tied to measures or performance?

Percentage	
10-20%	☐
21-30%	☐
31-40%	☐
41-50%	☒
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

71) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?

A combination of the two would be beneficial as KPIs can address standardized population health, but allow for local indictors to address local community projects/target groups.

72) Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?

Based on improvements

73) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

The Department need not be constrained by the claims dilemma as RCCOs can develop the systems to monitor progress. These systems can be audited for accuracy to assure the State of their validity. To wait until the State can develop a system could waste valuable time.

74) **Incentive payment frequency**. Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	☒
Annually	☐
Other	☐

If you checked the "Other" box, please describe payment frequency below:

75) For potential Offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

Examples:

- access standards
- access to providers within acceptable driving distances
- capacity costs to have resources available, but may not be used consistently

76) For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

The BHOs are evaluated on 34 measures but reimbursement is not tied to any of them; our RCCO cap is not paid based on outcomes at this time, but receives performance bonus money.

Health Information Technology (HIT)

77) **Types of communication.** For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	☒
Text message	☐	☒
Web portal	☐	☒
Email	☐	☒
Telemedicine / Video chat	☐	☒
Face-to-face meeting	☐	☒
Smartphone app	☐	☒
Other:		

78) **HIT investments by organizations.** For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below:

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	☐	☒
Digital care management tool	☐	☒
Care transitions alerts	☐	☒
Electronic Health Records (EHRs)	☐	☒
Health risk assessment software	☐	☒
Practice assessment tools	☐	☒
Practice management tools (scheduling, billing)	☐	☒
Client web portal for communicating care plan, services, benefit enrollment	☐	☒
Patient education/wellness tools	☐	☒
Provider/case manager directory	☐	☒
Shared decision-making tools	☐	☒
Telemedicine software	☐	☒
Other:	☐	☐
Other:	☐	☐

79) **Importance of technology by type.** The Department is working to determine what technology is in place, what technology is needed, and what technology should be standardized. For RCCOs, providers, and other organizations, use the table below to answer what HIT infrastructure outside of the 5DAC your organization would use to perform population health management activities. Tools are scored from 1-5, where 1 are those items least-likely to be used, and 5 are items most-likely to be used:

Tool	1 Least	2	3	4	5 Most
Population analytics / reporting / dashboard	☐	☐	☐	☒	☐
Care management tool	☐	☐	☐	☐	☒
Care transitions alerts	☐	☐	☐	☐	☒
Electronic Health Records (EHRs)	☐	☐	☐	☐	☒
Practice assessment tools	☐	☒	☐	☐	☐
Health risk assessment software	☐	☐	☒	☐	☐
Practice management tools (scheduling, billing)	☐	☐	☒	☐	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☐	☒	☐	☐
Patient education wellness tools	☐	☐	☒	☐	☐
Provider/case manager directory	☐	☐	☐	☒	☐
Shared decision-making tools	☐	☐	☒	☐	☐
Telemedicine	☐	☐	☐	☐	☒
Other:	☐	☐	☐	☐	☐

80) What are the primary barriers to RCCOs and providers increasing their use Health Information Technology to improve the performance of Primary Care Practices?

Staff feeling comfortable or being willing to utilize the technology and accept the rules for reimbursement are the primary barriers. Cost is also a barrier in smaller practices in rural and frontier areas.

81) How can Health Information Technology support Behavioral Health Integration?

Information technology will benefit all of healthcare with behavioral health being equally impacted. The ability to reach out to rural/frontier areas will be of special interest to the rural BHOs and RCCOs. Our BHO has invested heavily in tele-medicine for this reason. One challenge we are facing is the integration of medical information. Currently an electronic medical record (EMR) does not exist that can handle both primary care and behavioral health to the full extent of HCPF contact requirements and all the components of integrated care. This is a substantial barrier to Level 6 integration. We are meeting this challenge through creative bridging of two EMRs, but this is not an ideal solution. The expense of having to buy two systems may deter many providers from embracing the true impact that integration can achieve.

82) In the next iteration of the ACC, should there be a shared resource for data and analytics? Please describe the basic criteria for what a shared data and analytics platform needs to contain in order for it to be useful.

If the RPF required the contracting entities transmit analytics to the state rather than have the state develop a state wide system for data and analytics it could be more cost efficient, effective, and timely. The RFP could require that RCCOs track cost of care; health outcomes and other health come measure and transmit these data in a common platform to the state.

83) Should there be a shared care management tool? Please describe the basic criteria for what a care management tool would need to contain in order for it to be useful.

An effective care management tool must monitor access to care on a real time basis. Care managers need to know when appointments are made, prescriptions are filled, and emergency rooms are accessed. Currently most care management is addressed after the fact and can only prevent future problems rather than intervene in current events.

84) Should there be a shared population health management tool? Please describe the basic criteria for what a population health management tool would need to contain in order for it to be useful.

This task should be the responsibility of the RCCO. The tool could look at the overall use of care by a population and identify duplicate and inappropriate care so that these trends can be addressed with the providers in the network. This arrangement works best under a risk model where providers are incentivized to be efficient. If the state wants this standardized due to wanting to measure apples to apples statewide, consider engaging the CBHC to assemble a medical and behavioral health committee to develop this tool prior to the next bid.

85) Please describe the functionality that a common Medicaid provider directory would need to contain in order for it to be useful.

The Connect for Health Colorado provider resource guide is a good model for such a directory. Members and care managers should be able to search for provider's base on the needs of the patient.

86) How can the RCCOs support providers' access to actionable and timely clinical data?

The solution is clearly an effective CORHIO and QHN. Anything short of this would not be as effective.

87) What are the HIT solutions that would benefit clients, providers, and RCCOs? Please comment on the parameters these tools or platforms would need to possess and the ways in which they could be used.

A combined primary care – behavioral health EMR, the effective implementation of CORHIO/QHN with access for primary care provides, and work with statewide pharmacy's to enable electronic prescribing.

88) What technical assistance or resources related to HIT infrastructure should the RCCOs supply? This assistance or these resources could be for providers, social service organization, clients/families, or for others.

The RCCOs and BHOs in rural/frontier areas should be the primary source of HIT infrastructure. Most provider groups with the exception of hospitals and FQHCs cannot afford nor can they support the HIT systems needed.

89) What role should health information exchange platforms like CORHIO or QHN play in the next iteration of the ACC?

See question 86 above.

90) Please share any information, advice, and suggestions you have about health information technology in the ACC Program.

This was document long and intense. I am concerned about the quantity and quality of feedback you will get due to the length of this RFI.

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Susan J. Hebert
Location: Denver, CO

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Excelsior Youth Center
Location: Aurora, CO
☒ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☒ Medical provider / PCMP / other provider
  i. Type or specialty: Behavioral, Mental Health and Educational Services for Female Adolescent Youth
  ii. Area of practice: CEO
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☐ Other (please describe): Click here to enter text.

Are you currently involved in the ACC program?

☐ Yes
☒ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years

How have you been involved in the ACC program and what interaction have you had with RCCOs:
Click here to enter text.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:
Click here to enter text.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

Please feel welcome to describe why or why not using the space below.

☐ 3-4 years
☐ Since before the program was implemented.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

N/A

2) What is not working well in the ACC Program?

3) What is working best in the Behavioral Health Organization (BHO) system right now?

4) What is not working well in the BHO system?

5) What is working well with RCCO and BHO collaboration right now?

6) What is not working well with RCCO and BHO collaboration right now?

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

Partnering financially with "best practice" providers of behavioral health and mental health continuum of services, especially Community-based, family-based and community Wrap-Around services who consistently manage to excellent outcomes.

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services**. Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☒	☐	
Community Behavioral Health Services Rule	☒	☐	
Covered diagnoses list	☒	☐	
Different behavioral / physical health reimbursement	☒	☐	
Institutions for Mental Diseases exclusion	☒	☐	
OBH rules, reporting, or financing (regulatory differences between agencies)	☒	☐	
PCMP financing structure	☒	☐	
Per-member per-month amount	☒	☐	
Physical space constraints	☒	☐	
Privacy Laws (HIPAA, 42 CFR)	☐	☐	
Professional / cultural divisions	☒	☐	
RCCO or BHO contracts	☒	☐	
Staff capacity	☒	☐	
State/Federal rules or reporting requirements	☒	☐	
Technical resources / data sharing	☒	☐	
Training	☒	☐	
Others	Please type your response here.		

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

Assurance that evidence-based behavioral health practices are being applied consistently and producing positive behavioral health outcomes.

10) Please share any other general advice or suggestions you may have about behavioral health integration.

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination?

Rapid needs assessment and referral to a seamless integrated system of care that can ensure best possible results on clearly identified and mutually-desired goals.

b. How should RCCOs prioritize who receives care coordination first?

Behavioral Health providers are generally agreed on the differing levels of care required for specific behavioral health Hx and symptoms. Collaborating with them is key to determine "triage" decisions for care.

c. How should RCCOs identify clients and families who need care coordination?

Include a brief behavioral health assessment for any patients thought to potentially benefit from this (probably more patients than not since physical symptoms and dx processes are often related to behavioral health dynamics, directly or indirectly).

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

12) What services should be coordinated and are there services that should not be a part of care coordination?

Short-term residential care for quick crisis stabilization, respite for families, family or foster family interventions to stabilize and strengthen family unit and avoid need for higher, more expensive levels of behavioral or mental health care : therapeutic, educational, training, coaching, etc., wrap-around community services, case management,

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

Assessments already exist in Behavioral/Mental\ Health "centers of excellence."

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today?

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

Please see above!

c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

d. What are the gaps in care coordination across the continuum of care?

15) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	Should the RCCO have a role? Yes	No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma	☒	☐	☐	
Affordability (assistance with prescriptions or co-pays)	☒	☐	☐	
Daycare / childcare	☒	☐	☐	
Economic stability & employment	☒	☐	☐	
Education	☒	☐	☐	
Environment	☒	☐	☐	
Food access / nutrition	☒	☐	☐	
Health literacy	☒	☐	☐	
Housing	☒	☐	☐	

Language or translation services	☒	☐	☐	
Literacy	☐	☐	☐	
Transportation	☒	☐	☐	
Other	Please type your response here. Feel free to list as many non-medical factors as you want, and please explain how the RCCO should be involved.			

16) **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	Coordinate care? Yes	No	In what capacity should these individuals coordinate care in the ACC Program?
Advanced Practice (Registered) Nurses	☒	☐	
Certified Addiction Councilors	☒	☐	
Certified Nurse Midwives	☐	☐	
Community Health Workers	☐	☐	
Generalists (BA/BS/MA/MS)	☐	☐	
Health Coaches	☐	☐	
Licensed Clinical Social Workers	☒	☐	
Licensed Marriage and Family Therapist	☒	☐	
Licensed Mental Health Counselors	☒	☐	
Licensed Professional Counselor	☐	☐	
Masters of Public Health	☒	☐	
Medical Doctors / Doctors of Osteopathic Medicine	☐	☐	
Nurse Practitioners	☒	☐	
Patient Navigators	☒	☐	

Peer Advocates	☐	☐	
Promotoras	☐	☐	
Psychiatrists	☒	☐	
Psychologists	☒	☐	
Registered Nurses	☐	☐	
Social Workers	☐	☐	
Wraparound facilitators	☐	☐	
Other	Please type your response here.

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Bobbi Lock
Location: Cortez, Montezuma, CO

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Montezuma County Public Health Department
Location: Cortez, Montezuma, CO
☒ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☐ Medical provider / PCMP / other provider
  i. Type or specialty: Click here to enter text.
  ii. Area of practice: Click here to enter text.
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☒ Other (please describe): Public Health Dept

Are you currently involved in the ACC program?

☒ Yes
☐ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☒ 2-3 years
☐ 3-4 years

How have you been involved in the ACC program and what interaction have you had with RCCOs:
Immunizations: pulling eligibility, billing/claims

Please briefly describe your involvement with Medicaid, either in Colorado or another state:
Immunizations: eligibility, billing and claims

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☒ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

Please feel welcome to describe why or why not using the space below.

☐ Since before the program was implemented.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

2) What is not working well in the ACC Program?

3) What is working best in the Behavioral Health Organization (BHO) system right now? N/A

4) What is not working well in the BHO system? N/A

5) What is working well with RCCO and BHO collaboration right now? N/A

6) What is not working well with RCCO and BHO collaboration right now? N/A

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1] N/A

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☐	☐	
Community Behavioral Health Services Rule	☐	☐	
Covered diagnoses list	☒	☐	Medicaid still has not released new coverage rates
Different behavioral / physical health reimbursement	☐	☐	
Institutions for Mental Diseases exclusion	☐	☐	
OBH rules, reporting, or financing (regulatory differences between agencies)	☐	☐	
PCMP financing structure	☐	☐	
Per-member per-month amount	☐	☐	
Physical space constraints	☐	☐	
Privacy Laws (HIPAA, 42 CFR)	☐	☐	
Professional / cultural divisions	☐	☐	
RCCO or BHO contracts	☐	☐	
Staff capacity	☐	☐	
State/Federal rules or reporting requirements	☐	☐	
Technical resources / data sharing	☐	☐	
Training	☐	☐	
Others	Please type your response here.		

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care? N/A

10) Please share any other general advice or suggestions you may have about behavioral health integration.

N/A

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination?

A collaboration go ensure clients are being well cared for and services are being given without duplication.

b. How should RCCOs prioritize who receives care coordination first?

c. How should RCCOs identify clients and families who need care coordination?

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

12) What services should be coordinated and are there services that should not be a part of care coordination?

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today? N/A

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

d. What are the gaps in care coordination across the continuum of care?

15) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	Should the RCCO have a role? Yes	No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma	☐	☐	☐	
Affordability (assistance with prescriptions or co-pays)	☐	☐	☐	
Daycare / childcare	☐	☐	☐	
Economic stability & employment	☐	☐	☐	
Education	☐	☐	☐	
Environment	☐	☐	☐	
Food access / nutrition	☐	☐	☐	
Health literacy	☐	☐	☐	
Housing	☐	☐	☐	
Language or translation services	☐	☐	☐	
Literacy	☐	☐	☐	
Transportation	☐	☐	☐	
Other	Please type your response here. Feel free to list as many non-medical factors as you want, and please explain how the RCCO should be involved.			

16) **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	Coordinate care? Yes	Coordinate care? No	In what capacity should these individuals coordinate care in the ACC Program?
Advanced Practice (Registered) Nurses	☐	☐	
Certified Addiction Councilors	☐	☐	
Certified Nurse Midwives	☐	☐	
Community Health Workers	☐	☐	
Generalists (BA/BS/MA/MS)	☐	☐	
Health Coaches	☐	☐	
Licensed Clinical Social Workers	☐	☐	
Licensed Marriage and Family Therapist	☐	☐	
Licensed Mental Health Counselors	☐	☐	
Licensed Professional Counselor	☐	☐	
Masters of Public Health	☐	☐	
Medical Doctors / Doctors of Osteopathic Medicine	☐	☐	
Nurse Practitioners	☐	☐	
Patient Navigators	☐	☐	
Peer Advocates	☐	☐	
Promotoras	☐	☐	
Psychiatrists	☐	☐	
Psychologists	☐	☐	
Registered Nurses	☐	☐	
Social Workers	☐	☐	
Wraparound facilitators	☐	☐	
Other	Please type your response here.		

17) **Care coordination requirements for specific populations.** Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and infants	☐	☐	
Children	☐	☐	
Children who are healthy, but in socially-complex environments	☐	☐	
Children involved in the foster care system	☐	☐	
Children with a chronic illness	☐	☐	
Children with a serious emotional disturbance	☐	☐	
Children with medical complexity	☐	☐	
Children or youth with a behavioral health diagnosis or substance use disorder	☐	☐	
Transition-age adolescents	☐	☐	
Parents and families	☐	☐	
Pregnant women	☐	☐	
Adults	☐	☐	
Adults who are healthy, but in socially-complex situations	☐	☐	
Adults with a chronic illness	☐	☐	
Adults with a behavioral health diagnosis or substance use disorder	☐	☐	
Clients involved in the criminal justice system	☐	☐	
Clients with a disability	☐	☐	
Clients in a nursing facility	☐	☐	
Elderly clients	☐	☐	
Frail elderly clients	☐	☐	
Clients in palliative care	☐	☐	
Other populations, please comment:			

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

19) How should care coordination be evaluated? How should its outcomes be measured?

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

    a. What is the PMPM cost for providing care coordination services?

    b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

    a. **Care coordinator to client ratios.** If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☐
51-100	☐
101-200	☐
201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

27) Should the RCCO region maps change? Why or why not? If so, how?

28) Should the BHO region maps change? Why or why not? If so, how?

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

34) What role should RCCOs play in attributing clients to their respective PCMPs?

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

42) How should the Department structure stakeholder engagement for the ACC as a whole?

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

a. If no, what are the gaps?

b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

a. What role should hospitals play in the next iteration of the ACC Program?

b. What role should pharmacies play in the next iteration of the ACC Program?

c. What role should specialists play in the next iteration of the ACC Program?

d. What role should home health play in the next iteration of the ACC Program?

e. What role should hospice care play in the next iteration of the ACC Program?

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

g. What role should counties play in the next iteration of the ACC Program?

h. What role should local public health agencies play in the next iteration of the ACC Program?

Currently we only utilize eligibility and billing services.

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

45) How can RCCOs help to support clients and families in making and keeping appointments?

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

I think this is a reasonable option. Proper training could allow us to utilize current employees.

47) **Community Health Worker reimbursement**. Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement process	(Please check all that apply)
Independently bill	☒
On staff (salary) at Primary Care Medical Provider Clinic	☐
On staff (salary) at RCCO	☐
Per Member Per Month Payment	☐

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Click here to enter text.
Location: City, County, State.

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Click here to enter text.
Location: City, County, State.
☐ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☒ Medical provider / PCMP / other provider
  i. Type or specialty: Click here to enter text.
  ii. Area of practice: Click here to enter text.
☒ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☐ Other (please describe): Click here to enter text.

Are you currently involved in the ACC program?

☒ Yes
☐ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☒ 2-3 years
☐ 3-4 years
☐ Since before the program was implemented.

How have you been involved in the ACC program and what interaction have you had with RCCOs:
I have been involved for 2+ years. Attend all meetings and a representative for our Safety Net Clinic. (not NCQA)

Please briefly describe your involvement with Medicaid, either in Colorado or another state:
Committee involvement and liaison at state and local level. Oversee ACC regulation, clinic billing, clinic payments, care coordination.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely
☒ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

Please feel welcome to describe why or why not using the space below.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

    - Finding medical homes for its clients.

2) What is not working well in the ACC Program?

    - Rules of Enhanced PCMP Care have created barriers for providers. Trying to follow the exact wording of an NCQA facility is wrong and it cuts out a lot of providers with these 9 rules.
        - For instance, regarding #1, dictating set times for which a provider can offer extended hours can be difficult financially for the smaller practices, safety nets and rural settings. The ACC should allow creativity by the provider, not the NCQA standards. With these strict rules, a provider that is open during the lunch hour or even has extra providers on a schedule to triple book one day would not meet the standards for expanded hours.
    - Changes in providing data metrics to ACC. Understand the state wants a clearer picture, but care management and care coordination can be subjective. Assuming that all participants on these forms are licenses and asking for FTE's is not reality. We have volunteers, part time staff and many UNLICENSED workers that provide this service and the metrics forms dictate otherwise.

3) What is working best in the Behavioral Health Organization (BHO) system right now?

    The efforts to integrate care in the clinic setting have been enormously helpful. The integration movement in the clinic has been huge and embraced by all.

4) What is not working well in the BHO system?

    a. Strict licensing rules of 3 yrs of practice has caused hardship to hire a BH Provider! So many have come from a mental health center and licensing is under the facility. When the BH staffer leave that setting to come to a clinic, they have no individual years of licensing. Our clinic was not able to hire anyone.

    b. Increase the reimbursement dollars to encourage providers and clinics to hire.

S) What is working well with RCCO and BHO collaboration right now?

    See above

6) What is not working well with RCCO and BHO collaboration right now? See above. Watch the creations of overstock of rules that non-bh providers are facing in the ACC now!

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

See above answers

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☐	☐	
Community Behavioral Health Services Rule	☒	☐	Strict rules for licensing of 3 yrs is impossible for individuals out of MH Centers.
Covered diagnoses list	☐	☐	
Different behavioral / physical health reimbursement	☒	☐	Should be equal to other non-BH provides
Institutions for Mental Diseases exclusion	☐	☐	
OBH rules, reporting, or financing (regulatory differences between agencies)	☐	☐	
PCMP financing structure	☐	☐	
Per-member per-month amount	☐	☐	
Physical space constraints	☒	☐	
Privacy Laws (HIPAA, 42 CFR)	☐	☐	
Professional / cultural divisions	☐	☐	
RCCO or BHO contracts	☒	☐	Keep getting more strict, less freedom for provider to create and be independent
Staff capacity	☒	☐	Cost to hire is difficult
State/Federal rules or reporting requirements	☒	☐	Burdonsome
Technical resources / data sharing	☒	☐	COHRIO doesn't seem to be working, Medicaid data is old.
Training	☐	☐	
Others	Please type your response here.		

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

The ACC Program is a great idea and generous to the primary care provider!

However, we will never get clinics or providers on board that are not federal clinics because of the strict rules of the ACC for membership and metrics. For instance, we checked all of south metro area of Denver to find providers accepting new adults >18 if they would accept a new Medicaid patient. Only 10 practices exist and 4 of them are federal funded clinics!

To entice providers to participate is not going to happen by dictating Enhanced PCMP Care standards that mimic a NCQA, by asking for FTE's and licenses on our enhanced care management programs is alarming.

Sell the mission of the ACC/RCCO to a provider, tell him/her of the reimbursement and allow the provider the opportunity to create that vision based on the mission. Medicaid is the least paying, yet has the most rules. The easy way out of how to measure success by ACC and State is not to be mimicking an FQ as it is exclusionary.

10) Please share any other general advice or suggestions you may have about behavioral health integration.

- There is a shortage of licensed counselors that will take Medicaid that aren't working in a mental health clinics and we need to make it easier to get individuals credentialed so they can work elsewhere. 3 years on a individual is pretty much impossible as they all come from a MH Clinic with no individual licensing.
- Increase the reimbursement to entice a hire by a primary provider.
- Please see prior comments in other sections.

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination?

Our Clinic defines it as managing the care of a patient or patient population that needs assistance with a positive outcome to their health. It's important to recognize that care coordination can be medical or non-medical.

b. How should RCCOs prioritize who receives care coordination first?

The RCCO's set standards for the provider focus, but the RCCO must be careful of the burden of continuing to change them or add to them. You have to focus on your areas of need first. Focusing on high ER use has to be a priority for all of us and encouraging a patient to engage in a medical home. Giving an annual well visit is also critical to the program.

Addressing the patients bio, social and psychological character and how it effects their health must be part of the care coordination. What are the barriers that are keeping that patient from having excellent health?

c. How should RCCOs identify clients and families who need care coordination?

Have the standards and metrics to match them..

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

It must be accepted that some of this is subjective for a clinic. Metrics are important and claims show a picture. However, creating too many rules and requirement on reporting will not improve the care and will not assist the state in getting a bigger picture.

Slow down on the barrage of item to care coordinate. i.e. well care, er visits, depression screens are quite enough. Asking for diabetes, a1c, age driven metrics is too much. Ask for 1-2 things and see the results adding more metrics and items to care coordinate is too soon and will confuse providers on where to focus.

12) What services should be coordinated and are there services that should not be a part of care coordination?

It must be accepted that some of this is subjective for a clinic. Metrics are important and claims show a picture. However, creating too many rules and requirement on reporting will not improve the care and will not assist the state in getting a bigger picture.

Slow down on the barrage of item to care coordinate. i.e. well care, er visits, depression screens are quite enough. Asking for diabetes, a1c, age driven metrics is too much. Ask for 1-2 things and see the results adding more metrics and items to care coordinate is too soon and will confuse providers on where to focus.

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs? A. The hospitals do not tell us when a patient is in their hospital. They also encourage ER use with signage and advertising.

B. COHRIO seems as if it will not work to address all of this need for communication with a provider and we need some sort of real time communication

C. Claims bases data provided to providers may be old for addressing an individual, but is very helpful to get a general picture.

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today?

Navigation to address non medical barriers to health care with

Dental is a huge addition

Provider and assistant outreach

Behavioral health assistance

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

There are hundreds of resources and organizations available everyday to assist with care coordination.

c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

Allow for creativity and less rules and use of outside ACC resources. It's so subjective and not everything can be measured.

d. What are the gaps in care coordination across the continuum of care? Real time information and lack of ways to communicate that information

15) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	Should the RCCO have a role? Yes	Should the RCCO have a role? No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma	☐	☒	☒	No. there are resources and don't duplicate. Also rcco's need to be careful of having that information that can be private.
Affordability (assistance with prescriptions or co-pays)	☐	☒	☒	Don't duplicate what is clearly out there.
Daycare / childcare	☐	☒	☒	Don't duplicate what is clearly out there.
Economic stability & employment	☐	☒	☒	Don't duplicate what is clearly out there.
Education	☐	☒	☒	Don't duplicate what is clearly out there.
Environment	☐	☒	☐	
Food access / nutrition	☐	☒	☒	Don't duplicate what is clearly out there.
Health literacy	☐	☒	☐	
Housing	☐	☒	☒	Don't duplicate what is clearly out there.
Language or translation services	☒	☐	☒	It's a problem to not have a free language line.
Literacy	☒	☐	☐	Don't duplicate what is clearly out there.
Transportation	☒	☐	☒	Don't duplicate what is clearly out there.
Other	Please type your response here. Feel free to list as many non-medical factors as you want, and please explain how the RCCO should be involved.			

16) **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	Coordinate care? Yes	Coordinate care? No	In what capacity should these individuals coordinate care in the ACC Program?
Advanced Practice (Registered) Nurses	☒	☐	
Certified Addiction Councilors	☒	☐	
Certified Nurse Midwives	☐	☒	
Community Health Workers	☒	☐	
Generalists (BA/BS/MA/MS)	☒	☐	
Health Coaches	☒	☐	
Licensed Clinical Social Workers	☒	☐	
Licensed Marriage and Family Therapist	☒	☐	
Licensed Mental Health Counselors	☒	☐	
Licensed Professional Counselor	☒	☐	
Masters of Public Health	☒	☐	
Medical Doctors / Doctors of Osteopathic Medicine	☒	☐	
Nurse Practitioners	☒	☐	
Patient Navigators	☒	☐	
Peer Advocates	☒	☐	
Promotoras	☒	☐	
Psychiatrists	☒	☐	
Psychologists	☒	☐	
Registered Nurses	☒	☐	
Social Workers	☒	☐	
Wraparound facilitators	☒	☐	
Other	Again do not dictate who can care coordinate, but rather embrace all		

types. This list is an example of all care givers that can effect barriers to health care and assist in care coordination. The provider is more focused on medical these days while others are assisting in the coordination.

17) **Care coordination requirements for specific populations.** Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and infants	☐	☒	
Children	☐	☒	
Children who are healthy, but in socially-complex environments	☐	☒	
Children involved in the foster care system	☐	☒	
Children with a chronic illness	☒	☐	Many are very ill and cant be quantified in ACC categories for specific care.
Children with a serious emotional disturbance	☒	☐	Many are very ill and cant be quantified in ACC categories for specific care.
Children with medical complexity	☐	☒	
Children or youth with a behavioral health diagnosis or substance use disorder	☒	☐	Many are very ill and cant be quantified in ACC categories for specific care.
Transition-age adolescents	☐	☒	
Parents and families	☐	☒	
Pregnant women	☐	☒	
Adults	☐	☒	
Adults who are healthy, but in socially-complex situations	☐	☒	
Adults with a chronic illness	☐	☒	
Adults with a behavioral health diagnosis or substance use disorder	☒	☒	Many are very ill and cant be quantified in ACC categories for specific care.
Clients involved in the criminal justice system	☒	☒	Many are very ill and cant be quantified in ACC categories for specific care.
Clients with a disability	☐	☒	
Clients in a nursing facility	☒	☐	Many are very ill and cant be quantified in ACC categories for specific care.
Elderly clients	☒	☐	Many are very ill and cant be quantified in ACC categories for specific care.
Frail elderly clients	☒	☐	Many are very ill and cant be quantified in ACC categories for specific care.
Clients in palliative care	☒	☐	Many are very ill and cant be quantified in ACC categories for specific care.
Other populations, please comment:			

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system? They need to receive RCCO standards of care and navigation.

Case manager at RCCO should follow these cases and alert providers only when something is needed.

19) How should care coordination be evaluated? How should its outcomes be measured?

Be careful of the NCQA guide! Enhanced PCMP care program is built for federally qualified and funded clinics. The standards do not necessarily afford a provider, rural clinic or urban safety net clinic to financially meet these standards. Your average provider can only handle so much in his/her clinic and outside resources must be used and therefore can't be judged as not care management.

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

a. What is the PMPM cost for providing care coordination services?

We don't receive that much money. This cost also cannot be measured as entire staff and also possibly volunteers could be involved in 1 case.

b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

??

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

NO! How can you force providers to hire these people? Again this assists is the FQ that can afford to hire care coordinators. Don't dictate more ratios and rules.

a. **Care coordinator to client ratios.** If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☒
26-50	☐
51-100	☐
101-200	☐

201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

ER Visits

Annual Well Visits with Depression Screens

Behavioral care in integrated setting

Dental Care-annual cleaning

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Slow down! Understanding the state wants more data to show the ACC is working, but am feeling that it's becoming rule laden and too many items to care coordinate. Also accept that care coordination at times can't be measured and a simple contact is subjective and could save a life.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

RCCO's should have more standards that are across the board. We feel that fiefdoms have been formed in all the RCCO's. Let's make Denver 5 more accountable in these issues as they are still turning patients away.

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

Newly insured clients are bombarding ERs because there are not enough PCP's to take them. Why have all these rules when this issue is simply not addressed.

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

Disagree as I think they all should have clear standards across all RCCO's with few differences. Just because a provider crosses path with a patient from a different RCCO should not give them reason to shop another RCCO based on reimbursement or better stats for shared savings. Every FQ would join the best one with the best shared savings. Just has potential to not be a good idea.

27) Should the RCCO region maps change? Why or why not? If so, how?

No comment

28) Should the BHO region maps change? Why or why not? If so, how?

Yes! They should be the same as the RCCO's.

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

I don't understand or know enough what this means to comment.

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

I would ask that all of these prior comments be shared. Standardize the RCCO rules, have less metrics. This is not a public health experiment.

However, a forward thinking clinic receives the payment and may have a robust PCMP Medical Home and offers navigation and care coordination, yet receives the same payment for a clinic that may not be embracing the same standards.

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

Medicaid now has better benefits than my own private insurance plan offered by my employer and I worry where this will all go with more increased benefits. Where will the money come from to sustain all of this?

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

No.

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

34) What role should RCCOs play in attributing clients to their respective PCMPs?

Only assist if unattributed and we must be careful of farming off others. There has to be some neutrality with providers.

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

Patience! Realize you have a shortage of providers and focus on that, then the results. HCPF sometimes wants results and lower stats, but when they pressure the ACC to improve stats, the ACC create more rules and more metrics.

However the ACC's have a lot of money and I am concerned about their oversight, their budgets and hope they are watched as closely in audit by the state as the provider seems monitored by the ACC.

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

Standards should be set by the State with oversight. Limit arm of ACC's to act alone and standardize rules for each RCCO.

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

None

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

Follow the rules!

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

Nothing

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

Reporting of metrics, sharing in savings

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

By not taking assuming all providers are in FQ's and follow NCQA rules. Local programs and individual issues always exist and we can't be in one pot all the time. Again, more general standards for providers and more standardization for RCCO's.

42) How should the Department structure stakeholder engagement for the ACC as a whole?

The current community type meetings in the RCCO's seems to be working.

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population? There are shortages of providers and specialists across the board! Unless we simply give up and have giant clinics that take Medicaid, we have to make participation a priority. The same can be said for dental and BH providers.

a. If no, what are the gaps?

Very few providers accept Medicaid. They may be credentialed, but they are not accepting new patients. Hospitals need to be more accountable and assist in care coordination and promoting medical homes. They also can heavily influence specialist at their hospitals to "play" in the Medicaid world. There are also very few independent Urgent Care's that accept Medicaid, which is a problem in after hours care and encourage hospital ER use.

b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

I'm not sure that's an issue as we see very few. Childrens Hospital pretty much has a lock on that area for the youngsters and are there medical home. A lot of these patients are so diabled and have so many issues a primary provider can't be appropriate as there's more need for special care.

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

a. What role should hospitals play in the next iteration of the ACC Program?

More accountability in stopping preventable visits by navigation and encouraging use of a medical home. They encourage ER visits by marketing wait times. They also have got to join together and communicate today with providers and all hospitals on patients in their hospitals and the patient using multiple facilities.

b. What role should pharmacies play in the next iteration of the ACC Program?

No comment

c. What role should specialists play in the next iteration of the ACC Program?

We need to encourage participation! Similar to a PCMP, we need to give them incentive pay to be part of the ACC. Let them share in cost savings, i.e. keeping er visits low. We have specialists that are more willing to care for someone for free than take a Medicaid patient. Why? Low reimbursement and afraid if they take one, they'll all come.

d. What role should home health play in the next iteration of the ACC Program?

It's covered and not sure what else to say here.

e. What role should hospice care play in the next iteration of the ACC Program?

None really.

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

None, it's too much right now and a burden. Slow this part down.

g. What role should counties play in the next iteration of the ACC Program?

None. They seem pretty busy already.

h. What role should local public health agencies play in the next iteration of the ACC Program?

If they are able, let them be a PCMP and share in incentive programs.

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

I think I have addressed multiple times in prior comments.

45) How can RCCOs help to support clients and families in making and keeping appointments?

Let the providers handle and currently Healthy Communities already assists us in RCCO 3.

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

Yes, it is the only way this whole care program can work! However, billing for their care doesn't seem okay with me. But accepting them as caregivers in the total picture of assisting the PCP with care coordination is important and should be measured, but not billable.

47) **Community Health Worker reimbursement.** Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement process	(Please check all that apply)
Independently bill	☐
On staff (salary) at Primary Care Medical Provider Clinic	☒
On staff (salary) at RCCO	☒
Per Member Per Month Payment	☐

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

It should be the same as any BH standards, especially related to well care.

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you?

Accepting of all cultures, cultural situations and their norms and meeting that in a medical setting.

b. What RCCO requirements would ensure cultural competency?

As a reporting entity. Not sure how a RCCO could be involved unless someone was judged or turned away.

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?

I believe most professionals in the health care industry are aware and have experience to address. We don't need a state or ACC making sure of that, but perhaps rather address with any reportable incidents of prejudice toward a culture.

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

Offer a free Language Line.

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

Yes.

51) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

Find some providers to join! Again the state and ACC are some focused on outcomes that recruitment got skipped. Perhaps no one cares about it, but if we don't address, we graduate to large federally qualified health clinics for the underserved only and keep them separate. I don't think anyone wants that, so we need to get providers on board. Thus the rules and metrics need to be minimal. When you get a population, then start to measure.

52) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

Practice Support

53) **Support for practices.** Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☒	☐	☐	☐
Network provider education	☒	☐	☐	☐
Assistance with practice redesign	☐	☒	☐	☐
Assistance with efficiency-enhancing activities	☒	☐	☐	☐
Provide web-based resources and directories	☒	☐	☐	☐
Provide practice-specific data reports	☒	☐	☐	☐
Provide clinical care guidelines and best practices.	☒	☐	☐	☐
Provide clinical screening tools	☒	☐	☐	☐
Provide health and functioning questionnaires	☒	☐	☐	☐
Provide chronic care templates	☐	☒	☐	☐
Provide registries	☒	☐	☐	☐
Offer client reminders	☐	☒	☐	☐
Offer client self-management tools	☒	☐	☐	☐
Offer educational materials about specific conditions	☒	☐	☐	☐
Supply behavioral health surveys	☒	☐	☐	☐
Supply other self-screening tools	☒	☐	☐	☐
Administer behavioral health surveys	☒	☐	☐	☐
Administer other self-screening tools	☒	☐	☐	☐
Prepare client action plans	☐	☒	☐	☐
Provide training on providing culturally-competent care	☒	☐	☐	☐
Provide training to supporting staff	☒	☐	☐	☐
Provide training on motivational interviewing	☒	☐	☐	☐
Provide tools and software for phone call and appointment tracking	☐	☒	☐	☐
Provide tools and resources for tracking labs, referrals, etc.	☐	☒	☐	☐
Provide referral and transitions of care checklists	☒	☐	☐	☐
Provide visit agendas or templates	☐	☒	☐	☐
Provide standing pharmacy order templates	☐	☒	☐	☐
Provide comprehensive directory of community resources	☒	☐	☐	☐
Provide directory of other resources	☒	☐	☐	☐
Provide materials regarding Nurse Advice Line	☒	☐	☐	☐
Ensure all tools and resources are centrally located on RCCO-specific website	☒	☐	☐	☐
Others	Please don't make any of these items required, but rather support tools.			

54) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

55) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

The role of the RCCO is to coach and educate that. But, easy on requirements and respect limited staff and time. This is not their only patient roster!

56) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

Look at individual movement rather than only the RCCO group.

57) Should the Department require that PCMPs utilize disease registries to manage the health of their population?

Why, that is already done. It's seems like the Dept wants ACC to become a separate entity. These things exist already is so many settings, why duplicate?

58) Please share any other advice or suggestions about provider support in the ACC.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

They are fine. However, clinics that make patients wait for days or months on end to get well care or even sick care should not be reimbursed same as the other PCMP that is giving more immediate care. Let the patient go elsewhere. Spot audits and patient reporting should happened and lowered pay or some sort of warning should happen.

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

No never! Care suffers and there's no incentive to do better other than see as many as you can. Certain big city Clinics are a current prime example of collecting large numbers of patients and not providing a medical home that meets the Triple Aim of health care.

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

Yes they do and it is subjective, but can be done through general metrics.

62) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

YES!

63) What role – if any – should the RCCOs play in the distribution of payments to providers?

They should distribute the pay with oversight of audit by department

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

It sounds like this RFI shows a theme of the dept and ACC's becoming license capitated free standing clinics with less embracing of the small clinic and primary provider groups. I'd like more of a definition of what the dept wants as I am getting mixed messages on future of providers in various settings. What does the state want as there are some major driftings towards FQ. If that's the case, we need to be up front and discuss the future.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

General measure where all can participate would be best. Lower ER, high numbers of well visits, etc.

We need to get support in having people use the provider or clinic as their medical home and communicate that to clients and hospitals. Also general public messaging would assist. There's simply no support with this.

66) **Measuring Client experience.** Please complete the table below to indicate how the Department should measure Client/patient experience:

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☒	☐	
SF-12 Health Survey	☐	☐	I don't know what that is.
Other types of client interviews / surveys	☒	☐	
Patient Activation Measure	☒	☐	
Focus groups	☐	☐	
Other	Please type your response here.		

67) Knowing that, at this time, the Department only has claims data, how should population health be measured?

I don't know. Surveys perhaps and focus groups. Census work.

68) How should quality and performance data be reported to the RCCOs, PCMPs, and the public?

Yes!

69) **Measures for payment.** Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☒
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐

None	☐

70) What percent of RCCO payments should be tied to measures or performance?

Percentage	
10-20%	☐
21-30%	☐
31-40%	☐
41-50%	☐
51-60%	☒
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

71) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?

Yes.

72) Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?

No.

73) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

Monthly or quarterly is financially helpful to us.

74) **Incentive payment frequency**. Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	☒

Annually	☐
Other	☐

If you checked the "Other" box, please describe payment frequency below:

75) For potential offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

76) For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

We measure success by finding solutions or improving health in individual cases. It's impossible for us to measure success on total numbers served.

Health Information Technology (HIT)

77) **Types of communication.** For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	☐
Text message	☐	☐
Web portal	☐	☐
Email	☐	☐
Telemedicine / Video chat	☐	☐
Face-to-face meeting	☐	☐
Smartphone app	☐	☐
Other:		

78) **HIT investments by organizations.** For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below:

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	☒	☐
Digital care management tool	☒	☐
Care transitions alerts	☒	☐
Electronic Health Records (EHRs)	☒	☐
Health risk assessment software	☐	☐
Practice assessment tools	☐	☐
Practice management tools (scheduling, billing)	☒	☐
Client web portal for communicating care plan, services, benefit enrollment	☒	☐
Patient education/wellness tools	☒	☐
Provider/case manager directory	☒	☐
Shared decision-making tools	☒	☐
Telemedicine software	☐	☒
Other:	☐	☐
Other:	☐	☐

79) **Importance of technology by type.** The Department is working to determine what technology is in place, what technology is needed, and what technology should be standardized. For RCCOs, providers, and other organizations, use the table below to answer what HIT infrastructure outside of the SDAC your organization would use to perform population health management activities. Tools are scored from 1-5, where 1 are those items least-likely to be used, and 5 are items most-likely to be used:

Tool	1 Least	2	3	4	5 Most
Population analytics / reporting / dashboard	☐	☐	☐	☐	☒
Care management tool	☐	☐	☐	☐	☒
Care transitions alerts	☐	☐	☐	☐	☒
Electronic Health Records (EHRs)	☐	☐	☐	☐	☒
Practice assessment tools	☐	☒	☐	☐	☐
Health risk assessment software	☒	☐	☐	☐	☐
Practice management tools (scheduling, billing)	☐	☐	☐	☐	☒
Client web portal for communicating care plan, services, benefit enrollment	☐	☒	☐	☐	☐
Patient education wellness tools	☐	☐	☐	☒	☐
Provider/case manager directory	☐	☒	☐	☐	☐
Shared decision-making tools	☐	☒	☐	☐	☐
Telemedicine	☐	☐	☒	☐	☐
Other:	☐	☐	☐	☐	☐

80) What are the primary barriers to RCCOs and providers increasing their use Health Information Technology to improve the performance of Primary Care Practices?

Cost and time. Plus COHRIO is not going to be the answer.

81) How can Health Information Technology support Behavioral Health Integration?

Exact same as non-BH. Most EMR's accommodate BH nicely.

82) In the next iteration of the ACC, should there be a shared resource for data and analytics? Please describe the basic criteria for what a shared data and analytics platform needs to contain in order for it to be useful.

I think we have enough data, but hospitals need to share with us.

83) Should there be a shared care management tool? Please describe the basic criteria for what a care management tool would need to contain in order for it to be useful.

No. I think it is already being developed by RCCO's, but a care management tool should be customized by the provider and their team based on ACC/RCCO goals and standards.

84) Should there be a shared population health management tool? Please describe the basic criteria for what a population health management tool would need to contain in order for it to be useful.

Great idea for illnesses perhaps

85) Please describe the functionality that a common Medicaid provider directory would need to contain in order for it to be useful.

We have our own staff checking the booklet to find out if they are accepting new patients. We don't care if they are credentialed, it's if they are taking patients.

86) How can the RCCOs support providers' access to actionable and timely clinical data?

More timely information.

87) What are the HIT solutions that would benefit clients, providers, and RCCOs? Please comment on the parameters these tools or platforms would need to possess and the ways in which they could be used.

All EMRs are slightly differentt. All of of EMR's do this these data reporting and other parameters, so please be careful of creating roadblocks when we have systems that address it.

88) What technical assistance or resources related to HIT infrastructure should the RCCOs supply? This assistance or these resources could be for providers, social service organization, clients/families, or for others.

We have our own IT department

89) What role should health information exchange platforms like CORHIO or QHN play in the next iteration of the ACC?

It needs to work! CORHIO is just not integrated yet and it's not helpful in the big picture until all participate. Many providers don't have software of data to consider it yet.

90) Please share any information, advice, and suggestions you have about health information technology in the ACC Program.

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Doug Bonino
Location: Aurora, Arapahoe, Colorado

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Continuum of Colorado
Location: Aurora, Arapahoe, Colorado
☐ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☐ Medical provider / PCMP / other provider
  i. Type or specialty: Click here to enter text.
  ii. Area of practice: Click here to enter text.
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
X Other (please describe): HCBS Waiver provider

Are you currently involved in the ACC program?

☐ Yes
☐ No
X I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☐ 3-4 years
☐ Since before the program was implemented.

How have you been involved in the ACC program and what interaction have you had with RCCOs:
no

Please briefly describe your involvement with Medicaid, either in Colorado or another state:
HCBS Waiver Provider with clients who have a Developmental or Intellectual disability

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
X/A

Please feel welcome to describe why or why not using the space below.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

* We are a provider of intensive ABA services for children with autism and other developmental disabilities, and as such our services have not been covered by Medicaid, nor do we work within ACC currently. We are responding in the hope that ABA services, provided board certified behavior analysts, will become a more accessible option for families as part of behavioral health services, when such support is determined to be medically necessary.

2) What is not working well in the ACC Program?

3) What is working best in the Behavioral Health Organization (BHO) system right now?

4) What is not working well in the BHO system?

5) What is working well with RCCO and BHO collaboration right now?

6) What is not working well with RCCO and BHO collaboration right now?

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☐	☐	
Community Behavioral Health Services Rule	☐	☐	
Covered diagnoses list	X	☐	Because ABA services have not been covered for individuals with autism (outside of limited waiver options), we are usually consulted or aware of physical health services.
Different behavioral / physical health reimbursement	☐	☐	
Institutions for Mental Diseases exclusion	☐	☐	
OBH rules, reporting, or financing (regulatory differences between agencies)	☐	☐	
PCMP financing structure	☐	☐	
Per-member per-month amount	☐	☐	
Physical space constraints	☐	☐	
Privacy Laws (HIPAA, 42 CFR)	☐	☐	
Professional / cultural divisions	☐	☐	
RCCO or BHO contracts	☐	☐	
Staff capacity	X	☐	Not being able to anticipate coverage for those needing intensive behavioral intervention (ABA) makes it difficult to staff appropriately.
State/Federal rules or reporting requirements	X	☐	State rules not consistent with CMS guidelines regarding coverage of individuals with autism.

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

Technical resources / data sharing	☐	☐	
Training	☐	☐	
Others	Please type your response here.		

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

10) Please share any other general advice or suggestions you may have about behavioral health integration.

Consider ways to make quality behavioral services, such as ABA provided by Board Certified Behavior Analysts, more accessible. If necessary, Colorado could follow the direction of many other states in creating a state licensure program for BCBA's, or could instead choose to recognize the national certification as an acceptable indicator of expertise (which has been the finding of courts in applicable law suits against private insurance companies.

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination?

b. How should RCCOs prioritize who receives care coordination first?

c. How should RCCOs identify clients and families who need care coordination?

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

12) What services should be coordinated and are there services that should not be a part of care coordination?

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today?

Response from the HCBS-DD residential provider indicates Medical care with the primary physician and care from the behavioral team being done by residential management

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different? For clients served in the HCBS-Dd waiver services are coordinated through the residential agency and the case management department of the CCB

c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

Have communication with the residential agency – or even better, have the RCCO contract with the residential agency to provide the care coordination since they are already doing it and that way you can avoid duplication of efforts.

Similarly have the RCCO contract with the CCB Case Management department for those individuals where they are already engaged and involved (and there is not a medical provider already delegated as the care coordinator). This avoids unnecessary duplication and more people in the customer's life added no extra value assuming the customer doesn't want more people to have to deal with.

d. What are the gaps in care coordination across the continuum of care?

15) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

The designated core coordinator should have a role in the areas below. If the RCCO – for reduced duplication contracts this role out, then their role becomes one of oversight to verify that the coordination is occurring as intended.

Non-medical need:	Should the RCCO have a role? Yes	No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma		x☐	X	See comment above
Affordability (assistance with prescriptions or co-pays)	☐	☐	☐	See comment above
Daycare / childcare	☐	☐	☐	See comment above
Economic stability & employment	☐	☐	☐	See comment above
Education	☐	☐	☐	See comment above
Environment	X	☐	X	See comment above

Food access / nutrition	☐	☐	☐	See comment above
Health literacy	☐	☐	☐	See comment above
Housing	X	☐	X	See comment above
Language or translation services	☐	☐	☐	See comment above
Literacy	☐	☐	☐	See comment above
Transportation	☐	☐	☐	See comment above
Other	Please type your response here. Feel free to list as many non-medical factors as you want, and please explain how the RCCO should be involved.			

16) **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Difficult to answer as these are all specific to the individual and their needs and preferences. If the idea is to determine how to provide for the highest level of coordinated care for the individual then given all of the systems in involved in their life there should be one lead care coordinator that determines how this should occur.

Type:	Coordinate care? Yes	No	In what capacity should these individuals coordinate care in the ACC Program?
Advanced Practice (Registered) Nurses	X	☐	Medical Care
Certified Addiction Councilors	☐	☐	
Certified Nurse Midwives	☐	☐	
Community Health Workers	☐	☐	
Generalists (BA/BS/MA/MS)	☐	☐	
Health Coaches	☐	☐	
Licensed Clinical Social Workers	☐	☐	
Licensed Marriage and Family Therapist	☐	☐	
Licensed Mental Health Counselors	☐	☐	
Licensed Professional Counselor	☐	☐	
Masters of Public Health	☐	☐	
Medical Doctors / Doctors of Osteopathic Medicine	☐	☐	
Nurse Practitioners	☐	☐	
Patient Navigators	☐	☐	
Peer Advocates	☐	☐	
Promotoras	☐	☐	
Psychiatrists	☐	☐	
Psychologists	☐	☐	

Registered Nurses	☐	☐	
Social Workers	☐	☐	
Wraparound facilitators	☐	☐	
Other	Any of the above if the client needs those supports		

17) **Care coordination requirements for specific populations.** Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and infants	☐	X	
Children	☐	X	
Children who are healthy, but in socially-complex environments	X	☐	Social Service involvement if necessary for health and safety
Children involved in the foster care system	X	☐	Social Service involvement if necessary for health and safety
Children with a chronic illness	X	☐	Social Service involvement if necessary for health and safety
Children with a serious emotional disturbance	X	☐	Social Service involvement if necessary for health and safety
Children with medical complexity	X	☐	Social Service involvement if necessary for health and safety
Children or youth with a behavioral health diagnosis or substance use disorder	X	☐	Social Service involvement if necessary for health and safety
Transition-age adolescents	☐	X	
Parents and families	☐	X	
Pregnant women	☐	X	
Adults	☐	X	
Adults who are healthy, but in socially-complex situations	☐	☐	
Adults with a chronic illness	☐	☐	
Adults with a behavioral health diagnosis or substance use disorder	☐	☐	
Clients involved in the criminal justice system	☐	☐	
Clients with a disability	X	☐	
Clients in a nursing facility	☐	☐	
Elderly clients	☐	☐	
Frail elderly clients	☐	☐	
Clients in palliative care	☐	☐	
Other populations, please comment:			

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

ACC Request for Information

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: DAVID B. ROOS, M.D.

Location:

923S CROWN CREST BLVD, #100

PARKER, CO 80138

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: CROWN POINT PEDIATRICS

Location: PARKER

☒ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☒ Medical provider / PCMP / other provider
  i. Type or specialty:
  ii. Area of practice: Click here to enter text.
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☒ Other (please describe): Advocate for children on Medicaid

How have you been involved in the ACC program and what interaction have you had with RCCOs:

As a provider

Please briefly describe your involvement with Medicaid, either in Colorado or another state:

I have been a Medicaid provider for 32 years.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely
☒ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

Please feel welcome to describe why or why not using the space below.

Are you currently involved in the ACC program?

☐ Yes
☒ No
☐ I don't know

If you answered "yes" above, how long?

☒ Less than one year
☐ 1-2 years
☐ 2-3 years
☐ 3-4 years
☐ Since before the program was implemented.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

- Reimbursement (mostly due to the Federal ACA) is fairer now.

- The decision to make the well child visit one of the KPIs was a very good decision in behalf of children, but unfortunately attribution is still flawed and the SDAC data is delayed and often inaccurate. So, it is difficult to create an effective QI process to improve the KPI, but this is a good start.

- The decision to focus on integrated behavioral health in medical homes is a wonderful decision to improve health outcomes for people covered by Medicaid. Thank you.

- You have a great opportunity to do what is needed for the majority of Medicaid recipients. The majority of Medicaid recipients in Colorado are children and adolescents; they should not be considered one of the subgroups. The following principles should be incorporated into the core objectives of the ACC:

    - Children's health care needs are very different than adults. For adults, the focus is on managing chronic disease more effectively. For children, it is about preventing the development of those chronic diseases.
    - If the ACC really wants to focus on health and wellness, the greatest opportunity is with the children (the majority of Medicaid recipients). By focusing on preventive care, early screening and early intervention for children, there will be big savings; unfortunately those savings may not occur for many years or decades in the future, but the investment will eventually be worth it.
    - So, the ACC will need to invest in children to the extent possible now even though the savings come much later. We recommend that a portion of short-term savings that occurs due to chronic disease management in adults in the ACC be invested back into preventive care for children.
    - Children are part of families and you can't help the child unless you help the family. So, care coordination is more involved for children since it includes care coordination of the parents/family.
    - There is increased recognition that behavioral health is a part of overall health and should be accessible within a pediatric medical home. However, the current mental health system must have policies, procedures, and resources that support integrated behavioral health activities at the practice level.

2) What is not working well in the ACC Program?

- Attribution continues to attribute patients to the wrong medical home and the process of getting patients reassigned to the correct medical home is onerous for the patient and family.

- The health care data through the SDAC is based on claims so it is delayed and is incomplete (particularly for children). Therefore, it is not very useful in helping medical homes improve outcomes for children.

- Each RCCO does things very differently, which is confusing for medical homes with patients in several RCCOs. RCCOs are inconsistent in how they respond to requests for care coordination (quite variable depending on whom you reach at the RCCO). So the new RFP should ask how RCCOs will develop policies and procedures to make their methods and responses to requests for help more consistent, both within

the RCCO and among all RCCOs.

- There are certain expectations/requirements and ways of doing things that are so different from one RCCO to another that it requires significant extra work for the medical home to adapt to the differences. To deal with this. So, the RFP should ask how RCCOs intend

- If a patient lives in one region and goes to a medical home in another region, and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from the patient's region RCCO. This is particularly true in the Denver metro area. There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients.

- The "incentives" now are actually disincentives, especially the requirement that the RCCO must meet its KPIs before a high performing medical home can be rewarded for meeting its KPIs. The concept behind this approach is not consistent with how health care systems (and "medical neighborhoods") work.

- The geography of the 7 regions does not reflect the natural geography of health care systems and referral patterns. Larimer County should be in Region 2.

- RCCOs are not providing the level of care coordination that Medicaid patients need. We have had RCCO "care coordinators" just tell us to call 211. The level of commitment that patients and families need is difficult to find, unless care coordination is provided at the medical home level or the community level.

- Both family practices and pediatric practices report that the SDAC does not reflect their own data that the practice can obtain from their EHR or their own claims data. This is particularly true regarding data on health care screening. The RFP should ask how RCCOs and HCPF should take advantage of this practice-based data.

- Most medical homes are not working closely with RCCOs and are not receiving much support. The RFP should ask how RCCOs intend to work more closely with medical homes.

- Feedback from RCCOs to the medical home regarding patients referred to the RCCO for care coordination is spotty. How will RCCOs consistently provide feedback and communication to the medical home regarding what was done for the patients and whether there was improvement?

- There has been difficulty with communication from the state level through the RCCOs down to the individual practice/provider level. Providers feel as though they are not well informed from HCPF or RCCOs. We are grateful that CCHAP keeps us informed.

- The current system does not take into account the movement of patients on and off Medicaid and movement between RCCOs. Whether for KPIs or future shared savings incentives, practices need to be evaluated on established patients who have been in a practice for a minimum of six months. This allows the medical home to actually have time to make an impact on the child's care. Otherwise, it is a substantial disincentive for practices to be open to the more complex and challenging patients, those that likely need access the most.

- Currently, there is very little communication and alignment between BHO's and RCCO's. In order for integrated behavioral health to be successful at the practice and community level, the BHO's and RCCO's must have similar goals, policies/procedures that are aligned, payment structures that are aligned with movement toward integration and ongoing close communication with one another. The RFP should ask how they intend to do this.

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

- The decision to focus on integrated behavioral health in medical homes is a wonderful decision to improve health outcomes for people covered by Medicaid. Thank you.

- If Colorado is serious about promoting integration of behavioral and physical (medical) health care, then the RCCOs and BHOs should be integrated. This would mean they should have the same regions and function as though they are one organization. This would reduce duplication of efforts and have better alignment of incentives and payments that support integrated care.

- Open the behavioral health and wellness codes (96150 – 96155) now. Don't wait. This will encourage integration immediately and enable medical homes to start now the process of evolving toward full integration.

- Care coordination for both behavioral health and medical care should be done in the primary care setting. And either the RCCO and/or the BHO should delegate the responsibility to do care coordination and a pmpm to cover the expense to the medical home as part of the payment reform process. And behavioral health care coordination and medical care coordination needs to be fully reimbursed. In addition, the BHO and the RCCO will need to have information and care coordinators to assist medical homes to handle uncommon or very complex issues.

- Provide infrastructure and funding for data collection and management to support integrated behavioral health in the medical home and the care coordination that will have to be part of that. Utilizing 5DAC data is just one way to understand the activities within a medical home. 5DAC data is delayed and does not include enough information to support behavioral health care coordination in the medical home. Other methods and technologies are needed. There will need to be an investment in the development of new technologies and methods to do behavioral screening, track referrals, document treatment and collect data on the whole care coordination process at the medical home level. This will require adequate reimbursement to cover the cost of starting up new care coordination programs in the medical home and start up technologies to improve screening, intervention and care coordination with follow through in the medical home.

- The CPACK program developed by CBHC is a very good program, particularly the following:

a. Assistance with finding a behavioral health provider for patients
b. Telephone consultation by a child psychiatrist to primary care providers

We recommend that BHOs be required to provide the 2 components above as part of their new contracts.

- Payment options for integrated behavioral health (not just co-location) need to be clear and understandable to providers and practices. In order for the integrated model to be sustainable, there need to be ways to access understandable billing rules/policies.

Core Coordination

Question 12) What needs for children/families should be coordinated in medical homes and are there services that should not be a part of care coordination by the pediatric and family medical home

One of the most difficult services to provide in the medical home is home visits. Support from the larger system is needed.

Services that can be provided in a pediatric or family medical home are: complex medical coordination including logistics/travel, ancillary services (PT/OT/home health services, ...), collaboration with mental/behavioral health, collaboration regarding school needs, referrals to early intervention services and Child Find, referral to other agencies (rehab, hospice, ...), collaboration with foster care and DHS system. RCCOs need to help medical homes with needs like assistance with housing, food, parental employment, child care, in which case the RCCO can help families connect with other agencies that provide these services.

Question 19: How should care coordination program be evaluated? How should its outcomes be measured?

A care coordination program should initially be measured by having good processes, not measured by outcomes, until solid data exists on outcomes that are risk adjusted and accurate for children. Initially all measures need to be quite separated from outcomes that are highly tied to patient behavior, or practices will again be less likely to serve those with highest risk.

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Our medical home relates to multiple RCCOs and we want to be delegated to do care coordination. If all RCCOs allowed medical homes to be delegated to do care coordination, we could receive a pmpm from all of them, which would enable us to afford to hire enough care coordinators to meet the needs of all of our ACC patients.

Where should care coordination be done? Care coordination is best done in the medical home. We are willing to do care coordination, because we have a relationship with our patients and they trust us and we recognize that coordinating complex medical care is essential for good care and for cost savings. Also, the primary care provider is best positioned to have a long term relationship with the patient, and therefore know and

understand other aspects of the patient's life and how important those non-medical factors are on the patient's health and health issues.

If care coordination cannot be done in the medical home, then it is best done by community-based organizations. The least effective, least well-received, least trusted is care coordination done from a call center in an RCCO. The role of the RCCO should be to help the medical home-based care coordination staff access resources for families.

The majority of practices are willing to provide Care Coordination, if they can get financial support (PMPM) for providing the service.

Should you be doing care coordination for certain patient populations e.g. children with asthma or special needs children? Or for your entire Medicaid population healthy or chronically ill? The overall goal of Colorado Medicaid should be to provide care coordination services for ALL patients in the Medicaid population (for some patients it may be very minimal, others extensive). This is the essence of preventive care. A care coordinator that is based in the medical home is in the best position to help identify risk factors proactively, as early as possible before they impact a patient's health and cause illness. Children with special healthcare needs (complex, complicated) require a higher level of care coordination, so the pmpm attached to their care coordination needs to be risk adjusted.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

- All RCCOs should have their offices in the region served, should be non-profits, be a Medicaid provider and be incorporated only in Colorado.

- All RCCOs should offer to delegate care coordination to medical homes willing to accept that responsibility and the RCCO should share a portion of the RCCO pmpm with the medical home that accepts delegation.

- All RCCOs should use the same criteria for delegation and for the amount that is paid for delegated services of care coordination. By doing this, services can reach a standard across the state. A patient would have access to similar services no matter where they moved across Colorado.

- RCCOs should all agree on how they will effectively communicate to medical homes regarding any contact the RCCO has with patients attributed to the medical home. They should include PCMPs in developing those criteria.

- All RCCOs should help (or contract with an organization to help) medical homes understand how to access their SDAC data, understand their data and use it to develop rapid cycle QI projects to improve health outcomes and meet KPIs.

- All RCCOs should agree to provide uniform support for medical homes when a medical home asks for help with care coordination, even when the medical home is in another region (and contracted with another

RCCO) but the patient is in the first RCCO's region.

- RCCOs should be required to allow medical homes to give the RCCO a list of patients the medical home feels is their patients and receive help from the RCCO to understand why certain patients have been attributed to another medical home. If the patient is determined to be more appropriately attributed to the inquiring medical home, then the RCCO should help re-attribute the patient to the correct medical home.

- RCCOs should share on a regular basis the RCCO's performance on KPIs and share savings incentives and share with the medical home how their own performance compares with other medical homes.

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

This is particularly applicable to the Denver metro area. There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients. For many expectations/requirements and ways of doing things the RCCOs are so different from one another that it requires significant extra work for medical homes to adapt to the differences. In addition, if a patient lives in one region and goes to a medical home in another region, and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from that first region.

27) Should the RCCO region maps change? Why or why not? If so, how?

Yes. There are two changes we recommend:

- Larimer County should be included in Region 2, since the medical community and the support organizations of Larimer County and very closely linked to Weld County
- In the Metro Denver area, the boundary issues are so difficult that we recommend one RCCO be responsible for the whole metro area or that medical homes be allowed to choose one RCCO for all of their patients.

28) Should the BHO region maps change? Why or why not? If so, how?

If Colorado is serious about promoting integration of behavioral and physical (medical) health care, then the RCCOs and BHOs should be integrated. This would mean they should have the same regions and function as though they are one organization. They should share incentives that are aligned around successful integration of behavioral and medical services and outcomes. So the BHO maps/regions should conform to the RCCO regions/maps.

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients. There are certain expectations/requirements and ways of doing things that are so different from one RCCO to another that it requires significant extra work to adapt to the differences. If a patient lives in one region and goes to a medical home in another region and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from that first region. This is particularly true in the Denver metro area.

Another alternative: When a practice contracts with a RCCO currently they "belong" to one RCCO. Change that and have them only contract with the state and have that contract extend to all RCCOS. This way RCCOS would be more accountable to standardization through out all of Colorado, and the services provided to patients/families would be more uniform.

34) What role should RCCOs play in attributing clients to their respective PCMPs?

The attribution system is quite flawed still. RCCOs should be required to allow medical homes to give the RCCO a list of patients the medical home feels are their patients and receive help from the RCCO to understand why certain patients are attributed to another medical home. If the patient is determined to be more appropriately attributed to the inquiring medical home, then the RCCO should help re-attribute the patient to the correct medical home.

Payment Structure and Quality Monitoring

S9) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

- The payment structure absolutely does not support the ACC goals. A medical home does not receive incentives for KPIs unless the RCCO meets its KPI. This becomes a disincentive, because many medical homes meet their performance targets, but do not get rewarded because the RCCO did not meet its targets. So the medical home has no incentive to maintain the performance. The philosophy that HCPF has espoused (that the high performing medical home should encourage or help the low performing medical home) is not realistic and is not how the real world works. There is no time for that, plus the high performing medical home has no way of knowing who is low performing. This idea shows a lack of understanding of the world where health cares is delivered. Medical homes need to receive full incentives when they meet their KPI targets, no matter what happens in the RCCO.

- The incentives are too low to change much. Also, the KPIs need to remain focused on process, not outcomes, until the data is more sophisticated to accurately attribute patients and account for risk factors.

- Many medical homes have the ability to collect REAL-TIME data from their EHR and their claims database, which can be used to measure performance more accurately than the SDAC. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes

to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and providers to develop a vetting process that will enable HCPF and RCCOs to trust the medical home self-reported real-time data.

- Since children are the majority and give the best chance of truly improving health and wellness, KPIs need to be more child-focused. And since the potential cost savings for children's health care are so far in the future, KPIs need to be intermediate, process outcomes.

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

There is very little of the infrastructure in the state in place at the present time to enable capitation to be implemented successfully. Here are just some of the changes that would need to be in place before it would be fair or prudent to implement capitation:

- The state would need to already be paying fair amounts for all aspects of the care needed by Medicaid recipients before it could effectively move to capitation. In other words, codes for things that HCPF wants done under capitation should be opened and reimbursement adequately now. This would encourage medical homes to already be doing these things before the change to capitation. It would also give HCPF and medical homes experience regarding what the actual costs are for providing the desired services and determine a fair capitation. It will be difficult to change behavior to include new activities under capitation among providers, if you continue to hold codes closed now for things you want done under capitation. You have to help the medical homes create the habits you want before the switch to capitation.

- All providers would have to be reliably involved in the ACC: primary care, all of the various adult and child specialists, the hospitals, the therapies, dentists, mental health providers, etc.

- The data system would have to be able to report real time data and be far, far more accurate than it is now.

- The attribution system is flawed. That would have to be improved and provide accurate, real-time attribution data before capitation should be instituted.

- You will have to change a variety of policies that are barriers to population management.

- Capitation has to be combined with significant incentives to implement processes and improve outcomes. So, you will need to have the incentive system very well developed and viewed by providers as motivating before implementing capitation

- Healthcare for children focuses on prevention, early detection and early intervention, which require initial increased investment to reduce potential expenses many years and decades down the line. Other ACO programs have shown that savings on children are difficult to show early on. So, incentives in the care of

children will initially be for intermediate outcomes (or for process outcomes) and need to be direct incentives rather than incentives in the form of shared savings.

- Early in the transition from pre-ACC payment methods to ACC payment structure (2012), some medical homes were asked to return money to Medicaid. Transitions like that (for example the transition to capitation) have to avoid this. Primary care medical homes have such narrow margins that this can be very difficult financially on a medical home

- Many medical homes have the ability to collect from their EHR and their claims database REAL-TIME data with which performance can be measured. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and providers to develop a vetting process that will enable HCPF and RCCOs to trust that medical home self-reported real-time data is trustworthy.

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

Many medical homes have the capability and infrastructure to adapt to payment tied to value. What is missing is the state, HCPF, RCCO, BHO infrastructure. See all of the infrastructure elements HCPF needs to have in place listed in question 60

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

- The HCPF Payment Reform Committee should meet at a time when providers and practice managers can actually attend. Monday afternoons is probably the worst time to actually enable providers or practice managers to attend. Once you select an appropriate time, then actively recruit participation.

- Make sure that your efforts are statewide. Views are different in the various regions of the state.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

- Many medical homes have the ability to collect from their EHR and their claims database REAL-TIME data with which performance can be measured. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and provider from medical homes to develop a vetting process that will enable HCPF and RCCOs to trust medical home self-reported real-time data.

- The measures for children can be drawn from HEDIS measures or CHIPRA measures or from the Pediatric Measurement Proposal that HCPF did in 2010 with the help of Jim Todd.
  Appropriate child health measures could be selected from the following measures :
  - Well child visits appropriate for age
  - Developmental screening by three years of age
  - Teen depression screening
  - Complete immunization status by age two
  - Post-partum depression screening rate for mothers of newborns by age 4 months
  - Appropriate antibiotic use in URI and strep pharyngitis

- Medical homes could also be measured on:
  - Patient (or family) satisfaction ratings
  - Documentation of QI projects

Screening should be part of KPIs, but you need to do more than just create a KPI. If you are going to have KPIs, then you need to track not only the number of times a screening was done, but also track the v-codes (or some way to track positives) and make them available in the SDAC so medical homes can track them. And the SDAC needs to track referrals (or intervention). Otherwise it is not worth measuring the number of screenings.

- The PCMP or medical home should receive real-time data (less than a month since date of service) with data that will allow them to compare their performance with performance of similar type of medical home.

- Healthcare for children focuses on prevention, early detection and early intervention, which require initial increased investment to reduce potential expenses many years and decades down the line. Other ACO programs have shown that savings on children are difficult to show early on. So, incentives in the care of children will initially be for intermediate outcomes (or for process outcomes) and need to be direct incentives rather than incentives in the form of shared savings.

69) Measures for payment. Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☒
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

We only need 2-4 KPIs. Any more will dilute the effect. What we really want is good data, so we can improve our outcomes by doing a quality improvement project. Since children are the majority of Medicaid recipients and give you the best chance of truly improving health and wellness in the long term, KPIs need to be more child-focused. And since the savings are so far in the future, KPIs need to be intermediate, process outcomes.

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

ACC Request for Information

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Centennial Pediatrics, PC

Location: 15464 E. orchard Road

Centennial, CO

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization:

Location:

☒ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☒ Medical provider / PCMP / other provider
  i. Type or specialty:
  ii. Area of practice: Click here to enter text.
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☒ Other (please describe): Advocate for children on Medicaid

How have you been involved in the ACC program and what interaction have you had with RCCOs:

Involved in two ACC – Colorado Access and PHP

Please briefly describe your involvement with Medicaid, either in Colorado or another state:

Pediatric medical provider.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☒ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

Are you currently involved in the ACC program?

Please feel welcome to describe why or why not using the space below.

☒ Yes
☐ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☒ 1-2 years
☐ 2-3 years
☐ 3-4 years
☐ Since before the program was implemented.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

- Reimbursement (mostly due to the Federal ACA) is fairer now. – This has been a significant improvement but I see little benefit in participation with the ACC – they provide little care coordination for my patients

- The decision to make the well child visit one of the KPIs was a very good decision in behalf of children, but unfortunately attribution is still flawed and the SDAC data is delayed and often inaccurate. So, it is difficult to create an effective QI process to improve the KPI, but this is a good start.

- The decision to focus on integrated behavioral health in medical homes is a wonderful decision to improve health outcomes for people covered by Medicaid. Thank you.

- You have a great opportunity to do what is needed for the majority of Medicaid recipients. The majority of Medicaid recipients in Colorado are children and adolescents; they should not be considered one of the subgroups. The following principles should be incorporated into the core objectives of the ACC:

    - Children's health care needs are very different than adults. For adults, the focus is on managing chronic disease more effectively. For children, it is about preventing the development of those chronic diseases.
    - If the ACC really wants to focus on health and wellness, the greatest opportunity is with the children (the majority of Medicaid recipients). By focusing on preventive care, early screening and early intervention for children, there will be big savings; unfortunately those savings may not occur for many years or decades in the future, but the investment will eventually be worth it.
    - So, the ACC will need to invest in children to the extent possible now even though the savings come much later. We recommend that a portion of short-term savings that occurs due to chronic disease management in adults in the ACC be invested back into preventive care for children.
    - Children are part of families and you can't help the child unless you help the family. So, care coordination is more involved for children since it includes care coordination of the parents/family.
    - There is increased recognition that behavioral health is a part of overall health and should be accessible within a pediatric medical home. However, the current mental health system must have policies, procedures, and resources that support integrated behavioral health activities at the practice level.

2) What is not working well in the ACC Program?

- Attribution continues to attribute patients to the wrong medical home and the process of getting patients reassigned to the correct medical home is onerous for the patient and family. HUGE problem still in the system. We have had a large problem with my patients being assigned to another provider. We have also had a significant problem with my patients showing ineligible on the website but calling Medicaid and being told "I am not sure why your provider is saying that you are elibigile it is their problem" This puts a signficiant "blame" on us when the eligibility website clearly states they patient is ineligible and creates a us vs them and not making the provider on the same team as Medicaid.

- The health care data through the SDAC is based on claims so it is delayed and is incomplete (particularly for children). Therefore, it is not very useful in helping medical homes improve outcomes for children.

- Each RCCO does things very differently, which is confusing for medical homes with patients in several RCCOs. RCCOs are inconsistent in how they respond to requests for care coordination (quite variable depending on whom you reach at the RCCO). So the new RFP should ask how RCCOs will develop policies and procedures to make their methods and responses to requests for help more consistent, both within the RCCO and among all RCCOs.

- There are certain expectations/requirements and ways of doing things that are so different from one RCCO to another that it requires significant extra work for the medical home to adapt to the differences. To deal with this. So, the RFP should ask how RCCOs intend

- If a patient lives in one region and goes to a medical home in another region, and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from the patient's region RCCO. This is particularly true in the Denver metro area. <u>There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients.</u>

- The "incentives" now are actually disincentives, especially the requirement that the RCCO must meet its KPIs before a high performing medical home can be rewarded for meeting its KPIs. The concept behind this approach is not consistent with how health care systems (and "medical neighborhoods") work.

- The geography of the 7 regions does not reflect the natural geography of health care systems and referral patterns. Larimer County should be in Region 2.

- RCCOs are not providing the level of care coordination that Medicaid patients need. We have had RCCO "care coordinators" just tell us to call 211. The level of commitment that patients and families need is difficult to find, unless care coordination is provided at the medical home level or the community level.

- Both family practices and pediatric practices report that the SDAC does not reflect their own data that the practice can obtain from their EHR or their own claims data. This is particularly true regarding data on health care screening. The RFP should ask how RCCOs and HCPF should take advantage of this practice-based data.

- Most medical homes are not working closely with RCCOs and are not receiving much support. The RFP should ask how RCCOs intend to work more closely with medical homes.

- Feedback from RCCOs to the medical home regarding patients referred to the RCCO for care coordination is spotty. How will RCCOs consistently provide feedback and communication to the medical home regarding what was done for the patients and whether there was improvement?

- There has been difficulty with communication from the state level through the RCCOs down to the individual practice/provider level. Providers feel as though they are not well informed from HCPF or RCCOs. We are grateful that CCHAP keeps us informed.

- The current system does not take into account the movement of patients on and off Medicaid and movement between RCCOs. Whether for KPIs or future shared savings incentives, practices need to be evaluated on established patients who have been in a practice for a minimum of six months. This allows the medical home to actually have time to make an impact on the child's care. Otherwise, it is a substantial disincentive for practices to be open to the more complex and challenging patients, those that likely need access the most.

- Currently, there is very little communication and alignment between BHO's and RCCO's. In order for integrated behavioral health to be successful at the practice and community level, the BHO's and RCCO's must have similar goals, policies/procedures that are aligned, payment structures that are aligned with movement toward integration and ongoing close communication with one another. The RFP should ask how they intend to do this.

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

- The decision to focus on integrated behavioral health in medical homes is a wonderful decision to improve health outcomes for people covered by Medicaid. Thank you.

- If Colorado is serious about promoting integration of behavioral and physical (medical) health care, then the RCCOs and BHOs should be integrated. This would mean they should have the same regions and function as though they are one organization. This would reduce duplication of efforts and have better alignment of incentives and payments that support integrated care.

- Open the behavioral health and wellness codes (96150 – 96155) now. Don't wait. This will encourage integration immediately and enable medical homes to start now the process of evolving toward full integration.

- Care coordination for both behavioral health and medical care should be done in the primary care setting. And either the RCCO and/or the BHO should delegate the responsibility to do care coordination and a pmpm to cover the expense to the medical home as part of the payment reform process. And behavioral health care coordination and medical care coordination needs to be fully reimbursed. In addition, the BHO and the RCCO will need to have information and care coordinators to assist medical homes to handle uncommon or very complex issues.

- Provide infrastructure and funding for data collection and management to support integrated behavioral health in the medical home and the care coordination that will have to be part of that. Utilizing SDAC data is just one way to understand the activities within a medical home. SDAC data is delayed and does not include enough information to support behavioral health care coordination in the medical home. Other methods and technologies are needed. There will need to be an investment in the development of new

technologies and methods to do behavioral screening, track referrals, document treatment and collect data on the whole care coordination process at the medical home level. This will require adequate reimbursement to cover the cost of starting up new care coordination programs in the medical home and start up technologies to improve screening, intervention and care coordination with follow through in the medical home.

- The CPACK program developed by CBHC is a very good program, particularly the following:
  a. Assistance with finding a behavioral health provider for patients
  b. Telephone consultation by a child psychiatrist to primary care providers
  We recommend that BHOs be required to provide the 2 components above as part of their new contracts.

- Payment options for integrated behavioral health (not just co-location) need to be clear and understandable to providers and practices. In order for the integrated model to be sustainable, there need to be ways to access understandable billing rules/policies.

Care Coordinotion

Question 12) What needs for children/families should be coordinoted in medical homes ond ore there services thot should not be o part of core coordinotion by the pediotric ond family medical home

One of the most difficult services to provide in the medical home is home visits. Support from the larger system is needed.

Services that can be provided in a pediatric or family medical home are: complex medical coordination including logistics/travel, ancillary services (PT/OT/home health services, ...), collaboration with mental/behavioral health, collaboration regarding school needs, referrals to early intervention services and Child Find, referral to other agencies (rehab, hospice, ...), collaboration with foster care and DHS system. RCCOs need to help medical homes with needs like assistance with housing, food, parental employment, child care, in which case the RCCO can help families connect with other agencies that provide these services.

Question 19: How should care coordination program be evaluated? How should its outcomes be measured?

A care coordination program should initially be measured by having good processes, not measured by outcomes, until solid data exists on outcomes that are risk adjusted and accurate for children. Initially all measures need to be quite separated from outcomes that are highly tied to patient behavior, or practices will again be less likely to serve those with highest risk.

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Our medical home relates to multiple RCCOs and we want to be delegated to do care coordination. If all RCCOs allowed medical homes to be delegated to do care coordination, we could receive a pmpm from all of

them, which would enable us to afford to hire enough care coordinators to meet the needs of all of our ACC patients.

Where should care coordinotion be done? Care coordination is best done in the medical home. In our experience when I have called the RCCOs for care coordination NOTHING has been done and they are not helpful at all. We are willing to do care coordination, because we have a relationship with our patients and they trust us and we recognize that coordinating complex medical care is essential for good care and for cost savings. Also, the primary care provider is best positioned to have a long term relationship with the patient, and therefore know and understand other aspects of the patient's life and how important those non-medical factors are on the patient's health and health issues.

If care coordination cannot be done in the medical home, then it is best done by community-based organizations. The least effective, least well-received, least trusted is care coordination done from a call center in an RCCO. The role of the RCCO should be to help the medical home-based care coordination staff access resources for families.

The majority of practices are willing to provide Care Coordination, if they can get financial support (PMPM) for providing the service.

Should you be doing care coordination for certain patient populations e.g. children with asthma or special needs children? Or for your entire Medicaid population healthy or chronically ill? The overall goal of Colorado Medicaid should be to provide care coordination services for ALL patients in the Medicaid population (for some patients it may be very minimal, others extensive). This is the essence of preventive care. A care coordinator that is based in the medical home is in the best position to help identify risk factors proactively, as early as possible before they impact a patient's health and cause illness. Children with special healthcare needs (complex, complicated) require a higher level of care coordination, so the pmpm attached to their care coordination needs to be risk adjusted.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

- All RCCOs should have their offices in the region served, should be non-profits, be a Medicaid provider and be incorporated only in Colorado.

- All RCCOs should offer to delegate care coordination to medical homes willing to accept that responsibility and the RCCO should share a portion of the RCCO pmpm with the medical home that accepts delegation.

- All RCCOs should use the same criteria for delegation and for the amount that is paid for delegated services of care coordination. By doing this, services can reach a standard across the state. A patient

would have access to similar services no matter where they moved across Colorado.

- RCCOs should all agree on how they will effectively communicate to medical homes regarding any contact the RCCO has with patients attributed to the medical home. They should include PCMPs in developing those criteria.

- All RCCOs should help (or contract with an organization to help) medical homes understand how to access their SDAC data, understand their data and use it to develop rapid cycle QI projects to improve health outcomes and meet KPIs.

- All RCCOs should agree to provide uniform support for medical homes when a medical home asks for help with care coordination, even when the medical home is in another region (and contracted with another RCCO) but the patient is in the first RCCO's region.

- RCCOs should be required to allow medical homes to give the RCCO a list of patients the medical home feels is their patients and receive help from the RCCO to understand why certain patients have been attributed to another medical home. If the patient is determined to be more appropriately attributed to the inquiring medical home, then the RCCO should help re-attribute the patient to the correct medical home.

- RCCOs should share on a regular basis the RCCO's performance on KPIs and share savings incentives and share with the medical home how their own performance compares with other medical homes.

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

This is particularly applicable to the Denver metro area. There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients. For many expectations/requirements and ways of doing things the RCCOs are so different from one another that it requires significant extra work for medical homes to adapt to the differences. In addition, if a patient lives in one region and goes to a medical home in another region, and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from that first region.

27) Should the RCCO region maps change? Why or why not? If so, how?

Yes. There are two changes we recommend:

- Larimer County should be included in Region 2, since the medical community and the support organizations of Larimer County and very closely linked to Weld County
- In the Metro Denver area, the boundary issues are so difficult that we recommend one RCCO be responsible for the whole metro area or that medical homes be allowed to choose one RCCO for all of their patients.

28) Should the BHO region maps change? Why or why not? If so, how?

If Colorado is serious about promoting integration of behavioral and physical (medical) health care, then the RCCOs and BHOs should be integrated. This would mean they should have the same regions and function as though they are one organization. They should share incentives that are aligned around successful integration of behavioral and medical services and outcomes. So the BHO maps/regions should conform to the RCCO regions/maps.

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients or not – if a provider feels they can handle these services they should be given the management fee. There are certain expectations/requirements and ways of doing things that are so different from one RCCO to another that it requires significant extra work to adapt to the differences. If a patient lives in one region and goes to a medical home in another region and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from that first region. This is particularly true in the Denver metro area.

Another alternative: When a practice contracts with a RCCO currently they "belong" to one RCCO. Change that and have them only contract with the state and have that contract extend to all RCCOS. This way RCCOS would be more accountable to standardization through out all of Colorado, and the services provided to patients/families would be more uniform.

34) What role should RCCOs play in attributing clients to their respective PCMPs?

The attribution system is quite flawed still. RCCOs should be required to allow medical homes to give the RCCO a list of patients the medical home feels are their patients and receive help from the RCCO to understand why certain patients are attributed to another medical home. If the patient is determined to be more appropriately attributed to the inquiring medical home, then the RCCO should help re-attribute the patient to the correct medical home.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

- The payment structure absolutely does not support the ACC goals. A medical home does not receive incentives for KPIs unless the RCCO meets its KPI. This becomes a disincentive, because many medical homes meet their performance targets, but do not get rewarded because the RCCO did not meet its targets. So the medical home has no incentive to maintain the performance. The philosophy that HCPF has espoused (that the high performing medical home should encourage or help the low performing

medical home) is not realistic and is not how the real world works. There is no time for that, plus the high performing medical home has no way of knowing who is low performing. This idea shows a lack of understanding of the world where health cares is delivered. Medical homes need to receive full incentives when they meet their KPI targets, no matter what happens in the RCCO.

- The incentives are too low to change much. Also, the KPIs need to remain focused on process, not outcomes, until the data is more sophisticated to accurately attribute patients and account for risk factors.

- Many medical homes have the ability to collect REAL-TIME data from their EHR and their claims database, which can be used to measure performance more accurately than the SDAC. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and providers to develop a vetting process that will enable HCPF and RCCOs to trust the medical home self-reported real-time data.

- Since children are the majority and give the best chance of truly improving health and wellness, KPIs need to be more child-focused. And since the potential cost savings for children's health care are so far in the future, KPIs need to be intermediate, process outcomes.

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

There is very little of the infrastructure in the state in place at the present time to enable capitation to be implemented successfully. Here are just some of the changes that would need to be in place before it would be fair or prudent to implement capitation:

- The state would need to already be paying fair amounts for all aspects of the care needed by Medicaid recipients before it could effectively move to capitation. In other words, codes for things that HCPF wants done under capitation should be opened and reimbursement adequately now. This would encourage medical homes to already be doing these things before the change to capitation. It would also give HCPF and medical homes experience regarding what the actual costs are for providing the desired services and determine a fair capitation. It will be difficult to change behavior to include new activities under capitation among providers, if you continue to hold codes closed now for things you want done under capitation. You have to help the medical homes create the habits you want before the switch to capitation.

- All providers would have to be reliably involved in the ACC: primary care, all of the various adult and child specialists, the hospitals, the therapies, dentists, mental health providers, etc.

- The data system would have to be able to report real time data and be far, far more accurate than it is now.

- The attribution system is flawed. That would have to be improved and provide accurate, real-time attribution data before capitation should be instituted.

- You will have to change a variety of policies that are barriers to population management.

- Capitation has to be combined with significant incentives to implement processes and improve outcomes. So, you will need to have the incentive system very well developed and viewed by providers as motivating before implementing capitation

- Healthcare for children focuses on prevention, early detection and early intervention, which require initial increased investment to reduce potential expenses many years and decades down the line. Other ACO programs have shown that savings on children are difficult to show early on. So, incentives in the care of children will initially be for intermediate outcomes (or for process outcomes) and need to be direct incentives rather than incentives in the form of shared savings.

- Early in the transition from pre-ACC payment methods to ACC payment structure (2012), some medical homes were asked to return money to Medicaid. Transitions like that (for example the transition to capitation) have to avoid this. Primary care medical homes have such narrow margins that this can be very difficult financially on a medical home

- Many medical homes have the ability to collect from their EHR and their claims database REAL-TIME data with which performance can be measured. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and providers to develop a vetting process that will enable HCPF and RCCOs to trust that medical home self-reported real-time data is trustworthy.

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

Many medical homes have the capability and infrastructure to adapt to payment tied to value. What is missing is the state, HCPF, RCCO, BHO infrastructure. See all of the infrastructure elements HCPF needs to have in place listed in question 60

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

- The HCPF Payment Reform Committee should meet at a time when providers and practice managers can actually attend. Monday afternoons is probably the worst time to actually enable providers or practice managers to attend. Once you select an appropriate time, then actively recruit participation.

- Make sure that your efforts are statewide. Views are different in the various regions of the state.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

- Many medical homes have the ability to collect from their EHR and their claims database REAL-TIME data with which performance can be measured. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and provider from medical homes to develop a vetting process that will enable HCPF and RCCOs to trust medical home self-reported real-time data.

- The measures for children can be drawn from HEDIS measures or CHIPRA measures or from the Pediatric Measurement Proposal that HCPF did in 2010 with the help of Jim Todd.
  Appropriate child health measures could be selected from the following measures :
  - Well child visits appropriate for age
  - Developmental screening by three years of age
  - Teen depression screening
  - Complete immunization status by age two
  - Post-partum depression screening rate for mothers of newborns by age 4 months
  - Appropriate antibiotic use in URI and strep pharyngitis

- Medical homes could also be measured on:
  - Patient (or family) satisfaction ratings
  - Documentation of QI projects

Screening should be part of KPIs, but you need to do more than just create a KPI. If you are going to have KPIs, then you need to track not only the number of times a screening was done, but also track the v-codes (or some way to track positives) and make them available in the SDAC so medical homes can track them. And the SDAC needs to track referrals (or intervention). Otherwise it is not worth measuring the number of screenings.

- The PCMP or medical home should receive real-time data (less than a month since date of service) with data that will allow them to compare their performance with performance of similar type of medical home.

- Healthcare for children focuses on prevention, early detection and early intervention, which require initial increased investment to reduce potential expenses many years and decades down the line. Other ACO programs have shown that savings on children are difficult to show early on. So, incentives in the care of children will initially be for intermediate outcomes (or for process outcomes) and need to be direct incentives rather than incentives in the form of shared savings.

69) Measures for payment. Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☒
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

We only need 2-4 KPIs. Any more will dilute the effect. What we really want is good data, so we can improve our outcomes by doing a quality improvement project. Since children are the majority of Medicaid recipients and give you the best chance of truly improving health and wellness in the long term, KPIs need to be more child-focused. And since the savings are so far in the future, KPIs need to be intermediate, process outcomes.

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

ACC Request for Information

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Dawn M Dycus, MD

Location: 183 S. 18th Ave, Brighton CO 80601

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Brighton Pediatrics

Location: same

☐ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☒ Medical provider / PCMP / other provider
  i. Type or specialty: Pediatrics
  ii. Area of practice: private practice
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☒ Other (please describe): Advocate for children on Medicaid

How have you been involved in the ACC program and what interaction have you had with RCCOs:

I have not had any interaction with RCCOs that I am aware of

Please briefly describe your involvement with Medicaid, either in Colorado or another state:

I am a provider in an office that accepts Medicaid patients.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely
☐ Likely
☒ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

Are you currently involved in the ACC program?

☐ Yes
☐ No
☒ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☐ 3-4 years
☐ Since before the program was implemented.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

- Reimbursement (mostly due to the Federal ACA) is fairer now.

- The decision to make the well child visit one of the KPIs was a very good decision in behalf of children, but unfortunately attribution is still flawed and the SDAC data is delayed and often inaccurate. So, it is difficult to create an effective QI process to improve the KPI, but this is a good start.

- The decision to focus on integrated behavioral health in medical homes is a wonderful decision to improve health outcomes for people covered by Medicaid. Thank you.

- You have a great opportunity to do what is needed for the majority of Medicaid recipients. The majority of Medicaid recipients in Colorado are children and adolescents; they should not be considered one of the subgroups. The following principles should be incorporated into the core objectives of the ACC:

    - Children's health care needs are very different than adults. For adults, the focus is on managing chronic disease more effectively. For children, it is about preventing the development of those chronic diseases.
    - If the ACC really wants to focus on health and wellness, the greatest opportunity is with the children (the majority of Medicaid recipients). By focusing on preventive care, early screening and early intervention for children, there will be big savings; unfortunately those savings may not occur for many years or decades in the future, but the investment will eventually be worth it.
    - So, the ACC will need to invest in children to the extent possible now even though the savings come much later. We recommend that a portion of short-term savings that occurs due to chronic disease management in adults in the ACC be invested back into preventive care for children.
    - Children are part of families and you can't help the child unless you help the family. So, care coordination is more involved for children since it includes care coordination of the parents/family.
    - There is increased recognition that behavioral health is a part of overall health and should be accessible within a pediatric medical home. However, the current mental health system must have policies, procedures, and resources that support integrated behavioral health activities at the practice level.

2) What is not working well in the ACC Program?

- Attribution continues to attribute patients to the wrong medical home and the process of getting patients reassigned to the correct medical home is onerous for the patient and family.

- The health care data through the SDAC is based on claims so it is delayed and is incomplete (particularly for children). Therefore, it is not very useful in helping medical homes improve outcomes for children.

- Each RCCO does things very differently, which is confusing for medical homes with patients in several RCCOs. RCCOs are inconsistent in how they respond to requests for care coordination (quite variable depending on whom you reach at the RCCO). So the new RFP should ask how RCCOs will develop policies and procedures to make their methods and responses to requests for help more consistent, both within the RCCO and among all RCCOs.

- There are certain expectations/requirements and ways of doing things that are so different from one RCCO to another that it requires significant extra work for the medical home to adapt to the differences. So, the RFP should ask how RCCOs intend to deal with this.

- If a patient lives in one region and goes to a medical home in another region, and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from the patient's region RCCO. This is particularly true in the Denver metro area. <u>There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients.</u>

- The "incentives" now are actually disincentives, especially the requirement that the RCCO must meet its KPIs before a high performing medical home can be rewarded for meeting its KPIs. The concept behind this approach is not consistent with how health care systems (and "medical neighborhoods") work.

- The geography of the 7 regions does not reflect the natural geography of health care systems and referral patterns. Larimer County should be in Region 2.

- RCCOs are not providing the level of care coordination that Medicaid patients need. We have had RCCO "care coordinators" just tell us to call 211. The level of commitment that patients and families need is difficult to find, unless care coordination is provided at the medical home level or the community level.

- Both family practices and pediatric practices report that the SDAC does not reflect their own data that the practice can obtain from their EHR or their own claims data. This is particularly true regarding data on health care screening. The RFP should ask how RCCOs and HCPF should take advantage of this practice-based data.

- Most medical homes are not working closely with RCCOs and are not receiving much support. The RFP should ask how RCCOs intend to work more closely with medical homes.

- Feedback from RCCOs to the medical home regarding patients referred to the RCCO for care coordination is spotty. How will RCCOs consistently provide feedback and communication to the medical home regarding what was done for the patients and whether there was improvement?

- There has been difficulty with communication from the state level through the RCCOs down to the individual practice/provider level. Providers feel as though they are not well informed from HCPF or RCCOs. We are grateful that CCHAP keeps us informed.

- The current system does not take into account the movement of patients on and off Medicaid and movement between RCCOs. Whether for KPIs or future shared savings incentives, practices need to be evaluated on established patients who have been in a practice for a minimum of six months. This allows the medical home to actually have time to make an impact on the child's care. Otherwise, it is a substantial disincentive for practices to be open to the more complex and challenging patients, those that likely need access the most.

- Currently, there is very little communication and alignment between BHO's and RCCO's. In order for integrated behavioral health to be successful at the practice and community level, the BHO's and RCCO's must have similar goals, policies/procedures that are aligned, payment structures that are aligned with movement toward integration and ongoing close communication with one another. The RFP should ask how they intend to do this.

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

- The decision to focus on integrated behavioral health in medical homes is a wonderful decision to improve health outcomes for people covered by Medicaid. Thank you.

- If Colorado is serious about promoting integration of behavioral and physical (medical) health care, then the RCCOs and BHOs should be integrated. This would mean they should have the same regions and function as though they are one organization. This would reduce duplication of efforts and have better alignment of incentives and payments that support integrated care.

- Open the behavioral health and wellness codes (96150 – 96155) now. Don't wait. This will encourage integration immediately and enable medical homes to start now the process of evolving toward full integration.

- Care coordination for both behavioral health and medical care should be done in the primary care setting. And either the RCCO and/or the BHO should delegate the responsibility to do care coordination and a pmpm to cover the expense to the medical home as part of the payment reform process. And behavioral health care coordination and medical care coordination needs to be fully reimbursed. In addition, the BHO and the RCCO will need to have information and care coordinators to assist medical homes to handle uncommon or very complex issues.

- Provide infrastructure and funding for data collection and management to support integrated behavioral health in the medical home and the care coordination that will have to be part of that. Utilizing 5DAC data is just one way to understand the activities within a medical home. 5DAC data is delayed and does not include enough information to support behavioral health care coordination in the medical home. Other methods and technologies are needed. There will need to be an investment in the development of new technologies and methods to do behavioral screening, track referrals, document treatment and collect data on the whole care coordination process at the medical home level. This will require adequate reimbursement to cover the cost of starting up new care coordination programs in the medical home and start up technologies to improve screening, intervention and care coordination with follow through in the medical home.

- The CPACK program developed by CBHC is a very good program, particularly the following:
  a. Assistance with finding a behavioral health provider for patients
  b. Telephone consultation by a child psychiatrist to primary care providers
  We recommend that BHOs be required to provide the 2 components above as part of their new contracts.

- Payment options for integrated behavioral health (not just co-location) need to be clear and understandable to providers and practices. In order for the integrated model to be sustainable, there need to be ways to access understandable billing rules/policies.

Care Coordination

Question 12) What needs for children/fomilies should be coordinated in medical homes ond ore there services that should not be o part of care coordinotian by the pediatric and fomily medicol home

One of the most difficult services to provide in the medical home is home visits. Support from the larger system is needed.

Services that can be provided in a pediatric or family medical home are: complex medical coordination including logistics/travel, ancillary services (PT/OT/home health services, ...), collaboration with mental/behavioral health, collaboration regarding school needs, referrals to early intervention services and Child Find, referral to other agencies (rehab, hospice, ...), collaboration with foster care and DHS system. RCCOs need to help medical homes with needs like assistance with housing, food, parental employment, child care, in which case the RCCO can help families connect with other agencies that provide these services.

Question 19: How should care coordination program be evaluated? How should its outcomes be measured?

A care coordination program should initially be measured by having good processes, not measured by outcomes, until solid data exists on outcomes that are risk adjusted and accurate for children. Initially all measures need to be quite separated from outcomes that are highly tied to patient behavior, or practices will again be less likely to serve those with highest risk.

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Our medical home relates to multiple RCCOs and we want to be delegated to do care coordination. If all RCCOs allowed medical homes to be delegated to do care coordination, we could receive a pmpm from all of them, which would enable us to afford to hire enough care coordinators to meet the needs of all of our ACC patients.

Where should care coordinotion be done? Care coordination is best done in the medical home. We are willing to do care coordination, because we have a relationship with our patients and they trust us and we recognize that coordinating complex medical care is essential for good care and for cost savings. Also, the primary care provider is best positioned to have a long term relationship with the patient, and therefore know and understand other aspects of the patient's life and how important those non-medical factors are on the patient's health and health issues.

If care coordination cannot be done in the medical home, then it is best done by community-based organizations. The least effective, least well-received, least trusted is care coordination done from a call center in an RCCO. The role of the RCCO should be to help the medical home-based care coordination staff access resources for families.

The majority of practices are willing to provide Care Coordination, if they can get financial support (PMPM) for providing the service.

Should you be doing care coordination for certain patient populations e.g. children with asthma or special needs children? Or for your entire Medicaid population healthy or chronically ill? The overall goal of Colorado Medicaid should be to provide care coordination services for ALL patients in the Medicaid population (for some patients it may be very minimal, others extensive). This is the essence of preventive care. A care

coordinator that is based in the medical home is in the best position to help identify risk factors proactively, as early as possible before they impact a patient's health and cause illness. Children with special healthcare needs (complex, complicated) require a higher level of care coordination, so the pmpm attached to their care coordination needs to be risk adjusted.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

- All RCCOs should have their offices in the region served, should be non-profits, be a Medicaid provider and be incorporated only in Colorado.

- All RCCOs should offer to delegate care coordination to medical homes willing to accept that responsibility and the RCCO should share a portion of the RCCO pmpm with the medical home that accepts delegation.

- All RCCOs should use the same criteria for delegation and for the amount that is paid for delegated services of care coordination. By doing this, services can reach a standard across the state. A patient would have access to similar services no matter where they moved across Colorado.

- RCCOs should all agree on how they will effectively communicate to medical homes regarding any contact the RCCO has with patients attributed to the medical home. They should include PCMPs in developing those criteria.

- All RCCOs should help (or contract with an organization to help) medical homes understand how to access their SDAC data, understand their data and use it to develop rapid cycle QI projects to improve health outcomes and meet KPIs.

- All RCCOs should agree to provide uniform support for medical homes when a medical home asks for help with care coordination, even when the medical home is in another region (and contracted with another RCCO) but the patient is in the first RCCO's region.

- RCCOs should be required to allow medical homes to give the RCCO a list of patients the medical home feels is their patients and receive help from the RCCO to understand why certain patients have been attributed to another medical home. If the patient is determined to be more appropriately attributed to the inquiring medical home, then the RCCO should help re-attribute the patient to the correct medical home.

- RCCOs should share on a regular basis the RCCO's performance on KPIs and share savings incentives and share with the medical home how their own performance compares with other medical homes.

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

This is particularly applicable to the Denver metro area. There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients. For many expectations/requirements and ways of doing things the RCCOs are so different from one another that it requires significant extra work for medical homes to adapt to the differences. In addition, if a patient lives in one region and goes to a medical home in another region, and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from that first region.

27) Should the RCCO region maps change? Why or why not? If so, how?

Yes. There are two changes we recommend:

- Larimer County should be included in Region 2, since the medical community and the support organizations of Larimer County and very closely linked to Weld County
- In the Metro Denver area, the boundary issues are so difficult that we recommend one RCCO be responsible for the whole metro area or that medical homes be allowed to choose one RCCO for all of their patients.

28) Should the BHO region maps change? Why or why not? If so, how?

If Colorado is serious about promoting integration of behavioral and physical (medical) health care, then the RCCOs and BHOs should be integrated. This would mean they should have the same regions and function as though they are one organization. They should share incentives that are aligned around successful integration of behavioral and medical services and outcomes. So the BHO maps/regions should conform to the RCCO regions/maps.

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients. There are certain expectations/requirements and ways of doing things that are so different from one RCCO to another that it requires significant extra work to adapt to the differences. If a patient lives in one region and goes to a medical home in another region and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from that first region. This is particularly true in the Denver metro area.

Another alternative: When a practice contracts with a RCCO currently they "belong" to one RCCO. Change that and have them only contract with the state and have that contract extend to all RCCOS. This way RCCOS would be more accountable to standardization through out all of Colorado, and the services provided to patients/families would be more uniform.

34) What role should RCCOs play in attributing clients to their respective PCMPs?

The attribution system is quite flawed still. RCCOs should be required to allow medical homes to give the RCCO a list of patients the medical home feels are their patients and receive help from the RCCO to understand why certain patients are attributed to another medical home. If the patient is determined to be more appropriately attributed to the inquiring medical home, then the RCCO should help re-attribute the patient to the correct medical home.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

- The payment structure absolutely does not support the ACC goals. A medical home does not receive incentives for KPIs unless the RCCO meets its KPI. This becomes a disincentive, because many medical homes meet their performance targets, but do not get rewarded because the RCCO did not meet its targets. So the medical home has no incentive to maintain the performance. The philosophy that HCPF has espoused (that the high performing medical home should encourage or help the low performing medical home) is not realistic and is not how the real world works. There is no time for that, plus the high performing medical home has no way of knowing who is low performing. This idea shows a lack of understanding of the world where health cares is delivered. Medical homes need to receive full incentives when they meet their KPI targets, no matter what happens in the RCCO.

- The incentives are too low to change much. Also, the KPIs need to remain focused on process, not outcomes, until the data is more sophisticated to accurately attribute patients and account for risk factors.

- Many medical homes have the ability to collect REAL-TIME data from their EHR and their claims database, which can be used to measure performance more accurately than the SDAC. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and providers to develop a vetting process that will enable HCPF and RCCOs to trust the medical home self-reported real-time data.

- Since children are the majority and give the best chance of truly improving health and wellness, KPIs need to be more child-focused. And since the potential cost savings for children's health care are so far in the future, KPIs need to be intermediate, process outcomes.

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

There is very little of the infrastructure in the state in place at the present time to enable capitation to be implemented successfully. Here are just some of the changes that would need to be in place before it would be fair or prudent to implement capitation:

- The state would need to already be paying fair amounts for all aspects of the care needed by Medicaid recipients before it could effectively move to capitation. In other words, codes for things that HCPF wants done under capitation should be opened and reimbursement adequately now. This would encourage medical homes to already be doing these things before the change to capitation. It would also give HCPF and medical homes experience regarding what the actual costs are for providing the desired services and determine a fair capitation. It will be difficult to change behavior to include new activities under capitation among providers, if you continue to hold codes closed now for things you want done under capitation. You have to help the medical homes create the habits you want before the switch to capitation.

- All providers would have to be reliably involved in the ACC: primary care, all of the various adult and child specialists, the hospitals, the therapies, dentists, mental health providers, etc.

- The data system would have to be able to report real time data and be far, far more accurate than it is now.

- The attribution system is flawed. That would have to be improved and provide accurate, real-time attribution data before capitation should be instituted.

- You will have to change a variety of policies that are barriers to population management.

- Capitation has to be combined with significant incentives to implement processes and improve outcomes. So, you will need to have the incentive system very well developed and viewed by providers as motivating before implementing capitation

- Healthcare for children focuses on prevention, early detection and early intervention, which require initial increased investment to reduce potential expenses many years and decades down the line. Other ACO programs have shown that savings on children are difficult to show early on. So, incentives in the care of children will initially be for intermediate outcomes (or for process outcomes) and need to be direct incentives rather than incentives in the form of shared savings.

- Early in the transition from pre-ACC payment methods to ACC payment structure (2012), some medical homes were asked to return money to Medicaid. Transitions like that (for example the transition to capitation) have to avoid this. Primary care medical homes have such narrow margins that this can be very difficult financially on a medical home

- Many medical homes have the ability to collect from their EHR and their claims database REAL-TIME data with which performance can be measured. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to

use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and providers to develop a vetting process that will enable HCPF and RCCOs to trust that medical home self-reported real-time data is trustworthy.

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

Many medical homes have the capability and infrastructure to adapt to payment tied to value. What is missing is the state, HCPF, RCCO, BHO infrastructure. See all of the infrastructure elements HCPF needs to have in place listed in question 60

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

- The HCPF Payment Reform Committee should meet at a time when providers and practice managers can actually attend. Monday afternoons is probably the worst time to actually enable providers or practice managers to attend. Once you select an appropriate time, then actively recruit participation.

- Make sure that your efforts are statewide. Views are different in the various regions of the state.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

- Many medical homes have the ability to collect from their EHR and their claims database REAL-TIME data with which performance can be measured. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and provider from medical homes to develop a vetting process that will enable HCPF and RCCOs to trust medical home self-reported real-time data.

- The measures for children can be drawn from HEDIS measures or CHIPRA measures or from the Pediatric Measurement Proposal that HCPF did in 2010 with the help of Jim Todd.
  Appropriate child health measures could be selected from the following measures :
  - Well child visits appropriate for age
  - Developmental screening by three years of age
  - Teen depression screening
  - Complete immunization status by age two
  - Post-partum depression screening rate for mothers of newborns by age 4 months
  - Appropriate antibiotic use in URI and strep pharyngitis

- Medical homes could also be measured on:
  - Patient (or family) satisfaction ratings

- Documentation of QI projects

Screening should be part of KPIs, but you need to do more than just create a KPI. If you are going to have KPIs, then you need to track not only the number of times a screening was done, but also track the v-codes (or some way to track positives) and make them available in the SDAC so medical homes can track them. And the SDAC needs to track referrals (or intervention). Otherwise it is not worth measuring the number of screenings.

- The PCMP or medical home should receive real-time data (less than a month since date of service) with data that will allow them to compare their performance with performance of similar type of medical home.

- Healthcare for children focuses on prevention, early detection and early intervention, which require initial increased investment to reduce potential expenses many years and decades down the line. Other ACO programs have shown that savings on children are difficult to show early on. So, incentives in the care of children will initially be for intermediate outcomes (or for process outcomes) and need to be direct incentives rather than incentives in the form of shared savings.

69) Measures for payment. Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures

☐ Client's family member

☐ Client advocate

☒ Medical provider / PCMP / other provider

i. Type or specialty:
ii. Area of practice: Click here to enter text.

x Provider advocate (e.g. medical society)

☐ Potential bidder for RCCO contract

☐ Behavioral Health Organization

☐ Data or HIT entity

☐ Foundation

☐ Educational or research institution

☐ Another public or private program

☐ Legislator or elected official

☒ Other (please describe): Advocate for children on Medicaid

How have you been involved in the ACC program and what interaction have you had with RCCOs:

Click here to enter text.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:

Click here to enter text.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely

☐ Likely

☐ Reserved (waiting to see the RFP)

☐ Unlikely without significant changes

☐ Will not seek to participate

☐ N/A

Please feel welcome to describe why or why not using the space below.

Are you currently involved in the ACC program?

☐ Yes

☐ No

☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year

☐ 1-2 years

☐ 2-3 years

☐ 3-4 years

☐ Since before the program was implemented.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

- Reimbursement (mostly due to the Federal ACA) is fairer now.

- The decision to make the well child visit one of the KPIs was a very good decision in behalf of children, but unfortunately attribution is still flawed and the SDAC data is delayed and often inaccurate. So, it is difficult to create an effective QI process to improve the KPI, but this is a good start.

- The decision to focus on integrated behavioral health in medical homes is a wonderful decision to improve health outcomes for people covered by Medicaid. Thank you.

- You have a great opportunity to do what is needed for the majority of Medicaid recipients. The majority of Medicaid recipients in Colorado are children and adolescents; they should not be considered one of the subgroups. The following principles should be incorporated into the core objectives of the ACC:

    - Children's health care needs are very different than adults. For adults, the focus is on managing chronic disease more effectively. For children, it is about preventing the development of those chronic diseases.
    - If the ACC really wants to focus on health and wellness, the greatest opportunity is with the children (the majority of Medicaid recipients). By focusing on preventive care, early screening and early intervention for children, there will be big savings; unfortunately those savings may not occur for many years or decades in the future, but the investment will eventually be worth it.
    - So, the ACC will need to invest in children to the extent possible now even though the savings come much later. We recommend that a portion of short-term savings that occurs due to chronic disease management in adults in the ACC be invested back into preventive care for children.
    - Children are part of families and you can't help the child unless you help the family. So, care coordination is more involved for children since it includes care coordination of the parents/family.
    - There is increased recognition that behavioral health is a part of overall health and should be accessible within a pediatric medical home. However, the current mental health system must have policies, procedures, and resources that support integrated behavioral health activities at the practice level.

2) What is not working well in the ACC Program?

- Attribution continues to attribute patients to the wrong medical home and the process of getting patients reassigned to the correct medical home is onerous for the patient and family.

- The health care data through the SDAC is based on claims so it is delayed and is incomplete (particularly for children). Therefore, it is not very useful in helping medical homes improve outcomes for children.

- Each RCCO does things very differently, which is confusing for medical homes with patients in several RCCOs. RCCOs are inconsistent in how they respond to requests for care coordination (quite variable depending on whom you reach at the RCCO). So the new RFP should ask how RCCOs will develop policies and procedures to make their methods and responses to requests for help more consistent, both within

the RCCO and among all RCCOs.

- There are certain expectations/requirements and ways of doing things that are so different from one RCCO to another that it requires significant extra work for the medical home to adapt to the differences. To deal with this. So, the RFP should ask how RCCOs intend

- If a patient lives in one region and goes to a medical home in another region, and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from the patient's region RCCO. This is particularly true in the Denver metro area. <u>There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients.</u>

- The "incentives" now are actually disincentives, especially the requirement that the RCCO must meet its KPIs before a high performing medical home can be rewarded for meeting its KPIs. The concept behind this approach is not consistent with how health care systems (and "medical neighborhoods") work.

- The geography of the 7 regions does not reflect the natural geography of health care systems and referral patterns. Larimer County should be in Region 2.

- RCCOs are not providing the level of care coordination that Medicaid patients need. We have had RCCO "care coordinators" just tell us to call 211. The level of commitment that patients and families need is difficult to find, unless care coordination is provided at the medical home level or the community level.

- Both family practices and pediatric practices report that the SDAC does not reflect their own data that the practice can obtain from their EHR or their own claims data. This is particularly true regarding data on health care screening. The RFP should ask how RCCOs and HCPF should take advantage of this practice-based data.

- Most medical homes are not working closely with RCCOs and are not receiving much support. The RFP should ask how RCCOs intend to work more closely with medical homes.

- Feedback from RCCOs to the medical home regarding patients referred to the RCCO for care coordination is spotty. How will RCCOs consistently provide feedback and communication to the medical home regarding what was done for the patients and whether there was improvement?

- There has been difficulty with communication from the state level through the RCCOs down to the individual practice/provider level. Providers feel as though they are not well informed from HCPF or RCCOs. We are grateful that CCHAP keeps us informed.

- The current system does not take into account the movement of patients on and off Medicaid and movement between RCCOs. Whether for KPIs or future shared savings incentives, practices need to be evaluated on established patients who have been in a practice for a minimum of six months. This allows the medical home to actually have time to make an impact on the child's care. Otherwise, it is a substantial disincentive for practices to be open to the more complex and challenging patients, those that likely need access the most.

- Currently, there is very little communication and alignment between BHO's and RCCO's. In order for integrated behavioral health to be successful at the practice and community level, the BHO's and RCCO's

must have similar goals, policies/procedures that are aligned, payment structures that are aligned with movement toward integration and ongoing close communication with one another. The RFP should ask how they intend to do this.

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

- The decision to focus on integrated behavioral health in medical homes is a wonderful decision to improve health outcomes for people covered by Medicaid. Thank you.

- If Colorado is serious about promoting integration of behavioral and physical (medical) health care, then the RCCOs and BHOs should be integrated. This would mean they should have the same regions and function as though they are one organization. This would reduce duplication of efforts and have better alignment of incentives and payments that support integrated care.

- Open the behavioral health and wellness codes (96150 – 96155) now. Don't wait. This will encourage integration immediately and enable medical homes to start now the process of evolving toward full integration.

- Care coordination for both behavioral health and medical care should be done in the primary care setting. And either the RCCO and/or the BHO should delegate the responsibility to do care coordination and a pmpm to cover the expense to the medical home as part of the payment reform process. And behavioral health care coordination and medical care coordination needs to be fully reimbursed. In addition, the BHO and the RCCO will need to have information and care coordinators to assist medical homes to handle uncommon or very complex issues.

- Provide infrastructure and funding for data collection and management to support integrated behavioral health in the medical home and the care coordination that will have to be part of that. Utilizing 5DAC data is just one way to understand the activities within a medical home. 5DAC data is delayed and does not include enough information to support behavioral health care coordination in the medical home. Other methods and technologies are needed. There will need to be an investment in the development of new technologies and methods to do behavioral screening, track referrals, document treatment and collect data on the whole care coordination process at the medical home level. This will require adequate reimbursement to cover the cost of starting up new care coordination programs in the medical home and start up technologies to improve screening, intervention and care coordination with follow through in the medical home.

- The CPACK program developed by CBHC is a very good program, particularly the following:
  a. Assistance with finding a behavioral health provider for patients
  b. Telephone consultation by a child psychiatrist to primary care providers

We recommend that BHOs be required to provide the 2 components above as part of their new contracts.

- Payment options for integrated behavioral health (not just co-location) need to be clear and understandable to providers and practices. In order for the integrated model to be sustainable, there need to be ways to access understandable billing rules/policies.

Care Coordination

Question 12) What needs for children/families should be coordinated in medical homes and are there services that should not be a part of care coordination by the pediatric and family medical home

One of the most difficult services to provide in the medical home is home visits. Support from the larger system is needed.

Services that can be provided in a pediatric or family medical home are: complex medical coordination including logistics/travel, ancillary services (PT/OT/home health services, ...), collaboration with mental/behavioral health, collaboration regarding school needs, referrals to early intervention services and Child Find, referral to other agencies (rehab, hospice, ...), collaboration with foster care and DHS system. RCCOs need to help medical homes with needs like assistance with housing, food, parental employment, child care, in which case the RCCO can help families connect with other agencies that provide these services.

Question 19: How should care coordination program be evaluated? How should its outcomes be measured?

A care coordination program should initially be measured by having good processes, not measured by outcomes, until solid data exists on outcomes that are risk adjusted and accurate for children. Initially all measures need to be quite separated from outcomes that are highly tied to patient behavior, or practices will again be less likely to serve those with highest risk.

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Our medical home relates to multiple RCCOs and we want to be delegated to do care coordination. If all RCCOs allowed medical homes to be delegated to do care coordination, we could receive a pmpm from all of them, which would enable us to afford to hire enough care coordinators to meet the needs of all of our ACC patients.

Where should care coordination be done? Care coordination is best done in the medical home. We are willing to do care coordination, because we have a relationship with our patients and they trust us and we recognize that coordinating complex medical care is essential for good care and for cost savings. Also, the primary care provider is best positioned to have a long term relationship with the patient, and therefore know and understand other aspects of the patient's life and how important those non-medical factors are on the patient's health and health issues.

If care coordination cannot be done in the medical home, then it is best done by community-based organizations. The least effective, least well-received, least trusted is care coordination done from a call center in an RCCO. The role of the RCCO should be to help the medical home-based care coordination staff access resources for families.

The majority of practices are willing to provide Care Coordination, if they can get financial support (PMPM) for providing the service.

Should you be doing care coordination for certain patient populations e.g. children with asthma or special needs children? Or for your entire Medicaid population healthy or chronically ill? The overall goal of Colorado Medicaid should be to provide care coordination services for ALL patients in the Medicaid population (for some patients it may be very minimal, others extensive). This is the essence of preventive care. A care coordinator that is based in the medical home is in the best position to help identify risk factors proactively, as early as possible before they impact a patient's health and cause illness. Children with special healthcare needs (complex, complicated) require a higher level of care coordination, so the pmpm attached to their care coordination needs to be risk adjusted.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

- All RCCOs should have their offices in the region served, should be non-profits, be a Medicaid provider and be incorporated only in Colorado.
- All RCCOs should offer to delegate care coordination to medical homes willing to accept that responsibility and the RCCO should share a portion of the RCCO pmpm with the medical home that accepts delegation.
- All RCCOs should use the same criteria for delegation and for the amount that is paid for delegated services of care coordination. By doing this, services can reach a standard across the state. A patient would have access to similar services no matter where they moved across Colorado.
- RCCOs should all agree on how they will effectively communicate to medical homes regarding any contact the RCCO has with patients attributed to the medical home. They should include PCMPs in developing those criteria.
- All RCCOs should help (or contract with an organization to help) medical homes understand how to access their SDAC data, understand their data and use it to develop rapid cycle QI projects to improve health outcomes and meet KPIs.
- All RCCOs should agree to provide uniform support for medical homes when a medical home asks for help with care coordination, even when the medical home is in another region (and contracted with another RCCO) but the patient is in the first RCCO's region.

- RCCOs should be required to allow medical homes to give the RCCO a list of patients the medical home feels is their patients and receive help from the RCCO to understand why certain patients have been attributed to another medical home. If the patient is determined to be more appropriately attributed to the inquiring medical home, then the RCCO should help re-attribute the patient to the correct medical home.

- RCCOs should share on a regular basis the RCCO's performance on KPIs and share savings incentives and share with the medical home how their own performance compares with other medical homes.

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

This is particularly applicable to the Denver metro area. There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients. For many expectations/requirements and ways of doing things the RCCOs are so different from one another that it requires significant extra work for medical homes to adapt to the differences. In addition, if a patient lives in one region and goes to a medical home in another region, and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from that first region.

27) Should the RCCO region maps change? Why or why not? If so, how?

Yes. There are two changes we recommend:

- Larimer County should be included in Region 2, since the medical community and the support organizations of Larimer County and very closely linked to Weld County

- In the Metro Denver area, the boundary issues are so difficult that we recommend one RCCO be responsible for the whole metro area or that medical homes be allowed to choose one RCCO for all of their patients.

28) Should the BHO region maps change? Why or why not? If so, how?

If Colorado is serious about promoting integration of behavioral and physical (medical) health care, then the RCCOs and BHOs should be integrated. This would mean they should have the same regions and function as though they are one organization. They should share incentives that are aligned around successful integration of behavioral and medical services and outcomes. So the BHO maps/regions should conform to the RCCO regions/maps.

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients. There are certain expectations/requirements and ways of doing things that are so different from one RCCO to another that it requires significant extra work to adapt to the differences. If a patient lives in one region and goes to a medical home in another region and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from that first region. This is particularly true in the Denver metro area.

Another alternative: When a practice contracts with a RCCO currently they "belong" to one RCCO. Change that and have them only contract with the state and have that contract extend to all RCCOS. This way RCCOS would be more accountable to standardization through out all of Colorado, and the services provided to patients/families would be more uniform.

34) What role should RCCOs play in attributing clients to their respective PCMPs?

The attribution system is quite flawed still. RCCOs should be required to allow medical homes to give the RCCO a list of patients the medical home feels are their patients and receive help from the RCCO to understand why certain patients are attributed to another medical home. If the patient is determined to be more appropriately attributed to the inquiring medical home, then the RCCO should help re-attribute the patient to the correct medical home.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

- The payment structure absolutely does not support the ACC goals. A medical home does not receive incentives for KPIs unless the RCCO meets its KPI. This becomes a disincentive, because many medical homes meet their performance targets, but do not get rewarded because the RCCO did not meet its targets. So the medical home has no incentive to maintain the performance. The philosophy that HCPF has espoused (that the high performing medical home should encourage or help the low performing medical home) is not realistic and is not how the real world works. There is no time for that, plus the high performing medical home has no way of knowing who is low performing. This idea shows a lack of understanding of the world where health cares is delivered. Medical homes need to receive full incentives when they meet their KPI targets, no matter what happens in the RCCO.

- The incentives are too low to change much. Also, the KPIs need to remain focused on process, not outcomes, until the data is more sophisticated to accurately attribute patients and account for risk factors.

- Many medical homes have the ability to collect REAL-TIME data from their EHR and their claims database, which can be used to measure performance more accurately than the SDAC. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes

to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and providers to develop a vetting process that will enable HCPF and RCCOs to trust the medical home self-reported real-time data.

- Since children are the majority and give the best chance of truly improving health and wellness, KPIs need to be more child-focused. And since the potential cost savings for children's health care are so far in the future, KPIs need to be intermediate, process outcomes.

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

There is very little of the infrastructure in the state in place at the present time to enable capitation to be implemented successfully. Here are just some of the changes that would need to be in place before it would be fair or prudent to implement capitation:

- The state would need to already be paying fair amounts for all aspects of the care needed by Medicaid recipients before it could effectively move to capitation. In other words, codes for things that HCPF wants done under capitation should be opened and reimbursement adequately now. This would encourage medical homes to already be doing these things before the change to capitation. It would also give HCPF and medical homes experience regarding what the actual costs are for providing the desired services and determine a fair capitation. It will be difficult to change behavior to include new activities under capitation among providers, if you continue to hold codes closed now for things you want done under capitation. You have to help the medical homes create the habits you want before the switch to capitation.

- All providers would have to be reliably involved in the ACC: primary care, all of the various adult and child specialists, the hospitals, the therapies, dentists, mental health providers, etc.

- The data system would have to be able to report real time data and be far, far more accurate than it is now.

- The attribution system is flawed. That would have to be improved and provide accurate, real-time attribution data before capitation should be instituted.

- You will have to change a variety of policies that are barriers to population management.

- Capitation has to be combined with significant incentives to implement processes and improve outcomes. So, you will need to have the incentive system very well developed and viewed by providers as motivating before implementing capitation

- Healthcare for children focuses on prevention, early detection and early intervention, which require initial increased investment to reduce potential expenses many years and decades down the line. Other ACO programs have shown that savings on children are difficult to show early on. So, incentives in the care of

children will initially be for intermediate outcomes (or for process outcomes) and need to be direct incentives rather than incentives in the form of shared savings.

- Early in the transition from pre-ACC payment methods to ACC payment structure (2012), some medical homes were asked to return money to Medicaid. Transitions like that (for example the transition to capitation) have to avoid this. Primary care medical homes have such narrow margins that this can be very difficult financially on a medical home

- Many medical homes have the ability to collect from their EHR and their claims database REAL-TIME data with which performance can be measured. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and providers to develop a vetting process that will enable HCPF and RCCOs to trust that medical home self-reported real-time data is trustworthy.

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

Many medical homes have the capability and infrastructure to adapt to payment tied to value. What is missing is the state, HCPF, RCCO, BHO infrastructure. See all of the infrastructure elements HCPF needs to have in place listed in question 60

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

- The HCPF Payment Reform Committee should meet at a time when providers and practice managers can actually attend. Monday afternoons is probably the worst time to actually enable providers or practice managers to attend. Once you select an appropriate time, then actively recruit participation.

- Make sure that your efforts are statewide. Views are different in the various regions of the state.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

- Many medical homes have the ability to collect from their EHR and their claims database REAL-TIME data with which performance can be measured. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and provider from medical homes to develop a vetting process that will enable HCPF and RCCOs to trust medical home self-reported real-time data.

- The measures for children can be drawn from HEDIS measures or CHIPRA measures or from the Pediatric Measurement Proposal that HCPF did in 2010 with the help of Jim Todd.
  Appropriate child health measures could be selected from the following measures :
  - Well child visits appropriate for age
  - Developmental screening by three years of age
  - Teen depression screening
  - Complete immunization status by age two
  - Post-partum depression screening rate for mothers of newborns by age 4 months
  - Appropriate antibiotic use in URI and strep pharyngitis

- Medical homes could also be measured on:
  - Patient (or family) satisfaction ratings
  - Documentation of QI projects

Screening should be part of KPIs, but you need to do more than just create a KPI. If you are going to have KPIs, then you need to track not only the number of times a screening was done, but also track the v-codes (or some way to track positives) and make them available in the SDAC so medical homes can track them. And the SDAC needs to track referrals (or intervention). Otherwise it is not worth measuring the number of screenings.

- The PCMP or medical home should receive real-time data (less than a month since date of service) with data that will allow them to compare their performance with performance of similar type of medical home.

- Healthcare for children focuses on prevention, early detection and early intervention, which require initial increased investment to reduce potential expenses many years and decades down the line. Other ACO programs have shown that savings on children are difficult to show early on. So, incentives in the care of children will initially be for intermediate outcomes (or for process outcomes) and need to be direct incentives rather than incentives in the form of shared savings.

69) Measures for payment. Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☒
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

We only need 2-4 KPIs. Any more will dilute the effect. What we really want is good data, so we can improve our outcomes by doing a quality improvement project. Since children are the majority of Medicaid recipients and give you the best chance of truly improving health and wellness in the long term, KPIs need to be more child-focused. And since the savings are so far in the future, KPIs need to be intermediate, process outcomes.

THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

ACC Request for Information

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Lowry Pediatrics

Location: 8190 E 1st Ave #100

Denver, CO 80230

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization:

Location:

☐ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☒ Medical provider / PCMP / other provider
  i. Type or specialty:
  ii. Area of practice: Click here to enter text.
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☒ Other (please describe): Advocate for children on Medicaid

How have you been involved in the ACC program and what interaction have you had with RCCOs:

Click here to enter text.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:

Click here to enter text.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

Please feel welcome to describe why or why not using the space below.

Are you currently involved in the ACC program?

☒ Yes
☐ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☒ 2-3 years
☐ 3-4 years
☐ Since before the program was implemented.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

- Reimbursement (mostly due to the Federal ACA) is fairer now.

- The decision to make the well child visit one of the KPIs was a very good decision in behalf of children, but unfortunately attribution is still flawed and the SDAC data is delayed and often inaccurate. So, it is difficult to create an effective QI process to improve the KPI, but this is a good start.

- The decision to focus on integrated behavioral health in medical homes is a wonderful decision to improve health outcomes for people covered by Medicaid. Thank you.

- You have a great opportunity to do what is needed for the majority of Medicaid recipients. The majority of Medicaid recipients in Colorado are children and adolescents; they should not be considered one of the subgroups. The following principles should be incorporated into the core objectives of the ACC:

    - Children's health care needs are very different than adults. For adults, the focus is on managing chronic disease more effectively. For children, it is about preventing the development of those chronic diseases.
    - If the ACC really wants to focus on health and wellness, the greatest opportunity is with the children (the majority of Medicaid recipients). By focusing on preventive care, early screening and early intervention for children, there will be big savings; unfortunately those savings may not occur for many years or decades in the future, but the investment will eventually be worth it.
    - So, the ACC will need to invest in children to the extent possible now even though the savings come much later. We recommend that a portion of short-term savings that occurs due to chronic disease management in adults in the ACC be invested back into preventive care for children.
    - Children are part of families and you can't help the child unless you help the family. So, care coordination is more involved for children since it includes care coordination of the parents/family.
    - There is increased recognition that behavioral health is a part of overall health and should be accessible within a pediatric medical home. However, the current mental health system must have policies, procedures, and resources that support integrated behavioral health activities at the practice level.

2) What is not working well in the ACC Program?

- Attribution continues to attribute patients to the wrong medical home and the process of getting patients reassigned to the correct medical home is onerous for the patient and family.

- The health care data through the SDAC is based on claims so it is delayed and is incomplete (particularly for children). Therefore, it is not very useful in helping medical homes improve outcomes for children.

- Each RCCO does things very differently, which is confusing for medical homes with patients in several RCCOs. RCCOs are inconsistent in how they respond to requests for care coordination (quite variable depending on whom you reach at the RCCO). So the new RFP should ask how RCCOs will develop policies and procedures to make their methods and responses to requests for help more consistent, both within

the RCCO and among all RCCOs.

- There are certain expectations/requirements and ways of doing things that are so different from one RCCO to another that it requires significant extra work for the medical home to adapt to the differences. To deal with this. So, the RFP should ask how RCCOs intend

- If a patient lives in one region and goes to a medical home in another region, and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from the patient's region RCCO. This is particularly true in the Denver metro area. There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients.

- The "incentives" now are actually disincentives, especially the requirement that the RCCO must meet its KPIs before a high performing medical home can be rewarded for meeting its KPIs. The concept behind this approach is not consistent with how health care systems (and "medical neighborhoods") work.

- The geography of the 7 regions does not reflect the natural geography of health care systems and referral patterns. Larimer County should be in Region 2.

- RCCOs are not providing the level of care coordination that Medicaid patients need. We have had RCCO "care coordinators" just tell us to call 211. The level of commitment that patients and families need is difficult to find, unless care coordination is provided at the medical home level or the community level.

- Both family practices and pediatric practices report that the SDAC does not reflect their own data that the practice can obtain from their EHR or their own claims data. This is particularly true regarding data on health care screening. The RFP should ask how RCCOs and HCPF should take advantage of this practice-based data.

- Most medical homes are not working closely with RCCOs and are not receiving much support. The RFP should ask how RCCOs intend to work more closely with medical homes.

- Feedback from RCCOs to the medical home regarding patients referred to the RCCO for care coordination is spotty. How will RCCOs consistently provide feedback and communication to the medical home regarding what was done for the patients and whether there was improvement?

- There has been difficulty with communication from the state level through the RCCOs down to the individual practice/provider level. Providers feel as though they are not well informed from HCPF or RCCOs. We are grateful that CCHAP keeps us informed.

- The current system does not take into account the movement of patients on and off Medicaid and movement between RCCOs. Whether for KPIs or future shared savings incentives, practices need to be evaluated on established patients who have been in a practice for a minimum of six months. This allows the medical home to actually have time to make an impact on the child's care. Otherwise, it is a substantial disincentive for practices to be open to the more complex and challenging patients, those that likely need access the most.

- Currently, there is very little communication and alignment between BHO's and RCCO's. In order for integrated behavioral health to be successful at the practice and community level, the BHO's and RCCO's must have similar goals, policies/procedures that are aligned, payment structures that are aligned with movement toward integration and ongoing close communication with one another. The RFP should ask how they intend to do this.

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

- The decision to focus on integrated behavioral health in medical homes is a wonderful decision to improve health outcomes for people covered by Medicaid. Thank you.

- If Colorado is serious about promoting integration of behavioral and physical (medical) health care, then the RCCOs and BHOs should be integrated. This would mean they should have the same regions and function as though they are one organization. This would reduce duplication of efforts and have better alignment of incentives and payments that support integrated care.

- Open the behavioral health and wellness codes (96150 – 96155) now. Don't wait. This will encourage integration immediately and enable medical homes to start now the process of evolving toward full integration.

- Care coordination for both behavioral health and medical care should be done in the primary care setting. And either the RCCO and/or the BHO should delegate the responsibility to do care coordination and a pmpm to cover the expense to the medical home as part of the payment reform process. And behavioral health care coordination and medical care coordination needs to be fully reimbursed. In addition, the BHO and the RCCO will need to have information and care coordinators to assist medical homes to handle uncommon or very complex issues.

- Provide infrastructure and funding for data collection and management to support integrated behavioral health in the medical home and the care coordination that will have to be part of that. Utilizing SDAC data is just one way to understand the activities within a medical home. SDAC data is delayed and does not include enough information to support behavioral health care coordination in the medical home. Other methods and technologies are needed. There will need to be an investment in the development of new technologies and methods to do behavioral screening, track referrals, document treatment and collect data on the whole care coordination process at the medical home level. This will require adequate reimbursement to cover the cost of starting up new care coordination programs in the medical home and start up technologies to improve screening, intervention and care coordination with follow through in the medical home.

- The CPACK program developed by CBHC is a very good program, particularly the following:
  a. Assistance with finding a behavioral health provider for patients

b. Telephone consultation by a child psychiatrist to primary care providers
We recommend that BHOs be required to provide the 2 components above as part of their new contracts.

- Payment options for integrated behavioral health (not just co-location) need to be clear and understandable to providers and practices. In order for the integrated model to be sustainable, there need to be ways to access understandable billing rules/policies.

Care Caardinatian

Questian 12) What needs for children/families should be caardinated in medical hames and are there services that shauld nat be a part af care caordination by the pediatric and family medical hame

One of the most difficult services to provide in the medical home is home visits. Support from the larger system is needed.

Services that can be provided in a pediatric or family medical home are: complex medical coordination including logistics/travel, ancillary services (PT/OT/home health services, ...), collaboration with mental/behavioral health, collaboration regarding school needs, referrals to early intervention services and Child Find, referral to other agencies (rehab, hospice, ...), collaboration with foster care and DHS system. RCCOs need to help medical homes with needs like assistance with housing, food, parental employment, child care, in which case the RCCO can help families connect with other agencies that provide these services.

Question 19: How should care coordination program be evaluated? How should its outcomes be measured?

A care coordination program should initially be measured by having good processes, not measured by outcomes, until solid data exists on outcomes that are risk adjusted and accurate for children. Initially all measures need to be quite separated from outcomes that are highly tied to patient behavior, or practices will again be less likely to serve those with highest risk.

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Our medical home relates to multiple RCCOs and we want to be delegated to do care coordination. If all RCCOs allowed medical homes to be delegated to do care coordination, we could receive a pmpm from all of them, which would enable us to afford to hire enough care coordinators to meet the needs of all of our ACC patients.

Where should core coordinotion be done? Care coordination is best done in the medical home. We are willing to do care coordination, because we have a relationship with our patients and they trust us and we recognize that coordinating complex medical care is essential for good care and for cost savings. Also, the primary care provider is best positioned to have a long term relationship with the patient, and therefore know and understand other aspects of the patient's life and how important those non-medical factors are on the patient's health and health issues.

If care coordination cannot be done in the medical home, then it is best done by community-based organizations. The least effective, least well-received, least trusted is care coordination done from a call center in an RCCO. The role of the RCCO should be to help the medical home-based care coordination staff access resources for families.

The majority of practices are willing to provide Care Coordination, if they can get financial support (PMPM) for providing the service.

Should you be doing care coordination for certain patient populations e.g. children with asthma or special needs children? Or for your entire Medicaid population healthy or chronically ill? The overall goal of Colorado Medicaid should be to provide care coordination services for ALL patients in the Medicaid population (for some patients it may be very minimal, others extensive). This is the essence of preventive care. A care coordinator that is based in the medical home is in the best position to help identify risk factors proactively, as early as possible before they impact a patient's health and cause illness. Children with special healthcare needs (complex, complicated) require a higher level of care coordination, so the pmpm attached to their care coordination needs to be risk adjusted.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

- All RCCOs should have their offices in the region served, should be non-profits, be a Medicaid provider and be incorporated only in Colorado.
- All RCCOs should offer to delegate care coordination to medical homes willing to accept that responsibility and the RCCO should share a portion of the RCCO pmpm with the medical home that accepts delegation.
- All RCCOs should use the same criteria for delegation and for the amount that is paid for delegated services of care coordination. By doing this, services can reach a standard across the state. A patient would have access to similar services no matter where they moved across Colorado.
- RCCOs should all agree on how they will effectively communicate to medical homes regarding any contact the RCCO has with patients attributed to the medical home. They should include PCMPs in developing those criteria.

- All RCCOs should help (or contract with an organization to help) medical homes understand how to access their SDAC data, understand their data and use it to develop rapid cycle QI projects to improve health outcomes and meet KPIs.

- All RCCOs should agree to provide uniform support for medical homes when a medical home asks for help with care coordination, even when the medical home is in another region (and contracted with another RCCO) but the patient is in the first RCCO's region.

- RCCOs should be required to allow medical homes to give the RCCO a list of patients the medical home feels is their patients and receive help from the RCCO to understand why certain patients have been attributed to another medical home. If the patient is determined to be more appropriately attributed to the inquiring medical home, then the RCCO should help re-attribute the patient to the correct medical home.

- RCCOs should share on a regular basis the RCCO's performance on KPIs and share savings incentives and share with the medical home how their own performance compares with other medical homes.

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

This is particularly applicable to the Denver metro area. There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients. For many expectations/requirements and ways of doing things the RCCOs are so different from one another that it requires significant extra work for medical homes to adapt to the differences. In addition, if a patient lives in one region and goes to a medical home in another region, and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from that first region.

27) Should the RCCO region maps change? Why or why not? If so, how?

Yes. There are two changes we recommend:

- Larimer County should be included in Region 2, since the medical community and the support organizations of Larimer County and very closely linked to Weld County
- In the Metro Denver area, the boundary issues are so difficult that we recommend one RCCO be responsible for the whole metro area or that medical homes be allowed to choose one RCCO for all of their patients.

28) Should the BHO region maps change? Why or why not? If so, how?

If Colorado is serious about promoting integration of behavioral and physical (medical) health care, then the RCCOs and BHOs should be integrated. This would mean they should have the same regions and function as though they are one organization. They should share incentives that are aligned around successful integration of behavioral and medical services and outcomes. So the BHO maps/regions should conform to the RCCO regions/maps.

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients. There are certain expectations/requirements and ways of doing things that are so different from one RCCO to another that it requires significant extra work to adapt to the differences. If a patient lives in one region and goes to a medical home in another region and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from that first region. This is particularly true in the Denver metro area.

Another alternative: When a practice contracts with a RCCO currently they "belong" to one RCCO. Change that and have them only contract with the state and have that contract extend to all RCCOS. This way RCCOS would be more accountable to standardization through out all of Colorado, and the services provided to patients/families would be more uniform.

34) What role should RCCOs play in attributing clients to their respective PCMPs?

The attribution system is quite flawed still. RCCOs should be required to allow medical homes to give the RCCO a list of patients the medical home feels are their patients and receive help from the RCCO to understand why certain patients are attributed to another medical home. If the patient is determined to be more appropriately attributed to the inquiring medical home, then the RCCO should help re-attribute the patient to the correct medical home.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

- The payment structure absolutely does not support the ACC goals. A medical home does not receive incentives for KPIs unless the RCCO meets its KPI. This becomes a disincentive, because many medical homes meet their performance targets, but do not get rewarded because the RCCO did not meet its targets. So the medical home has no incentive to maintain the performance. The philosophy that HCPF has espoused (that the high performing medical home should encourage or help the low performing medical home) is not realistic and is not how the real world works. There is no time for that, plus the high

performing medical home has no way of knowing who is low performing. This idea shows a lack of understanding of the world where health cares is delivered. Medical homes need to receive full incentives when they meet their KPI targets, no matter what happens in the RCCO.

- The incentives are too low to change much. Also, the KPIs need to remain focused on process, not outcomes, until the data is more sophisticated to accurately attribute patients and account for risk factors.

- Many medical homes have the ability to collect REAL-TIME data from their EHR and their claims database, which can be used to measure performance more accurately than the SDAC. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and providers to develop a vetting process that will enable HCPF and RCCOs to trust the medical home self-reported real-time data.

- Since children are the majority and give the best chance of truly improving health and wellness, KPIs need to be more child-focused. And since the potential cost savings for children's health care are so far in the future, KPIs need to be intermediate, process outcomes.

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

There is very little of the infrastructure in the state in place at the present time to enable capitation to be implemented successfully. Here are just some of the changes that would need to be in place before it would be fair or prudent to implement capitation:

- The state would need to already be paying fair amounts for all aspects of the care needed by Medicaid recipients before it could effectively move to capitation. In other words, codes for things that HCPF wants done under capitation should be opened and reimbursement adequately now. This would encourage medical homes to already be doing these things before the change to capitation. It would also give HCPF and medical homes experience regarding what the actual costs are for providing the desired services and determine a fair capitation. It will be difficult to change behavior to include new activities under capitation among providers, if you continue to hold codes closed now for things you want done under capitation. You have to help the medical homes create the habits you want before the switch to capitation.

- All providers would have to be reliably involved in the ACC: primary care, all of the various adult and child specialists, the hospitals, the therapies, dentists, mental health providers, etc.

- The data system would have to be able to report real time data and be far, far more accurate than it is now.

- The attribution system is flawed. That would have to be improved and provide accurate, real-time attribution data before capitation should be instituted.

- You will have to change a variety of policies that are barriers to population management.

- Capitation has to be combined with significant incentives to implement processes and improve outcomes. So, you will need to have the incentive system very well developed and viewed by providers as motivating before implementing capitation

- Healthcare for children focuses on prevention, early detection and early intervention, which require initial increased investment to reduce potential expenses many years and decades down the line. Other ACO programs have shown that savings on children are difficult to show early on. So, incentives in the care of children will initially be for intermediate outcomes (or for process outcomes) and need to be direct incentives rather than incentives in the form of shared savings.

- Early in the transition from pre-ACC payment methods to ACC payment structure (2012), some medical homes were asked to return money to Medicaid. Transitions like that (for example the transition to capitation) have to avoid this. Primary care medical homes have such narrow margins that this can be very difficult financially on a medical home

- Many medical homes have the ability to collect from their EHR and their claims database REAL-TIME data with which performance can be measured. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and providers to develop a vetting process that will enable HCPF and RCCOs to trust that medical home self-reported real-time data is trustworthy.

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

Many medical homes have the capability and infrastructure to adapt to payment tied to value. What is missing is the state, HCPF, RCCO, BHO infrastructure. See all of the infrastructure elements HCPF needs to have in place listed in question 60

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

- The HCPF Payment Reform Committee should meet at a time when providers and practice managers can actually attend. Monday afternoons is probably the worst time to actually enable providers or practice managers to attend. Once you select an appropriate time, then actively recruit participation.

- Make sure that your efforts are statewide. Views are different in the various regions of the state.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

- Many medical homes have the ability to collect from their EHR and their claims database REAL-TIME data with which performance can be measured. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and provider from medical homes to develop a vetting process that will enable HCPF and RCCOs to trust medical home self-reported real-time data.

- The measures for children can be drawn from HEDIS measures or CHIPRA measures or from the Pediatric Measurement Proposal that HCPF did in 2010 with the help of Jim Todd.
  Appropriate child health measures could be selected from the following measures :
  - Well child visits appropriate for age
  - Developmental screening by three years of age
  - Teen depression screening
  - Complete immunization status by age two
  - Post-partum depression screening rate for mothers of newborns by age 4 months
  - Appropriate antibiotic use in URI and strep pharyngitis

- Medical homes could also be measured on:
  - Patient (or family) satisfaction ratings
  - Documentation of QI projects

Screening should be part of KPIs, but you need to do more than just create a KPI. If you are going to have KPIs, then you need to track not only the number of times a screening was done, but also track the v-codes (or some way to track positives) and make them available in the SDAC so medical homes can track them. And the SDAC needs to track referrals (or intervention). Otherwise it is not worth measuring the number of screenings.

- The PCMP or medical home should receive real-time data (less than a month since date of service) with data that will allow them to compare their performance with performance of similar type of medical home.

- Healthcare for children focuses on prevention, early detection and early intervention, which require initial increased investment to reduce potential expenses many years and decades down the line. Other ACO programs have shown that savings on children are difficult to show early on. So, incentives in the care of children will initially be for intermediate outcomes (or for process outcomes) and need to be direct incentives rather than incentives in the form of shared savings.

69) Measures for payment. Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☒
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

We only need 2-4 KPIs. Any more will dilute the effect. What we really want is good data, so we can improve our outcomes by doing a quality improvement project. Since children are the majority of Medicaid recipients and give you the best chance of truly improving health and wellness in the long term, KPIs need to be more child-focused. And since the savings are so far in the future, KPIs need to be intermediate, process outcomes.

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

ACC Request for Information

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Brad Kurtz

Location: Physician Advanced Pediatric Associates

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization:

Location:

☐ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☒ Medical provider / PCMP / other provider
  i. Type or specialty:
  ii. Area of practice: Click here to enter text.
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☒ Other (please describe): Advocate for children on Medicaid

How have you been involved in the ACC program and what interaction have you had with RCCOs:

Click here to enter text.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:

Click here to enter text.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

Please feel welcome to describe why or why not using the space below.

Are you currently involved in the ACC program?

☐ Yes
☐ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☐ 3-4 years
☐ Since before the program was implemented.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

- Reimbursement (mostly due to the Federal ACA) is fairer now.

- The decision to make the well child visit one of the KPIs was a very good decision in behalf of children, but unfortunately attribution is still flawed and the SDAC data is delayed and often inaccurate. So, it is difficult to create an effective QI process to improve the KPI, but this is a good start.

- The decision to focus on integrated behavioral health in medical homes is a wonderful decision to improve health outcomes for people covered by Medicaid. Thank you.

- You have a great opportunity to do what is needed for the majority of Medicaid recipients. The majority of Medicaid recipients in Colorado are children and adolescents; they should not be considered one of the subgroups. The following principles should be incorporated into the core objectives of the ACC:

    - Children's health care needs are very different than adults. For adults, the focus is on managing chronic disease more effectively. For children, it is about preventing the development of those chronic diseases.
    - If the ACC really wants to focus on health and wellness, the greatest opportunity is with the children (the majority of Medicaid recipients). By focusing on preventive care, early screening and early intervention for children, there will be big savings; unfortunately those savings may not occur for many years or decades in the future, but the investment will eventually be worth it.
    - So, the ACC will need to invest in children to the extent possible now even though the savings come much later. We recommend that a portion of short-term savings that occurs due to chronic disease management in adults in the ACC be invested back into preventive care for children.
    - Children are part of families and you can't help the child unless you help the family. So, care coordination is more involved for children since it includes care coordination of the parents/family.
    - There is increased recognition that behavioral health is a part of overall health and should be accessible within a pediatric medical home. However, the current mental health system must have policies, procedures, and resources that support integrated behavioral health activities at the practice level.

2) What is not working well in the ACC Program?

- Attribution continues to attribute patients to the wrong medical home and the process of getting patients reassigned to the correct medical home is onerous for the patient and family.

- The health care data through the SDAC is based on claims so it is delayed and is incomplete (particularly for children). Therefore, it is not very useful in helping medical homes improve outcomes for children.

- Each RCCO does things very differently, which is confusing for medical homes with patients in several RCCOs. RCCOs are inconsistent in how they respond to requests for care coordination (quite variable depending on whom you reach at the RCCO). So the new RFP should ask how RCCOs will develop policies and procedures to make their methods and responses to requests for help more consistent, both within

the RCCO and among all RCCOs.

- There are certain expectations/requirements and ways of doing things that are so different from one RCCO to another that it requires significant extra work for the medical home to adapt to the differences. To deal with this. So, the RFP should ask how RCCOs intend

- If a patient lives in one region and goes to a medical home in another region, and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from the patient's region RCCO. This is particularly true in the Denver metro area. <u>There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients.</u>

- The "incentives" now are actually disincentives, especially the requirement that the RCCO must meet its KPIs before a high performing medical home can be rewarded for meeting its KPIs. The concept behind this approach is not consistent with how health care systems (and "medical neighborhoods") work.

- The geography of the 7 regions does not reflect the natural geography of health care systems and referral patterns. Larimer County should be in Region 2.

- RCCOs are not providing the level of care coordination that Medicaid patients need. We have had RCCO "care coordinators" just tell us to call 211. The level of commitment that patients and families need is difficult to find, unless care coordination is provided at the medical home level or the community level.

- Both family practices and pediatric practices report that the SDAC does not reflect their own data that the practice can obtain from their EHR or their own claims data. This is particularly true regarding data on health care screening. The RFP should ask how RCCOs and HCPF should take advantage of this practice-based data.

- Most medical homes are not working closely with RCCOs and are not receiving much support. The RFP should ask how RCCOs intend to work more closely with medical homes.

- Feedback from RCCOs to the medical home regarding patients referred to the RCCO for care coordination is spotty. How will RCCOs consistently provide feedback and communication to the medical home regarding what was done for the patients and whether there was improvement?

- There has been difficulty with communication from the state level through the RCCOs down to the individual practice/provider level. Providers feel as though they are not well informed from HCPF or RCCOs. We are grateful that CCHAP keeps us informed.

- The current system does not take into account the movement of patients on and off Medicaid and movement between RCCOs. Whether for KPIs or future shared savings incentives, practices need to be evaluated on established patients who have been in a practice for a minimum of six months. This allows the medical home to actually have time to make an impact on the child's care. Otherwise, it is a substantial disincentive for practices to be open to the more complex and challenging patients, those that likely need access the most.

- Currently, there is very little communication and alignment between BHO's and RCCO's. In order for integrated behavioral health to be successful at the practice and community level, the BHO's and RCCO's must have similar goals, policies/procedures that are aligned, payment structures that are aligned with movement toward integration and ongoing close communication with one another. The RFP should ask how they intend to do this.

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

- The decision to focus on integrated behavioral health in medical homes is a wonderful decision to improve health outcomes for people covered by Medicaid. Thank you.

- If Colorado is serious about promoting integration of behavioral and physical (medical) health care, then the RCCOs and BHOs should be integrated. This would mean they should have the same regions and function as though they are one organization. This would reduce duplication of efforts and have better alignment of incentives and payments that support integrated care.

- Open the behavioral health and wellness codes (96150 – 96155) now. Don't wait. This will encourage integration immediately and enable medical homes to start now the process of evolving toward full integration.

- Care coordination for both behavioral health and medical care should be done in the primary care setting. And either the RCCO and/or the BHO should delegate the responsibility to do care coordination and a pmpm to cover the expense to the medical home as part of the payment reform process. And behavioral health care coordination and medical care coordination needs to be fully reimbursed. In addition, the BHO and the RCCO will need to have information and care coordinators to assist medical homes to handle uncommon or very complex issues.

- Provide infrastructure and funding for data collection and management to support integrated behavioral health in the medical home and the care coordination that will have to be part of that. Utilizing 5DAC data is just one way to understand the activities within a medical home. 5DAC data is delayed and does not include enough information to support behavioral health care coordination in the medical home. Other methods and technologies are needed. There will need to be an investment in the development of new technologies and methods to do behavioral screening, track referrals, document treatment and collect data on the whole care coordination process at the medical home level. This will require adequate reimbursement to cover the cost of starting up new care coordination programs in the medical home and start up technologies to improve screening, intervention and care coordination with follow through in the medical home.

- The CPACK program developed by CBHC is a very good program, particularly the following:

a. Assistance with finding a behavioral health provider for patients
b. Telephone consultation by a child psychiatrist to primary care providers

We recommend that BHOs be required to provide the 2 components above as part of their new contracts.

- Payment options for integrated behavioral health (not just co-location) need to be clear and understandable to providers and practices. In order for the integrated model to be sustainable, there need to be ways to access understandable billing rules/policies.

Care Coordination

Question 12) Whot needs for children/fomilies should be caardinated in medicol homes and are there services that should not be o port af care coordinotion by the pediatric and family medical home

One of the most difficult services to provide in the medical home is home visits. Support from the larger system is needed.

Services that can be provided in a pediatric or family medical home are: complex medical coordination including logistics/travel, ancillary services (PT/OT/home health services, ...), collaboration with mental/behavioral health, collaboration regarding school needs, referrals to early intervention services and Child Find, referral to other agencies (rehab, hospice, ...), collaboration with foster care and DHS system. RCCOs need to help medical homes with needs like assistance with housing, food, parental employment, child care, in which case the RCCO can help families connect with other agencies that provide these services.

Question 19: How should care coordination program be evaluated? How should its outcomes be measured?

A care coordination program should initially be measured by having good processes, not measured by outcomes, until solid data exists on outcomes that are risk adjusted and accurate for children. Initially all measures need to be quite separated from outcomes that are highly tied to patient behavior, or practices will again be less likely to serve those with highest risk.

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Our medical home relates to multiple RCCOs and we want to be delegated to do care coordination. If all RCCOs allowed medical homes to be delegated to do care coordination, we could receive a pmpm from all of them, which would enable us to afford to hire enough care coordinators to meet the needs of all of our ACC patients.

Where should care coordination be done? Care coordination is best done in the medical home. We are willing to do care coordination, because we have a relationship with our patients and they trust us and we recognize that coordinating complex medical care is essential for good care and for cost savings. Also, the primary care provider is best positioned to have a long term relationship with the patient, and therefore know and understand other aspects of the patient's life and how important those non-medical factors are on the patient's health and health issues.

If care coordination cannot be done in the medical home, then it is best done by community-based organizations. The least effective, least well-received, least trusted is care coordination done from a call center in an RCCO. The role of the RCCO should be to help the medical home-based care coordination staff access resources for families.

The majority of practices are willing to provide Care Coordination, if they can get financial support (PMPM) for providing the service.

Should you be doing care coordination for certain patient populations e.g. children with asthma or special needs children? Or for your entire Medicaid population healthy or chronically ill? The overall goal of Colorado Medicaid should be to provide care coordination services for ALL patients in the Medicaid population (for some patients it may be very minimal, others extensive). This is the essence of preventive care. A care coordinator that is based in the medical home is in the best position to help identify risk factors proactively, as early as possible before they impact a patient's health and cause illness. Children with special healthcare needs (complex, complicated) require a higher level of care coordination, so the pmpm attached to their care coordination needs to be risk adjusted.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

- All RCCOs should have their offices in the region served, should be non-profits, be a Medicaid provider and be incorporated only in Colorado.
- All RCCOs should offer to delegate care coordination to medical homes willing to accept that responsibility and the RCCO should share a portion of the RCCO pmpm with the medical home that accepts delegation.
- All RCCOs should use the same criteria for delegation and for the amount that is paid for delegated services of care coordination. By doing this, services can reach a standard across the state. A patient would have access to similar services no matter where they moved across Colorado.
- RCCOs should all agree on how they will effectively communicate to medical homes regarding any contact the RCCO has with patients attributed to the medical home. They should include PCMPs in developing those criteria.

- All RCCOs should help (or contract with an organization to help) medical homes understand how to access their SDAC data, understand their data and use it to develop rapid cycle QI projects to improve health outcomes and meet KPIs.

- All RCCOs should agree to provide uniform support for medical homes when a medical home asks for help with care coordination, even when the medical home is in another region (and contracted with another RCCO) but the patient is in the first RCCO's region.

- RCCOs should be required to allow medical homes to give the RCCO a list of patients the medical home feels is their patients and receive help from the RCCO to understand why certain patients have been attributed to another medical home. If the patient is determined to be more appropriately attributed to the inquiring medical home, then the RCCO should help re-attribute the patient to the correct medical home.

- RCCOs should share on a regular basis the RCCO's performance on KPIs and share savings incentives and share with the medical home how their own performance compares with other medical homes.

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

This is particularly applicable to the Denver metro area. There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients. For many expectations/requirements and ways of doing things the RCCOs are so different from one another that it requires significant extra work for medical homes to adapt to the differences. In addition, if a patient lives in one region and goes to a medical home in another region, and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from that first region.

27) Should the RCCO region maps change? Why or why not? If so, how?

Yes. There are two changes we recommend:

- Larimer County should be included in Region 2, since the medical community and the support organizations of Larimer County and very closely linked to Weld County
- In the Metro Denver area, the boundary issues are so difficult that we recommend one RCCO be responsible for the whole metro area or that medical homes be allowed to choose one RCCO for all of their patients.

28) Should the BHO region maps change? Why or why not? If so, how?

If Colorado is serious about promoting integration of behavioral and physical (medical) health care, then the RCCOs and BHOs should be integrated. This would mean they should have the same regions and function as though they are one organization. They should share incentives that are aligned around successful integration of behavioral and medical services and outcomes. So the BHO maps/regions should conform to the RCCO regions/maps.

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients. There are certain expectations/requirements and ways of doing things that are so different from one RCCO to another that it requires significant extra work to adapt to the differences. If a patient lives in one region and goes to a medical home in another region and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from that first region. This is particularly true in the Denver metro area.

Another alternative: When a practice contracts with a RCCO currently they "belong" to one RCCO. Change that and have them only contract with the state and have that contract extend to all RCCOS. This way RCCOS would be more accountable to standardization through out all of Colorado, and the services provided to patients/families would be more uniform.

34) What role should RCCOs play in attributing clients to their respective PCMPs?

The attribution system is quite flawed still. RCCOs should be required to allow medical homes to give the RCCO a list of patients the medical home feels are their patients and receive help from the RCCO to understand why certain patients are attributed to another medical home. If the patient is determined to be more appropriately attributed to the inquiring medical home, then the RCCO should help re-attribute the patient to the correct medical home.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

- The payment structure absolutely does not support the ACC goals. A medical home does not receive incentives for KPIs unless the RCCO meets its KPI. This becomes a disincentive, because many medical homes meet their performance targets, but do not get rewarded because the RCCO did not meet its targets. So the medical home has no incentive to maintain the performance. The philosophy that HCPF has espoused (that the high performing medical home should encourage or help the low performing medical home) is not realistic and is not how the real world works. There is no time for that, plus the high performing medical home has no way of knowing who is low performing. This idea shows a lack of understanding of the world where health cares is delivered. Medical homes need to receive full incentives when they meet their KPI targets, no matter what happens in the RCCO.

- The incentives are too low to change much. Also, the KPIs need to remain focused on process, not outcomes, until the data is more sophisticated to accurately attribute patients and account for risk factors.

- Many medical homes have the ability to collect REAL-TIME data from their EHR and their claims database, which can be used to measure performance more accurately than the SDAC. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and providers to develop a vetting process that will enable HCPF and RCCOs to trust the medical home self-reported real-time data.

- Since children are the majority and give the best chance of truly improving health and wellness, KPIs need to be more child-focused. And since the potential cost savings for children's health care are so far in the future, KPIs need to be intermediate, process outcomes.

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

<u>There is very little of the infrastructure in the state in place at the present time to enable capitation to be implemented successfully.</u> Here are just some of the changes that would need to be in place before it would be fair or prudent to implement capitation:

- The state would need to already be paying fair amounts for all aspects of the care needed by Medicaid recipients before it could effectively move to capitation. In other words, codes for things that HCPF wants done under capitation should be opened and reimbursement adequately now. This would encourage medical homes to already be doing these things before the change to capitation. It would also give HCPF and medical homes experience regarding what the actual costs are for providing the desired services and determine a fair capitation. It will be difficult to change behavior to include new activities under capitation

among providers, if you continue to hold codes closed now for things you want done under capitation. You have to help the medical homes create the habits you want before the switch to capitation.

- All providers would have to be reliably involved in the ACC: primary care, all of the various adult and child specialists, the hospitals, the therapies, dentists, mental health providers, etc.

- The data system would have to be able to report real time data and be far, far more accurate than it is now.

- The attribution system is flawed. That would have to be improved and provide accurate, real-time attribution data before capitation should be instituted.

- You will have to change a variety of policies that are barriers to population management.

- Capitation has to be combined with significant incentives to implement processes and improve outcomes. So, you will need to have the incentive system very well developed and viewed by providers as motivating before implementing capitation

- Healthcare for children focuses on prevention, early detection and early intervention, which require initial increased investment to reduce potential expenses many years and decades down the line. Other ACO programs have shown that savings on children are difficult to show early on. So, incentives in the care of children will initially be for intermediate outcomes (or for process outcomes) and need to be direct incentives rather than incentives in the form of shared savings.

- Early in the transition from pre-ACC payment methods to ACC payment structure (2012), some medical homes were asked to return money to Medicaid. Transitions like that (for example the transition to capitation) have to avoid this. Primary care medical homes have such narrow margins that this can be very difficult financially on a medical home

- Many medical homes have the ability to collect from their EHR and their claims database REAL-TIME data with which performance can be measured. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and providers to develop a vetting process that will enable HCPF and RCCOs to trust that medical home self-reported real-time data is trustworthy.

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

Many medical homes have the capability and infrastructure to adapt to payment tied to value. What is missing is the state, HCPF, RCCO, BHO infrastructure. See all of the infrastructure elements HCPF needs to have in place listed in question 60

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

- The HCPF Payment Reform Committee should meet at a time when providers and practice managers can actually attend. Monday afternoons is probably the worst time to actually enable providers or practice managers to attend. Once you select an appropriate time, then actively recruit participation.

- Make sure that your efforts are statewide. Views are different in the various regions of the state.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

- Many medical homes have the ability to collect from their EHR and their claims database REAL-TIME data with which performance can be measured. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and provider from medical homes to develop a vetting process that will enable HCPF and RCCOs to trust medical home self-reported real-time data.

- The measures for children can be drawn from HEDIS measures or CHIPRA measures or from the Pediatric Measurement Proposal that HCPF did in 2010 with the help of Jim Todd.
  Appropriate child health measures could be selected from the following measures :
  - Well child visits appropriate for age
  - Developmental screening by three years of age
  - Teen depression screening
  - Complete immunization status by age two
  - Post-partum depression screening rate for mothers of newborns by age 4 months
  - Appropriate antibiotic use in URI and strep pharyngitis

- Medical homes could also be measured on:
  - Patient (or family) satisfaction ratings
  - Documentation of QI projects

Screening should be part of KPIs, but you need to do more than just create a KPI. If you are going to have KPIs, then you need to track not only the number of times a screening was done, but also track the v-codes (or some way to track positives) and make them available in the SDAC so medical homes can track them. And the SDAC needs to track referrals (or intervention). Otherwise it is not worth measuring the number of screenings.

- The PCMP or medical home should receive real-time data (less than a month since date of service) with data that will allow them to compare their performance with performance of similar type of medical home.

- Healthcare for children focuses on prevention, early detection and early intervention, which require initial increased investment to reduce potential expenses many years and decades down the line. Other ACO

programs have shown that savings on children are difficult to show early on. So, incentives in the care of children will initially be for intermediate outcomes (or for process outcomes) and need to be direct incentives rather than incentives in the form of shared savings.

69) Measures for payment. Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☒
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

We only need 2-4 KPIs. Any more will dilute the effect. What we really want is good data, so we can improve our outcomes by doing a quality improvement project. Since children are the majority of Medicaid recipients and give you the best chance of truly improving health and wellness in the long term, KPIs need to be more child-focused. And since the savings are so far in the future, KPIs need to be intermediate, process outcomes.

Colorado Department of Health Care Policy and Financing

RFI Response Received and Recorded.

Serial Number: 016

Accepted by: KJDW

Notes: Standard cover sheet added

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: **Becky Otteman**
Location: **La Junta, Colorado**

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: **Southeast Health Group**
Location: **Six Southeastern Counties**
☒ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☒ Medical provider / PCMP / other provider
  i. Type or specialty: **Behavioral Health**
  ii. Area of practice: **Mental Health, SUD, Primary Care & Wellness Services**
☐ Provider advocate (e.g. medical society)
☒ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☐ Other (please describe): Click here to enter text.

Are you currently involved in the ACC program?

☒ Yes
☐ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☒ 3-4 years

How have you been involved in the ACC program and what interaction have you had with RCCOs:
Southeast Health Group is both a provider and partner/owner of Integrated Community Health Partners (ICHP) the Region 4 RCCO.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:
Behavioral Health provider for Baca, Bent, Crowley, Kiowa, Otero, and Prowers Counties since 1957.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☒ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

Please feel welcome to describe why or why not using the space below.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

- **"All healthcare is local" and that is what is working best. The network of providers developed at the local/community level for individuals to access for care has expanded across our 6 counties.**
- **Care coordination that is person-centered and done at the right time and right place for the individual which is when they enter the office for care and in their own community.**

2) What is not working well in the ACC Program?

- **The cost and quality of care provided will not get better until payment reform picks up speed in the state and transitions away from a fee-for-service system. KPIs have only had a minor impact on the overall cost of care. A risk-based global payment model that forces providers to focus on the Triple Aim (better care, higher quality, and lower costs) is the direction that the next phase of the ACC program needs to go. This is a huge change, thus it may have to be transitioned in incrementally over a definitive period of time.**

3) What is working best in the Behavioral Health Organization (BHO) system right now?

- **Our BHO has been able to efficiently and effectively "bend the cost curve" by controlling costs, managing provider risk, and providing access to more individuals in our six counties that need our services.**

4) What is not working well in the BHO system?

- **Encounters. We (the Behavioral Health Providers and OBH and HCPF) talk about a person-centered approach to care that is focused on value and outcomes, yet we still have to be concerned with counting widgets/encounters. This practice of counting encounters is from the Fee-For-Service system which is what we should be moving away from if we are serious about payment reform in the State of Colorado.**

5) What is working well with RCCO and BHO collaboration right now?

- **Local partnerships that have the flexibility to make an impact on the physical and behavioral health care of our citizens. Solutions to issues are developed and implemented at the local level.**

6) What is not working well with RCCO and BHO collaboration right now?

- **As behavioral health providers we still do not have access to the SDAC system. This impedes our ability to more effectively coordinate care.**
- **Payment reform – moving away from FFS and to a global budget – is not happening. In this next phase of the ACC contract that needs to happen.**

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

- **Since this RFI is all about the next phase of the ACC, then it only makes sense that rewarding bidders for integration should be a major focus of the ACC. Recognizing that providers are at different steps on the ladder towards integration, a system that recognizes and rewards at the different levels and continued movement towards full integration should be part of the ACC. Integration should be done not just with client care, but also with provider data, and funding/financing streams.**

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☒	☐	**Fragmented funding streams with too many meaningless measurement and reporting requirements.**
Community Behavioral Health Services Rule	☒	☐	**Rules and regulations need to be streamlined. Over-regulation adds a complexity to the system that fragments it and forces providers to focus on the multiple regulations that they will be audited on rather than person-centered integrated care.**
Covered diagnoses list	☒	☒	**I marked yes and no because it really depends on the situation at hand. It would be easier to integrate if all of the diagnoses and codes were open to us, however the covered diagnoses list does not cause huge problems for us at this time.**
Different behavioral / physical health reimbursement	☐	☒	
Institutions for Mental Diseases exclusion	☒	☐	**Our 1915(b)(3) waiver does offers us some help in this area through our Medicaid Managed Care program.**
OBH rules, reporting, or financing (regulatory differences between agencies)	☒	☐	**Again, regulations need to be streamlined and re-aligned so there is one set of rules, reporting, and financing. The regulatory differences between agencies are a huge barrier to integration because many of the rules and reporting requirements are in direct competition or at odds with each other. This fragments the system and as long as there is fragmentation it will hamper any integration efforts.**
PCMP financing structure	☐	☒	**Behavioral health agencies are not recognized as PCMPs so I can't respond to this with any informed intelligence.**
Per-member per-month amount	☐	☒	
Physical space constraints	☐	☒	

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

Privacy Laws (HIPAA, 42 CFR)	☒	☐	**HIPAA is not a problem, but in our SUD division the struggles with 42 CFR keeps us from coordinating care and integrating in the way that is best for our communities.**
Professional / cultural divisions	☒	☐	**Many physical health providers still do not believe that behavioral health is "health".**
RCCO or BHO contracts	☐	☒	
Staff capacity	☒	☐	**Workforce issues are prevalent throughout the whole State, but even more so in our six rural and frontier counties where poverty is the highest. Most clinical providers (both physical and behavioral health care) do not want to live in a rural/frontier environment, nor do they understand it.**
State/Federal rules or reporting requirements	☒	☐	**Again, rules and reporting requirements all need to be aligned.**
Technical resources / data sharing	☒	☐	**As I said earlier, behavioral health still does not have access to the SDAC.**
Training	☐	☒	
Others	Please type your response here.		

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

- **The community based behavioral health providers have supported and continue to support the six levels of integration as outlined by SAMHSA. You can find these on their website at www.samhsa.gov titled A Standard framework for Levels of Integrated Healthcare.**

10) Please share any other general advice or suggestions you may have about behavioral health integration.

- **Behavioral health integration needs to be bi-directional. At Southeast Health Group we have opened our own physical healthcare clinics on-site at 2 of our 8 locations. At these sites our physical health care providers work alongside our mental health and substance use disorder providers. They have a formal weekly team meeting to talk about difficult cases and to coordinate care. Referrals from one provider to another are done immediately and when the person is in the doctor's office -- this greatly improves the efficiency and effectiveness of the care which results in high quality outcomes.**

- **In some rural/frontier areas, behavioral health integration does not make sense. For example, in Kiowa County whose county population is approximately 1,200 individuals, it does not make sense to have a behavioral health therapist sitting at the local clinic waiting to see a client. In FY 2012-2013 our therapist that services that county saw a total of 20 unduplicated clients for the whole fiscal year. Instead, the doctor at the clinic is on a first-name basis with our therapist and our therapist goes at least once a week and then as needed to see the clients that need behavioral health services. Emergency services are, of course, available 24/7.**

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination?

- **Taken directly from the ICHP Care Coordination Metrics Definitions – Care coordination is the deliberate organization of patient care activities between two or more participants (including the patient) involved in patient's care to facilitate the appropriate delivery of health care services.**

b. How should RCCOs prioritize who receives care coordination first?

- **Every individual that walks in our doors for services needs to receive care coordination – it should not be done on a prioritized schedule. Thus, we provide care coordination for all of our clients. I don't believe in priority lists because they overlook the needs of those individuals that need the care coordination to help keep them stable so their health issues don't escalate and cause them to need a higher level of care.**

c. How should RCCOs identify clients and families who need care coordination?

- **Again, any individual (and their family members that support them with care) should receive care coordination.**

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

- **If every client receives care coordination there does not need to be a tracking mechanism in place as the client's treatment plan and notes from meeting with the health care provider will indicate the care coordination that is taking place.**

12) What services should be coordinated and are there services that should not be a part of care coordination?

- **All services should be coordinated, especially those services that will directly impact the future health of the client. Public Health is an important component in this respect.**

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

- **Health assessments that include the social determinants of health (as long as the social determinants are impacting the health of the client)**
- **Case management services currently receiving or have received in the past**
- **Care planning as developed and implemented by the patient's integrated team of providers**
- **Care transitions from one level of care to another or from one type of living situation to another**
- **Community resources currently used by the client**
- **Specialty providers the client has seen or is currently seeing**

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today?

- **Care coordination is being provided by everyone that deals with the patient and is done in each agencies own way, with their own forms/templates, definitions, etc. This is a huge problem. There should be one care coordination system that covers all aspects of the client's care and that all providers have access to and can add to in a systematic way that is developed and implemented by the RCCO.**

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

- **As a Medicaid Community Based Behavioral Health Center we are required to do care coordination and have done so for many years. Then in 2011 when the RCCOs started up, all of the sudden we started having problems with care coordination because it was either competing with or in conflict with the care coordination being done through our RCCO.**
- **Because the BHOs and the Behavioral Health Centers have done care coordination for decades it only makes sense that they should have been consulted on their model for care coordination and how it could best be modeled for the RCCOs as they were developing their own care coordination program.**

c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

- **Care coordination needs to be done at the RCCO level because that is where the network of providers gets their direction.**

d. What are the gaps in care coordination across the continuum of care?

- **Many doctors and nurses feel that care coordination is not their responsibility and will not come to the table when care coordination needs are being discussed.**

15) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	Should the RCCO have a role? Yes	Should the RCCO have a role? No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma	☐	☐	☒	
Affordability (assistance with prescriptions or co-pays)	☐	☐	☒	
Daycare / childcare	☐	☒	☐	**For this item and the next four items, only if the item is having a negative impact on the health of the patient**
Economic stability & employment	☐	☒	☐	⇩
Education	☐	☒	☐	⇩
Environment	☐	☒	☐	⇩
Food access / nutrition	☐	☒	☐	⇩
Health literacy	☒	☐	☐	
Housing	☐	☒	☐	
Language or translation services	☒	☐	☐	
Literacy	☐	☒	☐	
Transportation	☐	☐	☒	
Other	Please type your response here. Feel free to list as many non-medical factors as you want, and please explain how the RCCO should be involved.			

16) **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	Coordinate care? Yes	Coordinate care? No	In what capacity should these individuals coordinate care in the ACC Program?
Advanced Practice (Registered) Nurses	☒	☐	In our agency as part of the integration team that meets weekly to deal with client issues and coordinate care.
Certified Addiction Councilors	☒	☐	In our agency as part of the integration team that meets weekly to deal with client issues and coordinate care.
Certified Nurse Midwives	☐	☒	
Community Health Workers	☒	☐	In our agency as part of the integration team that meets weekly to deal with client issues and coordinate care.
Generalists (BA/BS/MA/MS)	☒	☐	In our agency as part of the integration team that meets weekly to deal with client issues and coordinate care.
Health Coaches	☒	☐	In our agency as part of the integration team that meets weekly to deal with client issues and coordinate care.
Licensed Clinical Social Workers	☒	☐	In our agency as part of the integration team that meets weekly to deal with client issues and coordinate care.
Licensed Marriage and Family Therapist	☒	☐	In our agency as part of the integration team that meets weekly to deal with client issues and coordinate care.
Licensed Mental Health Counselors	☒	☐	In our agency as part of the integration team that meets weekly to deal with client issues and coordinate care.
Licensed Professional Counselor	☒	☐	In our agency as part of the integration team that meets weekly to deal with client issues and coordinate care.
Masters of Public Health	☐	☒	
Medical Doctors / Doctors of Osteopathic Medicine	☐	☒	
Nurse Practitioners	☒	☐	In our agency as part of the integration team that meets weekly to deal with client issues and coordinate care.
Patient Navigators	☒	☐	In our agency as part of the integration team that meets weekly to deal with client issues and coordinate care.
Peer Advocates	☒	☐	In our agency as part of the integration team that meets weekly to deal with client issues and coordinate care.
Promotoras	☐	☒	
Psychiatrists	☐	☒

Clients in palliative care	☐	☒	
Other populations, please comment:			

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

- **If medical issues are not involved, the RCCO should not be involved.**

19) How should care coordination be evaluated? How should its outcomes be measured?

- **Care Coordination should be evaluated by using measures that look at reduction in use of the emergency room, reduction in overall cost of care, reduction of care duplication, an increase in the quality of care, and an increase in the overall satisfaction with care by the client and an increase in the health status of the client.**

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

a. What is the PMPM cost for providing care coordination services?

- **I cannot answer this question unless I would have access to data that is actuarially sound.**
- **I can speak to the PMPM being changed midstream and how disruptive that is to the overall system from both a business standpoint and a client care standpoint. Once the PMPM is established it should not be changed midstream.**

b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

- **Same answer as #20**

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

- **Yes, there should be coordinator to client ratio requirements. Having said that the whole State of Colorado has a huge workforce issue, especially in the rural and frontier areas where our counties are located. There would need to be an exception to the rule for these regions that are not as populated and where resources – including human resources – are scarce.**
- **Also, actuarial soundness would be needed.**

a. **Care coordinator to client ratios.** If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☒
51-100	☐
101-200	☐
201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

- **By the total reduction in cost of care that is generated from the reduction of unnecessary/duplicative services and the total impact on the overall improved health status of the client.**
- **Metrics that are most important are:**
  a. **Total number of Members receiving care coordination services within a set timeframe.**
  b. **Total number of Members with a completed Health Risk/Care Assessment within a set timeframe.**
  c. **Number of Members with a Care Plan developed and/or updated within a set timeframe.**
  d. **Number of Members who are identified as High ER Utilizers receiving at least one intervention (follow-up service) within a set timeframe from discharge from the ER.**
  e. **Number of Members who are stepping down from inpatient care to a lower level of service.**
  f. **Number of Members referred to other community agencies that supplement patient care.**

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

- **The exchange of information among network providers for different aspects of the patient's care is paramount in the care coordination process. It takes just one provider that ignores this exchange to screw up the whole process for the client and the other providers.**

- **If the care coordination is not helping to bridge the gap between providers and agencies, then it is not being carried out correctly and the whole system needs to be re-evaluated.**

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

- **I would add standardized guidelines and protocols to the list above and remove payment methodologies. Payment methodology should look different from one RCCO to another and from one region to another. I think that each RCCO should handle their own payment methodology because the providers in that RCCO region know best what works and what doesn't. The costs of care encountered in the rural/frontier region can be very different from the city or urban area.**

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

- **I think that requiring a bidder to form a relationship with a certain entity will not work. Forced "friendships" never work. It would be better to ask the bidders to list the community relationships that they currently have, both formal and informal, contractual and non-contractual, and what community relationships they wish they could have with what entities and what are the barriers to forming that specific relationship. This will help to understand community strengths and needs more than another mandate or requirement.**

- **There are times when Southeast Health Group does everything in its power to develop a relationship with a community agency, and through no fault of its own, it just does not happen either because of the other agencies philosophy or top leaders lack of initiative. Thus, the reason that requiring bidders to form certain community relationships is not a good idea.**

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

- **Out of our six counties that we cover at Southeast Health Group, 4 of them are frontier and 2 of them are rural according to the Census. We use to have a stable population of approximately 50,000 individuals in those six counties, but our population continues to drop. My point in this is that what is being suggested would not work in our rural/frontier environment as there is not enough volume. Plus, the closest RCCO to us that is not our current RCCO is 2 hours away. Demographically it just wouldn't work.**

27) Should the RCCO region maps change? Why or why not? If so, how?

- **Yes, the State should combine RCCO regions 4 & 7. We already do a lot of work with the providers in the RCCO 7 region through our BHO relationship with Aspen Pointe. Our RCCO 4, ICHP, has had some formal MOUs with RCCO 7 in order for them to utilize a care coordination tool that RCCO 4 developed. Plus, for those of us in rural/frontier Southeastern Colorado most of us go to Pueblo or Colorado Springs for our healthcare and we definitely go to these two communities for any specialty care. I think that there currently is a lot of waste and duplication happening because these two regions are split. Combining them into one RCCO region will help with care coordination and reduction in cost of care because of duplication of services.**

28) Should the BHO region maps change? Why or why not? If so, how?

- **No, they should not change at this time. A new RFP would have to be issued and we are just now settling into our current contract. I have heard side conversations that someday the Department may want to combine the BHOs and RCCOs into one program. If this is true and the Department is working towards this, it would be better to wait until the Department is ready to combine the two entities. I see a change to the BHO regions now as an unnecessary step that would be chaotic not only for the behavioral health agencies, but more importantly for the clients that we serve.**

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

- **Our vendor tells us that 8 months is the minimum, with 10 months being more realistic. I do not know the answers to the other two questions.**

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

- **As I said earlier the streamlining of any/all regulations that the ACC must deal with would help with its effectiveness.**

- **More importantly, risk contracts where the RCCOs manage their own PMPM for care would really help the ACC become more effective through savings generated. We witnessed this happen when the mental health centers went to a Medicaid managed care risk contract and we have seen just how they have been able to bend the cost curve and generate savings through the risk contracts.**

- **Quality measures need to be improved upon for the ACC program. Improvement would impact in a positive way care coordination and access to the specialty care that many of our complex clients need.**

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

- **Southeast Health Group has 2 fully integrated sites that we are not able to access a code for in order to get credit or reimbursed for the physical health services that we provide. So opening up codes for integrated sights would really help.**

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

- **No, the rural/frontier areas of the state cannot handle multiple RCCOs. There is not enough of a population mass to support two. It would be confusing and chaotic for clients.**

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

- **N/A – We are a Medicaid provider.**

34) What role should RCCOs play in attributing clients to their respective PCMPs?

- **RCCOs should be totally in charge of attribution of clients because they know their respective providers best.**

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

- **Nothing at the State level – let the collaboration stay at the regional/local level where it belongs.**

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

- **Nothing at the State level – let the collaboration stay at the regional/local level where it belongs.**

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

- **None – the RCCOs have to handle Medicaid and that is a big enough endeavor in and of itself. Throwing commercial insurance into the mix would be a nightmare!**

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

- **Earlier in this document I mentioned the importance of moving to risk contracts; the Division of Insurance would need to be involved with that.**

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

- **In our rural/frontier environment we have the same people attending the same meetings all of the time. It is extremely difficult to get clients and their families to attend, thus the meetings become just another meeting of the various agencies in the region. Clients are generally not interested in this level of engagement, thus any reporting back to the Department becomes one-sided and doesn't mean much.**

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

- **Same answer here as in Number 39; just replace the word clients, with providers, community organizations, etc.**

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

- **Our communities do not care to know about the ACC program. They just want to know that the medical and behavioral providers are doing their jobs in getting people in for care and referred to specialty care when needed. Thus, if enhanced community engagement would need to be created it would need to be "forced" through some type of award during the bidding/RFP process.**

42) How should the Department structure stakeholder engagement for the ACC as a whole?

- **Same answer her as in Number 39.**

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

- **No, it does not adequately serve the ACC population.**

a. If no, what are the gaps?

- **Here in the rural/frontier part of the State access to specialty care is a huge issue. Our population is an aging population and will not or cannot travel to Pueblo or Colorado Springs or Denver for care. We need specialty providers that spend several days a month in our area on a routine basis. Some of this is done through the local hospital, but it doesn't meet the demand.**

b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

- **The gaps are not really specific to a certain population. I point out the elderly just because that is who we deal with a lot. However, if you talk to the school administrators they would probably give examples of gaps for their student population. It is a 0 to 99 age issue and not specific to any one population.**

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

a. What role should hospitals play in the next iteration of the ACC Program?

- **Hospitals need to integrate and coordinate care. Most of the hospitals we work with do not do this at all or do it very poorly. In order for hospitals to play a role in the next ACC Program, they would need to be required to be active with CORHIO, for example. We are active with CORHIO but it doesn't do us any good because the hospitals do not utilize it. The hospitals would also need to be okay with referring clients to a different level of care which they might not want to do because they would lose money. Hospitals in the rural/frontier regions tend to isolate themselves and do not move out of their comfort zones. They could take a lesson from programs like Centura's Health Neighborhoods that collaborate and coordinate with providers in the community.**

b. What role should pharmacies play in the next iteration of the ACC Program?

- **I cannot think of a role for pharmacies.**

c. What role should specialists play in the next iteration of the ACC Program?

- **As I said earlier, specialty care needs to be more accessible in our rural/frontier region. Telemedicine has been a welcome addition to our programing. I think that incentives for agencies to build upon their telemedicine programs (or develop one if not developed) should be in the next iteration along with incentives for specialty providers to provide care in the rural/frontier region.**

d. What role should home health play in the next iteration of the ACC Program?

- **Home health should be involved in the care planning for those Members that need this service. They should be working closely with the nursing homes and hospitals.**

e. What role should hospice care play in the next iteration of the ACC Program?

- **Just like home health it should be available for those Members that need it.**

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

- **I cannot think of a role for these two entities.**

g. What role should counties play in the next iteration of the ACC Program?

- **The counties in the southeast region are very parochial in nature and rarely cooperate with other. I think that this would be opening up Pandora's Box and cause a lot of problems for our agency that provides services in 6 large (geographically) counties. It is hard enough now to work with 6 different sets of commissioners with 6 different ideas on what they want in the way of healthcare for their county. If you bring the counties in it would really muddy the waters. Thus, they should not have a role.**

h. What role should local public health agencies play in the next iteration of the ACC Program?

- **The role is one of a referral source for the network of ACC providers.**

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

- **We already have enough organizations at the table. If you bring in more that will have their own agendas for healthcare it will really cause a lot of issues. I can see our main supporters and network providers dropping out if this should happen.**

45) How can RCCOs help to support clients and families in making and keeping appointments?

- **The only thing that has worked for us is lots and lots and lots of outreach and follow-up calls to make sure that clients remember their appointments. This will always be an on-going problem and I don't know that involving the RCCOs will change much.**

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

- **No, it should not be required. I think that HCPF should stay away from a lot of requirements and instead allow the bidders to offer up their own solutions for a lot of the questions that are being asked in this RFI. We have Health Navigators that we would build into our RFP response.**

47) **Community Health Worker reimbursement.** Please use the table below to detail how Community Health Workers should be reimbursed:

- **As I said above, HCPF should stay out of this level of detail and instead have the bidders offer their own solutions in their RFP.**

Reimbursement process	(Please check all that apply)
Independently bill	☐
On staff (salary) at Primary Care Medical Provider Clinic	☐
On staff (salary) at RCCO	☐
Per Member Per Month Payment	☐

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

- **Just like behavioral health is healthcare, oral health is also healthcare. So the RCCO's should be helping oral health to integrate and coordinate services.**

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you?

- **Our clients receiving services in the way that best suits them through our local customs and traditions.**

b. What RCCO requirements would ensure cultural competency?

- **This questions is like asking, "What RCCO requirements would ensure that teenage girls in southeastern Colorado do not get pregnant!" Cultural competency cannot be regulated or required; it can only be shown to be understood by an agency through their words and more importantly through their actions with clients and customers. It would be better for HCPF to ask a bidder to demonstrate how cultural competency is active in their organization and community.**

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?

- **It depends on where the organization is located (city, urban, rural, frontier) and what values the organization teaches its staff when doing cultural competency training. Plus, the clients/families themselves will dictate the types of skills the staff need.**

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

- **Again, making requirements is not the way to go. Ask the bidders to offer up their own solutions.**

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

- **No, this should not be part of the next RFP. If a specific RCCO feels that this a needed in their region than they can take care of it.**

51) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

- **For years, we have educated our clients through diversion programs and protocols how to avoid going to the emergency room and what to do instead. The ACC should do the same – develop diversion programs that redirect clients to community based care rather than inpatient.**

52) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

Practice Support

53) **Support for practices.** Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☐	☒	☐	☒
Network provider education	☐	☒	☐	☒
Assistance with practice redesign	☐	☒	☐	☒
Assistance with efficiency-enhancing activities	☐	☒	☐	☒
Provide web-based resources and directories	☐	☒	☐	☒
Provide practice-specific data reports	☐	☒	☐	☒
Provide clinical care guidelines and best practices.	☐	☒	☐	☒
Provide clinical screening tools	☐	☒	☐	☒
Provide health and functioning questionnaires	☐	☒	☐	☒
Provide chronic care templates	☐	☒	☐	☒
Provide registries	☐	☒	☐	☒
Offer client reminders	☐	☒	☐	☒
Offer client self-management tools	☐	☒	☐	☒
Offer educational materials about specific conditions	☐	☒	☐	☒
Supply behavioral health surveys	☐	☒	☐	☒
Supply other self-screening tools	☐	☒	☐	☒
Administer behavioral health surveys	☐	☒	☐	☒
Administer other self-screening tools	☐	☒	☐	☒
Prepare client action plans	☐	☒	☐	☒
Provide training on providing culturally-competent care	☐	☒	☐	☒
Provide training to supporting staff	☐	☒	☐	☒
Provide training on motivational interviewing	☐	☒	☐	☒
Provide tools and software for phone call and appointment tracking	☐	☒	☐	☒
Provide tools and resources for tracking labs, referrals, etc.	☐	☒	☐	☒
Provide referral and transitions of care checklists	☐	☒	☐	☒
Provide visit agendas or templates	☐	☒	☐	☒
Provide standing pharmacy order templates	☐	☒	☐	☒
Provide comprehensive directory of community resources	☐	☒	☐	☒
Provide directory of other resources	☐	☒	☐	☒
Provide materials regarding Nurse Advice Line	☐	☒	☐	☒
Ensure all tools and resources are centrally located on RCCO-specific website	☐	☒	☐	☒
Others	**I am not at all in favor of this "one size fits all" type of approach. This should be left up to each RCCO/bidder to determine what fits for their region and what does not fit.**			

54) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

- **N/A**

55) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

- **As I have responded multiple times now, requirements are not the way to go. The bidders should offer up solutions, propose methods, vet ideas, etc. to address this and other areas of the RFI that speak to "requirements".**

56) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

- **The RFP bidder should include this in their response based on their particular PCMPs and locations. Most PCMPs want to be involved at this level only if their rate is higher than those that are not designated medical homes for the client.**

57) Should the Department require that PCMPs utilize disease registries to manage the health of their population?

- **Again, "require" is a no. If the PCMP wants to use a disease registry than they should be able to do so.**

58) Please share any other advice or suggestions about provider support in the ACC.

- **I don't know how many times I said no in this section that seemed to be totally focused on having lots of requirements in the next phase of the ACC program. Requirements are the easy way out for a bidder because all they have to do is meet them. It is much harder for a bidder to come up with their own solutions backed up by data, experience, and a successful and satisfied client population.**

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

- **Earlier in this document I pointed out that a risk contract is best. So a risk contract with a PMPM and goals for meeting the Triple Aim that are supported by financial incentives would be a good payment structure. I think that this is the best way to keep costs low and improve the health of a population.**

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

- **As a behavioral health organization, we are not PCMPs. However, we have worked under a Global Budget successfully for the past 18 years. I think that a Global Budget would work well for physical healthcare providers as well.**

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

- **No, providers cannot be successful in their current environment because it is a fee-for-service environment which is the biggest barrier to development of a system where payments are tied to value. Since providers are paid for volume rather than value, there is no incentive for them to change to a system based on value. Until the providers have to deal with a risk contract that has value as a main area of reward rather than volume, there is no reason for them to change. So the payment structure in the next RCCO RFP needs to be set up as a risk contract with value as the focus rather than volume and fee-for-service arrangements done away with forever more.**

62) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

- **We are currently an LSLPN, licensed by the DOI, so any additional licensure requiring reserves that may be needed would not stop us from bidding.**

63) What role – if any – should the RCCOs play in the distribution of payments to providers?

- **The RCCOs should be totally in charge of distribution of payments to providers within their RCCO system.**

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

- **Since the payment system that the behavioral health agencies have worked under for so many years has bent the cost curve and been so successful, I would stick with it – so a Global Budget with PMPM payments built through a rate setting process that takes into account the various factors at play. Also, quality needs to be part of the equation and rewarded.**

66) **Measuring Client experience.** Please complete the table below to indicate how the Department should measure Client/patient experience:

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☒	☐	
SF-12 Health Survey	☒	☐	
Other types of client interviews / surveys	☒	☐	
Patient Activation Measure	☒	☐	
Focus groups	☒	☐	
Other	Please type your response here. **Whatever is done needs to be started at the very beginning of the RCCO contract and not introduced in the middle of the contract. That has happened and it causes problems with the efficacy of the data.**		

67) Knowing that, at this time, the Department only has claims data, how should population health be measured?

- **Since whatever the RCCO does has to fit into the Department's system, I don't think that population health can be measured any other way until the Department changes this function. The Department should have to pay for it and then the measurement needs to be the responsibility of the RCCO.**

68) How should quality and performance data be reported to the RCCOs, PCMPs, and the public?

- **In this day of technology it should be done by a website which makes it easy access for all.**

69) **Measures for payment.** Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☒
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

70) What percent of RCCO payments should be tied to measures or performance?

Percentage	
10-20%	☐
21-30%	☐
31-40%	☐
41-50%	☒
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

71) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?

- **Yes, they should be paid on the same KPIs, however I do think that some of the local nuances need to be taken into account; rural/frontier is very different than downtown Denver.**

72) Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?

- **Improvement**

73) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

- **I don't understand why the RCCOs would have to wait on the State. The RCCOs should be able to monitor their own progress and report it to the state when the State is ready to handle the information. The State would have to make sure that each RCCOs measurement and monitoring process is valid, but other than that the RCCOs could go ahead and get started.**

74) **Incentive payment frequency.** Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	☒
Annually	☐
Other	☐

If you checked the "Other" box, please describe payment frequency below:

75) For potential offeror's and other similar organizations: please describe the fixed costs of operating a RCCO.

- **What HCPF puts in the RCCO RFP will largely determine what the fixed costs of operating the RCCO will be. Of course, each RCCO will need staff to provide the necessary services so that is always the number one fixed cost. After that it really does depend on the requirements in the RFP. The resulting RCCO contract, rules and regulations all figure into a RCCOs fixed costs.**

76) For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

- **As a community provider we are currently measured on 28 different measurements to assess the quality of our care. We are not reimbursed for any of these measures. I do believe that the RCCOs should be reimbursed for these measures as this is a "lost cost" for us in the way of the staff and technology needed to deal with the data and reporting requirements.**

Health Information Technology (HIT)

77) **Types of communication.** For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	☒
Text message	☐	☒
Web portal	☐	☒
Email	☐	☒
Telemedicine / Video chat	☐	☒
Face-to-face meeting	☐	☒
Smartphone app	☐	☒
Other:		

78) **HIT investments by organizations.** For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below:

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	☐	☒
Digital care management tool	☐	☒
Care transitions alerts	☒	☐
Electronic Health Records (EHRs)	☒	☐
Health risk assessment software	☐	☒
Practice assessment tools	☒	☐
Practice management tools (scheduling, billing)	☒	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☐
Patient education/wellness tools	☒	☐
Provider/case manager directory	☒	☐
Shared decision-making tools	☐	☐
Telemedicine software	☒	☐
Other:	☐	☐
Other:	☐	☐

79) **Importance of technology by type.** The Department is working to determine what technology is in place, what technology is needed, and what technology should be standardized. For RCCOs, providers, and other organizations, use the table below to answer what HIT infrastructure outside of the SDAC your organization would use to perform population health management activities. Tools are scored from 1-5, where 1 are those items least-likely to be used, and 5 are items most-likely to be used:

Tool	1 Least	2	3	4	5 Most
Population analytics / reporting / dashboard	☐	☐	☐	☒	☐
Care management tool	☐	☐	☐	☐	☒
Care transitions alerts	☐	☐	☐	☐	☒
Electronic Health Records (EHRs)	☐	☐	☐	☐	☒
Practice assessment tools	☐	☐	☒	☐	☐
Health risk assessment software	☐	☐	☒	☐	☐
Practice management tools (scheduling, billing)	☐	☐	☒	☐	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☒	☐	☐	☐
Patient education wellness tools	☐	☐	☒	☐	☐
Provider/case manager directory	☐	☐	☐	☒	☐
Shared decision-making tools	☐	☐	☒	☐	☐
Telemedicine	☐	☐	☐	☐	☒
Other:	☐	☐	☐	☐	☐

80) What are the primary barriers to RCCOs and providers increasing their use Health Information Technology to improve the performance of Primary Care Practices?

- **The biggest barrier is staff not wanting to use it and second is the cost which is not reimbursable.**

81) How can Health Information Technology support Behavioral Health Integration?

- **HIT has a huge impact on behavioral health integration. For years we were not able to get a psychiatrist to move to La Junta to provide psychiatric services. Then when we decided to invest in telepsychiatry we had multiple psychiatrists willing to work for us from their place of business. We were concerned that our clients, especially the elderly, would not like meeting with a psychiatrist via an electronic system and our concerns were quickly put to rest as we got positive feedback from all populations, especially the elderly, on being able to talk to the psychiatrist via our large monitors that have no delay in the picture or speech. So HIT is a huge support for populations that live in the rural/frontier regions.**

- **Now we are ready to move more into telemedicine with our primary care providers, but there is a barrier. That barrier is the integration of our physical health and behavioral health information. We have searched for an EMR that combines the two into one well-designed electronic chart, but it doesn't exist. We have heavily invested in travel, hotels, and staff time by sending our IT and clinical staff to different locations to look at the different products on the market. What we have found is that an EMR is either really good on the physical side and has lots of weaknesses on the behavioral side or vice versa. Until these two disciplines can be merged into one EMR, true integration will not happen and will keep the physical health providers from wanting to work with or integrate with behavioral health.**

82) In the next iteration of the ACC, should there be a shared resource for data and analytics? Please describe the basic criteria for what a shared data and analytics platform needs to contain in order for it to be useful.

- **Yes, there should be a shared resource for data and analytics. I think that the basic criteria should first start with each RCCO bidder in their RFP response describing how they are going to gather, report on, and transmit the data to HCPF. I do not think that HCPF should be totally responsible for this platform. If the RCCOs are put in charge of getting the data to HCPF I believe that HCPF would see better results.**

- **What should be transmitted to HCPF by all RCCOs is the cost of care and any health outcome measures that impact that cost of care.**

83) Should there be a shared care management tool? Please describe the basic criteria for what a care management tool would need to contain in order for it to be useful.

- **Our SyCare partnership developed a shared care management tool that provides "real time" data to monitor individuals who have accessed emergency room/inpatient care in our region and this is now used by our RCCO. Every now and then there is a delay in transmitting the information, but it is still delivered within a 60 minute period of time. It would be nice to take the next step into tracking pharmaceuticals and health appointments at any health agency in our region so our care managers can track the individuals health care access needs.**

84) Should there be a shared population health management tool? Please describe the basic criteria for what a population health management tool would need to contain in order for it to be useful.

- **Yes, and I think that this should be the responsibility of each RCCO. Criteria should be developed to look at duplication of services, lack of access, appropriate treatment protocols, satisfaction of services, and outcomes for the various populations. Since population health management is a big undertaking for a provider, they would need some type of incentive to participate in order for efficiencies to be met. As I have said throughout this response, a risk based contract works best in these situations.**

85) Please describe the functionality that a common Medicaid provider directory would need to contain in order for it to be useful.

- **The needs of the client should drive how the provider directory is set up so clients can search for providers based on their particular needs.**

86) How can the RCCOs support providers' access to actionable and timely clinical data?

- **Getting all providers to utilize CORHIO would be the best way to accomplish this.**

87) What are the HIT solutions that would benefit clients, providers, and RCCOs? Please comment on the parameters these tools or platforms would need to possess and the ways in which they could be used.

- **An integrated physical health and behavioral healthcare electronic health record that gives all providers immediate access to real time data and allows for the tracking of the patients progress, medications, appointments, and overall access to care would be most beneficial.**

88) What technical assistance or resources related to HIT infrastructure should the RCCOs supply? This assistance or these resources could be for providers, social service organization, clients/families, or for others.

- **The RCCOs should be totally responsible for the HIT infrastructure in order to have a broad network of providers. In the rural/frontier areas many providers cannot afford the cost of an electronic health record and still do paper charts. Until this is dealt with at the RCCO level, our region will not be able to provide the type of data and information asked about in some of the previous questions. The RCCOs should provide ongoing support for all providers.**

89) What role should health information exchange platforms like CORHIO or QHN play in the next iteration of the ACC?

- **If HCPF is wanting an effective and efficient RCCO system, then CORHIO and QHN need to be at the table at all times.**

90) Please share any information, advice, and suggestions you have about health information technology in the ACC Program.

A new report from the Commonwealth Fund, "State Strategies for Integrating Physical and Behavioral Health Services in a Changing Medicaid Environment," identifies key elements of an integrated health system and examines state strategies to achieve integration. For example, the authors identify the following strategies for states to consider:

- ***Consolidating agencies.***
- ***Placing state managed care contracting decisions for both physical and behavioral health under the same authority.***
- ***Providing financial incentives for providers and managed care organizations to integrate care.***
- ***Increasing data exchange across providers and departments.***
- http://www.commonwealthfund.org/publications/fund-reports/2014/aug/state-strategies-behavioral-health

I believe that the health information technology program for the ACC program should be the catalyst for integrating care, increasing data exchange, and providing improved overall access and quality service for all individuals needing healthcare within a RCCO region.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Bern Heath, Ph.D.
Location: Durango, La Plata County, Colorado

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Axis Health System
Location: Dolores, Montezuma, La Plata, San Juan and Archuleta Counties and municipalities
☒ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☒ Client advocate
☒ Medical provider / PCMP / other provider
  i. Type or specialty: Community Health Center (FQHC)
  ii. Area of practice: Primary Care
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☒ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☐ Other (please describe): Click here to enter text.

Are you currently involved in the ACC program?

☒ Yes
☐ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☒ 1-2 years
☐ 2-3 years

How have you been involved in the ACC program and what interaction have you had with RCCOs:
We are in RCCO Region 1 and are funded for attributed patients at our Cortez and La Plata integrated primary care clinics and have a contract for 3 Positions under the Community Care Coordination Agreement.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:
We are both a community health center (FQHC) and a community mental health center. As a community health center we are part of the prospective payment structure. As a community mental health system we are part of Colorado Health Partnership BHO and we bill FFS for non-covered services.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☒ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

Please feel welcome to describe why or why not using the space below.

☐ 3-4 years
☐ Since before the program was implemented.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

- **Though Region 1 is unrealistically large, the structure allows for use of resources to best serve unique community needs.**
- **The data we are getting is helpful from a claims basis.**

2) What is not working well in the ACC Program?

- **The initial focus on chronic care management has not evolved into more integrated care approaches.**
- **Most importantly (and with regard to Section 1.3.4) substantive payment reforms essential to truly integrated care have not occurred. Traditional fee-for-service (FFS) billing does not support higher levels of integrated care. FFS structures stumble over same day billing restrictions and do not reimburse for consultations without the patient present, electronic contacts or a large volume of care management all of which we have found to be essential for improved health outcomes in an integrated healthcare system. FFS structures inadvertently provide incentives for ineffective, fragmented and churned visits rather than active management of care focused on health outcomes. FFS is also the most expensive payment structure both for providers and insurers as it requires excessive administrative resources for the billing and verification processes at the encounter level. We have to align coverage and payment reform to support integrated care. We believe this requires a global capitated structure.**

3) What is working best in the Behavioral Health Organization (BHO) system right now?

Colorado Health Partnerships is a mature managed care organization. We have not only been incredibly effective in reducing the per cap cost of care through reduced need for out of home care, we have a significant penetration rate and are picking up very challenging cases earlier.

In addition, we have some the leaders in the integration of care in our BHO and we have a strong collegial relationship between our organizations, allowing effective and best practices to be shared and adapted to different regional needs.

4) What is not working well in the BHO system?

The funding structure is more accurately represented as a Fee-For-Service (FFS) structure in Managed Care clothing. We are paid through a global cap structure (PMPM), but are required to account for individual service units and have our rates set on units using a FFS structure as a means to measure the value of the contract. This preserves the excessive cost of FFS structures (service unit verifications) for both the provider and insurer. It has the further significant failing of dis-incentivizing innovative integrated care designs that do not fit traditional FFS reimbursement models but effectively care for patients.

5) What is working well with RCCO and BHO collaboration right now?

Our BHO is working actively to prepare for a merging of RCCOs and BHOs. We hope to bring both extensive integrated care models and mature risk management to the RCCO table.

6) What is not working well with RCCO and BHO collaboration right now?

The collaboration is challenged by the geographic regions which do not match up well. With too much emphasis on population centers, the regions should be re-designed to take maximum advantage of the regional BHO service relationships which are well established, highly functional and effective for patients.

Region 1 is prepared for a global capitated structure, but the move has been slow to nonexistent. Until global cap is achieved, co-location rather than integration will be the limit of care. This hurts Axis Health System with 2 integrated clinics that will be hamstrung until global capitation is available.

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

We need to move to more integrated models of care, which will move us from unit of service (volume) accountability to population based outcome accountability (value as CIVHC) puts it. If we are to move beyond co-location, a global cap payment structure will be needed. The RFP should provide points for existing progress toward more integrated models of care and population outcome data and incentivize continued progress in this direction

The only national system of behavioral health serving all populations is the Community Mental Health Center (CMHC) system. The only national system of primary care serving all populations is the Community Health Center (CHC) System (referred to as FQHCs). Any statewide effort to establish integrated healthcare must incorporate both systems. CMHCs and CHCs have been working increasingly closer together over the past two years and have found many local ways to partner through co-location and more recently in more integrated models. The RFP should incentivize this increasing collaboration by giving preference to applications that effectively bring CHCs and CMHCs together and should provide incentive funding for more permanent structures (such as joint ventures or jointly owned facilities).

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services**. Using the table below, please explain which issues are barriers, **and how they can be addressed:**

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☒	☐	**See responses to #2 and #4 above. We have a FFS encounter based foundation for a capitation contract and need a global cap structure with a population based outcome payment structure. This would both significantly improve care (providing more flexibility for innovative integrated care models) it would also cost less by eliminating the misguided (measuring the wrong thing) FFS accountability structure that requires excessive administrative resources both for the provider and insurer.**
Community Behavioral Health Services Rule	☒	☒	
Covered diagnoses list	☒	☐	**Covered diagnoses are intended to limit the scope of responsibility and hence of cost to a program. If we truly wish to patient centered care, serve as medical or healthcare homes and improve outcomes through more integrated models of care, then we must provide incentives for whole-person, integrated healthcare including coordination between existing Community Health Centers and Community Mental Health Centers. The PMPM should be recalculated without the limit of covered diagnoses for integrated primary care.**
Different behavioral / physical health reimbursement	☒	☒	**This can be circumvented as VT did by pooling funds at the State level, or it can be managed locally (at some cost and effort) as we have done and presented to HCPF. The very sophisticated document that resulted is available if desired from either Axis Health System or Colorado Health Partnerships.**
Institutions for Mental Diseases exclusion	☒	☐	**As I understand it, the 191S(b)(3) waiver gives us some room.**
OBH rules, reporting, or financing (regulatory differences between agencies)	☒	☐	**CMHCs and CHCs are getting hammered by increasing administrative demands made far worse by their inconsistency in structure, reporting requirements and timing between State agencies. Few agencies today have a single grant contract. There are multiple payers, multiple deliverables and a lack of alignment in how**

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

			to value patient impact. Demands vary by State Department and within departments by program.
PCMP financing structure	☐	☐	
Per-member per-month amount	☐	☒	
Physical space constraints	☐	☒	
Privacy Laws (HIPAA, 42 CFR)	☐	☒	**FERPA (confidentiality provision in the educational setting for school based health or college based services) is also a factor. Substance Use's 42 CFR Part II is in revision and it would be much better (frankly for both providers and patients) for the three systems to merge into one, but there are ways to accommodate the separate structures if need be.**
Professional / cultural divisions	☐	☒	
RCCO or BHO contracts	☐	☒	
Staff capacity	☒	☐	**Whether CHCs or CMHCs, the rapid expansion of Medicaid has outpaced the labor pool. This is especially true of medical providers. This makes the need for midlevel medical practitioners even more acute – especially in rural areas. This will stabilize over time, but re-visiting reciprocity, the time it takes for independent practicing nurses to be licensed in Colorado, and the scope of practice for trained nurses important considerations. If these cannot be changed statewide, perhaps in designated rural areas with Medically Underserved Populations (MUPs) we could have a different standard.**
State/Federal rules or reporting requirements	☒	☐	**See response to OBH rules above.**
Technical resources / data sharing	☐	☐	
Training	☒	☐	**There are NO good academic healthcare programs providing training in integrated, whole-person, healthcare. This is an added burden to local providers as we have to train and re-train new employees.**
Others	**Please type** your response here.		

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

The best resource for this is *A Standard Framework for Levels of Integrated Healthcore* published by the SAMHSA-HRSA Center for Integrated Health Solutions in April 2013. This can be simply and accurately assessed by a simple decision tree tool, the *Integrated Practice Assessment Tool* (IPAT) developed by a collaboration of Psychologists from Colorado Access, Value Options and Axis Health System. It can be found at www.IPATS.org.

10) Please share any other general advice or suggestions you may have about behavioral health integration.

When we talk about our "healthcare system" we are not being accurate because it really isn't. It is for the most part not about health, but about illness. It is not about care; it is about services and service units. It is not about a system, but a set of fragmented resources. What we really have in this country and in Colorado is not a healthcare system, but a sick service set of resources. What we need is a health care system.

The Affordable Care Act is establishing a healthcare system by ensuring that all Americans have access to affordable care and providing structures to make services less fragmented. In so doing, the Affordable Care Act has committed to Berwick, Nolan and Whittington's concept of the Triple Aim....that healthcare reform, to be successful, must meet three goals: the improved experience of care, the improved health of the population and reduced per capita cost of healthcare. We have come to know that the integration of healthcare is essential to achieve all three components of the Triple Aim and hence, to the success of healthcare reform.

Everyone wants to do integrated care until they realize that they have to change how they practice". When they realize they have to change how they practice, they try to change the concept of integration to accommodate their current practice instead. It is critical that any RFP understand and require practice change if there is to be any meaningful progress toward integration.

The shift to accountability through population based outcomes is critical to achieve both the best care and greatest cost savings. In our field, we have a tendency to measure the wrong things. The number of inpatient bed days will give us a sense of our financial exposure in an "at risk" environment, but it does not inform care. By itself it will not tell us what we need to do differently to improve health.

At Axis, we have selected five measures we take at enrollment and then quarterly on every person we serve (i.e., it is a population measure). These measures are PHQ-9 (for depression), AUDIT (for substance use), HRQOL (self-report of unhealthy days), BMI, and Blood Pressure.

We selected these measures strategically.

- **The measures had to be population-based; applicable to all patients coming in to any location regardless of type of location and the purpose of their visit.**
- **We had to start with a manageable set of key measurements and not try to measure everything.**
- **The measurement had to fit into the workflow of each location and not require a particular staff discipline (e.g., nursing) to collect.**
- **The measures had to have proven validity for health outcome.**
- **The measures had to be age appropriate.**

Albert Einstein famously, and astutely noted: "We can't solve problems by using the same kind of thinking we used when we created them." Integration takes patience, commitment, thought and effort. It is complex, mostly not understood, underappreciated and difficult to implement. But it delivers the best care, saves healthcare dollars, and improves the patient experience of care.

Care Coordination

11) Care coordination is an important part of the ACC Program.

A cautionary note here...care coordination and navigation can actually obstruct increased integration by giving systems a mechanism to connect without requiring the primary providers do the work of, or take a different level of responsibility for, coordinating care.

a. What is the best definition of care coordination?

The deliberate organization of patient care activities between two or more participants involved in a patient's care to facilitate the appropriate delivery of health care services.

b. How should RCCOs prioritize who receives care coordination first?

We might want to look at this another way. A fundamental principle of care *integration* is that all care is coordinated within and between organizations. It is not a separate service but an essential component of the concept of care.

c. How should RCCOs identify clients and families who need care coordination?

All patients and families need and should receive coordinate care right up through level 6 integration.

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

Tracking should be unnecessary as it is a presumed component of all care. What we should be measuring is outcomes, not services and service units (see response to funding questions above).

12) What services should be coordinated and are there services that should not be a part of care coordination?

All services should be coordinated within and between practices.

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

This cannot be answered without the context of the patient.

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today?

This is the problem. More fragmented, one off coordination hurts care and compromises outcomes. I would hope the re-bid would strategically consolidate such efforts and incentivize care coordination as a fundamental component of the integration of care, not a program in which a patient is involved.

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

This is the wrong question...see above.

c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

See "a." above

d. What are the gaps in care coordination across the continuum of care?

The gaps occur because care coordination is seen as a program, not integrated into the model of care.

15) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

Please note...they may be, in the traditional sense, non-medical needs, but they are NOT non-healthcare needs. If we are to integrate care, these issues must be an active part of whole-person care.

Non-medical need:	Should the RCCO have a role? Yes	No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma	☒	☐	☒	**This should be part of the healthcare assessment and health care through the RCCO must address these issues to be effective.**
Affordability (assistance with prescriptions or co-pays)	☒	☐	☒	
Daycare / childcare	☐	☒	☐	
Economic stability & employment	☐	☒	☐	
Education	☐	☒	☐	
Environment	☐	☒	☐	
Food access / nutrition	☒	☐	☐	**This is an essential medical issue related particularly to healthy lifestyles and prevention of chronic illnesses (Type II diabetes, etc.)**
Health literacy	☒	☐	☐	**Important if we are to improve patient engagement and personal responsibility for patient's own health**
Housing	☐	☒	☐	
Language or translation services	☒	☐	☐	
Literacy	☐	☒	☐	

Transportation	☒	☐	☐	**Particularly as it relates to crisis services and inpatient transports in rural areas**
Other	Please type your response here. Feel free to list as many non-medical factors as you want, and please explain how the RCCO should be involved.			

16) **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Note: Care coordination is everyone's responsibility in terms of patient need (identification) and in terms of contributing expertise to the care. However, I have checked "yes" below only for those whom I see as directly transporting or making the initial contact.

Type:	**Coordinate care?** Yes	No	**In what capacity should these individuals coordinate care in the ACC Program?**
Advanced Practice (Registered) Nurses	☐	☒	
Certified Addiction Councilors	☐	☒	
Certified Nurse Midwives	☐	☒	
Community Health Workers	☒	☐	
Generalists (BA/BS/MA/MS)	☒	☐

Other	Please type your response here.		

17) **Care coordination requirements for specific populations.** Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and infants	☒	☐	Requires special sensitivity to new parent issues especially for first born.
Children	☐	☒	
Children who are healthy, but in socially-complex environments	☐	☒	
Children involved in the foster care system	☒	☐	Requires special sensitivity (e.g., trauma informed care and attachment issues)
Children with a chronic illness	☒	☐	Depends on the illness and level of control. Type 1 Diabetes would require some special expertise, for example.
Children with a serious emotional disturbance	☐	☒	If adequate behavioral health back-up.
Children with medical complexity	☐	☒	
Children or youth with a behavioral health diagnosis or substance use disorder	☐	☒	
Transition-age adolescents	☐	☒	
Parents and families	☐	☒	
Pregnant women	☐	☒	
Adults	☐	☒	
Adults who are healthy, but in socially-complex situations	☐	☒	
Adults with a chronic illness	☒	☐	Depends on the illness and level of control.
Adults with a behavioral health diagnosis or substance use disorder	☒	☐	Depends on severity.
Clients involved in the criminal justice system	☐	☒	
Clients with a disability	☐	☒	
Clients in a nursing facility	☐	☒	
Elderly clients	☐	☒	
Frail elderly clients	☒	☐	
Clients in palliative care	☒	☐	
Other populations, please comment:			

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

19) How should care coordination be evaluated? How should its outcomes be measured?

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

    a. What is the PMPM cost for providing care coordination services?

This would have to be actuarially calculated but should not be a separate component. We would be best served by a global cap funding structure which looked at overall cost of care, provided a PMPM that would equal that primary care cost and allow the providers to share in any savings. This is a sound strategy to start with, but presuming diminished returns from cost savings over time, would need to have a floor so as not to create a death spiral.

    b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

See response above. The PMPM for total care could vary, as it did in Minnesota, by range of eligible chronic conditions with complexity tiers with varied payment structures to adjust for different approaches to patient care: 0, 1-3, 4-6. 7+ might work.

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

    a. **Care coordinator to client ratios.** If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☐
51-100	☐
101-200	☐
201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

Accountability should not be service based, but population based. That is, we should not preserve the service volume mind set, but population based health outcomes by site.

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

I think it would be essential for data reporting to and from the RCCOs to have some standard components (though additional data could be selected by RCCOs with their partners). I would also suggest a minimum group of population based health outcomes (e.g., change in depression, substance use, BMI, BP, CDC HRQOL). Measures like inpatient days are financial risk measures, not population health measures. Inpatient bed day measures do not specifically inform care. There is a difference in focus and application between risk measures and health measures.

Other than these items it would be essential for local latitude in care configuration to maximize both resources and effectiveness.

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

We need not to prescribe processes and instead focus on outcomes. That is the accountability commitment that should be required.

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

This is a reasonable suggestion, but likely will not be relevant to RCCO 1 covering a vast rural and frontier area.

27) Should the RCCO region maps change? Why or why not? If so, how?

The maps were driven by population, not by care systems in place. As a result RCCO 1 is way too large to make consistent practice practical or effective. In addition, the structures in Larimer County do not have existing or natural connections to the rest of the region. The regions should change, be restructured to accommodate existing, established and proven BHO and geographic boundaries (e.g., 5 counties of SW Colorado geographically together bounded by major mountain passes – though with only 92+K in population). That is, I would suggest Region 1 be split into 2 or 3 regions – each of which could be led by Rocky, but would have slightly different and more effective/responsive structures. The BHO regions have existed for some time and are effective care regions. Restructuring the map should ensure BHO boundaries are respected – Though CHP is too large to stay intact, it could easily be subdivided (still under CHP) into the three original MHASA regions without great disruption and the historic and effective ties among the three regions would serve the RCCOs well.

28) Should the BHO region maps change? Why or why not? If so, how?

See above.

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

I would think that it would take 12 - 18 months. I do not have any sound estimate of the cost.

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

First, Payment Reform (move to a true global cap)...Second, Payment Reform (move to a true global cap)...Third, Payment Reform (move to a true global cap).

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

See above

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

I have viewed the RCCOs as the region, but to the question, these regions could be subdivided without problematic competition.

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

I am a Medicaid provider for both behavioral health and primary care.

34) What role should RCCOs play in attributing clients to their respective PCMPs?

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

We already have too many conflicting masters. One State Department should have the responsibility for managing this and at the Department level could coordinate with CDPHE, but do not make the RCCOs and the partner organizations have to deal with multiple State Departments, multiple standards and multiple objectives while keeping all the funding entirely segregated.

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

The RCCOs should have an enrollment/eligibility component to facilitate the State's Medicaid expansion and HBE, but should not be burdened with regular reporting requirements back to the HBE beyond the bare essentials.

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

Honestly, we have a robust grievance and noticing procedures to ensure consumer feedback. If the State wishes, it could administer an independent consumer satisfactions questionnaire. Stakeholder processes are politically expedient but practice burdens that are rarely of material value where the rubber meets the road.

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

Letters of support outlining roles should be sufficient. We need to keep our eyes on the ball of "population outcomes", not the outcomes *and* prescribed processes for achieving them. Either set the outcome requirements *or* require a prescribed process (which doesn't hold providers responsible for the outcome).

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

See above....and measure the right thing...outcomes. This will be the most effective way to drive the community involvement you want to see, but community involvement is not the object....achieving outcomes is the object.

42) How should the Department structure stakeholder engagement for the ACC as a whole?

See the answer to 39 above.

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

a. If no, what are the gaps?

There needs to be a more formal place and role for CHCs as well as for RHCs. Rural and Frontier areas will have staffing challenges at all levels.

b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

The gaps are geographic, discipline and provider specific, not population specific.

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

a. What role should hospitals play in the next iteration of the ACC Program?

Hospitals have a strong role to play, but not the central role they have been used to. Primary care offers the opportunity to capture the long hanging fruit in cost reduction but need the hospital inpatient and lab resources as well as entrée to the specialists' structure. However, most hospitals are neither used to nor comfortable with a genuine healthcare partnership. One of the exceptions is Mercy in Durango which is a Centura Hospital. Partnering as part of a system to improve health outcomes rather than driving care is the best role for hospitals.

b. What role should pharmacies play in the next iteration of the ACC Program?

Engagement through primary care systems.

c. What role should specialists play in the next iteration of the ACC Program?

Specialists are moving increasingly into partnership with or under Hospitals. They are the hardest to work with as they are most resistant to the practice change and care coordination required of integrated care.

d. What role should home health play in the next iteration of the ACC Program?

e. What role should hospice care play in the next iteration of the ACC Program?

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

g. What role should counties play in the next iteration of the ACC Program?

h. What role should local public health agencies play in the next iteration of the ACC Program?

Public health agencies have great expertise in population based health and health indicators and in prevention, all of which are extremely valuable in designing care and modifying resources to meet unique

community needs. I would think that they should be actively engaged as ACC partners. We have done so and are much better for it.

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

There is a danger of too many cooks in the stew and there is a risk that prescribing local relationships will be less effective than holding partners accountable for outcomes. Healthcare reform must be developed by healthcare professionals (administrators, payers and providers) in order to be meaningfully changed and administratively manageable. The concept of healthcare reform will not be successful if it is lost in a "grass roots" approach at this point. Broad input is important, but solution development needs to be focused so that changes are meaningful for those at risk (patients, providers and payers).

45) How can RCCOs help to support clients and families in making and keeping appointments?

I don't believe the RCCOs can help. This is an issue of great import to all behavioral health and primary care organizations and each, knowing its own population, are capable of developing the best regional strategies.

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

Health Workers and Navigators are not always the best alternative and can have the unintended impact of relieving systems of the need (by transferring the effort to these positions) to actually maintain contact and coordinate care with other parts of the healthcare system. Hold regions accountable for outcomes, provide adequate funding to achieve those outcomes, but let the RCCOs determine the best strategies for achieving them.

47) **Community Health Worker reimbursement.** Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement process	(Please check all that apply)
Independently bill	☐
On staff (salary) at Primary Care Medical Provider Clinic	☐
On staff (salary) at RCCO	☐
Per Member Per Month Payment	☐

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you?

b. What RCCO requirements would ensure cultural competency?

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

I would think that the RFP wording would be something along the lines of, "RCCOs will ensure that their networks are sufficient to the needs of the patient population to the degree practical and possible."

51) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

I would suggest an approach that sets rural/frontier and urban standards for expected emergency room utilization for what is deemed inappropriate emergency room utilization, provide the data on this utilization by hospital to the RCCOs, and expect/require that the RCCOs conform to (or come in lower than) the standard.

52) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

Practice Support

53) **Support for practices.** Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☐	☒	☐	☐
Network provider education	☐	☒	☐	☐
Assistance with practice redesign	☐	☒	☐	☐
Assistance with efficiency-enhancing activities	☐	☒	☐	☐
Provide web-based resources and directories	☐	☒	☐	☐
Provide practice-specific data reports	☒	☐	☐	☐
Provide clinical care guidelines and best practices.	☐	☒	☐	☐
Provide clinical screening tools	☐	☒	☐	☐
Provide health and functioning questionnaires	☐	☒	☐	☐
Provide chronic care templates	☐	☒	☐	☐
Provide registries	☐	☒	☐	☐

Provide training to supporting staff	☐	☒	☐	☐
Provide training on motivational interviewing	☐	☒	☐	☐
Provide tools and software for phone call and appointment tracking	☐	☒	☐	☐
Provide tools and resources for tracking labs, referrals, etc.	☐	☒	☐	☐
Provide referral and transitions of care checklists	☐	☒	☐	☐
Provide visit agendas or templates	☐	☒	☐	☐
Provide standing pharmacy order templates	☐	☒	☐	☐
Provide comprehensive directory of community resources	☐	☒	☐	☐
Provide directory of other resources	☐	☒	☐	☐
Provide materials regarding Nurse Advice Line	☐	☒	☐	☐
Ensure all tools and resources are centrally located on RCCO-specific website	☐	☒	☐	☐
Others				

54) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

55) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

Referencing the SAMHSA-HRSA Center for Integrated Health Solutions publication, *A Standard Framework for Levels of Integrated Healthcare*, for purposes of consistency and comparison, the RCCOs could use the Integrated Practice Assessment Tool (IPAT) as a measure of level of facility integration. This would provide a mechanism to objectively determine progress in integration. The instrument combined with the publication provide useful information on what is required to move practices to higher levels of integration.

56) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

The most effective *and* efficient way would be to ensure a global capitated payment with population based outcome accountability setting the stage for gain sharing as both recognition and incentive.

57) Should the Department require that PCMPs utilize disease registries to manage the health of their population?

No

58) Please share any other advice or suggestions about provider support in the ACC.

The most effective, and also the most efficient approach is to determine population based outcomes and key operational indicators – hold RCCOs responsible for achieving them – and resist the temptation to prescribe how they can be achieved. Said another way, the Department can prescribe how all care and services should be delivered (and hence the Department takes responsibility for the outcomes), or it can define the outcomes and key indicators and hold the RCCOs responsible for achieving them, but it cannot do both with any hope of success.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

Substantive payment reform is essential to truly integrated care. Traditional fee-for-service (FFS) billing does not support higher levels of integrated care. FFS structures stumble over same day billing restrictions and do not reimburse for consultations without the patient present, electronic contacts or a large volume of care management all of which we have found to be essential for improved health outcomes in an integrated healthcare system. FFS structures inadvertently provide incentives for ineffective, fragmented and churned visits rather than active management of care focused on health outcomes. FFS is also the most expensive payment structure both for providers and insurers as it requires excessive administrative resources for the billing and verification processes at the encounter level.

We have to align coverage and payment reform to support integrated care. We believe this requires a global capitated structure – payment on a PMPM basis without the overlay of unit cost to justify the expense. We would recommend that consideration be given to PMPM payments being tiered by number of chronic conditions (as was done in Minnesota) which roughly adjusts for complexity and cost.

We would also like to see this risk sharing model include gain sharing of the savings resulting from the integration of care...but a cautionary note is called for. If this were to be implemented, there would be significant savings the first year with reduced savings in subsequent years. Thus, gain sharing of cost reductions is a reasonable and sound approach for the first 1-3 years, but with diminishing savings as costs come down to stable levels then the reward system/incentive will need to be refocused to operational issues or consumer satisfaction (which loads on the Triple Aim of patient experience of care and hence engagement in their own treatment).

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

As both a primary care provider (1 FQHC, 2 School-Based Health Centers, and 1 private clinic) and as a community mental health center, we have been requesting such a structure for the past 3 years. We would and indeed could do it, and do it successfully, tomorrow if allowed. We have already developed the foundational structure needed to ensure transparency and appropriate use of the different Medicaid streams (prospective payment for the CHC, capitation under the BHO and access various Medicaid FFS payment structures). For our region and operation, all primary care and behavioral health services should be included in a primary care capitation.

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

We are fully prepared to tie payments to value (outcomes). At Axis, we have selected five measures we take at enrollment and then quarterly on every person we serve (i.e., it is a population measure). These measures are PHQ-9 (for depression), AUDIT (for substance use), HRQOL (self-report of unhealthy days), BMI, and Blood Pressure. This results in the nine measures you see above in one of the first dashboard reports we published internally. The population screening is made possible by use of electronic assessments via PatientTools.

We selected these measures strategically.

- The measures had to be population-based; applicable to all patients coming in to any location regardless of type of location and the purpose of their visit.
- We had to start with a manageable set of key measurements and not try to measure everything.
- The measurement had to fit into the workflow of each location and not require a particular staff discipline (e.g., nursing) to collect.
- The measures had to have proven validity for health outcome.
- The measures had to be age appropriate.

The following is a dashboard look, generated by Axis internally, of the nine components resulting from the 5 population health measures:

Outcome Measurements by Location

Sample 1 (patients with positive screen, earliest screen May 2010), Sample 2 (latest screen April - Oct 2014)

Outcome Measure	Columbine Center	Pagosa Springs Center	Cortez Integrated Healthcare	La Plata Integrated Healthcare
Depression	●	●	●	●
Alcohol Use - Male	○	○	○	●
Alcohol Use - Female	●	insufficient data	●	●
Unhealthy Days - Mental Health	●	○	●	●
Unhealthy Days - Physical Health	●	○	●	●
Unhealthy Days - Disrupting Normal Activitites	●	○	●	●
Body Mass Index	○	○	○	○
Blood Pressure - Systolic	●	●	●	●
Blood Pressure - Diastolic	●	●	●	●

Key:
● statistically significant change, wrong direction
○ no statistically significant change
● statistically significant change, right direction
*statistically significant change not due to chance

The Columbine Center and Pagosa Springs Center are traditional behavioral health sites. Cortez Integrated Healthcare and La Plata Integrated Healthcare are integrated primary care sites at a Level 5 integration (using the IPAT). All sites are successful at improving patient depression and blood pressure. None of the sites are effectively addressing BMI. The integrated sites alone are consistently showing statistical improvement with alcohol use by women and with the CDC's self-report (HRQOL) of healthy days.

It will take a little time to determine if these measures are the best ones or whether others would be better, but we can clearly see that outcome measures can be successfully implemented in a population manner across all settings.

62) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

As part of the Colorado Health Partnerships BHO, we are licensed by the DOI. Through the BHO (and in some instances independently) we are prepared to secure any license required and with adequate notice, set aside any required reserves.

63) What role – if any – should the RCCOs play in the distribution of payments to providers?

The RCCO alone should be responsible for payment of the providers.

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

See #62 above. Axis is also establishing a single exit question at our locations using a Likert Scale of 1-S; (S) my visit today was outstanding, (4) My visit today was good, (3) My visit today was just okay, (2) My visit today was not good, (1) my visit today was terrible. We are experimenting with this low patient intrusion, consumer satisfaction approach to see if it is sensitive enough to lead us to better care improvement strategies. These are examples of local creativity and local solutions that would not result from a prescriptive RFP.

66) **Measuring Client experience**. Please complete the table below to indicate how the Department should measure Client/patient experience:

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☐	☒	
SF-12 Health Survey	☐	☒	
Other types of client interviews / surveys	☐	☒	
Patient Activation Measure	☐	☒	
Focus groups	☐	☒	
Other	Please type your response here. See response to #66		

67) Knowing that, at this time, the Department only has claims data, how should population health be measured?

See answer to # 62 as a possibility. This should be the RCCO's responsibility with adequate funding by the State.

68) How should quality and performance data be reported to the RCCOs, PCMPs, and the public?

Through a web site.

69) **Measures for payment.** Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☒
8-10	☐

11-20	☐
21-30	☐
31-40	☐
41-S0	☐
51+	☐
None	☐

70) What percent of RCCO payments should be tied to measures or performance?

Percentage	
10-20%	☐
21-30%	☐
31-40%	☐
41-S0%	☐
S1-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

The first and second year 41 – 50%, the third and fourth years 51 – 65%, the fifth year 66-75%.

71) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?

Yes

72) Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?

Improvements to start, then national standards after initial cost savings have been achieved.

73) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

I would hope the Department would not get stuck in the tar baby of claims and encounters which perpetuates much of the negative side effect of care delivery in a FF5 structure. The RCCOs have the horse power to develop and implement monitoring systems adequate to 5tate needs.

74) **Incentive payment frequency.** Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	☒
Annually	☐
Other	☐

If you checked the "Other" box, please describe payment frequency below:

75) For potential offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

76) For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

See #s 62 and 66 above. We also have BHO measures, OBH measures (different for substance use MSOs and mental health) and Community Health Center (FQHC) measures. These are separate, disconnected and uncoordinated. It would be of tremendous help if the RCCO could be the organizing entity for a single accountability system. In some instances these measures are compliance requirements, others are used to access full contract payment (though they claim to be incentives).

Health Information Technology (HIT)

77) **Types of communication.** For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	☒
Text message	☐	☒
Web portal	☐	☒
Email	☐	☒
Telemedicine / Video chat	☐	☒
Face-to-face meeting	☐	☒
Smartphone app	☐	☒
Other:		

78) **HIT investments by organizations.** For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below:

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	☒	☒
Digital care management tool	☒	☒
Care transitions alerts	☒	☒
Electronic Health Records (EHRs)	☒	☐
Health risk assessment software	☐	☒
Practice assessment tools	☒	☒
Practice management tools (scheduling, billing)	☒	☒

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Margaret Sobocinski

Location: Carin' Clinic

5150 Allison Street

Arvada, CO 80002

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Carin' Clinic

Location: 5150 Allison Street

Arvada, CO 80002

☒ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☒ Medical provider / PCMP / other provider
  i. Type or specialty: Pediatrics
  ii. Area of practice: Primary Care
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☒ Other (please describe): Advocate for children on Medicaid

How have you been involved in the ACC program and what interaction have you had with RCCOs:

Our RCCO (Colo Community Health Alliance) has helped us with QI projects and taught me how to use Treo to help track patients.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:

We are a primary care clinic that serves low-income children, including those with Medicaid.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☒ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes

☐ Will not seek to participate
☐ N/A

Are you currently involved in the ACC program?

☒ Yes
☐ No
☐ I don't know

Please feel welcome to describe why or why not using the space below.

If you answered "yes" above, how long?

☐ Less than one year
☒ 1-2 years
☐ 2-3 years
☐ 3-4 years
☐ Since before the program was implemented.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

- Reimbursement (mostly due to the Federal ACA) is fairer now.
- The decision to make the well child visit one of the KPIs was a very good decision in behalf of children, but unfortunately attribution is still flawed and the SDAC data is delayed and often inaccurate. So, it is difficult to create an effective QI process to improve the KPI, but this is a good start.
- The decision to focus on integrated behavioral health in medical homes is a wonderful decision to improve health outcomes for people covered by Medicaid. Thank you.
- The majority of Medicaid recipients in Colorado are children and adolescents; they should not be considered one of the subgroups. This is a great opportunity to do what is needed for the majority of Medicaid recipients. The following principles should be incorporated into the core objectives of the ACC:
    - Children's health care needs are very different than adults. For adults, the focus is on managing chronic disease more effectively. For children, it is about preventing the development of those chronic diseases.
    - If the ACC really wants to focus on health and wellness, the greatest opportunity is with the children. By focusing on preventive care, early screening and early

intervention for children, there will be big savings; unfortunately those savings may not occur for many years or decades in the future, but the investment will eventually be worth it.

- So, the ACC will need to invest in children to the extent possible now even though the savings come much later. We recommend that a portion of short-term savings that occurs due to chronic disease management in adults in the ACC be invested back into preventive care for children.
- Children are part of families and you can't help the child unless you help the family. So, care coordination is more involved for children since it includes care coordination of the parents/family.
- There is increased recognition that behavioral health is a part of overall health and should be accessible within a pediatric medical home. However, the current mental health system must have policies, procedures, and resources that support integrated behavioral health activities at the practice level.

2) What is not working well in the ACC Program?

- Attribution continues to attribute patients to the wrong medical home and the process of getting patients reassigned to the correct medical home is onerous for the patient and family.

- The health care data through the SDAC is based on claims so it is delayed and is incomplete (particularly for children). Therefore, it is not very useful in helping medical homes improve outcomes for children.

- Each RCCO does things very differently, which is confusing for medical homes with patients in several RCCOs. RCCOs are inconsistent in how they respond to requests for care coordination (quite variable depending on whom you reach at the RCCO). So the new RFP should ask how RCCOs will develop policies and procedures to make their methods and responses to requests for help more consistent, both within the RCCO and among all RCCOs.

- If a patient lives in one region and goes to a medical home in another region, and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from the patient's region RCCO. This is particularly true in the Denver metro area. There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients.

- The "incentives" now are actually disincentives, especially the requirement that the RCCO must meet its KPIs before a high performing medical home can be rewarded for meeting its KPIs. The concept behind this approach is not consistent with how health care systems (and "medical neighborhoods") work.

- The geography of the 7 regions does not reflect the natural geography of health care systems and referral patterns.

- Both family practices and pediatric practices report that the SDAC does not reflect their own data that the practice can obtain from their EHR or their own claims data. This is particularly true regarding data on health care screening. The RFP should ask how RCCOs and HCPF should take advantage of this practice-based data.

- Feedback from RCCOs to the medical home regarding patients referred to the RCCO for care coordination is spotty. How will RCCOs consistently provide feedback and communication to the medical home regarding what was done for the patients and whether there was improvement?

- There has been difficulty with communication from the state level through the RCCOs down to the individual practice/provider level. Providers feel as though they are not well informed from HCPF or RCCOs. We are grateful that CCHAP keeps us informed.

- The current system does not take into account the movement of patients on and off Medicaid and movement between RCCOs. Whether for KPIs or future shared savings incentives, practices need to be evaluated on established patients who have been in a practice for a minimum of six months. This allows the medical home to actually have time to make an impact on the child's care. Otherwise, it is a substantial disincentive for practices to be open to the more complex and challenging patients, those that likely need access the most.

- Currently, there is very little communication and alignment between BHO's and RCCO's. In order for integrated behavioral health to be successful at the practice and community level, the BHO's and RCCO's must have similar goals, policies/procedures that are aligned, payment structures that are aligned with movement toward integration and ongoing close communication with one another. The RFP should ask how they intend to do this.

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

- The decision to focus on integrated behavioral health in medical homes is a wonderful decision to improve health outcomes for people covered by Medicaid. Thank you.

- If Colorado is serious about promoting integration of behavioral and physical (medical) health care, then the RCCOs and BHOs should be integrated. This would mean they should have the same regions and function as though they are one organization. This would reduce duplication of efforts and have better alignment of incentives and payments that support integrated care.

- Open the behavioral health and wellness codes (96150 – 96155) now. Don't wait. This will encourage integration immediately and enable medical homes to start now the process of evolving toward full integration.

- Provide infrastructure and funding for data collection and management to support integrated behavioral health in the medical home and the care coordination that will have to be part of that. Utilizing SDAC data is just one way to understand the activities within a medical home. SDAC data is delayed and does not include enough information to support behavioral health care coordination in the medical home. Other methods and technologies are needed. There will need to be an investment in the development of new technologies and methods to do behavioral screening, track referrals, document treatment and collect data on the whole care coordination process at the medical home level. This will require adequate reimbursement to cover the cost of starting up new care coordination programs in the medical home and start up technologies to improve screening, intervention and care coordination with follow through in the medical home.

- Payment options for integrated behavioral health (not just co-location) need to be clear and understandable to providers and practices. In order for the integrated model to be sustainable, there need to be ways to access understandable billing rules/policies.

Core Coordinatian

Question 12) Whot needs far children/fomilies should be coordinated in medical homes ond are there services thot shauld not be a port of care coordinotion by the pediatric and fomily medical home

One of the most difficult services to provide in the medical home is home visits. Support from the larger system is needed.

Services that can be coordinated in a pediatric or family medical home are: complex medical coordination including logistics/travel, ancillary services (PT/OT/home health services, ...), collaboration with mental/behavioral health, collaboration regarding school needs, referrals to early intervention services and Child Find, referral to other agencies (rehab, hospice, ...), collaboration with foster care and DHS system. RCCOs need to help medical homes with needs like assistance with housing, food, parental employment, child care, in which case the RCCO can help families connect with other agencies that provide these services.

Question 19: How should care coordination program be evaluated? How should its outcomes be measured?

A care coordination program should initially be measured by having good processes, not measured by outcomes, until solid data exists on outcomes that are risk adjusted and accurate for children. Initially all measures need to be quite separated from outcomes that are highly tied to patient behavior, or practices will again be less likely to serve those with highest risk.

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Should you be doing care coordination for certain patient populations e.g. children with asthma or special needs children? Or for your entire Medicaid population healthy or chronically ill? The overall goal of Colorado Medicaid should be to provide care coordination services for ALL patients in the Medicaid population (for some patients it may be very minimal, others extensive). This is the essence of preventive care. A care coordinator that is based in the medical home is in the best position to help identify risk factors proactively, as early as possible before they impact a patient's health and cause illness. Children with special healthcare needs (complex, complicated) require a higher level of care coordination, so the pmpm attached to their care coordination needs to be risk adjusted.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

- All RCCOs should have their offices in the region served, should be non-profits, be a Medicaid provider and be incorporated only in Colorado.

- All RCCOs should offer to delegate care coordination to medical homes willing to accept that responsibility and the RCCO should share a portion of the RCCO pmpm with the medical home that accepts delegation.

- All RCCOs should use the same criteria for delegation and for the amount that is paid for delegated services of care coordination. By doing this, services can reach a standard across the state. A patient would have access to similar services no matter where they moved across Colorado.

- RCCOs should all agree on how they will effectively communicate to medical homes regarding any contact the RCCO has with patients attributed to the medical home. They should include PCMPs in developing those criteria.

- All RCCOs should help (or contract with an organization to help) medical homes understand how to access their SDAC data, understand their data and use it to develop rapid cycle QI projects to improve health outcomes and meet KPIs.

- All RCCOs should agree to provide uniform support for medical homes when a medical home asks for help with care coordination, even when the medical home is in another region (and contracted with another RCCO) but the patient is in the first RCCO's region.

- RCCOs should be required to allow medical homes to give the RCCO a list of patients the medical home feels is their patients and receive help from the RCCO to understand why certain patients have been attributed to another medical home. If the patient is determined to be more appropriately attributed to the inquiring medical home, then the RCCO should help re-attribute the patient to the correct medical home.

- RCCOs should share on a regular basis the RCCO's performance on KPIs and share savings incentives and share with the medical home how their own performance compares with other medical homes.

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

This is particularly applicable to the Denver metro area. There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients. For many expectations/requirements and ways of doing things the RCCOs are so different from one another that it requires significant extra work for medical homes to adapt to the differences. In addition, if a patient lives in one region and goes to a medical home in another region, and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from that first region.

27) Should the RCCO region maps change? Why or why not? If so, how?

Yes.

In the Metro Denver area, the boundary issues are so difficult that we recommend one RCCO be responsible for the whole metro area or that medical homes be allowed to choose one RCCO for all of their patients.

28) Should the BHO region maps change? Why or why not? If so, how?

If Colorado is serious about promoting integration of behavioral and physical (medical) health care, then the RCCOs and BHOs should be integrated. This would mean they should have the same regions and function as though they are one organization. They should share incentives

that are aligned around successful integration of behavioral and medical services and outcomes. So the BHO maps/regions should conform to the RCCO regions/maps.

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients. There are certain expectations/requirements and ways of doing things that are so different from one RCCO to another that it requires significant extra work to adapt to the differences. If a patient lives in one region and goes to a medical home in another region and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from that first region. This is particularly true in the Denver metro area.

Another alternative: When a practice contracts with a RCCO currently they "belong" to one RCCO. Change that and have them only contract with the state and have that contract extend to all RCCOS. This way RCCOS would be more accountable to standardization through out all of Colorado, and the services provided to patients/families would be more uniform.

34) What role should RCCOs play in attributing clients to their respective PCMPs?

The attribution system is quite flawed still. RCCOs should be required to allow medical homes to give the RCCO a list of patients the medical home feels are their patients and receive help from the RCCO to understand why certain patients are attributed to another medical home. If the patient is determined to be more appropriately attributed to the inquiring medical home, then the RCCO should help re-attribute the patient to the correct medical home.

Payment Structure and Quality Monitoring

S9) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

- The payment structure absolutely does not support the ACC goals. A medical home does not receive incentives for KPIs unless the RCCO meets its KPI. This becomes a disincentive, because many medical homes meet their performance targets, but do not get rewarded because the RCCO did not meet its targets. So the medical home has no incentive to maintain the performance. The philosophy that HCPF has espoused (that the high performing medical home should encourage or help the low performing medical home) is not realistic and is not how the real world works. There is no time for that, plus the high performing medical home has no way of knowing who is low performing. This idea shows a lack of understanding of the world where health cares is delivered. Medical homes need to receive full incentives when they meet their KPI targets, no matter what happens in the RCCO.

- The incentives are too low to change much. Also, the KPIs need to remain focused on process, not outcomes, until the data is more sophisticated to accurately attribute patients and account for risk factors.

- Many medical homes have the ability to collect REAL-TIME data from their EHR and their claims database, which can be used to measure performance more accurately than the SDAC. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and providers to develop a vetting process that will enable HCPF and RCCOs to trust the medical home self-reported real-time data.

- Since children are the majority and give the best chance of truly improving health and wellness, KPIs need to be more child-focused. And since the potential cost savings for children's health care are so far in the future, KPIs need to be intermediate, process outcomes.

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

There is very little of the infrastructure in the state in place at the present time to enable capitation to be implemented successfully. Here are just some of the changes that would need to be in place before it would be fair or prudent to implement capitation:

- The state would need to already be paying fair amounts for all aspects of the care needed by Medicaid recipients before it could effectively move to capitation. In other words, codes for things that HCPF wants done under capitation should be opened and reimbursed adequately now. This would encourage medical homes to already be doing these things before the change to capitation. It would also give HCPF and medical homes experience regarding what the actual costs are for providing the desired services and determine a fair capitation. It will be difficult to change behavior to include new activities under capitation among providers, if you continue to hold codes closed now for things you want done under capitation. You have to help the medical homes create the habits you want before the switch to capitation.

- All providers would have to be reliably involved in the ACC: primary care, all of the various adult and child specialists, the hospitals, the therapies, dentists, mental health providers, etc.

- The data system would have to be able to report real time data and be far, far more accurate than it is now.

- The attribution system is flawed. That would have to be improved and provide accurate, real-time attribution data before capitation should be instituted.

- You will have to change a variety of policies that are barriers to population management.

- Capitation has to be combined with significant incentives to implement processes and improve outcomes. So, you will need to have the incentive system very well developed and viewed by providers as motivating before implementing capitation

- Healthcare for children focuses on prevention, early detection and early intervention, which require initial increased investment to reduce potential expenses many years and decades down the line. Other ACO programs have shown that savings on children are difficult to show early on. So, incentives in the care of children will initially be for intermediate outcomes (or for process outcomes) and need to be direct incentives rather than incentives in the form of shared savings.

- Early in the transition from pre-ACC payment methods to ACC payment structure (2012), some medical homes were asked to return money to Medicaid. Transitions like that (for example the transition to capitation) have to avoid this. Primary care medical homes have such narrow margins that this can be very difficult financially on a medical home.

- Many medical homes have the ability to collect from their EHR and their claims database REAL-TIME data with which performance can be measured. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and providers to develop a vetting process that will enable HCPF and RCCOs to trust that medical home self-reported real-time data is trustworthy.

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

Many medical homes have the capability and infrastructure to adapt to payment tied to value. What is missing is the state, HCPF, RCCO, BHO infrastructure. See all of the infrastructure elements HCPF needs to have in place listed in question 60

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

- The HCPF Payment Reform Committee should meet at a time when providers and practice managers can actually attend. Monday afternoons is probably the worst time to actually enable providers or practice managers to attend. Once you select an appropriate time, then actively recruit participation.

- Make sure that your efforts are statewide. Views are different in the various regions of the state.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

- Many medical homes have the ability to collect from their EHR and their claims database REAL-TIME data with which performance can be measured. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and provider from medical homes to develop a vetting process that will enable HCPF and RCCOs to trust medical home self-reported real-time data.

- The measures for children can be drawn from HEDIS measures or CHIPRA measures or from the Pediatric Measurement Proposal that HCPF did in 2010 with the help of Jim Todd. Appropriate child health measures could be selected from the following measures :
    - Well child visits appropriate for age
    - Developmental screening by three years of age
    - Teen depression screening
    - Complete immunization status by age two
    - Post-partum depression screening rate for mothers of newborns by age 4 months
    - Appropriate antibiotic use in URI and strep pharyngitis

- Medical homes could also be measured on:
    - Patient (or family) satisfaction ratings
    - Documentation of QI projects

Screening should be part of KPIs, but you need to do more than just create a KPI. If you are going to have KPIs, then you need to track not only the number of times a screening was done, but also track the v-codes (or some way to track positives) and make them available in the SDAC so medical homes can track them. And the SDAC needs to track referrals (or intervention). Otherwise it is not worth measuring the number of screenings.

- The PCMP or medical home should receive real-time data (less than a month since date of service) with data that will allow them to compare their performance with performance of similar type of medical home.

- Healthcare for children focuses on prevention, early detection and early intervention, which require initial increased investment to reduce potential expenses many years and decades down the line. Other ACO programs have shown that savings on children are difficult to show early on. So, incentives in the care of children will initially be for intermediate outcomes (or for process outcomes) and need to be direct incentives rather than incentives in the form of shared savings.

69) Measures for payment. Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☒
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

We only need 2-4 KPIs. Any more will dilute the effect. What we really want is good data, so we can improve our outcomes by doing a quality improvement project. Since children are the majority of Medicaid recipients and give you the best chance of truly improving health and wellness in the long term, KPIs need to be more child-focused. And since the savings are so far in the future, KPIs need to be intermediate, process outcomes.

Colorado Department of Health Care Policy and Financing

Notes: Standard cover sheet added; formatting standardized

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Donald Moore
Location: Pueblo, Colorado

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Pueblo Community Health Center
Location: Pueblo, Colorado
☒ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☒ Medical provider / PCMP / other provider
  i. Type or specialty: Family Practice
  ii. Area of practice: FQHC
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☐ Other (please describe): Click here to enter text.

Are you currently involved in the ACC program?

☒ Yes
☐ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☒ Since before the program was implemented.

How have you been involved in the ACC program and what interaction have you had with RCCOs:

Yes, PCHC helped form the Region 4 (ICHP) RCCO and is one of its nine owners. PCHC is also a PCMP. PCHC is extensively involved in the significant aspects of ICHP's operation and performance, i.e., care coordination, KPIs, data, governance, community outreach, etc. PCHC has also represented its RCCO on the PIAC.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:

PCHC is an FQHC provider and serves 45% of the Medicaid population in Pueblo, County, including over half of all Medicaid newborn deliveries.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☒ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

1. As a major provider of services to the population, PCHC has a responsibility to contribute to ACC implementation success to assure ongoing access to quality health care. 2. The ACC is the single, largest opportunity for my organization to participate in health

care delivery and payment reforms and align our orientation to the Triple Aim.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

Triple Aim philosophy underpinning the program design; KPI and data focus/sharing; development of stronger, local provider collaboration and relationships; use of a QI/PI and population health/cost management model rather than an insurance model.

2) What is not working well in the ACC Program?

Attribution needs to be more robust based on experience gained to date; too many "initiatives"; lack of incentives for key players in the health care system to be involved (i.e., hospitals, specialists, public health, CCBs);

3) What is working best in the Behavioral Health Organization (BHO) system right now?

4) What is not working well in the BHO system?

5) What is working well with RCCO and BHO collaboration right now?

6) What is not working well with RCCO and BHO collaboration right now?

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☐	☐	
Community Behavioral Health Services Rule	☐	☐	
Covered diagnoses list	☐	☐	
Different behavioral / physical health reimbursement	☐	☐	
Institutions for Mental Diseases exclusion	☐	☐	
OBH rules, reporting, or financing (regulatory differences between agencies)	☐	☐	
PCMP financing structure	☐	☐	
Per-member per-month amount	☐	☐	
Physical space constraints	☐	☐	
Privacy Laws (HIPAA, 42 CFR)	☐	☐	
Professional / cultural divisions	☐	☐	
RCCO or BHO contracts	☐	☐	
Staff capacity	☐	☐	
State/Federal rules or reporting requirements	☐	☐	
Technical resources / data sharing	☐	☐	
Training	☐	☐	
Others	Please type your response here.		

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

First and foremost, the provider/clinic should be able to assume responsibility and be accountable for the majority of a patient's care. Other characteristics should include 1) the clinic provides physical and behavioral health in a common setting ("one stop shop"); 2) clinicians use a common patient health record/HIE that facilitates a shared care plan; the clinic is accountable for access to care and population health/cost management measures reflective of integrated care, and 3) provides or arranges for appropriate supportive and enabling services that recognize the impact of socio-economic factors on health.

10) Please share any other general advice or suggestions you may have about behavioral health integration.

Care Coordination

A general comment – the ACC program should 1) rely on the literature to describe the elements and standards in care coordination that describe best practices, and, 2) determine the outcomes it wants from care coordination activity. With this information, HCPF could hold each RCCO accountable for outcomes while the RCCO should have the flexibility and latitude to determine the care coordination strategies that work best in its region and local communities. The resource, agency and provider mix in each "sub-region" of the RCCO region is varies and a prescriptive definition is going to cause frustration and consume RCCO resources to meet criteria that may or not be important to impacting cost and population health goals. In summary, it would be most helpful to shift ACC program design regarding care coordination from a process to an outcomes focus.

11) Care coordination is an important part of the ACC Program.

   a. What is the best definition of care coordination?

   b. How should RCCOs prioritize who receives care coordination first?

   c. How should RCCOs identify clients and families who need care coordination?

   d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

12) What services should be coordinated and are there services that should not be a part of care coordination?

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

   a. What care coordination is going on today?

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

d. What are the gaps in care coordination across the continuum of care?

15) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	Should the RCCO have a role? Yes	No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma	☐	☐	☐	
Affordability (assistance with prescriptions or co-pays)	☐	☐	☐	
Daycare / childcare	☐	☐	☐	
Economic stability & employment	☐	☐	☐	
Education	☐	☐	☐	
Environment	☐	☐	☐	
Food access / nutrition	☐	☐	☐	
Health literacy	☐	☐	☐	
Housing	☐	☐	☐	

Language or translation services	☐	☐	☐	
Literacy	☐	☐	☐	
Transportation	☐	☐	☐	
Other	Please type your response here. Feel free to list as many non-medical factors as you want, and please explain how the RCCO should be involved.			

16) **Requirements about who should be doing care coordination**. Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	Coordinate care? Yes	No	In what capacity should these individuals coordinate care in the ACC Program?
Advanced Practice (Registered) Nurses	☐	☐	
Certified Addiction Councilors	☐	☐	
Certified Nurse Midwives	☐	☐	
Community Health Workers	☐	☐	
Generalists (BA/BS/MA/MS)	☐	☐	
Health Coaches	☐	☐	
Licensed Clinical Social Workers	☐	☐	
Licensed Marriage and Family Therapist	☐	☐	
Licensed Mental Health Counselors	☐	☐	
Licensed Professional Counselor	☐	☐	
Masters of Public Health	☐	☐	
Medical Doctors / Doctors of Osteopathic Medicine	☐	☐	
Nurse Practitioners	☐	☐	
Patient Navigators	☐	☐	

Peer Advocates	☐	☐	
Promotoras	☐	☐	
Psychiatrists	☐	☐	
Psychologists	☐	☐	
Registered Nurses	☐	☐	
Social Workers	☐	☐	
Wraparound facilitators	☐	☐	
Other	Please type your response here.		

17) **Care coordination requirements for specific populations.** Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and infants	☐	☐	
Children	☐	☐	
Children who are healthy, but in socially-complex environments	☐	☐	
Children involved in the foster care system	☐	☐	
Children with a chronic illness	☐	☐	
Children with a serious emotional disturbance	☐	☐	
Children with medical complexity	☐	☐	
Children or youth with a behavioral health diagnosis or substance use disorder	☐	☐

Clients in palliative care	☐	☐	
Other populations, please comment:			

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

19) How should care coordination be evaluated? How should its outcomes be measured?

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

a. What is the PMPM cost for providing care coordination services?

b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

a. **Care coordinator to client ratios.** If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☐
51-100	☐
101-200	☐
201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐

4,001-5,000	☐
More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

Letters of support from key stakeholders, community leaders and actors in the continuum of care; evidence of provider satisfaction and support across a broad mix of providers; ability to share data; embraces a Triple Aim philosophy.

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

27) Should the RCCO region maps change? Why or why not? If so, how?

It depends. The department has expressed a desire for administrative simplicity which may be in conflict with increasing the number of regions. However, natural patient utilization patterns and established provider communication channels and systems of care may suggest smaller regions than may exist now. HCPF shouldn't use administrative simplicity as its primary criteria for definition regions if it desires to change the regions. Rather, a premium should be placed on what geographic boundaries encompass a) patient use patterns, b) groups of providers who have a shared commitment to the Triple Aim for a common population, and, c) sufficient numbers of patients to achieve economies of scale.

28) Should the BHO region maps change? Why or why not? If so, how?

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

1) Balancing patient choice with expectations and rules to utilize care appropriately.

2) There is tension between increasing provider participation and concentrating patient attribution in practices that are committed to PCMH and the Triple Aim.

3) How much and what kind of risk does HCPF want to pass down to RCCOs, and their providers, and what rules, laws, etc. are needed to facilitate this direction? Does HCPF want RCCOs to be insurance companies or will it hold the risk if a RCCO can implement payment reforms?

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

Client incentives are needed to motivate patients to use less costly and more effective services.

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

This concept seems to run counter to the Dept's desire for administrative simplicity. If this direction is selected however there shouldn't be impediments to a provider being in more than one RCCO network.

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

34) What role should RCCOs play in attributing clients to their respective PCMPs?

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

42) How should the Department structure stakeholder engagement for the ACC as a whole?

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

a. If no, what are the gaps?

b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

a. What role should hospitals play in the next iteration of the ACC Program?

b. What role should pharmacies play in the next iteration of the ACC Program?

c. What role should specialists play in the next iteration of the ACC Program?

d. What role should home health play in the next iteration of the ACC Program?

e. What role should hospice care play in the next iteration of the ACC Program?

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

g. What role should counties play in the next iteration of the ACC Program?

h. What role should local public health agencies play in the next iteration of the ACC Program?

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

45) How can RCCOs help to support clients and families in making and keeping appointments?

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

47) **Community Health Worker reimbursement.** Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement process	(Please check all that apply)
Independently bill	☐
On staff (salary) at Primary Care Medical Provider Clinic	☐
On staff (salary) at RCCO	☐
Per Member Per Month Payment	☐

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you?

Providing customer service: treating patients according to their individual needs and having empathy and compassion for their background and station in life. In particular, it means being sensitive to socio-economic factors that impact health.

b. What RCCO requirements would ensure cultural competency?

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

51) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

The KPI data in the first RCCO contract period suggests that higher ER use doesn't result in higher Total Costs of Care. It is understandable to maintain a focus on lowering ER use so as to increase a patient's interaction with preventive and primacy care with a PCMP, but it may not be a significant factor in cost management.

52) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

Practice Support

53) **Support for practices.** Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☐	☐	☐	☐
Network provider education	☐	☐	☐	☐
Assistance with practice redesign	☐	☐	☐	☐
Assistance with efficiency-enhancing activities	☐	☐	☐	☐
Provide web-based resources and directories	☐	☐	☐	☐
Provide practice-specific data reports	☐	☐	☐	☐
Provide clinical care guidelines and best practices.	☐	☐	☐	☐

Provide clinical screening tools	☐	☐	☐	☐
Provide health and functioning questionnaires	☐	☐	☐	☐
Provide chronic care templates	☐	☐	☐	☐
Provide registries	☐	☐	☐	☐
Offer client reminders	☐	☐	☐	☐
Offer client self-management tools	☐	☐	☐	☐
Offer educational materials about specific conditions	☐	☐	☐	☐
Supply behavioral health surveys	☐	☐	☐	☐
Supply other self-screening tools	☐	☐	☐	☐
Administer behavioral health surveys	☐	☐	☐	☐
Administer other self-screening tools	☐	☐	☐	☐
Prepare client action plans	☐	☐	☐	☐
Provide training on providing culturally-competent care	☐	☐	☐	☐
Provide training to supporting staff	☐	☐	☐	☐
Provide training on motivational interviewing	☐	☐	☐	☐
Provide tools and software for phone call and appointment tracking	☐	☐	☐	☐
Provide tools and resources for tracking labs, referrals, etc.	☐	☐	☐	☐
Provide referral and transitions of care checklists	☐	☐	☐	☐
Provide visit agendas or templates	☐	☐	☐	☐
Provide standing pharmacy order templates	☐	☐	☐	☐
Provide comprehensive directory of community resources	☐	☐	☐	☐
Provide directory of other resources	☐	☐	☐	☐
Provide materials regarding Nurse Advice Line	☐	☐	☐	☐
Ensure all tools and resources are centrally located on RCCO-specific website	☐	☐	☐	☐
Others				

54) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

55) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

56) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

57) Should the Department require that PCMPs utilize disease registries to manage the health of their population?

58) Please share any other advice or suggestions about provider support in the ACC.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

Yes, depending on what is included in the capitation payment (i.e., factors within a primary care provider's influence). It would be helpful to have payment adjustments based on social determinants of health in addition traditional risk adjusting factors.

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

62) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

63) What role – if any – should the RCCOs play in the distribution of payments to providers?

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Rose Pediatrics

Location: 4545 E 9th Ave, Ste 260

Denver, CO 80220

9137 Ridgeline Blvd, Ste 130

Highlands Ranch, CO 80129

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization:

Location:

☐ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☒ Medical provider / PCMP / other provider
  i. Type or specialty: Pediatrics
  ii. Area of practice: Primary Care
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☒ Other (please describe): Advocate for children on Medicaid

How have you been involved in the ACC program and what interaction have you had with RCCOs:

PCMP: Rose Pediatrics

Please briefly describe your involvement with Medicaid, either in Colorado or another state:

Serve Pediatric Medicaid Patients

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely
☐ Likely
☒ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

Are you currently involved in the ACC program?

Please feel welcome to describe why or why not using the space below.

☒ Yes
☐ No
☐ I don't know

If you answered "yes" above, how long?

☒ Less than one year
☐ 1-2 years
☐ 2-3 years
☐ 3-4 years
☐ Since before the program was implemented.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

- Reimbursement (mostly due to the Federal ACA) is fairer now.

- The decision to make the well child visit one of the KPIs was a very good decision in behalf of children, but unfortunately attribution is still flawed and the SDAC data is delayed and often inaccurate. So, it is difficult to create an effective QI process to improve the KPI, but this is a good start.

- The decision to focus on integrated behavioral health in medical homes is a wonderful decision to improve health outcomes for people covered by Medicaid. Thank you.

- You have a great opportunity to do what is needed for the majority of Medicaid recipients. The majority of Medicaid recipients in Colorado are children and adolescents; they should not be considered one of the subgroups. The following principles should be incorporated into the core objectives of the ACC:

    - Children's health care needs are very different than adults. For adults, the focus is on managing chronic disease more effectively. For children, it is about preventing the development of those chronic diseases.
    - If the ACC really wants to focus on health and wellness, the greatest opportunity is with the children (the majority of Medicaid recipients). By focusing on preventive care, early screening and early intervention for children, there will be big savings;

unfortunately those savings may not occur for many years or decades in the future, but the investment will eventually be worth it.

- So, the ACC will need to invest in children to the extent possible now even though the savings come much later. We recommend that a portion of short-term savings that occurs due to chronic disease management in adults in the ACC be invested back into preventive care for children.
- Children are part of families and you can't help the child unless you help the family. So, care coordination is more involved for children since it includes care coordination of the parents/family.
- There is increased recognition that behavioral health is a part of overall health and should be accessible within a pediatric medical home. However, the current mental health system must have policies, procedures, and resources that support integrated behavioral health activities at the practice level.

2) What is not working well in the ACC Program?

- Attribution continues to attribute patients to the wrong medical home and the process of getting patients reassigned to the correct medical home is onerous for the patient and family.

- The health care data through the SDAC is based on claims so it is delayed and is incomplete (particularly for children). Therefore, it is not very useful in helping medical homes improve outcomes for children.

- Each RCCO does things very differently, which is confusing for medical homes with patients in several RCCOs. RCCOs are inconsistent in how they respond to requests for care coordination (quite variable depending on whom you reach at the RCCO). So the new RFP should ask how RCCOs will develop policies and procedures to make their methods and responses to requests for help more consistent, both within the RCCO and among all RCCOs.

- There are certain expectations/requirements and ways of doing things that are so different from one RCCO to another that it requires significant extra work for the medical home to adapt to the differences. To deal with this. So, the RFP should ask how RCCOs intend

- If a patient lives in one region and goes to a medical home in another region, and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from the patient's region RCCO. This is particularly true in the Denver metro area. <u>There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients.</u>

- The "incentives" now are actually disincentives, especially the requirement that the RCCO must meet its KPIs before a high performing medical home can be rewarded for meeting its KPIs. The concept behind this approach is not consistent with how health care systems (and

"medical neighborhoods") work.

- The geography of the 7 regions does not reflect the natural geography of health care systems and referral patterns. Larimer County should be in Region 2.

- RCCOs are not providing the level of care coordination that Medicaid patients need. We have had RCCO "care coordinators" just tell us to call 211. The level of commitment that patients and families need is difficult to find, unless care coordination is provided at the medical home level or the community level.

- Both family practices and pediatric practices report that the SDAC does not reflect their own data that the practice can obtain from their EHR or their own claims data. This is particularly true regarding data on health care screening. The RFP should ask how RCCOs and HCPF should take advantage of this practice-based data.

- Most medical homes are not working closely with RCCOs and are not receiving much support. The RFP should ask how RCCOs intend to work more closely with medical homes.

- Feedback from RCCOs to the medical home regarding patients referred to the RCCO for care coordination is spotty. How will RCCOs consistently provide feedback and communication to the medical home regarding what was done for the patients and whether there was improvement?

- There has been difficulty with communication from the state level through the RCCOs down to the individual practice/provider level. Providers feel as though they are not well informed from HCPF or RCCOs. We are grateful that CCHAP keeps us informed.

- The current system does not take into account the movement of patients on and off Medicaid and movement between RCCOs. Whether for KPIs or future shared savings incentives, practices need to be evaluated on established patients who have been in a practice for a minimum of six months. This allows the medical home to actually have time to make an impact on the child's care. Otherwise, it is a substantial disincentive for practices to be open to the more complex and challenging patients, those that likely need access the most.

- Currently, there is very little communication and alignment between BHO's and RCCO's. In order for integrated behavioral health to be successful at the practice and community level, the BHO's and RCCO's must have similar goals, policies/procedures that are aligned, payment structures that are aligned with movement toward integration and ongoing close communication with one another. The RFP should ask how they intend to do this.

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

- The decision to focus on integrated behavioral health in medical homes is a wonderful decision to improve health outcomes for people covered by Medicaid. Thank you.

- If Colorado is serious about promoting integration of behavioral and physical (medical) health care, then the RCCOs and BHOs should be integrated. This would mean they should have the same regions and function as though they are one organization. This would reduce duplication of efforts and have better alignment of incentives and payments that support integrated care.

- Open the behavioral health and wellness codes (96150 – 96155) now. Don't wait. This will encourage integration immediately and enable medical homes to start now the process of evolving toward full integration.

- Care coordination for both behavioral health and medical care should be done in the primary care setting. And either the RCCO and/or the BHO should delegate the responsibility to do care coordination and a pmpm to cover the expense to the medical home as part of the payment reform process. And behavioral health care coordination and medical care coordination needs to be fully reimbursed. In addition, the BHO and the RCCO will need to have information and care coordinators to assist medical homes to handle uncommon or very complex issues.

- Provide infrastructure and funding for data collection and management to support integrated behavioral health in the medical home and the care coordination that will have to be part of that. Utilizing 5DAC data is just one way to understand the activities within a medical home. 5DAC data is delayed and does not include enough information to support behavioral health care coordination in the medical home. Other methods and technologies are needed. There will need to be an investment in the development of new technologies and methods to do behavioral screening, track referrals, document treatment and collect data on the whole care coordination process at the medical home level. This will require adequate reimbursement to cover the cost of starting up new care coordination programs in the medical home and start up technologies to improve screening, intervention and care coordination with follow through in the medical home.

- The CPACK program developed by CBHC is a very good program, particularly the following:
  a. Assistance with finding a behavioral health provider for patients
  b. Telephone consultation by a child psychiatrist to primary care providers

We recommend that BHOs be required to provide the 2 components above as part of their new contracts.

- Payment options for integrated behavioral health (not just co-location) need to be clear and understandable to providers and practices. In order for the integrated model to be sustainable, there need to be ways to access understandable billing rules/policies.

Core Coordination

Question 12) What needs for children/families should be coordinated in medical homes and are there services that should not be a part of core coordination by the pediatric and family medical home

One of the most difficult services to provide in the medical home is home visits. Support from the larger system is needed.

Services that can be provided in a pediatric or family medical home are: complex medical coordination including logistics/travel, ancillary services (PT/OT/home health services, ...), collaboration with mental/behavioral health, collaboration regarding school needs, referrals to early intervention services and Child Find, referral to other agencies (rehab, hospice, ...), collaboration with foster care and DHS system. RCCOs need to help medical homes with needs like assistance with housing, food, parental employment, child care, in which case the RCCO can help families connect with other agencies that provide these services.

Question 19: How should care coordination program be evaluated? How should its outcomes be measured?

A care coordination program should initially be measured by having good processes, not measured by outcomes, until solid data exists on outcomes that are risk adjusted and accurate for children. Initially all measures need to be quite separated from outcomes that are highly tied to patient behavior, or practices will again be less likely to serve those with highest risk.

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Our medical home relates to multiple RCCOs and we want to be delegated to do care coordination. If all RCCOs allowed medical homes to be delegated to do care coordination, we could receive a pmpm from all of them, which would enable us to afford to hire enough care coordinators to meet the needs of all of our ACC patients.

Where should care coordination be done? Care coordination is best done in the medical home. We are willing to do care coordination, because we have a relationship with our patients and they trust us and we recognize that coordinating complex medical care is essential for good

care and for cost savings. Also, the primary care provider is best positioned to have a long term relationship with the patient, and therefore know and understand other aspects of the patient's life and how important those non-medical factors are on the patient's health and health issues.

If care coordination cannot be done in the medical home, then it is best done by community-based organizations. The least effective, least well-received, least trusted is care coordination done from a call center in an RCCO. The role of the RCCO should be to help the medical home-based care coordination staff access resources for families.

The majority of practices are willing to provide Care Coordination, if they can get financial support (PMPM) for providing the service.

Should you be doing care coordination for certain patient populations e.g. children with asthma or special needs children? Or for your entire Medicaid population healthy or chronically ill? The overall goal of Colorado Medicaid should be to provide care coordination services for ALL patients in the Medicaid population (for some patients it may be very minimal, others extensive). This is the essence of preventive care. A care coordinator that is based in the medical home is in the best position to help identify risk factors proactively, as early as possible before they impact a patient's health and cause illness. Children with special healthcare needs (complex, complicated) require a higher level of care coordination, so the pmpm attached to their care coordination needs to be risk adjusted.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

- All RCCOs should have their offices in the region served, should be non-profits, be a Medicaid provider and be incorporated only in Colorado.

- All RCCOs should offer to delegate care coordination to medical homes willing to accept that responsibility and the RCCO should share a portion of the RCCO pmpm with the medical home that accepts delegation.

- All RCCOs should use the same criteria for delegation and for the amount that is paid for delegated services of care coordination. By doing this, services can reach a standard across the state. A patient would have access to similar services no matter where they moved across Colorado.

- RCCOs should all agree on how they will effectively communicate to medical homes regarding any contact the RCCO has with patients attributed to the medical home. They

should include PCMPs in developing those criteria.

- All RCCOs should help (or contract with an organization to help) medical homes understand how to access their SDAC data, understand their data and use it to develop rapid cycle QI projects to improve health outcomes and meet KPIs.

- All RCCOs should agree to provide uniform support for medical homes when a medical home asks for help with care coordination, even when the medical home is in another region (and contracted with another RCCO) but the patient is in the first RCCO's region.

- RCCOs should be required to allow medical homes to give the RCCO a list of patients the medical home feels is their patients and receive help from the RCCO to understand why certain patients have been attributed to another medical home. If the patient is determined to be more appropriately attributed to the inquiring medical home, then the RCCO should help re-attribute the patient to the correct medical home.

- RCCOs should share on a regular basis the RCCO's performance on KPIs and share savings incentives and share with the medical home how their own performance compares with other medical homes.

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

This is particularly applicable to the Denver metro area. There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients. For many expectations/requirements and ways of doing things the RCCOs are so different from one another that it requires significant extra work for medical homes to adapt to the differences. In addition, if a patient lives in one region and goes to a medical home in another region, and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from that first region.

27) Should the RCCO region maps change? Why or why not? If so, how?

Yes. There are two changes we recommend:

- Larimer County should be included in Region 2, since the medical community and the support organizations of Larimer County and very closely linked to Weld County
- In the Metro Denver area, the boundary issues are so difficult that we recommend one RCCO be responsible for the whole metro area or that medical homes be allowed to choose one RCCO for all of their patients.

28) Should the BHO region maps change? Why or why not? If so, how?

If Colorado is serious about promoting integration of behavioral and physical (medical) health care, then the RCCOs and BHOs should be integrated. This would mean they should have the same regions and function as though they are one organization. They should share incentives that are aligned around successful integration of behavioral and medical services and outcomes. So the BHO maps/regions should conform to the RCCO regions/maps.

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients. There are certain expectations/requirements and ways of doing things that are so different from one RCCO to another that it requires significant extra work to adapt to the differences. If a patient lives in one region and goes to a medical home in another region and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from that first region. This is particularly true in the Denver metro area.

Another alternative: When a practice contracts with a RCCO currently they "belong" to one RCCO. Change that and have them only contract with the state and have that contract extend to all RCCOS. This way RCCOS would be more accountable to standardization through out all of Colorado, and the services provided to patients/families would be more uniform.

34) What role should RCCOs play in attributing clients to their respective PCMPs?

The attribution system is quite flawed still. RCCOs should be required to allow medical homes to give the RCCO a list of patients the medical home feels are their patients and receive help from the RCCO to understand why certain patients are attributed to another medical home. If the patient is determined to be more appropriately attributed to the inquiring medical home, then the RCCO should help re-attribute the patient to the correct medical home.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

- The payment structure absolutely does not support the ACC goals. A medical home does not receive incentives for KPIs unless the RCCO meets its KPI. This becomes a disincentive, because many medical homes meet their performance targets, but do not get rewarded because the RCCO did not meet its targets. So the medical home has no incentive to maintain the performance. The philosophy that HCPF has espoused (that the high performing medical home should encourage or help the low performing medical home) is not realistic and is not how the real world works. There is no time for that, plus the high performing medical home has no way of knowing who is low performing. This idea shows a lack of understanding of the world where health cares is delivered. Medical homes need to

receive full incentives when they meet their KPI targets, no matter what happens in the RCCO.

- The incentives are too low to change much. Also, the KPIs need to remain focused on process, not outcomes, until the data is more sophisticated to accurately attribute patients and account for risk factors.

- Many medical homes have the ability to collect REAL-TIME data from their EHR and their claims database, which can be used to measure performance more accurately than the SDAC. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and providers to develop a vetting process that will enable HCPF and RCCOs to trust the medical home self-reported real-time data.

- Since children are the majority and give the best chance of truly improving health and wellness, KPIs need to be more child-focused. And since the potential cost savings for children's health care are so far in the future, KPIs need to be intermediate, process outcomes.

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

<u>There is very little of the infrastructure in the state in place at the present time to enable capitation to be implemented successfully.</u> Here are just some of the changes that would need to be in place before it would be fair or prudent to implement capitation:

- The state would need to already be paying fair amounts for all aspects of the care needed by Medicaid recipients before it could effectively move to capitation. In other words, codes for things that HCPF wants done under capitation should be opened and reimbursement adequately now. This would encourage medical homes to already be doing these things before the change to capitation. It would also give HCPF and medical homes experience regarding what the actual costs are for providing the desired services and determine a fair capitation. It will be difficult to change behavior to include new activities under capitation among providers, if you continue to hold codes closed now for things you want done under capitation. You have to help the medical homes create the habits you want before the switch to capitation.

- All providers would have to be reliably involved in the ACC: primary care, all of the various adult and child specialists, the hospitals, the therapies, dentists, mental health providers, etc.

- The data system would have to be able to report real time data and be far, far more accurate than it is now.

- The attribution system is flawed. That would have to be improved and provide accurate, real-time attribution data before capitation should be instituted.

- You will have to change a variety of policies that are barriers to population management.

- Capitation has to be combined with significant incentives to implement processes and improve outcomes. So, you will need to have the incentive system very well developed and viewed by providers as motivating before implementing capitation

- Healthcare for children focuses on prevention, early detection and early intervention, which require initial increased investment to reduce potential expenses many years and decades down the line. Other ACO programs have shown that savings on children are difficult to show early on. So, incentives in the care of children will initially be for intermediate outcomes (or for process outcomes) and need to be direct incentives rather than incentives in the form of shared savings.

- Early in the transition from pre-ACC payment methods to ACC payment structure (2012), some medical homes were asked to return money to Medicaid. Transitions like that (for example the transition to capitation) have to avoid this. Primary care medical homes have such narrow margins that this can be very difficult financially on a medical home

- Many medical homes have the ability to collect from their EHR and their claims database REAL-TIME data with which performance can be measured. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and providers to develop a vetting process that will enable HCPF and RCCOs to trust that medical home self-reported real-time data is trustworthy.

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

Many medical homes have the capability and infrastructure to adapt to payment tied to value. What is missing is the state, HCPF, RCCO, BHO infrastructure. See all of the infrastructure elements HCPF needs to have in place listed in question 60

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

- The HCPF Payment Reform Committee should meet at a time when providers and practice managers can actually attend. Monday afternoons is probably the worst time to actually enable providers or practice managers to attend. Once you select an appropriate time, then actively recruit participation.

- Make sure that your efforts are statewide. Views are different in the various regions of the state.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

- Many medical homes have the ability to collect from their EHR and their claims database REAL-TIME data with which performance can be measured. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and provider from medical homes to develop a vetting process that will enable HCPF and RCCOs to trust medical home self-reported real-time data.

- The measures for children can be drawn from HEDIS measures or CHIPRA measures or from the Pediatric Measurement Proposal that HCPF did in 2010 with the help of Jim Todd. Appropriate child health measures could be selected from the following measures :
    - Well child visits appropriate for age
    - Developmental screening by three years of age
    - Teen depression screening
    - Complete immunization status by age two
    - Post-partum depression screening rate for mothers of newborns by age 4 months
    - Appropriate antibiotic use in URI and strep pharyngitis

- Medical homes could also be measured on:
    - Patient (or family) satisfaction ratings
    - Documentation of QI projects

Screening should be part of KPIs, but you need to do more than just create a KPI. If you are going to have KPIs, then you need to track not only the number of times a screening was done, but also track the v-codes (or some way to track positives) and make them available in the SDAC so medical homes can track them. And the SDAC needs to track referrals (or intervention). Otherwise it is not worth measuring the number of screenings.

- The PCMP or medical home should receive real-time data (less than a month since date of service) with data that will allow them to compare their performance with performance of similar type of medical home.

- Healthcare for children focuses on prevention, early detection and early intervention, which require initial increased investment to reduce potential expenses many years and decades down the line. Other ACO programs have shown that savings on children are difficult to show early on. So, incentives in the care of children will initially be for intermediate outcomes (or for process outcomes) and need to be direct incentives rather than incentives in the form of shared savings.

69) Measures for payment. Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☒
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

We only need 2-4 KPIs. Any more will dilute the effect. What we really want is good data, so we can improve our outcomes by doing a quality improvement project. Since children are the majority of Medicaid recipients and give you the best chance of truly improving health and wellness in the long term, KPIs need to be more child-focused. And since the savings are so far in the future, KPIs need to be intermediate, process outcomes.

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name:

1st Allergy and Asthma and Pediatrics
DBA Horizon Pediatrics and Primary Care
3566 E 104th Ave

Thornton, CO 80233

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization:

Location:

☒ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☒ Medical provider / PCMP / other provider
  i. Type or specialty: Pediatrics and Family Medicine
  ii. Area of practice: Thornton and Denver
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☒ Other (please describe): Advocate for children on Medicaid

How have you been involved in the ACC program and what interaction have you had with RCCOs:

I have worked with Molly Markek and her team. I also work as an advisor to CCHAP

Please briefly describe your involvement with Medicaid, either in Colorado or another state:

I have cared for children on Medicaid since 1978 first in Metro NY and now 16 years in Colorado.lick here to enter text.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☒ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes

Are you currently involved in the ACC program?

☒ Yes
☐ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☒ 2-3 years
☐ 3-4 years
☐ Since before the program was implemented.

☐ Will not seek to participate
☐ N/A

Please feel welcome to describe why or why not using the space below.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

- Reimbursement (mostly due to the Federal ACA) is fairer now.

- The decision to make the well child visit one of the KPIs was a very good decision in behalf of children, but unfortunately attribution is still flawed and the SDAC data is delayed and often inaccurate. So, it is difficult to create an effective QI process to improve the KPI, but this is a good start.

- The decision to focus on integrated behavioral health in medical homes is a wonderful decision to improve health outcomes for people covered by Medicaid. Thank you.

- You have a great opportunity to do what is needed for the majority of Medicaid recipients. The majority of Medicaid recipients in Colorado are children and adolescents; they should not be considered one of the subgroups. The following principles should be incorporated into the core objectives of the ACC:

    - Children's health care needs are very different than adults. For adults, the focus is on managing chronic disease more effectively. For children, it is about preventing the development of those chronic diseases.
    - If the ACC really wants to focus on health and wellness, the greatest opportunity is with the children (the majority of Medicaid recipients). By focusing on preventive care, early screening and early intervention for children, there will be big savings; unfortunately those savings may not occur for many years or decades in the future, but the investment will eventually be worth it.
    - So, the ACC will need to invest in children to the extent possible now even though the savings come much later. We recommend that a portion of short-term savings that occurs due to chronic disease management in adults in the ACC be invested back into preventive care for children.
    - Children are part of families and you can't help the child unless you help the family. So, care coordination is more involved for children since it includes care coordination of the parents/family.
    - There is increased recognition that behavioral health is a part of overall health and should be accessible within a pediatric medical home. However, the current mental health system must have policies, procedures, and resources that support integrated behavioral health activities at the practice level.

2) What is not working well in the ACC Program?

- Attribution continues to attribute patients to the wrong medical home and the process of getting patients reassigned to the correct medical home is onerous for the patient and

family.

- The health care data through the SDAC is based on claims so it is delayed and is incomplete (particularly for children). Therefore, it is not very useful in helping medical homes improve outcomes for children.

- Each RCCO does things very differently, which is confusing for medical homes with patients in several RCCOs. RCCOs are inconsistent in how they respond to requests for care coordination (quite variable depending on whom you reach at the RCCO). So the new RFP should ask how RCCOs will develop policies and procedures to make their methods and responses to requests for help more consistent, both within the RCCO and among all RCCOs.

- There are certain expectations/requirements and ways of doing things that are so different from one RCCO to another that it requires significant extra work for the medical home to adapt to the differences. To deal with this. So, the RFP should ask how RCCOs intend

- If a patient lives in one region and goes to a medical home in another region, and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from the patient's region RCCO. This is particularly true in the Denver metro area. <u>There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients.</u>

- The "incentives" now are actually disincentives, especially the requirement that the RCCO must meet its KPIs before a high performing medical home can be rewarded for meeting its KPIs. The concept behind this approach is not consistent with how health care systems (and "medical neighborhoods") work.

- The geography of the 7 regions does not reflect the natural geography of health care systems and referral patterns. Larimer County should be in Region 2.

- RCCOs are not providing the level of care coordination that Medicaid patients need. We have had RCCO "care coordinators" just tell us to call 211. The level of commitment that patients and families need is difficult to find, unless care coordination is provided at the medical home level or the community level.

- Both family practices and pediatric practices report that the SDAC does not reflect their own data that the practice can obtain from their EHR or their own claims data. This is particularly true regarding data on health care screening. The RFP should ask how RCCOs and HCPF should take advantage of this practice-based data.

- Most medical homes are not working closely with RCCOs and are not receiving much support. The RFP should ask how RCCOs intend to work more closely with medical homes.

- Feedback from RCCOs to the medical home regarding patients referred to the RCCO for care coordination is spotty. How will RCCOs consistently provide feedback and communication to the medical home regarding what was done for the patients and whether there was improvement?

- There has been difficulty with communication from the state level through the RCCOs down to the individual practice/provider level. Providers feel as though they are not well informed from HCPF or RCCOs. We are grateful that CCHAP keeps us informed.

- The current system does not take into account the movement of patients on and off Medicaid and movement between RCCOs. Whether for KPIs or future shared savings incentives, practices need to be evaluated on established patients who have been in a practice for a minimum of six months. This allows the medical home to actually have time to make an impact on the child's care. Otherwise, it is a substantial disincentive for practices to be open to the more complex and challenging patients, those that likely need access the most.

- Currently, there is very little communication and alignment between BHO's and RCCO's. In order for integrated behavioral health to be successful at the practice and community level, the BHO's and RCCO's must have similar goals, policies/procedures that are aligned, payment structures that are aligned with movement toward integration and ongoing close communication with one another. The RFP should ask how they intend to do this.

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

- The decision to focus on integrated behavioral health in medical homes is a wonderful decision to improve health outcomes for people covered by Medicaid. Thank you.

- If Colorado is serious about promoting integration of behavioral and physical (medical) health care, then the RCCOs and BHOs should be integrated. This would mean they should have the same regions and function as though they are one organization. This would reduce duplication of efforts and have better alignment of incentives and payments that support integrated care.

- Open the behavioral health and wellness codes (96150 – 96155) now. Don't wait. This will encourage integration immediately and enable medical homes to start now the process of

evolving toward full integration.

- Care coordination for both behavioral health and medical care should be done in the primary care setting. And either the RCCO and/or the BHO should delegate the responsibility to do care coordination and a pmpm to cover the expense to the medical home as part of the payment reform process. And behavioral health care coordination and medical care coordination needs to be fully reimbursed. In addition, the BHO and the RCCO will need to have information and care coordinators to assist medical homes to handle uncommon or very complex issues.

- Provide infrastructure and funding for data collection and management to support integrated behavioral health in the medical home and the care coordination that will have to be part of that. Utilizing SDAC data is just one way to understand the activities within a medical home. SDAC data is delayed and does not include enough information to support behavioral health care coordination in the medical home. Other methods and technologies are needed. There will need to be an investment in the development of new technologies and methods to do behavioral screening, track referrals, document treatment and collect data on the whole care coordination process at the medical home level. This will require adequate reimbursement to cover the cost of starting up new care coordination programs in the medical home and start up technologies to improve screening, intervention and care coordination with follow through in the medical home.

- The CPACK program developed by CBHC is a very good program, particularly the following:
  a. Assistance with finding a behavioral health provider for patients
  b. Telephone consultation by a child psychiatrist to primary care providers
  We recommend that BHOs be required to provide the 2 components above as part of their new contracts.

- Payment options for integrated behavioral health (not just co-location) need to be clear and understandable to providers and practices. In order for the integrated model to be sustainable, there need to be ways to access understandable billing rules/policies.

Core Coordinatian

Question 12) Whot needs for children/fomilies should be coordinoted in medical homes and are there services thot should not be o part of core coordinotian by the pediotric and fomily medicol home

One of the most difficult services to provide in the medical home is home visits. Support from the larger system is needed.

Services that can be provided in a pediatric or family medical home are: complex medical coordination including logistics/travel, ancillary services (PT/OT/home health services, ...),

collaboration with mental/behavioral health, collaboration regarding school needs, referrals to early intervention services and Child Find, referral to other agencies (rehab, hospice, ...), collaboration with foster care and DHS system. RCCOs need to help medical homes with needs like assistance with housing, food, parental employment, child care, in which case the RCCO can help families connect with other agencies that provide these services.

Question 19: How should care coordination program be evaluated? How should its outcomes be measured?

A care coordination program should initially be measured by having good processes, not measured by outcomes, until solid data exists on outcomes that are risk adjusted and accurate for children. Initially all measures need to be quite separated from outcomes that are highly tied to patient behavior, or practices will again be less likely to serve those with highest risk.

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Our medical home relates to multiple RCCOs and we want to be delegated to do care coordination. If all RCCOs allowed medical homes to be delegated to do care coordination, we could receive a pmpm from all of them, which would enable us to afford to hire enough care coordinators to meet the needs of all of our ACC patients.

Where should core coordination be done? Care coordination is best done in the medical home. We are willing to do care coordination, because we have a relationship with our patients and they trust us and we recognize that coordinating complex medical care is essential for good care and for cost savings. Also, the primary care provider is best positioned to have a long term relationship with the patient, and therefore know and understand other aspects of the patient's life and how important those non-medical factors are on the patient's health and health issues.

If care coordination cannot be done in the medical home, then it is best done by community-based organizations. The least effective, least well-received, least trusted is care coordination done from a call center in an RCCO. The role of the RCCO should be to help the medical home-based care coordination staff access resources for families.

The majority of practices are willing to provide Care Coordination, if they can get financial support (PMPM) for providing the service.

Should you be doing care coordination for certain patient populations e.g. children with asthma or special needs children? Or for your entire Medicaid population healthy or chronically ill? The overall goal of Colorado Medicaid should be to provide care coordination services for ALL patients in the Medicaid population (for some patients it may be very minimal, others extensive). This is the essence of preventive care. A care coordinator that is based in the medical home is in the best position to help identify risk factors proactively, as early as possible before they impact a patient's health and cause illness. Children with special

healthcare needs (complex, complicated) require a higher level of care coordination, so the pmpm attached to their care coordination needs to be risk adjusted.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

- All RCCOs should have their offices in the region served, should be non-profits, be a Medicaid provider and be incorporated only in Colorado.

- All RCCOs should offer to delegate care coordination to medical homes willing to accept that responsibility and the RCCO should share a portion of the RCCO pmpm with the medical home that accepts delegation.

- All RCCOs should use the same criteria for delegation and for the amount that is paid for delegated services of care coordination. By doing this, services can reach a standard across the state. A patient would have access to similar services no matter where they moved across Colorado.

- RCCOs should all agree on how they will effectively communicate to medical homes regarding any contact the RCCO has with patients attributed to the medical home. They should include PCMPs in developing those criteria.

- All RCCOs should help (or contract with an organization to help) medical homes understand how to access their SDAC data, understand their data and use it to develop rapid cycle QI projects to improve health outcomes and meet KPIs.

- All RCCOs should agree to provide uniform support for medical homes when a medical home asks for help with care coordination, even when the medical home is in another region (and contracted with another RCCO) but the patient is in the first RCCO's region.

- RCCOs should be required to allow medical homes to give the RCCO a list of patients the medical home feels is their patients and receive help from the RCCO to understand why certain patients have been attributed to another medical home. If the patient is determined to be more appropriately attributed to the inquiring medical home, then the RCCO should help re-attribute the patient to the correct medical home.

- RCCOs should share on a regular basis the RCCO's performance on KPIs and share savings incentives and share with the medical home how their own performance compares with other medical homes.

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

This is particularly applicable to the Denver metro area. There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients. For many expectations/requirements and ways of doing things the RCCOs are so different from one another that it requires significant extra work for medical homes to adapt to the differences. In addition, if a patient lives in one region and goes to a medical home in another region, and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from that first region.

27) Should the RCCO region maps change? Why or why not? If so, how?

Yes. There are two changes we recommend:

- Larimer County should be included in Region 2, since the medical community and the support organizations of Larimer County and very closely linked to Weld County
- In the Metro Denver area, the boundary issues are so difficult that we recommend one RCCO be responsible for the whole metro area or that medical homes be allowed to choose one RCCO for all of their patients.

28) Should the BHO region maps change? Why or why not? If so, how?

If Colorado is serious about promoting integration of behavioral and physical (medical) health care, then the RCCOs and BHOs should be integrated. This would mean they should have the same regions and function as though they are one organization. They should share incentives that are aligned around successful integration of behavioral and medical services and outcomes. So the BHO maps/regions should conform to the RCCO regions/maps.

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients. There are certain expectations/requirements and ways of doing things that are so different from one RCCO to another that it requires significant extra work to adapt to the differences. If a patient lives in one region and goes to a medical home in another region and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from that first region. This is particularly true in the Denver metro area.

Another alternative: When a practice contracts with a RCCO currently they "belong" to one RCCO. Change that and have them only contract with the state and have that contract extend to all RCCOS. This way RCCOS would be more accountable to standardization through out all of Colorado, and the services provided to patients/families would be more uniform.

34) What role should RCCOs play in attributing clients to their respective PCMPs?

The attribution system is quite flawed still. RCCOs should be required to allow medical homes to give the RCCO a list of patients the medical home feels are their patients and receive help from the RCCO to understand why certain patients are attributed to another medical home. If the patient is determined to be more appropriately attributed to the inquiring medical home, then the RCCO should help re-attribute the patient to the correct medical home.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

- The payment structure absolutely does not support the ACC goals. A medical home does not receive incentives for KPIs unless the RCCO meets its KPI. This becomes a disincentive, because many medical homes meet their performance targets, but do not get rewarded because the RCCO did not meet its targets. So the medical home has no incentive to maintain the performance. The philosophy that HCPF has espoused (that the high performing medical home should encourage or help the low performing medical home) is not realistic and is not how the real world works. There is no time for that, plus the high performing medical home has no way of knowing who is low performing. This idea shows a lack of understanding of the world where health cares is delivered. Medical homes need to receive full incentives when they meet their KPI targets, no matter what happens in the RCCO.

- The incentives are too low to change much. Also, the KPIs need to remain focused on process, not outcomes, until the data is more sophisticated to accurately attribute patients and account for risk factors.

- Many medical homes have the ability to collect REAL-TIME data from their EHR and their claims database, which can be used to measure performance more accurately than the SDAC. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and providers to develop a vetting process that will enable HCPF and RCCOs to trust the medical home self-reported real-time data.

- Since children are the majority and give the best chance of truly improving health and wellness, KPIs need to be more child-focused. And since the potential cost savings for children's health care are so far in the future, KPIs need to be intermediate, process outcomes.

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

There is very little of the infrastructure in the state in place at the present time to enable capitation to be implemented successfully. Here are just some of the changes that would need to be in place before it would be fair or prudent to implement capitation:

- The state would need to already be paying fair amounts for all aspects of the care needed by Medicaid recipients before it could effectively move to capitation. In other words, codes for things that HCPF wants done under capitation should be opened and reimbursement adequately now. This would encourage medical homes to already be doing these things before the change to capitation. It would also give HCPF and medical homes experience regarding what the actual costs are for providing the desired services and determine a fair capitation. It will be difficult to change behavior to include new activities under capitation among providers, if you continue to hold codes closed now for things you want done under capitation. You have to help the medical homes create the habits you want before the switch to capitation.

- All providers would have to be reliably involved in the ACC: primary care, all of the various adult and child specialists, the hospitals, the therapies, dentists, mental health providers, etc.

- The data system would have to be able to report real time data and be far, far more accurate than it is now.

- The attribution system is flawed. That would have to be improved and provide accurate, real-time attribution data before capitation should be instituted.

- You will have to change a variety of policies that are barriers to population management.

- Capitation has to be combined with significant incentives to implement processes and improve outcomes. So, you will need to have the incentive system very well developed and viewed by providers as motivating before implementing capitation

- Healthcare for children focuses on prevention, early detection and early intervention, which require initial increased investment to reduce potential expenses many years and decades down the line. Other ACO programs have shown that savings on children are difficult to show early on. So, incentives in the care of children will initially be for intermediate

outcomes (or for process outcomes) and need to be direct incentives rather than incentives in the form of shared savings.

- Early in the transition from pre-ACC payment methods to ACC payment structure (2012), some medical homes were asked to return money to Medicaid. Transitions like that (for example the transition to capitation) have to avoid this. Primary care medical homes have such narrow margins that this can be very difficult financially on a medical home

- Many medical homes have the ability to collect from their EHR and their claims database REAL-TIME data with which performance can be measured. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and providers to develop a vetting process that will enable HCPF and RCCOs to trust that medical home self-reported real-time data is trustworthy.

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

Many medical homes have the capability and infrastructure to adapt to payment tied to value. What is missing is the state, HCPF, RCCO, BHO infrastructure. See all of the infrastructure elements HCPF needs to have in place listed in question 60

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

- The HCPF Payment Reform Committee should meet at a time when providers and practice managers can actually attend. Monday afternoons is probably the worst time to actually enable providers or practice managers to attend. Once you select an appropriate time, then actively recruit participation.

- Make sure that your efforts are statewide. Views are different in the various regions of the state.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

- Many medical homes have the ability to collect from their EHR and their claims database REAL-TIME data with which performance can be measured. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from

medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and provider from medical homes to develop a vetting process that will enable HCPF and RCCOs to trust medical home self-reported real-time data.

- The measures for children can be drawn from HEDIS measures or CHIPRA measures or from the Pediatric Measurement Proposal that HCPF did in 2010 with the help of Jim Todd. Appropriate child health measures could be selected from the following measures :
  - Well child visits appropriate for age
  - Developmental screening by three years of age
  - Teen depression screening
  - Complete immunization status by age two
  - Post-partum depression screening rate for mothers of newborns by age 4 months
  - Appropriate antibiotic use in URI and strep pharyngitis

- Medical homes could also be measured on:
  - Patient (or family) satisfaction ratings
  - Documentation of QI projects

Screening should be part of KPIs, but you need to do more than just create a KPI. If you are going to have KPIs, then you need to track not only the number of times a screening was done, but also track the v-codes (or some way to track positives) and make them available in the SDAC so medical homes can track them. And the SDAC needs to track referrals (or intervention). Otherwise it is not worth measuring the number of screenings.

- The PCMP or medical home should receive real-time data (less than a month since date of service) with data that will allow them to compare their performance with performance of similar type of medical home.

- Healthcare for children focuses on prevention, early detection and early intervention, which require initial increased investment to reduce potential expenses many years and decades down the line. Other ACO programs have shown that savings on children are difficult to show early on. So, incentives in the care of children will initially be for intermediate outcomes (or for process outcomes) and need to be direct incentives rather than incentives in the form of shared savings.

69) Measures for payment. Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	

1-7	☒
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

We only need 2-4 KPIs. Any more will dilute the effect. What we really want is good data, so we can improve our outcomes by doing a quality improvement project. Since children are the majority of Medicaid recipients and give you the best chance of truly improving health and wellness in the long term, KPIs need to be more child-focused. And since the savings are so far in the future, KPIs need to be intermediate, process outcomes.

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

Littleton Fire Rescue
2255 West Berry Avenue
Littleton, Colorado 80120
303-795-3800 : Fax 303-795-3929

Proudly serving the communities of:

City of Littleton
Littleton Fire Protection District
Metro Districts Highlands Ranch

To whom it may concern,

The Littleton Fire Department utilizes advanced life support transport ambulances, a community paramedic program, and a mobile integrated healthcare response car that utilizes a physician assistant and a paramedic. From this perspective, the Littleton Fire Dept would like to provide a response to the RCCO RFP along two key lines of action, alternative destination and reimbursement modalities.

RCCOs should actively engage to support the utilization of alternative destinations for patients accessing the 911 system for behavioral health and non-emergency care issues. Chronic pain management and medication management issues deserve more targeted support to ensure the patient gets what they medically require, without taxing a 911 system that should remain available for higher acuity emergencies. In order to best address these alternative destination options, reimbursement modalities must also be in place.

Currently, ambulance services are financially rewarded for continued utilization of emergency department as the only destination for all 911 calls. In fact, the only financial recognition that the 911 system receives is for transport to the emergency department. The catch-all has become, in essence, that a call to 911 results in a high fee-for-service ambulance transport to the expensive emergency room evaluation. RCCOs need to engage in substantive alternative reimbursement structures that reward re-navigation of these care and behavioral health patients into the most appropriate, more affordable patient destination locations.

We appreciate the opportunity to provide input into the RFP from the perspective of the catch-all 911 system. Our agency exists to represent the needs of our public, to include the most effective access to the appropriate levels of care and cost-affordable alternatives to the existing system. Please do not hesitate to contact us for further questions or input regarding this perspective.

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Cyndi Dodds
Location: Fort Collins, CO 80525

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Touchstone Health Partners
Location: Larimer County, CO
☒ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☐ Medical provider / PCMP / other provider
  i. Type or specialty: Click here to enter text.
  ii. Area of practice: Click here to enter text.
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☒ Other (please describe): Community Behavioral Health Provider

Are you currently involved in the ACC program?

☒ Yes
☐ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☐ 3-4 years

How have you been involved in the ACC program and what interaction have you had with RCCOs:
Member of the community leadership team and provide purchased staff with behavioral health expertise to the RCCO community care management team.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:
Colorado Medicaid provider, former BHO co-owner, current BHO subcontractor providing both mental health and substance use disorder treatment services

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☒ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

Please feel welcome to describe why or why not using the space below.

☒ Since before the program was implemented

General Questions

- What is working best in the Accountable Care Collaborative (ACC) right now?

The ACC model allows for flexible, community based, local approaches to care coordination that involve multiple partners and stakeholders.

The RCCO in our region has a well functioning multidisciplinary care coordination team that combines:

- physical health and behavioral health expertise
- access to multiple electronic medical records including a local hospital and several practices
- patient support at the point of care
- active leadership and strategic direction from the RCCO, practices, hospital, behavioral health organization and health district
- shared financing structure supporting the community care coordination team

- What is not working well in the ACC Program?

- What is working best in the Behavioral Health Organization (BHO) system right now?

The BHO system has successfully managed a risk-based global payment system. Through this model, the BHOs have established comprehensive networks of local, regional and state wide partnerships to provide flexible services that meet the unique needs of clients/patients in *their* community in a person-focused, integrated healthcare delivery system.

The "carve In" model of behavioral healthcare services has ensures over the years that designated funds are invested in medically necessary mental health services. Care must be taken in the future to ensure that behavioral health dollars continue to flow to provide these specialty services that ensure local flexibility, service coordination and distinction as appropriate and necessary to implement and operationalize a truly integrated system of care.

- What is not working well in the BHO system?

The BHO system is so heavily regulated that clinicians spend an inordinate amount of time on documentation and data collection. The system is not client-centered, it is bureaucratic/ administrative centered. Data is important, but it has to be more balanced. Access to services is critical and behavioral health centers are striving to manage a record demand for services. In order to reduce costs and increase efficiencies, including

access to care and service delivery, all systems need to be aligned to gather needed data while building efficiencies with emphasis on what is best for the clients/patients.

- What is working well with RCCO and BHO collaboration right now?

  Locally the RCCO, Rocky Mountain Health Plans, has been an outstanding partner utilizing a community engagement model that formally brings multiple systems together including the community mental health center, the BHO, medical practices, the local Health District, the Health Alliance of Northern Colorado etc. This approach has recognized that health care is local and to meet the goals of the RCCO multiple partners need to be aligned in the coordination and delivery of care.

- What is not working well with RCCO and BHO collaboration right now?

  To date, the RCCO and BHO have not shared cross system data to assure complete and accurate information in tabulating the system's impact on KPI's. In addition, divergent and burdensome administrative requirements limits the BHO's scope of practice and inclusion in primary care settings.

Behavioral Health Integration

- What should be the next steps in behavioral health integration in Colorado?[1]

  It is important that commercial health insurance plans, RCCOs and the BHO's are all aligned with Colorado's State Health Innovation Plan. Overall the focus should be on a system that focuses on what best serves the needs, both for medical and behavioral health, of the client/patient population including data systems, finance and provider quality and efficiency. Administrative requirements should provide the necessary regulatory and monitoring oversight to meet regulatory requirements while focusing on client/patient satisfaction including improved health outcomes.

[1] Many terms and definitions can be found in the Appendix at the end of this document.

- **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☐	☐	
Community Behavioral Health Services Rule	☐	☐	
Covered diagnoses list	☐	☐	
Different behavioral / physical health reimbursement	☐	☐	
Institutions for Mental Diseases exclusion	☐	☐	
OBH rules, reporting, or financing (regulatory differences between agencies)	☒	☐	There should be consideration given to recognizing behavioral health as healthcare and not social services. This could include an examination of the current structure of behavioral health services being divided across multiple governmental systems rather and the inconsistencies that prevail regarding regulatory burdens and unfunded mandates imposed on behavioral health and not general healthcare.
PCMP financing structure	☐	☐	
Per-member per-month amount	☐	☐	
Physical space constraints	☐	☐	
Privacy Laws (HIPAA, 42 CFR)	☒	☐	Work to more closely align 42CFR with HIPAA
Professional / cultural divisions	☐	☐	
RCCO or BHO contracts	☐	☐	
Staff capacity	☒	☐	Staffing needs are an ongoing challenge for behavioral health providers
State/Federal rules or reporting requirements	☐	☐	

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

Technical resources / data sharing	☐	☐	
Training	☐	☐	
Others	Codes for billing integrated behavioral health services provided in a primary care practice need to be opened/authorized in Colorado		

- What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

  Please see Heath B, Wise Romero P, and Reynolds K. A review and Proposed Standard Framework for Levels of Integrated Healthcare, Washington, DC. SAMSA-HRSA Center for Integrated Health Solutions. March 2013.

- Please share any other general advice or suggestions you may have about behavioral health integration.

It is imperative that the state authorize billing codes that will allow for payment of behavioral health (mental health and substance abuse) services provided in fast paced medical practices and available to a broad range of symptom acuity presented by the individual patient. This could also be connected to cross system payment reform such as value-based global payment with performance based contracting for integrated health care.

Consistent with community partnerships and resources, providers should implement integration per the model referenced in question #9. Recognizing the uniqueness of communities, existing partners should join to agree upon an evolving system of integrated care.

Care Coordination

- Care coordination is an important part of the ACC Program.

  - What is the best definition of care coordination?

  A client centered assessment-based, trans-disciplinary approach that works with patients, their providers and their support systems to develop and implement a comprehensive care plan that integrates available physical health, behavioral health, social support services and self-care that are determined to have the best chance of maximizing a patient's health. Care coordination is done according to the patient's needs, goals, and preferences (with provider input.) Care coordination monitors progress and coordinates communication between all providers.

  - How should RCCOs prioritize who receives care coordination first?

  Some potential strategies for bending the health care cost curve and reduce costs include:
  - targeting patients having 4+ emergency room visits and great than $3,000 in potentially preventable events, and/or 10+ emergency room visits (excluding) clients whose emergency room visits are appropriate due their condition
  - Referrals from practices for high risk patients
  - Clients with evidenced-based conditions/issues such as asthma, post-acute stroke patients, complex frail elderly living independently and high risk/high cost medication management

  - How should RCCOs identify clients and families who need care coordination?

  - How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

  It would be ideal if RCCOs could develop a streamlined process that draws from already existing data instead of creating yet more reporting requirements.

- What services should be coordinated and are there services that should not be a part of care coordination?

Minimally coordination of physical health, behavioral health, social support services and self-care that is determined to have the best chance of maximizing a patient's health should occur. Coordination needs to be flexible enough to meet the unique needs of the patient and their families.

- What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

- Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

    - What care coordination is going on today?

    - What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

    Community Behavioral Health providers understand that the social determinants of health play role promoting a client/patients recovery and resiliency. Care coordination is provided to ensure clients have services to meet their needs so that treatment can be effective and recovery possible. The community mental/behavioral health system has been skilled at providing case/care management services to support their clientele's treatment and recovery for decades. Capitalizing on this experience is an important feature that can support primary care practices with whole person care.

    - How can the ACC avoid duplicating or disrupting current care coordination relationships?

    - What are the gaps in care coordination across the continuum of care?

    Who is going to coordinate the multiple care managers? Consistency is key in being successful in improving outcomes and the client/patient experience in the treatment and management of their healthcare and related needs.

- **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	Should the RCCO have a role? Yes	No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma	☐	☐	☒	Touchstone Health Partners has a large variety of robust partnerships with other community services including Child Welfare, Foot Hills Gateway, the Work Force Center, Schools, the Criminal Justice System including the local jail & community corrections, probation & parole, law enforcement, the Health Department & Health District of Northern Larimer County, private providers etc.

Affordability (assistance with prescriptions or co-pays)	☒	☐	☐	
Daycare / childcare	☐	☐	☒	
Economic stability & employment	☐	☐	☒	
Education	☐	☐	☒	
Environment	☐	☐	☒	
Food access / nutrition	☐	☐	☒	
Health literacy	☐	☒	☐	
Housing	☐	☐	☒	
Language or translation services	☐	☐	☒	
Literacy	☐	☐	☒	
Transportation	☐	☐	☒	
Other	RCCOs should coordinate with local behavioral health centers and BHOs around needed mental health and substance use disorder services.			

- **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	Coordinate care? Yes	No	In what capacity should these individuals coordinate care in the ACC Program?
Advanced Practice (Registered) Nurses	☒	☐	
Certified Addiction Councilors	☒	☐	
Certified Nurse Midwives	☒	☐	
Community Health Workers	☒	☐	

Generalists (BA/BS/MA/MS)	☒	☐	
Health Coaches	☒	☐	
Licensed Clinical Social Workers	☒	☐	
Licensed Marriage and Family Therapist	☒	☐	
Licensed Mental Health Counselors	☒	☐	
Licensed Professional Counselor	☒	☐	
Masters of Public Health	☒	☐	
Medical Doctors / Doctors of Osteopathic Medicine	☒	☐	
Nurse Practitioners	☒	☐	
Patient Navigators	☒	☐	
Peer Advocates	☒	☐	
Promotoras	☒	☐	
Psychiatrists	☒	☐	
Psychologists	☒	☐	
Registered Nurses	☒	☐	
Social Workers	☒	☐	
Wraparound facilitators	☒	☐	
Other	Any of these categories could play a strong role on a multidisciplinary care coordination team. It is important to keep any requirements flexible to meet local community needs.		

- **Care coordination requirements for specific populations.** Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and infants	☐	☐	
Children	☐	☐	
Children who are healthy, but in socially-complex environments	☒	☐	

Children involved in the foster care system	☒	☐	
Children with a chronic illness	☒	☐	
Children with a serious emotional disturbance	☒	☐	
Children with medical complexity	☒	☐	
Children or youth with a behavioral health diagnosis or substance use disorder	☒	☐	
Transition-age adolescents	☐	☐	
Parents and families	☐	☐	
Pregnant women	☐	☐	
Adults	☐	☐	
Adults who are healthy, but in socially-complex situations	☐	☐	
Adults with a chronic illness	☒	☐	
Adults with a behavioral health diagnosis or substance use disorder	☒	☐	
Clients involved in the criminal justice system	☒	☐	
Clients with a disability	☒	☐	
Clients in a nursing facility	☐	☐	
Elderly clients	☐	☐	
Frail elderly clients	☒	☐	
Clients in palliative care	☐	☐	
Other populations, please comment:			

- How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

- How should care coordination be evaluated? How should its outcomes be measured?

- Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

    - What is the PMPM cost for providing care coordination services?

    - Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

- Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

    - **Care coordinator to client ratios.** If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☒
51-100	☐
101-200	☐
201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

- How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

- Please share any other general advice or suggestions you have about care coordination in the ACC.

The ACC should streamline regulations and allow for flexible, community based models that are done at the point of care.

Program Structure

- If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

- What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

- The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

- Should the RCCO region maps change? Why or why not? If so, how?

Regional maps should align with patient patterns in accessing care build upon natural partnerships.

- Should the BHO region maps change? Why or why not? If so, how?

No, the current boundaries are well established, highly functional, support patient patterns for accessing care and build upon natural partnerships.

- Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

There is a danger in asking local communities to move through a RCCO transition. There has been a tremendous investment of time and talent from key stakeholders in planning, implementing, adjusting and maintaining RCCO initiatives. To think that this type of work might have to be recreated with new partners in the near future is exhausting, disruptive and pulls much needed resources away from patient/client care.

- What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

- What are the limitations of the current benefit structure and what – if any – changes are needed?

- Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

No, this would lead to a highly fragmented community response resulting in multiple care coordination teams, miscommunication, duplicated efforts and confusion for patients and practices. Communities would coordinators to coordinate the care coordinators.

- If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

- What role should RCCOs play in attributing clients to their respective PCMPs?

Attribution should be based on the patient's needs and access to care.

- What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

- What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

  The ACC Program and the Dept. of Human services should be closely aligned to ensure that both systems are funded adequately and are highly coordinated to ensure high quality and effective care for all Coloradoans.

What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

- What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

It would be helpful if DORA could ease/improve the incredibly difficult process of licensing psychiatrists and psychiatric nurse practitioners that have practiced/move here from another state.

Stakeholder Engagement

- What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

- What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

- Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

- How should the Department structure stakeholder engagement for the ACC as a whole?

Network Adequacy and Creating a Comprehensive System of Care

- Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

    a. If no, what are the gaps?

    b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

    No, Colorado has a shortage of psychiatric providers, epically those serving children/youth.

    ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

    The scope of practice of mid-level practitioners should be reviewed for expansion in order to ensure that their skills and training are fully utilized. Reciprocity agreements either other states should be reviewed to more rapidly credential recruits from other states. Colorado should incentivize out of state recruits rather than discouraging them from practicing in Colorado.

- What role should hospitals play in the next iteration of the ACC Program?

- What role should pharmacies play in the next iteration of the ACC Program?

- What role should specialists play in the next iteration of the ACC Program?

- What role should home health play in the next iteration of the ACC Program?

- What role should hospice care play in the next iteration of the ACC Program?

- What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

- What role should counties play in the next iteration of the ACC Program?

- What role should local public health agencies play in the next iteration of the ACC Program?

- What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

- How can RCCOs help to support clients and families in making and keeping appointments?

Easily accessible transportation

- Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

Community Health Workers or Patient Navigators should be supported but not required. Allow for flexibility in the ACC model.

- **Community Health Worker reimbursement**. Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement process	(Please check all that apply)
Independently bill	☐
On staff (salary) at Primary Care Medical Provider Clinic	☐
On staff (salary) at RCCO	☐
Per Member Per Month Payment	☐

- Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

- Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.
    - What does cultural competence mean to you?
    - What RCCO requirements would ensure cultural competency?
    - What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?
    - Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

    Bidders should demonstrate that they can deliver care in a culturally informed, appropriate and competent manner.

- Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

- Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

Real time data is needed to provide timely intervention. The ACC should support a process for alerting a practice when their patient enters the emergency room. Public information campaigns that inform about alternative care options might also be useful.

- Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

Practice Support

- **Support for practices**. Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☐	☐	☐	☐
Network provider education	☐	☐	☐	☐
Assistance with practice redesign	☐	☐	☐	☐
Assistance with efficiency-enhancing activities	☐	☐	☐	☐
Provide web-based resources and directories	☐	☐	☐	☐
Provide practice-specific data reports	☐	☐	☐	☐
Provide clinical care guidelines and best practices.	☐	☐	☐	☐
Provide clinical screening tools	☐	☐	☐	☐
Provide health and functioning questionnaires	☐	☐	☐	☐
Provide chronic care templates	☐	☐	☐	☐
Provide registries	☐	☐	☐	☐
Offer client reminders	☐	☐	☐	☐
Offer client self-management tools	☐	☐	☐	☐
Offer educational materials about specific conditions	☐	☐	☐	☐
Supply behavioral health surveys	☐	☐	☐	☐
Supply other self-screening tools	☐	☐	☐	☐
Administer behavioral health surveys	☐	☐	☐	☐
Administer other self-screening tools	☐	☐	☐	☐
Prepare client action plans	☐	☐	☐	☐
Provide training on providing culturally-competent care	☐	☐	☐	☐

Others				

- If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

- What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

- What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

Providers should be incentivized to assume/manage risk.

A policy of having a part of a contract withheld with providers required to earn it back is an ineffective incentive program.

- Should the Department require that PCMPs utilize disease registries to manage the health of their population?

- Please share any other advice or suggestions about provider support in the ACC.

Payment Structure and Quality Monitoring

- Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

Move away from fee for service (ffs) models to those where the RCCO assume and manage risks. FFS models do not support comprehensive integration. The current BHO capitation model is actually a FFS model that is disguised a global payment/capitation model. The requirement to justify payment and avoid "claw back" or rate reductions is through a unit of service accountability structure results in restricting service options that are unreimbursed even though they are effective in achieving health outcomes. This includes some categories of care coordination, technology delivered services, consultations without the client/patient present etc.

- If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

- Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

- The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

- What role – if any – should the RCCOs play in the distribution of payments to providers?

- Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

- What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of cli Providers should be incentivized to assume/manage risk ents and providers, and health outcomes?

- **Measuring Client experience.** Please complete the table below to indicate how the Department should measure Client/patient experience:

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☐	☐	
SF-12 Health Survey	☐	☐	
Other types of client interviews / surveys	☐	☐	
Patient Activation Measure	☐	☐	
Focus groups	☐	☐	
Other	Please type your response here.		

- Knowing that, at this time, the Department only has claims data, how should population health be measured?

- How should quality and performance data be reported to the RCCOs, PCMPs, and the public?

- **Measures for payment.** Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☐
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

- What percent of RCCO payments should be tied to measures or performance?

Percentage	
10-20%	☐
21-30%	☐
31-40%	☐
41-50%	☐
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

- Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?

- Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?

Establish baseline performance using national standards and then reward improvements.

- Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

- **Incentive payment frequency.** Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	☐
Annually	☐
Other	☐

If you checked the "Other" box, please describe payment frequency below:

- For potential offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

- For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

Community Behavioral Health providers practice in the CSTAT measures for both mental health and substance use disorder services as part of their contract with OBH. There are also specialty programs such as Functional Family Therapy, Integrated Dual Disorder Treatment and Parent Child Interaction Therapy that have outcome measures that are not reimbursed.

Health Information Technology (HIT)

- **Types of communication.** For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	☐
Text message	☐	☐
Web portal	☐	☐
Email	☐	☐
Telemedicine / Video chat	☐	☐
Face-to-face meeting	☐	☐
Smartphone app	☐	☐
Other:		

- **HIT investments by organizations.** For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below:

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	☐	☐
Digital care management tool	☐	☐
Care transitions alerts	☐	☐
Electronic Health Records (EHRs)	☐	☐
Health risk assessment software	☐	☐

- What are the primary barriers to RCCOs and providers increasing their use Health Information Technology to improve the performance of Primary Care Practices?

- How can Health Information Technology support Behavioral Health Integration?

- In the next iteration of the ACC, should there be a shared resource for data and analytics? Please describe the basic criteria for what a shared data and analytics platform needs to contain in order for it to be useful.

In order to support the whole person, it needs to include both behavioral health data and physical health data.

- Should there be a shared care management tool? Please describe the basic criteria for what a care management tool would need to contain in order for it to be useful.

- Should there be a shared population health management tool? Please describe the basic criteria for what a population health management tool would need to contain in order for it to be useful.

- Please describe the functionality that a common Medicaid provider directory would need to contain in order for it to be useful.

If we're going to connect the head and the body and provide truly integrated care, it will vital that both behavioral health and physical health providers are included in a directory.

- How can the RCCOs support providers' access to actionable and timely clinical data?

Real time clinical data is critical.

- What are the HIT solutions that would benefit clients, providers, and RCCOs? Please comment on the parameters these tools or platforms would need to possess and the ways in which they could be used.

- What technical assistance or resources related to HIT infrastructure should the RCCOs supply? This assistance or these resources could be for providers, social service organization, clients/families, or for others.

- What role should health information exchange platforms like CORHIO or QHN play in the next iteration of the ACC?

Health information exchange platforms need to support patient care and intervention at the practice/provider level with real time, easy to access data that includes both behavioral and physical health information.

- Please share any information, advice, and suggestions you have about health information technology in the ACC Program.

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: David Pacini, MD

Location:

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Primary Care Partners

Location:

☐ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☒ Medical provider / PCMP / other provider
  i. Type or specialty: Pediatrics
  ii. Area of practice: Private practice, Western Colorado
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☒ Other (please describe): Advocate for children on Medicaid

How have you been involved in the ACC program and what interaction have you had with RCCOs:

2 yr

Please briefly describe your involvement with Medicaid, either in Colorado or another state:

Medicaid provider for over 20 yr

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

Please feel welcome to describe why or why not using the space below.

Are you currently involved in the ACC program?

☒ Yes
☐ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☒ 1-2 years
☐ 2-3 years
☐ 3-4 years
☐ Since before the program was implemented.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

- Reimbursement (mostly due to the Federal ACA) is fairer now.

- The decision to make the well child visit one of the KPIs was a very good decision in behalf of children, but unfortunately attribution is still flawed and the SDAC data is delayed and often inaccurate. So, it is difficult to create an effective QI process to improve the KPI, but this is a good start.

- The decision to focus on integrated behavioral health in medical homes is a wonderful decision to improve health outcomes for people covered by Medicaid. Thank you.

- You have a great opportunity to do what is needed for the majority of Medicaid recipients. The majority of Medicaid recipients in Colorado are children and adolescents; they should not be considered one of the subgroups. The following principles should be incorporated into the core objectives of the ACC:

    - Children's health care needs are very different than adults. For adults, the focus is on managing chronic disease more effectively. For children, it is about preventing the development of those chronic diseases.
    - If the ACC really wants to focus on health and wellness, the greatest opportunity is with the children (the majority of Medicaid recipients). By focusing on preventive

care, early screening and early intervention for children, there will be big savings; unfortunately those savings may not occur for many years or decades in the future, but the investment will eventually be worth it.

- So, the ACC will need to invest in children to the extent possible now even though the savings come much later. We recommend that a portion of short-term savings that occurs due to chronic disease management in adults in the ACC be invested back into preventive care for children.
- Children are part of families and you can't help the child unless you help the family. So, care coordination is more involved for children since it includes care coordination of the parents/family.
- There is increased recognition that behavioral health is a part of overall health and should be accessible within a pediatric medical home. However, the current mental health system must have policies, procedures, and resources that support integrated behavioral health activities at the practice level.

2) What is not working well in the ACC Program?

- Attribution continues to attribute patients to the wrong medical home and the process of getting patients reassigned to the correct medical home is onerous for the patient and family.

- The health care data through the SDAC is based on claims so it is delayed and is incomplete (particularly for children). Therefore, it is not very useful in helping medical homes improve outcomes for children.

- Each RCCO does things very differently, which is confusing for medical homes with patients in several RCCOs. RCCOs are inconsistent in how they respond to requests for care coordination (quite variable depending on whom you reach at the RCCO). So the new RFP should ask how RCCOs will develop policies and procedures to make their methods and responses to requests for help more consistent, both within the RCCO and among all RCCOs.

- There are certain expectations/requirements and ways of doing things that are so different from one RCCO to another that it requires significant extra work for the medical home to adapt to the differences. To deal with this. So, the RFP should ask how RCCOs intend

- If a patient lives in one region and goes to a medical home in another region, and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from the patient's region RCCO. This is particularly true in the Denver metro area. <u>There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients.</u>

- The "incentives" now are actually disincentives, especially the requirement that the RCCO must meet its KPIs before a high performing medical home can be rewarded for meeting its

KPIs. The concept behind this approach is not consistent with how health care systems (and "medical neighborhoods") work.

- The geography of the 7 regions does not reflect the natural geography of health care systems and referral patterns. Larimer County should be in Region 2.

- RCCOs are not providing the level of care coordination that Medicaid patients need. We have had RCCO "care coordinators" just tell us to call 211. The level of commitment that patients and families need is difficult to find, unless care coordination is provided at the medical home level or the community level.

- Both family practices and pediatric practices report that the SDAC does not reflect their own data that the practice can obtain from their EHR or their own claims data. This is particularly true regarding data on health care screening. The RFP should ask how RCCOs and HCPF should take advantage of this practice-based data.

- Most medical homes are not working closely with RCCOs and are not receiving much support. The RFP should ask how RCCOs intend to work more closely with medical homes.

- Feedback from RCCOs to the medical home regarding patients referred to the RCCO for care coordination is spotty. How will RCCOs consistently provide feedback and communication to the medical home regarding what was done for the patients and whether there was improvement?

- There has been difficulty with communication from the state level through the RCCOs down to the individual practice/provider level. Providers feel as though they are not well informed from HCPF or RCCOs. We are grateful that CCHAP keeps us informed.

- The current system does not take into account the movement of patients on and off Medicaid and movement between RCCOs. Whether for KPIs or future shared savings incentives, practices need to be evaluated on established patients who have been in a practice for a minimum of six months. This allows the medical home to actually have time to make an impact on the child's care. Otherwise, it is a substantial disincentive for practices to be open to the more complex and challenging patients, those that likely need access the most.

- Currently, there is very little communication and alignment between BHO's and RCCO's. In order for integrated behavioral health to be successful at the practice and community level, the BHO's and RCCO's must have similar goals, policies/procedures that are aligned, payment structures that are aligned with movement toward integration and ongoing close communication with one another. The RFP should ask how they intend to do this.

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

- The decision to focus on integrated behavioral health in medical homes is a wonderful decision to improve health outcomes for people covered by Medicaid. Thank you.

- If Colorado is serious about promoting integration of behavioral and physical (medical) health care, then the RCCOs and BHOs should be integrated. This would mean they should have the same regions and function as though they are one organization. This would reduce duplication of efforts and have better alignment of incentives and payments that support integrated care.

- Open the behavioral health and wellness codes (96150 – 96155) now. Don't wait. This will encourage integration immediately and enable medical homes to start now the process of evolving toward full integration.

- Care coordination for both behavioral health and medical care should be done in the primary care setting. And either the RCCO and/or the BHO should delegate the responsibility to do care coordination and a pmpm to cover the expense to the medical home as part of the payment reform process. And behavioral health care coordination and medical care coordination needs to be fully reimbursed. In addition, the BHO and the RCCO will need to have information and care coordinators to assist medical homes to handle uncommon or very complex issues.

- Provide infrastructure and funding for data collection and management to support integrated behavioral health in the medical home and the care coordination that will have to be part of that. Utilizing SDAC data is just one way to understand the activities within a medical home. SDAC data is delayed and does not include enough information to support behavioral health care coordination in the medical home. Other methods and technologies are needed. There will need to be an investment in the development of new technologies and methods to do behavioral screening, track referrals, document treatment and collect data on the whole care coordination process at the medical home level. This will require adequate reimbursement to cover the cost of starting up new care coordination programs in the medical home and start up technologies to improve screening, intervention and care coordination with follow through in the medical home.

- The CPACK program developed by CBHC is a very good program, particularly the following:
  a. Assistance with finding a behavioral health provider for patients
  b. Telephone consultation by a child psychiatrist to primary care providers

We recommend that BHOs be required to provide the 2 components above as part of their new contracts.

- Payment options for integrated behavioral health (not just co-location) need to be clear and understandable to providers and practices. In order for the integrated model to be sustainable, there need to be ways to access understandable billing rules/policies.

Core Coordination

Question 12) What needs for children/families should be coordinated in medical homes and are there services that should not be a part of core coordination by the pediatric and family medical home

One of the most difficult services to provide in the medical home is home visits. Support from the larger system is needed.

Services that can be provided in a pediatric or family medical home are: complex medical coordination including logistics/travel, ancillary services (PT/OT/home health services, ...), collaboration with mental/behavioral health, collaboration regarding school needs, referrals to early intervention services and Child Find, referral to other agencies (rehab, hospice, ...), collaboration with foster care and DHS system. RCCOs need to help medical homes with needs like assistance with housing, food, parental employment, child care, in which case the RCCO can help families connect with other agencies that provide these services.

Question 19: How should care coordination program be evaluated? How should its outcomes be measured?

A care coordination program should initially be measured by having good processes, not measured by outcomes, until solid data exists on outcomes that are risk adjusted and accurate for children. Initially all measures need to be quite separated from outcomes that are highly tied to patient behavior, or practices will again be less likely to serve those with highest risk.

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Our medical home relates to multiple RCCOs and we want to be delegated to do care coordination. If all RCCOs allowed medical homes to be delegated to do care coordination, we could receive a pmpm from all of them, which would enable us to afford to hire enough care coordinators to meet the needs of all of our ACC patients.

Where should core coordination be done? Care coordination is best done in the medical home. We are willing to do care coordination, because we have a relationship with our patients and they trust us and we recognize that coordinating complex medical care is essential for good

care and for cost savings. Also, the primary care provider is best positioned to have a long term relationship with the patient, and therefore know and understand other aspects of the patient's life and how important those non-medical factors are on the patient's health and health issues.

If care coordination cannot be done in the medical home, then it is best done by community-based organizations. The least effective, least well-received, least trusted is care coordination done from a call center in an RCCO. The role of the RCCO should be to help the medical home-based care coordination staff access resources for families.

The majority of practices are willing to provide Care Coordination, if they can get financial support (PMPM) for providing the service.

Should you be doing care coordination for certain patient populations e.g. children with asthma or special needs children? Or for your entire Medicaid population healthy or chronically ill? The overall goal of Colorado Medicaid should be to provide care coordination services for ALL patients in the Medicaid population (for some patients it may be very minimal, others extensive). This is the essence of preventive care. A care coordinator that is based in the medical home is in the best position to help identify risk factors proactively, as early as possible before they impact a patient's health and cause illness. Children with special healthcare needs (complex, complicated) require a higher level of care coordination, so the pmpm attached to their care coordination needs to be risk adjusted.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

- All RCCOs should have their offices in the region served, should be non-profits, be a Medicaid provider and be incorporated only in Colorado.

- All RCCOs should offer to delegate care coordination to medical homes willing to accept that responsibility and the RCCO should share a portion of the RCCO pmpm with the medical home that accepts delegation.

- All RCCOs should use the same criteria for delegation and for the amount that is paid for delegated services of care coordination. By doing this, services can reach a standard across the state. A patient would have access to similar services no matter where they moved across Colorado.

- RCCOs should all agree on how they will effectively communicate to medical homes regarding any contact the RCCO has with patients attributed to the medical home. They

should include PCMPs in developing those criteria.

- All RCCOs should help (or contract with an organization to help) medical homes understand how to access their SDAC data, understand their data and use it to develop rapid cycle QI projects to improve health outcomes and meet KPIs.

- All RCCOs should agree to provide uniform support for medical homes when a medical home asks for help with care coordination, even when the medical home is in another region (and contracted with another RCCO) but the patient is in the first RCCO's region.

- RCCOs should be required to allow medical homes to give the RCCO a list of patients the medical home feels is their patients and receive help from the RCCO to understand why certain patients have been attributed to another medical home. If the patient is determined to be more appropriately attributed to the inquiring medical home, then the RCCO should help re-attribute the patient to the correct medical home.

- RCCOs should share on a regular basis the RCCO's performance on KPIs and share savings incentives and share with the medical home how their own performance compares with other medical homes.

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

This is particularly applicable to the Denver metro area. There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients. For many expectations/requirements and ways of doing things the RCCOs are so different from one another that it requires significant extra work for medical homes to adapt to the differences. In addition, if a patient lives in one region and goes to a medical home in another region, and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from that first region.

27) Should the RCCO region maps change? Why or why not? If so, how?

Yes. There are two changes we recommend:

- Larimer County should be included in Region 2, since the medical community and the support organizations of Larimer County and very closely linked to Weld County
- In the Metro Denver area, the boundary issues are so difficult that we recommend one RCCO be responsible for the whole metro area or that medical homes be allowed to choose one RCCO for all of their patients.

28) Should the BHO region maps change? Why or why not? If so, how?

If Colorado is serious about promoting integration of behavioral and physical (medical) health care, then the RCCOs and BHOs should be integrated. This would mean they should have the same regions and function as though they are one organization. They should share incentives that are aligned around successful integration of behavioral and medical services and outcomes. So the BHO maps/regions should conform to the RCCO regions/maps.

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients. There are certain expectations/requirements and ways of doing things that are so different from one RCCO to another that it requires significant extra work to adapt to the differences. If a patient lives in one region and goes to a medical home in another region and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from that first region. This is particularly true in the Denver metro area.

Another alternative: When a practice contracts with a RCCO currently they "belong" to one RCCO. Change that and have them only contract with the state and have that contract extend to all RCCOS. This way RCCOS would be more accountable to standardization through out all of Colorado, and the services provided to patients/families would be more uniform.

34) What role should RCCOs play in attributing clients to their respective PCMPs?

The attribution system is quite flawed still. RCCOs should be required to allow medical homes to give the RCCO a list of patients the medical home feels are their patients and receive help from the RCCO to understand why certain patients are attributed to another medical home. If the patient is determined to be more appropriately attributed to the inquiring medical home, then the RCCO should help re-attribute the patient to the correct medical home.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

- The payment structure absolutely does not support the ACC goals. A medical home does not receive incentives for KPIs unless the RCCO meets its KPI. This becomes a disincentive, because many medical homes meet their performance targets, but do not get rewarded because the RCCO did not meet its targets. So the medical home has no incentive to maintain the performance. The philosophy that HCPF has espoused (that the high performing medical home should encourage or help the low performing medical home) is not realistic and is not how the real world works. There is no time for that, plus the high performing medical home has no way of knowing who is low performing. This idea shows a lack of understanding of the world where health cares is delivered. Medical homes need to

receive full incentives when they meet their KPI targets, no matter what happens in the RCCO.

- The incentives are too low to change much. Also, the KPIs need to remain focused on process, not outcomes, until the data is more sophisticated to accurately attribute patients and account for risk factors.

- Many medical homes have the ability to collect REAL-TIME data from their EHR and their claims database, which can be used to measure performance more accurately than the SDAC. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and providers to develop a vetting process that will enable HCPF and RCCOs to trust the medical home self-reported real-time data.

- Since children are the majority and give the best chance of truly improving health and wellness, KPIs need to be more child-focused. And since the potential cost savings for children's health care are so far in the future, KPIs need to be intermediate, process outcomes.

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

There is very little of the infrastructure in the state in place at the present time to enable capitation to be implemented successfully. Here are just some of the changes that would need to be in place before it would be fair or prudent to implement capitation:

- The state would need to already be paying fair amounts for all aspects of the care needed by Medicaid recipients before it could effectively move to capitation. In other words, codes for things that HCPF wants done under capitation should be opened and reimbursement adequately now. This would encourage medical homes to already be doing these things before the change to capitation. It would also give HCPF and medical homes experience regarding what the actual costs are for providing the desired services and determine a fair capitation. It will be difficult to change behavior to include new activities under capitation among providers, if you continue to hold codes closed now for things you want done under capitation. You have to help the medical homes create the habits you want before the switch to capitation.

- All providers would have to be reliably involved in the ACC: primary care, all of the various adult and child specialists, the hospitals, the therapies, dentists, mental health providers, etc.

- The data system would have to be able to report real time data and be far, far more accurate than it is now.

- The attribution system is flawed. That would have to be improved and provide accurate, real-time attribution data before capitation should be instituted.

- You will have to change a variety of policies that are barriers to population management.

- Capitation has to be combined with significant incentives to implement processes and improve outcomes. So, you will need to have the incentive system very well developed and viewed by providers as motivating before implementing capitation

- Healthcare for children focuses on prevention, early detection and early intervention, which require initial increased investment to reduce potential expenses many years and decades down the line. Other ACO programs have shown that savings on children are difficult to show early on. So, incentives in the care of children will initially be for intermediate outcomes (or for process outcomes) and need to be direct incentives rather than incentives in the form of shared savings.

- Early in the transition from pre-ACC payment methods to ACC payment structure (2012), some medical homes were asked to return money to Medicaid. Transitions like that (for example the transition to capitation) have to avoid this. Primary care medical homes have such narrow margins that this can be very difficult financially on a medical home

- Many medical homes have the ability to collect from their EHR and their claims database REAL-TIME data with which performance can be measured. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and providers to develop a vetting process that will enable HCPF and RCCOs to trust that medical home self-reported real-time data is trustworthy.

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

Many medical homes have the capability and infrastructure to adapt to payment tied to value. What is missing is the state, HCPF, RCCO, BHO infrastructure. See all of the infrastructure elements HCPF needs to have in place listed in question 60

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

- The HCPF Payment Reform Committee should meet at a time when providers and practice managers can actually attend. Monday afternoons is probably the worst time to actually enable providers or practice managers to attend. Once you select an appropriate time, then actively recruit participation.

- Make sure that your efforts are statewide. Views are different in the various regions of the state.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

- Many medical homes have the ability to collect from their EHR and their claims database REAL-TIME data with which performance can be measured. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and provider from medical homes to develop a vetting process that will enable HCPF and RCCOs to trust medical home self-reported real-time data.

- The measures for children can be drawn from HEDIS measures or CHIPRA measures or from the Pediatric Measurement Proposal that HCPF did in 2010 with the help of Jim Todd. Appropriate child health measures could be selected from the following measures :
    - Well child visits appropriate for age
    - Developmental screening by three years of age
    - Teen depression screening
    - Complete immunization status by age two
    - Post-partum depression screening rate for mothers of newborns by age 4 months
    - Appropriate antibiotic use in URI and strep pharyngitis

- Medical homes could also be measured on:
    - Patient (or family) satisfaction ratings
    - Documentation of QI projects

Screening should be part of KPIs, but you need to do more than just create a KPI. If you are going to have KPIs, then you need to track not only the number of times a screening was done, but also track the v-codes (or some way to track positives) and make them available in the SDAC so medical homes can track them. And the SDAC needs to track referrals (or intervention). Otherwise it is not worth measuring the number of screenings.

- The PCMP or medical home should receive real-time data (less than a month since date of service) with data that will allow them to compare their performance with performance of similar type of medical home.

- Healthcare for children focuses on prevention, early detection and early intervention, which require initial increased investment to reduce potential expenses many years and decades down the line. Other ACO programs have shown that savings on children are difficult to show early on. So, incentives in the care of children will initially be for intermediate outcomes (or for process outcomes) and need to be direct incentives rather than incentives in the form of shared savings.

69) Measures for payment. Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☒
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

We only need 2-4 KPIs. Any more will dilute the effect. What we really want is good data, so we can improve our outcomes by doing a quality improvement project. Since children are the majority of Medicaid recipients and give you the best chance of truly improving health and wellness in the long term, KPIs need to be more child-focused. And since the savings are so far in the future, KPIs need to be intermediate, process outcomes.

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Shannon M Murphy

Location:

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Primary Care Partners

Location:

☐ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☒ Medical provider / PCMP / other provider
  i. Type or specialty:
  ii. Area of practice: pediatrician
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☒ Other (please describe): Advocate for children on Medicaid

How have you been involved in the ACC program and what interaction have you had with RCCOs:

Medicaid providier

Please briefly describe your involvement with Medicaid, either in Colorado or another state:

Provider and advocate for children on medicaid

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely
☒ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate

☐ N/A

Are you currently involved in the ACC program?

Please feel welcome to describe why or why not using the space below.

☒ Yes
☐ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☒ 1-2 years
☐ 2-3 years
☐ 3-4 years
☐ Since before the program was implemented.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

- Reimbursement (mostly due to the Federal ACA) is fairer now.

- The decision to make the well child visit one of the KPIs was a very good decision in behalf of children, but unfortunately attribution is still flawed and the SDAC data is delayed and often inaccurate. So, it is difficult to create an effective QI process to improve the KPI, but this is a good start.

- The decision to focus on integrated behavioral health in medical homes is a wonderful decision to improve health outcomes for people covered by Medicaid. Thank you.

- You have a great opportunity to do what is needed for the majority of Medicaid recipients. The majority of Medicaid recipients in Colorado are children and adolescents; they should not be considered one of the subgroups. The following principles should be incorporated into the core objectives of the ACC:

    - Children's health care needs are very different than adults. For adults, the focus is on managing chronic disease more effectively. For children, it is about preventing the development of those chronic diseases.
    - If the ACC really wants to focus on health and wellness, the greatest opportunity is with the children (the majority of Medicaid recipients). By focusing on preventive care, early screening and early intervention for children, there will be big savings;

unfortunately those savings may not occur for many years or decades in the future, but the investment will eventually be worth it.

- So, the ACC will need to invest in children to the extent possible now even though the savings come much later. We recommend that a portion of short-term savings that occurs due to chronic disease management in adults in the ACC be invested back into preventive care for children.
- Children are part of families and you can't help the child unless you help the family. So, care coordination is more involved for children since it includes care coordination of the parents/family.
- There is increased recognition that behavioral health is a part of overall health and should be accessible within a pediatric medical home. However, the current mental health system must have policies, procedures, and resources that support integrated behavioral health activities at the practice level.

2) What is not working well in the ACC Program?

- Attribution continues to attribute patients to the wrong medical home and the process of getting patients reassigned to the correct medical home is onerous for the patient and family.

- The health care data through the SDAC is based on claims so it is delayed and is incomplete (particularly for children). Therefore, it is not very useful in helping medical homes improve outcomes for children.

- Each RCCO does things very differently, which is confusing for medical homes with patients in several RCCOs. RCCOs are inconsistent in how they respond to requests for care coordination (quite variable depending on whom you reach at the RCCO). So the new RFP should ask how RCCOs will develop policies and procedures to make their methods and responses to requests for help more consistent, both within the RCCO and among all RCCOs.

- There are certain expectations/requirements and ways of doing things that are so different from one RCCO to another that it requires significant extra work for the medical home to adapt to the differences. To deal with this. So, the RFP should ask how RCCOs intend

- If a patient lives in one region and goes to a medical home in another region, and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from the patient's region RCCO. This is particularly true in the Denver metro area. <u>There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients.</u>

- The "incentives" now are actually disincentives, especially the requirement that the RCCO must meet its KPIs before a high performing medical home can be rewarded for meeting its KPIs. The concept behind this approach is not consistent with how health care systems (and

"medical neighborhoods") work.

- The geography of the 7 regions does not reflect the natural geography of health care systems and referral patterns. Larimer County should be in Region 2.

- RCCOs are not providing the level of care coordination that Medicaid patients need. We have had RCCO "care coordinators" just tell us to call 211. The level of commitment that patients and families need is difficult to find, unless care coordination is provided at the medical home level or the community level.

- Both family practices and pediatric practices report that the SDAC does not reflect their own data that the practice can obtain from their EHR or their own claims data. This is particularly true regarding data on health care screening. The RFP should ask how RCCOs and HCPF should take advantage of this practice-based data.

- Most medical homes are not working closely with RCCOs and are not receiving much support. The RFP should ask how RCCOs intend to work more closely with medical homes.

- Feedback from RCCOs to the medical home regarding patients referred to the RCCO for care coordination is spotty. How will RCCOs consistently provide feedback and communication to the medical home regarding what was done for the patients and whether there was improvement?

- There has been difficulty with communication from the state level through the RCCOs down to the individual practice/provider level. Providers feel as though they are not well informed from HCPF or RCCOs. We are grateful that CCHAP keeps us informed.

- The current system does not take into account the movement of patients on and off Medicaid and movement between RCCOs. Whether for KPIs or future shared savings incentives, practices need to be evaluated on established patients who have been in a practice for a minimum of six months. This allows the medical home to actually have time to make an impact on the child's care. Otherwise, it is a substantial disincentive for practices to be open to the more complex and challenging patients, those that likely need access the most.

- Currently, there is very little communication and alignment between BHO's and RCCO's. In order for integrated behavioral health to be successful at the practice and community level, the BHO's and RCCO's must have similar goals, policies/procedures that are aligned, payment structures that are aligned with movement toward integration and ongoing close communication with one another. The RFP should ask how they intend to do this.

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

- The decision to focus on integrated behavioral health in medical homes is a wonderful decision to improve health outcomes for people covered by Medicaid. Thank you.

- If Colorado is serious about promoting integration of behavioral and physical (medical) health care, then the RCCOs and BHOs should be integrated. This would mean they should have the same regions and function as though they are one organization. This would reduce duplication of efforts and have better alignment of incentives and payments that support integrated care.

- Open the behavioral health and wellness codes (96150 – 961SS) now. Don't wait. This will encourage integration immediately and enable medical homes to start now the process of evolving toward full integration.

- Care coordination for both behavioral health and medical care should be done in the primary care setting. And either the RCCO and/or the BHO should delegate the responsibility to do care coordination and a pmpm to cover the expense to the medical home as part of the payment reform process. And behavioral health care coordination and medical care coordination needs to be fully reimbursed. In addition, the BHO and the RCCO will need to have information and care coordinators to assist medical homes to handle uncommon or very complex issues.

- Provide infrastructure and funding for data collection and management to support integrated behavioral health in the medical home and the care coordination that will have to be part of that. Utilizing SDAC data is just one way to understand the activities within a medical home. SDAC data is delayed and does not include enough information to support behavioral health care coordination in the medical home. Other methods and technologies are needed. There will need to be an investment in the development of new technologies and methods to do behavioral screening, track referrals, document treatment and collect data on the whole care coordination process at the medical home level. This will require adequate reimbursement to cover the cost of starting up new care coordination programs in the medical home and start up technologies to improve screening, intervention and care coordination with follow through in the medical home.

- The CPACK program developed by CBHC is a very good program, particularly the following:
  a. Assistance with finding a behavioral health provider for patients
  b. Telephone consultation by a child psychiatrist to primary care providers

---

We recommend that BHOs be required to provide the 2 components above as part of their new contracts.

- Payment options for integrated behavioral health (not just co-location) need to be clear and understandable to providers and practices. In order for the integrated model to be sustainable, there need to be ways to access understandable billing rules/policies.

Care Coordination

Question 12) Whot needs for children/families should be coordinated in medical homes and are there services thot should not be o port af care coordinotion by the pediotric ond family medical hame

One of the most difficult services to provide in the medical home is home visits. Support from the larger system is needed.

Services that can be provided in a pediatric or family medical home are: complex medical coordination including logistics/travel, ancillary services (PT/OT/home health services, ...), collaboration with mental/behavioral health, collaboration regarding school needs, referrals to early intervention services and Child Find, referral to other agencies (rehab, hospice, ...), collaboration with foster care and DHS system. RCCOs need to help medical homes with needs like assistance with housing, food, parental employment, child care, in which case the RCCO can help families connect with other agencies that provide these services.

Question 19: How should care coordination program be evaluated? How should its outcomes be measured?

A care coordination program should initially be measured by having good processes, not measured by outcomes, until solid data exists on outcomes that are risk adjusted and accurate for children. Initially all measures need to be quite separated from outcomes that are highly tied to patient behavior, or practices will again be less likely to serve those with highest risk.

23) Please share any other general advice or suggestions you have about care coordinatian in the ACC.

Our medical home relates to multiple RCCOs and we want to be delegated to do care coordination. If all RCCOs allowed medical homes to be delegated to do care coordination, we could receive a pmpm from all of them, which would enable us to afford to hire enough care coordinators to meet the needs of all of our ACC patients.

Where shauld core coordinotion be done? Care coordination is best done in the medical home. We are willing to do care coordination, because we have a relationship with our patients and they trust us and we recognize that coordinating complex medical care is essential for good

care and for cost savings. Also, the primary care provider is best positioned to have a long term relationship with the patient, and therefore know and understand other aspects of the patient's life and how important those non-medical factors are on the patient's health and health issues.

If care coordination cannot be done in the medical home, then it is best done by community-based organizations. The least effective, least well-received, least trusted is care coordination done from a call center in an RCCO. The role of the RCCO should be to help the medical home-based care coordination staff access resources for families.

The majority of practices are willing to provide Care Coordination, if they can get financial support (PMPM) for providing the service.

Should you be doing care coordination for certain patient populations e.g. children with asthma or special needs children? Or for your entire Medicaid population healthy or chronically ill? The overall goal of Colorado Medicaid should be to provide care coordination services for ALL patients in the Medicaid population (for some patients it may be very minimal, others extensive). This is the essence of preventive care. A care coordinator that is based in the medical home is in the best position to help identify risk factors proactively, as early as possible before they impact a patient's health and cause illness. Children with special healthcare needs (complex, complicated) require a higher level of care coordination, so the pmpm attached to their care coordination needs to be risk adjusted.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

- All RCCOs should have their offices in the region served, should be non-profits, be a Medicaid provider and be incorporated only in Colorado.

- All RCCOs should offer to delegate care coordination to medical homes willing to accept that responsibility and the RCCO should share a portion of the RCCO pmpm with the medical home that accepts delegation.

- All RCCOs should use the same criteria for delegation and for the amount that is paid for delegated services of care coordination. By doing this, services can reach a standard across the state. A patient would have access to similar services no matter where they moved across Colorado.

- RCCOs should all agree on how they will effectively communicate to medical homes regarding any contact the RCCO has with patients attributed to the medical home. They

should include PCMPs in developing those criteria.

- All RCCOs should help (or contract with an organization to help) medical homes understand how to access their SDAC data, understand their data and use it to develop rapid cycle QI projects to improve health outcomes and meet KPIs.

- All RCCOs should agree to provide uniform support for medical homes when a medical home asks for help with care coordination, even when the medical home is in another region (and contracted with another RCCO) but the patient is in the first RCCO's region.

- RCCOs should be required to allow medical homes to give the RCCO a list of patients the medical home feels is their patients and receive help from the RCCO to understand why certain patients have been attributed to another medical home. If the patient is determined to be more appropriately attributed to the inquiring medical home, then the RCCO should help re-attribute the patient to the correct medical home.

- RCCOs should share on a regular basis the RCCO's performance on KPIs and share savings incentives and share with the medical home how their own performance compares with other medical homes.

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

This is particularly applicable to the Denver metro area. There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients. For many expectations/requirements and ways of doing things the RCCOs are so different from one another that it requires significant extra work for medical homes to adapt to the differences. In addition, if a patient lives in one region and goes to a medical home in another region, and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from that first region.

27) Should the RCCO region maps change? Why or why not? If so, how?

Yes. There are two changes we recommend:

- Larimer County should be included in Region 2, since the medical community and the support organizations of Larimer County and very closely linked to Weld County
- In the Metro Denver area, the boundary issues are so difficult that we recommend one RCCO be responsible for the whole metro area or that medical homes be allowed to choose one RCCO for all of their patients.

28) Should the BHO region maps change? Why or why not? If so, how?

If Colorado is serious about promoting integration of behavioral and physical (medical) health care, then the RCCOs and BHOs should be integrated. This would mean they should have the same regions and function as though they are one organization. They should share incentives that are aligned around successful integration of behavioral and medical services and outcomes. So the BHO maps/regions should conform to the RCCO regions/maps.

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients. There are certain expectations/requirements and ways of doing things that are so different from one RCCO to another that it requires significant extra work to adapt to the differences. If a patient lives in one region and goes to a medical home in another region and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from that first region. This is particularly true in the Denver metro area.

Another alternative: When a practice contracts with a RCCO currently they "belong" to one RCCO. Change that and have them only contract with the state and have that contract extend to all RCCOS. This way RCCOS would be more accountable to standardization through out all of Colorado, and the services provided to patients/families would be more uniform.

34) What role should RCCOs play in attributing clients to their respective PCMPs?

The attribution system is quite flawed still. RCCOs should be required to allow medical homes to give the RCCO a list of patients the medical home feels are their patients and receive help from the RCCO to understand why certain patients are attributed to another medical home. If the patient is determined to be more appropriately attributed to the inquiring medical home, then the RCCO should help re-attribute the patient to the correct medical home.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

- The payment structure absolutely does not support the ACC goals. A medical home does not receive incentives for KPIs unless the RCCO meets its KPI. This becomes a disincentive, because many medical homes meet their performance targets, but do not get rewarded because the RCCO did not meet its targets. So the medical home has no incentive to maintain the performance. The philosophy that HCPF has espoused (that the high performing medical home should encourage or help the low performing medical home) is not realistic and is not how the real world works. There is no time for that, plus the high performing medical home has no way of knowing who is low performing. This idea shows a lack of understanding of the world where health cares is delivered. Medical homes need to

receive full incentives when they meet their KPI targets, no matter what happens in the RCCO.

- The incentives are too low to change much. Also, the KPIs need to remain focused on process, not outcomes, until the data is more sophisticated to accurately attribute patients and account for risk factors.

- Many medical homes have the ability to collect REAL-TIME data from their EHR and their claims database, which can be used to measure performance more accurately than the SDAC. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and providers to develop a vetting process that will enable HCPF and RCCOs to trust the medical home self-reported real-time data.

- Since children are the majority and give the best chance of truly improving health and wellness, KPIs need to be more child-focused. And since the potential cost savings for children's health care are so far in the future, KPIs need to be intermediate, process outcomes.

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

There is very little of the infrastructure in the state in place at the present time to enable capitation to be implemented successfully. Here are just some of the changes that would need to be in place before it would be fair or prudent to implement capitation:

- The state would need to already be paying fair amounts for all aspects of the care needed by Medicaid recipients before it could effectively move to capitation. In other words, codes for things that HCPF wants done under capitation should be opened and reimbursement adequately now. This would encourage medical homes to already be doing these things before the change to capitation. It would also give HCPF and medical homes experience regarding what the actual costs are for providing the desired services and determine a fair capitation. It will be difficult to change behavior to include new activities under capitation among providers, if you continue to hold codes closed now for things you want done under capitation. You have to help the medical homes create the habits you want before the switch to capitation.

- All providers would have to be reliably involved in the ACC: primary care, all of the various adult and child specialists, the hospitals, the therapies, dentists, mental health providers, etc.

- The data system would have to be able to report real time data and be far, far more accurate than it is now.

- The attribution system is flawed. That would have to be improved and provide accurate, real-time attribution data before capitation should be instituted.

- You will have to change a variety of policies that are barriers to population management.

- Capitation has to be combined with significant incentives to implement processes and improve outcomes. So, you will need to have the incentive system very well developed and viewed by providers as motivating before implementing capitation

- Healthcare for children focuses on prevention, early detection and early intervention, which require initial increased investment to reduce potential expenses many years and decades down the line. Other ACO programs have shown that savings on children are difficult to show early on. So, incentives in the care of children will initially be for intermediate outcomes (or for process outcomes) and need to be direct incentives rather than incentives in the form of shared savings.

- Early in the transition from pre-ACC payment methods to ACC payment structure (2012), some medical homes were asked to return money to Medicaid. Transitions like that (for example the transition to capitation) have to avoid this. Primary care medical homes have such narrow margins that this can be very difficult financially on a medical home

- Many medical homes have the ability to collect from their EHR and their claims database REAL-TIME data with which performance can be measured. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and providers to develop a vetting process that will enable HCPF and RCCOs to trust that medical home self-reported real-time data is trustworthy.

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

Many medical homes have the capability and infrastructure to adapt to payment tied to value. What is missing is the state, HCPF, RCCO, BHO infrastructure. See all of the infrastructure elements HCPF needs to have in place listed in question 60

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

- The HCPF Payment Reform Committee should meet at a time when providers and practice managers can actually attend. Monday afternoons is probably the worst time to actually enable providers or practice managers to attend. Once you select an appropriate time, then actively recruit participation.

- Make sure that your efforts are statewide. Views are different in the various regions of the state.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

- Many medical homes have the ability to collect from their EHR and their claims database REAL-TIME data with which performance can be measured. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and provider from medical homes to develop a vetting process that will enable HCPF and RCCOs to trust medical home self-reported real-time data.

- The measures for children can be drawn from HEDIS measures or CHIPRA measures or from the Pediatric Measurement Proposal that HCPF did in 2010 with the help of Jim Todd. Appropriate child health measures could be selected from the following measures :
  - Well child visits appropriate for age
  - Developmental screening by three years of age
  - Teen depression screening
  - Complete immunization status by age two
  - Post-partum depression screening rate for mothers of newborns by age 4 months
  - Appropriate antibiotic use in URI and strep pharyngitis

- Medical homes could also be measured on:
  - Patient (or family) satisfaction ratings
  - Documentation of QI projects

Screening should be part of KPIs, but you need to do more than just create a KPI. If you are going to have KPIs, then you need to track not only the number of times a screening was done, but also track the v-codes (or some way to track positives) and make them available in the SDAC so medical homes can track them. And the SDAC needs to track referrals (or intervention). Otherwise it is not worth measuring the number of screenings.

- The PCMP or medical home should receive real-time data (less than a month since date of service) with data that will allow them to compare their performance with performance of similar type of medical home.

- Healthcare for children focuses on prevention, early detection and early intervention, which require initial increased investment to reduce potential expenses many years and decades down the line. Other ACO programs have shown that savings on children are difficult to show early on. So, incentives in the care of children will initially be for intermediate outcomes (or for process outcomes) and need to be direct incentives rather than incentives in the form of shared savings.

69) Measures for payment. Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☒
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐

We only need 2-4 KPIs. Any more will dilute the effect. What we really want is good data, so we can improve our outcomes by doing a quality improvement project. Since children are the majority of Medicaid recipients and give you the best chance of truly improving health and wellness in the long term, KPIs need to be more child-focused. And since the savings are so far in the future, KPIs need to be intermediate, process outcomes.

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Ellen Brooks, MD

Location:

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Pediatric Partners of Valley View

Location: 1905 Blake Ave. , Suite 201, Glenwood Springs, CO 81601

☒ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☒ Medical provider / PCMP / other provider
  i. Type or specialty:
  ii. Area of practice: Pediatrics
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☒ Other (please describe): Advocate for children on Medicaid

How have you been involved in the ACC program and what interaction have you had with RCCOs:

I have been intermittently involved with the CCHAP Advisory Board

Please briefly describe your involvement with Medicaid, either in Colorado or another state:

We accept Medicaid patients and also see them in our local hospital

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely
☒ Likely
☐ Reserved (waiting to see the RFP)

☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

Are you currently involved in the ACC program?

☒ Yes
☐ No
☐ I don't know

Please feel welcome to describe why or why not using the space below.

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☐ 3-4 years
☒ Since before the program was implemented.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

- Reimbursement (mostly due to the Federal ACA) is fairer now.
- The decision to make the well child visit one of the KPIs was a very good decision in behalf of children, but unfortunately attribution is still flawed and the SDAC data is delayed and often inaccurate. So, it is difficult to create an effective QI process to improve the KPI, but this is a good start.
- The decision to focus on integrated behavioral health in medical homes is a wonderful decision to improve health outcomes for people covered by Medicaid. Thank you.
- You have a great opportunity to do what is needed for the majority of Medicaid recipients. The majority of Medicaid recipients in Colorado are children and adolescents; they should not be considered one of the subgroups. The following principles should be incorporated into the core objectives of the ACC:
    - Children's health care needs are very different than adults. For adults, the focus is on managing chronic disease more effectively. For children, it is about preventing the development of those chronic diseases.

- If the ACC really wants to focus on health and wellness, the greatest opportunity is with the children (the majority of Medicaid recipients). By focusing on preventive care, early screening and early intervention for children, there will be big savings; unfortunately those savings may not occur for many years or decades in the future, but the investment will eventually be worth it.
- So, the ACC will need to invest in children to the extent possible now even though the savings come much later. We recommend that a portion of short-term savings that occurs due to chronic disease management in adults in the ACC be invested back into preventive care for children.
- Children are part of families and you can't help the child unless you help the family. So, care coordination is more involved for children since it includes care coordination of the parents/family.
- There is increased recognition that behavioral health is a part of overall health and should be accessible within a pediatric medical home. However, the current mental health system must have policies, procedures, and resources that support integrated behavioral health activities at the practice level.

2) What is not working well in the ACC Program?

- Attribution continues to attribute patients to the wrong medical home and the process of getting patients reassigned to the correct medical home is onerous for the patient and family.

- The health care data through the SDAC is based on claims so it is delayed and is incomplete (particularly for children). Therefore, it is not very useful in helping medical homes improve outcomes for children.

- Each RCCO does things very differently, which is confusing for medical homes with patients in several RCCOs. RCCOs are inconsistent in how they respond to requests for care coordination (quite variable depending on whom you reach at the RCCO). So the new RFP should ask how RCCOs will develop policies and procedures to make their methods and responses to requests for help more consistent, both within the RCCO and among all RCCOs.

- There are certain expectations/requirements and ways of doing things that are so different from one RCCO to another that it requires significant extra work for the medical home to adapt to the differences. To deal with this. So, the RFP should ask how RCCOs intend

- If a patient lives in one region and goes to a medical home in another region, and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from the patient's region RCCO. This is particularly true in the Denver metro area. <u>There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients.</u>

- The "incentives" now are actually disincentives, especially the requirement that the RCCO must meet its KPIs before a high performing medical home can be rewarded for meeting its KPIs. The concept behind this approach is not consistent with how health care systems (and "medical neighborhoods") work.

- The geography of the 7 regions does not reflect the natural geography of health care systems and referral patterns. Larimer County should be in Region 2.

- RCCOs are not providing the level of care coordination that Medicaid patients need. We have had RCCO "care coordinators" just tell us to call 211. The level of commitment that patients and families need is difficult to find, unless care coordination is provided at the medical home level or the community level.

- Both family practices and pediatric practices report that the SDAC does not reflect their own data that the practice can obtain from their EHR or their own claims data. This is particularly true regarding data on health care screening. The RFP should ask how RCCOs and HCPF should take advantage of this practice-based data.

- Most medical homes are not working closely with RCCOs and are not receiving much support. The RFP should ask how RCCOs intend to work more closely with medical homes.

- Feedback from RCCOs to the medical home regarding patients referred to the RCCO for care coordination is spotty. How will RCCOs consistently provide feedback and communication to the medical home regarding what was done for the patients and whether there was improvement?

- There has been difficulty with communication from the state level through the RCCOs down to the individual practice/provider level. Providers feel as though they are not well informed from HCPF or RCCOs. We are grateful that CCHAP keeps us informed.

- The current system does not take into account the movement of patients on and off Medicaid and movement between RCCOs. Whether for KPIs or future shared savings incentives, practices need to be evaluated on established patients who have been in a practice for a minimum of six months. This allows the medical home to actually have time to make an impact on the child's care. Otherwise, it is a substantial disincentive for practices to be open to the more complex and challenging patients, those that likely need access the most.

- Currently, there is very little communication and alignment between BHO's and RCCO's. In order for integrated behavioral health to be successful at the practice and community level, the BHO's and RCCO's must have similar goals, policies/procedures that are aligned, payment structures that are aligned with movement toward integration and ongoing close communication with one another. The RFP should ask how they intend to do this.

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

- The decision to focus on integrated behavioral health in medical homes is a wonderful decision to improve health outcomes for people covered by Medicaid. Thank you.

- If Colorado is serious about promoting integration of behavioral and physical (medical) health care, then the RCCOs and BHOs should be integrated. This would mean they should have the same regions and function as though they are one organization. This would reduce duplication of efforts and have better alignment of incentives and payments that support integrated care.

- Open the behavioral health and wellness codes (96150 – 96155) now. Don't wait. This will encourage integration immediately and enable medical homes to start now the process of evolving toward full integration.

- Care coordination for both behavioral health and medical care should be done in the primary care setting. And either the RCCO and/or the BHO should delegate the responsibility to do care coordination and a pmpm to cover the expense to the medical home as part of the payment reform process. And behavioral health care coordination and medical care coordination needs to be fully reimbursed. In addition, the BHO and the RCCO will need to have information and care coordinators to assist medical homes to handle uncommon or very complex issues.

- Provide infrastructure and funding for data collection and management to support integrated behavioral health in the medical home and the care coordination that will have to be part of that. Utilizing SDAC data is just one way to understand the activities within a medical home. SDAC data is delayed and does not include enough information to support behavioral health care coordination in the medical home. Other methods and technologies are needed. There will need to be an investment in the development of new technologies and methods to do behavioral screening, track referrals, document treatment and collect data on the whole care coordination process at the medical home level. This will require adequate reimbursement to cover the cost of starting up new care coordination programs in the medical home and start up technologies to improve screening, intervention and care coordination with follow through in the medical home.

- The CPACK program developed by CBHC is a very good program, particularly the following:

---

a. Assistance with finding a behavioral health provider for patients
b. Telephone consultation by a child psychiatrist to primary care providers

We recommend that BHOs be required to provide the 2 components above as part of their new contracts.

- Payment options for integrated behavioral health (not just co-location) need to be clear and understandable to providers and practices. In order for the integrated model to be sustainable, there need to be ways to access understandable billing rules/policies.

Core Coordination

Question 12) What needs for children/families should be coordinated in medical homes and are there services that should not be a part of core coordination by the pediatric and family medical home

One of the most difficult services to provide in the medical home is home visits. Support from the larger system is needed.

Services that can be provided in a pediatric or family medical home are: complex medical coordination including logistics/travel, ancillary services (PT/OT/home health services, ...), collaboration with mental/behavioral health, collaboration regarding school needs, referrals to early intervention services and Child Find, referral to other agencies (rehab, hospice, ...), collaboration with foster care and DHS system. RCCOs need to help medical homes with needs like assistance with housing, food, parental employment, child care, in which case the RCCO can help families connect with other agencies that provide these services.

Question 19: How should care coordination program be evaluated? How should its outcomes be measured?

A care coordination program should initially be measured by having good processes, not measured by outcomes, until solid data exists on outcomes that are risk adjusted and accurate for children. Initially all measures need to be quite separated from outcomes that are highly tied to patient behavior, or practices will again be less likely to serve those with highest risk.

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Our medical home relates to multiple RCCOs and we want to be delegated to do care coordination. If all RCCOs allowed medical homes to be delegated to do care coordination, we could receive a pmpm from all of them, which would enable us to afford to hire enough care coordinators to meet the needs of all of our ACC patients.

Where should care coordinotion be done? Care coordination is best done in the medical home. We are willing to do care coordination, because we have a relationship with our patients and they trust us and we recognize that coordinating complex medical care is essential for good care and for cost savings. Also, the primary care provider is best positioned to have a long term relationship with the patient, and therefore know and understand other aspects of the patient's life and how important those non-medical factors are on the patient's health and health issues.

If care coordination cannot be done in the medical home, then it is best done by community-based organizations. The least effective, least well-received, least trusted is care coordination done from a call center in an RCCO. The role of the RCCO should be to help the medical home-based care coordination staff access resources for families.

The majority of practices are willing to provide Care Coordination, if they can get financial support (PMPM) for providing the service.

Should you be doing care coordination for certain patient populations e.g. children with asthma or special needs children? Or for your entire Medicaid population healthy or chronically ill? The overall goal of Colorado Medicaid should be to provide care coordination services for ALL patients in the Medicaid population (for some patients it may be very minimal, others extensive). This is the essence of preventive care. A care coordinator that is based in the medical home is in the best position to help identify risk factors proactively, as early as possible before they impact a patient's health and cause illness. Children with special healthcare needs (complex, complicated) require a higher level of care coordination, so the pmpm attached to their care coordination needs to be risk adjusted.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

- All RCCOs should have their offices in the region served, should be non-profits, be a Medicaid provider and be incorporated only in Colorado.

- All RCCOs should offer to delegate care coordination to medical homes willing to accept that responsibility and the RCCO should share a portion of the RCCO pmpm with the medical home that accepts delegation.

- All RCCOs should use the same criteria for delegation and for the amount that is paid for delegated services of care coordination. By doing this, services can reach a standard across the state. A patient would have access to similar services no matter where they moved across Colorado.

- RCCOs should all agree on how they will effectively communicate to medical homes regarding any contact the RCCO has with patients attributed to the medical home. They should include PCMPs in developing those criteria.

- All RCCOs should help (or contract with an organization to help) medical homes understand how to access their SDAC data, understand their data and use it to develop rapid cycle QI projects to improve health outcomes and meet KPIs.

- All RCCOs should agree to provide uniform support for medical homes when a medical home asks for help with care coordination, even when the medical home is in another region (and contracted with another RCCO) but the patient is in the first RCCO's region.

- RCCOs should be required to allow medical homes to give the RCCO a list of patients the medical home feels is their patients and receive help from the RCCO to understand why certain patients have been attributed to another medical home. If the patient is determined to be more appropriately attributed to the inquiring medical home, then the RCCO should help re-attribute the patient to the correct medical home.

- RCCOs should share on a regular basis the RCCO's performance on KPIs and share savings incentives and share with the medical home how their own performance compares with other medical homes.

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

This is particularly applicable to the Denver metro area. There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients. For many expectations/requirements and ways of doing things the RCCOs are so different from one another that it requires significant extra work for medical homes to adapt to the differences. In addition, if a patient lives in one region and goes to a medical home in another region, and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from that first region.

27) Should the RCCO region maps change? Why or why not? If so, how?

Yes. There are two changes we recommend:

- Larimer County should be included in Region 2, since the medical community and the support organizations of Larimer County and very closely linked to Weld County
- In the Metro Denver area, the boundary issues are so difficult that we recommend one RCCO be responsible for the whole metro area or that medical homes be allowed to choose one RCCO for all of their patients.

28) Should the BHO region maps change? Why or why not? If so, how?

If Colorado is serious about promoting integration of behavioral and physical (medical) health care, then the RCCOs and BHOs should be integrated. This would mean they should have the same regions and function as though they are one organization. They should share incentives that are aligned around successful integration of behavioral and medical services and outcomes. So the BHO maps/regions should conform to the RCCO regions/maps.

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients. There are certain expectations/requirements and ways of doing things that are so different from one RCCO to another that it requires significant extra work to adapt to the differences. If a patient lives in one region and goes to a medical home in another region and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from that first region. This is particularly true in the Denver metro area.

Another alternative: When a practice contracts with a RCCO currently they "belong" to one RCCO. Change that and have them only contract with the state and have that contract extend to all RCCOS. This way RCCOS would be more accountable to standardization through out all of Colorado, and the services provided to patients/families would be more uniform.

34) What role should RCCOs play in attributing clients to their respective PCMPs?

The attribution system is quite flawed still. RCCOs should be required to allow medical homes to give the RCCO a list of patients the medical home feels are their patients and receive help from the RCCO to understand why certain patients are attributed to another medical home. If the patient is determined to be more appropriately attributed to the inquiring medical home, then the RCCO should help re-attribute the patient to the correct medical home.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

- The payment structure absolutely does not support the ACC goals. A medical home does not receive incentives for KPIs unless the RCCO meets its KPI. This becomes a disincentive, because many medical homes meet their performance targets, but do not get rewarded because the RCCO did not meet its targets. So the medical home has no incentive to maintain the performance. The philosophy that HCPF has espoused (that the high performing medical home should encourage or help the low performing medical home) is not realistic and is not how the real world works. There is no time for that, plus the high

performing medical home has no way of knowing who is low performing. This idea shows a lack of understanding of the world where health cares is delivered. Medical homes need to receive full incentives when they meet their KPI targets, no matter what happens in the RCCO.

- The incentives are too low to change much. Also, the KPIs need to remain focused on process, not outcomes, until the data is more sophisticated to accurately attribute patients and account for risk factors.

- Many medical homes have the ability to collect REAL-TIME data from their EHR and their claims database, which can be used to measure performance more accurately than the SDAC. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and providers to develop a vetting process that will enable HCPF and RCCOs to trust the medical home self-reported real-time data.

- Since children are the majority and give the best chance of truly improving health and wellness, KPIs need to be more child-focused. And since the potential cost savings for children's health care are so far in the future, KPIs need to be intermediate, process outcomes.

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

<u>There is very little of the infrastructure in the state in place at the present time to enable capitation to be implemented successfully.</u> Here are just some of the changes that would need to be in place before it would be fair or prudent to implement capitation:

- The state would need to already be paying fair amounts for all aspects of the care needed by Medicaid recipients before it could effectively move to capitation. In other words, codes for things that HCPF wants done under capitation should be opened and reimbursement adequately now. This would encourage medical homes to already be doing these things before the change to capitation. It would also give HCPF and medical homes experience regarding what the actual costs are for providing the desired services and determine a fair capitation. It will be difficult to change behavior to include new activities under capitation among providers, if you continue to hold codes closed now for things you want done under capitation. You have to help the medical homes create the habits you want before the switch to capitation.

- All providers would have to be reliably involved in the ACC: primary care, all of the various adult and child specialists, the hospitals, the therapies, dentists, mental health providers, etc.

- The data system would have to be able to report real time data and be far, far more accurate than it is now.

- The attribution system is flawed. That would have to be improved and provide accurate, real-time attribution data before capitation should be instituted.

- You will have to change a variety of policies that are barriers to population management.

- Capitation has to be combined with significant incentives to implement processes and improve outcomes. So, you will need to have the incentive system very well developed and viewed by providers as motivating before implementing capitation

- Healthcare for children focuses on prevention, early detection and early intervention, which require initial increased investment to reduce potential expenses many years and decades down the line. Other ACO programs have shown that savings on children are difficult to show early on. So, incentives in the care of children will initially be for intermediate outcomes (or for process outcomes) and need to be direct incentives rather than incentives in the form of shared savings.

- Early in the transition from pre-ACC payment methods to ACC payment structure (2012), some medical homes were asked to return money to Medicaid. Transitions like that (for example the transition to capitation) have to avoid this. Primary care medical homes have such narrow margins that this can be very difficult financially on a medical home

- Many medical homes have the ability to collect from their EHR and their claims database REAL-TIME data with which performance can be measured. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and providers to develop a vetting process that will enable HCPF and RCCOs to trust that medical home self-reported real-time data is trustworthy.

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

Many medical homes have the capability and infrastructure to adapt to payment tied to value. What is missing is the state, HCPF, RCCO, BHO infrastructure. See all of the infrastructure elements HCPF needs to have in place listed in question 60

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

- The HCPF Payment Reform Committee should meet at a time when providers and practice managers can actually attend. Monday afternoons is probably the worst time to actually enable providers or practice managers to attend. Once you select an appropriate time, then actively recruit participation.

- Make sure that your efforts are statewide. Views are different in the various regions of the state.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

- Many medical homes have the ability to collect from their EHR and their claims database REAL-TIME data with which performance can be measured. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and provider from medical homes to develop a vetting process that will enable HCPF and RCCOs to trust medical home self-reported real-time data.

- The measures for children can be drawn from HEDIS measures or CHIPRA measures or from the Pediatric Measurement Proposal that HCPF did in 2010 with the help of Jim Todd. Appropriate child health measures could be selected from the following measures :
  - Well child visits appropriate for age
  - Developmental screening by three years of age
  - Teen depression screening
  - Complete immunization status by age two
  - Post-partum depression screening rate for mothers of newborns by age 4 months
  - Appropriate antibiotic use in URI and strep pharyngitis

- Medical homes could also be measured on:
  - Patient (or family) satisfaction ratings
  - Documentation of QI projects

Screening should be part of KPIs, but you need to do more than just create a KPI. If you are going to have KPIs, then you need to track not only the number of times a screening was done, but also track the v-codes (or some way to track positives) and make them available in the SDAC so medical homes can track them. And the SDAC needs to track referrals (or intervention). Otherwise it is not worth measuring the number of screenings.

- The PCMP or medical home should receive real-time data (less than a month since date of service) with data that will allow them to compare their performance with performance of similar type of medical home.

- Healthcare for children focuses on prevention, early detection and early intervention, which require initial increased investment to reduce potential expenses many years and decades down the line. Other ACO programs have shown that savings on children are difficult to show early on. So, incentives in the care of children will initially be for intermediate outcomes (or for process outcomes) and need to be direct incentives rather than incentives in the form of shared savings.

69) Measures for payment. Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☒
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

We only need 2-4 KPIs. Any more will dilute the effect. What we really want is good data, so we can improve our outcomes by doing a quality improvement project. Since children are the majority of Medicaid recipients and give you the best chance of truly improving health and wellness in the long term, KPIs need to be more child-focused. And since the savings are so far in the future, KPIs need to be intermediate, process outcomes.

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: William Findlay MD

Location: Grand Junction, CO

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Western Colorado Peditrics

Location: Grand Junction, CO

☒ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☒ Medical provider / PCMP / other provider
  i. Type or specialty:
  ii. Area of practice: pediactrics, grand junction
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☒ Other (please describe): Advocate for children on Medicaid

How have you been involved in the ACC program and what interaction have you had with RCCOs:

1-2 yrs

Please briefly describe your involvement with Medicaid, either in Colorado or another state:

our practice has served Medicaid for over 30 years

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☒ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate

☐ N/A

Are you currently involved in the ACC program?

Please feel welcome to describe why or why not using the space below.

☒ Yes
☐ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☒ 1-2 years
☐ 2-3 years
☐ 3-4 years
☐ Since before the program was implemented.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

- Reimbursement (mostly due to the Federal ACA) is fairer now.

- The decision to make the well child visit one of the KPIs was a very good decision in behalf of children, but unfortunately attribution is still flawed and the SDAC data is delayed and often inaccurate. So, it is difficult to create an effective QI process to improve the KPI, but this is a good start.

- The decision to focus on integrated behavioral health in medical homes is a wonderful decision to improve health outcomes for people covered by Medicaid. Thank you.

- You have a great opportunity to do what is needed for the majority of Medicaid recipients. The majority of Medicaid recipients in Colorado are children and adolescents; they should not be considered one of the subgroups. The following principles should be incorporated into the core objectives of the ACC:

    - Children's health care needs are very different than adults. For adults, the focus is on managing chronic disease more effectively. For children, it is about preventing the development of those chronic diseases.
    - If the ACC really wants to focus on health and wellness, the greatest opportunity is with the children (the majority of Medicaid recipients). By focusing on preventive

care, early screening and early intervention for children, there will be big savings; unfortunately those savings may not occur for many years or decades in the future, but the investment will eventually be worth it.

- So, the ACC will need to invest in children to the extent possible now even though the savings come much later. We recommend that a portion of short-term savings that occurs due to chronic disease management in adults in the ACC be invested back into preventive care for children.
- Children are part of families and you can't help the child unless you help the family. So, care coordination is more involved for children since it includes care coordination of the parents/family.
- There is increased recognition that behavioral health is a part of overall health and should be accessible within a pediatric medical home. However, the current mental health system must have policies, procedures, and resources that support integrated behavioral health activities at the practice level.

2) What is not working well in the ACC Program?

- Attribution continues to attribute patients to the wrong medical home and the process of getting patients reassigned to the correct medical home is onerous for the patient and family.

- The health care data through the SDAC is based on claims so it is delayed and is incomplete (particularly for children). Therefore, it is not very useful in helping medical homes improve outcomes for children.

- Each RCCO does things very differently, which is confusing for medical homes with patients in several RCCOs. RCCOs are inconsistent in how they respond to requests for care coordination (quite variable depending on whom you reach at the RCCO). So the new RFP should ask how RCCOs will develop policies and procedures to make their methods and responses to requests for help more consistent, both within the RCCO and among all RCCOs.

- There are certain expectations/requirements and ways of doing things that are so different from one RCCO to another that it requires significant extra work for the medical home to adapt to the differences. To deal with this. So, the RFP should ask how RCCOs intend

- If a patient lives in one region and goes to a medical home in another region, and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from the patient's region RCCO. This is particularly true in the Denver metro area. <u>There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients.</u>

- The "incentives" now are actually disincentives, especially the requirement that the RCCO must meet its KPIs before a high performing medical home can be rewarded for meeting its

KPIs. The concept behind this approach is not consistent with how health care systems (and "medical neighborhoods") work.

- The geography of the 7 regions does not reflect the natural geography of health care systems and referral patterns. Larimer County should be in Region 2.

- RCCOs are not providing the level of care coordination that Medicaid patients need. We have had RCCO "care coordinators" just tell us to call 211. The level of commitment that patients and families need is difficult to find, unless care coordination is provided at the medical home level or the community level.

- Both family practices and pediatric practices report that the SDAC does not reflect their own data that the practice can obtain from their EHR or their own claims data. This is particularly true regarding data on health care screening. The RFP should ask how RCCOs and HCPF should take advantage of this practice-based data.

- Most medical homes are not working closely with RCCOs and are not receiving much support. The RFP should ask how RCCOs intend to work more closely with medical homes.

- Feedback from RCCOs to the medical home regarding patients referred to the RCCO for care coordination is spotty. How will RCCOs consistently provide feedback and communication to the medical home regarding what was done for the patients and whether there was improvement?

- There has been difficulty with communication from the state level through the RCCOs down to the individual practice/provider level. Providers feel as though they are not well informed from HCPF or RCCOs. We are grateful that CCHAP keeps us informed.

- The current system does not take into account the movement of patients on and off Medicaid and movement between RCCOs. Whether for KPIs or future shared savings incentives, practices need to be evaluated on established patients who have been in a practice for a minimum of six months. This allows the medical home to actually have time to make an impact on the child's care. Otherwise, it is a substantial disincentive for practices to be open to the more complex and challenging patients, those that likely need access the most.

- Currently, there is very little communication and alignment between BHO's and RCCO's. In order for integrated behavioral health to be successful at the practice and community level, the BHO's and RCCO's must have similar goals, policies/procedures that are aligned, payment structures that are aligned with movement toward integration and ongoing close communication with one another. The RFP should ask how they intend to do this.

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

- The decision to focus on integrated behavioral health in medical homes is a wonderful decision to improve health outcomes for people covered by Medicaid. Thank you.

- If Colorado is serious about promoting integration of behavioral and physical (medical) health care, then the RCCOs and BHOs should be integrated. This would mean they should have the same regions and function as though they are one organization. This would reduce duplication of efforts and have better alignment of incentives and payments that support integrated care.

- Open the behavioral health and wellness codes (96150 – 96155) now. Don't wait. This will encourage integration immediately and enable medical homes to start now the process of evolving toward full integration.

- Care coordination for both behavioral health and medical care should be done in the primary care setting. And either the RCCO and/or the BHO should delegate the responsibility to do care coordination and a pmpm to cover the expense to the medical home as part of the payment reform process. And behavioral health care coordination and medical care coordination needs to be fully reimbursed. In addition, the BHO and the RCCO will need to have information and care coordinators to assist medical homes to handle uncommon or very complex issues.

- Provide infrastructure and funding for data collection and management to support integrated behavioral health in the medical home and the care coordination that will have to be part of that. Utilizing SDAC data is just one way to understand the activities within a medical home. SDAC data is delayed and does not include enough information to support behavioral health care coordination in the medical home. Other methods and technologies are needed. There will need to be an investment in the development of new technologies and methods to do behavioral screening, track referrals, document treatment and collect data on the whole care coordination process at the medical home level. This will require adequate reimbursement to cover the cost of starting up new care coordination programs in the medical home and start up technologies to improve screening, intervention and care coordination with follow through in the medical home.

- The CPACK program developed by CBHC is a very good program, particularly the following:
  a. Assistance with finding a behavioral health provider for patients
  b. Telephone consultation by a child psychiatrist to primary care providers

We recommend that BHOs be required to provide the 2 components above as part of their new contracts.

- Payment options for integrated behavioral health (not just co-location) need to be clear and understandable to providers and practices. In order for the integrated model to be sustainable, there need to be ways to access understandable billing rules/policies.

Care Coordination

Question 12) What needs for children/fomilies should be coordinated in medical homes and are there services thot shauld not be o port af core coordinotian by the pediotric and family medical home

One of the most difficult services to provide in the medical home is home visits. Support from the larger system is needed.

Services that can be provided in a pediatric or family medical home are: complex medical coordination including logistics/travel, ancillary services (PT/OT/home health services, ...), collaboration with mental/behavioral health, collaboration regarding school needs, referrals to early intervention services and Child Find, referral to other agencies (rehab, hospice, ...), collaboration with foster care and DHS system. RCCOs need to help medical homes with needs like assistance with housing, food, parental employment, child care, in which case the RCCO can help families connect with other agencies that provide these services.

Question 19: How should care coordination program be evaluated? How should its outcomes be measured?

A care coordination program should initially be measured by having good processes, not measured by outcomes, until solid data exists on outcomes that are risk adjusted and accurate for children. Initially all measures need to be quite separated from outcomes that are highly tied to patient behavior, or practices will again be less likely to serve those with highest risk.

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Our medical home relates to multiple RCCOs and we want to be delegated to do care coordination. If all RCCOs allowed medical homes to be delegated to do care coordination, we could receive a pmpm from all of them, which would enable us to afford to hire enough care coordinators to meet the needs of all of our ACC patients.

Where should core coordination be done? Care coordination is best done in the medical home. We are willing to do care coordination, because we have a relationship with our patients and they trust us and we recognize that coordinating complex medical care is essential for good

care and for cost savings. Also, the primary care provider is best positioned to have a long term relationship with the patient, and therefore know and understand other aspects of the patient's life and how important those non-medical factors are on the patient's health and health issues.

If care coordination cannot be done in the medical home, then it is best done by community-based organizations. The least effective, least well-received, least trusted is care coordination done from a call center in an RCCO. The role of the RCCO should be to help the medical home-based care coordination staff access resources for families.

The majority of practices are willing to provide Care Coordination, if they can get financial support (PMPM) for providing the service.

Should you be doing care coordination for certain patient populations e.g. children with asthma or special needs children? Or for your entire Medicaid population healthy or chronically ill? The overall goal of Colorado Medicaid should be to provide care coordination services for ALL patients in the Medicaid population (for some patients it may be very minimal, others extensive). This is the essence of preventive care. A care coordinator that is based in the medical home is in the best position to help identify risk factors proactively, as early as possible before they impact a patient's health and cause illness. Children with special healthcare needs (complex, complicated) require a higher level of care coordination, so the pmpm attached to their care coordination needs to be risk adjusted.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

- All RCCOs should have their offices in the region served, should be non-profits, be a Medicaid provider and be incorporated only in Colorado.

- All RCCOs should offer to delegate care coordination to medical homes willing to accept that responsibility and the RCCO should share a portion of the RCCO pmpm with the medical home that accepts delegation.

- All RCCOs should use the same criteria for delegation and for the amount that is paid for delegated services of care coordination. By doing this, services can reach a standard across the state. A patient would have access to similar services no matter where they moved across Colorado.

- RCCOs should all agree on how they will effectively communicate to medical homes regarding any contact the RCCO has with patients attributed to the medical home. They

should include PCMPs in developing those criteria.

- All RCCOs should help (or contract with an organization to help) medical homes understand how to access their SDAC data, understand their data and use it to develop rapid cycle QI projects to improve health outcomes and meet KPIs.

- All RCCOs should agree to provide uniform support for medical homes when a medical home asks for help with care coordination, even when the medical home is in another region (and contracted with another RCCO) but the patient is in the first RCCO's region.

- RCCOs should be required to allow medical homes to give the RCCO a list of patients the medical home feels is their patients and receive help from the RCCO to understand why certain patients have been attributed to another medical home. If the patient is determined to be more appropriately attributed to the inquiring medical home, then the RCCO should help re-attribute the patient to the correct medical home.

- RCCOs should share on a regular basis the RCCO's performance on KPIs and share savings incentives and share with the medical home how their own performance compares with other medical homes.

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

This is particularly applicable to the Denver metro area. There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients. For many expectations/requirements and ways of doing things the RCCOs are so different from one another that it requires significant extra work for medical homes to adapt to the differences. In addition, if a patient lives in one region and goes to a medical home in another region, and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from that first region.

27) Should the RCCO region maps change? Why or why not? If so, how?

Yes. There are two changes we recommend:

- Larimer County should be included in Region 2, since the medical community and the support organizations of Larimer County and very closely linked to Weld County
- In the Metro Denver area, the boundary issues are so difficult that we recommend one RCCO be responsible for the whole metro area or that medical homes be allowed to choose one RCCO for all of their patients.

28) Should the BHO region maps change? Why or why not? If so, how?

If Colorado is serious about promoting integration of behavioral and physical (medical) health care, then the RCCOs and BHOs should be integrated. This would mean they should have the same regions and function as though they are one organization. They should share incentives that are aligned around successful integration of behavioral and medical services and outcomes. So the BHO maps/regions should conform to the RCCO regions/maps.

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients. There are certain expectations/requirements and ways of doing things that are so different from one RCCO to another that it requires significant extra work to adapt to the differences. If a patient lives in one region and goes to a medical home in another region and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from that first region. This is particularly true in the Denver metro area.

Another alternative: When a practice contracts with a RCCO currently they "belong" to one RCCO. Change that and have them only contract with the state and have that contract extend to all RCCOS. This way RCCOS would be more accountable to standardization through out all of Colorado, and the services provided to patients/families would be more uniform.

34) What role should RCCOs play in attributing clients to their respective PCMPs?

The attribution system is quite flawed still. RCCOs should be required to allow medical homes to give the RCCO a list of patients the medical home feels are their patients and receive help from the RCCO to understand why certain patients are attributed to another medical home. If the patient is determined to be more appropriately attributed to the inquiring medical home, then the RCCO should help re-attribute the patient to the correct medical home.

Payment Structure and Quality Monitoring

S9) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

- The payment structure absolutely does not support the ACC goals. A medical home does not receive incentives for KPIs unless the RCCO meets its KPI. This becomes a disincentive, because many medical homes meet their performance targets, but do not get rewarded because the RCCO did not meet its targets. So the medical home has no incentive to maintain the performance. The philosophy that HCPF has espoused (that the high performing medical home should encourage or help the low performing medical home) is not realistic and is not how the real world works. There is no time for that, plus the high performing medical home has no way of knowing who is low performing. This idea shows a lack of understanding of the world where health cares is delivered. Medical homes need to

receive full incentives when they meet their KPI targets, no matter what happens in the RCCO.

- The incentives are too low to change much. Also, the KPIs need to remain focused on process, not outcomes, until the data is more sophisticated to accurately attribute patients and account for risk factors.

- Many medical homes have the ability to collect REAL-TIME data from their EHR and their claims database, which can be used to measure performance more accurately than the SDAC. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and providers to develop a vetting process that will enable HCPF and RCCOs to trust the medical home self-reported real-time data.

- Since children are the majority and give the best chance of truly improving health and wellness, KPIs need to be more child-focused. And since the potential cost savings for children's health care are so far in the future, KPIs need to be intermediate, process outcomes.

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

<u>There is very little of the infrastructure in the state in place at the present time to enable capitation to be implemented successfully.</u> Here are just some of the changes that would need to be in place before it would be fair or prudent to implement capitation:

- The state would need to already be paying fair amounts for all aspects of the care needed by Medicaid recipients before it could effectively move to capitation. In other words, codes for things that HCPF wants done under capitation should be opened and reimbursement adequately now. This would encourage medical homes to already be doing these things before the change to capitation. It would also give HCPF and medical homes experience regarding what the actual costs are for providing the desired services and determine a fair capitation. It will be difficult to change behavior to include new activities under capitation among providers, if you continue to hold codes closed now for things you want done under capitation. You have to help the medical homes create the habits you want before the switch to capitation.

- All providers would have to be reliably involved in the ACC: primary care, all of the various adult and child specialists, the hospitals, the therapies, dentists, mental health providers, etc.

- The data system would have to be able to report real time data and be far, far more accurate than it is now.

- The attribution system is flawed. That would have to be improved and provide accurate, real-time attribution data before capitation should be instituted.

- You will have to change a variety of policies that are barriers to population management.

- Capitation has to be combined with significant incentives to implement processes and improve outcomes. So, you will need to have the incentive system very well developed and viewed by providers as motivating before implementing capitation

- Healthcare for children focuses on prevention, early detection and early intervention, which require initial increased investment to reduce potential expenses many years and decades down the line. Other ACO programs have shown that savings on children are difficult to show early on. So, incentives in the care of children will initially be for intermediate outcomes (or for process outcomes) and need to be direct incentives rather than incentives in the form of shared savings.

- Early in the transition from pre-ACC payment methods to ACC payment structure (2012), some medical homes were asked to return money to Medicaid. Transitions like that (for example the transition to capitation) have to avoid this. Primary care medical homes have such narrow margins that this can be very difficult financially on a medical home

- Many medical homes have the ability to collect from their EHR and their claims database REAL-TIME data with which performance can be measured. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and providers to develop a vetting process that will enable HCPF and RCCOs to trust that medical home self-reported real-time data is trustworthy.

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

Many medical homes have the capability and infrastructure to adapt to payment tied to value. What is missing is the state, HCPF, RCCO, BHO infrastructure. See all of the infrastructure elements HCPF needs to have in place listed in question 60

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

- The HCPF Payment Reform Committee should meet at a time when providers and practice managers can actually attend. Monday afternoons is probably the worst time to actually enable providers or practice managers to attend. Once you select an appropriate time, then actively recruit participation.

- Make sure that your efforts are statewide. Views are different in the various regions of the state.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

- Many medical homes have the ability to collect from their EHR and their claims database REAL-TIME data with which performance can be measured. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and provider from medical homes to develop a vetting process that will enable HCPF and RCCOs to trust medical home self-reported real-time data.

- The measures for children can be drawn from HEDIS measures or CHIPRA measures or from the Pediatric Measurement Proposal that HCPF did in 2010 with the help of Jim Todd. Appropriate child health measures could be selected from the following measures :
    - Well child visits appropriate for age
    - Developmental screening by three years of age
    - Teen depression screening
    - Complete immunization status by age two
    - Post-partum depression screening rate for mothers of newborns by age 4 months
    - Appropriate antibiotic use in URI and strep pharyngitis

- Medical homes could also be measured on:
    - Patient (or family) satisfaction ratings
    - Documentation of QI projects

Screening should be part of KPIs, but you need to do more than just create a KPI. If you are going to have KPIs, then you need to track not only the number of times a screening was done, but also track the v-codes (or some way to track positives) and make them available in the SDAC so medical homes can track them. And the SDAC needs to track referrals (or intervention). Otherwise it is not worth measuring the number of screenings.

- The PCMP or medical home should receive real-time data (less than a month since date of service) with data that will allow them to compare their performance with performance of similar type of medical home.

- Healthcare for children focuses on prevention, early detection and early intervention, which require initial increased investment to reduce potential expenses many years and decades down the line. Other ACO programs have shown that savings on children are difficult to show early on. So, incentives in the care of children will initially be for intermediate outcomes (or for process outcomes) and need to be direct incentives rather than incentives in the form of shared savings.

69) Measures for payment. Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☒
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

We only need 2-4 KPIs. Any more will dilute the effect. What we really want is good data, so we can improve our outcomes by doing a quality improvement project. Since children are the majority of Medicaid recipients and give you the best chance of truly improving health and wellness in the long term, KPIs need to be more child-focused. And since the savings are so far in the future, KPIs need to be intermediate, process outcomes.

RFI Response Received and Recorded.

Serial Number: 029

Accepted by: KJDW

Notes: Standard cover sheet added

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: William M Campbell, MD

Location: Children's Hospital Colorado

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Children's Hospital Colorado

Location: Aurora, CO

☐ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☒ Medical provider / PCMP / other provider
  i. Type or specialty:
  ii. Area of practice: Click here to enter text.
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☒ Other (please describe): Advocate for children on Medicaid

How have you been involved in the ACC program and what interaction have you had with RCCOs:

Click here to enter text.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:

About 8 years, including the Children's Services Steering Committee

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate

☐ N/A

Are you currently involved in the ACC program?

☐ Yes
☐ No
☐ I don't know

Please feel welcome to describe why or why not using the space below.

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☐ 3-4 years
☐ Since before the program was implemented.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

- Reimbursement (mostly due to the Federal ACA) is fairer now.

- The decision to make the well child visit one of the KPIs was a very good decision in behalf of children, but unfortunately attribution is still flawed and the SDAC data is delayed and often inaccurate. So, it is difficult to create an effective QI process to improve the KPI, but this is a good start.

- The decision to focus on integrated behavioral health in medical homes is a wonderful decision to improve health outcomes for people covered by Medicaid. Thank you.

- You have a great opportunity to do what is needed for the majority of Medicaid recipients. The majority of Medicaid recipients in Colorado are children and adolescents; they should not be considered one of the subgroups. The following principles should be incorporated into the core objectives of the ACC:

    - Children's health care needs are very different than adults. For adults, the focus is on managing chronic disease more effectively. For children, it is about preventing the development of those chronic diseases.
    - If the ACC really wants to focus on health and wellness, the greatest opportunity is with the children (the majority of Medicaid recipients). By focusing on preventive care, early screening and early intervention for children, there will be big savings; unfortunately those savings may not occur for many years or decades in the future, but the investment will eventually be worth it.

- So, the ACC will need to invest in children to the extent possible now even though the savings come much later. We recommend that a portion of short-term savings that occurs due to chronic disease management in adults in the ACC be invested back into preventive care for children.
- Children are part of families and you can't help the child unless you help the family. So, care coordination is more involved for children since it includes care coordination of the parents/family.
- There is increased recognition that behavioral health is a part of overall health and should be accessible within a pediatric medical home. However, the current mental health system must have policies, procedures, and resources that support integrated behavioral health activities at the practice level.

2) What is not working well in the ACC Program?

- Attribution continues to attribute patients to the wrong medical home and the process of getting patients reassigned to the correct medical home is onerous for the patient and family.

- The health care data through the SDAC is based on claims so it is delayed and is incomplete (particularly for children). Therefore, it is not very useful in helping medical homes improve outcomes for children.

- Each RCCO does things very differently, which is confusing for medical homes with patients in several RCCOs. RCCOs are inconsistent in how they respond to requests for care coordination (quite variable depending on whom you reach at the RCCO). So the new RFP should ask how RCCOs will develop policies and procedures to make their methods and responses to requests for help more consistent, both within the RCCO and among all RCCOs.

- There are certain expectations/requirements and ways of doing things that are so different from one RCCO to another that it requires significant extra work for the medical home to adapt to the differences. To deal with this. So, the RFP should ask how RCCOs intend

- If a patient lives in one region and goes to a medical home in another region, and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from the patient's region RCCO. This is particularly true in the Denver metro area. <u>There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients.</u>

- The "incentives" now are actually disincentives, especially the requirement that the RCCO must meet its KPIs before a high performing medical home can be rewarded for meeting its KPIs. The concept behind this approach is not consistent with how health care systems (and "medical neighborhoods") work.

- The geography of the 7 regions does not reflect the natural geography of health care systems and referral patterns. Larimer County should be in Region 2.

- RCCOs are not providing the level of care coordination that Medicaid patients need. We have had RCCO "care coordinators" just tell us to call 211. The level of commitment that patients and families need is difficult to find, unless care coordination is provided at the medical home level or the community level.

- Both family practices and pediatric practices report that the SDAC does not reflect their own data that the practice can obtain from their EHR or their own claims data. This is particularly true regarding data on health care screening. The RFP should ask how RCCOs and HCPF should take advantage of this practice-based data.

- Most medical homes are not working closely with RCCOs and are not receiving much support. The RFP should ask how RCCOs intend to work more closely with medical homes.

- Feedback from RCCOs to the medical home regarding patients referred to the RCCO for care coordination is spotty. How will RCCOs consistently provide feedback and communication to the medical home regarding what was done for the patients and whether there was improvement?

- There has been difficulty with communication from the state level through the RCCOs down to the individual practice/provider level. Providers feel as though they are not well informed from HCPF or RCCOs. We are grateful that CCHAP keeps us informed.

- The current system does not take into account the movement of patients on and off Medicaid and movement between RCCOs. Whether for KPIs or future shared savings incentives, practices need to be evaluated on established patients who have been in a practice for a minimum of six months. This allows the medical home to actually have time to make an impact on the child's care. Otherwise, it is a substantial disincentive for practices to be open to the more complex and challenging patients, those that likely need access the most.

- Currently, there is very little communication and alignment between BHO's and RCCO's. In order for integrated behavioral health to be successful at the practice and community level, the BHO's and RCCO's must have similar goals, policies/procedures that are aligned, payment structures that are aligned with movement toward integration and ongoing close communication with one another. The RFP should ask how they intend to do this.

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

- The decision to focus on integrated behavioral health in medical homes is a wonderful decision to improve health outcomes for people covered by Medicaid. Thank you.

- If Colorado is serious about promoting integration of behavioral and physical (medical) health care, then the RCCOs and BHOs should be integrated. This would mean they should have the same regions and function as though they are one organization. This would reduce duplication of efforts and have better alignment of incentives and payments that support integrated care.

- Open the behavioral health and wellness codes (96150 – 96155) now. Don't wait. This will encourage integration immediately and enable medical homes to start now the process of evolving toward full integration.

- Care coordination for both behavioral health and medical care should be done in the primary care setting. And either the RCCO and/or the BHO should delegate the responsibility to do care coordination and a pmpm to cover the expense to the medical home as part of the payment reform process. And behavioral health care coordination and medical care coordination needs to be fully reimbursed. In addition, the BHO and the RCCO will need to have information and care coordinators to assist medical homes to handle uncommon or very complex issues.

- Provide infrastructure and funding for data collection and management to support integrated behavioral health in the medical home and the care coordination that will have to be part of that. Utilizing 5DAC data is just one way to understand the activities within a medical home. 5DAC data is delayed and does not include enough information to support behavioral health care coordination in the medical home. Other methods and technologies are needed. There will need to be an investment in the development of new technologies and methods to do behavioral screening, track referrals, document treatment and collect data on the whole care coordination process at the medical home level. This will require adequate reimbursement to cover the cost of starting up new care coordination programs in the medical home and start up technologies to improve screening, intervention and care coordination with follow through in the medical home.

- The CPACK program developed by CBHC is a very good program, particularly the following:
  a. Assistance with finding a behavioral health provider for patients
  b. Telephone consultation by a child psychiatrist to primary care providers

We recommend that BHOs be required to provide the 2 components above as part of their new contracts.

- Payment options for integrated behavioral health (not just co-location) need to be clear and understandable to providers and practices. In order for the integrated model to be sustainable, there need to be ways to access understandable billing rules/policies.

- Behavioral health care should be provided for children with developmental disabilities (e.g., autism spectrum disorder and intellectual disability, genetic syndromes, traumatic brain injury, fetal alcohol spectrum disorder, etc.) who also have behavioral health problems (e.g., anxiety, depression, bipolar disorder, disruptive behaviors, etc.)

Care Coordination

Question 12) What needs for children/families should be coordinated in medical homes and are there services that should not be a part of core coordination by the pediatric and family medical home

One of the most difficult services to provide in the medical home is home visits. Support from the larger system is needed.

Services that can be provided in a pediatric or family medical home are: complex medical coordination including logistics/travel, ancillary services (PT/OT/home health services, ...), collaboration with mental/behavioral health, collaboration regarding school needs, referrals to early intervention services and Child Find, referral to other agencies (rehab, hospice, ...), collaboration with foster care and DHS system. RCCOs need to help medical homes with needs like assistance with housing, food, parental employment, child care, in which case the RCCO can help families connect with other agencies that provide these services.

Question 19: How should care coordination program be evaluated? How should its outcomes be measured?

A care coordination program should initially be measured by having good processes, not measured by outcomes, until solid data exists on outcomes that are risk adjusted and accurate for children. Initially all measures need to be quite separated from outcomes that are highly tied to patient behavior, or practices will again be less likely to serve those with highest risk.

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Our medical home relates to multiple RCCOs and we want to be delegated to do care coordination. If all RCCOs allowed medical homes to be delegated to do care coordination, we

could receive a pmpm from all of them, which would enable us to afford to hire enough care coordinators to meet the needs of all of our ACC patients.

Where should core coordination be done? Care coordination is best done in the medical home. We are willing to do care coordination, because we have a relationship with our patients and they trust us and we recognize that coordinating complex medical care is essential for good care and for cost savings. Also, the primary care provider is best positioned to have a long term relationship with the patient, and therefore know and understand other aspects of the patient's life and how important those non-medical factors are on the patient's health and health issues.

If care coordination cannot be done in the medical home, then it is best done by community-based organizations. The least effective, least well-received, least trusted is care coordination done from a call center in an RCCO. The role of the RCCO should be to help the medical home-based care coordination staff access resources for families.

The majority of practices are willing to provide Care Coordination, if they can get financial support (PMPM) for providing the service.

Should you be doing care coordination for certain patient populations e.g. children with asthma or special needs children? Or for your entire Medicaid population healthy or chronically ill? The overall goal of Colorado Medicaid should be to provide care coordination services for ALL patients in the Medicaid population (for some patients it may be very minimal, others extensive). This is the essence of preventive care. A care coordinator that is based in the medical home is in the best position to help identify risk factors proactively, as early as possible before they impact a patient's health and cause illness. Children with special healthcare needs (complex, complicated) require a higher level of care coordination, so the pmpm attached to their care coordination needs to be risk adjusted.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

- All RCCOs should have their offices in the region served, should be non-profits, be a Medicaid provider and be incorporated only in Colorado.

- All RCCOs should offer to delegate care coordination to medical homes willing to accept that responsibility and the RCCO should share a portion of the RCCO pmpm with the medical home that accepts delegation.

- All RCCOs should use the same criteria for delegation and for the amount that is paid for delegated services of care coordination. By doing this, services can reach a standard across

the state. A patient would have access to similar services no matter where they moved across Colorado.

- RCCOs should all agree on how they will effectively communicate to medical homes regarding any contact the RCCO has with patients attributed to the medical home. They should include PCMPs in developing those criteria.

- All RCCOs should help (or contract with an organization to help) medical homes understand how to access their SDAC data, understand their data and use it to develop rapid cycle QI projects to improve health outcomes and meet KPIs.

- All RCCOs should agree to provide uniform support for medical homes when a medical home asks for help with care coordination, even when the medical home is in another region (and contracted with another RCCO) but the patient is in the first RCCO's region.

- RCCOs should be required to allow medical homes to give the RCCO a list of patients the medical home feels is their patients and receive help from the RCCO to understand why certain patients have been attributed to another medical home. If the patient is determined to be more appropriately attributed to the inquiring medical home, then the RCCO should help re-attribute the patient to the correct medical home.

- RCCOs should share on a regular basis the RCCO's performance on KPIs and share savings incentives and share with the medical home how their own performance compares with other medical homes.

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

This is particularly applicable to the Denver metro area. There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for <u>all</u> of their ACC patients. For many expectations/requirements and ways of doing things the RCCOs are so different from one another that it requires significant extra work for medical homes to adapt to the differences. In addition, if a patient lives in one region and goes to a medical home in another region, and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from that first region.

27) Should the RCCO region maps change? Why or why not? If so, how?

Yes. There are two changes we recommend:

- Larimer County should be included in Region 2, since the medical community and the support organizations of Larimer County and very closely linked to Weld County

- In the Metro Denver area, the boundary issues are so difficult that we recommend one RCCO be responsible for the whole metro area or that medical homes be allowed to choose one RCCO for all of their patients.

28) Should the BHO region maps change? Why or why not? If so, how?

If Colorado is serious about promoting integration of behavioral and physical (medical) health care, then the RCCOs and BHOs should be integrated. This would mean they should have the same regions and function as though they are one organization. They should share incentives that are aligned around successful integration of behavioral and medical services and outcomes. So the BHO maps/regions should conform to the RCCO regions/maps.

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients. There are certain expectations/requirements and ways of doing things that are so different from one RCCO to another that it requires significant extra work to adapt to the differences. If a patient lives in one region and goes to a medical home in another region and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from that first region. This is particularly true in the Denver metro area.

Another alternative: When a practice contracts with a RCCO currently they "belong" to one RCCO. Change that and have them only contract with the state and have that contract extend to all RCCOS. This way RCCOS would be more accountable to standardization through out all of Colorado, and the services provided to patients/families would be more uniform.

34) What role should RCCOs play in attributing clients to their respective PCMPs?

The attribution system is quite flawed still. RCCOs should be required to allow medical homes to give the RCCO a list of patients the medical home feels are their patients and receive help from the RCCO to understand why certain patients are attributed to another medical home. If the patient is determined to be more appropriately attributed to the inquiring medical home, then the RCCO should help re-attribute the patient to the correct medical home.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

- The payment structure absolutely does not support the ACC goals. A medical home does not receive incentives for KPIs unless the RCCO meets its KPI. This becomes a disincentive, because many medical homes meet their performance targets, but do not get rewarded

because the RCCO did not meet its targets. So the medical home has no incentive to maintain the performance. The philosophy that HCPF has espoused (that the high performing medical home should encourage or help the low performing medical home) is not realistic and is not how the real world works. There is no time for that, plus the high performing medical home has no way of knowing who is low performing. This idea shows a lack of understanding of the world where health cares is delivered. Medical homes need to receive full incentives when they meet their KPI targets, no matter what happens in the RCCO.

- The incentives are too low to change much. Also, the KPIs need to remain focused on process, not outcomes, until the data is more sophisticated to accurately attribute patients and account for risk factors.

- Many medical homes have the ability to collect REAL-TIME data from their EHR and their claims database, which can be used to measure performance more accurately than the SDAC. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and providers to develop a vetting process that will enable HCPF and RCCOs to trust the medical home self-reported real-time data.

- Since children are the majority and give the best chance of truly improving health and wellness, KPIs need to be more child-focused. And since the potential cost savings for children's health care are so far in the future, KPIs need to be intermediate, process outcomes.

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

There is very little of the infrastructure in the state in place at the present time to enable capitation to be implemented successfully. Here are just some of the changes that would need to be in place before it would be fair or prudent to implement capitation:

- The state would need to already be paying fair amounts for all aspects of the care needed by Medicaid recipients before it could effectively move to capitation. In other words, codes for things that HCPF wants done under capitation should be opened and reimbursement adequately now. This would encourage medical homes to already be doing these things before the change to capitation. It would also give HCPF and medical homes experience regarding what the actual costs are for providing the desired services and determine a fair capitation. It will be difficult to change behavior to include new activities under capitation among providers, if you continue to hold codes closed now for things you want done under

capitation. You have to help the medical homes create the habits you want before the switch to capitation.

- All providers would have to be reliably involved in the ACC: primary care, all of the various adult and child specialists, the hospitals, the therapies, dentists, mental health providers, etc.

- The data system would have to be able to report real time data and be far, far more accurate than it is now.

- The attribution system is flawed. That would have to be improved and provide accurate, real-time attribution data before capitation should be instituted.

- You will have to change a variety of policies that are barriers to population management.

- Capitation has to be combined with significant incentives to implement processes and improve outcomes. So, you will need to have the incentive system very well developed and viewed by providers as motivating before implementing capitation

- Healthcare for children focuses on prevention, early detection and early intervention, which require initial increased investment to reduce potential expenses many years and decades down the line. Other ACO programs have shown that savings on children are difficult to show early on. So, incentives in the care of children will initially be for intermediate outcomes (or for process outcomes) and need to be direct incentives rather than incentives in the form of shared savings.

- Early in the transition from pre-ACC payment methods to ACC payment structure (2012), some medical homes were asked to return money to Medicaid. Transitions like that (for example the transition to capitation) have to avoid this. Primary care medical homes have such narrow margins that this can be very difficult financially on a medical home

- Many medical homes have the ability to collect from their EHR and their claims database REAL-TIME data with which performance can be measured. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and providers to develop a vetting process that will enable HCPF and RCCOs to trust that medical home self-reported real-time data is trustworthy.

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

RFI Response 029

Many medical homes have the capability and infrastructure to adapt to payment tied to value. What is missing is the state, HCPF, RCCO, BHO infrastructure. See all of the infrastructure elements HCPF needs to have in place listed in question 60

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

- The HCPF Payment Reform Committee should meet at a time when providers and practice managers can actually attend. Monday afternoons is probably the worst time to actually enable providers or practice managers to attend. Once you select an appropriate time, then actively recruit participation.

- Make sure that your efforts are statewide. Views are different in the various regions of the state.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

- Many medical homes have the ability to collect from their EHR and their claims database REAL-TIME data with which performance can be measured. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and provider from medical homes to develop a vetting process that will enable HCPF and RCCOs to trust medical home self-reported real-time data.

- The measures for children can be drawn from HEDIS measures or CHIPRA measures or from the Pediatric Measurement Proposal that HCPF did in 2010 with the help of Jim Todd. Appropriate child health measures could be selected from the following measures :
    - Well child visits appropriate for age
    - Developmental screening by three years of age
    - Teen depression screening
    - Complete immunization status by age two
    - Post-partum depression screening rate for mothers of newborns by age 4 months
    - Appropriate antibiotic use in URI and strep pharyngitis

- Medical homes could also be measured on:
    - Patient (or family) satisfaction ratings
    - Documentation of QI projects

Screening should be part of KPIs, but you need to do more than just create a KPI. If you are going to have KPIs, then you need to track not only the number of times a screening was done, but also track the v-codes (or some way to track positives) and make them available in the SDAC so medical homes can track them. And the SDAC needs to track referrals (or intervention). Otherwise it is not worth measuring the number of screenings.

- The PCMP or medical home should receive real-time data (less than a month since date of service) with data that will allow them to compare their performance with performance of similar type of medical home.

- Healthcare for children focuses on prevention, early detection and early intervention, which require initial increased investment to reduce potential expenses many years and decades down the line. Other ACO programs have shown that savings on children are difficult to show early on. So, incentives in the care of children will initially be for intermediate outcomes (or for process outcomes) and need to be direct incentives rather than incentives in the form of shared savings.

69) Measures for payment. Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☒
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

We only need 2-4 KPIs. Any more will dilute the effect. What we really want is good data, so we can improve our outcomes by doing a quality improvement project. Since children are the majority of Medicaid recipients and give you the best chance of truly improving health and wellness in the long term, KPIs need to be more child-focused. And since the savings are so far in the future, KPIs need to be intermediate, process outcomes.

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Cassana Littler

Location: Grand Junction, CO

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Western Colorado Pediatric Associates

Location: Grand Junction, CO

☒ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☒ Medical provider / PCMP / other provider
  i. Type or specialty: Primary Care
  ii. Area of practice: General Pediatrics
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☒ Other (please describe): Advocate for children on Medicaid

How have you been involved in the ACC program and what interaction have you had with RCCOs:

Physician and medical home provider to families on the Western Slope of Colorado

Please briefly describe your involvement with Medicaid, either in Colorado or another state:

Medical home provider for Medicaid patients on the Western Slope

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely
☒ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

Are you currently involved in the ACC program?

Please feel welcome to describe why or why not using the space below.

☒ Yes
☐ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☒ 1-2 years
☐ 2-3 years
☐ 3-4 years
☐ Since before the program was implemented.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

- Reimbursement (mostly due to the Federal ACA) is fairer now.

- The decision to make the well child visit one of the KPIs was a very good decision in behalf of children, but unfortunately attribution is still flawed and the SDAC data is delayed and often inaccurate. So, it is difficult to create an effective QI process to improve the KPI, but this is a good start.

- The decision to focus on integrated behavioral health in medical homes is a wonderful decision to improve health outcomes for people covered by Medicaid. Thank you.

- You have a great opportunity to do what is needed for the majority of Medicaid recipients. The majority of Medicaid recipients in Colorado are children and adolescents; they should not be considered one of the subgroups. The following principles should be incorporated into the core objectives of the ACC:

    - Children's health care needs are very different than adults. For adults, the focus is on managing chronic disease more effectively. For children, it is about preventing the development of those chronic diseases.
    - If the ACC really wants to focus on health and wellness, the greatest opportunity is with the children (the majority of Medicaid recipients). By focusing on preventive care, early screening and early intervention for children, there will be big savings;

unfortunately those savings may not occur for many years or decades in the future, but the investment will eventually be worth it.

- So, the ACC will need to invest in children to the extent possible now even though the savings come much later. We recommend that a portion of short-term savings that occurs due to chronic disease management in adults in the ACC be invested back into preventive care for children.
- Children are part of families and you can't help the child unless you help the family. So, care coordination is more involved for children since it includes care coordination of the parents/family.
- There is increased recognition that behavioral health is a part of overall health and should be accessible within a pediatric medical home. However, the current mental health system must have policies, procedures, and resources that support integrated behavioral health activities at the practice level.

2) What is not working well in the ACC Program?

- Attribution continues to attribute patients to the wrong medical home and the process of getting patients reassigned to the correct medical home is onerous for the patient and family.

- The health care data through the SDAC is based on claims so it is delayed and is incomplete (particularly for children). Therefore, it is not very useful in helping medical homes improve outcomes for children.

- Each RCCO does things very differently, which is confusing for medical homes with patients in several RCCOs. RCCOs are inconsistent in how they respond to requests for care coordination (quite variable depending on whom you reach at the RCCO). So the new RFP should ask how RCCOs will develop policies and procedures to make their methods and responses to requests for help more consistent, both within the RCCO and among all RCCOs.

- There are certain expectations/requirements and ways of doing things that are so different from one RCCO to another that it requires significant extra work for the medical home to adapt to the differences. To deal with this. So, the RFP should ask how RCCOs intend

- If a patient lives in one region and goes to a medical home in another region, and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from the patient's region RCCO. This is particularly true in the Denver metro area. <u>There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients.</u>

- The "incentives" now are actually disincentives, especially the requirement that the RCCO must meet its KPIs before a high performing medical home can be rewarded for meeting its KPIs. The concept behind this approach is not consistent with how health care systems (and

"medical neighborhoods") work.

- The geography of the 7 regions does not reflect the natural geography of health care systems and referral patterns. Larimer County should be in Region 2.

- RCCOs are not providing the level of care coordination that Medicaid patients need. We have had RCCO "care coordinators" just tell us to call 211. The level of commitment that patients and families need is difficult to find, unless care coordination is provided at the medical home level or the community level.

- Both family practices and pediatric practices report that the SDAC does not reflect their own data that the practice can obtain from their EHR or their own claims data. This is particularly true regarding data on health care screening. The RFP should ask how RCCOs and HCPF should take advantage of this practice-based data.

- Most medical homes are not working closely with RCCOs and are not receiving much support. The RFP should ask how RCCOs intend to work more closely with medical homes.

- Feedback from RCCOs to the medical home regarding patients referred to the RCCO for care coordination is spotty. How will RCCOs consistently provide feedback and communication to the medical home regarding what was done for the patients and whether there was improvement?

- There has been difficulty with communication from the state level through the RCCOs down to the individual practice/provider level. Providers feel as though they are not well informed from HCPF or RCCOs. We are grateful that CCHAP keeps us informed.

- The current system does not take into account the movement of patients on and off Medicaid and movement between RCCOs. Whether for KPIs or future shared savings incentives, practices need to be evaluated on established patients who have been in a practice for a minimum of six months. This allows the medical home to actually have time to make an impact on the child's care. Otherwise, it is a substantial disincentive for practices to be open to the more complex and challenging patients, those that likely need access the most.

- Currently, there is very little communication and alignment between BHO's and RCCO's. In order for integrated behavioral health to be successful at the practice and community level, the BHO's and RCCO's must have similar goals, policies/procedures that are aligned, payment structures that are aligned with movement toward integration and ongoing close communication with one another. The RFP should ask how they intend to do this.

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

- The decision to focus on integrated behavioral health in medical homes is a wonderful decision to improve health outcomes for people covered by Medicaid. Thank you.

- If Colorado is serious about promoting integration of behavioral and physical (medical) health care, then the RCCOs and BHOs should be integrated. This would mean they should have the same regions and function as though they are one organization. This would reduce duplication of efforts and have better alignment of incentives and payments that support integrated care.

- Open the behavioral health and wellness codes (96150 – 96155) now. Don't wait. This will encourage integration immediately and enable medical homes to start now the process of evolving toward full integration.

- Care coordination for both behavioral health and medical care should be done in the primary care setting. And either the RCCO and/or the BHO should delegate the responsibility to do care coordination and a pmpm to cover the expense to the medical home as part of the payment reform process. And behavioral health care coordination and medical care coordination needs to be fully reimbursed. In addition, the BHO and the RCCO will need to have information and care coordinators to assist medical homes to handle uncommon or very complex issues.

- Provide infrastructure and funding for data collection and management to support integrated behavioral health in the medical home and the care coordination that will have to be part of that. Utilizing SDAC data is just one way to understand the activities within a medical home. SDAC data is delayed and does not include enough information to support behavioral health care coordination in the medical home. Other methods and technologies are needed. There will need to be an investment in the development of new technologies and methods to do behavioral screening, track referrals, document treatment and collect data on the whole care coordination process at the medical home level. This will require adequate reimbursement to cover the cost of starting up new care coordination programs in the medical home and start up technologies to improve screening, intervention and care coordination with follow through in the medical home.

- The CPACK program developed by CBHC is a very good program, particularly the following:
  a. Assistance with finding a behavioral health provider for patients
  b. Telephone consultation by a child psychiatrist to primary care providers

We recommend that BHOs be required to provide the 2 components above as part of their new contracts.

- Payment options for integrated behavioral health (not just co-location) need to be clear and understandable to providers and practices. In order for the integrated model to be sustainable, there need to be ways to access understandable billing rules/policies.

Core Coordination

Question 12) What needs for children/families should be coordinated in medical homes and are there services that should not be a part of core coordination by the pediatric and family medical home

One of the most difficult services to provide in the medical home is home visits. Support from the larger system is needed.

Services that can be provided in a pediatric or family medical home are: complex medical coordination including logistics/travel, ancillary services (PT/OT/home health services, ...), collaboration with mental/behavioral health, collaboration regarding school needs, referrals to early intervention services and Child Find, referral to other agencies (rehab, hospice, ...), collaboration with foster care and DHS system. RCCOs need to help medical homes with needs like assistance with housing, food, parental employment, child care, in which case the RCCO can help families connect with other agencies that provide these services.

Question 19: How should care coordination program be evaluated? How should its outcomes be measured?

A care coordination program should initially be measured by having good processes, not measured by outcomes, until solid data exists on outcomes that are risk adjusted and accurate for children. Initially all measures need to be quite separated from outcomes that are highly tied to patient behavior, or practices will again be less likely to serve those with highest risk.

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Our medical home relates to multiple RCCOs and we want to be delegated to do care coordination. If all RCCOs allowed medical homes to be delegated to do care coordination, we could receive a pmpm from all of them, which would enable us to afford to hire enough care coordinators to meet the needs of all of our ACC patients.

Where should care coordination be done? Care coordination is best done in the medical home. We are willing to do care coordination, because we have a relationship with our patients and they trust us and we recognize that coordinating complex medical care is essential for good

care and for cost savings. Also, the primary care provider is best positioned to have a long term relationship with the patient, and therefore know and understand other aspects of the patient's life and how important those non-medical factors are on the patient's health and health issues.

If care coordination cannot be done in the medical home, then it is best done by community-based organizations. The least effective, least well-received, least trusted is care coordination done from a call center in an RCCO. The role of the RCCO should be to help the medical home-based care coordination staff access resources for families.

The majority of practices are willing to provide Care Coordination, if they can get financial support (PMPM) for providing the service.

Should you be doing care coordination for certain patient populations e.g. children with asthma or special needs children? Or for your entire Medicaid population healthy or chronically ill? The overall goal of Colorado Medicaid should be to provide care coordination services for ALL patients in the Medicaid population (for some patients it may be very minimal, others extensive). This is the essence of preventive care. A care coordinator that is based in the medical home is in the best position to help identify risk factors proactively, as early as possible before they impact a patient's health and cause illness. Children with special healthcare needs (complex, complicated) require a higher level of care coordination, so the pmpm attached to their care coordination needs to be risk adjusted.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

- All RCCOs should have their offices in the region served, should be non-profits, be a Medicaid provider and be incorporated only in Colorado.

- All RCCOs should offer to delegate care coordination to medical homes willing to accept that responsibility and the RCCO should share a portion of the RCCO pmpm with the medical home that accepts delegation.

- All RCCOs should use the same criteria for delegation and for the amount that is paid for delegated services of care coordination. By doing this, services can reach a standard across the state. A patient would have access to similar services no matter where they moved across Colorado.

- RCCOs should all agree on how they will effectively communicate to medical homes regarding any contact the RCCO has with patients attributed to the medical home. They

should include PCMPs in developing those criteria.

- All RCCOs should help (or contract with an organization to help) medical homes understand how to access their SDAC data, understand their data and use it to develop rapid cycle QI projects to improve health outcomes and meet KPIs.

- All RCCOs should agree to provide uniform support for medical homes when a medical home asks for help with care coordination, even when the medical home is in another region (and contracted with another RCCO) but the patient is in the first RCCO's region.

- RCCOs should be required to allow medical homes to give the RCCO a list of patients the medical home feels is their patients and receive help from the RCCO to understand why certain patients have been attributed to another medical home. If the patient is determined to be more appropriately attributed to the inquiring medical home, then the RCCO should help re-attribute the patient to the correct medical home.

- RCCOs should share on a regular basis the RCCO's performance on KPIs and share savings incentives and share with the medical home how their own performance compares with other medical homes.

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

This is particularly applicable to the Denver metro area. There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients. For many expectations/requirements and ways of doing things the RCCOs are so different from one another that it requires significant extra work for medical homes to adapt to the differences. In addition, if a patient lives in one region and goes to a medical home in another region, and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from that first region.

27) Should the RCCO region maps change? Why or why not? If so, how?

Yes. There are two changes we recommend:

- Larimer County should be included in Region 2, since the medical community and the support organizations of Larimer County and very closely linked to Weld County
- In the Metro Denver area, the boundary issues are so difficult that we recommend one RCCO be responsible for the whole metro area or that medical homes be allowed to choose one RCCO for all of their patients.

28) Should the BHO region maps change? Why or why not? If so, how?

If Colorado is serious about promoting integration of behavioral and physical (medical) health care, then the RCCOs and BHOs should be integrated. This would mean they should have the same regions and function as though they are one organization. They should share incentives that are aligned around successful integration of behavioral and medical services and outcomes. So the BHO maps/regions should conform to the RCCO regions/maps.

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients. There are certain expectations/requirements and ways of doing things that are so different from one RCCO to another that it requires significant extra work to adapt to the differences. If a patient lives in one region and goes to a medical home in another region and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from that first region. This is particularly true in the Denver metro area.

Another alternative: When a practice contracts with a RCCO currently they "belong" to one RCCO. Change that and have them only contract with the state and have that contract extend to all RCCOS. This way RCCOS would be more accountable to standardization through out all of Colorado, and the services provided to patients/families would be more uniform.

34) What role should RCCOs play in attributing clients to their respective PCMPs?

The attribution system is quite flawed still. RCCOs should be required to allow medical homes to give the RCCO a list of patients the medical home feels are their patients and receive help from the RCCO to understand why certain patients are attributed to another medical home. If the patient is determined to be more appropriately attributed to the inquiring medical home, then the RCCO should help re-attribute the patient to the correct medical home.

Payment Structure and Quality Monitoring

S9) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

- The payment structure absolutely does not support the ACC goals. A medical home does not receive incentives for KPIs unless the RCCO meets its KPI. This becomes a disincentive, because many medical homes meet their performance targets, but do not get rewarded because the RCCO did not meet its targets. So the medical home has no incentive to maintain the performance. The philosophy that HCPF has espoused (that the high performing medical home should encourage or help the low performing medical home) is not realistic and is not how the real world works. There is no time for that, plus the high performing medical home has no way of knowing who is low performing. This idea shows a lack of understanding of the world where health cares is delivered. Medical homes need to

receive full incentives when they meet their KPI targets, no matter what happens in the RCCO.

- The incentives are too low to change much. Also, the KPIs need to remain focused on process, not outcomes, until the data is more sophisticated to accurately attribute patients and account for risk factors.

- Many medical homes have the ability to collect REAL-TIME data from their EHR and their claims database, which can be used to measure performance more accurately than the SDAC. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and providers to develop a vetting process that will enable HCPF and RCCOs to trust the medical home self-reported real-time data.

- Since children are the majority and give the best chance of truly improving health and wellness, KPIs need to be more child-focused. And since the potential cost savings for children's health care are so far in the future, KPIs need to be intermediate, process outcomes.

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

<u>There is very little of the infrastructure in the state in place at the present time to enable capitation to be implemented successfully.</u> Here are just some of the changes that would need to be in place before it would be fair or prudent to implement capitation:

- The state would need to already be paying fair amounts for all aspects of the care needed by Medicaid recipients before it could effectively move to capitation. In other words, codes for things that HCPF wants done under capitation should be opened and reimbursement adequately now. This would encourage medical homes to already be doing these things before the change to capitation. It would also give HCPF and medical homes experience regarding what the actual costs are for providing the desired services and determine a fair capitation. It will be difficult to change behavior to include new activities under capitation among providers, if you continue to hold codes closed now for things you want done under capitation. You have to help the medical homes create the habits you want before the switch to capitation.

- All providers would have to be reliably involved in the ACC: primary care, all of the various adult and child specialists, the hospitals, the therapies, dentists, mental health providers, etc.

- The data system would have to be able to report real time data and be far, far more accurate than it is now.

- The attribution system is flawed. That would have to be improved and provide accurate, real-time attribution data before capitation should be instituted.

- You will have to change a variety of policies that are barriers to population management.

- Capitation has to be combined with significant incentives to implement processes and improve outcomes. So, you will need to have the incentive system very well developed and viewed by providers as motivating before implementing capitation

- Healthcare for children focuses on prevention, early detection and early intervention, which require initial increased investment to reduce potential expenses many years and decades down the line. Other ACO programs have shown that savings on children are difficult to show early on. So, incentives in the care of children will initially be for intermediate outcomes (or for process outcomes) and need to be direct incentives rather than incentives in the form of shared savings.

- Early in the transition from pre-ACC payment methods to ACC payment structure (2012), some medical homes were asked to return money to Medicaid. Transitions like that (for example the transition to capitation) have to avoid this. Primary care medical homes have such narrow margins that this can be very difficult financially on a medical home

- Many medical homes have the ability to collect from their EHR and their claims database REAL-TIME data with which performance can be measured. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and providers to develop a vetting process that will enable HCPF and RCCOs to trust that medical home self-reported real-time data is trustworthy.

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

Many medical homes have the capability and infrastructure to adapt to payment tied to value. What is missing is the state, HCPF, RCCO, BHO infrastructure. See all of the infrastructure elements HCPF needs to have in place listed in question 60

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

- The HCPF Payment Reform Committee should meet at a time when providers and practice managers can actually attend. Monday afternoons is probably the worst time to actually enable providers or practice managers to attend. Once you select an appropriate time, then actively recruit participation.

- Make sure that your efforts are statewide. Views are different in the various regions of the state.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

- Many medical homes have the ability to collect from their EHR and their claims database REAL-TIME data with which performance can be measured. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and provider from medical homes to develop a vetting process that will enable HCPF and RCCOs to trust medical home self-reported real-time data.

- The measures for children can be drawn from HEDIS measures or CHIPRA measures or from the Pediatric Measurement Proposal that HCPF did in 2010 with the help of Jim Todd. Appropriate child health measures could be selected from the following measures :
    - Well child visits appropriate for age
    - Developmental screening by three years of age
    - Teen depression screening
    - Complete immunization status by age two
    - Post-partum depression screening rate for mothers of newborns by age 4 months
    - Appropriate antibiotic use in URI and strep pharyngitis

- Medical homes could also be measured on:
    - Patient (or family) satisfaction ratings
    - Documentation of QI projects

Screening should be part of KPIs, but you need to do more than just create a KPI. If you are going to have KPIs, then you need to track not only the number of times a screening was done, but also track the v-codes (or some way to track positives) and make them available in the SDAC so medical homes can track them. And the SDAC needs to track referrals (or intervention). Otherwise it is not worth measuring the number of screenings.

- The PCMP or medical home should receive real-time data (less than a month since date of service) with data that will allow them to compare their performance with performance of similar type of medical home.

- Healthcare for children focuses on prevention, early detection and early intervention, which require initial increased investment to reduce potential expenses many years and decades down the line. Other ACO programs have shown that savings on children are difficult to show early on. So, incentives in the care of children will initially be for intermediate outcomes (or for process outcomes) and need to be direct incentives rather than incentives in the form of shared savings.

69) Measures for payment. Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☒
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

We only need 2-4 KPIs. Any more will dilute the effect. What we really want is good data, so we can improve our outcomes by doing a quality improvement project. Since children are the majority of Medicaid recipients and give you the best chance of truly improving health and wellness in the long term, KPIs need to be more child-focused. And since the savings are so far in the future, KPIs need to be intermediate, process outcomes.

Colorado Department of Health Care Policy and Financing

RFI Response Received and Recorded.

Serial Number: 031

Accepted by: KJDW

Notes: Standard cover sheet added

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Lauren Carei, PA-C

Location: Western Colorado Pediatrics

3150 N. 12th Steet

Grand Junction, CO 81506

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Western Colorado Pediatrics

Location: 3150 N. 12th Steet

Grand Junction, CO 81506

☐ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☒ Medical provider / PCMP / other provider
   i. Type or specialty: Physician assistant
   ii. Area of practice: Pediatrics
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☒ Other (please describe): Advocate for children on Medicaid

How have you been involved in the ACC program and what interaction have you had with RCCOs:

I am a physician assistant and I provide care to Medicaid patients on a daily basis.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:

I am a physician assistant and I provide care to Medicaid patients on a daily basis.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely
☒ Likely
☐ Reserved (waiting to see the RFP)

☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

Are you currently involved in the ACC program?

☒ Yes
☐ No
☐ I don't know

Please feel welcome to describe why or why not using the space below.

If you answered "yes" above, how long?

☐ Less than one year
☒ 1-2 years
☐ 2-3 years
☐ 3-4 years
☐ Since before the program was implemented.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

- Reimbursement (mostly due to the Federal ACA) is fairer now.
- The decision to make the well child visit one of the KPIs was a very good decision in behalf of children, but unfortunately attribution is still flawed and the SDAC data is delayed and often inaccurate. So, it is difficult to create an effective QI process to improve the KPI, but this is a good start.
- The decision to focus on integrated behavioral health in medical homes is a wonderful decision to improve health outcomes for people covered by Medicaid. Thank you.
- You have a great opportunity to do what is needed for the majority of Medicaid recipients. The majority of Medicaid recipients in Colorado are children and adolescents; they should not be considered one of the subgroups. The following principles should be incorporated into the core objectives of the ACC:
    - Children's health care needs are very different than adults. For adults, the focus is on managing chronic disease more effectively. For children, it is about preventing the development of those chronic diseases.

- If the ACC really wants to focus on health and wellness, the greatest opportunity is with the children (the majority of Medicaid recipients). By focusing on preventive care, early screening and early intervention for children, there will be big savings; unfortunately those savings may not occur for many years or decades in the future, but the investment will eventually be worth it.
- So, the ACC will need to invest in children to the extent possible now even though the savings come much later. We recommend that a portion of short-term savings that occurs due to chronic disease management in adults in the ACC be invested back into preventive care for children.
- Children are part of families and you can't help the child unless you help the family. So, care coordination is more involved for children since it includes care coordination of the parents/family.
- There is increased recognition that behavioral health is a part of overall health and should be accessible within a pediatric medical home. However, the current mental health system must have policies, procedures, and resources that support integrated behavioral health activities at the practice level.

2) What is not working well in the ACC Program?

- Attribution continues to attribute patients to the wrong medical home and the process of getting patients reassigned to the correct medical home is onerous for the patient and family.

- The health care data through the SDAC is based on claims so it is delayed and is incomplete (particularly for children). Therefore, it is not very useful in helping medical homes improve outcomes for children.

- Each RCCO does things very differently, which is confusing for medical homes with patients in several RCCOs. RCCOs are inconsistent in how they respond to requests for care coordination (quite variable depending on whom you reach at the RCCO). So the new RFP should ask how RCCOs will develop policies and procedures to make their methods and responses to requests for help more consistent, both within the RCCO and among all RCCOs.

- There are certain expectations/requirements and ways of doing things that are so different from one RCCO to another that it requires significant extra work for the medical home to adapt to the differences. To deal with this. So, the RFP should ask how RCCOs intend

- If a patient lives in one region and goes to a medical home in another region, and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from the patient's region RCCO. This is particularly true in the Denver metro area. <u>There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients.</u>

- The "incentives" now are actually disincentives, especially the requirement that the RCCO must meet its KPIs before a high performing medical home can be rewarded for meeting its KPIs. The concept behind this approach is not consistent with how health care systems (and "medical neighborhoods") work.

- The geography of the 7 regions does not reflect the natural geography of health care systems and referral patterns. Larimer County should be in Region 2.

- RCCOs are not providing the level of care coordination that Medicaid patients need. We have had RCCO "care coordinators" just tell us to call 211. The level of commitment that patients and families need is difficult to find, unless care coordination is provided at the medical home level or the community level.

- Both family practices and pediatric practices report that the SDAC does not reflect their own data that the practice can obtain from their EHR or their own claims data. This is particularly true regarding data on health care screening. The RFP should ask how RCCOs and HCPF should take advantage of this practice-based data.

- Most medical homes are not working closely with RCCOs and are not receiving much support. The RFP should ask how RCCOs intend to work more closely with medical homes.

- Feedback from RCCOs to the medical home regarding patients referred to the RCCO for care coordination is spotty. How will RCCOs consistently provide feedback and communication to the medical home regarding what was done for the patients and whether there was improvement?

- There has been difficulty with communication from the state level through the RCCOs down to the individual practice/provider level. Providers feel as though they are not well informed from HCPF or RCCOs. We are grateful that CCHAP keeps us informed.

- The current system does not take into account the movement of patients on and off Medicaid and movement between RCCOs. Whether for KPIs or future shared savings incentives, practices need to be evaluated on established patients who have been in a practice for a minimum of six months. This allows the medical home to actually have time to make an impact on the child's care. Otherwise, it is a substantial disincentive for practices to be open to the more complex and challenging patients, those that likely need access the most.

- Currently, there is very little communication and alignment between BHO's and RCCO's. In order for integrated behavioral health to be successful at the practice and community level, the BHO's and RCCO's must have similar goals, policies/procedures that are aligned, payment structures that are aligned with movement toward integration and ongoing close communication with one another. The RFP should ask how they intend to do this.

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

- The decision to focus on integrated behavioral health in medical homes is a wonderful decision to improve health outcomes for people covered by Medicaid. Thank you.

- If Colorado is serious about promoting integration of behavioral and physical (medical) health care, then the RCCOs and BHOs should be integrated. This would mean they should have the same regions and function as though they are one organization. This would reduce duplication of efforts and have better alignment of incentives and payments that support integrated care.

- Open the behavioral health and wellness codes (96150 – 96155) now. Don't wait. This will encourage integration immediately and enable medical homes to start now the process of evolving toward full integration.

- Care coordination for both behavioral health and medical care should be done in the primary care setting. And either the RCCO and/or the BHO should delegate the responsibility to do care coordination and a pmpm to cover the expense to the medical home as part of the payment reform process. And behavioral health care coordination and medical care coordination needs to be fully reimbursed. In addition, the BHO and the RCCO will need to have information and care coordinators to assist medical homes to handle uncommon or very complex issues.

- Provide infrastructure and funding for data collection and management to support integrated behavioral health in the medical home and the care coordination that will have to be part of that. Utilizing SDAC data is just one way to understand the activities within a medical home. SDAC data is delayed and does not include enough information to support behavioral health care coordination in the medical home. Other methods and technologies are needed. There will need to be an investment in the development of new technologies and methods to do behavioral screening, track referrals, document treatment and collect data on the whole care coordination process at the medical home level. This will require adequate reimbursement to cover the cost of starting up new care coordination programs in the medical home and start up technologies to improve screening, intervention and care coordination with follow through in the medical home.

- The CPACK program developed by CBHC is a very good program, particularly the following:

---

a. Assistance with finding a behavioral health provider for patients
b. Telephone consultation by a child psychiatrist to primary care providers
We recommend that BHOs be required to provide the 2 components above as part of their new contracts.

- Payment options for integrated behavioral health (not just co-location) need to be clear and understandable to providers and practices. In order for the integrated model to be sustainable, there need to be ways to access understandable billing rules/policies.

Care Coordinotion

Question 12) Whot needs for children/families should be coordinated in medical homes and are there services thot should not be o port of core coordinotion by the pediatric and fomily medicol home

One of the most difficult services to provide in the medical home is home visits. Support from the larger system is needed.

Services that can be provided in a pediatric or family medical home are: complex medical coordination including logistics/travel, ancillary services (PT/OT/home health services, ...), collaboration with mental/behavioral health, collaboration regarding school needs, referrals to early intervention services and Child Find, referral to other agencies (rehab, hospice, ...), collaboration with foster care and DHS system. RCCOs need to help medical homes with needs like assistance with housing, food, parental employment, child care, in which case the RCCO can help families connect with other agencies that provide these services.

Question 19: How should care coordination program be evaluated? How should its outcomes be measured?

A care coordination program should initially be measured by having good processes, not measured by outcomes, until solid data exists on outcomes that are risk adjusted and accurate for children. Initially all measures need to be quite separated from outcomes that are highly tied to patient behavior, or practices will again be less likely to serve those with highest risk.

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Our medical home relates to multiple RCCOs and we want to be delegated to do care coordination. If all RCCOs allowed medical homes to be delegated to do care coordination, we could receive a pmpm from all of them, which would enable us to afford to hire enough care coordinators to meet the needs of all of our ACC patients.

Where should care coordination be done? Care coordination is best done in the medical home. We are willing to do care coordination, because we have a relationship with our patients and they trust us and we recognize that coordinating complex medical care is essential for good care and for cost savings. Also, the primary care provider is best positioned to have a long term relationship with the patient, and therefore know and understand other aspects of the patient's life and how important those non-medical factors are on the patient's health and health issues.

If care coordination cannot be done in the medical home, then it is best done by community-based organizations. The least effective, least well-received, least trusted is care coordination done from a call center in an RCCO. The role of the RCCO should be to help the medical home-based care coordination staff access resources for families.

The majority of practices are willing to provide Care Coordination, if they can get financial support (PMPM) for providing the service.

Should you be doing care coordination for certain patient populations e.g. **children with asthma or special needs children? Or for your entire Medicaid population healthy or chronically ill?** The overall goal of Colorado Medicaid should be to provide care coordination services for ALL patients in the Medicaid population (for some patients it may be very minimal, others extensive). This is the essence of preventive care. A care coordinator that is based in the medical home is in the best position to help identify risk factors proactively, as early as possible before they impact a patient's health and cause illness. Children with special healthcare needs (complex, complicated) require a higher level of care coordination, so the pmpm attached to their care coordination needs to be risk adjusted.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

- All RCCOs should have their offices in the region served, should be non-profits, be a Medicaid provider and be incorporated only in Colorado.

- All RCCOs should offer to delegate care coordination to medical homes willing to accept that responsibility and the RCCO should share a portion of the RCCO pmpm with the medical home that accepts delegation.

- All RCCOs should use the same criteria for delegation and for the amount that is paid for delegated services of care coordination. By doing this, services can reach a standard across the state. A patient would have access to similar services no matter where they moved across Colorado.

- RCCOs should all agree on how they will effectively communicate to medical homes regarding any contact the RCCO has with patients attributed to the medical home. They should include PCMPs in developing those criteria.

- All RCCOs should help (or contract with an organization to help) medical homes understand how to access their SDAC data, understand their data and use it to develop rapid cycle QI projects to improve health outcomes and meet KPIs.

- All RCCOs should agree to provide uniform support for medical homes when a medical home asks for help with care coordination, even when the medical home is in another region (and contracted with another RCCO) but the patient is in the first RCCO's region.

- RCCOs should be required to allow medical homes to give the RCCO a list of patients the medical home feels is their patients and receive help from the RCCO to understand why certain patients have been attributed to another medical home. If the patient is determined to be more appropriately attributed to the inquiring medical home, then the RCCO should help re-attribute the patient to the correct medical home.

- RCCOs should share on a regular basis the RCCO's performance on KPIs and share savings incentives and share with the medical home how their own performance compares with other medical homes.

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

This is particularly applicable to the Denver metro area. There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients. For many expectations/requirements and ways of doing things the RCCOs are so different from one another that it requires significant extra work for medical homes to adapt to the differences. In addition, if a patient lives in one region and goes to a medical home in another region, and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from that first region.

27) Should the RCCO region maps change? Why or why not? If so, how?

Yes. There are two changes we recommend:

- Larimer County should be included in Region 2, since the medical community and the support organizations of Larimer County and very closely linked to Weld County
- In the Metro Denver area, the boundary issues are so difficult that we recommend one RCCO be responsible for the whole metro area or that medical homes be allowed to choose one RCCO for all of their patients.

28) Should the BHO region maps change? Why or why not? If so, how?

If Colorado is serious about promoting integration of behavioral and physical (medical) health care, then the RCCOs and BHOs should be integrated. This would mean they should have the same regions and function as though they are one organization. They should share incentives that are aligned around successful integration of behavioral and medical services and outcomes. So the BHO maps/regions should conform to the RCCO regions/maps.

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients. There are certain expectations/requirements and ways of doing things that are so different from one RCCO to another that it requires significant extra work to adapt to the differences. If a patient lives in one region and goes to a medical home in another region and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from that first region. This is particularly true in the Denver metro area.

Another alternative: When a practice contracts with a RCCO currently they "belong" to one RCCO. Change that and have them only contract with the state and have that contract extend to all RCCOS. This way RCCOS would be more accountable to standardization through out all of Colorado, and the services provided to patients/families would be more uniform.

34) What role should RCCOs play in attributing clients to their respective PCMPs?

The attribution system is quite flawed still. RCCOs should be required to allow medical homes to give the RCCO a list of patients the medical home feels are their patients and receive help from the RCCO to understand why certain patients are attributed to another medical home. If the patient is determined to be more appropriately attributed to the inquiring medical home, then the RCCO should help re-attribute the patient to the correct medical home.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

- The payment structure absolutely does not support the ACC goals. A medical home does not receive incentives for KPIs unless the RCCO meets its KPI. This becomes a disincentive, because many medical homes meet their performance targets, but do not get rewarded because the RCCO did not meet its targets. So the medical home has no incentive to maintain the performance. The philosophy that HCPF has espoused (that the high performing medical home should encourage or help the low performing medical home) is not realistic and is not how the real world works. There is no time for that, plus the high

performing medical home has no way of knowing who is low performing. This idea shows a lack of understanding of the world where health cares is delivered. Medical homes need to receive full incentives when they meet their KPI targets, no matter what happens in the RCCO.

- The incentives are too low to change much. Also, the KPIs need to remain focused on process, not outcomes, until the data is more sophisticated to accurately attribute patients and account for risk factors.

- Many medical homes have the ability to collect REAL-TIME data from their EHR and their claims database, which can be used to measure performance more accurately than the SDAC. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and providers to develop a vetting process that will enable HCPF and RCCOs to trust the medical home self-reported real-time data.

- Since children are the majority and give the best chance of truly improving health and wellness, KPIs need to be more child-focused. And since the potential cost savings for children's health care are so far in the future, KPIs need to be intermediate, process outcomes.

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

There is very little of the infrastructure in the state in place at the present time to enable capitation to be implemented successfully. Here are just some of the changes that would need to be in place before it would be fair or prudent to implement capitation:

- The state would need to already be paying fair amounts for all aspects of the care needed by Medicaid recipients before it could effectively move to capitation. In other words, codes for things that HCPF wants done under capitation should be opened and reimbursement adequately now. This would encourage medical homes to already be doing these things before the change to capitation. It would also give HCPF and medical homes experience regarding what the actual costs are for providing the desired services and determine a fair capitation. It will be difficult to change behavior to include new activities under capitation among providers, if you continue to hold codes closed now for things you want done under capitation. You have to help the medical homes create the habits you want before the switch to capitation.

- All providers would have to be reliably involved in the ACC: primary care, all of the various adult and child specialists, the hospitals, the therapies, dentists, mental health providers, etc.

- The data system would have to be able to report real time data and be far, far more accurate than it is now.

- The attribution system is flawed. That would have to be improved and provide accurate, real-time attribution data before capitation should be instituted.

- You will have to change a variety of policies that are barriers to population management.

- Capitation has to be combined with significant incentives to implement processes and improve outcomes. So, you will need to have the incentive system very well developed and viewed by providers as motivating before implementing capitation

- Healthcare for children focuses on prevention, early detection and early intervention, which require initial increased investment to reduce potential expenses many years and decades down the line. Other ACO programs have shown that savings on children are difficult to show early on. So, incentives in the care of children will initially be for intermediate outcomes (or for process outcomes) and need to be direct incentives rather than incentives in the form of shared savings.

- Early in the transition from pre-ACC payment methods to ACC payment structure (2012), some medical homes were asked to return money to Medicaid. Transitions like that (for example the transition to capitation) have to avoid this. Primary care medical homes have such narrow margins that this can be very difficult financially on a medical home

- Many medical homes have the ability to collect from their EHR and their claims database REAL-TIME data with which performance can be measured. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and providers to develop a vetting process that will enable HCPF and RCCOs to trust that medical home self-reported real-time data is trustworthy.

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

Many medical homes have the capability and infrastructure to adapt to payment tied to value. What is missing is the state, HCPF, RCCO, BHO infrastructure. See all of the infrastructure elements HCPF needs to have in place listed in question 60

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

- The HCPF Payment Reform Committee should meet at a time when providers and practice managers can actually attend. Monday afternoons is probably the worst time to actually enable providers or practice managers to attend. Once you select an appropriate time, then actively recruit participation.

- Make sure that your efforts are statewide. Views are different in the various regions of the state.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

- Many medical homes have the ability to collect from their EHR and their claims database REAL-TIME data with which performance can be measured. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and provider from medical homes to develop a vetting process that will enable HCPF and RCCOs to trust medical home self-reported real-time data.

- The measures for children can be drawn from HEDIS measures or CHIPRA measures or from the Pediatric Measurement Proposal that HCPF did in 2010 with the help of Jim Todd. Appropriate child health measures could be selected from the following measures :
  - Well child visits appropriate for age
  - Developmental screening by three years of age
  - Teen depression screening
  - Complete immunization status by age two
  - Post-partum depression screening rate for mothers of newborns by age 4 months
  - Appropriate antibiotic use in URI and strep pharyngitis

- Medical homes could also be measured on:
  - Patient (or family) satisfaction ratings
  - Documentation of QI projects

Screening should be part of KPIs, but you need to do more than just create a KPI. If you are going to have KPIs, then you need to track not only the number of times a screening was done, but also track the v-codes (or some way to track positives) and make them available in the SDAC so medical homes can track them. And the SDAC needs to track referrals (or intervention). Otherwise it is not worth measuring the number of screenings.

- The PCMP or medical home should receive real-time data (less than a month since date of service) with data that will allow them to compare their performance with performance of similar type of medical home.

- Healthcare for children focuses on prevention, early detection and early intervention, which require initial increased investment to reduce potential expenses many years and decades down the line. Other ACO programs have shown that savings on children are difficult to show early on. So, incentives in the care of children will initially be for intermediate outcomes (or for process outcomes) and need to be direct incentives rather than incentives in the form of shared savings.

69) Measures for payment. Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☒
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

We only need 2-4 KPIs. Any more will dilute the effect. What we really want is good data, so we can improve our outcomes by doing a quality improvement project. Since children are the majority of Medicaid recipients and give you the best chance of truly improving health and wellness in the long term, KPIs need to be more child-focused. And since the savings are so far in the future, KPIs need to be intermediate, process outcomes.

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Claudia Jantzer

Location: Grand Junction, CO

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization:Western Colorado Pediatrics

Location: Grand Junctiion, CO 81503

☒ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☒ Medical provider / PCMP / other provider
  i. Type or specialty:
  ii. Area of practice: Click here to enter text.
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☒ Other (please describe): Advocate for children on Medicaid

How have you been involved in the ACC program and what interaction have you had with RCCOs:

Click here to enter text.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:Provider for Patients.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely
☒ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

Please feel welcome to describe why or why not using the space below.

Are you currently involved in the ACC program?

☒ Yes
☐ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☒ 2-3 years
☐ 3-4 years
☐ Since before the program was implemented.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

- Reimbursement (mostly due to the Federal ACA) is fairer now.

- The decision to make the well child visit one of the KPIs was a very good decision in behalf of children, but unfortunately attribution is still flawed and the SDAC data is delayed and often inaccurate. So, it is difficult to create an effective QI process to improve the KPI, but this is a good start.

- The decision to focus on integrated behavioral health in medical homes is a wonderful decision to improve health outcomes for people covered by Medicaid. Thank you.

- You have a great opportunity to do what is needed for the majority of Medicaid recipients. The majority of Medicaid recipients in Colorado are children and adolescents; they should not be considered one of the subgroups. The following principles should be incorporated into the core objectives of the ACC:

    - Children's health care needs are very different than adults. For adults, the focus is on managing chronic disease more effectively. For children, it is about preventing the development of those chronic diseases.
    - If the ACC really wants to focus on health and wellness, the greatest opportunity is with the children (the majority of Medicaid recipients). By focusing on preventive

care, early screening and early intervention for children, there will be big savings; unfortunately those savings may not occur for many years or decades in the future, but the investment will eventually be worth it.

- So, the ACC will need to invest in children to the extent possible now even though the savings come much later. We recommend that a portion of short-term savings that occurs due to chronic disease management in adults in the ACC be invested back into preventive care for children.
- Children are part of families and you can't help the child unless you help the family. So, care coordination is more involved for children since it includes care coordination of the parents/family.
- There is increased recognition that behavioral health is a part of overall health and should be accessible within a pediatric medical home. However, the current mental health system must have policies, procedures, and resources that support integrated behavioral health activities at the practice level.

2) What is not working well in the ACC Program?

- Attribution continues to attribute patients to the wrong medical home and the process of getting patients reassigned to the correct medical home is onerous for the patient and family.

- The health care data through the SDAC is based on claims so it is delayed and is incomplete (particularly for children). Therefore, it is not very useful in helping medical homes improve outcomes for children.

- Each RCCO does things very differently, which is confusing for medical homes with patients in several RCCOs. RCCOs are inconsistent in how they respond to requests for care coordination (quite variable depending on whom you reach at the RCCO). So the new RFP should ask how RCCOs will develop policies and procedures to make their methods and responses to requests for help more consistent, both within the RCCO and among all RCCOs.

- There are certain expectations/requirements and ways of doing things that are so different from one RCCO to another that it requires significant extra work for the medical home to adapt to the differences. To deal with this. So, the RFP should ask how RCCOs intend

- If a patient lives in one region and goes to a medical home in another region, and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from the patient's region RCCO. This is particularly true in the Denver metro area. <u>There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients.</u>

- The "incentives" now are actually disincentives, especially the requirement that the RCCO must meet its KPIs before a high performing medical home can be rewarded for meeting its

KPIs. The concept behind this approach is not consistent with how health care systems (and "medical neighborhoods") work.

- The geography of the 7 regions does not reflect the natural geography of health care systems and referral patterns. Larimer County should be in Region 2.

- RCCOs are not providing the level of care coordination that Medicaid patients need. We have had RCCO "care coordinators" just tell us to call 211. The level of commitment that patients and families need is difficult to find, unless care coordination is provided at the medical home level or the community level.

- Both family practices and pediatric practices report that the SDAC does not reflect their own data that the practice can obtain from their EHR or their own claims data. This is particularly true regarding data on health care screening. The RFP should ask how RCCOs and HCPF should take advantage of this practice-based data.

- Most medical homes are not working closely with RCCOs and are not receiving much support. The RFP should ask how RCCOs intend to work more closely with medical homes.

- Feedback from RCCOs to the medical home regarding patients referred to the RCCO for care coordination is spotty. How will RCCOs consistently provide feedback and communication to the medical home regarding what was done for the patients and whether there was improvement?

- There has been difficulty with communication from the state level through the RCCOs down to the individual practice/provider level. Providers feel as though they are not well informed from HCPF or RCCOs. We are grateful that CCHAP keeps us informed.

- The current system does not take into account the movement of patients on and off Medicaid and movement between RCCOs. Whether for KPIs or future shared savings incentives, practices need to be evaluated on established patients who have been in a practice for a minimum of six months. This allows the medical home to actually have time to make an impact on the child's care. Otherwise, it is a substantial disincentive for practices to be open to the more complex and challenging patients, those that likely need access the most.

- Currently, there is very little communication and alignment between BHO's and RCCO's. In order for integrated behavioral health to be successful at the practice and community level, the BHO's and RCCO's must have similar goals, policies/procedures that are aligned, payment structures that are aligned with movement toward integration and ongoing close communication with one another. The RFP should ask how they intend to do this.

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

- The decision to focus on integrated behavioral health in medical homes is a wonderful decision to improve health outcomes for people covered by Medicaid. Thank you.

- If Colorado is serious about promoting integration of behavioral and physical (medical) health care, then the RCCOs and BHOs should be integrated. This would mean they should have the same regions and function as though they are one organization. This would reduce duplication of efforts and have better alignment of incentives and payments that support integrated care.

- Open the behavioral health and wellness codes (96150 – 96155) now. Don't wait. This will encourage integration immediately and enable medical homes to start now the process of evolving toward full integration.

- Care coordination for both behavioral health and medical care should be done in the primary care setting. And either the RCCO and/or the BHO should delegate the responsibility to do care coordination and a pmpm to cover the expense to the medical home as part of the payment reform process. And behavioral health care coordination and medical care coordination needs to be fully reimbursed. In addition, the BHO and the RCCO will need to have information and care coordinators to assist medical homes to handle uncommon or very complex issues.

- Provide infrastructure and funding for data collection and management to support integrated behavioral health in the medical home and the care coordination that will have to be part of that. Utilizing SDAC data is just one way to understand the activities within a medical home. 5DAC data is delayed and does not include enough information to support behavioral health care coordination in the medical home. Other methods and technologies are needed. There will need to be an investment in the development of new technologies and methods to do behavioral screening, track referrals, document treatment and collect data on the whole care coordination process at the medical home level. This will require adequate reimbursement to cover the cost of starting up new care coordination programs in the medical home and start up technologies to improve screening, intervention and care coordination with follow through in the medical home.

- The CPACK program developed by CBHC is a very good program, particularly the following:
  a. Assistance with finding a behavioral health provider for patients
  b. Telephone consultation by a child psychiatrist to primary care providers

We recommend that BHOs be required to provide the 2 components above as part of their new contracts.

- Payment options for integrated behavioral health (not just co-location) need to be clear and understandable to providers and practices. In order for the integrated model to be sustainable, there need to be ways to access understandable billing rules/policies.

Care Coordination

Question 12) What needs for children/families should be coordinated in medical homes and are there services that should not be a part of care coordination by the pediatric and family medical home

One of the most difficult services to provide in the medical home is home visits. Support from the larger system is needed.

Services that can be provided in a pediatric or family medical home are: complex medical coordination including logistics/travel, ancillary services (PT/OT/home health services, ...), collaboration with mental/behavioral health, collaboration regarding school needs, referrals to early intervention services and Child Find, referral to other agencies (rehab, hospice, ...), collaboration with foster care and DHS system. RCCOs need to help medical homes with needs like assistance with housing, food, parental employment, child care, in which case the RCCO can help families connect with other agencies that provide these services.

Question 19: How should care coordination program be evaluated? How should its outcomes be measured?

A care coordination program should initially be measured by having good processes, not measured by outcomes, until solid data exists on outcomes that are risk adjusted and accurate for children. Initially all measures need to be quite separated from outcomes that are highly tied to patient behavior, or practices will again be less likely to serve those with highest risk.

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Our medical home relates to multiple RCCOs and we want to be delegated to do care coordination. If all RCCOs allowed medical homes to be delegated to do care coordination, we could receive a pmpm from all of them, which would enable us to afford to hire enough care coordinators to meet the needs of all of our ACC patients.

Where should care coordination be done? Care coordination is best done in the medical home. We are willing to do care coordination, because we have a relationship with our patients and they trust us and we recognize that coordinating complex medical care is essential for good

care and for cost savings. Also, the primary care provider is best positioned to have a long term relationship with the patient, and therefore know and understand other aspects of the patient's life and how important those non-medical factors are on the patient's health and health issues.

If care coordination cannot be done in the medical home, then it is best done by community-based organizations. The least effective, least well-received, least trusted is care coordination done from a call center in an RCCO. The role of the RCCO should be to help the medical home-based care coordination staff access resources for families.

The majority of practices are willing to provide Care Coordination, if they can get financial support (PMPM) for providing the service.

Should you be doing care coordination for certain patient populations e.g. children with asthma or special needs children? Or for your entire Medicaid population healthy or **chronically ill?** The overall goal of Colorado Medicaid should be to provide care coordination services for ALL patients in the Medicaid population (for some patients it may be very minimal, others extensive). This is the essence of preventive care. A care coordinator that is based in the medical home is in the best position to help identify risk factors proactively, as early as possible before they impact a patient's health and cause illness. Children with special healthcare needs (complex, complicated) require a higher level of care coordination, so the pmpm attached to their care coordination needs to be risk adjusted.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

- All RCCOs should have their offices in the region served, should be non-profits, be a Medicaid provider and be incorporated only in Colorado.

- All RCCOs should offer to delegate care coordination to medical homes willing to accept that responsibility and the RCCO should share a portion of the RCCO pmpm with the medical home that accepts delegation.

- All RCCOs should use the same criteria for delegation and for the amount that is paid for delegated services of care coordination. By doing this, services can reach a standard across the state. A patient would have access to similar services no matter where they moved across Colorado.

- RCCOs should all agree on how they will effectively communicate to medical homes regarding any contact the RCCO has with patients attributed to the medical home. They

should include PCMPs in developing those criteria.

- All RCCOs should help (or contract with an organization to help) medical homes understand how to access their SDAC data, understand their data and use it to develop rapid cycle QI projects to improve health outcomes and meet KPIs.

- All RCCOs should agree to provide uniform support for medical homes when a medical home asks for help with care coordination, even when the medical home is in another region (and contracted with another RCCO) but the patient is in the first RCCO's region.

- RCCOs should be required to allow medical homes to give the RCCO a list of patients the medical home feels is their patients and receive help from the RCCO to understand why certain patients have been attributed to another medical home. If the patient is determined to be more appropriately attributed to the inquiring medical home, then the RCCO should help re-attribute the patient to the correct medical home.

- RCCOs should share on a regular basis the RCCO's performance on KPIs and share savings incentives and share with the medical home how their own performance compares with other medical homes.

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

This is particularly applicable to the Denver metro area. There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients. For many expectations/requirements and ways of doing things the RCCOs are so different from one another that it requires significant extra work for medical homes to adapt to the differences. In addition, if a patient lives in one region and goes to a medical home in another region, and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from that first region.

27) Should the RCCO region maps change? Why or why not? If so, how?

Yes. There are two changes we recommend:

- Larimer County should be included in Region 2, since the medical community and the support organizations of Larimer County and very closely linked to Weld County
- In the Metro Denver area, the boundary issues are so difficult that we recommend one RCCO be responsible for the whole metro area or that medical homes be allowed to choose one RCCO for all of their patients.

28) Should the BHO region maps change? Why or why not? If so, how?

If Colorado is serious about promoting integration of behavioral and physical (medical) health care, then the RCCOs and BHOs should be integrated. This would mean they should have the same regions and function as though they are one organization. They should share incentives that are aligned around successful integration of behavioral and medical services and outcomes. So the BHO maps/regions should conform to the RCCO regions/maps.

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients. There are certain expectations/requirements and ways of doing things that are so different from one RCCO to another that it requires significant extra work to adapt to the differences. If a patient lives in one region and goes to a medical home in another region and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from that first region. This is particularly true in the Denver metro area.

Another alternative: When a practice contracts with a RCCO currently they "belong" to one RCCO. Change that and have them only contract with the state and have that contract extend to all RCCOS. This way RCCOS would be more accountable to standardization through out all of Colorado, and the services provided to patients/families would be more uniform.

34) What role should RCCOs play in attributing clients to their respective PCMPs?

The attribution system is quite flawed still. RCCOs should be required to allow medical homes to give the RCCO a list of patients the medical home feels are their patients and receive help from the RCCO to understand why certain patients are attributed to another medical home. If the patient is determined to be more appropriately attributed to the inquiring medical home, then the RCCO should help re-attribute the patient to the correct medical home.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

- The payment structure absolutely does not support the ACC goals. A medical home does not receive incentives for KPIs unless the RCCO meets its KPI. This becomes a disincentive, because many medical homes meet their performance targets, but do not get rewarded because the RCCO did not meet its targets. So the medical home has no incentive to maintain the performance. The philosophy that HCPF has espoused (that the high performing medical home should encourage or help the low performing medical home) is not realistic and is not how the real world works. There is no time for that, plus the high performing medical home has no way of knowing who is low performing. This idea shows a lack of understanding of the world where health cares is delivered. Medical homes need to

receive full incentives when they meet their KPI targets, no matter what happens in the RCCO.

- The incentives are too low to change much. Also, the KPIs need to remain focused on process, not outcomes, until the data is more sophisticated to accurately attribute patients and account for risk factors.

- Many medical homes have the ability to collect REAL-TIME data from their EHR and their claims database, which can be used to measure performance more accurately than the SDAC. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and providers to develop a vetting process that will enable HCPF and RCCOs to trust the medical home self-reported real-time data.

- Since children are the majority and give the best chance of truly improving health and wellness, KPIs need to be more child-focused. And since the potential cost savings for children's health care are so far in the future, KPIs need to be intermediate, process outcomes.

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

There is very little of the infrastructure in the state in place at the present time to enable capitation to be implemented successfully. Here are just some of the changes that would need to be in place before it would be fair or prudent to implement capitation:

- The state would need to already be paying fair amounts for all aspects of the care needed by Medicaid recipients before it could effectively move to capitation. In other words, codes for things that HCPF wants done under capitation should be opened and reimbursement adequately now. This would encourage medical homes to already be doing these things before the change to capitation. It would also give HCPF and medical homes experience regarding what the actual costs are for providing the desired services and determine a fair capitation. It will be difficult to change behavior to include new activities under capitation among providers, if you continue to hold codes closed now for things you want done under capitation. You have to help the medical homes create the habits you want before the switch to capitation.

- All providers would have to be reliably involved in the ACC: primary care, all of the various adult and child specialists, the hospitals, the therapies, dentists, mental health providers, etc.

- The data system would have to be able to report real time data and be far, far more accurate than it is now.

- The attribution system is flawed. That would have to be improved and provide accurate, real-time attribution data before capitation should be instituted.

- You will have to change a variety of policies that are barriers to population management.

- Capitation has to be combined with significant incentives to implement processes and improve outcomes. So, you will need to have the incentive system very well developed and viewed by providers as motivating before implementing capitation

- Healthcare for children focuses on prevention, early detection and early intervention, which require initial increased investment to reduce potential expenses many years and decades down the line. Other ACO programs have shown that savings on children are difficult to show early on. So, incentives in the care of children will initially be for intermediate outcomes (or for process outcomes) and need to be direct incentives rather than incentives in the form of shared savings.

- Early in the transition from pre-ACC payment methods to ACC payment structure (2012), some medical homes were asked to return money to Medicaid. Transitions like that (for example the transition to capitation) have to avoid this. Primary care medical homes have such narrow margins that this can be very difficult financially on a medical home

- Many medical homes have the ability to collect from their EHR and their claims database REAL-TIME data with which performance can be measured. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and providers to develop a vetting process that will enable HCPF and RCCOs to trust that medical home self-reported real-time data is trustworthy.

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

Many medical homes have the capability and infrastructure to adapt to payment tied to value. What is missing is the state, HCPF, RCCO, BHO infrastructure. See all of the infrastructure elements HCPF needs to have in place listed in question 60

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

- The HCPF Payment Reform Committee should meet at a time when providers and practice managers can actually attend. Monday afternoons is probably the worst time to actually enable providers or practice managers to attend. Once you select an appropriate time, then actively recruit participation.

- Make sure that your efforts are statewide. Views are different in the various regions of the state.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

- Many medical homes have the ability to collect from their EHR and their claims database REAL-TIME data with which performance can be measured. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and provider from medical homes to develop a vetting process that will enable HCPF and RCCOs to trust medical home self-reported real-time data.

- The measures for children can be drawn from HEDIS measures or CHIPRA measures or from the Pediatric Measurement Proposal that HCPF did in 2010 with the help of Jim Todd. Appropriate child health measures could be selected from the following measures :
  - Well child visits appropriate for age
  - Developmental screening by three years of age
  - Teen depression screening
  - Complete immunization status by age two
  - Post-partum depression screening rate for mothers of newborns by age 4 months
  - Appropriate antibiotic use in URI and strep pharyngitis

- Medical homes could also be measured on:
  - Patient (or family) satisfaction ratings
  - Documentation of QI projects

Screening should be part of KPIs, but you need to do more than just create a KPI. If you are going to have KPIs, then you need to track not only the number of times a screening was done, but also track the v-codes (or some way to track positives) and make them available in the SDAC so medical homes can track them. And the SDAC needs to track referrals (or intervention). Otherwise it is not worth measuring the number of screenings.

- The PCMP or medical home should receive real-time data (less than a month since date of service) with data that will allow them to compare their performance with performance of similar type of medical home.

- Healthcare for children focuses on prevention, early detection and early intervention, which require initial increased investment to reduce potential expenses many years and decades down the line. Other ACO programs have shown that savings on children are difficult to show early on. So, incentives in the care of children will initially be for intermediate outcomes (or for process outcomes) and need to be direct incentives rather than incentives in the form of shared savings.

69) Measures for payment. Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☒
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

We only need 2-4 KPIs. Any more will dilute the effect. What we really want is good data, so we can improve our outcomes by doing a quality improvement project. Since children are the majority of Medicaid recipients and give you the best chance of truly improving health and wellness in the long term, KPIs need to be more child-focused. And since the savings are so far in the future, KPIs need to be intermediate, process outcomes.

Colorado Department of Health Care Policy and Financing

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Anita Rich
Location: Aurora, Adams, Colorado

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Colorado Children's Healthcare Access Program
Location: aurora, Adams Colorado
☐ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☒ Client advocate
☐ Medical provider / PCMP / other provider
  i. Type or specialty: Click here to enter text.
  ii. Area of practice: Click here to enter text.
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☐ Other (please describe): Click here to enter text.

Are you currently involved in the ACC program?

☒ Yes
☐ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☒ 3-4 years

How have you been involved in the ACC program and what interaction have you had with RCCOs:
Contracts with a several RCCOs, participate on RCCO and State Advisory Boards, train and support primary care Pediatric and Family practices with Care Coordination and practice growth(transformation).

Please briefly describe your involvement with Medicaid, either in Colorado or another state:
Support Practices to help clients maintain their Medicaid eligibility, Sit on Children's Service Advisory Committee, used as an expert on the needs of children and Medical Homes for Children, and helped with the certification of Medical Homes for Children in Colorado.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☒ N/A

Please feel welcome to describe why or why not using the space below.

☒ Since before the program was implemented.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

2) What is not working well in the ACC Program? **Practices report to me that the Attribution process is difficult to understand, use and correct. Many Pediatric practices still have adults on their list they have no knowledge and do not seem to be able to remove. Even though processes are followed (given to them by the RCCO) the adults are not removed timely. Sending lists and creating spread sheets are tedious and time consuming. Practices do not have this time or expertise. Attribution needs to be fixed to create a simple way to add and remove members.**

3) What is working best in the Behavioral Health Organization (BHO) system right now?

4) What is not working well in the BHO system?

5) What is working well with RCCO and BHO collaboration right now?

6) What is not working well with RCCO and BHO collaboration right now? **They are involved in separate regions. Regions should be identical to ensure collaboration and improved practices between the efforts for both organizations.**

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1] **Not talk about Integrating Behavioral health, but in a wellness model, talk about integrated Preventive Care. This could include physical, behavioral, and oral care. Why do they need to be in separate siloes to work at having the integrated in a practice?**

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☐	☐	
Community Behavioral Health Services Rule	☐	☐	
Covered diagnoses list	☐	☐	
Different behavioral / physical health reimbursement	☒	☐	Solve the problem as to whose patient is this and who is the primary care provider. With $3PMPM every one wants to be the primary.
Institutions for Mental Diseases exclusion	☐	☐	
OBH rules, reporting, or financing (regulatory differences between agencies)	☒	☐	Solve the release of information problem between the two different systems so the patient's needs and health are primary not the systems. All done with the patient as the focus.
PCMP financing structure	☐	☐	
Per-member per-month amount	☐	☐	
Physical space constraints	☒	☐	Always
Privacy Laws (HIPAA, 42 CFR)	☐	☐	
Professional / cultural divisions	☐	☐	
RCCO or BHO contracts	☐	☐	
Staff capacity	☐	☐	
State/Federal rules or reporting requirements	☒	☐	PHI See Above
Technical resources / data sharing	☒	☐	PHI issues
Training	☒	☐	

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

Others	Please type your response here.

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care? *Rewrite How obout integrated, whole-person/whole fomily core?*

Colorado Medicaid wants to move toward integrating behavioral (mental) health into the child's medical home. Practices will need work force help and a sustainable payment model. The ACC program needs to set standards and enforce consistency across the RCCOs and BHOs. Standardization in payment for services and for co-located providers, standards in information sharing and documentation, and standardization in timeliness of treatment as well as extended hours for treatment will be helpful.

10) Please share any other general advice or suggestions you may have about behavioral health integration.

How do we merge integrated behavioral health with Care Coordination and risk assessment and care, so that so issues can be referred out and followed?

How will the RCCOs support the needed work force development? To integrate you need the expertise with in the practice for identifying need and the folks trained and integrated to meet the need. How are we going to train/help the staff get to the point to support a family and to help them to understand the need they have for services? This issue should be a focus of the next RFP how to train and pay for these services in a sustainable manner.

Care Coordination

Colorado Medicaid wants to move toward integrating behavioral (mental) health into the child's medical home. What would that look like in your practice? What do you need in order to move in that direction? Where should care coordination be done?

___x__ In your practice?
_____ In your community close to your practice, run by a community-based organization
_____By the RCCO in your region

How willing are you to provide care coordination in your practice?

Practices tell me that they would like to have Care Coordination for children provided as close to the patient and family as possible. Integrated services in many forms, behavioral health, oral health, health literacy, food pantries, clothing, internet access, all could be provided to patient within the primary care practice. Levels of service would depend on panel mix and the needs of practices and the patient/familiesthey treat. All services would need appropriate levels of financial support for practice to provide these non-billable services.

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination? **Care Coordination is an organized/structured set of activities to support a child receiving the appropriate services and resources necessary to achieve the best results necessary. These services are provided in a patient/family centered way which includes assessment of needs and strengths, a developed care plan and goals focused on the family and follow up on activities in the plan to be sure that needs were met or support services provided so that services stay focused on the needs identified by family.**

b. How should RCCOs prioritize who receives care coordination first?

High on the list need to be referrals from provider and practice staff, patients/families needing high levels of specialty care, premature infants, long term care services and palliative care, children and families needing waivers and children not showing up for their appointments. The request for the patient/family for help should also be concerned high on the list.

c. How should RCCOs identify clients and families who need care coordination?

I believe the effort and staff hours should go to those patients/families where change can be made such as NEMT issues, no show issues, lack of resource issues. High dollar ED users can be supported but I wonder if the RCCO gets the most bang for their buck working services for one client rather than ten. Would it be better to work with Community agencies, with maybe financial support given to them, and use RCCO staff to deal with other less intense issues?

Believe providers when they call and not brush them off with a resource to call. Serve the provider and the client!

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider? **Monthly activity reports, case audits done on the same level as RCCO staff audits, on-site supervision as well as case consultation for those difficult situations that occur.**

12) What services should be coordinated and are there services that should not be a part of care coordination? **In a whole person approach, it should be those things that effect health from birth to end of life care. Support should be based on a needs assessment and on those services identified by the patient/family important and helpful to them and their success. Anything that will effect a patient's/family's wellness and ability to function is fair game for care coordination.**

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs? **Need is determined by the patient and family. A needs assessment done with the family is basic in determining what direction and services will improve the health and well being of the system. Care Coordination is basically build on relationship and that relationship must be develop in a trust filled, patient centered, supportive environment.**

Basic information needs to be collected and the plan should be a joint, patient care coordinator developed plan.

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today? **I am not sure of the extent of Care Coordination that is going on, whether formal or informal. As Assessment occurs this needs to be explored for each patient/family.**

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different? **Takes place in school, non-profit organization, religious organizations, between friends and in families to name a few. These informal and formal relationships need to be supported and nurtured. We are looking for results that lead to better lives, not credit for who did something.**

c. How can the ACC avoid duplicating or disrupting current care coordination relationships? **Allow providers to help patients and families and intervene to support the work closest to the patient**

and in the patient/families community. RCCO centric care coordination is distant for the patient/family and not in tune with the system that the patient/family currently functions.

d. What are the gaps in care coordination across the continuum of care? **There is a lack of understanding particular systems and a lack of relationship in the non-delegated system being created. It has lost its personal touch in most instances. In the pediatric system, there are gaps in hospital to community, particular for preemie babies, interaction with schools and day care, developmental screening and treatment, transportation support, health literacy, and transition to adulthood. All vital for the successful growth of children.**

15) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	Should the RCCO have a role? Yes	Should the RCCO have a role? No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma	☒	☐	☐	Reporting abuse and neglect, both child and elder and supporting the investigating agencies and helping with needed services not be ing provided by another agency.
Affordability (assistance with prescriptions or co-pays)	☒	☐	☐	Don't assist everyone, but have resources so that needed help can be obtained and the provider's identified services can be received.
Daycare / childcare	☐	☐	☐	Referral sources and help connecting to them
Economic stability & employment	☐	☐	☐	Referral sources and help connecting to them
Education	☐	☐	☐	Referral sources and help connecting to them
Environment	☐	☐	☐	I am not sure what this means.
Food access / nutrition	☐	☐	☐	Referral sources and help connecting to them
Health literacy	☒	☐	☐	Support practices with needed materials or development help and modalities for delaing with the problem in the practice.

Housing	☐	☐	☐	Referral sources and help connecting to them
Language or translation services	☒	☐	☐	RCCOs should support practices with easy and inexpensive ways to obtain immediate interpretation and translation of documents.
Literacy	☐	☐	☐	Referral sources and help connecting to them
Transportation	☒	☐	☐	Make sure that resources are available in all areas of the RCCO
Other	Please type your response here. Feel free to list as many non-medical factors as you want, and please explain how the RCCO should be involved.			

16) **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	**Coordinate care? Yes**	**No**	**In what capacity should these individuals coordinate care in the ACC Program?**
Advanced Practice (Registered) Nurses	☒	☐	Complicated medical care possibly for individuals being discharged from institutions and hospitals to insure Discharge plans are in place and the family the education and equipment they need to implement them. Also to monitor situation for a while to ensure that care is bing carried out.
Certified Addiction Councilors	☐	☒	
Certified Nurse Midwives	☒	☐	In OB Gyn office only
Community Health Workers	☒	☐	Practical feet on the ground; helath literacy helpers; follow up; know neighborhood and community resources
Generalists (BA/BS/MA/MS)	☒	☐	Best choice; know alittle about a lot, good problem solvers
Health Coaches	☐	☐	
Licensed Clinical Social Workers	☒	☐	Possibly for supervision; can also do behavioral health, grief/loss and palliative care.
Licensed Marriage and Family Therapist	☒	☐	See above
Licensed Mental Health Counselors	☒	☐	Need to be generalist good at all ages, see LCSW
Licensed Professional Counselor	☒	☐	See above
Masters of Public Health	☐	☒	

Medical Doctors / Doctors of Osteopathic Medicine	☐	☒	
Nurse Practitioners	☒	☐	In extremely complex medical or psych situation
Patient Navigators	☒	☐	Can provide very practical information to patients, help with health literacy, know area
Peer Advocates	☒	☐	Can help with practical information on community; can make calls and set up appointments
Promotoras	☐	☐	
Psychiatrists	☐	☒	
Psychologists	☐	☒	
Registered Nurses	☒	☐	Doing this work now
Social Workers	☒	☐	See LCSW
Wraparound facilitators	☐	☐	I don't know what these are, but might be lik Peer Advocates
Other	Please type your response here. School personnel, religious organizations and friends and family. Left off this list above are all the informal community folks that do most of this work. Grandparents, friends, neighbors, pastors and church members. Don't get stuck in this is only a PROFESSIONAL response.		

17) **Care coordination requirements** for specific **populations**. Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and infants	☒	☒	Preemies, born with equipment needs, O2, genetic abnormalities
Children	☒	☒	Above children older, blind, hearing loss, developmental delays, foster care
Children who are healthy, but in socially-complex environments	☐	☒	
Children involved in the foster care system	☒	☐	Legal, parental and behavioral issues as well as all the developmental issues of children and teens need special care and knowledge
Children with a chronic illness	☒	☐	Special knowledge of complex medical conditions, waviers, equipment, respite is necessary
Children with a serious emotional disturbance	☒	☐	Considered complex care need to understand needs of child and family

Children with medical complexity	☒	☐	See above in chronic illness
Children or youth with a behavioral health diagnosis or substance use disorder	☒	☐	See above in emotional disrtrubance
Transition-age adolescents	☒	☐	Persuading adult providers is hard
Parents and families	☒	☐	Need to understand family dynamics
Pregnant women	☒	☐	Complicated medical situation
Adults	☐	☐	
Adults who are healthy, but in socially-complex situations	☐	☐	
Adults with a chronic illness	☐	☐	
Adults with a behavioral health diagnosis or substance use disorder	☐	☐	
Clients involved in the criminal justice system	☐	☐	
Clients with a disability	☐	☐	
Clients in a nursing facility	☐	☐	
Elderly clients	☐	☐	
Frail elderly clients	☐	☐	
Clients in palliative care	☐	☐	
Other populations, please comment:			

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

Working in a collaborative mode with anyone connected with the patient. RCCO staff will need to learn about the legal and temporary nature of foster care and residential care and support schools; behavioral health and physicians in helping the child receiving care have a good care plan and make sure that plan follows the patient

19) How should care coordination be evaluated? How should its outcomes be measured?

There should be the development of process and clinical outcomes the show that care is happening. The measurements should be the same for delegates and RCCO care coordinator, any model of care coordination being provided by the RCCO. All patients should be assured they are receiving high quality planning and results no matter where their support and help is coming from.

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

a. What is the PMPM cost for providing care coordination services?

I believe there should be a basic payment for care coordination. This would cover the cost for monitoring, data support, and "being ready for anything. Cost $3-$4 PMPM

b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

Yes, acuity is important and costly Complex medical and social situations need more time, possibly travel and much more clinical knowledge to ensure positive outcomes. Cost $4.50 to $5 PMPM for high CRG patients and families.

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population? **YES**

a. **Care coordinator to client ratios.** If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

I base this answer on a mixed caseload of acuity as any practice would be. Caseloads should be monitored and even though a caseload can be up to 100, those limits don't always allow the best care. Supervision is important sand should be monitoring outcomes, worker ability and stress levels and at times modify the numbers. This is not a program about numbers it is a program about outcomes, patient satisfaction and worker stability.

Clients	
Fewer than 25	☐
26-50	☐
51-100	☒
101-200	☐
201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

The triple aim. Use care plans and goal attainment. Measurement will have to start with process outcomes, but as folks become more proficient outcomes could be decreased no shows, patient satisfaction, use of community resources, collaboration, care plans completed, increase immunization rates, fewer days missed from school and graduation rates of students.

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Care Coordination is best done where the child and family go for care, not over the phone miles away. Success lies in relationship not referral. Simple care plans should exist for all children with identified needs. Put care coordinators where children can be reached and have them collaborate with all those services involved with the patient.

Create systems where the legal needs of patients and families are supported. Housing needs, custody , violence, disability, school, and the acquisition of services are vitally important.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

All the things mentianed in the question are important for consistency. Borders between RCCOs are nonexistent to potients and no one should miss out on services becouse they see o pravider in anather RCCO. This program is PATIENT and FAMILY CENTRIC nat RCCO centric. This hos to be the center af oll decisions.

Functions: No function af o RCCO should look different to the customer, specialists, providers, potients, and fomilies moving from one ploce to another. If the service touches a custamer it MUST look and feel the some such os accessing services, contacting services, receiving services. Internolly RCCOs can be different, but a custamer should never hear "thot is not my practice, we don't da thot, or you will have to call this number."

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

They need to be in state company. A company that has experience with Medicaid clients and not in the business to promote anything, but good quality service is important. They should also have their office in the Region thy support. I would suggest that the hire folks that live in the region also. If possible, hire staff that has had to use services in the regions for their own needs. Give the RCCO a local feel.

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

This idea would certainly make the program more provider and patient centric than RCCO centric. it promotes service provision rather than infrastructure development. Instead of the RCCO doing everything a partnership would need to be developed with the practices and a more collaborative from a far plan would need to occur. It would be interesting.

This would also require the administrative part of the ACC to set manumit basic standards for all RCCOS. This might encourage RCCOs to put their emphasis on service provision.

The first RFP was looking for different approached for this program form the different RCCOs. Now, I think the basics of Administration and service provision should be mandated by HCPF and aloe the RCCOs to focus on patients and family needs and stopping developing infrastructure. Have the foundation developed by HCPF and all RCCOs adhere to that and develop up from that base to caring for its population.

27) Should the RCCO region maps change? Why or why not? If so, how?

I might be more efficient have them a line with the BHOs, if the BHO system remains. If not, the change I suggest is that Larimer County become part of the Front Range system instead of Region 1. It has more connections there.

28) Should the BHO region maps change? Why or why not? If so, how? **See above**

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

I have no idea how much it would cost. It would take a year, at least, if the company did not already have an infrastructure. All data, relationships and materials would have to transfer. There should have to be no hard feelings as this occurred. Both entities would have to have great integrity and understanding.

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

Improve attribution, decrease the time lag for data (not four months behind) , provide for the ability to pull reports on particular topics and stop adding things for everyone to do for a while. I understand that we are always after funding, but no one has time to adjust and look at results before we are moving on to something else.

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

I think this is possible. See #27. This would bring this situation into being. Already any practice can have a number of RCCOs to deal with. Competition might improve the current situation, but not at the expense of the practice and the patient/family.

Once a Provider contracts with the RCCO they need to be seen as contracting with every RCCO. The idea that this practices is mine and that one is yours is RCCO centric, not patient/family centric. That idea needs to change. Confusion does rain in the community resource and nonprofit world.

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

34) What role should RCCOs play in attributing clients to their respective PCMPs? **The same as they are doing now. They should not be in the business of assigning patients.**

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services*? Around common patients/families*

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

How about the Department of Education and every school district? Please stop leaving out children and their work.

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates? **They should continue to solicit input. They ca not do this work alone.**

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

42) How should the Department structure stakeholder engagement for the ACC as a whole? **Maintain Advisory groups, but use them for advice instead of reporting activities to them. These groups must be active participants and their view points be seen supportive and helpful. They may have ideas to make the program better. Use these folks as subject experts and advisors instead of once a quarter meeting attenders.**

How involved are you with the RCCO? How willing are you to be involved with the RCCO? What do the RCCOs need to do to get you interested in getting involved? **I am very active. I want to stay that way. I think that this movement can grow to really improve health and controls costs.**

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

a. If no, what are the gaps? **Hospitals are not participating. They all must participate to make this effort work successfully.**

b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities. **Children and their families are not a sub population, but currently are being treated that way. The emphasis has been going to "where the money is" to keep the RCCO functioning. You want to put an emphasis on whole person preventative care, look at you youngest members and don't think of them as a sub-population. They are the majority of your members.**

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

a. What role should hospitals play in the next iteration of the ACC Program?

b. What role should pharmacies play in the next iteration of the ACC Program?

c. What role should specialists play in the next iteration of the ACC Program?

d. What role should home health play in the next iteration of the ACC Program?

e. What role should hospice care play in the next iteration of the ACC Program?

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

g. What role should counties play in the next iteration of the ACC Program?

h. What role should local public health agencies play in the next iteration of the ACC Program?

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

45) How can RCCOs help to support clients and families in making and keeping appointments? **Should be done in the practices part of the Care Coordination if PMPM will support it.**

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP? **No, if we provide Care Coordination at the practice, the practice needs to decide how is is going to do that. CHWs are a good choice if paired with others. PMPM should be enough to defray the expenses of CHW.**

47) **Community Health Worker reimbursement.** Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement process	(Please check all that apply)
Independently bill	☐
On staff (salary) at Primary Care Medical Provider Clinic	☐
On staff (salary) at RCCO	☐
Per Member Per Month Payment	☒

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers? **Oral health is another service that should be integrated into practices. Services can be still administered the way they are now. Oral health is mandatory in all integrated care.**

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families. **See paragraph below.**

The Jaint Commissian hos identified the following 3 challenges as the "triple threot" to healthcare communication: 1. Longuoge borriers 2. Cultural borriers, 3. Low health literocy borriers.

Each RCCO must have a comprehensive strotegy to address effective communication (oral and written) with limited English ond culturolly different patients/families os well os those with low health literacy. What is your "argonization's" strotegy for addressing the triple threot on these three levels:
1. Building owareness af the "triple threot" to healthcore communicatian (1, 2, and 3 listed obave)
2. Identifying ond addressing systemic solutions to heolth literocy (signoge, website readability, handauts, phone trees, communicotians to potients, care coordination).
3. Implementing education/troining for providers ond staff in private practice and clinic settings in your regian to improve cammunicotians skills that lead to better health outcomes for all patients.

a. What does cultural competence mean to you? *See above*

b. What RCCO requirements would ensure cultural competency?

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

51) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

52) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

Practice Support

53) **Support for practices.** Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support: **See answer below the grid.**

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☐	☐	☐	☐
Network provider education	☐	☐	☐	☐
Assistance with practice redesign	☐	☐	☐	☐
Assistance with efficiency-enhancing activities	☐	☐	☐	☐
Provide web-based resources and directories	☐	☐	☐	☐
Provide practice-specific data reports	☐	☐	☐	☐
Provide clinical care guidelines and best practices.	☐	☐	☐	☐
Provide clinical screening tools	☐	☐	☐	☐
Provide health and functioning questionnaires	☐	☐	☐	☐
Provide chronic care templates	☐	☐	☐	☐
Provide registries	☐	☐	☐	☐
Offer client reminders	☐	☐	☐	☐
Offer client self-management tools	☐	☐	☐	☐
Offer educational materials about specific conditions	☐	☐	☐	☐
Supply behavioral health surveys	☐	☐	☐	☐
Supply other self-screening tools	☐	☐	☐	☐
Administer behavioral health surveys	☐	☐	☐	☐
Administer other self-screening tools	☐	☐	☐	☐
Prepare client action plans	☐	☐	☐	☐
Provide training on providing culturally-competent care	☐	☐	☐	☐
Provide training to supporting staff	☐	☐	☐	☐
Provide training on motivational interviewing	☐	☐	☐	☐
Provide tools and software for phone call and appointment tracking	☐	☐	☐	☐
Provide tools and resources for tracking labs, referrals, etc.	☐	☐	☐	☐
Provide referral and transitions of care checklists	☐	☐	☐	☐
Provide visit agendas or templates	☐	☐	☐	☐
Provide standing pharmacy order templates	☐	☐	☐	☐
Provide comprehensive directory of community resources	☐	☐	☐	☐
Provide directory of other resources	☐	☐	☐	☐
Provide materials regarding Nurse Advice Line	☐	☐	☐	☐
Ensure all tools and resources are centrally located on RCCO-specific website	☐	☐	☐	☐
Others	There are so many programs being funded to provide practice support, SIM, CHES and now TCPI, I believe the question is not what to provide, but how does the ACC fit into what is available to practices and not flood the practices with helpers from each for these initiatives. How can the			

programs work in collaboration with a single goal in mind and split up the work? All the tools and supports are great, but the process of helping practices will not be welcomed if the programs look uncoordinated and non-collaborative. Let's work together.

54) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

55) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes? **See Above**

56) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

57) Should the Department require that PCMPs utilize disease registries to manage the health of their population? NO . **Some practices cannot afford it.**

58) Please share any other advice or suggestions about provider support in the ACC.

Remember these practice are private businesses. You want to support them and not push them out of the program. Why don't RCCOs work with practices to make this plan?

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

Right now medical homes don't get rewards for good outcomes, unless the whole RCCO has the good outcomes. Is this fair? Or should a practice get rewards for good performance no matter how well the RCCO does?

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

62) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

63) What role – if any – should the RCCOs play in the distribution of payments to providers?

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

66) **Measuring Client experience.** Please complete the table below to indicate how the Department should measure Client/patient experience:

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☐	☐	
SF-12 Health Survey	☐	☐	
Other types of client interviews / surveys	☐	☐	
Patient Activation Measure	☐	☐	
Focus groups	☐	☐	
Other	Please type your response here.		

67) Knowing that, at this time, the Department only has claims data, how should population health be measured?

68) How should quality and performance data be reported to the RCCOs, PCMPs, and the public?

69) **Measures for payment.** Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☐
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

70) What percent of RCCO payments should be tied to measures or performance?

Percentage	
10-20%	☐
21-30%	☐
31-40%	☐
41-50%	☐
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☒

71) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?

72) Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?

73) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

74) **Incentive payment frequency**. Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	☐
Annually	☐
Other	☐

If you checked the "Other" box, please describe payment frequency below:

75) For potential offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

76) For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

Health Information Technology (HIT)

77) **Types of communication.** For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	☒
Text message	☐	☒
Web portal	☐	☒
Email	☐	☒
Telemedicine / Video chat	☐	☒
Face-to-face meeting	☐	☒
Smartphone app	☐	☒
Other: ALL formats are necessary to address specific needs that the other formats cannot; that's why they're there.		

78) **HIT investments by organizations.** For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below:

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	☐	☐
Digital care management tool	☐	☐
Care transitions alerts	☐	☐
Electronic Health Records (EHRs)	☐	☐
Health risk assessment software	☐	☐
Practice assessment tools	☐	☐
Practice management tools (scheduling, billing)	☐	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☐
Patient education/wellness tools	☐	☐
Provider/case manager directory	☐	☐
Shared decision-making tools	☐	☐
Telemedicine software	☐	☐
Other:	☐	☐
Other:	☐	☐

79) **Importance of technology by type.** The Department is working to determine what technology is in place, what technology is needed, and what technology should be standardized. For RCCOs, providers, and other organizations, use the table below to answer what HIT infrastructure outside of the 5DAC your organization would use to perform population health management activities. Tools are scored from 1-5, where 1 are those items least-likely to be used, and 5 are items most-likely to be used:

Tool	1 Least	2	3	4	5 Most
Population analytics / reporting / dashboard	☐	☒	☐	☐	☐
Care management tool	☐	☐	☒	☐	☐
Care transitions alerts	☒	☐	☐	☐	☐
Electronic Health Records (EHRs)	☐	☐	☐	☐	☒
Practice assessment tools	☒	☐	☐	☐	☐
Health risk assessment software	☐	☒	☐	☐	☒
Practice management tools (scheduling, billing)	☐	☐	☐	☐	☒
Client web portal for communicating care plan, services, benefit enrollment	☐	☐	☐	☐	☒
Patient education wellness tools	☐	☐	☒	☐	☐
Provider/case manager directory	☐	☒	☐	☐	☐
Shared decision-making tools	☐	☒	☐	☐	☐
Telemedicine	☐	☐	☐	☐	☒
Other:	☐	☐	☐	☐	☐

80) What are the primary barriers to RCCOs and providers increasing their use Health Information Technology to improve the performance of Primary Care Practices?

Possessing outdated tech (eg Windows XP, Office 2003), or next-to-no tech at all

Inability to use basic office management software (ie MS Office)

The Attribution algorithm is faulty; FIX IT. KEEP ADULTS OUT OF PEDIATRIC PRACTICES

Liability anxieties create inter-agency barriers related to sharing PHI

Releases are not standardized across Medicaid entities.

81) How can Health Information Technology support Behavioral Health Integration?

Improving assessment and identification of needs that lead to/exacerbate behavioral health issues

Reducing duplication of work; increasing real-time connections between providers

Improving security, enhancing communication, reducing cost, increasing user satisfaction

82) In the next iteration of the ACC, should there be a shared resource for data and analytics? Please describe the basic criteria for what a shared data and analytics platform needs to contain in order for it to be useful.

YES. Needs to have more data and greater end-user flexibility. It should allow end-user customization to accommodate diverse needs

83) Should there be a shared care management tool? Please describe the basic criteria for what a care management tool would need to contain in order for it to be useful.

YES. System could be similar to BUS, TRAILS, EPIC, etc. Standardization is VITAL to ensure consistency across providers, regions, and to improve audit efficiency

84) Should there be a shared population health management tool? Please describe the basic criteria for what a population health management tool would need to contain in order for it to be useful.

Standardization is VITAL to ensure consistency across providers, regions, and to improve audit efficiency

85) Please describe the functionality that a common Medicaid provider directory would need to contain in order for it to be useful.

Current functionality is sufficient, although mobile-optimization would be good. Regular updates (by providers for HCPF) should be required

86) How can the RCCOs support providers' access to actionable and timely clinical data?

Require HCPF to include more data and end-user functionality in the SDAC
Update ALL data every month (disregard 120-day timely filing delay)
MAKE HCPF FIX THE ATTRIBUTION ALGORITHM; INCORPORATE PEDIATRIC PRACTICE INFORMATION TO ELIMINATE ATTRIBUTION OF ADULTS TO PEDIATRIC ROSTERS

87) What are the HIT solutions that would benefit clients, providers, and RCCOs? Please comment on the parameters these tools or platforms would need to possess and the ways in which they could be used.

Standardized, regular, ADT info from hospitals
Standardized ROI for use by all Medicaid entities (FYI: it already exists, but no one uses it)

88) What technical assistance or resources related to HIT infrastructure should the RCCOs supply? This assistance or these resources could be for providers, social service organization, clients/families, or for others.

Assistance (one-on-one, classes, over-the-phone, web-based) on using parts of the SDAC; post TREO's SDAC webinar
Education, consultation on encryption, transmission, and storage of PHI

89) What role should health information exchange platforms like CORHIO or QHN play in the next iteration of the ACC?

Sharing of real-time ADT data
Need to include small and single-provider practices as well

90) Please share any information, advice, and suggestions you have about health information technology in the ACC Program.

"No Practice Left Behind"
Many providers lack the skills to implement anything but the simplest of electronic activities. Population health management involves use of technology that many (most?) do not possess. RCCO's are well-placed to help the providers in their areas improve, as a group, toward more effective population management.

Notes: Standard cover sheet added

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Shanna Wisdom
Location: Sterling, Logan, Colorado

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Northeast Colorado Health Department
Location: Logan, Morgan, Phillips, Sedgwick, Washington, and Yuma counties, Colorado
☒ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☐ Medical provider / PCMP / other provider
  i. Type or specialty: Click here to enter text.
  ii. Area of practice: Click here to enter text.
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☒ Other (please describe): Health Department

Are you currently involved in the ACC program?

☒ Yes
☐ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☒ 1-2 years
☐ 2-3 years

How have you been involved in the ACC program and what interaction have you had with RCCOs:
We are involved with the ACC program and the RCCOs through our involvement with the Healthy Communities program administered through HCPF. We have met with the RCCO in our region several times to discuss the possibility of becoming an ACC provider.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:
We accept and bill Medicaid for some client based programs at our agency including Family Planning and Immunizations.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely
☐ Likely
☒ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

Please feel welcome to describe why or why not using the space below.

☐ 3-4 years
☐ Since before the program was implemented.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

Using a regional approach to see what is going to work best for each region.

2) What is not working well in the ACC Program?

It is confusing for both clients and providers. Most components of the ACC Program are unknown and not well understood. The RCCOs are divided by region, but the regions are too large and not able to cover the entire region. Instead, it seems that wherever the RCCOs main office is located is the community that benefits most.

3) What is working best in the Behavioral Health Organization (BHO) system right now?

N/A

4) What is not working well in the BHO system?

N/A

5) What is working well with RCCO and BHO collaboration right now?

N/A

6) What is not working well with RCCO and BHO collaboration right now?

N/A

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

N/A

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed: N/A

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☐	☐	
Community Behavioral Health Services Rule	☐	☐	
Covered diagnoses list	☐	☐	
Different behavioral / physical health reimbursement	☐	☐	
Institutions for Mental Diseases exclusion	☐	☐	
OBH rules, reporting, or financing (regulatory differences between agencies)	☐	☐	
PCMP financing structure	☐	☐	
Per-member per-month amount	☐	☐	
Physical space constraints	☐	☐	
Privacy Laws (HIPAA, 42 CFR)	☐	☐	
Professional / cultural divisions	☐	☐	
RCCO or BHO contracts	☐	☐	
Staff capacity	☐	☐	
State/Federal rules or reporting requirements	☐	☐	
Technical resources / data sharing	☐	☐	
Training	☐	☐	
Others	Please type your response here.		

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

10) Please share any other general advice or suggestions you may have about behavioral health integration.

I think it will be difficult in rural communities to fully integrate physical and behavioral health care into one clinical setting. In many communities there are only a handful of healthcare providers and few behavioral health providers.

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination?

Ensuring that clients understand benefits and are able to access services to meet their needs.

b. How should RCCOs prioritize who receives care coordination first?

High Medicaid utilizers, individuals with chronic illness, and other special needs populations.

c. How should RCCOs identify clients and families who need care coordination?

Collaborate with HCPF to identify high utilizers/high needs individuals. Work with other care coordination programs to ensure that care coordination services are not being duplicated. Programs could include Healthcare Program for Children with Special Needs, Healthy Communities, Nurse Family Partnership, and Safecare.

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

There should be a database to track care coordination that is occurring anywhere (other care coordination programs and at the medical provider) including what care coordination is done at the RCCO level. Communication between the programs is necessary.

12) What services should be coordinated and are there services that should not be a part of care coordination?

Need to make sure that care coordination services are not being duplicated. May vary depending on area or region, as not all services are available in every region. There should be a standard to care coordination (applying for benefits, understanding what is covered, assistance with billing issues, assistance finding providers, assistance getting DME and other services, chronic disease management and prevention, etc.) and need to collaborate with other programs who are covering these programs. There are numerous programs that offer care coordination, but there is always eligibility criteria that leave gaps in services for some individuals. The RCCO and ACA could fill these gaps in service by providing care coordination to those individuals who are not eligible for other programs.

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

Insurance status, income, disability status, previous/current health and mental health conditions, and area of residence.

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today?

Healthcare Program for Children with Special Needs, Connect for Health Colorado, Department of Human Services, Healthy Communities, Patient Navigators at Medical Provider Offices, and Nurse Family Partnership.

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

There are several care coordination programs and most have a specific priority area or specialty. Most of the programs have eligibility criteria that individuals must meet before receiving services. Due to these eligibility criteria, many individuals do not qualify.

c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

Communication and collaboration among all care coordination programs. There should be a standard of care coordination that is available to everyone. Need to collaborate to find out what programs are already offering these services and find out where any gaps are. The ACC and RCCOs can fill the gaps in services and be the connection between the clients and other services they need.

d. What are the gaps in care coordination across the continuum of care?

Each care coordination program has different services they provide. Most programs focus on children and pregnant women. There are more gaps in services for adults, especially adults with disabilities or chronic illness.

15) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	**Should the RCCO have a role?** Yes	No	**Should the RCCOs coordinate with community supports and services?** Yes	**Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?**
Abuse, neglect, and trauma	☐	☒	☒	Connecting patients with the resource they need, but not actually providing the service.
Affordability (assistance with prescriptions or co-pays)	☒	☐	☒	

Daycare / childcare	☐	☒	☐	Connecting patients with the resource they need, but not actually providing the service.
Economic stability & employment	☐	☒	☒	Connect with local resources including Workforce centers
Education	☐	☒	☒	Connect with local resources including alternative schools and GED programs
Environment	☐	☒	☒	Coordinate with local resources including local health environmental health and fill gaps they do not cover
Food access / nutrition	☐	☒	☒	Coordinate with
Health literacy	☒	☐	☒	Ensure clients understand what is necessary
Housing	☐	☒	☒	Coordinate with local resources including subsidized properties
Language or translation services	☒	☒	☐	
Literacy	☐	☒	☐	
Transportation	☒	☐	☐	Transportation in rural communities is often a barrier to receiving services, so coordinating and assisting with that aspect is important
Other	Please type your response here. Feel free to list as many non-medical factors as you want, and please explain how the RCCO should be involved.			

16) **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	**Coordinate care?** Yes	No	**In what capacity should these individuals coordinate care in the ACC Program?**
Advanced Practice (Registered) Nurses	☒	☐	In-depth chronic disease counseling, management, and prevention. Physical health checks including blood work and blood pressure.
Certified Addiction Councilors	☒	☐	Provide counseling for individuals with substance use disorders including all illegal drugs, marijuana, cigarettes, and alcohol, etc.

Certified Nurse Midwives	☒	☐	Provide information about importance of prenatal care, birth, etc.
Community Health Workers	☒	☐	Fill in the gaps where other services are not offered. Refer to other services. Be the connection between the system and the client.
Generalists (BA/BS/MA/MS)	☒	☐	Fill in the gaps where other services are not offered. Refer to other services. Be the connection between the system and the client.
Health Coaches	☒	☐	Fill in the gaps where other services are not offered. Refer to other services. Be the connection between the system and the client.
Licensed Clinical Social Workers	☒	☐	Provide counseling in a variety of areas.
Licensed Marriage and Family Therapist	☒	☐	Provide counseling in a variety of areas.
Licensed Mental Health Counselors	☒	☐	Provide counseling in a variety of areas.
Licensed Professional Counselor	☒	☐	Provide counseling in a variety of areas.
Masters of Public Health	☒	☐	Fill in the gaps where other services are not offered. Refer to other services. Be the connection between the system and the client.
Medical Doctors / Doctors of Osteopathic Medicine	☒	☐	Provide in-depth information on chronic disease prevention
Nurse Practitioners	☒	☐	Provide in-depth information on chronic disease prevention
Patient Navigators	☒	☐	Fill in the gaps and connect clients/patients to services in their communities. Be a liaison between the client and the healthcare system.
Peer Advocates	☒	☐	Connect patients with local resources and assistance navigating systems they, themselves, have been part of.
Promotoras	☒	☐	Fill in the gaps and connect clients/patients to services in their communities. Be a liaison between the client and the healthcare system.
Psychiatrists	☒	☐	Routine care and referrals to other community resources if needed.
Psychologists	☒	☐	Routine care and referrals to other community resources if needed.

Registered Nurses	☒	☐	Routine care and referrals to other community resources if needed. In-depth knowledge about chronic disease prevention.
Social Workers	☒	☐	Routine care and referrals to other community resources if needed.
Wraparound facilitators	☒	☐	Fill in the gaps and connect clients/patients to services in their communities. Be a liaison between the client and the healthcare system.
Other	Please type your response here.		

17) **Care coordination requirements for specific populations**. Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and infants	☐	☒	
Children	☐	☒	
Children who are healthy, but in socially-complex environments	☒	☐	Need to know what community resources there are to assist.
Children involved in the foster care system	☒	☐	Need case manager/community worker to help navigate the child and involved families through the complex system to make sure every need is being addressed. Must be knowledgeable about many systems.
Children with a chronic illness	☒	☐	Need to know what community resources are there to assist and how to navigate through those systems.
Children with a serious emotional disturbance	☒	☐	Schools, social workers/therapists, etc. need to be involved and work together for treatment plan.
Children with medical complexity	☒	☐	Need to know what community resources are there to assist and how to navigate through those systems.
Children or youth with a behavioral health diagnosis or substance use disorder	☒	☐	Need to know what community resources are there to assist and how to navigate through the system.
Transition-age adolescents	☐	☒	
Parents and families	☐	☒	
Pregnant women	☒	☐	Need to know what community resources are there to assist and how to navigate through the system.
Adults	☐	☒	

Adults who are healthy, but in socially-complex situations	☒	☐	Need to know what community resources there are to assist.
Adults with a chronic illness	☒	☐	Need to know what community resources are there to assist and how to navigate through those systems.
Adults with a behavioral health diagnosis or substance use disorder	☒	☐	Need to know what community resources are available there are to assist.
Clients involved in the criminal justice system	☐	☒	
Clients with a disability	☒	☐	Need to know what community resources are available
Clients in a nursing facility	☐	☒	
Elderly clients	☒	☐	Need to know what community resources are available and how to navigate the systems they are part of.
Frail elderly clients	☒	☐	Need to know what community resources are available and how to navigate the systems they are part of.
Clients in palliative care	☒	☒	
Other populations, please comment:			

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

I envision them having a good understanding of the systems, to make sure there is a continuity of care for the children that move within the foster care system. Ensuring that the children remain on Medicaid and are getting the appropriate preventive care while in foster care. Referring to the appropriate behavioral health resources and other community resources if necessary.

19) How should care coordination be evaluated? How should its outcomes be measured?

Medicaid billing information (preventive services, high cost procedures). Number of interactions and contacts with clients. Agency collaboration and processes.

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

a. What is the PMPM cost for providing care coordination services?

N/A

b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

N/A

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

Yes. From my opinion, it seems that care coordination is about quantity instead of quality. There is a significant learning curve associated with being an effective care coordinator and sufficient time and attention needs to be paid to the coordination and training of other staff members. All of this in addition to having enough staff capacity to assist clients through the various systems they may be involved with.

a. **Care coordinator to client ratios.** If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☐
51-100	☐
101-200	☐
201-500	☐
501-1,000	☒
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

Medicaid billing (preventive and high cost services), community resources (oral health screenings/referrals, vision screenings, developmental screenings, social/emotional screenings). There are local resources that many families take advantage of and the current evaluation only takes into account the services that can be billed to Medicaid. It seems like we push certain services depending on what measures are being evaluated without considering or asking what the clients may actually need.

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

N/A

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

Care coordination requirements either to be met by the RCCO or in collaboration with local community resources. Data sharing between the RCCO and community organizations who are also doing care coordination. Contracting with providers to be part of the ACC, but also to accept Medicaid in general. In our region there is a lack of healthcare, vision, and dental providers who accept adult Medicaid or greatly limit the number of patients they see.

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

Office locations/capability in every city to be served and current relationships with community partners. Adequate staff capacity.

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

Some RCCOs probably have more capacity to reach clients than others. I think whoever is logistically able to provide care coordination for the clients should be able to.

27) Should the RCCO region maps change? Why or why not? If so, how?

Yes. I think the regions are too large. There is not enough staff capacity at some of the RCCOs to realistically reach the clients and area they are supposed to serve. Rural versus urban needs to be considered.

28) Should the BHO region maps change? Why or why not? If so, how?

N/A

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

N/A

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

N/A

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

N/A

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

I do not think there should be multiple RCCOs per region. I do not think the RCCOs should compete for clients and providers.

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

N/A

34) What role should RCCOs play in attributing clients to their respective PCMPs?

N/A

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

Data sharing between programs that are administered through the Colorado Department of Public Health and Environment to ensure we are working towards the same goals without duplicating services or programs.

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

Data sharing between programs. Care coordination at the local Department of Human Services offices. Medicaid billing for services.

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

Care coordination at the Connect for Health Assistance Sites.

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

N/A

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

Being available at the local level to build relationships. Focus groups and other ways of gathering qualitative information for the area.

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

Being available at the local level to build relationships. Hosts meetings, understand how everyone can collaborate, provide necessary resources and training.

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

Being available locally to build a strong relationship in the respective community.

42) How can the Department structure stakeholder engagement for the ACC as a whole?

Brief online surveys, focus groups, Q&A sessions. Many people do not understand the ACC, or only understand a part of it and do not understand how it all works together. The Department needs to gather information from the correct sources and how individuals understand the ACC on different levels. Every level needs to be included to get a realistic idea of what the best practices should be. Clients, community health workers, billing staff, nurses, physicians, front office staff, DHS eligibility technicians, mental health professionals, CEOs, managers, etc. all need to be included.

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

a. If no, what are the gaps?

In our region, vision, dental, specialists, and mental health providers are lacking for all ages, and all resources are lacking for adults including healthcare providers.

b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

Adults and adults/children with disabilities.

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

a. What role should hospitals play in the next iteration of the ACC Program?

Ensuring that clients are eligible for services and assist them with billing issues associated with hospital services. Track and case manage clients that have utilized the emergency department.

b. What role should pharmacies play in the next iteration of the ACC Program?

Ensuring that clients are eligible for prescriptions. Limit clients from having to pay out of pocket due to errors in the system. Should be able to assist clients with pharmacy billing issues.

c. What role should specialists play in the next iteration of the ACC Program?

Ensuring that clients are eligible for services. Assist with billing issues related to services provided. Collaborate with local organizations in communities that do not have adequate specialists to provide services to clients in those counties.

d. What role should home health play in the next iteration of the ACC Program?

Ensuring that clients are eligible for services. Assist with navigating the home health systems while providing the care that the client needs. Collaborate with pharmacies, physicians, hospitals on behalf of the clients.

e. What role should hospice care play in the next iteration of the ACC Program?

Ensure that clients are eligible for services. Assist with navigating the hospice care system.

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

Provide outreach and awareness to other local organizations who may need to refer clients to Single Entry Points. In our region, there is confusion as to what organizations are the Single Entry Points and what they are capable of assisting clients with.

g. What role should counties play in the next iteration of the ACC Program?

Counties should assist with eligibility for income based programs and provide referrals to other agencies.

h. What role should local public health agencies play in the next iteration of the ACC Program?

Local public health agencies should be a liaison between clients, healthcare, mental health, DHS, and other community partners to best assist the client. They should know what organizations provide the specific services to refer clients to. Important to build strong relationships with all of the partner agencies to best serve clients.

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

Community partners are important to the ACC Program, depending on what services they provide. Many community partners can refer clients to appropriate services, emphasize the importance of preventive care, and be in direct contact with clients. It is important to include them for the areas that they specialize in so that care coordination efforts are not duplicated in each community.

45) How can RCCOs help to support clients and families in making and keeping appointments?

Reminder phone calls, assistance with transportation, education on the importance of preventive care and Medicaid reimbursement and the importance of showing up for appointments

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

Community Health Workers or Patient Navigators should be required as part of the next RFP. Provider offices and organizations operate differently, but the resources available to clients in their respective communities are the same. There should be a standard Community Health Worker training for all ACC Community Health Workers/Patient Navigators with a focus on the specific community they will serve. The training could be broken down by county or small regions with similar resources. It is very important for the health workers to be familiar with the communities they serve to be able to refer clients to a wide variety of services and conduct follow-up.

47) **Community Health Worker reimbursement.** Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement process	(Please check all that apply)
Independently bill	☒

On staff (salary) at Primary Care Medical Provider Clinic	☒
On staff (salary) at RCCO	☒
Per Member Per Month Payment	☐

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

Assist dental providers to become Medicaid providers. In our region, the Medicaid reimbursement rate and the rate of no shows is detrimental to our independent dental providers. They need assistance in navigating the system of becoming a Medicaid provider.

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you?

Cultural competence means that you are able to understand and accept diversity. Ethnic, racial, monetary, class, etc. diversity are all examples.

b. What RCCO requirements would ensure cultural competency?

Providing/funding training opportunities for community partners and healthcare and mental health providers. It is important the community as a whole be culturally competent.

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?

They need to understand poverty and the affect is has on individuals. They need to understand and accept the different cultures and backgrounds that clients come from. They need to be open-minded and respectful. Bilingual if possible or have the resources to be able to translate.

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

Training, continuing education requirements

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

N/A

51) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

Collaborate with emergency departments to share data about high utilizers to see if something can be done to intervene on the individual level. Education about preventive care and the proper way to utilize the emergency department.

52) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

Practice Support

53) **Support for practices.** Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☒	☐	☐	☐
Network provider education	☒	☐	☐	☐
Assistance with practice redesign	☒	☐	☐	☐
Assistance with efficiency-enhancing activities	☒	☐	☐	☐
Provide web-based resources and directories	☒	☐	☐	☐
Provide practice-specific data reports	☒	☐	☐	☐
Provide clinical care guidelines and best practices.	☒	☐	☐	☐
Provide clinical screening tools	☒	☐	☐	☐
Provide health and functioning questionnaires	☒	☐	☐	☐
Provide chronic care templates	☒	☐	☐	☐
Provide registries	☒	☐	☐	☐
Offer client reminders	☒	☐	☐	☐
Offer client self-management tools	☒	☐	☒	☒
Offer educational materials about specific conditions	☒	☐	☒	☒
Supply behavioral health surveys	☒	☐	☒	☐
Supply other self-screening tools	☒	☐	☒	☐
Administer behavioral health surveys	☒	☐	☐	☐
Administer other self-screening tools	☒	☐	☐	☐
Prepare client action plans	☒	☐	☐	☐
Provide training on providing culturally-competent care	☒	☐	☐	☐
Provide training to supporting staff	☒	☐	☐	☐
Provide training on motivational interviewing	☒	☐	☐	☐
Provide tools and software for phone call and appointment tracking	☒	☐	☐	☐
Provide tools and resources for tracking labs, referrals, etc.	☒	☐	☐	☐
Provide referral and transitions of care checklists	☒	☐	☐	☐
Provide visit agendas or templates	☒	☐	☐	☐
Provide standing pharmacy order templates	☒	☐	☐	☐
Provide comprehensive directory of community resources	☒	☐	☐	☐
Provide directory of other resources	☒	☐	☐	☐
Provide materials regarding Nurse Advice Line	☒	☐	☒	☒
Ensure all tools and resources are centrally located on RCCO-specific website	☒	☐	☐	☐
Others				

54) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

Evidence-based chronic disease management assessments, educational information, etc.

55) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

N/A

56) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

Client behaviors and outcomes

57) Should the Department require that PCMPs utilize disease registries to manage the health of their population?

No, I do not think that disease registries should be used to manage populations.

58) Please share any other advice or suggestions about provider support in the ACC.

N/A

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

N/A

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

N/A

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

N/A

62) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited 5ervice Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

N/A

63) What role – if any – should the RCCOs play in the distribution of payments to providers?

N/A

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

N/A

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

N/A

66) **Measuring Client experience.** Please complete the table below to indicate how the Department should measure Client/patient experience:

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☐	☐	
SF-12 Health Survey	☐	☐	
Other types of client interviews / surveys	☐	☐	
Patient Activation Measure	☐	☐	
Focus groups	☐	☐	
Other	Please type your response here.		

67) Knowing that, at this time, the Department only has claims data, how should population health be measured?

Yearly public health led community-wide assessment

68) How should quality and performance data be reported to the RCCOs, PCMPs, and the public?

N/A

69) **Measures for payment.** Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☐
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

70) What percent of RCCO payments should be tied to measures or performance?

Percentage	
10-20%	☐
21-30%	☐
31-40%	☐
41-50%	☐
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

71) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?

No, RCCO's should not be paid on the same KPIs across the state. KPIs can be standard across the state, but payment should not be based solely on those indicators.

72) Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?

Reimbursement could be a mixture of comparison to national standards and based on improvement.

73) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

Many significant health changes cannot be measured on a monthly or regular basis and would only show change if measured less often. It is important to use claims data to get an overview of trends, but it is also important to look at more qualitative measures specific to the clinic or region.

74) **Incentive payment frequency.** Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	☒
Annually	☐
Other	☐

If you checked the "Other" box, please describe payment frequency below:

75) For potential offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

N/A

76) For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

N/A

Health Information Technology (HIT)

77) **Types of communication.** For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	☐
Text message	☐	☐
Web portal	☐	☐
Email	☐	☐
Telemedicine / Video chat	☐	☐
Face-to-face meeting	☐	☐
Smartphone app	☐	☐
Other:		

78) **HIT investments by organizations.** For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below:

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	☐	☐
Digital care management tool	☐	☐
Care transitions alerts	☐	☐
Electronic Health Records (EHRs)	☐	☐
Health risk assessment software	☐	☐
Practice assessment tools	☐	☐
Practice management tools (scheduling, billing)	☐	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☐
Patient education/wellness tools	☐	☐
Provider/case manager directory	☐	☐
Shared decision-making tools	☒	☐
Telemedicine software	☐	☐
Other:	☐	☐
Other:	☐	☐

79) **Importance of technology by type.** The Department is working to determine what technology is in place, what technology is needed, and what technology should be standardized. For RCCOs, providers, and other organizations, use the table below to answer what HIT infrastructure outside of the 5DAC your organization would use to perform population health management activities. Tools are scored from 1-5, where 1 are those items least-likely to be used, and 5 are items most-likely to be used:

Tool	1 Least	2	3	4	5 Most
Population analytics / reporting / dashboard	☐	☐	☐	☒	☐
Care management tool	☐	☐	☐	☒	☐
Care transitions alerts	☐	☐	☐	☒	☐
Electronic Health Records (EHRs)	☐	☐	☐	☐	☒
Practice assessment tools	☐	☐	☐	☒	☐
Health risk assessment software	☐	☐	☐	☒	☐
Practice management tools (scheduling, billing)	☐	☐	☐	☒	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☐	☐	☒	☐
Patient education wellness tools	☐	☐	☐	☒	☐
Provider/case manager directory	☐	☐	☐	☒	☐
5hared decision-making tools	☐	☐	☐	☒	☐
Telemedicine	☐	☒	☒	☐	☐
Other:	☐	☐	☐	☐	☐

80) What are the primary barriers to RCCOs and providers increasing their use Health Information Technology to improve the performance of Primary Care Practices?

The cost associated with implementing the system itself and the time to train staff on a new system.

81) How can Health Information Technology support Behavioral Health Integration?

N/A

82) In the next iteration of the ACC, should there be a shared resource for data and analytics? Please describe the basic criteria for what a shared data and analytics platform needs to contain in order for it to be useful.

N/A

83) Should there be a shared care management tool? Please describe the basic criteria for what a care management tool would need to contain in order for it to be useful.

N/A

84) Should there be a shared population health management tool? Please describe the basic criteria for what a population health management tool would need to contain in order for it to be useful.

N/A

85) Please describe the functionality that a common Medicaid provider directory would need to contain in order for it to be useful.

It would need to be broken down by county/city, specialty (general, ob-gyn, etc.), name of practice, address, phone number, and whether they are accepting new clients and adults. It doesn't seem as useful to break down the individual physicians, but rather to have the practice name. Individual physicians at a given practice change very frequently so it is hard to keep up to date. In our region, there may be 50 providers, but in only 10 locations.

86) How can the RCCOs support providers' access to actionable and timely clinical data?

N/A

87) What are the HIT solutions that would benefit clients, providers, and RCCOs? Please comment on the parameters these tools or platforms would need to possess and the ways in which they could be used.

N/A

88) What technical assistance or resources related to HIT infrastructure should the RCCOs supply? This assistance or these resources could be for providers, social service organization, clients/families, or for others.

N/A

89) What role should health information exchange platforms like CORHIO or QHN play in the next iteration of the ACC?

N/A

90) Please share any information, advice, and suggestions you have about health information technology in the ACC Program.

N/A

Colorado Department of Health Care Policy and Financing

RFI Response Received and Recorded.

Serial Number: 035

Accepted by: KJDW

Notes:

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Ronne Hines
Location: Denver Colorado

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Department of Regulatory Agencies, Division of Professions and Occupations
Location: Denver, Colorado
☒ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☐ Medical provider / PCMP / other provider
  i. Type or specialty: Click here to enter text.
  ii. Area of practice: Click here to enter text.
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☒ Other (please describe): State Agency

Are you currently involved in the ACC program?

☐ Yes
☒ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☐ 3-4 years

How have you been involved in the ACC program and what interaction have you had with RCCOs:

Click here to enter text.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:

As a sister state agency, we keep abreast of programs that affect any segment of Colorado's regulated healthcare workforce.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☒ N/A

Please feel welcome to describe why or why not using the space below.

☐ Since before the program was implemented.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

2) What is not working well in the ACC Program?

3) What is working best in the Behavioral Health Organization (BHO) system right now?

4) What is not working well in the BHO system?

5) What is working well with RCCO and BHO collaboration right now?

6) What is not working well with RCCO and BHO collaboration right now?

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

Outreach. Integrated care has been a topic of discussion for many years, but confusion remains. Providers working in traditional practice settings have many questions about how the new systems can work. From a regulatory perspective, they need to know what legal and regulatory issues may limit or expand opportunities to work in more integrated settings. Care providers need to know what is acceptable and what is not, how reimbursement will work and how they need to integrate compliance with the various professions working within the integrated model. As an example, mental health licensees must have a mandatory disclosure form on file for clients they are treating. How does that fit into integrated practice? Also, how do federal requirements for psychotherapy record protection and protection of drug and alcohol treatment records play into the integrated healthcare model? Similar questions exist for doctors, physician assistants and advance practice nurses who provide primary care. These professions are typically unfamiliar with the different requirements related to mental health such as record retention and disclosure forms. Increasing outreach and educational initiatives that explain what integrated care really means and looks like is essential. This outreach should not just be for those currently providing treatment in an integrated model. Many may be interested and not know where to find the information. Professional associations such as the National Association of Social Workers - Colorado Chapter and the Colorado Psychological Association may be able to provide further information in this area.

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☐	☐	
Community Behavioral Health Services Rule	☐	☐	
Covered diagnoses list	☐	☐	
Different behavioral / physical health reimbursement	☐	☐	
Institutions for Mental Diseases exclusion	☐	☐	
OBH rules, reporting, or financing (regulatory differences between agencies)	☐	☐	
PCMP financing structure	☐	☐	
Per-member per-month amount	☐	☐	
Physical space constraints	☐	☐	
Privacy Laws (HIPAA, 42 CFR)	☒	☐	As outlined in Q7
Professional / cultural divisions	☒	☐	Many primary care providers are unfamiliar with the integrated approach
RCCO or BHO contracts	☐	☐	
Staff capacity	☐	☐	
State/Federal rules or reporting requirements	☐	☐	
Technical resources / data sharing	☐	☐	
Training	☐	☐	
Others	Please type your response here.		

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

10) Please share any other general advice or suggestions you may have about behavioral health integration.

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination?

b. How should RCCOs prioritize who receives care coordination first?

c. How should RCCOs identify clients and families who need care coordination?

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

12) What services should be coordinated and are there services that should not be a part of care coordination?

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today?

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

d. What are the gaps in care coordination across the continuum of care?

15) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	Should the RCCO have a role? Yes	No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma	☐	☐	☐	
Affordability (assistance with prescriptions or co-pays)	☐	☐	☐	
Daycare / childcare	☐	☐	☐	
Economic stability & employment	☐	☐	☐	
Education	☐	☐	☐	
Environment	☐	☐	☐	
Food access / nutrition	☐	☐	☐	
Health literacy	☐	☐	☐	
Housing	☐	☐	☐	
Language or translation services	☐	☐	☐	
Literacy	☐	☐	☐	
Transportation	☐	☐	☐	
Other	Please type your response here. Feel free to list as many non-medical factors as you want, and please explain how the RCCO should be involved.			

16) **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	Coordinate care? Yes	Coordinate care? No	In what capacity should these individuals coordinate care in the ACC Program?
Advanced Practice (Registered) Nurses	☒	☐	Yes, within their scope of practice (SOP). APRNs are direct care providers and may not be willing to lead care coordination.
Certified Addiction Councilors	☐	☒	May be too specialized for care coordination.
Certified Nurse Midwives	☒	☐	Yes, within their scope of practice (SOP). CNMs are direct care providers and may not be willing to lead care coordination.
Community Health Workers	☐	☐	
Generalists (BA/BS/MA/MS)	☐	☐	
Health Coaches	☐	☒	These are unlicensed.
Licensed Clinical Social Workers	☒	☐	
Licensed Marriage and Family Therapist	☒	☐	
Licensed Mental Health Counselors	☐	☐	Not sure what professionals are included in this category. This is not a recognized profession in Colorado.
Licensed Professional Counselor	☒	☐	
Masters of Public Health	☐	☐	
Medical Doctors / Doctors of Osteopathic Medicine	☒	☐	Yes. Doctors are direct care providers and may not be willing to lead care coordination.
Nurse Practitioners	☒	☐	Yes, within their scope of practice (SOP). NPs are direct care providers and may not be willing to lead care coordination.
Patient Navigators	☐	☐	
Peer Advocates	☐	☐	
Promotoras	☐	☐	
Psychiatrists	☐	☐	
Psychologists	☒	☐	

Registered Nurses	☒	☐	Yes, within their scope of practice (SOP). APRNs are direct care providers and may not be willing to lead care coordination.
Social Workers	☐	☐	
Wraparound facilitators	☐	☐	
Other	Please type your response here.		

17) **Care coordination requirements for specific populations.** Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and infants	☐	☐	
Children	☐	☐	
Children who are healthy, but in socially-complex environments	☐	☐	
Children involved in the foster care system	☐	☐	
Children with a chronic illness	☐	☐	
Children with a serious emotional disturbance	☐	☐	
Children with medical complexity	☐	☐	
Children or youth with a behavioral health diagnosis or substance use disorder	☐	☐	
Transition-age adolescents	☐	☐	
Parents and families	☐	☐	
Pregnant women	☐	☐	
Adults	☐	☐	
Adults who are healthy, but in socially-complex situations	☐	☐	
Adults with a chronic illness	☐	☐	
Adults with a behavioral health diagnosis or substance use disorder	☐	☐	
Clients involved in the criminal justice system	☐	☐	
Clients with a disability	☐	☐	
Clients in a nursing facility	☐	☐	
Elderly clients	☐	☐	
Frail elderly clients	☐	☐	
Clients in palliative care	☐	☐	
Other populations, please comment:			

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

19) How should care coordination be evaluated? How should its outcomes be measured?

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

    a. What is the PMPM cost for providing care coordination services?

    b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

    a. **Care coordinator to client ratios.** If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☐
51-100	☐
101-200	☐
201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

27) Should the RCCO region maps change? Why or why not? If so, how?

28) Should the BHO region maps change? Why or why not? If so, how?

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

34) What role should RCCOs play in attributing clients to their respective PCMPs?

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

The Division of Professions and Occupations (DPO) at the Department of Regulatory Agencies is the sole regulatory body for 29 different healthcare professions. As the ACC continues to grow and new ideas spawn, the ACC must communicate with DPO to ensure regulatory barriers do not inhibit Medicaid client's access to integrated care. However, while DORA wants Medicaid clients to have good access to the services they need, it cannot happen at the expense of patient safety. Healthcare providers should be able to work to the full extent of their scope of practice as the healthcare system continues to move through an era of great transformation. As regulators, the Division must ensure that healthcare providers can thrive in their communities with minimal regulatory burden and an appropriate amount of consumer protections in place.

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

42) How should the Department structure stakeholder engagement for the ACC as a whole?

The ACC model touches many parts of an individual Medicaid client's community. Therefore, the Department needs to place the Medicaid client in the center and engage with any system or organization that may touch the client's overall health or healthcare services. Once the systems and organizations are identified, the Department can begin to see how an entire community can work together to better the health of its citizenry which includes Medicaid clients. This will involve private businesses, public programs, public-private partnerships, non-profits and philanthropic entities that may have a willingness to help, but lack an understanding of how to engage. Bridging that gap will be key. As a stakeholder, DORA wants to know about the ACC's expectations for providers and how those expectations intersect with various scopes of practice and other variables within the regulatory structures. This is vital to ensure providers and consumers interact in a safe, consumer centered system.

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

a. If no, what are the gaps?

b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

a. What role should hospitals play in the next iteration of the ACC Program?

b. What role should pharmacies play in the next iteration of the ACC Program?

Pharmacies should clearly communicate what drugs they have available and which drugs have been approved for auto-substitution by a hospital's Pharmacy & Therapeutics Committee. In the case of hospital pharmacies, the auto-substitution can be a key factor in cost savings efforts. At the same time, pharmacies need to understand which of the approved drugs will be covered under Medicaid. This will help avoid patient confusion after patient discharge, when billing occurs for drugs used while at the hospital. This also will help avoid situations where patients obtain their prescriptions in a retail pharmacy setting and discover that certain prescriptions are not covered by Medicaid. In these circumstances, consumers are sometimes left with a heavy cost burden. In addition, pharmacists should work with Medicaid clients and their prescribing practitioners to avoid therapeutic duplication. They can provide the same level of care without unnecessary or duplicative costs associated with therapeutic duplication.

c. What role should specialists play in the next iteration of the ACC Program?

d. What role should home health play in the next iteration of the ACC Program?

e. What role should hospice care play in the next iteration of the ACC Program?

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

g. What role should counties play in the next iteration of the ACC Program?

h. What role should local public health agencies play in the next iteration of the ACC Program?

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

45) How can RCCOs help to support clients and families in making and keeping appointments?

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

47) **Community Health Worker reimbursement**. Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement process	(Please check all that apply)
Independently bill	☐
On staff (salary) at Primary Care Medical Provider Clinic	☐
On staff (salary) at RCCO	☐
Per Member Per Month Payment	☐

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you?

b. What RCCO requirements would ensure cultural competency?

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

51) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

52) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

Practice Support

53) **Support for practices**. Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☐	☐	☐	☐
Network provider education	☐	☐	☐	☐
Assistance with practice redesign	☐	☐	☐	☐
Assistance with efficiency-enhancing activities	☐	☐	☐	☐
Provide web-based resources and directories	☐	☐	☐	☐
Provide practice-specific data reports	☐	☐	☐	☐
Provide clinical care guidelines and best practices.	☐	☐	☐	☐
Provide clinical screening tools	☐	☐	☐	☐
Provide health and functioning questionnaires	☐	☐	☐	☐
Provide chronic care templates	☐	☐	☐	☐
Provide registries	☐	☐	☐	☐
Offer client reminders	☐	☐	☐	☐
Offer client self-management tools	☐	☐	☐	☐
Offer educational materials about specific conditions	☐	☐	☐	☐
Supply behavioral health surveys	☐	☐	☐	☐
Supply other self-screening tools	☐	☐	☐	☐
Administer behavioral health surveys	☐	☐	☐	☐
Administer other self-screening tools	☐	☐	☐	☐
Prepare client action plans	☐	☐	☐	☐
Provide training on providing culturally-competent care	☐	☐	☐	☐
Provide training to supporting staff	☐	☐	☐	☐
Provide training on motivational interviewing	☐	☐	☐	☐
Provide tools and software for phone call and appointment tracking	☐	☐	☐	☐
Provide tools and resources for tracking labs, referrals, etc.	☐	☐	☐	☐
Provide referral and transitions of care checklists	☐	☐	☐	☐
Provide visit agendas or templates	☐	☐	☐	☐
Provide standing pharmacy order templates	☐	☐	☐	☐
Provide comprehensive directory of community resources	☐	☐	☐	☐
Provide directory of other resources	☐	☐	☐	☐
Provide materials regarding Nurse Advice Line	☐	☐	☐	☐
Ensure all tools and resources are centrally located on RCCO-specific website	☐	☐	☐	☐
Others				

54) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

55) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

56) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

57) Should the Department require that PCMPs utilize disease registries to manage the health of their population?

58) Please share any other advice or suggestions about provider support in the ACC.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

62) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

63) What role – if any – should the RCCOs play in the distribution of payments to providers?

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

66) **Measuring Client experience.** Please complete the table below to indicate how the Department should measure Client/patient experience:

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☐	☐	
SF-12 Health Survey	☐	☐	
Other types of client interviews / surveys	☐	☐	
Patient Activation Measure	☐	☐	
Focus groups	☐	☐	
Other	Please type your response here.		

67) Knowing that, at this time, the Department only has claims data, how should population health be measured?

68) How should quality and performance data be reported to the RCCOs, PCMPs, and the public?

69) **Measures for payment.** Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☐
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

70) What percent of RCCO payments should be tied to measures or performance?

Percentage	
10-20%	☐
21-30%	☐
31-40%	☐
41-50%	☐
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

71) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?

72) Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?

73) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

74) **Incentive payment frequency**. Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	☐
Annually	☐
Other	☐

If you checked the "Other" box, please describe payment frequency below:

75) For potential offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

76) For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

Health Information Technology (HIT)

77) **Types of communication.** For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	☐
Text message	☐	☐
Web portal	☐	☐
Email	☐	☐
Telemedicine / Video chat	☐	☐
Face-to-face meeting	☐	☐
Smartphone app	☐	☐
Other:		

78) **HIT investments by organizations.** For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below:

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	☐	☐
Digital care management tool	☐	☐
Care transitions alerts	☐	☐
Electronic Health Records (EHRs)	☐	☐
Health risk assessment software	☐	☐
Practice assessment tools	☐	☐
Practice management tools (scheduling, billing)	☐	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☐
Patient education/wellness tools	☐	☐
Provider/case manager directory	☐	☐
Shared decision-making tools	☐	☐
Telemedicine software	☐	☐
Other:	☐	☐
Other:	☐	☐

79) **Importance of technology by type**. The Department is working to determine what technology is in place, what technology is needed, and what technology should be standardized. For RCCOs, providers, and other organizations, use the table below to answer what HIT infrastructure outside of the SDAC your organization would use to perform population health management activities. Tools are scored from 1-5, where 1 are those items least-likely to be used, and 5 are items most-likely to be used:

Tool	1 Least	2	3	4	5 Most
Population analytics / reporting / dashboard	☐	☐	☐	☐	☐
Care management tool	☐	☐	☐	☐	☐
Care transitions alerts	☐	☐	☐	☐	☐
Electronic Health Records (EHRs)	☐	☐	☐	☐	☐
Practice assessment tools	☐	☐	☐	☐	☐
Health risk assessment software	☐	☐	☐	☐	☐
Practice management tools (scheduling, billing)	☐	☐	☐	☐	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☐	☐	☐	☐
Patient education wellness tools	☐	☐	☐	☐	☐
Provider/case manager directory	☐	☐	☐	☐	☐
Shared decision-making tools	☐	☐	☐	☐	☐
Telemedicine	☐	☐	☐	☐	☐
Other:	☐	☐	☐	☐	☐

80) What are the primary barriers to RCCOs and providers increasing their use Health Information Technology to improve the performance of Primary Care Practices?

Studies have identified a number of barriers to providers implementing and increasing their use of HIT, including situational barriers (including time and financial concerns), cognitive and or physical barriers (including physical disabilities and insufficient computer skills), liability barriers (including confidentiality concerns), and knowledge and attitudinal barriers.

81) How can Health Information Technology support Behavioral Health Integration?

82) In the next iteration of the ACC, should there be a shared resource for data and analytics? Please describe the basic criteria for what a shared data and analytics platform needs to contain in order for it to be useful.

Colorado Department of Health Care Policy and Financing

RFI Response Received and Recorded.

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for information:

Please provide your name and location:

Name: Gall L. Bleibtrey

Location:Guardian Angels Hith Ctr

If you are a member of (or affiliated with) an association, business, or other simiiar entity, please provide the name and location of that organization:

Name of organization:Guardian Angels Hlth Ctr

Location:Aurora, CO

☒ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that appiy:

☐ Client
☐ Client's famiiy member
☐ Client advocate
☒ Medical provider / PCMP / other provider
  i. Type or specialty:
  ii. Area of practice: Click here to enter text.
☐ Provider advocate (e.g. medicai society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected officiai
☒ Other (please describe): Advocate for children on Medicaid

How have you been involved in the ACC program and what interaction have you had with RCCOs:

Attend meetings, have representatives come to our practice to discuss policy and procedures for how to better assist patients and provide families with resources they are in need of.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:

We are a certified medical home, our practice is approximately 82% Colorado Medicaid based.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☒ Very likely
☐ Likely

Are you currently involved in the ACC program?

☒ Yes
☐ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☒ 3-4 years
☐ Since before the program was implemented.

☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

Please feel welcome to describe why or why not using the space below.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

- Reimbursement (mostly due to the Federal ACA) is fairer now.
- The decision to make the well child visit one of the KPIs was a very good decision in behalf of children, but unfortunately attribution is still flawed and the SDAC data is delayed and often inaccurate. So, it is difficult to create an effective QI process to improve the KPI, but this is a good start.
- The decision to focus on integrated behavioral health in medical homes is a wonderful decision to improve health outcomes for people covered by Medicaid. Thank you.
- You have a great opportunity to do what is needed for the majority of Medicaid recipients. The majority of Medicaid recipients in Colorado are children and adolescents; they should not be considered one of the subgroups. The following principles should be incorporated into the core objectives of the ACC:
    - Children's health care needs are very different than adults. For adults, the focus is on managing chronic disease more effectively. For children, it is about preventing the development of those chronic diseases.

- o if the ACC really wants to focus on health and wellness, the greatest opportunity is with the children (the majority of Medicaid recipients). By focusing on preventive care, early screening and early intervention for children, there will be big savings; unfortunately those savings may not occur for many years or decades in the future, but the investment will eventually be worth it.
- o So, the ACC will need to invest in children to the extent possible now even though the savings come much later. We recommend that a portion of short-term savings that occurs due to chronic disease management in adults in the ACC be invested back into preventive care for children.
- o Children are part of families and you can't help the child unless you help the family. So, care coordination is more involved for children since it includes care coordination of the parents/family.
- o There is increased recognition that behavioral health is a part of overall health and should be accessible within a pediatric medical home. However, the current mental health system must have policies, procedures, and resources that support integrated behavioral health activities at the practice level.

2) What is not working well in the ACC Program?

- Attribution continues to attribute patients to the wrong medical home and the process of getting patients reassigned to the correct medical home is onerous for the patient and family.

- The health care data through the SDAC is based on claims so it is delayed and is incomplete (particularly for children). Therefore, it is not very useful in helping medical homes improve outcomes for children.

- Each RCCO does things very differently, which is confusing for medical homes with patients in several RCCOs. RCCOs are inconsistent in how they respond to requests for care coordination (quite variable depending on whom you reach at the RCCO). So the new RFP should ask how RCCOs will develop policies and procedures to make their methods and responses to requests for help more consistent, both within the RCCO and among all RCCOs.

- There are certain expectations/requirements and ways of doing things that are so different from one RCCO to another that it requires significant extra work for the medical home to adapt to the differences. To deal with this. So, the RFP should ask how RCCOs intend

- if a patient lives in one region and goes to a medical home in another region, and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from the patient's region RCCO. This is particularly true in the Denver metro area. <u>There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients.</u>

- The "incentives" now are actually disincentives, especially the requirement that the RCCO must meet its KPIs before a high performing medical home can be rewarded for meeting its KPIs. The concept behind this approach is not consistent with how health care systems (and "medical neighborhoods") work.

- The geography of the 7 regions does not reflect the natural geography of health care systems and referral patterns. Larimer County should be in Region 2.

- RCCOs are not providing the level of care coordination that Medicaid patients need. We have had RCCO "care coordinators" just tell us to call 211. The level of commitment that patients and families need is difficult to find, unless care coordination is provided at the medical home level or the community level.

- Both family practices and pediatric practices report that the SDAC does not reflect their own data that the practice can obtain from their EHR or their own claims data. This is particularly true regarding data on health care screening. The RFP should ask how RCCOs and HCPF should take advantage of this practice-based data.

- Most medical homes are not working closely with RCCOs and are not receiving much support. The RFP should ask how RCCOs intend to work more closely with medical homes.

- Feedback from RCCOs to the medical home regarding patients referred to the RCCO for care coordination is spotty. How will RCCOs consistently provide feedback and communication to the medical home regarding what was done for the patients and whether there was improvement?

- There has been difficulty with communication from the state level through the RCCOs down to the individual practice/provider level. Providers feel as though they are not well informed from HCPF or RCCOs. We are grateful that CCHAP keeps us informed.

- The current system does not take into account the movement of patients on and off Medicaid and movement between RCCOs. Whether for KPIs or future shared savings incentives, practices need to be evaluated on established patients who have been in a practice for a minimum of six months. This allows the medical home to actually have time to make an impact on the child's care. Otherwise, it is a substantial disincentive for practices to be open to the more complex and challenging patients, those that likely need access the most.

- Currently, there is very little communication and alignment between BHO's and RCCO's. In order for integrated behavioral health to be successful at the practice and community level, the BHO's and RCCO's must have similar goals, policies/procedures that are aligned, payment structures that are aligned with movement toward integration and ongoing close communication with one another. The RFP should ask how they intend to do this.

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

- The decision to focus on integrated behavioral health in medical homes is a wonderful decision to improve health outcomes for people covered by Medicaid. Thank you.

- If Colorado is serious about promoting integration of behavioral and physical (medical) health care, then the RCCOs and BHOs should be integrated. This would mean they should have the same regions and function as though they are one organization. This would reduce duplication of efforts and have better alignment of incentives and payments that support integrated care.

- Open the behavioral health and wellness codes (96150 – 96155) now. Don't wait. This will encourage integration immediately and enable medical homes to start now the process of evolving toward full integration.

- Care coordination for both behavioral health and medical care should be done in the primary care setting. And either the RCCO and/or the BHO should delegate the responsibility to do care coordination and a pmpm to cover the expense to the medical home as part of the payment reform process. And behavioral health care coordination and medical care coordination needs to be fully reimbursed. In addition, the BHO and the RCCO will need to have information and care coordinators to assist medical homes to handle uncommon or very complex issues.

- Provide infrastructure and funding for data collection and management to support integrated behavioral health in the medical home and the care coordination that will have to be part of that. Utilizing SDAC data is just one way to understand the activities within a medical home. SDAC data is delayed and does not include enough information to support behavioral health care coordination in the medical home. Other methods and technologies are needed. There will need to be an investment in the development of new technologies and methods to do behavioral screening, track referrals, document treatment and collect data on the whole care coordination process at the medical home level. This will require adequate reimbursement to cover the cost of starting up new care coordination programs in the medical home and start up technologies to improve screening, intervention and care coordination with follow through in the medical home.

- The CPACK program developed by CBHC is a very good program, particularly the following:

---

a. Assistance with finding a behavioral health provider for patients
b. Telephone consultation by a child psychiatrist to primary care providers
We recommend that BHOs be required to provide the 2 components above as part of their new contracts.

- Payment options for integrated behavioral health (not just co-location) need to be clear and understandable to providers and practices. in order for the integrated model to be sustainable, there need to be ways to access understandable billing rules/policies.

Core Coordinotion

Question 12) What needs for children/fomilies should be coordinoted in medicol homes ond ore there services thot should not be o port of core coordinotion by the pediotric ond fomily medicol home

One of the most difficult services to provide in the medical home is home visits. Support from the larger system is needed.

Services that can be provided in a pediatric or family medical home are: complex medical coordination including logistics/travel, ancillary services (PT/OT/home health services, ...), collaboration with mental/behavioral health, collaboration regarding school needs, referrals to early intervention services and Child Find, referral to other agencies (rehab, hospice, ...), collaboration with foster care and DHS system. RCCOs need to help medical homes with needs like assistance with housing, food, parental employment, child care, in which case the RCCO can help families connect with other agencies that provide these services.

Question 19: How should care coordination program be evaluated? How should its outcomes be measured?

A care coordination program should initially be measured by having good processes, not measured by outcomes, until solid data exists on outcomes that are risk adjusted and accurate for children. Initially all measures need to be quite separated from outcomes that are highly tied to patient behavior, or practices will again be less likely to serve those with highest risk.

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Our medical home relates to multiple RCCOs and we want to be delegated to do care coordination. If all RCCOs allowed medical homes to be delegated to do care coordination, we could receive a pmpm from all of them, which would enable us to afford to hire enough care coordinators to meet the needs of all of our ACC patients.

Where should care coordination be done? Care coordination is best done in the medical home. We are willing to do care coordination, because we have a relationship with our patients and they trust us and we recognize that coordinating complex medical care is essential for good care and for cost savings. Also, the primary care provider is best positioned to have a long term relationship with the patient, and therefore know and understand other aspects of the patient's life and how important those non-medical factors are on the patient's health and health issues.

If care coordination cannot be done in the medical home, then it is best done by community-based organizations. The least effective, least well-received, least trusted is care coordination done from a call center in an RCCO. The role of the RCCO should be to help the medical home-based care coordination staff access resources for families.

The majority of practices are willing to provide Care Coordination, if they can get financial support (PMPM) for providing the service.

Should you be doing care coordination for certain patient populations e.g. children with asthma or special needs children? Or for your entire Medicaid population healthy or chronically ill? The overall goal of Colorado Medicaid should be to provide care coordination services for ALL patients in the Medicaid population (for some patients it may be very minimal, others extensive). This is the essence of preventive care. A care coordinator that is based in the medical home is in the best position to help identify risk factors proactively, as early as possible before they impact a patient's health and cause illness. Children with special healthcare needs (complex, complicated) require a higher level of care coordination, so the pmpm attached to their care coordination needs to be risk adjusted.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

- All RCCOs should have their offices in the region served, should be non-profits, be a Medicaid provider and be incorporated only in Colorado.

- All RCCOs should offer to delegate care coordination to medical homes willing to accept that responsibility and the RCCO should share a portion of the RCCO pmpm with the medical home that accepts delegation.

- All RCCOs should use the same criteria for delegation and for the amount that is paid for delegated services of care coordination. By doing this, services can reach a standard across the state. A patient would have access to similar services no matter where they moved across Colorado.

- RCCOs should all agree on how they will effectively communicate to medical homes regarding any contact the RCCO has with patients attributed to the medical home. They should include PCMPs in developing those criteria.

- All RCCOs should help (or contract with an organization to help) medical homes understand how to access their SDAC data, understand their data and use it to develop rapid cycle QI projects to improve health outcomes and meet KPIs.

- All RCCOs should agree to provide uniform support for medical homes when a medical home asks for help with care coordination, even when the medical home is in another region (and contracted with another RCCO) but the patient is in the first RCCO's region.

- RCCOs should be required to allow medical homes to give the RCCO a list of patients the medical home feels is their patients and receive help from the RCCO to understand why certain patients have been attributed to another medical home. If the patient is determined to be more appropriately attributed to the inquiring medical home, then the RCCO should help re-attribute the patient to the correct medical home.

- RCCOs should share on a regular basis the RCCO's performance on KPIs and share savings incentives and share with the medical home how their own performance compares with other medical homes.

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

This is particularly applicable to the Denver metro area. There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients. For many expectations/requirements and ways of doing things the RCCOs are so different from one another that it requires significant extra work for medical homes to adapt to the differences. In addition, if a patient lives in one region and goes to a medical home in another region, and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from that first region.

27) Should the RCCO region maps change? Why or why not? If so, how?

Yes. There are two changes we recommend:

- Larimer County should be included in Region 2, since the medical community and the support organizations of Larimer County and very closely linked to Weld County
- In the Metro Denver area, the boundary issues are so difficult that we recommend one RCCO be responsible for the whole metro area or that medical homes be allowed to choose one RCCO for all of their patients.

28) Should the BHO region maps change? Why or why not? If so, how?

If Colorado is serious about promoting integration of behavioral and physical (medical) health care, then the RCCOs and BHOs should be integrated. This would mean they should have the same regions and function as though they are one organization. They should share incentives that are aligned around successful integration of behavioral and medical services and outcomes. So the BHO maps/regions should conform to the RCCO regions/maps.

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients. There are certain expectations/requirements and ways of doing things that are so different from one RCCO to another that it requires significant extra work to adapt to the differences. If a patient lives in one region and goes to a medical home in another region and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from that first region. This is particularly true in the Denver metro area.

Another alternative: When a practice contracts with a RCCO currently they "belong" to one RCCO. Change that and have them only contract with the state and have that contract extend to all RCCOS. This way RCCOS would be more accountable to standardization through out all of Colorado, and the services provided to patients/families would be more uniform.

34) What role should RCCOs play in attributing clients to their respective PCMPs?

The attribution system is quite flawed still. RCCOs should be required to allow medical homes to give the RCCO a list of patients the medical home feels are their patients and receive help from the RCCO to understand why certain patients are attributed to another medical home. If the patient is determined to be more appropriately attributed to the inquiring medical home, then the RCCO should help re-attribute the patient to the correct medical home.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

- The payment structure absolutely does not support the ACC goals. A medical home does not receive incentives for KPIs unless the RCCO meets its KPI. This becomes a disincentive, because many medical homes meet their performance targets, but do not get rewarded because the RCCO did not meet its targets. So the medical home has no incentive to maintain the performance. The philosophy that HCPF has espoused (that the high performing medical home should encourage or help the low performing medical home) is not realistic and is not how the real world works. There is no time for that, plus the high

performing medical home has no way of knowing who is low performing. This idea shows a lack of understanding of the world where health cares is delivered. Medical homes need to receive full incentives when they meet their KPI targets, no matter what happens in the RCCO.

- The incentives are too low to change much. Also, the KPis need to remain focused on process, not outcomes, until the data is more sophisticated to accurately attribute patients and account for risk factors.

- Many medical homes have the ability to collect REAL-TiME data from their EHR and their claims database, which can be used to measure performance more accurately than the SDAC. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and providers to develop a vetting process that will enable HCPF and RCCOs to trust the medical home self-reported real-time data.

- Since children are the majority and give the best chance of truly improving health and wellness, KPis need to be more child-focused. And since the potential cost savings for children's health care are so far in the future, KPIs need to be intermediate, process outcomes.

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

<u>There is very little of the infrastructure in the state in place at the present time to enable capitation to be implemented successfully.</u> Here are just some of the changes that would need to be in place before it would be fair or prudent to implement capitation:

- The state would need to already be paying fair amounts for all aspects of the care needed by Medicaid recipients before it could effectively move to capitation. In other words, codes for things that HCPF wants done under capitation should be opened and reimbursement adequately now. This would encourage medical homes to already be doing these things before the change to capitation. it would also give HCPF and medical homes experience regarding what the actual costs are for providing the desired services and determine a fair capitation. It will be difficult to change behavior to include new activities under capitation among providers, if you continue to hold codes closed now for things you want done under capitation. You have to help the medical homes create the habits you want before the switch to capitation.

- All providers would have to be reliably involved in the ACC: primary care, all of the various adult and child specialists, the hospitals, the therapies, dentists, mental health providers, etc.

- The data system would have to be able to report real time data and be far, far more accurate than it is now.

- The attribution system is flawed. That would have to be improved and provide accurate, real-time attribution data before capitation should be instituted.

- You will have to change a variety of policies that are barriers to population management.

- Capitation has to be combined with significant incentives to implement processes and improve outcomes. So, you will need to have the incentive system very well developed and viewed by providers as motivating before implementing capitation

- Healthcare for children focuses on prevention, early detection and early intervention, which require initial increased investment to reduce potential expenses many years and decades down the line. Other ACO programs have shown that savings on children are difficult to show early on. So, incentives in the care of children will initially be for intermediate outcomes (or for process outcomes) and need to be direct incentives rather than incentives in the form of shared savings.

- Early in the transition from pre-ACC payment methods to ACC payment structure (2012), some medical homes were asked to return money to Medicaid. Transitions like that (for example the transition to capitation) have to avoid this. Primary care medical homes have such narrow margins that this can be very difficult financially on a medical home

- Many medical homes have the ability to collect from their EHR and their claims database REAL-TiME data with which performance can be measured. HCPF, SDAC (Treo Solutions), CiVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and providers to develop a vetting process that will enable HCPF and RCCOs to trust that medical home self-reported real-time data is trustworthy.

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

Many medicai homes have the capabiiity and infrastructure to adapt to payment tied to vaiue. What is missing is the state, HCPF, RCCO, BHO infrastructure. See all of the infrastructure eiements HCPF needs to have in place listed in question 60

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

- The HCPF Payment Reform Committee shouid meet at a time when providers and practice managers can actualiy attend. Monday afternoons is probably the worst time to actualiy enabie providers or practice managers to attend. Once you seiect an appropriate time, then actively recruit participation.

- Make sure that your efforts are statewide. Views are different in the various regions of the state.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and heaith outcomes?

- Many medicai homes have the abiiity to coliect from their EHR and their claims database REAL-TiME data with which performance can be measured. HCPF, SDAC (Treo Solutions), CiVHC, and RCCOs oniy have Medicaid claims data, which is far too deiayed to be usefui for medical homes to use to do rapid cycie quaiity improvement to improve performance in a timeiy manner. Therefore, HCPF and RCCOs wiii have to use data self-reported from medical homes to obtain real-time, useabie data. This requires that HCPF and RCCOs work closeiy with representative practice managers and provider from medical homes to deveiop a vetting process that wiii enable HCPF and RCCOs to trust medicai home self-reported real-time data.

- The measures for chiidren can be drawn from HEDIS measures or CHIPRA measures or from the Pediatric Measurement Proposal that HCPF did in 2010 with the heip of Jim Todd. Appropriate chiid health measures could be seiected from the foiiowing measures :
  - Weii chiid visits appropriate for age
  - Deveiopmental screening by three years of age
  - Teen depression screening
  - Compiete immunization status by age two
  - Post-partum depression screening rate for mothers of newborns by age 4 months
  - Appropriate antibiotic use in URI and strep pharyngitis

- Medicai homes couid aiso be measured on:
  - Patient (or famiiy) satisfaction ratings
  - Documentation of QI projects

Screening should be part of KPIs, but you need to do more than just create a KPI. if you are going to have KPIs, then you need to track not only the number of times a screening was done, but aiso track the v-codes (or some way to track positives) and make them available in the SDAC so medical homes can track them. And the SDAC needs to track referrals (or intervention). Otherwise it is not worth measuring the number of screenings.

- The PCMP or medical home should receive real-time data (less than a month since date of service) with data that will allow them to compare their performance with performance of similar type of medical home.

- Healthcare for children focuses on prevention, early detection and early intervention, which require initial increased investment to reduce potential expenses many years and decades down the iine. Other ACO programs have shown that savings on children are difficuit to show early on. So, incentives in the care of children will initially be for intermediate outcomes (or for process outcomes) and need to be direct incentives rather than incentives in the form of shared savings.

69) Measures for payment. Please use the tabie below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☒
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

We only need 2-4 KPIs. Any more wiil diiute the effect. What we reaily want is good data, so we can improve our outcomes by doing a quality improvement project. Since children are the majority of Medicaid recipients and give you the best chance of truly improving health and wellness in the long term, KPIs need to be more child-focused. And since the savings are so far in the future, KPIs need to be intermediate, process outcomes.

Transmittal Letter

November 24, 2014

Mr. Kevin Dunlevy-Wilson
Department of Health Care Policy and Financing
Accountable Care Collaborative Strategy Unit
1570 Grant Street
Denver, CO 80203

Dear Mr. Dunlevy-Wilson:

Please accept Netsmart Technologies, Inc.'s response to Colorado Department of Health Care Policy and Financing's RFI UHAA 2015000017. This response is valid for ninety (90) days from the submission date of November 24, 2014.

Thank you for including Netsmart in your RFI process. As a leader in the behavioral health and human services community, we are a vision-driven company that is passionate about the opportunity and the obligations that accompany our commitment. We emphasize partnering with our clients, using our resources for the collective good of the community, and leadership through innovation.

We look forward to demonstrating Netsmart's CareRecord solution to the Colorado Department of Health Care Policy and Financing. Please feel free to contact Angela Moore, Client Alignment Executive, with any of your questions or comments at (phone) 863-701-4707 or (email) amoore1@ntst.com.

Sincerely,

(Signature via Email Delivery)

Executive Summary

Our Partnership Goals

At the heart of Netsmart's partnership with the State of Colorado is the goal of improving the quality of life for all Colorado consumers. We intend to accomplish this by growing our long term relationship with the State of Colorado's Department of Health Care Policy and Finance. Together, Netsmart and the Health Care Policy and Finance Division can achieve coordinated and collaborative care to drive down costs, improve outcomes, and optimize technology innovations.

Please find through our responses and attachments, our dedication to facilitating coordinated care across providers.

Netsmart has a long term relationship with the State of Colorado. In addition to past work for CDHS at Fort Logan and Pueblo, Netsmart has served the Colorado community for more than 30 years with Centers such as:

- The Mental Health Center of Denver
- The Jefferson Center
- Community Reach Center
- North Range
- Mental Health Partners of Boulder
- Arapahoe Mental Health
- Tri-County Public Health Department
- El Paso Public Health Department

Over the years, several of these Centers have elected to grow their investment and leverage the HHS specific innovation that only Netsmart brings to the market. The growth of our innovative offerings have been the driving force in proving that we listen to the needs of our communities and follow through with services, such as CareManager, that directly improve efficiency.

The Community Crisis Connection (CCC), recently was awarded a $20m contract to provide Crisis Services across six service providers, many of which are current Netsmart clients. They will leverage data analytics based on CCAR and other community-based measures. This project sets the stage for a broader Care Management foundation for the people in across the state that experience a Mental Health crisis. Core to this new program, CRC will leverage Netsmart solutions to support delivery of 24 x 7 one-stop crisis services across the consortium of providers.

Why Netsmart?

CareManager™

CareManager Connects and Coordinates Data for Better Treatment of Consumer Populations

With increasing pressure to coordinate care across the full spectrum of providers and better treat consumer populations, health and human services organizations need solutions that enable cross-organizational care management. Taking a step beyond the recent initiative to

simply connect provider organizations and share consumer data, the newest federal goals aim to designate responsible organizations to coordinate and manage the care of identified consumer populations. These initiatives bring sweeping changes across the healthcare industry.

Colorado's HCPF Department seeking responses to the Accountable Care Collaborative system is in line with these goals and initiatives, in adherence to the following principles:

- To operate the accountable care of Colorado consumers safely, securely and efficiently;
  □ To decrease the circumstances that lead to medication and prescribing errors;
- To increase the application of clinical information that promotes a lessening in the use of the most intrusive interventions (such as seclusion and restraint);
- To decrease the consumers' needs for extended, inpatient stays, strengthen clinical hand-offs between prior and next providers, and advance each consumer's recovery into a sustained community integration;
- To improve outcomes for recovery and resiliency of patients served; and
- To achieve the Department's Triple Aim goals of Health, "Better Health, Better Care, and Lower Cost."

Netsmart is at the forefront of healthcare reform with new solutions to enable the coordinated care management which is key to accomplishing the stated goals, reducing hospitalizations and shifting and maintaining care in community based settings with improved outcomes, resiliency and engagement of identified populations.

CareManager is platform agnostic and aligns to the way care is managed across a continuum of providers. In addition, realizing care management and coordination initiatives wouldn't take on a single model, Netsmart established a team of associates to ensure the solutions align to different models while ensuring the solution is flexible enough to accommodate future needs.

Exchange Consumer Data

CareManager facilitates coordinated care across providers. Clinicians have access to all the consumer's records for which they have appropriate access. This comprehensive view into a

consumer's health provides the clinician a much broader understanding of their situation and makes them better equipped to diagnose and make recommendations that may vastly improve a consumer's outcome.

Coordinate Care Across Providers

CareManager is able to send proactive alerts so care managers can take proactive action. Contacting consumers and helping them manage their at-home responsibilities can have a dramatic impact on their lives.

Track Clinical Quality Measures and Outcomes

As this new concept of providing accountable care takes hold, organizations will be required to track designated quality measures to demonstrate improvements in outcomes with the populations for which they're responsible. As such, there is a need for reliable methods for tracking the specific quality measures for which the organization may be held accountable. As part of the CareManager roadmap, Netsmart is planning to build in a framework for quality measures which would allow an organization to gain insight into the quality of the care they manage.

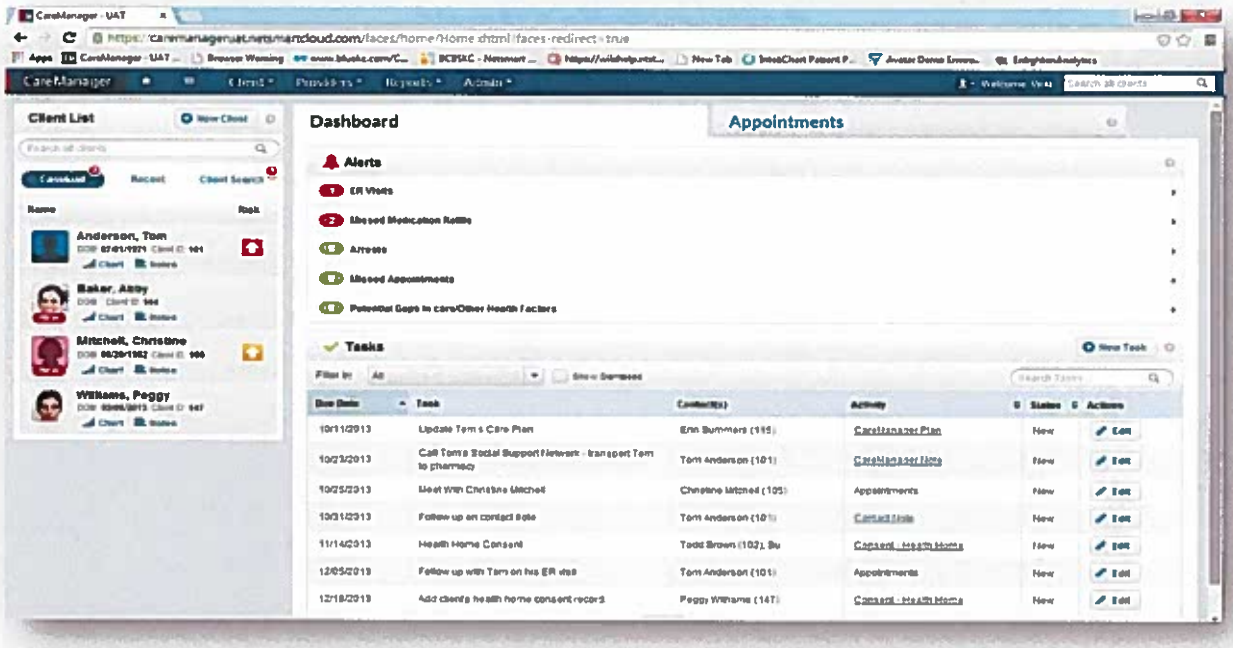
CareManager Features

Priority	Definition
Care Coordination	Manage consumer engagement, consent and assessments. The engagement and assessment process will help identify, at a high level, the consumer's needs and current challenges that need to be addressed. Connecting these business processes together, care managers can create a care plan and stratify the consumer so they can refer them to the most appropriate providers.
Population Management	Review the consumer data collected from all the providers to gather knowledge about the population. Information like percentage of high-, medium- and low-touch clients will support staffing decisions.
Referrals	Access a provider registry to locate an optimal provider. Initiate referrals from within the care planning process.
HIE Interface	Connect to HIEs/RHIOs in order to exchange items like care plans, patient demographics and treatment providers.

CareManager Screen Shots

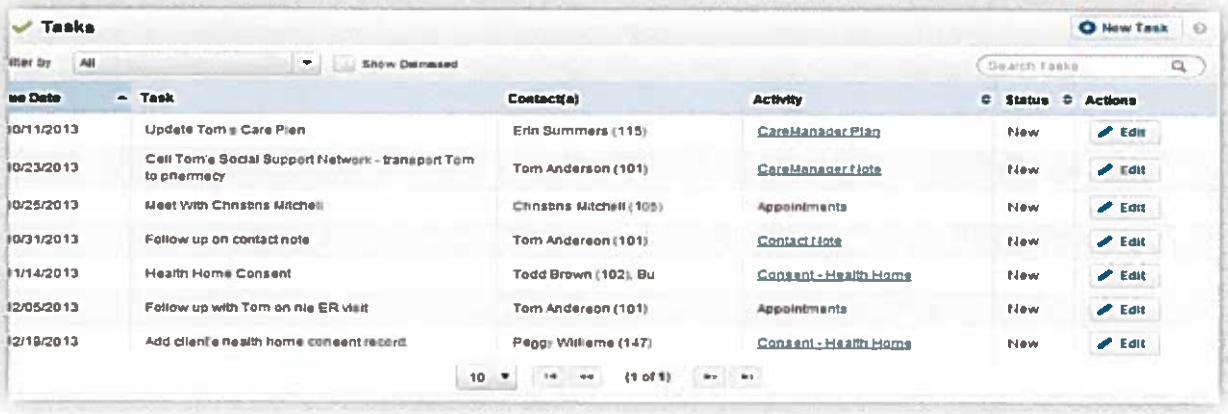
Dashboard

This home view provides the team member a quick view into their case load and activities. See alerts issued for members in their case load, tasks to be acted on, and calendar view of appointments.



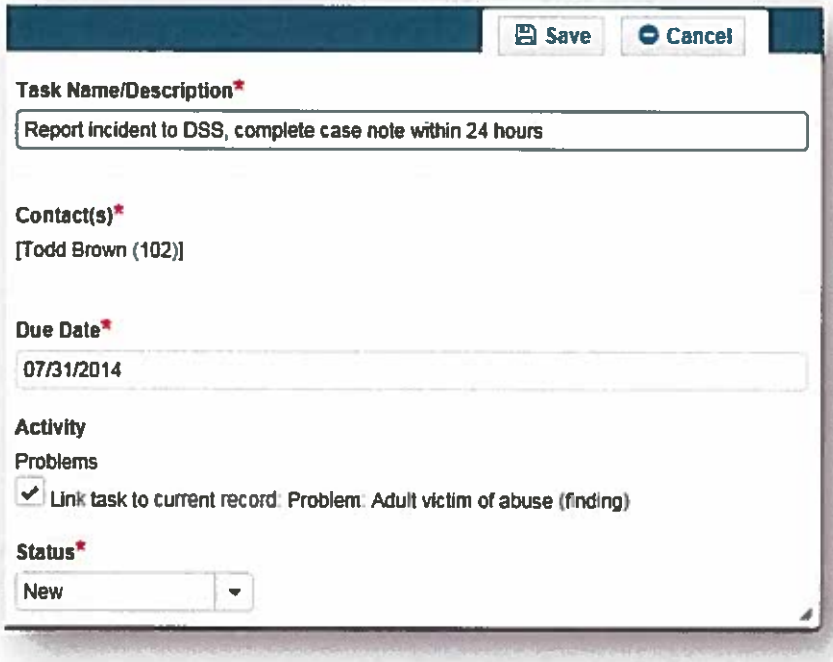
Task List

The care manager's to-do list; view tasks and access related activities, resolve tasks or create and assign new ones. Tasks are not only an effective tool to focus resources on issues requiring resolution, but it is also a powerful tool for ensuring care coordination by way of engaging team members in joint activities.



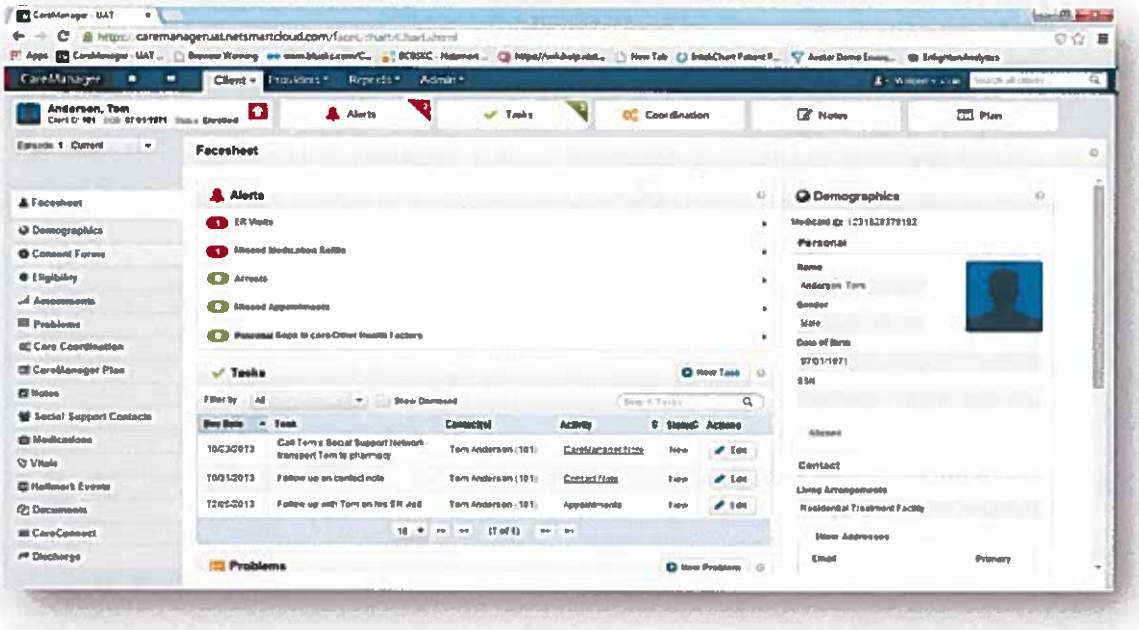
Task Detail View

Define a task, include contacts (client, team members) to be assigned the task, define a due date and link to a care plan, problem, note, assessment or any other activity in CareManager.



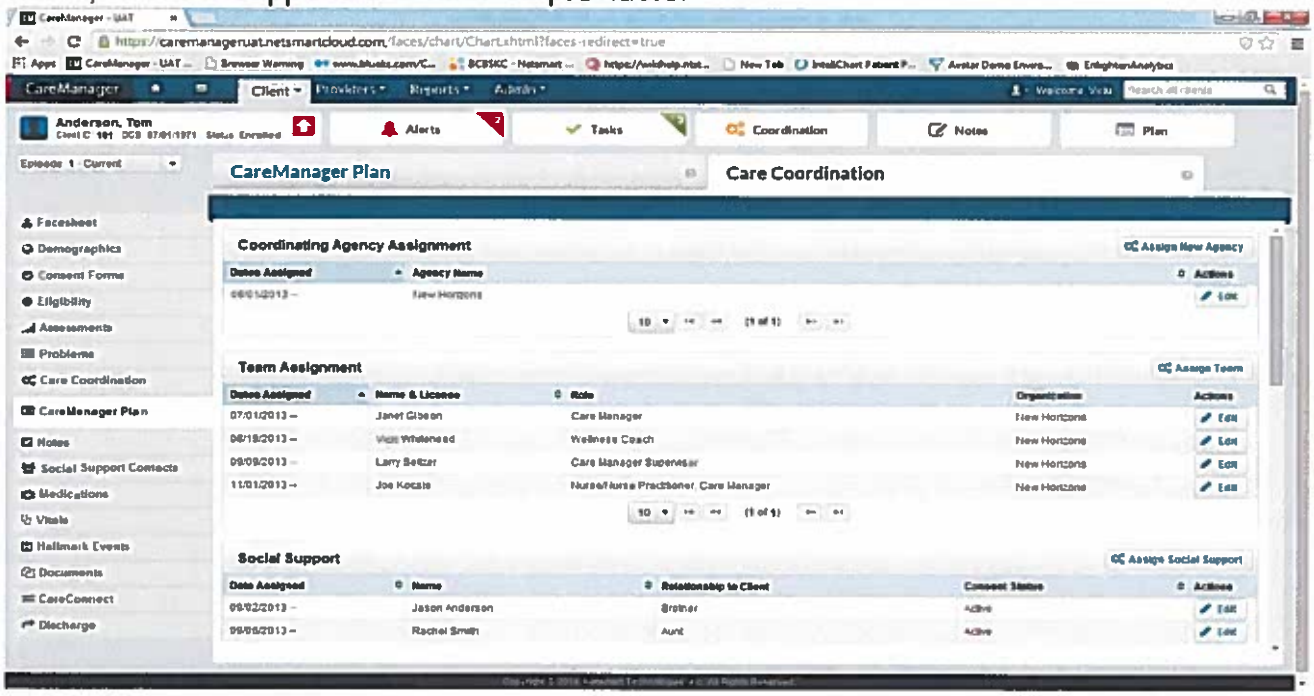
Member Facesheet - Person Centered View

Care Manager view of the full care record for the member; Alerts and tasks specific to the member, health concerns and care team, and access to all areas of the member chart all in one intuitive location.



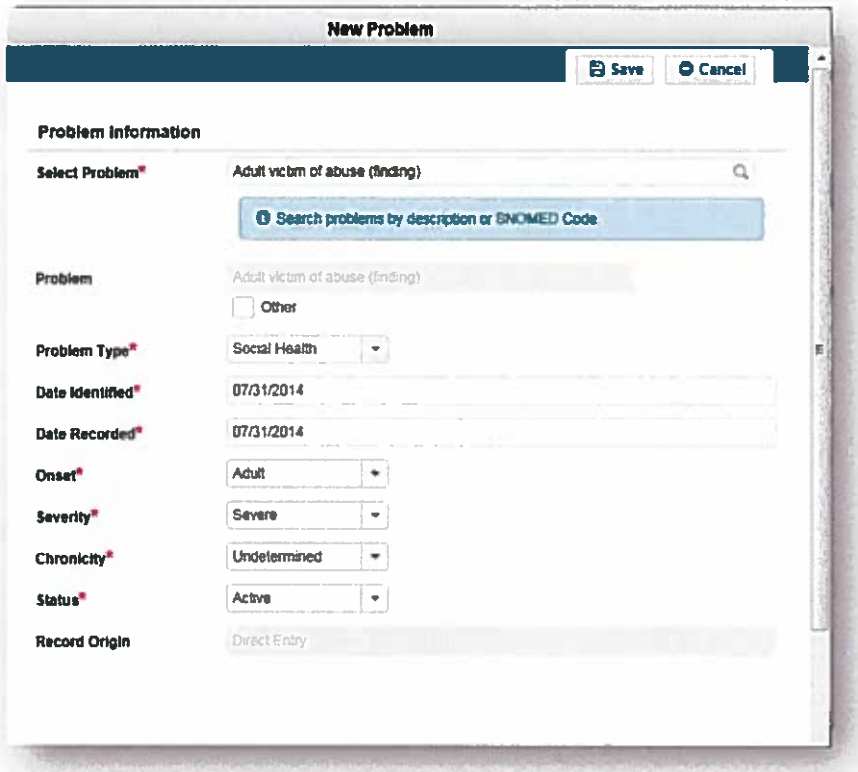
Care Coordination – Team Assignment

Assign and record team members, from care coordination agency, internal assigned care team, to social supports and referred providers.



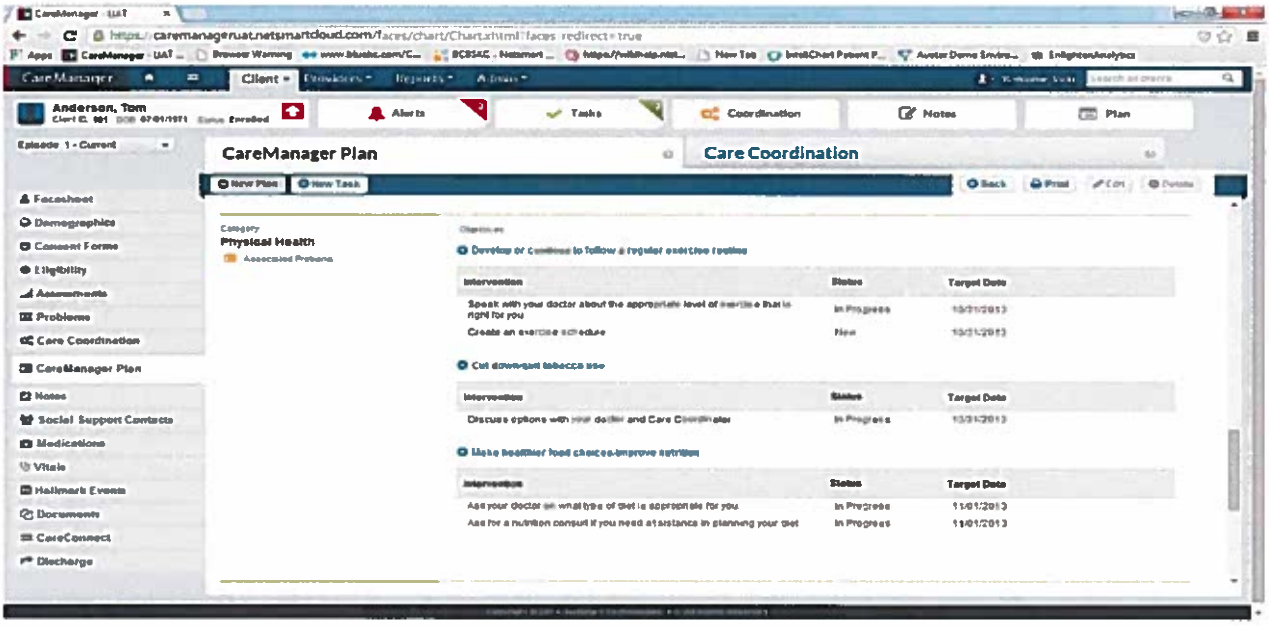
Member Care Plan – Member Problem List

Problems, or health concerns, are part of the members' health status. They can be associated with care plan interventions and provider referrals.



Care Plan View

The care plan is a living document that serves as the overall work plan for the member and their care team to document issues, goals and interventions, assign to internal and external team members, supports and providers, and track outcomes and engagement.



The Care Plan is categorized by Domains, associated with Problems, and lists goals and related interventions.

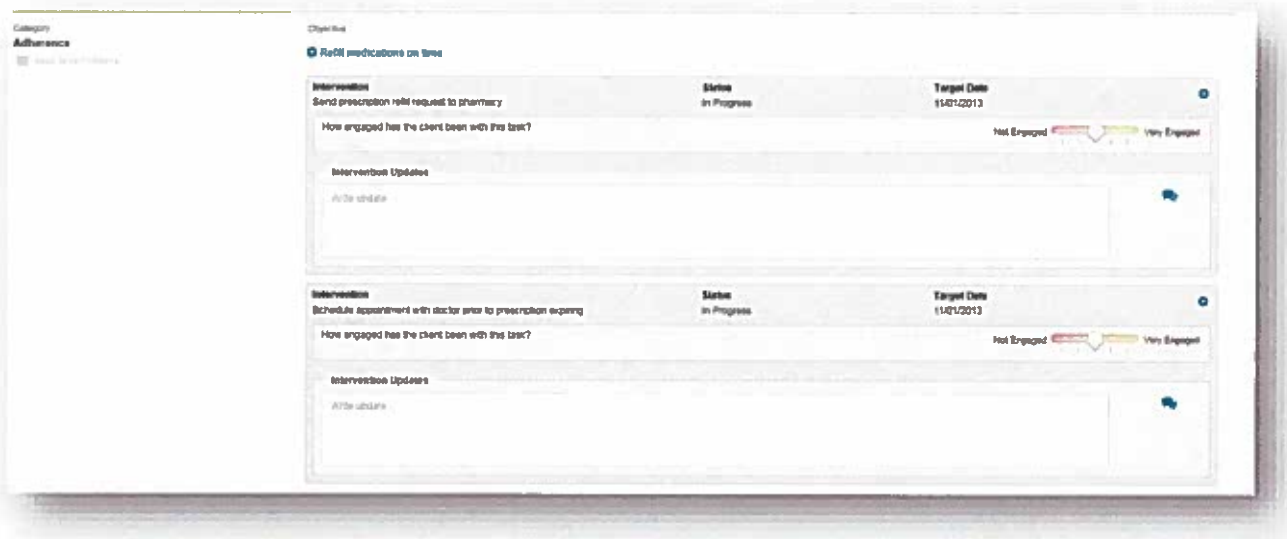
Netsmart

Care Manager Notes

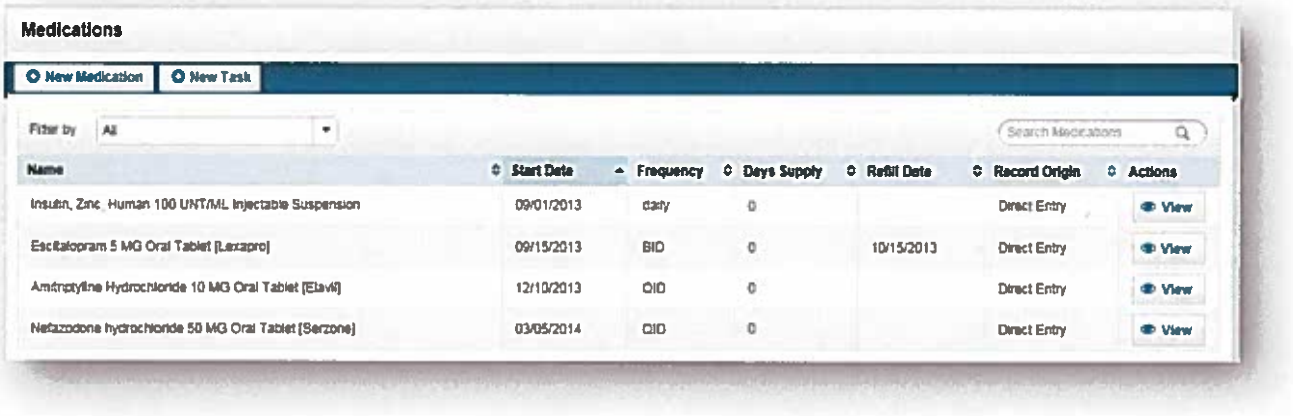
The notes provide a platform for the care manager to gauge and document activities, care plan progress, outcomes, barriers and member engagement.



Additional note types in CareManager: Contact note to document contact and activities by the care team, and Client Search note to document outreach activities and indicate enrollment or opt out and consent status.

Member Medication List

This screen is part of the member's clinical record which also includes Vitals, and Hallmark events; any clinical, behavioral or social events that impact that member's overall wellbeing and Care Plan.



Dashboards and Reports

CareManager provides several dashboards to allow the organization to track overall performance, operational indicators, identify opportunities for clinical improvement and generate registries for targeted interventions. In addition, CareManager allows the organization to define its own reports via a robust reporting tool.

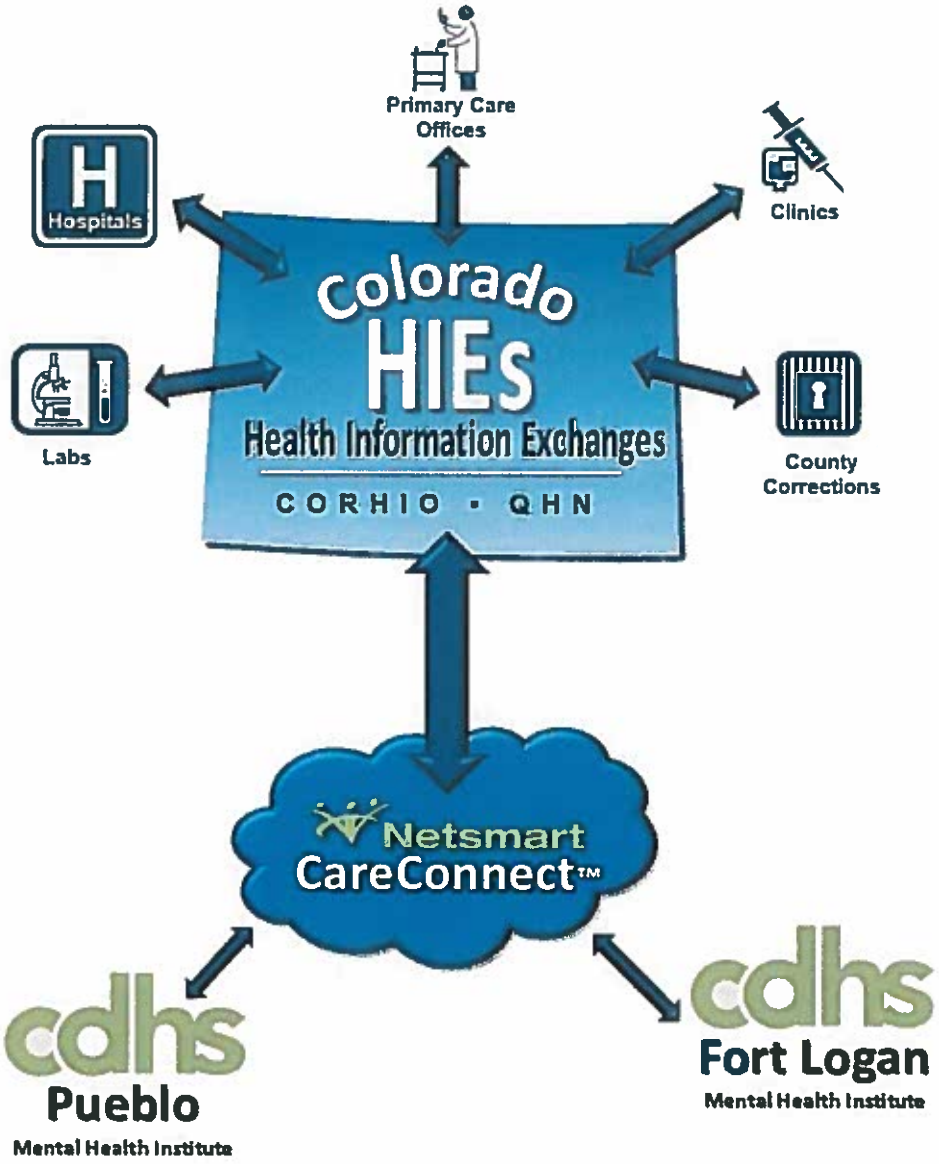
Colorado HIE Connectivity

In recent months, Netsmart responded to RFP NCRB1405035OBH Colorado Department of Human Services Comprehensive Electronic Health Record solution. Stated below are the plans proposed to increase coordinated care across the State of Colorado.

Colorado Department of Human Services

Connecting the Healthcare Community

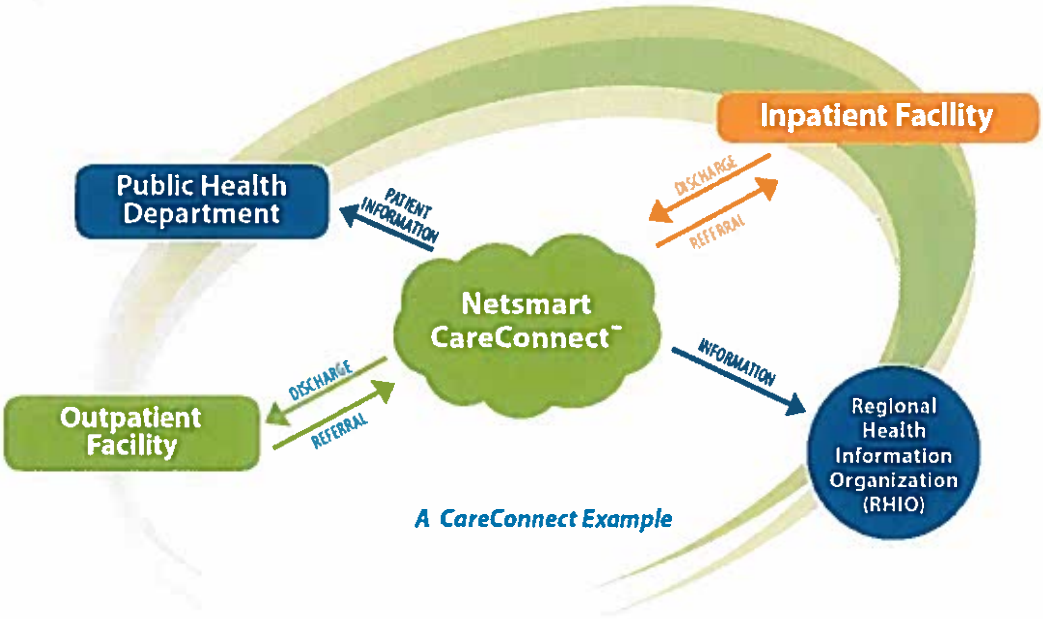


CareConnect functionality provides the ability to exchange health information electronically across statewide and regional providers in order to improve health care quality and safety, while connecting behavioral health and physical health communities. CareConnect™ has the unique capability to translate the files transmitted and received to match the formats required

by Netsmart's CareRecords as well as other EMR's, and the HIE operating systems. Once translated, CareConnect™ transmits the protected health information in a secure encrypted and auditable method.

Additionally, the HIE connection will allow the State of Colorado to pull transactions, or query through the Colorado Regional Health Information Organization (CORHIO) and Quality Health Network (QHN), allow a user to submit a request for patient information and ask the HIE entity to discover and provide any records it may have about the patient in accordance with policies governing patient consent and data use agreements between exchange users. CareConnect™ has the functional ability to register a patient within the HIE which will act as a Master Patient Index. Data embedded within Avatar will generate a Meaningful Use Stage 2 CCD and publish it to the HIE on a patient by patient basis. A query or call to the HIE can be sent directly from CareManager on a patient and the aggregated CCD will be transmitted back into the application and the data stored directly within the patient's chart.

Future CareConnect Possibilities



Overall, Netsmart is an innovative and dynamic company continuing to expand and build on not only the core Electronic Health Record offerings (MUII Certified) but all other technology needs that directly supplement an EHR's ability to assist in direct care to the communities we serve. While we are the leader for Behavioral, Mental, I/DD, Substance Abuse, and Public Health or the largest non-hospital and non-primary care EHR Company; our associates wake up each day dedicated to a much larger vision of an integrated health care world. Netsmart, the State of Colorado, and its partners have already, and will continue, to become more efficient and effective in what we do. It is our intent to stay focused on the integrated health care model Colorado intends to achieve.

Corporate Responsibility

Beyond digitization, our solutions focus on the delivery of care, the path to recovery and ensuring every person has access to care. To further support of our cause connected focus, Netsmart created a not-for-profit organization called **EveryDayMatters Foundation™**. The purpose of **EveryDayMatters Foundation™** is to provide funding and education to end the stigma associated with mental health challenges. The site offers clinicians, practitioners, consumers and community members a place to share stories, celebrate successes and become inspired. It is a forum aiming to end stigma surrounding mental and public health.

For more information, visit www.everydaymatters.com

NETSMART RESPONSE:

Netsmart is providing input and comments for Health Information Technology (HIT), questions 77 - 90.

Health Information Technology (HIT)

77. ***Types of communication. For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:***

NETSMART RESPONSE:

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	☒

Text message	☐	☒
Web portal	☐	☒
Email	☐	☒
Telemedicine / Video chat	☐	☒
Face-to-face meeting	☐	☒
Smartphone app	☐	☒

Other:
Ranking:

1. Phone
2. Email
3. Web Portal
4. Face-to-Face
5. Smartphone
6. Text Message
7. Telemedicine/Video chat

78. ***HIT investments by organizations. For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below:***

NETSMART RESPONSE:

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	☒	☐
Digital care management tool	☒	☐
Care transitions alerts	☒	☐
Electronic Health Records (EHRs)	☒	☐
Health risk assessment software	☒	☐

Telemedicine	☐	☐	☐	☐	☒
Other: Connectivity to CORHIO, QHN (HIEs) or other networks. Netsmart's CareConnect tool can operate in place of an HIE.	☐	☐	☐	☐	☒

80. ***What are the primary barriers to RCCOs and providers increasing their use Health Information Technology to improve the performance of Primary Care Practices?***

NETSMART RESPONSE:

The main barriers most RCCOs and providers encounter in integration of health information technology are multifaceted:

1. For those patients with substance abuse diagnosis, 42 Code of Federal Regulations ("CFR") Part 2:
   - 42 CFR Part 2 applies to any individual or entity that is federally assisted and holds itself out as providing, and provides, alcohol or drug abuse diagnosis, treatment or referral for treatment (42 CFR § 2.11). Most drug and alcohol treatment programs are federally assisted. For-profit programs and private practitioners that do not receive federal assistance of any kind would not be subject to the requirements of 42 CFR Part 2 unless the State licensing or certification agency requires them to comply. However, any clinician who uses a controlled substance for detoxification or maintenance treatment of a substance use disorder requires a federal DEA registration and becomes subject to the regulations through the DEA license.

- The regulations restrict the disclosure and use of alcohol and drug patient records which are maintained in connection with the performance of any federally assisted alcohol and drug abuse program (42 CFR § 2.3(a)). The restrictions apply to any information disclosed by a covered program that "would identify a patient as an alcohol or drug abuser ..." (42 CFR §2.12(a) (1)). In laymen's terms, the information protected by 42 CFR Part 2 is any information disclosed by a covered program that identifies an individual directly or indirectly as having a current or past drug or alcohol problem, or as a participant in a covered program.
  - With limited exceptions, 42 CFR Part 2 requires patient consent for disclosures of protected health information even for the purposes of treatment, payment, or health care operations. Consent for disclosure must be in writing.

2. In the current fee-for-service system, there is no financial incentive for integration. The upcoming pay-for-performance reimbursement models will require integration and treatment of both physical, mental health and substance abuse treatments holistically.
3. Lack of funding to support the data integration and data connectivity of RCCOs and providers. At Netsmart, we offer a low-cost of ownership product call CareConnection – which essentially can act as the connectivity agent all the way through to the creation of a Health Information Exchange. We currently use this product with CORHIO to community behavioral/health care providers and are expanding our relationship with QHN.

81. ***How can Health Information Technology support Behavioral Health Integration?***

NETSMART RESPONSE:

Behavioral health conditions, including mental illness and substance use disorders, are widespread among Medicaid's high-need, high-cost beneficiaries, many of whom also have chronic physical conditions. Over half of all Medicaid beneficiaries with disabilities are diagnosed with a mental illness. For those with common chronic conditions, health care costs are as much as 75 percent higher for those with mental illness compared to those without a mental illness and the addition of a co-occurring substance use disorder results in two- to threefold higher health care costs. Among individuals eligible for Medicare and Medicaid (also known as dual eligible individuals), 44 percent have at least one mental health diagnosis. For the 20 percent of dual eligible individuals with more than one mental health diagnosis, annual spending averages more than $38K—twice as high as average annual spending for the dual eligible population as a whole. The prevalence of serious mental illness is especially high

among dual eligible individuals under age 65 – at least three times higher than for those age 65 and older. Meanwhile, substance use disorder, with and without co-occurring mental illness, is also more common among dual eligible individuals than among Medicare-only beneficiaries.

Yet despite the complexity of their needs and the array of services they require, most individuals with both physical and behavioral health conditions are in fragmented systems of care with little to no coordination across providers, often resulting in poor quality and higher costs. Today, as health policymakers nationwide seek to transform the delivery and costeffectiveness of publicly financed care, states are intensifying efforts to develop managed and integrated care models for this complex need population.

The supporting technologies are a critical component to realizing care coordination and primary care integration. As health and human services providers become critical players in coordinating care between a wider range of providers and consumer populations, they need solutions that enable cross-organizational case management. Providers working in the roles of health homes, or designated organizations responsible for the coordination and management of care for identified consumer populations, require innovative solutions that enable and support this broader spectrum of services and related clinical data exchange.

Netsmart CareManager facilitates coordinated care across providers and offers the ability to exchange consumer data, track clinical quality measures and outcomes, and manage authorizations and claims across providers. CareManager gives access to all consumer records for which users are authorized. This comprehensive view into a consumer's health record provides broader insight and visibility into the activity taking place within the provider network.

This visibility allows your organization to make informed decisions and real-time course corrections to ensure the patient is receiving the appropriate care, at the appropriate location, at the appropriate time. Additionally, CareManager provides alerts, clinical decision support, utilization management and stratification of the population by acuity.

In this emerging era of accountable care, organizations are increasingly being required to track designated quality measures to demonstrate improved outcomes. CareManager provides reliable methods for tracking the specific quality measures for which they will be held accountable. Additionally, CareManager enables the exchange of authorizations and supports claims management, so clinical records, billing information and payments are managed from a central location.

In addition, to accomplish true integration, the need for connectivity is paramount. Netsmart's CareConnect acts as the conduit providing The CareConnect network connects providers, hospitals, physicians, HIEs, and integrated delivery networks to improve efficiency and reduce the cost of healthcare. Participating in a network via CareConnect also supports Stage 2 Meaningful Use requirements. CareConnect supports all federal and state policies and standards for health information exchange, including privacy and security standards (such as HIPAA and state law), technology interoperability standards (such as Direct), and message types (such as HL7 and CCDA). CareConnect is integrating the largest connected network of behavioral health providers, leading health systems, laboratories for electronic exchange of lab orders and results, HIEs for CCD exchange, and public health/meaningful use reporting. The CareConnect Network for Clinical Interoperability allows clinical care information, including clinical messages, immunization summaries, CCDs, referrals, discharge summaries and lab results to be transmitted within a client's own organization, between providers and practices within the larger healthcare community, and health systems locally and nationally across all technology platforms.

82. In the next iteration of the ACC, should there be a shared resource for data and analytics? Please describe the basic criteria for what a shared data and analytics platform needs to contain in order for it to be useful.

NETSMART RESPONSE:

There should absolutely be resources dedicated to data and analytics. We believe our experience with Enlighten Analytics will allow the functionality desired under this RFI. In previous installations of Enlighten Analytics, Netsmart has deployed the solution to a large number of behavioral health organizations where a member organization or single entity has access to a centralized aggregated view. Because of the architecture of Enlighten Analytics, the tool does not expose any patient/client identifiable information. The tool can be used to analyze large amounts of clinical, operational and financial data and is designed to find trends within an individual organization or across a state enterprise.

Enlighten Analytics is an award winning business intelligence tool. Enlighten Analytics is an innovative, interactive, easy-to-use platform specifically designed for behavioral health organizations. It captures revenue, cost, productivity and quality outcomes data and reporting in simple-to-interpret charts and graphs, effectively turning the massive amounts of complex data that behavioral health providers collect into meaningful, actionable information. This is part of Netsmart's commitment to advancing patient care and equipping its clients in preparing for the shifts in the healthcare economy. These also includes the integration of predictive modeling algorithms in clinical care and the promotion of innovative ways to leverage EHR transaction data to enhance clinical decision support and improve the accuracy and efficacy of patient diagnosis and treatment.

Enlighten Analytics gives behavioral healthcare providers understandable charts that provide a clear picture of their organizations' strengths and weaknesses. Organizations and statewide enterprises that have implemented Enlighten Analytics have experienced dramatic improvements in clinical productivity, patient access to services, and clinical quality.

With Enlighten Analytics, behavioral health providers can:

- Give care coordinators, case managers, therapists, psychiatrists, nurses, and peer specialists up-to-date, actionable information that helps them improve patient access and transform care.
- View key agency targets related to revenue, cost, staff productivity, and quality outcomes.
- Analyze, report, and predict revenue at the staff, clinic, and regional levels and review revenue totals by location, change over time, trending, and service type.
- View detailed information on kept service rates, including trending over time on kept appointments.
- Managers can look at individual categories (i.e. individual therapy) and see how kept rates vary by payer, various codes, day and week, and specific location.

- Identify and track service utilization rates. This is essential for behavioral health providers wishing to become health homes or successfully participate in Accountable Care Organizations. This breakthrough technology can promote data-driven decision making and improve the quality of behavioral healthcare services across the United States.

83. ***Should there be a shared care management tool? Please describe the basic criteria for what a care management tool would need to contain in order for it to be useful.***

NETSMART RESPONSE:

Yes. A shared care management tool is critical to increasing outcomes while driving down costs. The basic criteria and functionality of that tool would need to include the ability to:

- Manage population health
- Exchange client/consumer data securely
- Coordinate care across providers

- Track clinical quality measures and outcomes
- Exchange data
- Coordinate care across providers
- Track clinical quality measures and outcomes
- Manage authorizations and claims across providers

84. ***Should there be a shared population health management tool? Please describe the basic criteria for what a population health management tool would need to contain in order for it to be useful.***

NETSMART RESPONSE:

Yes. Population health management is a critical component of care management and care coordination. The population health management functionality aggregates clinical data to provide a broad picture at the population level. Stratifying the population by risk level will allow a care manager to engage individuals who require immediate attention. Providing visibility into the population and their needs will allow your organization to take innovative approaches to improve the population's health status.

85. ***Please describe the functionality that a common Medicaid provider directory would need to contain in order for it to be useful.***

NETSMART RESPONSE:

Medicaid provider directory functionality should include a database of Medicaid providers via a web portal. The system should have the ability to do a "quick search" by entering searchable text (e.g. name, location, type, etc.). Additionally, an advanced search capability that would include a zip code search, search to find providers near an address, search by specialty. As we move toward accountable care and pay for performance, it is suggested that in the future, a consumer/client review be added for each provider.

86. *How can the RCCOs support providers' access to actionable and timely clinical data?*

NETSMART RESPONSE:

The RCCOs would support provider's access to actionable and timely clinical data by aggregating that clinical data to provide a broad picture at the population level. Stratifying the population by risk level will allow a care manager to engage individuals who require immediate attention. Providing visibility into the population and their needs will allow a provider organization to take innovative approaches to improve the population's health status.

It would have to provide easy access to treatment planning, notes, assessments.

Additionally, it would need the ability to link the treatment plan, progress notes and other results back to the plan of care the care management and care coordination entities are utilizing.

Also, the need to have some "connectivity" between the Care Management Plan and the provider's Treatment Plan.

87. *What are the HIT solutions that would benefit clients, providers, and RCCOs? Please comment on the parameters these tools or platforms would need to possess and the ways in which they could be used.*

NETSMART RESPONSE:

Netsmart proposes its CareManager and CareConnect solutions as previously described. With increasing pressure to coordinate care across the full spectrum of providers and better treat individual populations, health and human services organizations need solutions that enable cross-organizational care management. Taking a step beyond the recent initiative to simply connect provider organizations and share an individual's data, the newest federal goals aim to designate responsible organizations to coordinate and manage the care of identified populations of individuals.

These initiatives are bringing sweeping changes across the healthcare industry. Netsmart is at the forefront of healthcare reform with new solutions to enable the coordinated care management. Netsmart's CareManager and CareConnect solutions address these needs in the most comprehensive manner available in today's market.

88. ***What technical assistance or resources related to HIT infrastructure should the RCCOs supply? This assistance or these resources could be for providers, social service organization, clients/families, or for others.***

NETSMART RESPONSE:

The RCCO's should supply a centralized team of helpdesk members and make available regional subject matter experts out in the field. The number of associates required would vary based on total number of end users and level of technical expertise needed. For the CareManager platform, a team of level 1 helpdesk members would address general questions as it relates to access to the web portal. This team should also be responsible for organized communication to users and be able to provide general help.

89. ***What role should health information exchange platforms like CORHIO or QHN play in the next iteration of the ACC?***

NETSMART RESPONSE:

CORHIO and QHN are the hub of connectivity and vital should they prove to be flexible and have the ability to adapt to the rapid changes needed in this RFI and beyond. Netsmart's CareConnect solution will support connecting to the existing networks or could become the overall connectivity tool needed for the ACC or State of Colorado.

90. *Please share any information, advice, and suggestions you have about health information technology in the ACC Program.*

NETSMART RESPONSE:

Please review our attachment in the "Attachment" Section of the RFI. We would appreciate the opportunity to speak in depth about the details of connectivity and a Care Management tool that can accommodate. Flexibility, innovation, and dedication to optimization of any HIT network and ACC program will continue to be a priority across the country as every State, County, Community, or ACC organization will require/request viable solutions to improve outcomes. The technology and the technology partner need to be willing to collaborate and accommodate as needed while also provide expertise from their experience in other settings.

Netsmart is committed to transforming the way care is delivered. Through innovative and interactive solutions and services, we will lead the charge in the era of accountable care, just as we did with Meaningful Use. Our obligation is to guide our clients through this rapidly changing environment by providing them with technology and services to help improve outcomes and reduce costs. We will help each of our clients adapt to these changes so that they can their goals and improve the health of the populations they serve.

At Netsmart, we are at the forefront of healthcare reform. We are continuing to innovate and evolve our services and solutions to meet the needs of our clients today and in the future. We are committed to ensuring that our clients in behavioral health, public health, substance abuse and addiction services emerge from the healthcare reform era as the leaders in their respective fields of specialization. Our belief is these attributes are necessary for the State of Colorado to achieve what is outlined in this RFI.

Model for the Nation

KANSAS BEHAVIORAL HEALTH AGENCIES AND NETSMART PARTNER ON HEALTH HOMES INITIATIVE TO DRIVE COORDINATED CARE

Industry
- Behavioral Health

Location
- State of Kansas

Challenges
- New legislation requiring health home implementation

Solution
- CareManager™

Results
- Member health homes can share information
- Increased care coordination
- Efficient, effective services to Medicaid clients across the state

On July 1, 2014, the State of Kansas began a health home program for people with serious mental illnesses (SMIs). The goal of the Kansas health homes: to improve health outcomes for those with chronic conditions, to reduce the number of people who are unnecessarily admitted to the hospital and to reduce emergency room visits.

Any of the roughly 426,360 local Medicaid recipients with an SMI are eligible for the program.

In recent years, clinicians have come to know that the opportunity to treat the body and the mind in one workflow is instrumental to giving individuals the treatment they need, especially in cases of co-morbidity or chronic illness. Sixty eight percent of adults with mental health conditions also have medical conditions, according to the American Psychological Association. If you treat both the mind and the body at the same time, you drive down costs and you drive up outcomes. It's a win-win.

This message became even clearer in 2010 with the passing of the Affordable Care Act, which in part focuses on the need for more effective continuity of care. To make this possible, the healthcare professionals responsible for care need to be able to share authorized clinical information and to smoothly facilitate referrals.

In Kansas this vision became a reality on Aug. 1, 2014 with the implementation of Netsmart's CareManager solution in 23 of the state's 26 Association of Community Mental Health Centers of Kansas Inc. health homes.

CareManager aggregates clinical data to provide a broad picture at the population level, facilitates care coordination across providers, tracks clinical quality measures and outcomes, and manage authorizations and claims across care providers. The solution is designed to work directly with care coordinators performing outreach and care management activities.

"Being able to come together under a single, standardized data platform will allow 23 member health homes to share information, coordinate care and provide efficient, effective services to clients across the state."

– Kyle Kessler, Executive Director of The Association of Community Mental Health Centers of Kansas (ACMHCK)

"The Kansas mental health system is shared between the state and the counties, and sharing is a big part of what makes the system work," said Kyle Kessler, executive director of the Association of Community Mental Health Centers of Kansas (ACMHCK), which oversaw the

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Nikki Brezny
Location: Denver, Denver, Colorado

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Colorado Coalition for the Homeless, Stout Street Health Center
Location: Denver, Denver, Colorado
☒ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☐ Medical provider / PCMP / other provider
  i. Type or specialty: PCMP, Behavioral Health, Dental, Pharmacy, Vision, Housing
  ii. Area of practice: Click here to enter text.
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☒ Other (please describe): FQHC serving the homeless

Are you currently involved in the ACC program?

☒ Yes
☐ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years

How have you been involved in the ACC program and what interaction have you had with RCCOs:

Quarterly meetings with RCCO Region 5 - Colorado Access

Please briefly describe your involvement with Medicaid, either in Colorado or another state:

Program manager for Medicaid Outreach and Enrollment

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☒ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

Please feel welcome to describe why or why not using the space below.

☐ 2-3 years
☒ 3-4 years
☐ Since before the program was implemented.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

- Conversations on how to make it better
- With Medicaid expansion, safety net providers are receiving improved compensation.

2) What is not working well in the ACC Program?

- No recognition, enhanced compensation or performance alternatives for facilities or organizations that work with special populations such as homeless people.
- Not all Medicaid enrolled persons are in the ACC or attributed to a PCMP
- Passive attribution has deteriorated the reliability of SDAC data.
- Population management and KPI management is challenging due to inaccurate attribution.
- SDAC data is "old" information as it is based on claims paid information.

3) What is working best in the Behavioral Health Organization (BHO) system right now?

- Leadership at the Mental Health Center level is more committed than ever to establishing and implementing best practices. As a result of Medicaid expansion, the Mental Health Centers are hiring new staff to accommodate the demand on services from hundreds of thousands of newly eligible Medicaid patients.
- In addition, the mental health community is aware that the system is dysfunctional, which is forcing people to look for ways to improve. The services that are provided, once a patient is able to access them, are very strong.

4) What is not working well in the BHO system?

- Even with the effort to create more staff positions to meet the increased demand on services, there are not enough staffing resources available to fund those positions. Salaries are being inflated to be comparable to the competition, which could have serious long-term impacts on the capacity to serve. This is particularly true with homeless service providers, who are not able to keep up with the competition created by larger mental health organizations who can afford to pay their staff more.
- There is a lack of hospital beds, therefore length of stays are not adequate. It also remains to be seen how the crisis response system will work.
- Funding is bifurcated and evaluations are still separate, which doesn't create a real system of integrated care. By funding new "integrated services," funding could be in jeopardy for groups that have been experts

at providing care for years. There is still a mindset that co-located means integrated, when integrated should be focused on seamless care.

- Access to services is still a huge problem. The system may be getting better in terms of providers and availability of resources but it means nothing if patients are not able to access the care.
- Behavioral health care for children is almost non-existent.

5) What is working well with RCCO and BHO collaboration right now?

- Reasonable accommodation standards are helping to build relationships.

6) What is not working well with RCCO and BHO collaboration right now?

- The relationship between RCCO's and BHO's depends on the RCCO. For example, Access has been very accommodating while others are not willing to accommodate a structure for the BHO's – they appear to be stuck within their old systems.
- The BHO's are not always culturally sensitive to the homeless population, there are archaic methods in place (paperwork, preauthorization, etc.) that need to be revamped.
- The RCCO's need to develop new payment structures. For example:

a. Respite care – what do we do with people once they are discharged from the hospital?

b. Non-clinical case management services – there needs to be a payment structure for services provided outside of a clinical setting (i.e., while driving a client to an appointment) and for services such as housing counseling.

c. Continuity of care is not supported financially by the RCCO's

- The levels of regulations and mandates are onerous, more time is spent on paperwork with each new system that is created. Time with patients is compromised.

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

- Integration of care is critical. Behavioral health and primary care need to be put on an even playing field, rather than continuing the notion that behavioral health care is second class, or an "add-on" to primary care.
- The mental health community needs to get creative, how can services be replicated? The community knows how to provide services, there is no need to reinvent the wheel, but how can best practices be fostered and replicated?

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☒	☐	
Community Behavioral Health Services Rule	☒	☐	
Covered diagnoses list	☒	☐	
Different behavioral / physical health reimbursement	☒	☐	
Institutions for Mental Diseases exclusion	☐	☐	
OBH rules, reporting, or financing (regulatory differences between agencies)	☒	☐	
PCMP financing structure	☒	☐	
Per-member per-month amount	☒	☐	
Physical space constraints	☐	☐	
Privacy Laws (HIPAA, 42 CFR)	☒	☐	
Professional / cultural divisions	☒	☐	
RCCO or BHO contracts	☒	☐	
Staff capacity	☒	☐	
State/Federal rules or reporting requirements	☒	☐	
Technical resources / data sharing	☒	☐	
Training	☒	☐	
Others	Please type your response here.		

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

- Shared Electronic Health Record among all programs and specialty care provided within the facility.
- Comprehensive and collaborative Patient Care Plan updated or reviewed at every face to face visit.
- Recognizing Integrated care is not the same as co-located care.

10) Please share any other general advice or suggestions you may have about behavioral health integration.

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination?

Care coordination is an approach to healthcare in which all of a patient's needs are coordinated with the assistance of a primary point of contact. The point of contact provides information to the patient and the patient's caregivers, and works with the patient to make sure that the patient gets the most appropriate treatment, while ensuring that health care is not accidentally duplicated. This process appears to save money on health care costs and it improves the quality of care as well as patient satisfaction.
The approach of care coordination is used for patients with special health care needs who require long term health care. Someone with the sniffles does not need this service; an older adult suffering from several chronic illnesses does, just as a child with developmental disabilities can benefit from it. Care coordination can also be used to help people recover from serious accidents or strokes, to manage mental health conditions, and to assist patients with comorbidities.

b. How should RCCOs prioritize who receives care coordination first?

- RCCOs should only be involved when a member directly contacts the RCCO and then should make contact with the appropriate facility or organization.
- We have found RCCO data which is based on past claims submission to be out dated by a minimum of two months.
- We have found inaccuracies with attribution. For example: 15% of the children reported as not having a Well-Child check in the last 12 months in the SDAC database for claims paid through September 2014 were not Coalition patients.

c. How should RCCOs identify clients and families who need care coordination?

- RCCOs should only be involved when a member directly contacts the RCCO.

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

- With the designation of *delegated Medical provider* comes the responsibility to track care coordination. Perhaps the delegate agency should be audited by the RCCO or HCPF for compliance.

12) What services should be coordinated and are there services that should not be a part of care coordination?

- To appropriately meet the needs of our homeless population all services that patients/clients are requesting or need must be coordinated including: housing, income and public benefits acquisition, transportation, nutrition and SNAP, family support and integrated health care services.

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

- Homeless status: Coordinating the care of someone who is living outdoors is uniquely different than that for someone who is staying with a friend or family member. For example: An insulin dependent diabetic living on the street has no method of keeping insulin at the required temperature. Coordinating this person's care is significantly more intense than someone who may have daily access to a refrigerator.
- Food and income source
- Receiving medical, mental health care or case management anywhere else.
- Preferred language
- Transportation needs

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today?

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

d. What are the gaps in care coordination across the continuum of care?

15) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	Should the RCCO have a role? Yes	Should the RCCO have a role? No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma	☒	☐	☒	

Affordability (assistance with prescriptions or co-pays)	☒	☐	☒	
Daycare / childcare	☐	☐	☐	
Economic stability & employment	☒	☐	☒	
Education	☒	☐	☒	
Environment	☒	☐	☒	
Food access / nutrition	☒	☐	☒	
Health literacy	☒	☐	☒	
Housing	☒	☐	☒	
Language or translation services	☒	☐	☒	
Literacy	☒	☐	☒	
Transportation	☒	☐	☒	Bus passes and taxi vouchers are more effective and useful for homeless persons than the RCCO contracted transportation vendor
Other	Please type your response here. Feel free to list as many non-medical factors as you want, and please explain how the RCCO should be involved.			

16) **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	**Coordinate care?** Yes	No	**In what capacity should these individuals coordinate care in the ACC Program?**
Advanced Practice (Registered) Nurses	☒	☐	

Certified Addiction Councilors	☒	☐	
Certified Nurse Midwives	☒	☐	
Community Health Workers	☒	☐	
Generalists (BA/BS/MA/MS)	☒	☐	
Health Coaches	☒	☐	
Licensed Clinical Social Workers	☒	☐	
Licensed Marriage and Family Therapist	☒	☐	
Licensed Mental Health Counselors	☒	☐	
Licensed Professional Counselor	☒	☐	
Masters of Public Health	☐	☐	
Medical Doctors / Doctors of Osteopathic Medicine	☒	☐	
Nurse Practitioners	☒	☐	
Patient Navigators	☒	☐	
Peer Advocates	☒	☐	
Promotoras	☐	☐	
Psychiatrists	☒	☐	
Psychologists	☐	☐	
Registered Nurses	☒	☐	
Social Workers	☒	☐	
Wraparound facilitators	☐	☐	
Other	Street outreach workers and case managers		

17) **Care coordination requirements for specific populations**. Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and infants	☒	☐	If homeless
Children	☒	☐	If homeless

Children who are healthy, but in socially-complex environments	☒	☐	
Children involved in the foster care system	☒	☐	
Children with a chronic illness	☒	☐	
Children with a serious emotional disturbance	☒	☐	
Children with medical complexity	☒	☐	
Children or youth with a behavioral health diagnosis or substance use disorder	☒	☐	
Transition-age adolescents	☒	☐	If homeless
Parents and families	☒	☐	If homeless
Pregnant women	☒	☐	If homeless
Adults	☒	☐	If homeless
Adults who are healthy, but in socially-complex situations	☒	☐	
Adults with a chronic illness	☒	☐	
Adults with a behavioral health diagnosis or substance use disorder	☒	☐	
Clients involved in the criminal justice system	☒	☐	
Clients with a disability	☒	☐	
Clients in a nursing facility	☒	☐	
Elderly clients	☒	☐	
Frail elderly clients	☒	☐	
Clients in palliative care	☒	☐	
Other populations, please comment: Homeless or at risk of homelessness. Living in a shelter, motel, halfway house, temporarily staying with a friend or family member.			

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

19) How should care coordination be evaluated? How should its outcomes be measured?

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

a. What is the PMPM cost for providing care coordination services?

- Unknown. We do not differentiate an ACC member from a straight Medicaid covered person from an uninsured person. Care coordination is available and provided for all persons.

b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

- Yes. Perhaps by the volume of care coordination items that the member needs. For example: homeless persons (given they are acknowledged as a specific population) have significantly more care coordination items than a stably housed person.

21) 5hould there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

- Without substantial financial support for organizations to staff care coordinator positions it may be an unfair requirement

a. **Care coordinator to client ratios.** If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☐
51-100	☐
101-200	☐
201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

- Did the member's health improve?
- Were barriers to access to care and interactions with systems removed?

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

27) Should the RCCO region maps change? Why or why not? If so, how?

28) Should the BHO region maps change? Why or why not? If so, how?

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

- Standardized reporting and auditing housed in a shared database for all regulatory agencies to access for compliance

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

34) What role should RCCOs play in attributing clients to their respective PCMPs?

- What was not helpful was the passive enrollment to Denver Health for anyone with a Denver county zip code. Homeless person often do not have an address to receive mail. In enrolling these persons in Medicaid the Coalition's address was used. The enrollment notices and information to choose a PCMP or be defaulted to Denver Health were never received by most homeless persons. Our Certified Application Counselors did their best to educate persons on the importance of choosing a PCMP. However, it is important to consider special populations such as the homeless and work with organizations such as the Coalition to find a more appropriate and equitable attribution system.

- As more providers become delegate agencies with higher PMPM payments the more critical the accuracy of attribution becomes. The risk of non-collaboration between agencies may be an issue.

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

42) How should the Department structure stakeholder engagement for the ACC as a whole?

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

a. If no, what are the gaps?

- Specialty care continues to be scarce. Our patient navigators are consistently frustrated by specialist's waiting lists and restricted access of accepting one Medicaid patient per month.
- It is vital that respite care for homeless individuals be available at a scope to meet the population need.

b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

- Specialists often will not work with our homeless persons as they are perceived as unreliable in keeping scheduled appointments. With appropriate transportation (bus passes, taxi vouchers, Coalition vehicles and case manager private vehicles) homeless persons can be better served in keeping appointments.

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

a. What role should hospitals play in the next iteration of the ACC Program?

- It is difficult to impact the high cost of our homeless using hospitals when there is not effective or timely communication and sharing of information that our attributed members received hospital care. It would be helpful if hospitals were incentivized to develop bidirectional electronic sharing of patient information.

b. What role should pharmacies play in the next iteration of the ACC Program?

c. What role should specialists play in the next iteration of the ACC Program?

- Willingness to develop relationships with organizations serving special needs populations such as homeless persons and willingness to undergo training in order to adapt practice guidelines appropriate to the needs of homeless patients.

d. What role should home health play in the next iteration of the ACC Program?

e. What role should hospice care play in the next iteration of the ACC Program?

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

g. What role should counties play in the next iteration of the ACC Program?

h. What role should local public health agencies play in the next iteration of the ACC Program?

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

45) How can RCCOs help to support clients and families in making and keeping appointments?

- Financial support for alternative methods of transportation. As previously stated, bus passes, taxi vouchers and Coalition fleet and staff private vehicles is the most appropriate and culturally sensitive method to facilitate access to care for homeless persons.

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

47) **Community Health Worker reimbursement**. Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement process	(Please check all that apply)
Independently bill	☐
On staff (salary) at Primary Care Medical Provider Clinic	☐
On staff (salary) at RCCO	☐
Per Member Per Month Payment	☐

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you?

- Providers serving homeless patients must understand the special and complex health care needs presented and must adapt practice patterns accordingly.

b. What RCCO requirements would ensure cultural competency?

- Required training to understand the unique healthcare needs of homeless patients; the Colorado Coalition for the Homeless

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?

- Diversity training

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

- Perhaps preferred (and appropriately compensated) facilities and organizations that demonstrate compassion and competency with special populations.

51) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

- Focus on Colorado. Support a task force to study what the special needs of each region are and what could be the most useful to make a difference.

52) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

Practice Support

53) **Support for practices.** Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☐	☐	☐	☐
Network provider education	☒	☐	☐	☐
Assistance with practice redesign	☐	☐	☐	☐
Assistance with efficiency-enhancing activities	☐	☐	☐	☐
Provide web-based resources and directories	☒	☐	☐	☐
Provide practice-specific data reports	☒	☐	☐	☐
Provide clinical care guidelines and best practices.	☒	☐	☐	☐
Provide clinical screening tools	☐	☐	☐	☐
Provide health and functioning questionnaires	☒	☐	☐	☐
Provide chronic care templates	☐	☐	☐	☐
Provide registries	☐	☐	☐	☐
Offer client reminders	☒	☐	☐	☐
Offer client self-management tools	☒	☐	☐	☐
Offer educational materials about specific conditions	☐	☐	☐	☐
Supply behavioral health surveys	☐	☐	☐	☐
Supply other self-screening tools	☐	☐	☐	☐
Administer behavioral health surveys	☐	☐	☐	☐
Administer other self-screening tools	☐	☐	☐	☐
Prepare client action plans	☐	☐	☐	☐
Provide training on providing culturally-competent care	☐	☐	☐	☐
Provide training to supporting staff	☒	☐	☐	☐
Provide training on motivational interviewing	☒	☐	☐	☐
Provide tools and software for phone call and appointment tracking	☒	☐	☐	☐
Provide tools and resources for tracking labs, referrals, etc.	☒	☐	☐	☐
Provide referral and transitions of care checklists	☒	☐	☐	☐
Provide visit agendas or templates	☐	☐	☐	☐
Provide standing pharmacy order templates	☐	☐	☐	☐
Provide comprehensive directory of community resources	☒	☐	☐	☐
Provide directory of other resources	☒	☐	☐	☐
Provide materials regarding Nurse Advice Line	☒	☐	☐	☐
Ensure all tools and resources are centrally located on RCCO-specific website	☒	☐	☐	☐
Others				

54) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

55) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

56) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

- A tiered system based on complexity of population served

57) Should the Department require that PCMPs utilize disease registries to manage the health of their population?

58) Please share any other advice or suggestions about provider support in the ACC.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

62) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

63) What role – if any – should the RCCOs play in the distribution of payments to providers?

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

66) **Measuring Client experience.** Please complete the table below to indicate how the Department should measure Client/patient experience:

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☐	☐	
SF-12 Health Survey	☐	☐	
Other types of client interviews / surveys	☐	☐	
Patient Activation Measure	☐	☐	
Focus groups	☐	☐	
Other	Please type your response here.		

67) Knowing that, at this time, the Department only has claims data, how should population health be measured?

68) How should quality and performance data be reported to the RCCOs, PCMPs, and the public?

69) **Measures for payment.** Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☐
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

70) What percent of RCCO payments should be tied to measures or performance?

Percentage	
10-20%	☐
21-30%	☐
31-40%	☐
41-50%	☐
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

71) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?
- Most KPIs focus on the cost of providing care. Measuring the improvement in member's health is what matters.

72) Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement
- Based on improvement of members health and an official recognition or consideration for providers that serve special populations such as homeless persons.

73) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

74) **Incentive payment frequency**. Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	☐
Annually	☐
Other	☒

If you checked the "Other" box, please describe payment frequency below:

- bi-annually

75) For potential offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

76) For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

- Health outcomes. No

Health Information Technology (HIT)

77) **Types of communication.** For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	☒
Text message	☐	☐
Web portal	☐	☐
Email	☐	☐
Telemedicine / Video chat	☐	☐
Face-to-face meeting	☐	☒
Smartphone app	☐	☐
Other: homeless patients have complex communication needs and encounter frequent barriers not relevant to the housed population		

78) **HIT investments by organizations.** For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below:

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	☒	☐
Digital care management tool	☒	☐
Care transitions alerts	☒	☐
Electronic Health Records (EHRs)	☒	☐
Health risk assessment software	☐	☐
Practice assessment tools	☐	☐
Practice management tools (scheduling, billing)	☒	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☒
Patient education/wellness tools	☒	☐
Provider/case manager directory	☐	☐
Shared decision-making tools	☐	☐
Telemedicine software	☒	☐
Other:	☐	☐
Other:	☐	☐

79) **Importance of technology by type.** The Department is working to determine what technology is in place, what technology is needed, and what technology should be standardized. For RCCOs, providers, and other organizations, use the table below to answer what HIT infrastructure outside of the SDAC your organization would use to perform population health management activities. Tools are scored from 1-5, where 1 are those items least-likely to be used, and 5 are items most-likely to be used:

Tool	1 Least	2	3	4	5 Most
Population analytics / reporting / dashboard	☐	☐	☒	☐	☐
Care management tool	☐	☐	☐	☐	☒
Care transitions alerts	☐	☐	☐	☐	☐
Electronic Health Records (EHRs)	☐	☐	☐	☐	☒
Practice assessment tools	☐	☐	☒	☐	☐
Health risk assessment software	☐	☐	☒	☐	☐
Practice management tools (scheduling, billing)	☐	☐	☐	☐	☒
Client web portal for communicating care plan, services, benefit enrollment	☐	☐	☐	☐	☒
Patient education wellness tools	☐	☐	☐	☐	☐

Other:	☐	☐	☐	☐	☐

80) What are the primary barriers to RCCOs and providers increasing their use Health Information Technology to improve the performance of Primary Care Practices?

- Cost of EHR vendor programs, enhancements and support.
- Cost of staff training.
- Cost of HIT support staff.
- Cost of new equipment.

81) How can Health Information Technology support Behavioral Health Integration?

- Enhance EHRs to seamlessly share a patient's health record.

- The Coalition has spent thousands of hours and dollars in customizing BH templates, workflows and administrative process to develop our EHR to support our integrated model of care. Perhaps incentives for software vendors to facilitate and develop integrated EHR programs is possible.

82) In the next iteration of the ACC, should there be a shared resource for data and analytics? Please describe the basic criteria for what a shared data and analytics platform needs to contain in order for it to be useful.

- A bi-directional or some other electronic method to address incorrect information such as attribution.

83) Should there be a shared care management tool? Please describe the basic criteria for what a care management tool would need to contain in order for it to be useful.

84) Should there be a shared population health management tool? Please describe the basic criteria for what a population health management tool would need to contain in order for it to be useful.

85) Please describe the functionality that a common Medicaid provider directory would need to contain in order for it to be useful.

- Identify providers that are committed and competent to provide care to special needs populations.

86) How can the RCCOs support providers' access to actionable and timely clinical data?

87) What are the HIT solutions that would benefit clients, providers, and RCCOs? Please comment on the parameters these tools or platforms would need to possess and the ways in which they could be used.

88) What technical assistance or resources related to HIT infrastructure should the RCCOs supply? This assistance or these resources could be for providers, social service organization, clients/families, or for others.

89) What role should health information exchange platforms like CORHIO or QHN play in the next iteration of the ACC?

- Facilitate incentives for hospital participation.
- Affordability for providers to participate

90) Please share any information, advice, and suggestions you have about health information technology in the ACC Program.

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Alexis Weightman
Location: Denver, Colorado

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Colorado Health Foundation
Location: Denver, Colorado

☒ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply: ☐ Client

☐ Client's family member
☐ Client advocate
☐ Medical provider / PCMP / other provider
   i. Type or specialty: Click here to enter text.
   ii. Area of practice: Click here to enter text.
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☒ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☐ Other (please describe): Click here to enter text.

Are you currently involved in the ACC program? ☒ Yes
☐ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☐ 3-4 years
☒ Since before the program was implemented.

How have you been involved in the ACC program and what interaction have you had with RCCOs:

Together with Rose Community Foundation, the Colorado Health Foundation is investing in an evaluation of the ACC that aims to help stakeholders:
-Understand the impact of the ACC on Medicaid beneficiaries
-Understand what aspects of the ACC are (or are not) effective -Inform future ACC policies
-Inform the content of future RFAs/RFPs -Provide evidence and analytic support to evaluate prospective policy options

Please briefly describe your involvement with Medicaid, either in Colorado or another state:

We frequently interact with Medicaid as a key partner to help promote shared goals of advancing health care and coverage in the state of Colorado.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely

☐ Likely

☐ Reserved (waiting to see the RFP)

☐ Unlikely without significant changes

☐ Will not seek to participate

☒ N/A

Please feel welcome to describe why or why not using the space below.

Department of Health Care Policy and Financing
Attn: ACC Team 1570
Grant Street
Denver, CO 80203

Re: Accountable Care Collaborative Request for Information (RFI UHAA 2015000017)

Dear ACC team,

As an organization focused on making Colorado the healthiest state in the nation, we are writing to offer a few global considerations for the next phase of the Accountable Care Collaborative (ACC). The Colorado Health Foundation is a non-profit organization that engages through grantmaking, public policy, evaluation, private sector engagement and communications outreach. Our partners include nonprofits, health care leaders, policy makers, educators and the private sector. To achieve our vision, we focus on three community outcome areas: *Healthy Living*, *Health Coverage* and *Health Care* to ensure a future state where our communities promote health and our health care systems deliver excellent, affordable care to Coloradans who both have and desire good health. The ACC plays a critical role in helping us make progress on all our goals, and is directly aligned with our health care and health coverage work.

We strongly support the vision for the next Regional Care Collaborative Organization Request for Proposals that includes a focus on person-centered, integrated, coordinated supports and services and a transition from a medical model to a health model. In order for the ACC program to achieve this transformation, focus will need to be directed to prevention and health promotion, not just disease management. Additionally, we believe the integration of oral health care within primary care is an important component of a personcentered health model of service delivery. We encourage the Department to include the integration of oral health care in its efforts to improve the ACC program.

The Foundation applauds efforts by the Department to foster data-driven care improvements and decisionmaking through access to new technology platforms and other tools that provide actionable feedback and enable enhanced program monitoring, evaluation, and refinement. Health information technology in the ACC program should support the integration of physical and behavioral health care and the sharing of these data, as well as enhance connections to the community resources that make people healthier. Additionally, the Foundation supports the availability of shared intelligence engines, such as population health management, care management, and quality reporting/analytics solutions, that leverage existing statewide or regional IT infrastructure and data (e.g., CORHO, QHN) to achieve Triple Aim goals. We encourage the deployment of consumer-oriented solutions that empower individuals and families to manage and engage in their own health.

In partnership with the Rose Community Foundation, the Foundation is investing in an evaluation of the ACC that aims to help stakeholders:

- Understand the impact of the ACC on Medicaid beneficiaries
- Understand what aspects of the ACC are (or are not) effective
- Inform future ACC policies
- Inform the content of future RFAs/RFPs
- Provide evidence and analytic support to evaluate prospective policy options

Moving forward, we encourage rigorous, ongoing evaluation of the ACC's impacts on health outcomes as well as on Colorado's health care delivery system, including identifying the full benefits and costs of providing coordinated care to Medicaid enrollees.

The Foundation has been a proud partner with many organizations in projects that impact the care provided to Medicaid consumers, most of which in turn impact, and are impacted by, the ACC program. We have made investments that improve primary, behavioral, and oral health integration; provide increased capacity for person-centered medical homes, patient navigation and care coordination; and enhance consumer engagement and enrollment. Because of the lessons learned through these investments, we recognize that transformation will require a better understanding of the level of resources and coordination necessary to fully implement the ACC program. We strongly encourage the Department to seek and incorporate feedback from its stakeholders that will further the state's understanding of the resources and coordination required to achieve its vision of transformation.

In closing, we appreciate your efforts to build on the past successes of the ACC program to serve more people through greater efficiencies, payment reforms and improved quality of care. The focus on the health of the whole person and the whole family is essential. We are committed to supporting the ACC team through and beyond the development period by actively participating as engaged stakeholders. We greatly appreciate the efforts to incorporate client and stakeholder perspectives into the design of the future system and encourage the Department to maintain this consumer focus throughout the process. Please do not hesitate to contact Alexis Weightman, Policy Director at the Colorado Health Foundation at aweightman@coloradohealth.org or 303-953-3600 if you have any questions or we can be of assistance to you and your staff.

Thank you for the opportunity to provide input on this important development for the State of Colorado.

Sincerely,

Anne Warhover

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

Table of Contents

SECTION 1.0 OVERVIEW

1.1. PURPOSE OF THIS REQUEST FOR INFORMATION (RFI)

1.1.1. The Colorado Department of Health Care Policy and Financing (Department) is issuing this Request for Information (RFI) to solicit input on the next phase of the Accountable Care Collaborative (ACC).

1.1.2. Information provided to the Department in response to this Request for Information will inform the Department's Request for Proposals (RFP) for the Regional Care Collaborative Organizations (RCCO) and the future design of the ACC Program.

1.1.3. Anyone interested in responding is welcome to submit a reply (persons or entities responding to this RFI are called "respondents" throughout this document). The Department encourages everyone with ideas about the ACC to respond.

1.2. DEPARTMENT BACKGROUND

1.2.1. The Department serves as the Medicaid Single State Agency, as defined by Code of Federal Regulations (CFR) Title 45 Section 205.100 (45 CFR §205.100). The Department develops and implements policy and financing for Medicaid and the Children's Health Insurance Program, called Child Health Plan Plus (CHP+) in Colorado, as well as a variety of other publicly funded health care programs for Colorado's

low-income families, children, pregnant women, the elderly, and people with disabilities. For more information about the Department, visit www.Colorado.gov/HCPF.

1.3. PROGRAM BACKGROUND

1.3.1. The Accountable Care Collaborative (ACC) Program started in May 2011 with around 500 clients. Since that time, the ACC has grown in many ways. Today, the program covers over 700,000 people. The current phase of the ACC is focused on developing a strong network of contracted providers that can serve as medical homes for Medicaid clients. At the start of the program, enrollment was comprised largely of adults, and the pay-for-performance measures were designed for an adult population.

1.3.2. Over the course of the last three years, the ACC has expanded its focus from the medical home to the whole neighborhood of providers, such as specialists. Program enrollment expanded, increasing the number of children to mirror the overall Colorado Medicaid population. To continue developing the ACC, the Department updated pay-for-performance measures to include children and changed the payment model to support improved medical homes.

1.3.3. The ACC strives to provide the Colorado Medicaid program with a client and family-centered, whole-person approach that improves health outcomes and ensures savings. The program design includes a focus on clinically-effective and cost-effective utilization of services. The ACC works to identify the needs of clients and to use local resources to meet those needs.

1.3.4. The ACC was designed as a platform to transform the Colorado Medicaid program. The upcoming request for proposals (RFP) will build upon the successes of the current program by further developing the ACC to serve more people through greater efficiency and other incremental improvements. In addition to these updates to the program, this RFP will also seek to make bolder, more-comprehensive changes to the ACC through deeper integration, new payment reforms, and the promotion of whole-person/whole-family health.

1.3.5. These improvements will also be strengthened by significant investments in technology, as with the forthcoming Business Intelligence and Data Management (BIDM) system. These new platforms will allow for enhanced program monitoring and evaluation, and will give all parts of the ACC Program better data to improve care and decision-making.

1.3.6. As one of the major parts of the ACC, the RCCOs leverage local infrastructure, relationships, and community resources. The RCCOs' main responsibilities in the first RFP were:

1.3.6.1. Provider network development: developing a formal contracted network of primary care providers and an informal network of specialists and ancillary providers;

1.3.6.2. Care coordination: the RCCOs must ensure that every client has access to an appropriate level of medical management and care coordination;

1.3.6.3. Provider support: supporting providers in delivering efficient, high-quality care by offering clinical tools, client materials, administrative support, practice redesign, etc.; and

1.3.6.4. Accountability and reporting: the RCCOs are responsible for reporting to the Department on the region's progress, and meeting programmatic and Departmental goals.

1.3.7. The RCCOs are responsible for assisting clients with every aspect of their care. This means that they have to assist clients with their physical health and their behavioral health. The state pays providers directly for physical health services. In Colorado, Medicaid behavioral health services are managed by five Behavioral Health Organizations (BHOs) statewide. RCCOs frequently work with the BHOs to

coordinate care. Almost all Medicaid clients are enrolled in a BHO when they receive Medicaid. The BHOs get a set amount of money to manage the care for Medicaid clients, and the BHOs reimburse their network of providers for delivering services to those clients. The five regions that the BHOs manage do not match the regions managed by the RCCOs.

1.3.8. Today, there are seven RCCOs, each working in a specific part of Colorado. Each RCCO has adopted a different approach that works in its region. The RCCOs and their leadership play a vital role in the ACC and offer customized and local health care experience to the program. The ACC leverages personal, human connections to build on the strengths of local and regional partners.

1.3.9. Just as the first RCCO RFP initiated the ACC Program in Colorado, this second RFP will launch the next iteration of the ACC. What the program looks like in the future depends upon the RFP, and the content of the RFP depends upon the insight and guidance you offer through opportunities such as this Request for Information.

1.3.10. For more information on the ACC Program, click here

1.4. VISION FOR THE NEXT RCCO RFP

1.4.1. The next phase of the ACC Program will build on the strengths and the lessons learned during the first iteration. There are three main goals of the next RFP. The Department welcomes input on these goals and how to achieve them.

1.4.1.1. 1. Transforming our system from a medical model to a health model.

1.4.1.1.1. A person's health is impacted by his or her social situation (for example housing, income, transportation, nutrition, presence of supportive family and friends) as well as medical care. The next phase of the ACC Program aims to promote health by developing systems that support healthy lives, rather than just medical care.

1.4.1.2. 2. Moving toward person-centered, integrated, and coordinated supports and services.

1.4.1.2.1. Person-centered care means that the individual/family/caregiver is an equal participant with the provider in defining health goals and developing treatment plans. These both must address the whole person and be achievable within the context of the person's life. To accomplish this, RCCOs must also be able to coordinate more-closely with non-medical services and other state agencies. In order to do this, RCCOs must understand the community and culture where the person lives.

1.4.1.2.2. Part of a whole-person or person-centered approach is addressing both a person's physical and behavioral health needs in a way that is coordinated and cohesive, often referred to as integration. Taking steps towards integration or better coordination of physical and behavioral health care for Medicaid clients is a primary goal of the next RFP. Behavioral health care refers to all services to treat health conditions that primarily present as alterations in thinking, mood or behavior and changes in emotional (mood), psychological (thinking), or social well-being (behavior) and conditions related to addictions. To create the infrastructure for this integration, the Department seeks input on whether or how the Behavioral Health Organization (BHO) or RCCO maps or functions should be adjusted so that they are aligned.

1.4.1.2.3. This next RFP will aim to continue to build on local strengths of each community. This RFP aims to be sensitive to the diverse needs of clients with Medicaid coverage and will develop specific expectations around meeting the unique needs of subpopulations such as children, adults,

the elderly, persons with disabilities, clients involved in the criminal justice system, and all others.

1.4.1.2.4. Incorporating clients' perspectives is an ongoing process. The next RFP aims to strengthen opportunities for clients and advocates to provide input and play an important role in program design and ongoing improvement.

1.4.1.3. 3. Leveraging efficiencies to provide better quality care at lower costs to more people.

1.4.1.3.1. The next RFP aims to capture efficiencies and save money through enhanced technology and by supporting a diverse and changing health care workforce.

1.4.1.3.2. The RFP endeavors to align the financial drivers for all elements of the Medicaid delivery system. Through the RFP process, the Department will explore different ways to pay for care, bend the cost curve, and be as cost-effective as possible.

SECTION 2.0 ADMINISTRATIVE INFORMATION

2.1. RFI TERMS AND CONDITIONS

2.1.1. This RFI is issued solely for information and planning purposes and does not constitute a solicitation. Information about costs and pricing is submitted voluntarily and is non-binding on the respondent. Responses to this RFI will not be considered legal offers nor will they result in an award of any type of contract.

2.1.2. The Department is not responsible for any costs incurred by any respondents for the development and provision of a response to this RFI.

2.1.3. The Department is subject to strict accountability and reporting requirements as a recipient of funds from public sources. Responses to this RFI are subject to disclosure by the Department as required by the Colorado Open Records Act (CORA). The Department plans to make responses to this RFI available for review online.

2.1.4. The Department reserves the right to copy any information provided by respondents for the purposes of facilitating the Department's review of / use of the information.

2.1.5. The Department reserves the right to use information or ideas that are provided by respondents. By submitting information in response to this RFI, the entity or individual represents that such copying or use of information will not violate any copyrights, licenses, or other agreements with respect to information submitted.

2.1.S.1. The responses received from this RFI may be used for the development of a future solicitation. Should a solicitation be issued, further details on the solicitation process will be provided.

2.2. POINT OF CONTACT

2.2.1. The Department's point of contact for this RFI is:

2.2.1.1. Kevin Dunlevy-Wilson (note: other Department staff may address e-mails or phone calls)

2.2.1.2. Department of Health Care Policy and Financing

2.2.1.3. Accountable Care Collaborative Strategy Unit

2.2.1.4. 1570 Grant Street

2.2.1.5. Denver, CO 80203-1818

2.2.1.6. Phone: 303-866-5351

2.2.1.7. RCCORFP@state.co.us

2.3. NOTICES AND COMMUNICATIONS

2.3.1. Communication with respondents will be via various methods including, but not limited to, e-mail, phone, mail, the Department's ACC RFP Web site at: https://www.colorado.gov/pacific/hcpf/regional-care-collaborative-organizations-rccos-requestproposals-rfp and notices on the CORE Web site at: https://codpa-vss.hostams.com/webapp/PRDVSS1X1/AltSelfService;jsessionid=00007DXSIavpsnQoNcRwuPiYmie:189n1g4b1. Respondents can view information posted on CORE by clicking on the "Public Access" button. It is the respondent's responsibility to periodically check the Colorado CORE Web site or the ACC RFP Web site for notices, changes, additional documents or amendments that pertain to this RFI.

2.4. TIMELINE

2.4.1. The timeline for this RFI is as follows:

ACTIVITY	DATE
RFI RELEASE DATE	OCTOBER 21, 2014
INQUIRIES REGARDING THE RFI ACCEPTED UNTIL	OCTOBER 31, 2014 11:00 AM MOUNTAIN TIME
DEPARTMENT RESPONSES TO RFI INQUIRIES (ESTIMATED)	NOVEMBER 10, 2014
RFI RESPONSE SUBMISSION DUE DATE	NOVEMBER 24, 2014 3:00 PM MOUNTAIN TIME

SECTION 3.0 RESPONSES

3.1. INQUIRIES

3.1.1. For inquiries about this RFI, you may send an email to: RCCORFP@state.co.us. If preferred, you may also contact the ACC RFP team by phone at: 303-866-5351. Include the RFI number and title listed in the e-mail subject line.

3.1.1.1. The Department will track the questions that it receives and aggregate the questions into an "Inquiries and Answers" document.

3.1.2. Inquiries received by the Department by the Inquiry Deadline will be responded to by the Department via a posting of the "Inquiries and Answers" document on the CORE Web site and the ACC RFP Web site. Inquiries received after the Inquiry Deadline may not be included in the Department's response.

3.2. PROTECTED HEALTH INFORMATION

3.2.1. Do not include Protected Health Information (PHI) in your response.

3.2.2. If the Department discloses the responses online or via a CORA request, unless the responder explicitly requested otherwise, responses by all Medicaid clients will be identified only by first initial and county of residence. Example: John Doe would be listed as: "'J.' Weld County." Requests for pseudonyms will generally be granted if requested.

3.3. RESPONSE FORMAT

3.3.1. The RFI is broken into the following sections:

3.3.1.1. Basic information about you, the respondent.

3.3.1.2. General Questions

3.3.1.3. Behavioral Health Integration

3.3.1.4. Care Coordination

3.3.1.5. Program Structure

3.3.1.6. Stakeholder Engagement

3.3.1.7. Network Adequacy and Creating a Comprehensive System of Care

3.3.1.8. Practice Support

3.3.1.9. Payment Structure and Quality Monitoring

3.3.1.10. Health Information Technology

3.3.2. The Department is requesting respondents to send any comments or answers, no matter how minor, to the Department. Respondents are encouraged to address the questions listed in the Response Worksheet, but you do not have to reply to all of the questions in a section.

3.3.3. Please note that early responses are appreciated. Respondents do not need to wait until SUBMISSION DATE (see Section 2.4) to submit comments. The Department appreciates receiving any and all comments from respondents.

3.3.4. Reponses should be emailed to RCCORFP@state.co.us. Your answers may be submitted as an attachment or an email. If they cannot be emailed, they may also be sent, in hard copy, to: Colorado Department of Health Care Policy and Financing, Attention: ACC Team, 1570 Grant St., Denver, CO 80203. Following receipt of your response, you should receive a confirmation email within three (3) business days.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Coral Cosway

Location: 1580 Logan St., Ste. 400, Denver CO 80203

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Colorado Behavioral Healthcare Council

Location: 1580 Logan St., Ste. 400, Denver, CO 80203

☒Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply: ☐Client

☐Client's family member

☐Client advocate

☐Medical provider / PCMP / other provider

i. Type or specialty: Click here to enter text.

ii. Area of practice: Click here to enter text.

☒Provider advocate (e.g. medical society)

☐Potential bidder for RCCO contract

☐Behavioral Health Organization

☐Data or HIT entity

☐Foundation

☐Educational or research institution

☐Another public or private program

☐Legislator or elected official

☐Other (please describe): Click here to enter text.

Are you currently involved in the ACC program?

☐Yes

☒No

☐ don't know

If you answered "yes" above, how long?

☐Less than one year

☐1-2 years

☐2-3 years

How have you been involved in the ACC program and what interaction have you had with RCCOs: Our BHO members coordinate with the RCCOs in their regions.

Please briefly describe your involvement with Medicaid, either in Colorado or another state: We represent organizations that are Medicaid providers or are managing service delivery to Medicaid enrollees. This includes Colorado's 17 Community Mental Health Centers, 5 Behavioral Health Organizations, 4 Managed Service Organizations, and 2 Specialty Clinics.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐Very likely

☐Likely

☐Reserved (waiting to see the RFP)

☐Unlikely without significant changes

☐Will not seek to participate

☒N/A

Our members have already taken significant steps to integrate their behavioral health services with physical health services for the benefit of all their clients/patients, including the Medicaid enrollees they serve. We hope the RFP will encourage and

enable an even higher level of integration. Our members look forward to being an integral part of moving that integrated system forward in Colorado.

☐3-4 years

☐Since before the program was implemented.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

   No answer

2) What is not working well in the ACC Program?

   No answer

3) What is working best in the Behavioral Health Organization (BHO) system right now?

   The existing risk-based payment model has enabled the BHOs and their extensive network of community partners to create a person-focused, integrated healthcare delivery system that is tailored to the needs of the communities they serve. By "integrated" we mean a system that provides behavioral, physical and human services as needed to improve health outcomes. This innovative system is able to provide the right services, at the right place, at the right time to achieve the triple aim (e.g., improved population health outcomes, improved client/patient experience, and reduced per capita healthcare costs) with respect to behavioral healthcare needs.

   It should be noted that neither a total "carve-in" or "carve-out" of behavioral healthcare services will enable achievement of the triple aim. Some middle path is required that allows for coordination, local flexibility, and separation as needed to operationalize integrated care in the context of the current regulatory environment and financing systems. The 1915(b)(3) Managed Care Waiver has allowed the BHOs to bend the cost curve and must be kept in place as the State contemplates how it will bring together physical and behavioral healthcare in the future in a manner that maintains the most effective parts of each system. The RCCO RFP should reward bidders who can integrate care, data, and financing.

   Additionally, having a system able to manage and pay for the care of people with significant and complex health needs, as behavioral health has been able to do, will be critical if the State plans to expand the Medicaid behavioral health benefit to populations such as people with developmental disabilities, autism, and traumatic brain injury.

4) What is not working well in the BHO system?

   Colorado's behavioral healthcare system is currently experiencing workforce shortage issues that are making it difficult to attract enough behavioral healthcare professionals to Colorado to meet the

increasing demand for services. Some barriers to hiring new staff include long wait times for licensure approval within the Colorado Department of Regulatory Affairs (DORA), reimbursement rates that don't allow for the ability to substantially increase pay for these professionals, and limits in loan repayment program capacity.

State data system problems are also significant barriers to BHO operations. The State's current data system forces BHO staff to spend a significant amount of time focused on data reporting and sharing (much larger than would be the case with a sufficient data system). Also, the lack of real-time physical health data because of limitations of the State's data system prevents the BHOs from being able to change the course of a client's care during a health event. Also, the system's inability to hold data on a patient's substance use disorder issues prevents the RCCOs from understanding the complete health needs of their patients.

Existing government funding streams for behavioral health (Medicaid and OBH dollars) are in silos that aren't easily aligned by either providers or the State. These funds should work together to support comprehensive care and population health objectives.

5) What is working well with RCCO and BHO collaboration right now?

No answer

6) What is not working well with RCCO and BHO collaboration right now? No answer

Behavioral Health Integration

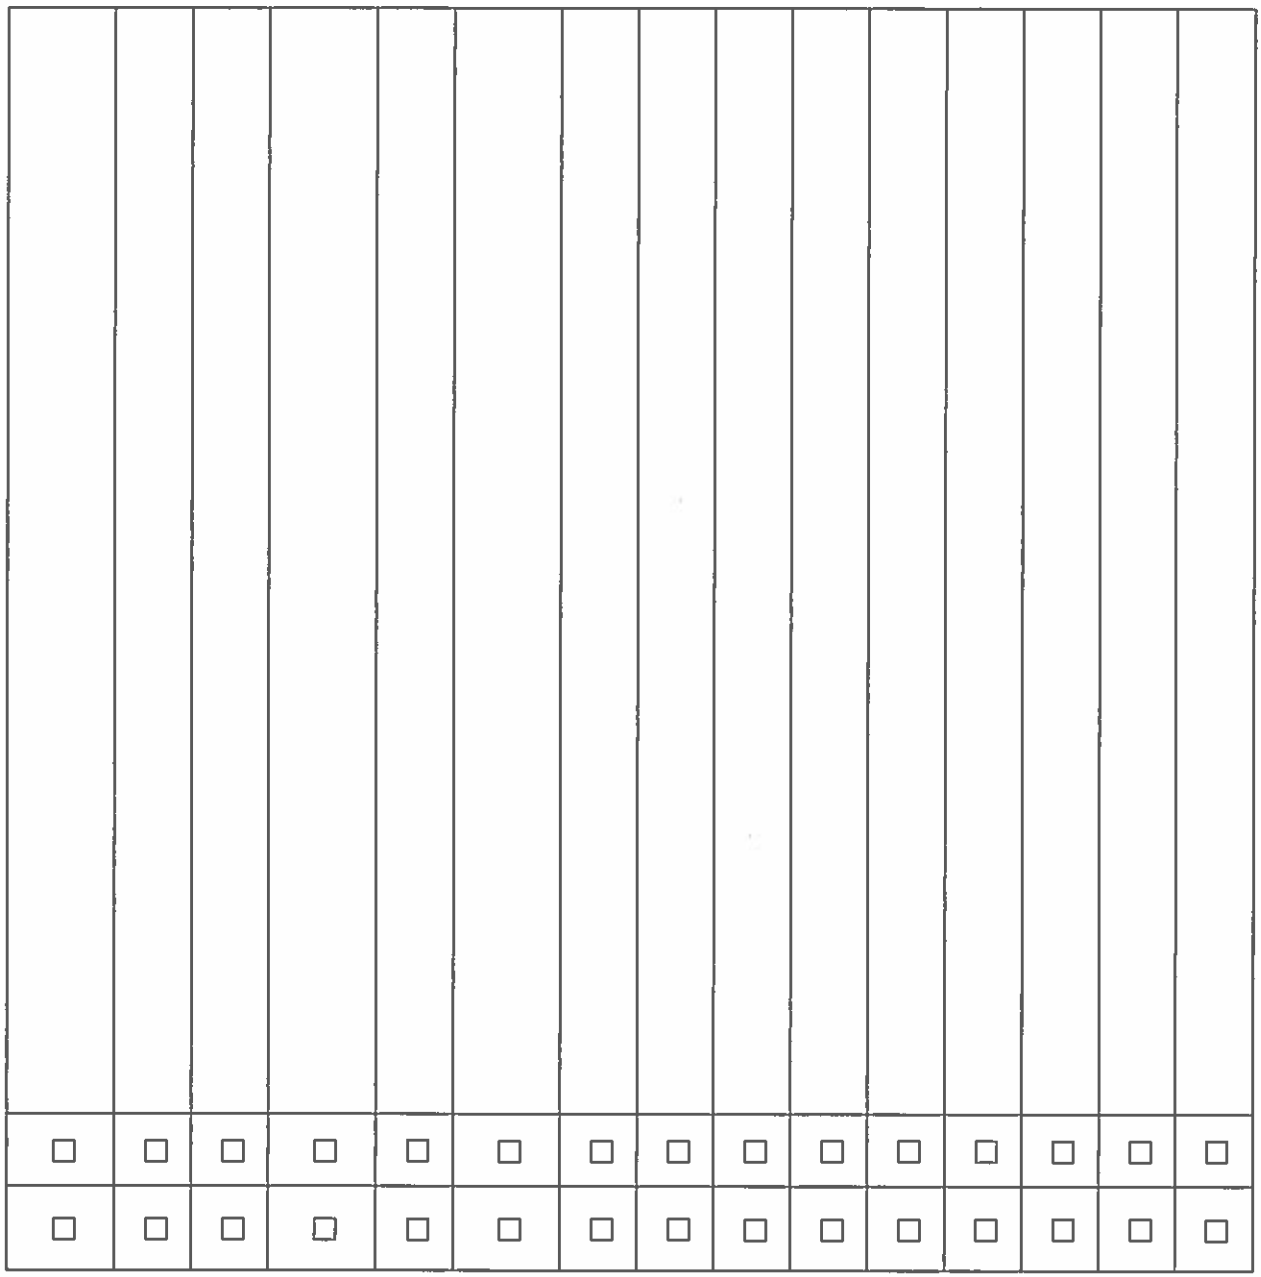
7) What should be the next steps in behavioral health integration in Colorado?[1]

Healthcare integration should align in the RCCO, BHO, and commercial insurance environments in order to achieve the goals of Colorado's State Health Innovation Plan. This should involve administrative systems, financing, data, the needs of clients/patients (including medical, behavioral and human services), and provider needs. Attention should also be paid to the amount of regulatory burden and payment structures in the overall system. Efforts should be made to streamline reporting and other regulatory requirements as much as possible while still maintaining the oversight needed to ensure improved health outcomes. Payment systems should support integration and whole-person care.

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) Barriers to the integration of behavioral health and physical health services. Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to address it:



Community Mental Health Center financing structure[2]	☐	☐	
Community Behavioral Health Services Rule	Please type your response here.		

Covered diagnoses list

Different behavioral / physical health reimbursement

Institutions for Mental Diseases exclusion

OBH rules, reporting, or financing (regulatory differences between agencies)

PCMP financing structure

Per-member per-month amount

Physical space constraints

Privacy Laws (HIPAA, 42 CFR)

Professional / cultural divisions

RCCO or BHO contracts

Staff capacity

State/Federal rules or reporting requirements

Technical resources / data sharing

Training

Others

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, wholeperson/whole-family physical and behavioral health care?

The Substance Abuse and Mental Health Services Administration (SAMHSA) and Health Resources and Services Administration (HRSA) Center for Integrated Health Solutions has developed a framework for levels of healthcare integration. This framework outlines key elements necessary for each level of integration, including[1]:

Level 1, Minimal Collaboration

- Located in separate facilities
- Separate systems
- Communication is minimal and driven by provider need in compelling cases only (may never meet in person)
- Limited understanding of each other's roles

Level 2, Basic Collaboration at a Distance

- Located in separate facilities
- Separate systems
- Communicate periodically about shared projects (communication driven by specific patient issues)
- Meet as part of a larger community
- Appreciate each other's roles as resources

Level 3, Basic Collaboration Onsite

- In the same facility but not necessarily in the same offices
- Separate systems
- Communication is regular about shared clients/patients using phone or email
- Collaborate based on need for each other's services and referrals
- Meet occasionally to discuss specific cases
- Feel part of a larger, yet ill-defined team

Level 4, Close Collaboration Onsite with Some System Integration

- In the same space within the same facility
- Share some systems (e.g., scheduling or medical records)
- Communication is in person as needed (have regular face-to-face interactions about some clients/patients)
- Collaborate based on needs of difficult clients/patients
- Have a basic understanding about roles and cultures

Level 5, Close Collaboration Approaching an Integrated Practice

- In the same space within the same facility with some shared space
- Actively seek system solutions or work-a-rounds together
- Communicate frequently in person
- Collaboration is driven by a desire to be a member of a care team
- Regular meetings to discuss overall client/patient care and specific client/patient issues
- Have an in-depth understanding of roles and cultures

Level 6, Full Collaboration in a Transformed/Merged Integrated Practice

- In the same space within the same facility sharing all practice space
- Have resolved most or all system issues and are functioning as one integrated system
- Communicate consistently at the system, care team, and individual levels
- Collaboration is driven by a shared concept of team care
- Have formal and informal meetings to support the existing integrated model of care • Have roles and cultures that blur or blend

[1] Heath B, Wise Romero P, and Reynolds K. A review and Proposed Standard Framework for Levels of Integrated Healthcare. Washington, DC. SAMHSA-HRSA Center for Integrated Health Solutions. March 2013.

10) Please share any other general advice or suggestions you may have about behavioral health integration.

Moving toward an integrated system of healthcare is a process. All practices should start at the level of integration (see model noted in question #9) that their community resources and partnerships allow. Then they should develop a strategic plan to move toward higher levels of integration.

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination?

No answer

b. How should RCCOs prioritize who receives care coordination first?

No answer

c. How should RCCOs identify clients and families who need care coordination?

No answer

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

RCCOs should develop a system that utilizes as much of the existing data reporting processes for that provider type as possible to reduce additional administrative burdens on providers.

12) What services should be coordinated and are there services that should not be a part of care coordination?

No answer

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

No answer

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today?

No answer

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

Because behavioral healthcare sometimes includes a human services component (i.e., wrap-around services), these providers are already coordinating this care for their clients. The purpose of this care coordination is to obtain the services that the client needs in order for their mental health or substance use disorder (SUD) treatment to be effective. Behavioral health providers are also currently coordinating care between mental health and SUD services.

c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

Place the care coordination relationship where it makes the most sense for the client/patient based on their physical and behavioral health needs. A patient with only medical needs may be best served by the RCCO or a physical health provider. However, a client/patient with a mental health and/or SUD issue may be better served with their care coordination placed with the behavioral health entity providing those services. This is especially true if the client/patient requires human (wrap-around) services as well.

d. What are the gaps in care coordination across the continuum of care?

No answer

15) RCCOs' roles in addressing clients' and their families' non-medical needs. Please complete the table below, keeping in mind adults, children, and families:

	Should the RCCO have a role?		Should the RCCOs coordinate with community supports and services?	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Non-medical need:	Yes	No	Yes	

Abuse, neglect, and trauma	☐	☐	☐	
Affordability (assistance with prescriptions or co-pays)	☐	☐	☐	
Daycare / childcare	☐	☐	☐	
Economic stability & employment	☐	☐	☐	
Education	☐	☐	☐	
Environment	☐	☐	☐	
Food access / nutrition	☐	☐	☐	
Health literacy	☐	☐	☐	
Housing	☐	☐	☐	
Language or translation services	☐	☐	☐	
Literacy				
Transportation	☐	☐	☐	
Other	☐	☐	☐	

RCCOs should be expected to continue to coordinate with the BHOs to ensure their patients are receiving needed services for behavioral health issues.

16) Requirements about who should be doing care coordination. Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	Coordinate care?	In what capacity should these individuals coordinate care in the ACC Program?

Care coordination should be placed with the provider most appropriate for that client/patient.

17) Care coordination requirements for specific populations. Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and infants	☐	☐	
Children	☐	☐	
Children who are healthy, but in socially-complex environments	☐	☐	
Children involved in the foster care system	☐	☐	
Children with a chronic illness	☐	☐	
Children with a serious emotional disturbance	☐	☐	

Children with medical complexity	☐	☐	
Children or youth with a behavioral health diagnosis or substance use disorder	☐	☐	
Transition-age adolescents	☐	☐	
Parents and families	☐	☐	
Pregnant women	☐	☐	
Adults	☐	☐	
Adults who are healthy, but in socially-complex situations	☐	☐	
Adults with a chronic illness	☐	☐	
Adults with a behavioral health diagnosis or substance use disorder	☐	☐	
Clients involved in the criminal justice system	☐	☐	
Clients with a disability	☐	☐	
Clients in a nursing facility	☐	☐	
Elderly clients	☐	☐	
Frail elderly clients	☐	☐	
Clients in palliative care	☐	☐	
Other populations, please comment:			

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

No answer

19) How should care coordination be evaluated? How should its outcomes be measured?

No answer

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

a. What is the PMPM cost for providing care coordination services?

b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

No answer

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

No answer

a. Care coordinator to client ratios. If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☐
S1-100	☐
101-200	☐
201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

No answer

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Care coordination efforts should align with Section 2703 of the Affordable Care Act for clients/patients with multiple chronic health conditions.

Be careful not to over-regulate care coordination. Allow flexibility to determine what works best for clients/patients. The goal should be better health outcomes, not creating another care plan for the sake of 'checking a box' on a form.

Care coordination is most effective when it's done at the point of care.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

As much as possible, regulatory activities should be streamlined while allowing enough local flexibility to enable the RCCO and contracted providers to achieve the triple aim in the communities they serve.

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

No answer

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

No answer

27) Should the RCCO region maps change? Why or why not? If so, how?

Changes to the RCCO map should be informed by existing data. Boundaries should reflect how patients access care to ensure the best health outcomes.

28) Should the BHO region maps change? Why or why not? If so, how?

No answer

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition? No answer

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

No answer

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

Continuous eligibility is integral to ensuring continuity of care; achieving improved health outcomes; and reducing long-term costs.

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

No answer

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

No answer

34) What role should RCCOs play in attributing clients to their respective PCMPs?

Clients/patients should be attributed to a PCMP that can best meet their needs and can serve them in their community.

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

No answer

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

Providing appropriate human services (i.e., wrap-around services) along with healthcare services can be an integral part of making and keeping a client healthy. The value of these services to improving health outcomes and reducing future healthcare costs should not be overlooked. Funding sources for these services (in HCPF and OBH) should work together to support comprehensive healthcare for Coloradans.

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

No answer

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

The ACC Program should work with DORA to develop a specific license for integrated care practices. This license should streamline regulatory processes and requirements between the two existing systems (physical and behavioral health).

Also, the ACC Program should work with DORA to modify licensure processes that currently slow the movement of qualified licensed healthcare professionals to Colorado from other states.

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

No answer

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

No answer

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

No answer

42) How should the Department structure stakeholder engagement for the ACC as a whole? No answer

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

a. If no, what are the gaps?

b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

There is currently a shortage of behavioral health practitioners in Colorado, including psychiatrists (especially those who treat children), mid-level practitioners and those with prescriptive authority. The ACC Program should work with DORA to reduce the regulatory burdens associated with qualified practitioners becoming licensed in Colorado. The State should support expanded scopes of practice where appropriate for mid-level practitioners. Also, bidders should be rewarded for investments in telehealth that could help ease this workforce shortage.

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

a. What role should hospitals play in the next iteration of the ACC Program?

b. What role should pharmacies play in the next iteration of the ACC Program?

c. What role should specialists play in the next iteration of the ACC Program?

d. What role should home health play in the next iteration of the ACC Program?

e. What role should hospice care play in the next iteration of the ACC Program?

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

g. What role should counties play in the next iteration of the ACC Program?

h. What role should local public health agencies play in the next iteration of the ACC Program?

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past? No answer

45) How can RCCOs help to support clients and families in making and keeping appointments?

The Community Mental Health Centers (CMHCs) have adapted their appointment procedures based on observed client behaviors to identify what procedures are most effective at getting clients to make and keep appointments. The RCCOs can learn from the CMHC's experience and facilitate the dissemination of that knowledge to their contracted providers.

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

No answer

47) Community Health Worker reimbursement. Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement process	(Please check all that apply)
Independently bill	☐
On staff (salary) at Primary Care Medical Provider Clinic	☐

On staff (salary) at RCCO	☐
Per Member Per Month Payment	☐

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

No answer

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you?

b. What RCCO requirements would ensure cultural competency?

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

Bidders should be expected to demonstrate that they, or their community partners, can provide services in a culturally-competent manner.

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

No answer

51) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

The ACC Program should develop a way for RCCOs to share more real-time data with providers so they can intervene while the client/patient is still in the emergency room.

52) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

No answer

Practice Support

53) Support for practices. Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

Type of support	Should a specific tool be required? Yes	No	Should the state

54) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

No answer

55) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

No answer

56) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

Incentivize providers to manage and carry risk. Withholding part of an existing contract amount is not an incentive program. A true incentive program provides dollars above a contract amount for achieving goals.

57) Should the Department require that PCMPs utilize disease registries to manage the health of their population? No answer

58) Please share any other advice or suggestions about provider support in the ACC. No answer

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

The ACC Program should consider moving toward a model where the RCCOs assume and manage risk.

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

CBHC members are succeeding under a risk-based (capitated) system in ways that wouldn't be possible under a fee-for-service system. The capitated system allows for more flexibility to provide the right services at the right place at the right time to meet the triple aim.

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

Yes, however, value must be measured appropriately – meaning that the items being measured are statistically valid, impact either the quality of care or outcomes, and are elements the provider can influence. Accountability measures need to focus on health outcomes instead of services delivered.

62) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding? No answer

63) What role – if any – should the RCCOs play in the distribution of payments to providers?

No answer

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

No answer

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes? No answer

66) Measuring Client experience. Please complete the table below to indicate how the Department should measure Client/patient experience:

Patient Activation Measure

Focus groups

Other

67) Knowing that, at this time, the Department only has claims data, how should population health be measured? No answer

68) How should quality and performance data be reported to the RCCOs, PCMPs, and the public?

No answer

69) Measures for payment. Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☐

8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

70) What percent of RCCO payments should be tied to measures or performance?

Percentage	
10-20%	☐
21-30%	☐
31-40%	☐
41-50%	☐
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

71) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?

No answer

72) Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?

Use national standards as a baseline and incentivize improvement within reasonable boundaries.

73) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

No answer

74) Incentive payment frequency. Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	☐

Annually	☐
Other	☐

If you checked the "Other" box, please describe payment frequency below:

No answer

75) For potential offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

No answer

76) For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

Managed care organizations, such as the BHOs, have these measures, such as access to care measurements, in their contracts.

Health Information Technology (HIT)

77) Types of communication. For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	☐
Text message	☐	☐
Web portal	☐	☐
Email	☐	☐
Telemedicine / Video chat	☐	☐
Face-to-face meeting	☐	☐
Smartphone app	☐	☐
Other:		

78) HIT investments by organizations. For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below:

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	☐	☐
Digital care management tool	☐	☐
Care transitions alerts	☐	☐
Electronic Health Records (EHRs)	☐	☐
Health risk assessment software	☐	☐

Telemedicine	☐	☐	☐	☐	☐
Other:	☐	☐	☐	☐	☐

80) What are the primary barriers to RCCOs and providers increasing their use Health Information Technology to improve the performance of Primary Care Practices?

No answer

81) How can Health Information Technology support Behavioral Health Integration?

The ACC Program should look for bidders willing to invest in technology that fosters integration and can overcome the challenges of the State's data system.

82) In the next iteration of the ACC, should there be a shared resource for data and analytics? Please describe the basic criteria for what a shared data and analytics platform needs to contain in order for it to be useful.

Whatever platform is created, it should be able to include behavioral health data (including substance use disorder information) as well as physical health data.

83) Should there be a shared care management tool? Please describe the basic criteria for what a care management tool would need to contain in order for it to be useful.

No answer

84) Should there be a shared population health management tool? Please describe the basic criteria for what a population health management tool would need to contain in order for it to be useful.

No answer

85) Please describe the functionality that a common Medicaid provider directory would need to contain in order for it to be useful.

To reduce the stigma of behavioral health services and move toward integrated care on the client/patient side (not just the provider side), a provider directory would need contain both physical and behavioral health providers.

86) How can the RCCOs support providers' access to actionable and timely clinical data?

Allow the RCCOs to share data outside the existing state data system with provider entities as needed to enable the use of timely clinical data to improve care.

87) What are the HIT solutions that would benefit clients, providers, and RCCOs? Please comment on the parameters these tools or platforms would need to possess and the ways in which they could be used.

No answer

88) What technical assistance or resources related to HIT infrastructure should the RCCOs supply? This assistance or these resources could be for providers, social service organization, clients/families, or for others.

No answer

89) What role should health information exchange platforms like CORHIO or QHN play in the next iteration of the ACC?

It's essential that exchange platforms are available to both physical and behavioral health providers. Also, it's critical that the platforms allow for the easy exchange of information, including real-time data that can be used to change the course of a client/patient's treatment.

90) Please share any information, advice, and suggestions you have about health information technology in the ACC Program.

November 19, 2014

Dr. Judy Zerzan (or appropriate HCPF executive)
Colorado Department of Health Care Policy and Financing
1570 Grant Street
Denver, CO 80203

Dr. Zerzan,
One behalf of the Colorado Chapter of the American Academy of Pediatrics (CO-AAP), and its over 500 (?) pediatricians across Colorado, we respectfully submit the follow comments in response to the Accountable Care Collaborative (ACC) Request for Information.

Over the course of the past several years, members of the CO-AAP have been involved in various aspects of the ACC and RCCO rollout. The Chapter has publically pledged support for the important initiative, and has worked diligently with the Department to collaboratively integrate pediatric practices into the RCCO model. Additionally, Chapter members have served and continue to serve in a variety of advisory capacities for the RCCOs and several internal Department committees.

It is with this spirit of collaboration that we submit the attached RFI answers on behalf of the Chapter. The recommendations have been developed in conjunction with the Colorado Children's Health Care Access Program and many community pediatricians.

We look forward to beginning a dialog with your team about the next steps for the state's ACC program, while keeping our focus on serving children and families at the forefront. Please feel free to contact me with any questions, and I look forward to discussing with you soon.

Regards,

Joe Craig, MD, FAAP
President, American Academy of Pediatrics, Colorado Chapter

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name:

Location:

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization:

Location:

☐ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☒ Medical provider / PCMP / other provider
  i. Type or specialty:
  ii. Area of practice: Click here to enter text.
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☒ Other (please describe): Advocate for children on Medicaid

How have you been involved in the ACC program and what interaction have you had with RCCOs:

Click here to enter text.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:

Click here to enter text.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

Please feel welcome to describe why or why not using the space below.

Are you currently involved in the ACC program?

☐ Yes
☐ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☐ 3-4 years
☐ Since before the program was implemented.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

- Reimbursement (mostly due to the Federal ACA) is fairer now.

- The decision to make the well child visit one of the KPIs was a very good decision in behalf of children, but unfortunately attribution is still flawed and the SDAC data is delayed and often inaccurate. So, it is difficult to create an effective QI process to improve the KPI, but this is a good start.

- The decision to focus on integrated behavioral health in medical homes is a wonderful decision to improve health outcomes for people covered by Medicaid. Thank you.

- You have a great opportunity to do what is needed for the majority of Medicaid recipients. The majority of Medicaid recipients in Colorado are children and adolescents; they should not be considered one of the subgroups. The following principles should be incorporated into the core objectives of the ACC:

    - Children's health care needs are very different than adults. For adults, the focus is on managing chronic disease more effectively. For children, it is about preventing the development of those chronic diseases.
    - If the ACC really wants to focus on health and wellness, the greatest opportunity is with the children (the majority of Medicaid recipients). By focusing on preventive care, early screening and early intervention for children, there will be big savings;

unfortunately those savings may not occur for many years or decades in the future, but the investment will eventually be worth it.

- So, the ACC will need to invest in children to the extent possible now even though the savings come much later. We recommend that a portion of short-term savings that occurs due to chronic disease management in adults in the ACC be invested back into preventive care for children.
- Children are part of families and you can't help the child unless you help the family. So, care coordination is more involved for children since it includes care coordination of the parents/family.
- There is increased recognition that behavioral health is a part of overall health and should be accessible within a pediatric medical home. However, the current mental health system must have policies, procedures, and resources that support integrated behavioral health activities at the practice level.

2) What is not working well in the ACC Program?

- Attribution continues to attribute patients to the wrong medical home and the process of getting patients reassigned to the correct medical home is onerous for the patient and family.

- The health care data through the SDAC is based on claims so it is delayed and is incomplete (particularly for children). Therefore, it is not very useful in helping medical homes improve outcomes for children.

- Each RCCO does things very differently, which is confusing for medical homes with patients in several RCCOs. RCCOs are inconsistent in how they respond to requests for care coordination (quite variable depending on whom you reach at the RCCO). So the new RFP should ask how RCCOs will develop policies and procedures to make their methods and responses to requests for help more consistent, both within the RCCO and among all RCCOs.

- There are certain expectations/requirements and ways of doing things that are so different from one RCCO to another that it requires significant extra work for the medical home to adapt to the differences. To deal with this. So, the RFP should ask how RCCOs intend

- If a patient lives in one region and goes to a medical home in another region, and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from the patient's region RCCO. This is particularly true in the Denver metro area. <u>There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients.</u>

- The "incentives" now are actually disincentives, especially the requirement that the RCCO must meet its KPIs before a high performing medical home can be rewarded for meeting its KPIs. The concept behind this approach is not consistent with how health care systems (and

"medical neighborhoods") work.

- The geography of the 7 regions does not reflect the natural geography of health care systems and referral patterns. Larimer County should be in Region 2.

- RCCOs are not providing the level of care coordination that Medicaid patients need. We have had RCCO "care coordinators" just tell us to call 211. The level of commitment that patients and families need is difficult to find, unless care coordination is provided at the medical home level or the community level.

- Both family practices and pediatric practices report that the SDAC does not reflect their own data that the practice can obtain from their EHR or their own claims data. This is particularly true regarding data on health care screening. The RFP should ask how RCCOs and HCPF should take advantage of this practice-based data.

- Most medical homes are not working closely with RCCOs and are not receiving much support. The RFP should ask how RCCOs intend to work more closely with medical homes.

- Feedback from RCCOs to the medical home regarding patients referred to the RCCO for care coordination is spotty. How will RCCOs consistently provide feedback and communication to the medical home regarding what was done for the patients and whether there was improvement?

- There has been difficulty with communication from the state level through the RCCOs down to the individual practice/provider level. Providers feel as though they are not well informed from HCPF or RCCOs. We are grateful that CCHAP keeps us informed.

- The current system does not take into account the movement of patients on and off Medicaid and movement between RCCOs. Whether for KPIs or future shared savings incentives, practices need to be evaluated on established patients who have been in a practice for a minimum of six months. This allows the medical home to actually have time to make an impact on the child's care. Otherwise, it is a substantial disincentive for practices to be open to the more complex and challenging patients, those that likely need access the most.

- Currently, there is very little communication and alignment between BHO's and RCCO's. In order for integrated behavioral health to be successful at the practice and community level, the BHO's and RCCO's must have similar goals, policies/procedures that are aligned, payment structures that are aligned with movement toward integration and ongoing close communication with one another. The RFP should ask how they intend to do this.

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

- The decision to focus on integrated behavioral health in medical homes is a wonderful decision to improve health outcomes for people covered by Medicaid. Thank you.

- If Colorado is serious about promoting integration of behavioral and physical (medical) health care, then the RCCOs and BHOs should be integrated. This would mean they should have the same regions and function as though they are one organization. This would reduce duplication of efforts and have better alignment of incentives and payments that support integrated care.

- Open the behavioral health and wellness codes (96150 – 96155) now. Don't wait. This will encourage integration immediately and enable medical homes to start now the process of evolving toward full integration.

- Care coordination for both behavioral health and medical care should be done in the primary care setting. And either the RCCO and/or the BHO should delegate the responsibility to do care coordination and a pmpm to cover the expense to the medical home as part of the payment reform process. And behavioral health care coordination and medical care coordination needs to be fully reimbursed. In addition, the BHO and the RCCO will need to have information and care coordinators to assist medical homes to handle uncommon or very complex issues.

- Provide infrastructure and funding for data collection and management to support integrated behavioral health in the medical home and the care coordination that will have to be part of that. Utilizing 5DAC data is just one way to understand the activities within a medical home. SDAC data is delayed and does not include enough information to support behavioral health care coordination in the medical home. Other methods and technologies are needed. There will need to be an investment in the development of new technologies and methods to do behavioral screening, track referrals, document treatment and collect data on the whole care coordination process at the medical home level. This will require adequate reimbursement to cover the cost of starting up new care coordination programs in the medical home and start up technologies to improve screening, intervention and care coordination with follow through in the medical home.

- The CPACK program developed by CBHC is a very good program, particularly the following:
  a. Assistance with finding a behavioral health provider for patients
  b. Telephone consultation by a child psychiatrist to primary care providers

We recommend that BHOs be required to provide the 2 components above as part of their new contracts.

- Payment options for integrated behavioral health (not just co-location) need to be clear and understandable to providers and practices. In order for the integrated model to be sustainable, there need to be ways to access understandable billing rules/policies.

Care Coordination

Question 12) What needs for children/families should be coordinated in medical homes and are there services that should not be a part of care coordination by the pediatric and family medical home

One of the most difficult services to provide in the medical home is home visits. Support from the larger system is needed.

Services that can be provided in a pediatric or family medical home are: complex medical coordination including logistics/travel, ancillary services (PT/OT/home health services, ...), collaboration with mental/behavioral health, collaboration regarding school needs, referrals to early intervention services and Child Find, referral to other agencies (rehab, hospice, ...), collaboration with foster care and DHS system. RCCOs need to help medical homes with needs like assistance with housing, food, parental employment, child care, in which case the RCCO can help families connect with other agencies that provide these services.

Question 19: How should care coordination program be evaluated? How should its outcomes be measured?

A care coordination program should initially be measured by having good processes, not measured by outcomes, until solid data exists on outcomes that are risk adjusted and accurate for children. Initially all measures need to be quite separated from outcomes that are highly tied to patient behavior, or practices will again be less likely to serve those with highest risk.

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Our medical home relates to multiple RCCOs and we want to be delegated to do care coordination. If all RCCOs allowed medical homes to be delegated to do care coordination, we could receive a pmpm from all of them, which would enable us to afford to hire enough care coordinators to meet the needs of all of our ACC patients.

Where should care coordination be done? Care coordination is best done in the medical home. We are willing to do care coordination, because we have a relationship with our patients and they trust us and we recognize that coordinating complex medical care is essential for good

care and for cost savings. Also, the primary care provider is best positioned to have a long term relationship with the patient, and therefore know and understand other aspects of the patient's life and how important those non-medical factors are on the patient's health and health issues.

If care coordination cannot be done in the medical home, then it is best done by community-based organizations. The least effective, least well-received, least trusted is care coordination done from a call center in an RCCO. The role of the RCCO should be to help the medical home-based care coordination staff access resources for families.

The majority of practices are willing to provide Care Coordination, if they can get financial support (PMPM) for providing the service.

Should you be doing care coordination for certain patient populations e.g. children with asthma or special needs children? Or for your entire Medicaid population healthy or chronically ill? The overall goal of Colorado Medicaid should be to provide care coordination services for ALL patients in the Medicaid population (for some patients it may be very minimal, others extensive). This is the essence of preventive care. A care coordinator that is based in the medical home is in the best position to help identify risk factors proactively, as early as possible before they impact a patient's health and cause illness. Children with special healthcare needs (complex, complicated) require a higher level of care coordination, so the pmpm attached to their care coordination needs to be risk adjusted.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

- All RCCOs should have their offices in the region served, should be non-profits, be a Medicaid provider and be incorporated only in Colorado.

- All RCCOs should offer to delegate care coordination to medical homes willing to accept that responsibility and the RCCO should share a portion of the RCCO pmpm with the medical home that accepts delegation.

- All RCCOs should use the same criteria for delegation and for the amount that is paid for delegated services of care coordination. By doing this, services can reach a standard across the state. A patient would have access to similar services no matter where they moved across Colorado.

- RCCOs should all agree on how they will effectively communicate to medical homes regarding any contact the RCCO has with patients attributed to the medical home. They

should include PCMPs in developing those criteria.

- All RCCOs should help (or contract with an organization to help) medical homes understand how to access their SDAC data, understand their data and use it to develop rapid cycle QI projects to improve health outcomes and meet KPIs.

- All RCCOs should agree to provide uniform support for medical homes when a medical home asks for help with care coordination, even when the medical home is in another region (and contracted with another RCCO) but the patient is in the first RCCO's region.

- RCCOs should be required to allow medical homes to give the RCCO a list of patients the medical home feels is their patients and receive help from the RCCO to understand why certain patients have been attributed to another medical home. If the patient is determined to be more appropriately attributed to the inquiring medical home, then the RCCO should help re-attribute the patient to the correct medical home.

- RCCOs should share on a regular basis the RCCO's performance on KPIs and share savings incentives and share with the medical home how their own performance compares with other medical homes.

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

This is particularly applicable to the Denver metro area. There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients. For many expectations/requirements and ways of doing things the RCCOs are so different from one another that it requires significant extra work for medical homes to adapt to the differences. In addition, if a patient lives in one region and goes to a medical home in another region, and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from that first region.

27) Should the RCCO region maps change? Why or why not? If so, how?

Yes. There are two changes we recommend:

- Larimer County should be included in Region 2, since the medical community and the support organizations of Larimer County and very closely linked to Weld County
- In the Metro Denver area, the boundary issues are so difficult that we recommend one RCCO be responsible for the whole metro area or that medical homes be allowed to choose one RCCO for all of their patients.

28) Should the BHO region maps change? Why or why not? If so, how?

If Colorado is serious about promoting integration of behavioral and physical (medical) health care, then the RCCOs and BHOs should be integrated. This would mean they should have the same regions and function as though they are one organization. They should share incentives that are aligned around successful integration of behavioral and medical services and outcomes. So the BHO maps/regions should conform to the RCCO regions/maps.

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients. There are certain expectations/requirements and ways of doing things that are so different from one RCCO to another that it requires significant extra work to adapt to the differences. If a patient lives in one region and goes to a medical home in another region and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from that first region. This is particularly true in the Denver metro area.

Another alternative: When a practice contracts with a RCCO currently they "belong" to one RCCO. Change that and have them only contract with the state and have that contract extend to all RCCOS. This way RCCOS would be more accountable to standardization through out all of Colorado, and the services provided to patients/families would be more uniform.

34) What role should RCCOs play in attributing clients to their respective PCMPs?

The attribution system is quite flawed still. RCCOs should be required to allow medical homes to give the RCCO a list of patients the medical home feels are their patients and receive help from the RCCO to understand why certain patients are attributed to another medical home. If the patient is determined to be more appropriately attributed to the inquiring medical home, then the RCCO should help re-attribute the patient to the correct medical home.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

- The payment structure absolutely does not support the ACC goals. A medical home does not receive incentives for KPIs unless the RCCO meets its KPI. This becomes a disincentive, because many medical homes meet their performance targets, but do not get rewarded because the RCCO did not meet its targets. So the medical home has no incentive to maintain the performance. The philosophy that HCPF has espoused (that the high performing medical home should encourage or help the low performing medical home) is not realistic and is not how the real world works. There is no time for that, plus the high performing medical home has no way of knowing who is low performing. This idea shows a lack of understanding of the world where health cares is delivered. Medical homes need to

receive full incentives when they meet their KPI targets, no matter what happens in the RCCO.

- The incentives are too low to change much. Also, the KPIs need to remain focused on process, not outcomes, until the data is more sophisticated to accurately attribute patients and account for risk factors.

- Many medical homes have the ability to collect REAL-TIME data from their EHR and their claims database, which can be used to measure performance more accurately than the SDAC. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and providers to develop a vetting process that will enable HCPF and RCCOs to trust the medical home self-reported real-time data.

- Since children are the majority and give the best chance of truly improving health and wellness, KPIs need to be more child-focused. And since the potential cost savings for children's health care are so far in the future, KPIs need to be intermediate, process outcomes.

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

There is very little of the infrastructure in the state in place at the present time to enable capitation to be implemented successfully. Here are just some of the changes that would need to be in place before it would be fair or prudent to implement capitation:

- The state would need to already be paying fair amounts for all aspects of the care needed by Medicaid recipients before it could effectively move to capitation. In other words, codes for things that HCPF wants done under capitation should be opened and reimbursement adequately now. This would encourage medical homes to already be doing these things before the change to capitation. It would also give HCPF and medical homes experience regarding what the actual costs are for providing the desired services and determine a fair capitation. It will be difficult to change behavior to include new activities under capitation among providers, if you continue to hold codes closed now for things you want done under capitation. You have to help the medical homes create the habits you want before the switch to capitation.

- All providers would have to be reliably involved in the ACC: primary care, all of the various adult and child specialists, the hospitals, the therapies, dentists, mental health providers, etc.

- The data system would have to be able to report real time data and be far, far more accurate than it is now.

- The attribution system is flawed. That would have to be improved and provide accurate, real-time attribution data before capitation should be instituted.

- You will have to change a variety of policies that are barriers to population management.

- Capitation has to be combined with significant incentives to implement processes and improve outcomes. So, you will need to have the incentive system very well developed and viewed by providers as motivating before implementing capitation

- Healthcare for children focuses on prevention, early detection and early intervention, which require initial increased investment to reduce potential expenses many years and decades down the line. Other ACO programs have shown that savings on children are difficult to show early on. So, incentives in the care of children will initially be for intermediate outcomes (or for process outcomes) and need to be direct incentives rather than incentives in the form of shared savings.

- Early in the transition from pre-ACC payment methods to ACC payment structure (2012), some medical homes were asked to return money to Medicaid. Transitions like that (for example the transition to capitation) have to avoid this. Primary care medical homes have such narrow margins that this can be very difficult financially on a medical home

- Many medical homes have the ability to collect from their EHR and their claims database REAL-TIME data with which performance can be measured. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and providers to develop a vetting process that will enable HCPF and RCCOs to trust that medical home self-reported real-time data is trustworthy.

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

Many medical homes have the capability and infrastructure to adapt to payment tied to value. What is missing is the state, HCPF, RCCO, BHO infrastructure. See all of the infrastructure elements HCPF needs to have in place listed in question 60

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

- The HCPF Payment Reform Committee should meet at a time when providers and practice managers can actually attend. Monday afternoons is probably the worst time to actually enable providers or practice managers to attend. Once you select an appropriate time, then actively recruit participation.

- Make sure that your efforts are statewide. Views are different in the various regions of the state.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

- Many medical homes have the ability to collect from their EHR and their claims database REAL-TIME data with which performance can be measured. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and provider from medical homes to develop a vetting process that will enable HCPF and RCCOs to trust medical home self-reported real-time data.

- The measures for children can be drawn from HEDIS measures or CHIPRA measures or from the Pediatric Measurement Proposal that HCPF did in 2010 with the help of Jim Todd. Appropriate child health measures could be selected from the following measures :
    - Well child visits appropriate for age
    - Developmental screening by three years of age
    - Teen depression screening
    - Complete immunization status by age two
    - Post-partum depression screening rate for mothers of newborns by age 4 months
    - Appropriate antibiotic use in URI and strep pharyngitis

- Medical homes could also be measured on:
    - Patient (or family) satisfaction ratings
    - Documentation of QI projects

Screening should be part of KPIs, but you need to do more than just create a KPI. If you are going to have KPIs, then you need to track not only the number of times a screening was done, but also track the v-codes (or some way to track positives) and make them available in the SDAC so medical homes can track them. And the SDAC needs to track referrals (or intervention). Otherwise it is not worth measuring the number of screenings.

- The PCMP or medical home should receive real-time data (less than a month since date of service) with data that will allow them to compare their performance with performance of similar type of medical home.

- Healthcare for children focuses on prevention, early detection and early intervention, which require initial increased investment to reduce potential expenses many years and decades down the line. Other ACO programs have shown that savings on children are difficult to show early on. So, incentives in the care of children will initially be for intermediate outcomes (or for process outcomes) and need to be direct incentives rather than incentives in the form of shared savings.

69) Measures for payment. Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☒
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

We only need 2-4 KPIs. Any more will dilute the effect. What we really want is good data, so we can improve our outcomes by doing a quality improvement project. Since children are the majority of Medicaid recipients and give you the best chance of truly improving health and wellness in the long term, KPIs need to be more child-focused. And since the savings are so far in the future, KPIs need to be intermediate, process outcomes.

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

Table of Contents

SECTION 1.0 OVERVIEW

1.1. PURPOSE OF THIS REQUEST FOR INFORMATION (RFI)

1.1.1. The Colorado Department of Health Care Policy and Financing (Department) is issuing this Request for Information (RFI) to solicit input on the next phase of the Accountable Care Collaborative (ACC).

1.1.2. Information provided to the Department in response to this Request for Information will inform the Department's Request for Proposals (RFP) for the Regional Care Collaborative Organizations (RCCO) and the future design of the ACC Program.

1.1.3. Anyone interested in responding is welcome to submit a reply (persons or entities responding to this RFI are called "respondents" throughout this document). The Department encourages everyone with ideas about the ACC to respond.

1.2. DEPARTMENT BACKGROUND

1.2.1. The Department serves as the Medicaid Single State Agency, as defined by Code of Federal Regulations (CFR) Title 45 Section 205.100 (45 CFR §205.100). The Department develops and implements policy and financing for Medicaid and the Children's Health Insurance Program, called Child Health Plan Plus (CHP+) in Colorado, as well as a variety of other publicly funded health care programs for Colorado's low-income families, children, pregnant women, the elderly, and people with disabilities. For more information about the Department, visit www.Colorado.gov/HCPF.

1.3. PROGRAM BACKGROUND

1.3.1. The Accountable Care Collaborative (ACC) Program started in May 2011 with around 500 clients. Since that time, the ACC has grown in many ways. Today, the program covers over 700,000 people. The current phase of the ACC is focused on developing a strong network of contracted providers that can serve as medical homes for Medicaid clients. At the start of the program, enrollment was comprised largely of adults, and the pay-for-performance measures were designed for an adult population.

1.3.2. Over the course of the last three years, the ACC has expanded its focus from the medical home to the whole neighborhood of providers, such as specialists. Program enrollment expanded, increasing the number of children to mirror the overall Colorado Medicaid population. To continue developing the ACC, the Department updated pay-for-performance measures to include children and changed the payment model to support improved medical homes.

1.3.3. The ACC strives to provide the Colorado Medicaid program with a client and family-centered, whole-person approach that improves health outcomes and ensures savings. The program design includes a focus on clinically-effective and cost-effective utilization of services. The ACC works to identify the needs of clients and to use local resources to meet those needs.

1.3.4. The ACC was designed as a platform to transform the Colorado Medicaid program. The upcoming request for proposals (RFP) will build upon the successes of the current program by further developing the ACC to serve more people through greater efficiency and other incremental improvements. In addition to these updates to the program, this RFP will also seek to make bolder, more-comprehensive changes to the ACC through deeper integration, new payment reforms, and the promotion of whole-person/whole-family health.

1.3.5. These improvements will also be strengthened by significant investments in technology, as with the forthcoming Business Intelligence and Data Management (BIDM) system. These new platforms will allow for enhanced program monitoring and evaluation, and will give all parts of the ACC Program better data to improve care and decision-making.

1.3.6. As one of the major parts of the ACC, the RCCOs leverage local infrastructure, relationships, and community resources. The RCCOs' main responsibilities in the first RFP were:

1.3.6.1. Provider network development: developing a formal contracted network of primary care providers and an informal network of specialists and ancillary providers;

1.3.6.2. Care coordination: the RCCOs must ensure that every client has access to an appropriate level of medical management and care coordination;

1.3.6.3. Provider support: supporting providers in delivering efficient, high-quality care by offering clinical tools, client materials, administrative support, practice redesign, etc.; and

1.3.6.4. Accountability and reporting: the RCCOs are responsible for reporting to the Department on the region's progress, and meeting programmatic and Departmental goals.

1.3.7. The RCCOs are responsible for assisting clients with every aspect of their care. This means that they have to assist clients with their physical health and their behavioral health. The state pays providers directly for physical health services. In Colorado, Medicaid behavioral health services are managed by five Behavioral Health Organizations (BHOs) statewide. RCCOs frequently work with the BHOs to coordinate care. Almost all Medicaid clients are enrolled in a BHO when they receive Medicaid. The BHOs get a set amount of money to manage the care for Medicaid clients, and the BHOs reimburse their network of providers for delivering services to those clients. The five regions that the BHOs manage do not match the regions managed by the RCCOs.

1.3.8. Today, there are seven RCCOs, each working in a specific part of Colorado. Each RCCO has adopted a different approach that works in its region. The RCCOs and their leadership play a vital role in the ACC and offer customized and local health care experience to the program. The ACC leverages personal, human connections to build on the strengths of local and regional partners.

1.3.9. Just as the first RCCO RFP initiated the ACC Program in Colorado, this second RFP will launch the next iteration of the ACC. What the program looks like in the future depends upon the RFP, and the content of the RFP depends upon the insight and guidance you offer through opportunities such as this Request for Information.

1.3.10. **For more information on the ACC Program, click here**

1.4. VISION FOR THE NEXT RCCO RFP

1.4.1. The next phase of the ACC Program will build on the strengths and the lessons learned during the first iteration. There are three main goals of the next RFP. The Department welcomes input on these goals and how to achieve them.

1.4.1.1. 1. Transforming our system from a medical model to a health model.

1.4.1.1.1. A person's health is impacted by his or her social situation (for example housing, income, transportation, nutrition, presence of supportive family and friends) as well as medical care. The next phase of the ACC Program aims to promote health by developing systems that support healthy lives, rather than just medical care.

1.4.1.2. 2. Moving toward person-centered, integrated, and coordinated supports and services.

1.4.1.2.1. Person-centered care means that the individual/family/caregiver is an equal participant with the provider in defining health goals and developing treatment plans. These both must address the whole person and be achievable within the context of the person's life. To accomplish this, RCCOs must also be able to coordinate more-closely with non-medical services and other state agencies. In order to do this, RCCOs must understand the community and culture where the person lives.

1.4.1.2.2. Part of a whole-person or person-centered approach is addressing both a person's physical and behavioral health needs in a way that is coordinated and cohesive, often referred to as integration. Taking steps towards integration or better coordination of physical and behavioral health care for Medicaid clients is a primary goal of the next RFP. Behavioral health care refers to all services to treat health conditions that primarily present as alterations in thinking, mood or behavior and changes in emotional (mood), psychological (thinking), or social well-being (behavior) and conditions related to addictions. To create the infrastructure for this integration, the Department seeks input on whether or how the Behavioral Health Organization (BHO) or RCCO maps or functions should be adjusted so that they are aligned.

1.4.1.2.3. This next RFP will aim to continue to build on local strengths of each community. This RFP aims to be sensitive to the diverse needs of clients with Medicaid coverage and will develop specific expectations around meeting the unique needs of subpopulations such as children, adults, the elderly, persons with disabilities, clients involved in the criminal justice system, and all others.

1.4.1.2.4. Incorporating clients' perspectives is an ongoing process. The next RFP aims to strengthen opportunities for clients and advocates to provide input and play an important role in program design and ongoing improvement.

1.4.1.3. 3. Leveraging efficiencies to provide better quality care at lower costs to more people.

1.4.1.3.1. The next RFP aims to capture efficiencies and save money through enhanced technology and by supporting a diverse and changing health care workforce.

1.4.1.3.2. The RFP endeavors to align the financial drivers for all elements of the Medicaid delivery system. Through the RFP process, the Department will explore different ways to pay for care, bend the cost curve, and be as cost-effective as possible.

SECTION 2.0 ADMINISTRATIVE INFORMATION

2.1. RFI TERMS AND CONDITIONS

2.1.1. This RFI is issued solely for information and planning purposes and does not constitute a solicitation. Information about costs and pricing is submitted voluntarily and is non-binding on the respondent. Responses to this RFI will not be considered legal offers nor will they result in an award of any type of contract.

2.1.2. The Department is not responsible for any costs incurred by any respondents for the development and provision of a response to this RFI.

2.1.3. The Department is subject to strict accountability and reporting requirements as a recipient of funds from public sources. Responses to this RFI are subject to disclosure by the Department as required by the Colorado Open Records Act (CORA). The Department plans to make responses to this RFI available for review online.

2.1.4. The Department reserves the right to copy any information provided by respondents for the purposes of facilitating the Department's review of / use of the information.

2.1.5. The Department reserves the right to use information or ideas that are provided by respondents. By submitting information in response to this RFI, the entity or individual represents that such copying or use of information will not violate any copyrights, licenses, or other agreements with respect to information submitted.

2.1.5.1. The responses received from this RFI may be used for the development of a future solicitation. Should a solicitation be issued, further details on the solicitation process will be provided.

2.2. POINT OF CONTACT

2.2.1. The Department's point of contact for this RFI is:

2.2.1.1. Kevin Dunlevy-Wilson (note: other Department staff may address e-mails or phone calls)

2.2.1.2. Department of Health Care Policy and Financing

2.2.1.3. Accountable Care Collaborative Strategy Unit

2.2.1.4. 1570 Grant Street

2.2.1.5. Denver, CO 80203-1818

2.2.1.6. Phone: 303-866-5351

2.2.1.7. RCCORFP@state.co.us

2.3. NOTICES AND COMMUNICATIONS

2.3.1. Communication with respondents will be via various methods including, but not limited to, e-mail, phone, mail, the Department's ACC RFP Web site at: https://www.colorado.gov/pacific/hcpf/regional-care-collaborative-organizations-rccos-request-proposals-rfp and notices on the CORE Web site at: https://codpa-vss.hostams.com/webapp/PRDVSS1X1/AltSelfService;jsessionid=00007DX5IavpsnQoNcRwuPiYmie:189n1q4b1. Respondents can view information posted on CORE by clicking on the "Public Access" button. It is the respondent's responsibility to periodically check the Colorado CORE Web site or the ACC RFP Web site for notices, changes, additional documents or amendments that pertain to this RFI.

2.4. TIMELINE

2.4.1. The timeline for this RFI is as follows:

ACTIVITY	DATE
RFI RELEASE DATE	OCTOBER 21, 2014
INQUIRIES REGARDING THE RFI ACCEPTED UNTIL	OCTOBER 31, 2014 11:00 AM MOUNTAIN TIME
DEPARTMENT RESPONSES TO RFI INQUIRIES (ESTIMATED)	NOVEMBER 10, 2014
RFI RESPONSE SUBMISSION DUE DATE	NOVEMBER 24, 2014 3:00 PM MOUNTAIN TIME

SECTION 3.0 RESPONSES

3.1. INQUIRIES

3.1.1. For inquiries about this RFI, you may send an email to: RCCORFP@state.co.us. If preferred, you may also contact the ACC RFP team by phone at: 303-866-5351. Include the RFI number and title listed in the e-mail subject line.

3.1.1.1. The Department will track the questions that it receives and aggregate the questions into an "Inquiries and Answers" document.

3.1.2. Inquiries received by the Department by the Inquiry Deadline will be responded to by the Department via a posting of the "Inquiries and Answers" document on the CORE Web site and the ACC RFP Web site. Inquiries received after the Inquiry Deadline may not be included in the Department's response.

3.2. PROTECTED HEALTH INFORMATION

3.2.1. Do not include Protected Health Information (PHI) in your response.

3.2.2. If the Department discloses the responses online or via a CORA request, unless the responder explicitly requested otherwise, responses by all Medicaid clients will be identified only by first initial and county of residence. Example: John Doe would be listed as: "'J.' Weld County." Requests for pseudonyms will generally be granted if requested.

3.3. RESPONSE FORMAT

3.3.1. The RFI is broken into the following sections:

3.3.1.1. Basic information about you, the respondent.

3.3.1.2. General Questions

3.3.1.3. Behavioral Health Integration

3.3.1.4. Care Coordination

3.3.1.5. Program Structure

3.3.1.6. Stakeholder Engagement

3.3.1.7. Network Adequacy and Creating a Comprehensive System of Care

3.3.1.8. Practice Support

3.3.1.9. Payment Structure and Quality Monitoring

3.3.1.10. Health Information Technology

3.3.2. The Department is requesting respondents to send any comments or answers, no matter how minor, to the Department. Respondents are encouraged to address the questions listed in the Response Worksheet, but you do not have to reply to all of the questions in a section.

3.3.3. Please note that early responses are appreciated. Respondents do not need to wait until SUBMISSION DATE (see Section 2.4) to submit comments. The Department appreciates receiving any and all comments from respondents.

3.3.4. Reponses should be emailed to RCCORFP@state.co.us. Your answers may be submitted as an attachment or an email. If they cannot be emailed, they may also be sent, in hard copy, to: Colorado Department of Health Care Policy and Financing, Attention: ACC Team, 1570 Grant St., Denver, CO 80203. Following receipt of your response, you should receive a confirmation email within three (3) business days.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Donna Mills
Location: Pueblo, Pueblo, Colorado

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Integrated Community Health Partners, ICHP
Location: Pueblo, Pueblo, Colorado
☒ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☐ Medical provider / PCMP / other provider
- **Type or specialty:** Click here to enter text.
- **Area of practice:** Click here to enter text.

☐ Provider advocate (e.g. medical society)
☒ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☐ Other (please describe): Click here to enter text.

Are you currently involved in the ACC program?

☒ Yes
☐ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☒ 3-4 years

How have you been involved in the ACC program and what interaction have you had with RCCOs:
We are RCCO 4

Please briefly describe your involvement with Medicaid, either in Colorado or another state:
We are RCCO 4

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☒ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

Please feel welcome to describe why or why not using the space below.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

- Community Driven
- Healthcare is Local
- Care Coordination Model
- KPI focus
- Member access

2) What is not working well in the ACC Program?

- Attribution
- Too many reporting requirements
- Too many initiatives
- Not enough time to fulfill initiatives
- KPI changes frequently
- No flexibility to be innovative with providers
- Key players not involved or incented to be involved, i.e. Hospitals, Specialists, etc.
- Payment system too fragmented

3) What is working best in the Behavioral Health Organization (BHO) system right now?

4) What is not working well in the BHO system?

5) What is working well with RCCO and BHO collaboration right now?

Region 4 has implemented some processes that are very innovative, but this may not be common among all RCCO's. For example, FQHCs and mental health centers have allocated the RCCO's resources so that each patient is assigned a care coordinator. The MHCs provide care coordination for practices that are too small to be able to offer their own care coordinators; "cross pollination" where behavioral health staff spend time in medical offices and medical staff spend time in behavioral health offices; natural environment for cross-training. This "cross pollination" has led to breaking down some of the cultural challenges. Innovation has also lead to shared projects which will improve outcomes on both the physical and behavioral health side. For example, RCCO 4's diabetes outreach and education project is being done collaboratively with CHP. The BHO has representation on each of the local, care coordination teams, i.e., SLV, Upper Ark Valley, Lower Ark Valley, Pueblo.

6) What is not working well with RCCO and BHO collaboration right now?

1) Different data systems; BHO's or mental health centers do not have direct access to the SDAC; they are dependent on the RCCO to obtain the data 2) Different payment structures and owner incentives; different provider incentives; 3) RCCO has responsibility (financial) for things they have no control over, such as attribution. The BHO's may have data or resources that can help the RCCO solve this problem, but there is no incentive for the BHO to do so; 4) different member fee structures – BHO's do not charge anything for services, but there is a co-pay structure for PCMP's, and other medical providers; 5) HIPAA has been cited as a barrier by some. For example, behavioral health HIPAA rules are more restrictive than medical, and sometimes it has been difficult to share patient information.

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

Integrating the funding streams and aligning the financing structure between primary care and behavioral health care should be the priority. Integrated funding would require creating appropriate integrated codes and integrating data and data repositories. In addition, parity for behavioral health should be included on the SDAC – meaning 1) CMHCs who have patients in common with PCMPs should be able to access the SDAC, and 2) behavioral health claims data should be included on the SDAC. Finally, there should be some kind of alignment between the RCCO boundaries and the BHO boundaries for better efficiency and coordination. At the same time, the current BHO boundaries shouldn't be a prerequisite for determining the most appropriate RCCO region boundaries.

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☒	☐	Integrating the funding streams and aligning the financing structure between primary care and behavioral health care should be the priority.
Community Behavioral Health Services Rule	☐	☐	
Covered diagnoses list	☐	☐	
Different behavioral / physical health reimbursement	☒	☐	RCCO should have similar payment system.
Institutions for Mental Diseases exclusion	☐	☐	
OBH rules, reporting, or financing (regulatory differences between agencies)	☐	☐	
PCMP financing structure	☒	☐	Integrating the funding streams and aligning the financing structure between primary care and behavioral health care should be the priority.
Per-member per-month amount	☐	☐	
Physical space constraints	☐	☐	
Privacy Laws (HIPAA, 42 CFR)	☐	☐	
Professional / cultural divisions	☐	☐	
RCCO or BHO contracts	☒	☐	Should have similar outcomes and have report templates and deliverables align.
Staff capacity	☐	☐	
State/Federal rules or reporting requirements	☐	☐	
Technical resources / data sharing	☒	☐	Organizations that serve the same members should have shared data.
Training	☐	☐	

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

Others	Please type your response here.

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

- Behavioral and physical health clinicians work together to design and implement a patient care plan.
- Tightly integrated, on-site team-work with a unified care plan often connotes close organizational integration as well, perhaps involving social and other services.
- The clinic provides physical and behavioral health accessible in a common setting (one stop shop).
- Clinic clinicians use a common patient health record/HIE.
- The clinic is accountable for population health and cost management measures reflective of integrated care.
- The clinic should have the capacity to deliver, arrange, coordinate and be accountable for the majority of a person's/family's care.

10) Please share any other general advice or suggestions you may have about behavioral health integration.

It's important for integration to occur within the Department as well. The BHO and RCCO contract managers do not spend enough time with each other to fully understand their programs. If there is more integration within the Department at the operational level, some new strategies will naturally arise from these relationships.

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination?

- Recognition that health care is local
- Collaborative, partnership approach
- Driven by patient and family in collaboration with the entire health care Team
- Meets the Triple Aim
- Assessing the needs and available resources of the Member
- Identification of gaps in care
- Linking Members to necessary resources
- Facilitation of communication among multiple agencies
- Meets State and Organizational requirements

b. How should RCCOs prioritize who receives care coordination first?

- Based on pre-defined risk stratification
- As identified by immediacy of situation of individual Member
- As identified by referral from Primary Care Provider, Community Mental Health Center and/or the Healthcare team

c. How should RCCOs identify clients and families who need care coordination?

- Via data from HCPF
- Specific population health criteria (children and MMP Members)
- Identified case needs on individual basis, by the Primary Care Provider, Health Care Team, Community Mental Health Center and/or community partners engaged with the Member

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

- Health care is local
- Each medical provider uses internally-developed systems
- Reporting to Performance Improvement, Quality and RCCO database to meet HCPF reporting requirements.

12) What services should be coordinated and are there services that should not be a part of care coordination?

- Housing, food, physical and behavioral health needs, prescriptions, health and lifestyle education should be part of care coordination.
- Transportation, financial resources and non-health education (literacy levels) should not fall to care coordination. Care coordination is only able to connect the Member with available resources.

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

- Accurate contact information
- A personal interview with Member to conduct comprehensive needs assessment to identify gaps in care.

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today?

- Medical and psychosocial
- Gaps in care analysis
- Referrals and linking to available resources

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

- Department of Social Services (Adult Protective Services and Child Protective Services)
- Long-term Support Services
- EPSDT screenings
- Healthy Communities
- Handicapped Children's Program
- All areas are different for special populations. RCCOs role is to facilitate necessary care coordination.

c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

- Recognition that health care is local and care coordination is accomplished at the level closest to the Member.
- Communication is key
- Work collaboratively with involved agencies to determine who takes the care coordination lead.

d. What are the gaps in care coordination across the continuum of care?

- Hospital admissions and discharges
- SNF/LTC admissions and discharges
- ER visits
- EHR differences
- Data collection and reporting

- **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	Should the RCCO have a role? Yes	Should the RCCO have a role? No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma	☒	☐	☒	
Affordability (assistance with prescriptions or co-pays)	☒	☐	☒	
Daycare / childcare	☐	☒	☐	
Economic stability & employment	☐	☒	☐	
Education	☐	☒	☐	
Environment	☒	☐	☒	
Food access / nutrition	☒	☐	☒	
Health literacy	☒	☐	☒	

Housing	☒	☐	☒	
Language or translation services	☒	☐	☒	
Literacy	☐	☒	☐	
Transportation	☐	☒	☐	
Other	Please type your response here. Feel free to list as many non-medical factors as you want, and please explain how the RCCO should be involved.			

- **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	Coordinate care? Yes	Coordinate care? No	In what capacity should these individuals coordinate care in the ACC Program?
Advanced Practice (Registered) Nurses	☐	☒	Team member
Certified Addiction Councilors	☒	☐	
Certified Nurse Midwives	☐	☒	Team member
Community Health Workers	☒	☐	
Generalists (BA/BS/MA/MS)	☒	☐	
Health Coaches	☐	☒	Team member
Licensed Clinical Social Workers	☒	☐	
Licensed Marriage and Family Therapist	☒	☐	
Licensed Mental Health Counselors	☒	☐	
Licensed Professional Counselor	☒	☐	
Masters of Public Health	☒	☐	
Medical Doctors / Doctors of Osteopathic Medicine	☐	☒	Team member
Nurse Practitioners	☐	☒	Team member
Patient Navigators	☒	☐	
Peer Advocates	☐	☒	Team member
Promotoras	☒	☐	
Psychiatrists	☐	☒	Team member
Psychologists	☐	☒	Team member
Registered Nurses	☒	☐	
Social Workers	☒	☐	
Wraparound facilitators	☒	☐	

Other	Please type your response here.

- **Care coordination requirements for specific populations.** Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and infants	☒	☐	Refer to specialty care
Children	☒	☐	Refer to specialty care
Children who are healthy, but in socially-complex environments	☐	☒	
Children involved in the foster care system	☒	☐	Refer to specialty care
Children with a chronic illness	☒	☐	Refer to specialty care
Children with a serious emotional disturbance	☒	☐	Refer to specialty care
Children with medical complexity	☒	☐	Refer to specialty care
Children or youth with a behavioral health diagnosis or substance use disorder	☒	☐	Refer to specialty care
Transition-age adolescents	☐	☒	
Parents and families	☐	☒	
Pregnant women	☐	☒	
Adults	☐	☒	
Adults who are healthy, but in socially-complex situations	☐	☒	
Adults with a chronic illness	☒	☐	Refer to specialty care
Adults with a behavioral health diagnosis or substance use disorder	☒	☐	Refer to specialty care
Clients involved in the criminal justice system	☒	☐	Refer to specialty care
Clients with a disability	☒	☐	Refer to specialty care
Clients in a nursing facility	☒	☐	Refer to specialty care
Elderly clients	☒	☐	Refer to specialty care
Frail elderly clients	☒	☐	Refer to specialty care
Clients in palliative care	☒	☐	Refer to specialty care
Other populations, please comment:			

18. How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

- Collaborative coordination and communication with Child Protective Services
- Direct work with foster care families as necessary for housing and transportation
- Identification of lead care coordinator and internal available resources for assistance as needed

19. How should care coordination be evaluated? How should its outcomes be measured?

- Identification of positive impact on individual basis
- Key Performance Indicators identified by HCPF
- Quality measures identified by HCPF and Performance Advisory Committee

20. Today RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

a. What is the PMPM cost for providing care coordination services?

b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

21. Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

a. **Care coordinator to client ratios.** If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☐
51-100	☐
101-200	☐
201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐

4,001-5,000	☐
More than 5,000	☐

22. How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

23. Please share any other general advice or suggestions you have about care coordination in the ACC.

Program Structure

24. If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

Although some standardization is important, too much stifles innovation. Data set reporting to and from RCCOs is probably appropriate, however, provider contracting, payment methodologies and the like need to be nimble to accommodate community needs and nuances.

25. What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

Health and healthcare is local. In order for a bidder to understand community strengths and needs, as well as form or maintain community relationships they have to be part of the community. Although ICHP's office is located in Pueblo – we have developed strong relationships with the communities throughout our region. Having doors opened throughout the RCCO has taken time and real relationship building. We have leveraged the strengths and relationships currently held by our safety net providers region wide who are also owners of ICHP.

26. The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

27. Should the RCCO region maps change? Why or why not? If so, how?

There may be value in the RCCO region maps changing if they align with patient access, utilization patterns.

28. Should the BHO region maps change? Why or why not? If so, how?

29. Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

30. What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

    - Lock-in auto assign
    - Manage population and attribution

31. What are the limitations of the current benefit structure and what – if any – changes are needed?

    No client incentive to use proper point of care.

32. Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

    - Absolutely not.

33. If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

34. What role should RCCOs play in attributing clients to their respective PCMPs? If a PCMP can provide evidence of a patient relationship, the RCCO should be allowed to attribute that member to the PCMP.

35. What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

Contract requirements, outcomes, and deliverables should align across agencies. To have the ACC required to impact outcomes that are primarily governed by other agencies or organizations sets the RCCOs up for failure. We should also be able to share data.

36. What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

Contract requirements, outcomes, and deliverables should align across agencies. To have the ACC required to impact outcomes that are primarily governed by other agencies or organizations sets the RCCOs up for failure. We should also be able to share data.

37. What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

Connect for Colorado and the ACC program should have the same policy for income eligibility. Also both programs should have continued Adult eligibility for 12 months.

38. What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

The Department needs to have more interaction with the Division of Insurance to determine ACC Program goals.

Stakeholder Engagement

39. What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

The RCCO should have a meaningful feedback loop between client/family/advocate stakeholders and decision-makers. 1) The RCCO should be allowed to do appropriate screening and training of client/family/advocate stakeholders to ensure their feedback and participation can have a meaningful impact on RCCO operations or goals, and not just be a committee that airs individual grievances or gives recommendations that are impossible to implement. 2) There should be a formal mechanism to communicate stakeholder recommendations to executive decision-makers. 3) Depending on the participants that are identified, the RCCOs can create a stakeholder committee, workgroup, or subcommittee that feeds back to a larger committee. 4) If the department sets requirements for membership (i.e. 50% clients with diabetes, 20% clients with behavioral health, etc.), this can lead to a committee that is not able to give meaningful direction, because it is not always possible to find stakeholders from specific target groups that are willing or able to participate meaningfully. There should not be prescriptive requirements about membership; 5) there should be a formal way for the leadership to respond to recommendations from this committee or workgroup.

40. What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

Broad stakeholder participation builds support for the program. Partnerships with providers, community organizations and provider associations are necessary to getting provider acceptance and support. These stakeholders can be engaged in multiple ways, including holding forums to resolve common problems; structured interview templates asking provider questions about service delivery problems and solutions; holding educational summits; establishing a larger committee with workgroups specific to addressing local problems. Because each community is unique, the requirement should allow for flexibility in how the provider stakeholder feedback is received (face to face meetings, survey templates, web meetings, etc.), and should describe how the feedback is communicated to leadership in operational and executive roles.

41. Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

Systems integration or outreach activities that occur on a local level can lead to increased communication, shared decision-making and collaboration among community agencies. This has to occur on a local level because understanding the culture and politics of a community are necessary. The Department should be willing to participate in some of these outreach activities, because the Department's presence can add credibility to the RCCO's goals and strategies.

42. How should the Department structure stakeholder engagement for the ACC as a whole?

The Department should also be willing to establish and host a state-wide stakeholder committee, where RCCO representatives and representatives from major stakeholder groups throughout the state meet on a regular (bi-monthly?) basis. This will give the Department the opportunity to hear from all regions how they are addressing specific issues, and how or whether or not they are affecting individual RCCO's. Any requirement to RCCO's for stakeholder feedback mechanisms should be flexible enough to allow the RCCO's a way to build a format that meets their local, geographic and cultural needs.

Network Adequacy and Creating a Comprehensive System of Care

43. Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

No

a. If no, what are the gaps?

Access to specialists and dentists outside of populous areas of the region are concerns. There are issues around accessible transportation for Medicaid individuals to specialists and other health care related appointments.

b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

Access to specialists for the population as a whole is a concern which include children/families and individuals with disabilities. County agencies arranging transportation services should be required to maintain a schedule and have appropriate turn-around-times to ensure availability of transportation services.

44. ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

a. What role should hospitals play in the next iteration of the ACC Program?

Hospitals need to become more engaged in the ACC program.

b. What role should pharmacies play in the next iteration of the ACC Program?

The pharmacies have a role, however; rules and function need to become integrated at a State level. Agencies all need to be measured on same performance level.

c. What role should specialists play in the next iteration of the ACC Program?

The specialists have a role, however; rules and function need to become integrated at a State level. Agencies all need to be measured on same performance level.

d. What role should home health play in the next iteration of the ACC Program?

The home health agencies have a role, however; rules and function need to become integrated at a State level. Agencies all need to be measured on same performance level.

e. What role should hospice care play in the next iteration of the ACC Program?

The hospice care agencies have a role, however; rules and function need to become integrated at a State level. Agencies all need to be measured on same performance level.

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

The SEPs and CCBs have a role, however; rules and function need to become integrated at a State level. Agencies all need to be measured on same performance level.

g. What role should counties play in the next iteration of the ACC Program?

The counties have a role, however; rules and function need to become integrated at a State level. Agencies all need to be measured on same performance level.

h. What role should local public health agencies play in the next iteration of the ACC Program?

The local public health agencies have a role, however; rules and function need to become integrated at a State level. Agencies all need to be measured on same performance level.

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

The community organizations and non-profits have a role, however; rules and function need to become integrated at a State level. Agencies all need to be measured on same performance level. Yes, these populations have been overlooked in the past.

45. How can RCCOs help to support clients and families in making and keeping appointments?

The PCMP should be able to manage the clients appointments and the RCCO should provide support if needed.

The disenrollment guidelines should be relaxed. RCCO's should be able to set clear expectations about missed appointments with a provider, for example, in the Member Rights and Responsibilities Statement. Other large public systems such as the VA set clear guidelines when someone becomes enrolled, reminding patients that missed appointments waste resources that another patient could have used. 3 or 4 missed appointments should be grounds for a provider being able to discharge a member. Once we are allowed to set clear expectations, we can work to help members overcome real barriers they experience. Suggestions include: 1) appointment reminders using text, e-mail or telephone 2) doing follow-up with members who have missed two appointments 3) offering appointments outside regular business hours 4) assigning chronic no-shows to care coordinators who can help them identify and solve other barriers.

46. Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

47. **Community Health Worker reimbursement.** Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement process	(Please check all that apply)
Independently bill	☐
On staff (salary) at Primary Care Medical Provider Clinic	☐
On staff (salary) at RCCO	☐
Per Member Per Month Payment	☐

48. Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

In order for the RCCO's to do a thorough and effective job in coordinating dental care, it makes more sense for dental benefits to be structured through the RCCO. This would allow the RCCO to conduct the same activities they do with medical services – recruit providers, offer provider support and practice transformation services, integrate dental services with other services in care coordination activities, provide the full array of customer service activities. In the current structure, there are operational boundaries, in that the RCCO's can't recruit providers and offer them the same level of support they do for PCMP's. If there are issues with providers, the

RCCO's don't have the same level of authority to resolve problems. While the RCCO's can still provide care coordination and customer service to members seeking dental services, they don't have the means to recruit providers or resolve provider issues in the current administrative structure.

49. Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you?

Cultural Competence in healthcare is the ability to understand and accept the impact that culture has on the health care encounter, the way patients view health, illness and healing, the way patients communicate in a health care setting, and the ability of the health care provider (including staff) to acknowledge these factors and modify their own communication style in order to communicate effectively with patients and their families.

b. What RCCO requirements would ensure cultural competency?

Putting together a cultural competency plan would ensure that the RCCO's recognize the importance of culture in the healthcare experience, and are willing to set goals to help them improve their own and their staff's cultural competency.

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?

First, cultural competency is a process, not an event, so it is difficult to articulate specific skills that make people culturally competent. Also, because someone has a skill does not mean they are culturally competent. There are several things that need to occur, however - 1) need to have a basic understanding of their patient's cultural backgrounds; 2) need to have a basic understanding of patient attitudes and behaviors that might impact the health care encounter; 3) have an understanding of their own cultural values and whether the values translate to behavior that has an impact on their patient's health care experience. These can all be addressed through training.

d. Low health literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

Some of this was addressed in "c" above. Other things will address this problem 1) training staff about low health literacy and the impact it has on patient outcomes; 2) RCCO's have a policy for securing interpreters and assisting patients with low English proficiency.

50. Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

51. Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

It is important to acknowledge that higher ER use has not been associated with higher total costs of care in Region 4. However, increasing primary care access by reducing ER use is desirable to increase access to preventative services and treatment adherence to all the care issues a patient is experiencing (not just the chief complaint that presents to the ER). The RCCO should be empowered to create incentives for patients and hospitals to reduce unnecessary ER use understanding that hospitals have to abide by EMTALA. The ACC should also explore what disincentives could be implemented that deter ER use but do not negatively impact patient safety or arbitrarily penalize hospitals for following EMTALA.

52. Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

Practice Support

53. **Support for practices.** Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☒	☐	☐	☐
Network provider education	☒	☐	☐	☐
Assistance with practice redesign	☒	☐	☐	☐
Assistance with efficiency-enhancing activities	☒	☐	☐	☐
Provide web-based resources and directories	☒	☐	☐	☐
Provide practice-specific data reports	☒	☐	☐	☐
Provide clinical care guidelines and best practices.	☒	☐	☐	☐
Provide clinical screening tools	☒	☐	☐	☐
Provide health and functioning questionnaires	☒	☐	☐	☐
Provide chronic care templates	☒	☐	☐	☐
Provide registries	☒	☐	☐	☐
Offer client reminders	☐	☒	☐	☐
Offer client self-management tools	☒	☐	☐	☐
Offer educational materials about specific conditions	☒	☐	☐	☐
Supply behavioral health surveys	☒	☐	☐	☐
Supply other self-screening tools	☒	☐	☐	☐
Administer behavioral health surveys	☐	☒	☐	☐
Administer other self-screening tools	☐	☒	☐	☐
Prepare client action plans	☐	☒	☐	☐
Provide training on providing culturally-competent care	☒	☐	☐	☐
Provide training to supporting staff	☒	☐	☐	☐
Provide training on motivational interviewing	☒	☐	☐	☐
Provide tools and software for phone call and appointment tracking	☐	☒	☐	☐
Provide tools and resources for tracking labs, referrals, etc.	☐	☒	☐	☐
Provide referral and transitions of care checklists	☒	☐	☐	☐
Provide visit agendas or templates	☒	☐	☐	☐
Provide standing pharmacy order templates	☒	☐	☐	☐
Provide comprehensive directory of community resources	☒	☐	☐	☐
Provide directory of other resources	☒	☐	☐	☐
Provide materials regarding Nurse Advice Line	☒	☐	☐	☐
Ensure all tools and resources are centrally located on RCCO-specific website	☒	☐	☐	☐
Others				

54. If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

55. What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

56. What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

Incentive payments through PMPM system for nationally recognized practices that are certified medical homes.

57. Should the Department require that PCMPs utilize disease registries to manage the health of their population?

58. Please share any other advice or suggestions about provider support in the ACC.

Payment Structure and Quality Monitoring

59. Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

    Giving the RCCOs more control over how to distribute the financial incentives and the provider funding would be helpful. Currently, the payment structure is such that any PMPM or incentive payments come directly from the State, which does not incentivize PCMP organizations to collaborate with the RCCO. In addition, high performing PCMPs should be rewarded for their performance and not make it contingent upon the entire region meeting a specific threshold. The current payment structure still pays for volume, not quality – but until the attribution issue is resolved, payment reform will be difficult.

60. If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

    It should also be a goal of the ACC to make risk adjustments that deals with the social determinants of health.

61. Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

    Some providers (primarily the FQHCs and large PCMPs) have the infrastructure to be successful in a pay for performance environment. However barriers, such as funding for facility improvements and EHRs, are significant at smaller provider practices in more rural and frontier areas. Therefore, they are not currently affordable. Without the appropriate facilities and EHRs that can extract and exchange data with an HIT, payment for value is difficult to determine and/or manage.

62. The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

We are not currently licensed, but the requirement would not preclude us from bidding, although it would be considered a costly barrier. There is significant uncertainty, also, with respect to the State's policy decision about DOI requirements. The acquisition of a license is a significant investment of time and money. With time running out before the RFP rebid, it becomes less and less feasible for our RCCO to acquire a license as long as there is not clarity on this element of program design.

63. What role – if any – should the RCCOs play in the distribution of payments to providers?

RCCOs should play a more significant role in the distribution of payments to providers in order to maximize the RCCO's potential. Meaning, this will allow RCCOs more flexibility to reward and incentivize good behavior/outcomes and hold providers accountable for unwanted behavior/outcomes.

64. Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

Due to the history of Managed Care in Colorado, consider phasing in various components of care into a managed care/capitated payment system. For example, start with the most common primary care outpatient visits and over time, increase the number of services covered. This would allow practices to become more familiar and comfortable with the new payment structure, give them sufficient PMPM to enhance services and invest profits back into their practices, and ease patient's concerns that managed care equals no care.

65. What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

HEDIS Measures, Meaningful Use, NCQA and UDS (FQHC) data and other current measures could be incorporated into the payment incentive structure initially. An important consideration to remember is that whatever measures we choose, we must modify the current RCCO structure to give us more jurisdiction over the measures. (For example, ER visits have a lot to do with how hospitals are organized, where they are geographically located, and how they use that department as a significant funding stream. However, hospitals are not part of the RCCOs.)

Measures that focus more on preventative care and/or routine check-ups can also be incentivized more heavily. This, albeit slowly, will help change the overall culture of the American population from "Doctors are who I see when I am sick" to "Doctors are who I see to keep me well." We'll never bend the cost curve focusing on sickness and illness burden only.

66. **Measuring Client experience.** Please complete the table below to indicate how the Department should measure Client/patient experience:

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☒	☐	Because CAHPS is really one of the few tools available to multiple States, being able to compare data is helpful. However, CAHPS has not come up with a truly integrated assessment yet, which is really what Colorado needs.
SF-12 Health Survey	☐	☒	The SF-12 seems less helpful and appears it may be phased out.
Other types of client interviews / surveys	☐	☐	
Patient Activation Measure	☒	☐	LOVE the PAMS – can we get this implemented statewide???
Focus groups	☒	☐	Focus groups can be helpful for very targeted questions. However, it is difficult to get a diverse, cross-section of participants and turn-out is typically minimal.
Other	Please type your response here.		

67. Knowing that, at this time, the Department only has claims data, how should population health be measured?

Population health could be measured based on diagnosis, age range, geographical proximity or other pertinent demographics. Decide on a particular cohort and then determine the best methodology for assessing wellness level (or conversely illness burden) within that cohort.

68. How should quality and performance data be reported to the RCCOs, PCMPs, and the public?

It should be open and transparent, but given the enormity of this endeavor, a vetting process with the RCCOs and PCMPs should be completed prior to placing anything out in the public domain on a "report card" type website.

69. **Measures for payment.** Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but

they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☒
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

70. What percent of RCCO payments should be tied to measures or performance?

Percentage	
10-20%	☒
21-30%	☒
31-40%	☐
41-50%	☐
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

If the focus becomes too diversified, the practices will quickly become overwhelmed and no measures will show considerable improvement. **If everything is important, then nothing is important.**

Practices need to have a base funding stream that is guaranteed in order to implement necessary changes to become enhanced primary care practices. If more than 20-25% of the funding is predicated to measures or performance, this may discourage participation. (20% to no more that 25% of RCCO payments should be tied to measures or performance, initially allowing time to take a baseline and get programs up and running.) However, over time, performance can and should ultimately become the dominant determinant for payment.

71. Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?

RCCOS across the State should be paid on a core set of KPIs with additional elective KPIS being offered and available. Some RCCOs have concentrated populations that grapple with a particular issue (like diabetes in Alamosa or teen pregnancy in Pueblo) that may be different in other RCCOs. Having a core set plus an elective set allows the state to compare core elements across Colorado while also giving RCCOs some more flexibility within their regions.

Once the SDAC is able to 1) show practice KPI trending and 2) show this trending at a more granular level, practices should receive KPI incentives If they meet the criteria. Having all practices within a RCCO either receive or not receive an incentive payment based on an aggregate allocation does not incentivize sufficiently and can actually demotivate provider practices.

72. Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?

    Based on improvement. The one KPI (Well child checks) predicated on achieving national standards has yet to pay out any incentive payments to any RCCO in any part of Colorado. In fact, it has now become a dis-incentive, as practices work hard to achieve this goal and even if they are at 100% compliance, because their entire Region is not hitting the national benchmarks, they are not getting any incentive payments.

73. Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

    Yes, payment should be tied to measures where data can be provided on a monthly or regular basis. Ideally, payments would be done quarterly. Monthly can become too cumbersome and annually does not provide the 1) positive reinforcement, and 2) the motivational incentive to modify a practice workflow or provider behavior in a timely enough manner. Annually, the interval between cause and effect is too great.

74. **Incentive payment frequency**. Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	☒
Annually	☐
Other	☐

If you checked the "Other" box, please describe payment frequency below:

75. For potential offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

    The administrative costs of operating a RCCO are fixed costs.

76. For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

    The RCCO has developed an audit tool for clinical and technical chart reviews to measure/assess the quality of care delivery at the practice level. However, it is not reimbursed at this time.

Health Information Technology (HIT)

77. **Types of communication.** For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	☒
Text message	☐	☒
Web portal	☐	☒
Email	☐	☒
Telemedicine / Video chat	☐	☒
Face-to-face meeting	☐	☒
Smartphone app	☐	☒
Other: The key here is that we must be flexible to whatever mechanism the client has access to and is comfortable with using. We must meet the client how and where they want to be met.		

78. **HIT investments by organizations.** For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below:

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	☒	☐
Digital care management tool	☒	☐
Care transitions alerts	☒	☐
Electronic Health Records (EHRs)	☒	☐
Health risk assessment software	☒	☐
Practice assessment tools	☒	☐
Practice management tools (scheduling, billing)	☐	☒
Client web portal for communicating care plan, services, benefit enrollment	☐	☒
Patient education/wellness tools	☒	☐
Provider/case manager directory	☒	☐
Shared decision-making tools	☐	☒
Telemedicine software	☐	☒
Other:	☐	☐

Other:	☐	☐

79. **Importance of technology by type**. The Department is working to determine what technology is in place, what technology is needed, and what technology should be standardized. For RCCOs, providers, and other organizations, use the table below to answer what HIT infrastructure outside of the SDAC your organization would use to perform population health management activities. Tools are scored from 1-5, where 1 are those items least-likely to be used, and 5 are items most-likely to be used:

Tool	1 Least	2	3	4	5 Most
Population analytics / reporting / dashboard	☐	☐	☐	☐	☒
Care management tool	☐	☐	☐	☐	☒
Care transitions alerts	☐	☐	☐	☒	☐
Electronic Health Records (EHRs)	☐	☐	☐	☒	☐
Practice assessment tools	☐	☐	☒	☐	☐
Health risk assessment software	☐	☐	☐	☒	☐
Practice management tools (scheduling, billing)	☐	☐	☒	☐	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☐	☐	☒	☐
Patient education wellness tools	☐	☐	☐	☒	☐
Provider/case manager directory	☐	☐	☐	☒	☐
Shared decision-making tools	☐	☐	☐	☒	☐
Telemedicine	☐	☐	☐	☒	☐
Other:	☐	☐	☐	☐	☐

80. What are the primary barriers to RCCOs and providers increasing their use Health Information Technology to improve the performance of Primary Care Practices?

The cost of implementing these tools, as well as maintaining or modifying them is a major barrier. The second barrier is that there are so many vendor tools to choose from, and they do not share a common structure for communicating between them (the data exchange standards either do not exist for all type of data to be communicated, or they are not robust enough to do so at this time).

81. How can Health Information Technology support Behavioral Health Integration?

    It is a common misconception that Behavioral Health data is significantly different from Primary Care data – it is not. The structures that hold both sets of data are virtually identical. The more exercises Information Technology systems can perform with Primary and Behavioral data integrated into the same structures, the faster the clinical paradigms about the need to separate these two sets of data will disappear.

82. In the next iteration of the ACC, should there be a shared resource for data and analytics? Please describe the basic criteria for what a shared data and analytics platform needs to contain in order for it to be useful.

    A shared resource for data and analytics makes sense when trying to compare and contrast different populations and different regions. However, shared resources can also be restrictive and misleading, if they are not implemented correctly. The raw detail data beneath any analytics should be widely available to the RCCOs, so that they may learn, validate and correct issues that they find within. Additionally, this allows RCCOs to create new and region or population-specific measure that may be of benefit to the client.

83. Should there be a shared care management tool? Please describe the basic criteria for what a care management tool would need to contain in order for it to be useful.

    A shared care management tool would create a significant amount of efficiency for a RCCO. The larger the user base for sharing the better. A care management tool shouldn't be limited to only a single payer because that creates barriers to adoption of the tool for the PCMP. The tool will need to include the universe of lives managed by each PCMP for it to be effective. The basic elements of a shared care management tool is that it needs to be data driven from claims, practice EHRs and the HIE.

84. Should there be a shared population health management tool? Please describe the basic criteria for what a population health management tool would need to contain in order for it to be useful.

    It doesn't matter if the population health management tool is widely shared or used just within a single RCCO. The users of the tool would be the RCCO leadership so the only benefit to using a shared tool could be economies of scale and apples to apples comparisons between RCCOs.

85. Please describe the functionality that a common Medicaid provider directory would need to contain in order for it to be useful.

A provider directory would be most useful as a shared platform to direct and exchange messages with providers and coordinate care in an effort to leverage all participants involved in the patient's care and resources available as well as maximize all opportunities for support and intervention.

86. How can the RCCOs support providers' access to actionable and timely clinical data?

RCCOs should be working with providers, including PCMPs, hospitals and specialists, across their region regarding how data will be shared. These conversations should happen within a state wide context as often patients and providers cross RCCO region lines. RCCOs could both be supportive of efforts to join CORHIO to achieve the outcome of sharing actionable and timely clinical data, and they could also be implementing requirements that providers engage in these efforts.

87. What are the HIT solutions that would benefit clients, providers, and RCCOs? Please comment on the parameters these tools or platforms would need to possess and the ways in which they could be used.

There are many HIT solutions which would provide benefits to clients, providers and RCCOs. Patient access to web portals to track their health information and direct messaging with providers would be useful in engaging patient in their health. Telemedicine, especially in relation to accessing specialists, would beneficial in expanding access to care. Instant communication in the form of email or text when a patient presents in the ER would be beneficial to case managers.

88. What technical assistance or resources related to HIT infrastructure should the RCCOs supply? This assistance or these resources could be for providers, social service organization, clients/families, or for others.

RCCOs should be encouraging participation in CORHIO and including technical assistance with that process, which would address a requirement that they should have to ensure the flow of information across systems. Additionally, RCCOs should be providing support to Meaningful Use and PCMH, which could be simply coordinating with organizations that provide support in this area. RCCOs will need to be compensated for these services.

89. What role should health information exchange platforms like CORHIO or QHN play in the next iteration of the ACC?

CORHIO has a large role to play in successfully developing the data systems which will allow real-time, clinical data to be shared, which is required to fully realize the benefits of care coordination. Many of the barriers that were alluded to in the questions of this RFI, such as is a single system needed for a particular purpose across a region, are issues CORHIO has already been working on solutions to, so they should be included as a partner in these efforts from the beginning.

90. Please share any information, advice, and suggestions you have about health information technology in the ACC Program.

Implementing new and innovative technologies, no matter how practical or cost-effective (even free), will always face resistance from providers who need to focus on getting paid first. For example, a free tool that offers everything that a provider would want to know on the status of their patient, risk stratifications, and health conditions, in real time, will always take second seat to the system that results in the provider getting paid for their services (such as an EHR with utilization management and billing modules). Asking the provider to perform duplicative data entry into both systems is not a palatable solution to them, but if a system were to be released that encompasses all of the features and functionality, above, it would most likely be very well received and widely adopted.

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Deborah Foote
Location: Nederland, Boulder County, CO

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Oral Health Colorado
Location: Nederland, Boulder County, CO
x Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☐ Medical provider / PCMP / other provider
  i. Type or specialty: Click here to enter text.
  ii. Area of practice: Click here to enter text.
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
x Other (please describe): Comprehensive oral health advocacy

Are you currently involved in the ACC program?

☐ Yes
x No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☐ 3-4 years
☐ Since before the program was implemented.

How have you been involved in the ACC program and what interaction have you had with RCCOs:
Provide input at PIAC

Please briefly describe your involvement with Medicaid, either in Colorado or another state:
Oral health network of organizations dedicated to insuring Medicaid dental benefits are available, accessible, and utilized.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

Please feel welcome to describe why or why not using the space below.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

2) What is not working well in the ACC Program?

✓ There is a lack of recognition that oral health is an important component of a person's total well-being and a component of integrated care. This is despite the fact that oral health is connected to three of the four KPIs for FY 13-14. Specifically ACC should recognize:

- there is increasing evidence that a number of hospital readmissions are due to untreated dental disease
- some patients are using the ER for oral health needs in areas that lack access or because referrals are not made- thus a patient is only receiving care to treat symptoms and not the dental disease itself
- well- child visits are an ideal opportunity for oral health education/interventions. Colorado Medicaid pays medical providers who meet certain training criteria (Caving Free at Three, Smiles for Life) for oral screenings and application of fluoride varnish.

3) What is working best in the Behavioral Health Organization (BHO) system right now?

4) What is not working well in the BHO system?

5) What is working well with RCCO and BHO collaboration right now?

6) What is not working well with RCCO and BHO collaboration right now?

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

8) **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to ad
Community Mental Health Center financing structure[2]	☐	☐	
Community Behavioral Health Services Rule	☐	☐	
Covered diagnoses list	✓	☐	Dental does not currently use diagnosis codes

[1] Many terms and definitions can be found in the Appendix at the end of this document.

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

			making outcome measures challenging
Different behavioral / physical health reimbursement	✓	☐	
Institutions for Mental Diseases exclusion	☐	☐	
OBH rules, reporting, or financing (regulatory differences between agencies)	☐	☐	
PCMP financing structure	☐	☐	
Per-member per-month amount	☐	☐	
Physical space constraints	☐	☐	
Privacy Laws (HIPAA, 42 CFR)	☐	☐	
Professional / cultural divisions	☐	☐	
RCCO or BHO contracts	☐	☐	
Staff capacity	☐	☐	
State/Federal rules or reporting requirements	☐	☐	
Technical resources / data sharing	✓	☐	
Training	✓	☐	Training on intersection of oral health with physical health and behavioral health
Others	Please type your response here.		

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

✓ As a minimum standard, referral to a dental home.

10) Please share any other general advice or suggestions you may have about behavioral health integration.

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination?

✓ Care coordination includes all aspects of total health- including oral health

b. How should RCCOs prioritize who receives care coordination first?

c. How should RCCOs identify clients and families who need care coordination?

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

12) What services should be coordinated and are there services that should not be a part of care coordination?

- ✓ For adults with a concurrent medical condition/diagnosis-particularly diabetes and heart disease, care should be taken to coordinate services between the medical specialist and dental provider.
- ✓ Preventive oral health services between medical and dental providers.
- ✓ RCCOs include Cavity Free at Three messaging in provider communications. RCCOs encourage primary care providers, including family practice physicians, pediatricians, ob/gyns, physician assistances and nurse practitioners, to contact CDPHE for Cavity Free at Three training. (Medicaid and CHP+ requires certification to bill for Cavity Free at Three medical services)
- ✓ Add Medicaid dental providers to RCCO communications. Encourage dental providers to receive Cavity Free at Three training.

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

- ✓ In respect to adult health, A1C, cardiac diagnoses, untreated dental needs, access to preventive care.
- ✓ In respect to children's health, untreated dental needs, access to preventive care.

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today?

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

d. What are the gaps in care coordination across the continuum of care?

15) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	Should the RCCO have a role? Yes	No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma		☐	☐	

Affordability (assistance with prescriptions or co-pays)	☐	☐	☐	
Daycare / childcare	☐	☐	☐	
Economic stability & employment	☐	☐	☐	
Education	x	☐	☐	Educate patients about proper oral health behaviors, benefits and access to oral health preventive and restorative services- and address cultural barriers to care. Educate providers about importance of the access to oral health care.
Environment		☐	☐	
Food access / nutrition	x	☐	☐	Advocate to fill food deserts with low-cost grocery stores, food pantries with healthful meals that promote good oral health.
Health literacy	x	☐	☐	Ensure patient education materials are available at points of service in culturally appropriate language.
Housing	☐	☐	☐	
Language or translation services	x	☐	☐	Ensure services as part of care coordination.
Literacy	☐	☐	☐	
Transportation	x	☐	☐	In coordination with HCPF. Ensure transportation vendor is timely and convenient for patients and available for all health services
Other	Educate on the importance of fluoride in oral health and routes of access (tap water, supplements) and how certain water filtration systems remove fluoride, bottled water does not have fluoride, etc.			

16) **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	**Coordinate care?**	**In what capacity should these individuals coordinate care in the ACC Program?**

	Yes	No	
Advanced Practice (Registered) Nurses		☐	
Certified Addiction Councilors	☐	☐	
Certified Nurse Midwives	☐	☐	
Community Health Workers		☐	
Generalists (BA/BS/MA/MS)	☐	☐	
Health Coaches		☐	
Licensed Clinical Social Workers		☐	
Licensed Marriage and Family Therapist	☐	☐	
Licensed Mental Health Counselors	☐	☐	
Licensed Professional Counselor	☐	☐	
Masters of Public Health	☐	☐	
Medical Doctors / Doctors of Osteopathic Medicine	☐	☐	
Nurse Practitioners	☐	☐	
Patient Navigators		☐	
Peer Advocates	☐	☐	
Promotoras		☐	
Psychiatrists	☐	☐	
Psychologists	☐	☐	
Registered Nurses	☐	☐	
Social Workers	☐	☐	
Wraparound facilitators	☐	☐	
Other	Dentists, dental hygienists		

17) **Care coordination requirements for specific populations**. Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and infants	x	☐	Oral health assessment should occur before age 1
Children	x	☐	Unique oral health assessment, assure fluoride varnish, sealants
Children who are healthy, but in socially-complex environments	x	☐	Same as "children"
Children involved in the foster care system	x	☐	Same as "children"
Children with a chronic illness	x	☐	Same as "children" plus medication impact on dental status (dry mouth)
Children with a serious emotional disturbance	x	☐	Same as "children" plus medication impact on dental status
Children with medical complexity	x	☐	Same as "children" plus medication impact on dental status
Children or youth with a behavioral health diagnosis or substance use disorder	x	☐	Same as "children" plus medication impact on dental status and intersection of certain substances (ex. Crystal meth) and its impact on oral health
Transition-age adolescents	X		Same as "children" with recognition that this age group has significant decrease in dental visits compared to early ages
Parents and families	☐	x	Oral health education to encourage best practices for children
Pregnant women	x	☐	Oral health assessment due to intersection of dental disease and pregnancy outcomes, oral health education on transmission of caries from mother to child
Adults	☐		
Adults who are healthy, but in socially-complex situations	x		
Adults with a chronic illness		x	Assess medication impact on dental status and illness with dental influences/impacts
Adults with a behavioral health diagnosis or substance use disorder		x	Assess medication impact on dental status
Clients involved in the criminal justice system	x	☐	
Clients with a disability		x	Assessment of disability on impact to engage in optimal oral health practices and access to oral health provider
Clients in a nursing facility		x	Assess oral health status impact on physical health, impact of medication on oral health status, and limits on accessing care outside facility

Elderly clients	☐	x	Assess oral health status impact on physical health, impact of medications on oral health status
Frail elderly clients		x	Assess oral health status impact on physical health, medication impact on oral health and ability to access to care in community
Clients in palliative care	x	☐	
Other populations, please comment: Families of clients who are high utilizers, including families of children requiring operating room dentistry to manage dental disease.			

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

19) How should care coordination be evaluated? How should its outcomes be measured?

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

   a. What is the PMPM cost for providing care coordination services?

   b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

   a. **Care coordinator to client ratios.** If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☐
51-100	☐
101-200	☐
201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

- ✓ Needs to include coordination with a dental home in order to ensure overall health of the client.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

27) Should the RCCO region maps change? Why or why not? If so, how?

28) Should the BHO region maps change? Why or why not? If so, how?

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

34) What role should RCCOs play in attributing clients to their respective PCMPs?

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

- ✓ Inclusion of oral health professionals- safety net providers and private practitioners

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

42) How should the Department structure stakeholder engagement for the ACC as a whole?

- ✓ Assure inclusion of oral health subject matter experts/advocates to help facilitate integration of oral health

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

- ✓ No.

a. If no, what are the gaps?

- ✓ Inadequate number of dental specialties for both adults and children, especially oral maxillofacial surgeons, periodontists, endodontists and pediatric dentists.
- ✓ Certain areas of the state have no access to dental providers.
- ✓ With Medicaid expansion and the addition of the Medicaid adult dental benefit, the majority of current dental providers are overwhelmed with pent up demand for care and the current average reimbursement rate for non-FQHC providers is only at 45% of usual and customary- which may continue to be a factor in dental providers not enrolling in Medicaid or only accepting a few patients.
- ✓ Rural communities may be unable to attract dental providers due to high cost to provider in establishing dental suite. Communities may need to look to community sponsorship of dental suite.

✓ No current opportunity to full utilize tele-dentistry. Hopefully can be option in 2016 due to upcoming legislative efforts.

b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

✓ Educate dental providers, specialists included, about Medicaid program. Focus on provider concerns about patient panel, reimbursement rates, speed of reimbursement and business case for care coordination.

✓ Facilitate provider trainings to expand patient panel to include people with disabilities.

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

a. What role should hospitals play in the next iteration of the ACC Program?

✓ Looking at solutions for moving clients from receiving ED care for oral health conditions to receiving necessary dental care to address the condition.

b. What role should pharmacies play in the next iteration of the ACC Program?

c. What role should specialists play in the next iteration of the ACC Program?

d. What role should home health play in the next iteration of the ACC Program?

e. What role should hospice care play in the next iteration of the ACC Program?

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

g. What role should counties play in the next iteration of the ACC Program?

h. What role should local public health agencies play in the next iteration of the ACC Program?

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

45) How can RCCOs help to support clients and families in making and keeping appointments?

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

✓ Requirement for both CHW and PN- and include expertise in oral health.

47) **Community Health Worker reimbursement.** Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement process	(Please check all that apply)
Independently bill	☐
On staff (salary) at Primary Care Medical Provider Clinic	
On staff (salary) at RCCO	
Per Member Per Month Payment	☐

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

✓ Coordinate with DentaQuest's outreach coordinators to evaluate priority communities lacking dental providers, including specialists. Support DentaQuest and Colorado Dental Association dental provider recruitment efforts. As virtual dental home evolves, support policies that reimburse for Teledentistry services and provide care coordination.

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you?

✓ Cultural competency enables providers to deliver services that are respectful of and responsive to the health beliefs, practices and cultural and linguistic needs of diverse patients.

b. What RCCO requirements would ensure cultural competency?

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

✓ Culturally appropriate care coordination that includes oral health care, including recruitment of navigators and/or promotores from local communities

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

51) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

- ✓ ER use has been a traditional point of "service" for oral health emergencies. With addition of adult dental in Medicaid, strategies should be employed to assure access to appropriate dental care.

52) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

Practice Support

53) **Support for practices.** Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☐	☐	☐	☐
Network provider education	☐	☐	☐	☐
Assistance with practice redesign	☐	☐	☐	☐
Assistance with efficiency-enhancing activities	☐	☐	☐	☐
Provide web-based resources and directories	☐	☐	☐	☐
Provide practice-specific data reports	☐	☐	☐	☐
Provide clinical care guidelines and best practices.	☐	☐	☐	☐
Provide clinical screening tools	☐	☐	☐	☐
Provide health and functioning questionnaires	☐	☐	☐	☐
Provide chronic care templates	☐	☐	☐	☐
Provide registries	☐	☐	☐	☐
Offer client reminders	☐	☐	☐	☐
Offer client self-management tools	☐	☐	☐	☐
Offer educational materials about specific conditions	☐	☐	☐	☐
Supply behavioral health surveys	☐	☐	☐	☐
Supply other self-screening tools	☐	☐	☐	☐
Administer behavioral health surveys	☐	☐	☐	☐
Administer other self-screening tools	☐	☐	☐	☐
Prepare client action plans	☐	☐	☐	☐
Provide training on providing culturally-competent care	☐	☐	☐	☐
Provide training to supporting staff	☐	☐	☐	☐
Provide training on motivational interviewing	☐	☐	☐	☐
Provide tools and software for phone call and appointment tracking	☐	☐	☐	☐
Provide tools and resources for tracking labs, referrals, etc.	☐	☐	☐	☐
Provide referral and transitions of care checklists	☐	☐	☐	☐
Provide visit agendas or templates	☐	☐	☐	☐
Provide standing pharmacy order templates	☐	☐	☐	☐
Provide comprehensive directory of community resources	☐	☐	☐	☐
Provide directory of other resources	☐	☐	☐	☐
Provide materials regarding Nurse Advice Line	☐	☐	☐	☐

Ensure all tools and resources are centrally located on RCCO-specific website	☐	☐	☐	☐
Others	Integrate oral health into any of the above where applicable			

54) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

55) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

- ✓ Require oral health education, screening and referral to dental providers

56) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

57) Should the Department require that PCMPs utilize disease registries to manage the health of their population?

58) Please share any other advice or suggestions about provider support in the ACC.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

- ✓ Current Medicaid dental services reimbursement averages about 45% of U&C. In order to increase access for the ACC population, enhanced reimbursement should be explored to encourage private providers to provide services to this more complex population.

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

62) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

63) What role – if any – should the RCCOs play in the distribution of payments to providers?

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

66) **Measuring Client experience**. Please complete the table below to indicate how the Department should measure Client/patient experience:

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☐	☐	
SF-12 Health Survey	☐	☐	
Other types of client interviews / surveys	☐	☐	
Patient Activation Measure	☐	☐	
Focus groups	☐	☐	
Other	Please type your response here.		

67) Knowing that, at this time, the Department only has claims data, how should population health be measured?

✓ Utilization of preventive versus emergency services. Frequency of preventive services for management of chronic disease, including dental and periodontal disease. Community and family level "hot spotting" of high utilizers.

68) How should quality and performance data be reported to the RCCOs, PCMPs, and the public?

✓ GIS maps for KPIs and quarterly data reports on access to preventive services versus emergency services, including oral health

69) **Measures for payment**. Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☐
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

70) What percent of RCCO payments should be tied to measures or performance?

Percentage	
10-20%	☐
21-30%	☐
31-40%	☐
41-50%	☐
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

71) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?

72) Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?

73) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

74) **Incentive payment frequency**. Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	☐
Annually	☐
Other	☐

If you checked the "Other" box, please describe payment frequency below:

75) For potential offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

76) For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

Health Information Technology (HIT)

77) **Types of communication.** For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	☐
Text message	☐	☐
Web portal	☐	☐
Email	☐	☐
Telemedicine / Video chat	☐	☐
Face-to-face meeting	☐	☐
Smartphone app	☐	☐
Other:		

78) **HIT investments by organizations.** For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below:

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	☐	☐
Digital care management tool	☐	☐
Care transitions alerts	☐	☐
Electronic Health Records (EHRs)	☐	☐
Health risk assessment software	☐	☐
Practice assessment tools	☐	☐
Practice management tools (scheduling, billing)	☐	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☐
Patient education/wellness tools	☐	☐
Provider/case manager directory	☐	☐
Shared decision-making tools	☐	☐
Telemedicine software	☐	☐

Other:	☐	☐
Other:	☐	☐

79) **Importance of technology by type.** The Department is working to determine what technology is in place, what technology is needed, and what technology should be standardized. For RCCOs, providers, and other organizations, use the table below to answer what HIT infrastructure outside of the SDAC your organization would use to perform population health management activities. Tools are scored from 1-5, where 1 are those items least-likely to be used, and S are items most-likely to be used:

Tool	1 Least	2	3	4	5 Most
Population analytics / reporting / dashboard	☐	☐	☐	☐	☐
Care management tool	☐	☐	☐	☐	☐
Care transitions alerts	☐	☐	☐	☐	☐
Electronic Health Records (EHRs)	☐	☐	☐	☐	☐
Practice assessment tools	☐	☐	☐	☐	☐
Health risk assessment software	☐	☐	☐	☐	☐
Practice management tools (scheduling, billing)	☐	☐	☐	☐	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☐	☐	☐	☐
Patient education wellness tools	☐	☐	☐	☐	☐
Provider/case manager directory	☐	☐	☐	☐	☐
Shared decision-making tools	☐	☐	☐	☐	☐
Telemedicine	☐	☐	☐	☐	☐
Other:	☐	☐	☐	☐	☐

80) What are the primary barriers to RCCOs and providers increasing their use Health Information Technology to improve the performance of Primary Care Practices?

81) How can Health Information Technology support Behavioral Health Integration?

82) In the next iteration of the ACC, should there be a shared resource for data and analytics? Please describe the basic criteria for what a shared data and analytics platform needs to contain in order for it to be useful.

83) Should there be a shared care management tool? Please describe the basic criteria for what a care management tool would need to contain in order for it to be useful.

- ✓ Care management tool should include oral health needs/services to alert providers to potential oral health impacts on other medical conditions and vice versa

84) Should there be a shared population health management tool? Please describe the basic criteria for what a population health management tool would need to contain in order for it to be useful.

- ✓ Tool needs to include oral health measures

85) Please describe the functionality that a common Medicaid provider directory would need to contain in order for it to be useful.

- ✓ Inclusion of oral health providers to facilitate referrals and integration

86) How can the RCCOs support providers' access to actionable and timely clinical data?

87) What are the HIT solutions that would benefit clients, providers, and RCCOs? Please comment on the parameters these tools or platforms would need to possess and the ways in which they could be used.

88) What technical assistance or resources related to HIT infrastructure should the RCCOs supply? This assistance or these resources could be for providers, social service organization, clients/families, or for others.

89) What role should health information exchange platforms like CORHIO or QHN play in the next iteration of the ACC?

90) Please share any information, advice, and suggestions you have about health information technology in the ACC Program.

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Arnold Salazar
Location: Alamosa, CO

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Colorado Health Partnerships
Location: Western/Southern CO
☒ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted -- Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☐ Medical provider / PCMP / other provider
  i. Type or specialty: Click here to enter text.
  ii. Area of practice: Click here to enter text.
☐ Provider advocate (e.g. medical society)
☒ Potential bidder for RCCO contract
☒ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☐ Other (please describe): Click here to enter text.

Are you currently involved in the ACC program?

☒ Yes
☐ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☐ 3-4 years
☒ Since before the program was implemented.

How have you been involved in the ACC program and what interaction have you had with RCCOs:
Colorado Health Partnerships (CHP) is one of the 5 BHOs, as such we have working relationships with RCCO 1, 4,and 7.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:
Behavioral Health provider for the western/southern parts of the state covering 43 counties.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☒ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

Please feel welcome to describe why or why not using the space below.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

   - Program is close to the community. I've observed some of the local solutions that have been addressed by the RCCOs that have been very effective. Having multiple RCCOs working on local solutions and sharing these solutions with each other will have greatest impact.
   - Focuses on local solutions – can be customized to meet local needs.

2) What is not working well in the ACC Program?

   - Payment reforms are moving too slow to have significant impact on cost and quality of care. We are still largely tied to a fee for service system that is volume driven and not focused on quality outcomes. The question of how to transition provides away from Fee for Service and on to payment for quality has eluded almost everyone. While KPIs have been tried and have had some impact, they can have only limited impact on cost. A risk model that focuses on cost as well as quality and access will prove to be a much more effective reform tool in my opinion.

3) What is working best in the Behavioral Health Organization (BHO) system right now?

   - The BHOs have been able to control costs over a long period of time while providing access to more members. BHOs have figured out how to manage provider risk which must be a key component of any payment reform initiative.

4) What is not working well in the BHO system?

   - The payment structure over time has moved too much toward encounter reporting which has its roots in Fee for Service. HCPF has not been able to move to outcome based reimbursement which I think should be the end goal.

5) What is working well with RCCO and BHO collaboration right now?

   - The joint RCCO – BHO meetings have been very productive. At the local level we have three different relationships with the RCCOs in our region, RCCOs 1, 4 and 7. What works is the flexibility to develop local solutions. This feature must be a prominent part of the next RCCO bid.

6) What is not working well with RCCO and BHO collaboration right now?

   Progress toward payment reform is much too slow. SDAC data is still not being shared with the BHOs at a level that could help coordinate care in a much more effective manner.

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

- The RCCO RPF should encourage integration. Bidders should be rewarded with higher scores for closer integration of programs, data and finances.

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) Barriers to the integration of behavioral health and physical health services. Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☐	☒	
Community Behavioral Health Services Rule	☐	☐	
Covered diagnoses list	☒	☐	it would be much easier to integrate if we did not have a limited diagnosis list; however I understand the cost implications of opening this up to all diagnosis and codes. A barrier isn't always a bad thing (won't put this in my response but you might give some thought.)
Different behavioral / physical health reimbursement	☐	☒	
Institutions for Mental Diseases exclusion	☒	☐	Although this is an issue, the 1915 (b)(3) waiver offers some flexibility through the Medicaid Managed Care program.
OBH rules, reporting, or financing (regulatory differences between agencies)	☐	☐	Better addressed by the MHCs
PCMP financing structure	☐	☐	
Per-member per-month amount	☐	☒	
Physical space constraints	☐	☒	
Privacy Laws (HIPAA, 42 CFR)	☒	☐	42 CFR is a real problem with care coordination; HIPAA however is not an issue.
Professional / cultural divisions	☒	☐	This is one of the many challenges we have found. The BHO and MHCs have some very rich experience in this area.
RCCO or BHO contracts	☐	☒	
Staff capacity	☒	☐	Staff capacity is an issue for all of health care in Colorado. BHOs and MHCs face those same challenges.

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

State/Federal rules or reporting requirements	☒	☐	The reporting requirements need to be aligned.
Technical resources / data sharing	☒	☐	SDAC data needs to be shared with the BHOs
Training	☐	☒	
Others	Please type your response here.		

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

- We think that the six levels of integration best reflect what we need in the field.

  http://www.integration.samhsa.gov/integrated-care-models/A_Standard_Framework_for_Levels_of_Integrated_Healthcare.pdf

10) Please share any other general advice or suggestions you may have about behavioral health integration.

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination?

- The deliberate organization of patient care activities between two or more participants involved in a patient's care to facilitate the appropriate delivery of health care services

b. How should RCCOs prioritize who receives care coordination first?

- While prioritizing care coordination may be required due to resource concerns, we should not forget that minor problems can escalate and sometimes our most effective care coordination prevents the escalation of health problems. Having a role for providers outside the RCCO to coordinate care is still a valuable resource. Defining the role of the RCCO and the providers so that care coordination is not duplicated should be a focus of the RCCO bid.

c. How should RCCOs identify clients and families who need care coordination?

- Care coordination should occur at the primary care (bi-directional) level for anyone accessing more than one health care system.

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

- I don't understand the context in which this question is asked.

12) What services should be coordinated and are there services that should not be a part of care coordination?

- All services should be coordinated including services outside the medical visit that impact the health care of the Medicaid member; including Social Services and Public Health .

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

- Care coordinators need to know how patients access primary care inciuding bi-directional service locations,(locations where behavioral health clients receive their primary care.) All care for specialty should be accessed through the primary care provider and should be coordinated by the RCCO.

14) Many clients and their famiiies have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today?

- Care coordination is happening at aii ievels which is part of the problem. The RCCO bid should seek to consolidate this process and reward bidders for identifying and then developing systems that address the issue of multiple care coordination systems.

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

- BHOs are required to coordinate care for Behavioral Health patients. This sometimes can be in conflict the care coordination required by the RCCOs. Colorado Heaith Partnerships through its Mental Health Center providers has worked to make this an effective process. I beiieve this could be used as a modei for how other system of care coordination is brought under the RCCO process.

c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

- By centralizing care coordination with the RCCO as noted in 14b above

d. What are the gaps in care coordination across the continuum of care?

- I don't have much to offer here.

15) RCCOs' roles in addressing cilents' and their families' non-medical needs. Please compiete the table beiow, keeping in mind adults, children, and famiiies:

- The RCCOs shouid focus on non-medicai systems only when these systems impact the health care of a Medicaid member. To take on the coordination of other systems would distract from the focus on heaithcare that this RFI/RFP seeks to address.

Non-medical need:	Should the RCCO have a role? Yes	No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma	☐	☐	☒	
Affordabiiity	☒	☐	☐	

(assistance with prescriptions or co-pays)				
Daycare / childcare	☐	☒	☐	
Economic stability & employment	☐	☒	☐	
Education	☐	☒	☐	
Environment	☐	☒	☐	
Food access / nutrition	☐	☐	☒	
Health literacy	☒	☐	☐	
Housing	☐	☒	☐	
Language or translation services	☒	☐	☐	
Literacy	☐	☒	☐	
Transportation	☐	☒	☐	
Other	Please type your response here. Feel free to list as many non-medical factors as you want, and please explain how the RCCO should be involved.			

16) Requirements about who should be doing care coordination. Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	Coordinate care? Yes	No	In what capacity should these individuals coordinate care in the ACC Program?
Advanced Practice (Registered) Nurses	☐	☒	
Certified Addiction Councilors	☐	☒	
Certified Nurse Midwives	☐	☒	
Community Health Workers	☒	☐	Primary responsibly deepening on organizational structure.

Generaiists (BA/BS/MA/MS)	☒	☐	Primary responsibiy deepening on organizational structure.
Heaith Coaches	☒	☐	Primary responsibly deepening on organizational structure.
Licensed Clinical Sociai Workers	☐	☒	
Licensed Marriage and Family Therapist	☐	☒	
Licensed Mental Health Counselors	☐	☒	
Licensed Professional Counselor	☐	☒	
Masters of Public Heaith	☐	☒	
Medical Doctors / Doctors of Osteopathic Medicine	☐	☒	
Nurse Practitioners	☐	☒	
Patient Navigators	☒	☐	Primary responsibly deepening on organizational structure.
Peer Advocates	☒	☐	Primary responsibly deepening on organizational structure.
Promotoras	☐	☒	
Psychiatrists	☐	☒	
Psychologists	☐	☒	
Registered Nurses	☐	☒	
Social Workers	☒	☐	Primary responsibiy deepening on organizational structure.
Wraparound facilitators	☒	☐	Primary responsibiy deepening on organizational structure.
Other	Please type your response here.		

17) **Care coordination requirements for specific populations.** Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Popuiation	Specific	General	If specific, please describe
Newborns and infants	☐	☒	
Children	☐	☒	
Chiidren who are healthy, but in socialiy-compiex environments	☐	☒	I'm not sure how socially complex is defined.
Children involved in the foster care system	☐	☒	
Children with a chronic iliness	☐	☒	

Children with a serious emotional disturbance	☒	☐	Care should be coordinated by the BHO
Children with medical complexity	☐	☒	
Children or youth with a behavioral health diagnosis or substance use disorder	☒	☐	Care should be coordinated by the BHO
Transition-age adolescents	☐	☒	
Parents and families	☐	☒	
Pregnant women	☐	☒	
Adults	☐	☒	
Adults who are healthy, but in socially-complex situations	☐	☒	
Adults with a chronic illness	☐	☐	
Adults with a behavioral health diagnosis or substance use disorder	☒	☐	Care should be coordinated by the BHO
Clients involved in the criminal justice system	☐	☒	
Clients with a disability	☐	☒	
Clients in a nursing facility	☐	☒	
Elderly clients	☐	☒	
Frail elderly clients	☐	☒	
Clients in palliative care	☐	☒	
Other populations, please comment:			

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

- The RCCO should only be involved if there are medical issues.

19) How should care coordination be evaluated? How should its outcomes be measured?

- Care coordination measures should monitor the reduction of duplicated care and the resulting reduction in medical expenses and the impact of this on health status.

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

a. What is the PMPM cost for providing care coordination services?

- This is very difficult to answer without actuarial analysis. The RCCOs may have a better handle on this. What is not advisable are rate cuts after the program has been implemented. This has

occurred in the RCCO program as well as the BHO program. These changes can be very disruptive to the successful implantation of effective program strategies.

b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

- Same as above.

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

- It should vary by population but needs to be set by an actuarial analysis.

a. Care coordinator to client ratios. If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☒
51-100	☐
101-200	☐
201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

- Cost of care – reduction in wasted care because of un-coordinated care. And the impact of this on health outcomes.

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

- I would agree with the iist provided above with the exception of provider contracts and payment mythologies. Provider contracting creates a competitive edge that saves money for the state and should be left to the RCCO to manage.

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

- There is a danger in being too prescriptive in the RFP by requiring RCCOs to have certain community relationships. it would be better to have RCCO bidders describe the relationships they have and how they will enhance those relationships. Points should be awarded in the RFP for community relationships.

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enroiled. Please comment on this proposal.

- i don't think this will work in rurai and frontier areas of the state. These areas don't have the popuiation needed to make this work.

27) Should the RCCO region maps change? Why or why not? If so, how?

- The state should go to fewer RCCOs and shouid consider combining RCCO regions 4 and 7. Most care in this part of the state is accessed through two major hubs, Puebio and Colorado Springs. Having these regions in one RCCO will make care coordination much more effective.

28) Shouid the BHO region maps change? Why or why not? If so, how?

- If the BHO maps were changed a new BHO RFP would have to be issued. i don't think the BHO maps can be change unless the state is ready to combine both (RCCO and BHO) programs. To change the BHO maps without combing the programs wouid be very disruptive to the BHO patients.

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

- At least 6 months minimum would be needed.

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

- Moving to risk contracts would make the ACC more effective and produce saving more quickly. Aliowing RCCOs to manage a PMPM for care I beiieve will show significant saving quickly. If quaiity measures are added to the deveiopment of the PMPM, I believe that care and access can also be positively impacted.

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

- The addition of 9900 codes that allow integrated sights to provide services that are needed wouid be a major improvement.

32) Should there be muitiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. if so, why? if so, how many and where? What issues would this address?

- i don't think this can work in rurai /frontier Colorado, the population couid not support two RCCOs. 5ee question 26 above

33) if you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be wiliing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? if not, why not?

- N/A

34) What role shouid RCCDs play in attributing clients to their respective PCMPs?

- Don't have the information to answer this question.

35) What types of coilaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

- I am not aware of any.

36) What types of coilaboration should exist between the ACC Program and the Colorado Department of Human Servlces?

- N/A

37) What types of coilaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

- Medicaid is already a big enough task for the RCCOs; we should not put more on them.

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

- DOi - only if there is a need for a license because of a risk contract.

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

- There is a tendency to over burden programs with stakeholder processes and engagement that rarely produces any meaningfui outcomes. Most of the time outreach meetings are poorly attended with input coming from many of the same stakeholders who often provide input directiy.

I would suggest that the RFP allow bidder to propose a meaningful stakeholder process that works for their area.

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

- See answer to Question 39.

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

- This can be accomplished through the RFP awarding points for community involvement.

42) How should the Department structure stakeholder engagement for the ACC as a whole?

- See question 39 above.

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

- No
  a. if no, what are the gaps?

- Access to specialty care in rural/frontier parts of Colorado is a problem.

  b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

- I don't think the gaps are popuiation specific.

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

a. What role should hospitals play in the next iteration of the ACC Program?

- Hospitals across Colorado remain isolated from the broader health care provider community. They are often seen as the health care entity that consumes most of the health care resources and are entrenched institutions that are very difficult to change. The one encouraging exception to this is the Centura Health Neighborhoods movement. In this model Centura seeks to become a partner with health care entities across the state at the local level, where the impact is most keenly felt. If hospitals have a role in the RCCO it is because they have transformed into effective community partners, invested in managing health care resources.

b. What role should pharmacies play in the next iteration of the ACC Program?

- I don't see a role for pharmacies.

c. What role should specialists play in the next iteration of the ACC Program?

- Specialty care needs to be more accessible in rural/frontier counties. The ACC program should provide incentives to specialists to provide care in these areas. The expansion of tele medicine should be strongly encouraged.

d. What role should home health play in the next iteration of the ACC Program?

- Home health should be a central part of care planning. Hospitals should be required to work closely with home health agencies.

e. What role should hospice care play in the next iteration of the ACC Program?

- Hospice care should be readily available to all patients in the ACC program.

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

- I don't know enough to answer this question.

g. What role should counties play in the next iteration of the ACC Program?

- This question is too broad.

h. What role should local public health agencies play in the next iteration of the ACC Program?

- Public heath agencies need to be an integral part of the referral resource for the ACC program.

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

- HCPF should be cautious of over reaching and involving too many player in the ACC process thus making it burdensome to carry out the main mission of the program, deliver better, more coordinated care to a larger number of Medicaid members.

45) How can RCCOs help to support clients and families in making and keeping appointments?

- This will always be challenging but extensive outreach is the only approach that has worked for the BHOs

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

- No, this should be an option proposed by the respondents to the RFP. HCPF should be careful not to be too prescriptive in how the RCCO program should operate. Leaving room for communities to offer solutions should be a key theme of the RPF.

47) Community Health Worker reimbursement. Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement should be at the discretion of the RCCO and should not be prescribed by HCPF in the RFP.

Reimbursement process	(Please check all that apply)
Independently bill	☐
On staff (salary) at Primary Care Medical Provider Clinic	☐
On staff (salary) at RCCO	☐
Per Member Per Month Payment	☐

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

- The RCCOs should have a role in coordinating oral health. Oral health need to be a part of overall health care and needs also be integrated.

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you?

- Good customer service that understands local customs and traditions.

b. What RCCO requirements would ensure cultural competency?

- The fallacy in this question is that requirements can drive cultural competency. I've yet to see this work in any real world setting. Asking bidders to describe the uniqueness of their community and how they see themselves addressing their need will give HCPF an insight into the bidder's ability to ensure culturally competent services. These values need to be ingrained in the organization's culture; no amount to requirements will drive these values if they aren't already there. HCPF should select bidders who can demonstrate this competency.

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?

- The skills must be driven by the values of the organization.

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

- See 49 b. above

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

- This should be at the discretion of the RCCO to address region specific issues and should not be prescribed by HCPF.

51) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

- The RCCO bid should reward the respondents for proposing programs and services that divert patients from emergency rooms for routine care. The bid should redirecting these recourse to the RCCOs to develop additional programs and services that keep patients from accessing expensive emergency room care.

52) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

Practice Support

53) Support for practices. Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

- The state should avoid designing a one size fits all program for the ACC. While many of these tools, programs and services are useful and can work, it should be up to the bidders to make a case to HCPF on how these fit the specific community they work in and what benefit they believe can be derived from their use.

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☐	☒	☐	☐
Network provider education	☐	☒	☐	☐
Assistance with practice redesign	☐	☒	☐	☐
Assistance with efficiency-enhancing activities	☐	☒	☐	☐

Provide directory of other resources	☐	☒	☐	☐
Provide materials regarding Nurse Advice Line	☐	☒	☐	☐
Ensure all tools and resources are centrally located on RCCO-specific website	☐	☒	☐	☐
Others				

54) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

- N/A

55) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

- Rather than have requirements, have the bidders propose methods that would address this question.

56) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

- Rate enhancements for participation in the RCCO program as defined by the RCCO in the bid response.

57) Should the Department require that PCMPs utilize disease registries to manage the health of their population?

- No

58) Please share any other advice or suggestions about provider support in the ACC.

- This section is very heavy on requirements. If these requirements are implemented as RFP requirements it leaves little or no room for creativity. it also shifts the success or failure from the bidder to the State. Winning bidder need only to focus on meeting the requirements to be successful rather than focus on solutions that meet the overall goal of population health.

  it would be better if the State allows bidder to offer solutions to improve population health and then monitor progress.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

- The RCCOs need to move to risk contracts that provide a PMPM that can be managed against goals for improved population health at a lower cost.

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

- We are not primary care providers but our BHO has operated for 18 years by having providers take risk. Each of our Mental Health Centers operates on a Global Budget. We think this system of financing providers can work for primary as well.

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

- No they are not. The biggest barrier is the fee for service system of reimbursement. The medical system in place currently is set up to generate volume not value, a fact that is known to anyone who has worked to reform the health care system. The biggest barrier is that there are no incentives for providers to move to a system that is based on value. In fact providers are penalized if they focus on value. The infrastructure will not be developed until the incentives for producing value are aligned with the payment structure. This transformation can best be achieved by introducing risk contract to the RCCOs that reward value rather than volume. I hope this can be done in the next RCCO bid.

62) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

- Our organization is licensed by the DOI and we are ready and able to acquire any needed license and the required reserves. A license would not preclude us from bidding.

63) What role – if any – should the RCCOs play in the distribution of payments to providers?

- RCCOs should be completely responsible for reimbursing providers they are required to manage.

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

- Capitation payments (PMPM) with rate setting factors that reward quality

66) Measuring Client experience. Please complete the table below to indicate how the Department should measure Client/patient experience:

- The State should have broad measures of success for all RCCOs and should allow RCCOs to suggest additional measure that address local needs.

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☒	☐	All of these should be options for measuring quality.
SF-12 Health Survey	☒	☐	
Other types of client interviews / surveys	☒	☐	
Patient Activation Measure	☒	☐	
Focus groups	☒	☐	
Other	Please type your response here.		

67) Knowing that, at this time, the Department only has claims data, how should population health be measured?

- This needs to be the responsibility of the RCCOs but must be funded by the State.

68) How should quality and performance data be reported to the RCCOs, PCMPs, and the public?

- Open and transparent though a website.

69) Measures for payment. Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7 at most	☒
8-10	☐
11-20	☐

21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

70) What percent of RCCO payments should be tied to measures or performance?

Percentage	
10-20%	☐
21-30%	☐
31-40%	☐
41-50%	☒
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

71) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?

- It should be a combination. Overall KPIs should address population health but allow for local indictors to address community needs.

72) Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?

- Based on improvements

73) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

- The Department should not be constrained by the claims dilemma. RCCOs can develop the systems to monitor progress. These systems can be audited for accuracy to assure the State of their validity. To wait until the State can develop a system would waste valuable time.

74) Incentive payment frequency. Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	☒
Annually	☐
Other	☐

If you checked the "Other" box, please describe payment frequency below:

N/A

75) For potential Offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

- I don't know the fixed costs of operating a RCCO but I do know the fixed costs of operating a BHO which might have some similarities. The BHOs are required to have access standards for routine, emergent and emergency care along with access to providers within acceptable driving distances. In order to meet these standards we have to over staff. This is one example but there are many such requirements in our current contract that drive cost. RCCO RFP requirements will drive fixed costs. That state should evaluate very carefully the whether these requirements will generate value to the health care system.

76) For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

- The BHOs are evaluated on 28 measures but reimbursement is not tied to any of them. We believe that these quality measures should be incorporated into the rate setting process for the BHOs. A similar process could be used to set RCCO rates if the state chooses, and we suggest they do, move to risk contracts.

Health Information Technology (HIT)

77) Types of communication. For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	☒
Text message	☐	☒
Web portal	☐	☒
Email	☐	☒
Telemedicine / Video chat	☐	☒
Face-to-face meeting	☐	☒
Smartphone app	☐	☒
Other:		

78) HIT investments by organizations. For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below:

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	☐	☒
Digital care management tool	☐	☒
Care transitions alerts	☐	☒
Electronic Health Records (EHRs)	☐	☒
Health risk assessment software	☐	☒
Practice assessment tools	☐	☒
Practice management tools (scheduling, billing)	☐	☒
Client web portal for communicating care plan, services, benefit enrollment	☐	☒
Patient education/wellness tools	☐	☒
Provider/case manager directory	☐	☒
Shared decision-making tools	☐	☐
Telemedicine software	☐	☒
Other:	☐	☐
Other:	☐	☐

79) Importance of technology by type. The Department is working to determine what technology is in place, what technology is needed, and what technology should be standardized. For RCCOs, providers, and other organizations, use the table below to answer what HIT infrastructure outside of the SDAC your organization would use to perform population health management activities. Tools are scored from 1-5, where 1 are those items least-likely to be used, and 5 are items most-likely to be used:

Tool	1 Least	2	3	4	5 Most
Population analytics / reporting / dashboard	☐	☐	☐	☒	☐
Care management tool	☐	☐	☐	☐	☒
Care transitions alerts	☐	☐	☐	☐	☒
Electronic Health Records (EHRs)	☐	☐	☐	☒	☐
Practice assessment tools	☐	☒	☐	☐	☐
Health risk assessment software	☐	☐	☒	☐	☐
Practice management tools (scheduling, billing)	☐	☒	☐	☐	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☒	☐	☐	☐

Patient education weliness tools	☐	☐	☒	☐	☐
Provider/case manager directory	☐	☐	☐	☒	☐
Shared decision-making toois	☐	☐	☒	☐	☐
Teiemedicine	☐	☐	☐	☐	☒
Other:	☐	☐	☐	☐	☐

80) What are the primary barriers to RCCOs and providers increasing their use Health Information Technoiogy to improve the performance of Primary Care Practices?

- Staff feeling comfortabie with the technoiogy and rules for reimbursement is the primary barrier.

81) How can Health Information Technoiogy support Behavioral Heaith Integration?

- Information technology wiii benefit aii of heaith care with behavioral heaith being equaiiy impacted. The abiiity to reach out to rural/frontier areas wiii be of speciai interest to the rurai BHOs and RCCOs. CHP has invested heavily in tele-medicine for this reason.

  One chaiienge we are facing is the integration of medical information. There currently does not exist an electronic medical record (EMR) that can handle both primary care and behavioral health. This is a very big barrier to true integration. We are meeting this challenge through creative bridging of two EMRs but this is not an ideai solution. The expense of having to buy two systems may deter many providers from embracing the true impact that interstation can achieve. We are happy to share our experience.

82) In the next iteration of the ACC, shouid there be a shared resource for data and analytics? Piease describe the basic criteria for what a shared data and analytics platform needs to contain in order for it to be useful.

- Yes there should be a shared system for data and analytics. However, the state has been challenged to implement even a basic system of data sharing. i believe better results would be achieved if this task was given to the RCCOs and BHOs. The RPF should require that the contracting entities transmit anaiytics to the state rather than have the state develop a state wide system for data and analytics.

  The RFP could requlre that RCCOs track cost of care; health outcomes and other health outcome measure and be able to transmit these data in a common platform.

83) Should there be a shared care management tooi? Please describe the basic criteria for what a care management tool wouid need to contain in order for it to be useful.

- And effective care management tool must monitor access to care on a real time basis. Care managers need to know when appointments are made, prescriptions are filled and emergency rooms are accessed. Currently most care management is addressed after the fact and can oniy prevent future problems rather than intervene as duplicate and inappropriate care is being pianned.

84) Should there be a shared population health management tool? Please describe the basic criteria for what a population health management tool would need to contain in order for it to be useful.

- This task should be the responsibility of the RCCO. The tool could look at the overall use of care by a population and identify duplicate and inappropriate care so that these trends can be addressed with the providers in the network. This arrangement works best under a risk model where providers are incentivized to be efficient.

85) Please describe the functionality that a common Medicaid provider directory would need to contain in order for it to be useful.

- The Connect for Health Colorado provider resource guide is a good model for such a directory. Members and care managers should be able to search for providers based on the needs of the patient.

86) How can the RCCOs support providers' access to actionable and timely clinical data?

- The solution is clearly an effective CORHIO and QHN. Anything short of this would not be as effective.

87) What are the HIT solutions that would benefit clients, providers, and RCCOs? Please comment on the parameters these tools or platforms would need to possess and the ways in which they could be used.

- A combined primary care – behavioral health EMR, the effective implementation of CORHIO/QHN with access for primary care providers and a real time system that tracks access to care.

88) What technical assistance or resources related to HIT infrastructure should the RCCOs supply? This assistance or these resources could be for providers, social service organization, clients/families, or for others.

- The RCCOs in rural/frontier areas should be the primary source of HIT infrastructure. Most provider groups with the exception of hospitals and FQHCs cannot afford nor can they support the HIT systems needed. The RFP should accommodate this condition.

89) What role should health information exchange platforms like CORHIO or QHN play in the next iteration of the ACC?

- See question 86 above.

90) Please share any information, advice, and suggestions you have about health information technology in the ACC Program.

- I have spent 6 hours working on this RFI. While it is very comprehensive, I am concerned that the task is so time consuming that the process will result in a low response rate.

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

ACC Request for Information

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for information:

Please provide your name and location:

Name: Click here to enter text.
Location: City, County, State.

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Colorado Hospital Association
Location: Greenwood Village, Arapahoe County, Colorado
☒ **Please check if you are answering on behalf of this entity**

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

- ☐ Client
- ☐ Client's family member
- ☐ Client advocate
- ☐ Medical provider / PCMP / other provider
  - i. **Type or specialty:** Click here to enter text.
  - ii. **Area of practice:** Click here to enter text.
- ☒ Provider advocate (e.g. medical society)
- ☐ Potential bidder for RCCO contract
- ☐ Behavioral Health Organization
- ☐ Data or HIT entity
- ☐ Foundation
- ☐ Educational or research institution
- ☐ Another public or private program
- ☐ Legislator or elected official
- ☐ Other (please describe): Click here to enter text.

Are you currently involved in the ACC program?

- ☒ Yes
- No
- ☐ I don't know

If you answered "yes" above, how long?

- ☐ Less than one year
- ☐ 1-2 years
- ☐ 2-3 years
- ☐ 3-4 years
- ☒ Since before the program was implemented.

How have you been involved in the ACC program and what interaction have you had with RCCOs:

As an organization, CHA continually monitors activities and progress of the ACC and RCCOs and provides feedback to HCPF, particularly in the areas of payment and delivery reform activities and how to engage our hospital members. CHA produced a Hospital/RCCO Summit in 2013, which brought together RCCO representatives from each region and case management directors from hospitals statewide. We are also an active participant on subcommittees of the ACC Program Improvement Advisory Committee and have been a member of the Medicare-Medicaid Enrollees Ad Hoc Advisory Subcommittee since it was formed in 2012.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:

CHA represents 100 member hospitals and health systems throughout Colorado, all of whom are Medicaid providers. CHA partners with its members to work towards health reform and performance improvement, and provides advocacy and representation at the state and federal level. Colorado hospitals and health systems are committed to providing coverage and access to safe, high-quality and affordable health care. In addition, Colorado hospitals have a tremendous impact on the state's economic stability and growth, contributing to nearly every community across the state with 72,000 employees statewide. CHA actively monitors and works with HCPF on numerous areas of mutual

concern, including ACC, provider relations, and delivery and payment reform initiatives.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☒ N/A

While some of our members are existing or potential participants in the ACC, CHA itself is not.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

It has demonstrated its value, both via savings of taxpayer dollars and progress on key performance indicators statewide

2) What is not working well in the ACC Program?

CHA believes that while there is value in regional variation, the lack of unified processes and procedures places unnecessary strain on individuals and organizations (eg, providers) that interface with the ACC infrastructure. Additionally, we would like to see more outreach and education targeted at providers.

3) What is working best in the Behavioral Health Organization (BHO) system right now?

CHA strongly values the state's commitment to integrating physical health and behavioral health (including mental health and substance use) and we would like to see higher levels of coordination both at the regional (e.g., BHO/RCCO) level and among providers, in order to provide improved patient-centered care.

4) What is not working well in the BHO system?

CHA has concerns that in the current system, there is a lack of accountability for care that is rendered and goes unreimbursed. The perception exists, and is validated in some settings, that a significant amount of unreimbursed care is being provided by a variety of providers (not just hospitals) – this care is being ethically provided by these various providers so patients do not go without the behavioral health services they need, often in times of crisis.

CHA would like to see increased transparency, financial accountability, and fiscal oversight of the BHOs. CHA is aware that HCPF is attempting to address these shortcomings and supports its efforts. Consistent with market trends and requirements included in the ACA, we recommend that HCPF consider amending department regulations to increase the medical loss ratio (MLR) applied to BHOs from the current 77% to 80-85% to assist

alignment with private market insurers (a majority of whom are now required to ensure parity for mental health and physical health services) and ensure effective and efficient use of state and federal resources. Finally, we would like HCPF to consider adding a neutral third party to the BHO appeals process in order to support impartial review of these appeals.

5) What is working well with RCCO and BHO collaboration right now?

For regions where RCCOs and BHOs are working together, the organizations have been able to identify shared issues and work toward solutions.

6) What is not working well with RCCO and BHO collaboration right now?

There is too much variability of RCCO-BHO partnerships, which is underscored by the lack of expectation and accountability at the state level for strong RCCO-BHO relationships and incentives to collaborate (or disincentives for lack of collaboration.)

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

- Although CHA supports de-institutionalization as appropriate based on a patient's health condition, we would like HCPF to pursue regulatory options that allow Colorado to circumvent or modify the "Institutes for Mental Disease (IMD) Exclusion" in order to support better patient-centered care for individuals with severe mental illness.
- CHA supports increased transparency and accountability for BHOs and CMHCs, and requirements for coordination and collaboration with RCCOs and other providers in the local community.
- Currently, Medicaid clients with co-occurring mental health and substance use disorders have difficulty accessing services, especially for inpatient substance use disorder treatment, which often impacts their physical health as well. CHA supports removing regulatory and financial barriers to providing this necessary benefit.
- CHA believes that in order to successfully meet objectives outlined for integration of physical and behavioral health, HCPF must take a strong leadership role in developing and strengthening initiatives that build a behavioral health workforce adequate to meet the needs of Medicaid clients and the Colorado community. In addition to examining regulatory barriers to existing members of the behavioral health workforce in providing patient-centered care, this must include alignment of educational and employer objectives to train additional behavioral health workers.

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services. Using the table below, please explain which issues are barriers, and how they can be addressed:**

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☐	☐	
Community Behavioral Health Services Rule	☐	☐	
Covered diagnoses list	☒	☐	No Medicaid SUD inpatient benefit. Benefit should be created and funded.
Different behavioral / physical health reimbursement	☒	☐	
Institutions for Mental Diseases exclusion	☒	☐	Non-use of empty psych beds due to IMD – more units closing. Although exclusion is at the federal level, HCPF could pursue state-only funding to circumvent this barrier.
OBH rules, reporting, or financing (regulatory differences between agencies)	☒	☐	Regulatory and financial discrepancies and redundancies across agencies needs to be addressed. Licensing rules at CDPHE and OBH rules are inconsistent with each other.
PCMP financing structure	☒	☐	As this relates to future ACC program changes, hospitals and health systems need to be part of the overall financing dialogue in order to ensure access to care, both for primary care (to the extent primary care is offered in many hospital-based settings) and for emergency, acute, and specialty care.
Per-member per-month amount	☐	☐	
Physical space constraints	☐	☐	
Privacy Laws (HIPAA, 42 CFR)	☐	☐	
Professional / cultural divisions	☐	☐	

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

	ACC Request for Information		
RCCO or BHO contracts	☒	☐	Both contracts should have consistent requirements for fiscal oversight and accountability, benefits and reimbursement policy should be aligned, and RCCO-BHO collaboration and cooperation should be required and/or incentivized.
Staff capacity	☒	☐	See response to #7 above.
State/Federal rules or reporting requirements	☐	☐	
Technical resources / data sharing	☐	☐	
Training	☐	☐	
Others			

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

HCPF should consider whether a provider is genuinely capable of providing not only physical healthcare, but also mental health services and substance use services. Although mental health and substance use disorders are generally lumped under the "behavioral health" heading, it is important to remember that the care – and provider types – generally differs between the two.

10) Please share any other general advice or suggestions you may have about behavioral health integration.

The statistics on comorbidities – not only of physical and behavioral health, but also of mental health and substance use – is astounding. According to the National Alliance on Mental Illness (NAMI), 50% of adults with mental illnesses have a lifetime substance use disorder, and less than 50% of individuals referred from a primary care provider to a behavioral health provider make it to their first appointment. As such, integration is critical to the success and sustainability of Colorado's health system.

Medicaid's top priority for integration must be addressing benefit coverage, payment policy, licensure, and other regulations that impede care for mentally ill individuals with co-occurring substance use disorders. Without addressing this challenge, access to care designed to prevent avoidable costs "down the road" – such as emergency care and crisis mental health service costs – will be thwarted.

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination?

b. How should RCCOs prioritize who receives care coordination first?

While CHA believes that care coordination services should be provided to all Medicaid beneficiaries, we also believe the department should prioritize reforms that address the needs of high need/high cost beneficiaries (e.g., aged, blind, disabled individuals and individuals with behavioral health comorbidities).

Research has shown that certain populations benefit the most from care coordination. CHF, diabetes mellitus, severe mental illness, recent stroke, and high utilizers of certain area of the delivery system have the best potential for reducing costs and utilization whlle improving the outcomes for patients.

c. How should RCCOs identify clients and families who need care coordination?

Data analytics can provide insight into defined populations that can benefit the greatest.

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

Develop standardized care coordination tools at the State and RCCO level.

Invest in health information technology and exchange, particularly for providers not otherwise eligible for federal incentive payments.

12) What services should be coordinated and are there services that should not be a part of care coordination?

Facilitate coordination across the entire care continuum, including through a more defined and expanded role for hospitals in RCCOs' networks and strong coordination with social services where needed.

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today?

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

Hospitals use hospital staff or volunteers (called navigators, discharge advocates, coaches, etc.) to either call patients at home after discharge or visit patients at home after discharge to assure that the patients have the information and resources they need to successfully care for themselves at home. The coordinators often focus on a specific population, such heart failure patients, total hip/knee replacement patients, those at higher risk for post-discharge complications, or those whose health improvement is heavily dependent on post-discharge treatment (eg, physical therapy) or patient behavior (eg, drug adherence). The staff in this role can access medical record information from the hospital to provide specific information to the patient, such as information about the medications prescribed for the patient at discharge.

Some hospitals use navigators to help patients navigate the healthcare system when they will need on-going care from a variety of providers. An example is a navigator for people with breast cancer. The large third-party payers also have coordinators who call patients at home to check on their status and respond to questions.

c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

Care coordination should be invisible to the client and also patient-centered. Patients should not be responsible for coordinating the care coordinators. All Medicaid contractors could be required to coordinate services among themselves or RCCOs could be held accountable for developing a care coordination partnership within their region.

d. What are the gaps in care coordination across the continuum of care?

There is lack of communication and miscommunication among care providers (hospital, physician, home health agency, hospice facility, long-term care facility, etc.) regarding the on-going plan of care. Much of the communication is via paper or electronic forms. This can limit understanding of the nuances of the care needed by a particular patient. In urban hospitals, the physician caring for the patient is often not the patient's PCP, and this can lead to miscommunication opportunities. This also highlights the need for care coordination tools – such as a client case management tool – at the state level.

1S) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	Should the RCCO have a role? Yes	No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma	☒	☐	☐	
Affordability (assistance with prescriptions or co-pays)	☒	☐	☐	
Daycare / childcare	☐	☐	☐	
Economic stability & employment	☐	☐	☐	
Education	☐	☐	☒	Coordinate with hospitals for patient education and engagement for populations receiving hospital-based services.
Environment	☐	☐	☐	
Food access / nutrition	☒	☐	☐	
Health literacy	☒	☐	☐	Understanding health literacy and how to successfully communicate with clients.
Housing	☒	☐	☐	
Language or translation services	☒	☐	☐	

Literacy	☐	☐	☐	
Transportation	☒	☐	☐	
Other	Please type your response here. Feel free to list as many non-medical factors as you want, and please explain how the RCCO should be involved.			

16) Requirements about who should be doing care coordination. Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	Coordinate care? Yes	No	In what capacity should these individuals coordinate care in the ACC Program?
Advanced Practice (Registered) Nurses	☐	☐	
Certified Addiction Counciiors	☐	☐	
Certified Nurse Midwives	☐	☐	
Community Health Workers	☐	☐	
Generalists (BA/BS/MA/MS)	☐	☐	
Health Coaches	☒	☐	Coaching and education after hospital discharge
Licensed Clinical Social Workers	☐	☐	
Licensed Marriage and Family Therapist	☐	☐	
Licensed Mental Health Counselors	☐	☐	
Licensed Professional Counselor	☐	☐	
Masters of Public Health	☐	☐	
Medical Doctors / Doctors of Osteopathic Medicine	☒	☐	Primary care
Nurse Practitioners	☒	☐	Primary care for people with less complex illness
Patient Navigators	☐	☐	
Peer Advocates	☐	☐	
Promotoras	☐	☐	
Psychiatrists	☐	☐	

Psychologists	☐	☐	
Registered Nurses	☐	☐	
Social Workers	☐	☐	
Wraparound facilitators	☐	☐	
Other	Please type your response here. Any and all of these different providers might have a role in care coordination – it all depends on what the care and navigational needs of the patient are and what resources are available in a given community.		

17) Care coordination requirements for specific populations. Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and infants	☐	☐	
Children	☐	☐	
Children who are healthy, but in socially-complex environments	☐	☐	
Children involved in the foster care system	☐	☐	
Children with a chronic illness	☒	☐	They often need care over many years, so long-term coordination is important.
Children with a serious emotional disturbance	☐	☐	
Children with medical complexity	☒	☐	See above.
Children or youth with a behavioral health diagnosis or substance use disorder	☐	☐	
Transition-age adolescents	☐	☐	
Parents and families	☐	☐	
Pregnant women	☐	☐	
Adults	☐	☐	
Adults who are healthy, but in socially-complex situations	☐	☐	
Adults with a chronic illness	☐	☐	
Adults with a behavioral health diagnosis or substance use disorder	☐	☐	
Clients involved in the criminal justice system	☐	☐	
Clients with a disability	☐	☐	
Clients in a nursing facility	☐	☐	
Elderly clients	☐	☐	

Frail elderly clients	☒	☐	Frail elderly clients who live alone and lack adequate social support are at great risk of harm.
Clients in palliative care	☐	☐	
Other populations, please comment: All of these patients might require care coordination services, and they might not; again, dependent upon the patients care and navigational needs and local resources.			

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

19) How should care coordination be evaluated? How should its outcomes be measured?

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

a. What is the PMPM cost for providing care coordination services?

b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

A developed risk adjustment system similar to the Medicare Advantage system adjusts payments to the level of costs of providing care. The cost of care management may correlate to the cost of delivering care and be an appropriate schedule.

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

a. **Care coordinator to client ratios.** If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☐
51-100	☐
101-200	☐
201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

Metrics that measure quality of care and health outcomes are most valuable, with lower emphasis placed on reducing utilization and cost. Quality and outcome metrics should include functional assessment of the client. Once good results are available for quality, then utilization and cost metrics can change.

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Care coordination is only effective if Medicaid recipients are engaged and accountable for following treatment plans. Care coordination must be designed with member accountability in mind AND the care coordination services being designed so that the services "meet the client", not the other way around as has been much of the current systems set up.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

27) Should the RCCO region maps change? Why or why not? If so, how?

28) Should the BHO region maps change? Why or why not? If so, how?

Regardless of which region maps change, it would be ideal for RCCO and BHO regions to be identical. This would help facilitate better care coordination, consistent community outreach, and alignment of regional interests.

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

Fund and create a benefit for inpatient SUD treatment. This could be achieved by funding treatment with state-only dollars or engaging with HHS on exemption or waiver options to modify the IMD requirements. Managed care contractors – such as BHOs - should be audited regularly, and medical loss ratios should be raised to at least 80%.

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

They limit access to services by barring comprehensive treatment of co-occurring mental and substance use disorders. Also, there needs to be an intermediate (between contractor and ALJ level) BHO claims appeal/review process using a neutral third party.

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

34) What role should RCCOs play in attributing clients to their respective PCMPs?

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

HCPF and CHDS should conduct a thorough analysis of behavioral health regulations, benefits, and services and engage in a wholesale redesign of behavioral health regulation to eliminate conflicts and redundancies and create a more logical regulatory approach. State agencies should "model the way" of integration by integrating the administration of physical and behavioral health benefits and services at the state level.

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

HCPF and DOI should identify consistent methodologies and standards for measuring and enforcing network adequacy.

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

42) How should the Department structure stakeholder engagement for the ACC as a whole?

While moving toward integrated care for ACC clients across the state, the department should bear in mind that there is a shortage of primary care providers and behavioral health providers in rural and underserved communities, and that incentives designed to support regional integrated care settings (such as community mental health centers), may have the unintended consequence of impeding access to primary care.

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

No.

a. If no, what are the gaps?

There are gaps in specialty services, which are not available statewide for everyone. For example, there is a critical shortage of behavioral health workers and access to inpatient behavioral health treatment.

b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

Entities a-e listed below are all providers of care and, as such, should be partners in the development of the next iteration of the ACC Program.

a. What role should hospitals play in the next iteration of the ACC Program?

The ACC program today is focused on primary care, including care coordination and integration between physical and behavioral health. Hospital services – both inpatient and outpatient – are a critical part of the care continuum in every region and account for the largest portion of Medicaid spending in Colorado.

Most of the key performance indicators for the ACC program depend upon changes in hospital-based practices, such as hospital admissions and readmissions, high-cost imaging, and emergency department (ED) utilization. Therefore, hospitals have the potential to play a stronger role in achieving the Triple Aim in the ACC and need to have a greater role in the development of the ACC and RCCOs at both the state and regional level. True care coordination can only occur if hospitals inpatient and outpatient areas are included in the reporting of data and real time access to data. Additionally, hospital organizations may be a reliable source of care coordination in some communities because of the integration of physicians, hospital, residential, and other post-acute care providers.

We strongly encourage RCCOs to consider the value of adding a hospital representative to their governing board and stakeholder groups in order to take advantage of the valuable resources hospitals provide to Medicaid clients.

b. What role should pharmacies play in the next iteration of the ACC Program?

c. What role should specialists play in the next iteration of the ACC Program?

d. What role should home health play in the next iteration of the ACC Program?

e. What role should hospice care play in the next iteration of the ACC Program?

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

RCCO care coordinators should be required to closely navigate relationships with these agencies for ACC clients in order to ease the patient's burden of navigating the bureaucracy of multiple organizations. This is especially necessary for populations with co-occurring, complex, or chronic conditions and those whose behavioral health needs create additional challenges.

g. What role should counties play in the next iteration of the ACC Program?

h. What role should local public health agencies play in the next iteration of the ACC Program?

Perhaps the biggest challenge for LPHAs and the ACC is that there is significant variation in the scope of services LPHAs provide. As a general rule, LPHAs should work closely with RCCOs and providers to support improved population health. LPHAs that provide clinical care should be part of the care coordination system.

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

45) How can RCCOs help to support clients and families in making and keeping appointments?

Patient engagement and education is key to achieving better health outcomes. While there are legal constraints on some methods for Medicaid to build client buy-in (e.g., through prohibitions on client cost sharing), HCPF should consider the viability and efficacy of client engagement incentives, for both providers and clients.

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

There should be some type of navigation support available in the community. This would need to be coordinated with the local hospital(s) and others who may already provide such services. Reimburse lower cost care navigators/community health workers to help educate patients and involve them in the development and adherence to care plans

47) **Community Health Worker reimbursement.** Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement process	(Please check all that apply)
Independently bill	☒

On staff (salary) at Primary Care Medical Provider Clinic	☒
On staff (salary) at RCCO	☒
Per Member Per Month Payment	☒

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

RCCO care coordinators should be required to closely navigate relationships with dental providers for ACC clients because navigating multiple systems creates additional barriers to care, particularly for clients with multiple concurrent conditions.

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you?

b. What RCCO requirements would ensure cultural competency?

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

51) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

Emergency room utilization is lowered through efforts before the patient arrives at the emergency room. Proactive coordination that bonds patients to PCMPs, and breaks through barriers to seeing the PCP have the best effort of addressing the trend. RCCOs should be responsible for calling patients, assisting patients in understanding information needed, scheduling appointments, and ensuring transportation.

The delivery system needs to be easily understood by the patient and not require the patient to "figure out" the system.

52) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

Consider providing capacity-building incentives to PCMP offices that agree to see patients in the evenings and on weekends.

Practice Support

53) **Support for practices.** Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☐	☒	☐	☐
Network provider education	☐	☐	☐	☐
Assistance with practice redesign	☒	☐	☐	☐
Assistance with efficiency-enhancing activities	☐	☐	☐	☐
Provide web-based resources and directories	☒	☐	☐	☐
Provide practice-specific data reports	☒	☐	☐	☐
Provide clinical care guidelines and best practices.	☐	☐	☐	☐
Provide clinical screening tools	☒	☐	☐	☐
Provide health and functioning questionnaires	☒	☐	☐	☐
Provide chronic care templates	☒	☐	☐	☐
Provide registries	☐	☐	☐	☐
Offer client reminders	☐	☐	☐	☐
Offer client self-management tools	☒	☐	☐	☐
Offer educational materials about specific conditions	☒	☐	☐	☐
Supply behavioral health surveys	☐	☐	☐	☐
Supply other self-screening tools	☐	☐	☐	☐
Administer behavioral health surveys	☐	☐	☐	☐
Administer other self-screening tools	☐	☐	☐	☐
Prepare client action plans	☐	☐	☐	☐
Provide training on providing culturally-competent care	☒	☐	☐	☐
Provide training to supporting staff	☐	☐	☐	☐
Provide training on motivational interviewing	☒	☐	☐	☐
Provide tools and software for phone call and appointment tracking	☐	☐	☐	☐
Provide tools and resources for tracking labs, referrals, etc.	☐	☐	☐	☐
Provide referral and transitions of care checklists	☒	☐	☐	☐
Provide visit agendas or templates	☐	☐	☐	☐
Provide standing pharmacy order templates	☐	☐	☐	☐
Provide comprehensive directory of community resources	☐	☐	☐	☐
Provide directory of other resources	☐	☐	☐	☐
Provide materials regarding Nurse Advice Line	☒	☐	☐	☐
Ensure all tools and resources are centrally located on RCCO-specific website	☒	☐	☐	☐
Others	Comment: The Department should acknowledge that needs for these supports will vary across the state and even within communities. Items checked above are all valuable for providers; the need will vary from provider to provider. As a general principle, state tools should not be overly			

prescriptive, as some providers may have similar tools in place already. To the extent possible, tools should be interoperable with other complementary tools or platforms.

54) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

A specific tool should not be required unless it has been nationally proven to be a valid and reliable tool across large populations and across a wide variety of provider types.

55) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

56) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

57) Should the Department require that PCMPs utilize disease registries to manage the health of their population?

Not sure how this would be helpful. Disease registries have historically served clinical or public health research, not individual clients or providers. If this were required of PCMPs, the Department would need to provide reimbursement to PCMPs for data entry to such registries, as it typically takes dedicated staff to successfully participate in data submission. That money would be better spent on patient care and services.

58) Please share any other advice or suggestions about provider support in the ACC.

All providers, including hospitals, who meet the criteria should be able to serve as Medical Homes to ensure engagement of the providers from whom patients' get the majority of their care.

Continue and strengthen State support for rural workforce development and incentives (expanded to include specialists and hospital administration), broadband connectivity, and telehealth capacity.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

62) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

63) What role – if any – should the RCCOs play in the distribution of payments to providers?

CHA does not have a position on whether RCCOs should have a more significant role in financial distribution or payment reform strategies within the ACC. However, if RCCOs take on added financial responsibility, risk, or decision-making functions, additional safeguards must also be added to ensure accountability for funds used and maintenance of quality and access standards. This could include audit and MLR functions, among others.

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

Reimburse providers who are not serving as Medical Homes for care coordination services that are not covered through fee-for-service reimbursement.

Reimburse providers for care coordination, care transition, transportation, and telehealth services, which will help beneficiaries access care in the most appropriate settings. Reimbursable telehealth services should include email and telephone consults.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

Hospital admission rates and readmission rates for certain chronic conditions (adult and pediatric), low birth weight rate, process measures that reflect standardized processes (e.g., regular eye exams for diabetic patients). Generally, performance metrics tied to payment should have a strong evidence base that supports the metric's accuracy and the efficacy of methods to meet quality or outcome standards.

66) Measuring Client experience. Please complete the table below to indicate how the Department should measure Client/patient experience:

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☐	☐	
SF-12 Health Survey	☐	☐	
Other types of client interviews / surveys	☐	☐	
Patient Activation Measure	☐	☐	
Focus groups	☐	☐	
Other	Please type your response here.		

67) Knowing that, at this time, the Department only has claims data, how should population health be measured?

68) How should quality and performance data be reported to the RCCOs, PCMPs, and the public?

Outcomes data should be reported to PCMPs comparing the PCMP to other PCMPs (blinded).

69) Measures for payment. Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☐
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

70) What percent of RCCO payments should be tied to measures or performance?

Percentage	
10-20%	☐
21-30%	☐
31-40%	☐
41-50%	☐
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

71) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?

72) Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?

73) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

74) Incentive payment frequency. Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	☐
Annually	☐
Other	☐

If you checked the "Other" box, please describe payment frequency below:

75) For potential offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

76) For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

Health Information Technology (HIT)

77) Types of communication. For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	☐
Text message	☐	☐
Web portal	☐	☐
Email	☐	☐
Telemedicine / Video chat	☐	☐
Face-to-face meeting	☐	☐
Smartphone app	☐	☐
Other:		

78) HIT investments by organizations. For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below:

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	☐	☐
Digital care management tool	☐	☐
Care transitions alerts	☐	☐
Electronic Health Records (EHRs)	☐	☐
Health risk assessment software	☐	☐
Practice assessment tools	☐	☐
Practice management tools (scheduling, billing)	☐	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☐
Patient education/wellness tools	☐	☐
Provider/case manager directory	☐	☐
Shared decision-making tools	☐	☐
Telemedicine software	☐	☐
Other:	☐	☐
Other:	☐	☐

79) Importance of technology by type. The Department is working to determine what technology is in place, what technology is needed, and what technology should be standardized. For RCCOs, providers, and other organizations, use the table below to answer what HIT infrastructure outside of the SDAC your organization would use to perform population health management activities. Tools are scored from 1-5, where 1 are those items least-likely to be used, and 5 are items most-likely to be used:

Tool	1 Least	2	3	4	5 Most
Population analytics / reporting / dashboard	☐	☐	☐	☐	☐
Care management tool	☐	☐	☐	☐	☐
Care transitions alerts	☐	☐	☐	☐	☐
Electronic Health Records (EHRs)	☐	☐	☐	☐	☐
Practice assessment tools	☐	☐	☐	☐	☐
Health risk assessment software	☐	☐	☐	☐	☐
Practice management tools (scheduling, billing)	☐	☐	☐	☐	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☐	☐	☐	☐
Patient education wellness tools	☐	☐	☐	☐	☐
Provider/case manager directory	☐	☐	☐	☐	☐
Shared decision-making tools	☐	☐	☐	☐	☐
Telemedicine	☐	☐	☐	☐	☐
Other:	☐	☐	☐	☐	☐

80) What are the primary barriers to RCCOs and providers increasing their use Health Information Technology to improve the performance of Primary Care Practices?

81) How can Health Information Technology support Behavioral Health Integration?

By having a unified system at all points where clients access services, care coordinators could monitor clients' entry into the system, delivery of services to clients and utilization patterns. Telehealth can also be integrated into primary care settings – as it already is in parts of the state – to provide behavioral health services.

82) In the next iteration of the ACC, should there be a shared resource for data and analytics? Please describe the basic criteria for what a shared data and analytics platform needs to contain in order for it to be useful.

83) Should there be a shared care management tool? Please describe the basic criteria for what a care management tool would need to contain in order for it to be useful.

Yes. See first sentence of response to question 81 above.

84) Should there be a shared population health management tool? Please describe the basic criteria for what a population health management tool would need to contain in order for it to be useful.

85) Please describe the functionality that a common Medicaid provider directory would need to contain in order for it to be useful.

86) How can the RCCOs support providers' access to actionable and timely clinical data?

87) What are the HIT solutions that would benefit clients, providers, and RCCOs? Please comment on the parameters these tools or platforms would need to possess and the ways in which they could be used.

88) What technical assistance or resources related to HIT infrastructure should the RCCOs supply? This assistance or these resources could be for providers, social service organization, clients/families, or for others.

89) What role should health information exchange platforms like CORHIO or QHN play in the next iteration of the ACC?

90) Please share any information, advice, and suggestions you have about health information technology in the ACC Program.

Colorado Department of Health Care Policy and Financing

RFI Response Received and Recorded.

Serial Number: 046

Accepted by: KJDW

Notes:

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Sue Williamson
Location: 6130 Greenwood Plaza Blvd, Ste, 150, Greenwood Village, CO 80111 (Arapahoe)

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Signal Behavioral Health Network
Location: 6130 Greenwood Plaza Blvd, Ste. 150, Greenwood Village, CO 80111 (Arapahoe)
x Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☐ Medical provider / PCMP / other provider
  i. Type or specialty: Click here to enter text.
  ii. Area of practice: Click here to enter text.
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
X Other (please describe): Managed Services Organization

Are you currently involved in the ACC program?

☐ Yes
x No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years

How have you been involved in the ACC program and what interaction have you had with RCCOs:

Click here to enter text.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:

Signal has a contract with Foothills Behavioral Partners, one of the Medicaid BHOs, to assist in facilitating the contracting/compliance/quality assurance of substance use providers with Foothills

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
X Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

Signal would very much like to participate in the RCCO program to help facilitate and inform the delivery of substance use disorder treatment services based on its expertise in managing a network of SUD providers. However, under the current structure, Signal has limited participation through a contract with one of the State's BHOs.

☐ 3-4 years
☐ Since before the program was implemented.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

Our knowledge is limited based on information shared with us through Department newsletters and other public forums.

2) What is not working well in the ACC Program?

Insufficient information to comment

What is working best in the Behavioral Health Organization (BHO) system right now?

Insufficient information to comment.

3) What is working best in the Behavioral Health Organization (BHO) system right now?

Insufficient information to comment.

4) What is not working well in the BHO system?

Many of the SUD providers within the Signal network are experiencing significant challenges in the contracting process with the BHOs/Value Options. There has been general confusion on credentialing/licensure issues; on which codes to bill, etc – general administrative barriers. Our providers report substantial delays in getting reimbursed. In fact, several of our providers have been waiting to receive reimbursement since January 2014.

Additionally, Colorado's SUD system is experiencing workforce shortage areas, particularly in the rural areas. Some barriers to hiring new staff include long wait times for licensure approval, reimbursement rates that don't all for the ability to hire or provide pay increases for these professionals and limits in loan repayment programs for this workforce.

State data systems and the lack of actionable information remain problematic. Because of the federal regulations relating to the privacy rights of those seeking SUD treatment, the RCCOs may not have access to the complete patient record.

Existing and separate data systems between HCPF and the Office of Behavioral Health (OBH) as well as the complexity of braiding funding for Medicaid clients for services not covered by Medicaid represent a challenge to providers in determining what appropriate payer source to use for a particular patient. Additionally, the Medicaid "churning" issue where patients gain and lose Medicaid eligibility creates tremendous administrative and financial barriers for providers and more importantly, creates significant access issues for patients.

5) What is working well with RCCO and BHO collaboration right now?

Insufficient information to comment.

6) What is not working well with RCCO and BHO collaboration right now?

Insufficient information to comment.

Behaviorai Health integration

7) What shouid be the next steps in behaviorai heaith integration in Colorado?[1]

Extensive analysis and mapping of the components/goals of the State innovation Model (SIM) grant against the vision and goais for the integration of physicai and behavioral health must occur to assure administrative, financial, data, provider and client needs are aligned. We encourage the Department to continue to explore expanding the current Medicaid SUD benefit to ensure that Medicaid clients have access to the fuii continuum of SUD services. The management of the SUD benefit by the BHOs contlnues to be a work in progress. As previously mentioned, SUD treatment provlders have experienced signiflcant barriers in contracting with the BHOs, in the billing process and in receiving timeiy reimbursement. In fact, many SUD treatment providers have been required to hire additionai billing staff to navigate the new heaithcare environment in which Medlcaid now plays a more prominent roie. It is our understanding based on information shared in community meetings that the penetration rate of those Medicaid patients recelving SUD treatment services is relatively iow in certain BHOs and in certain areas of the state.

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	X	☐	
Community Behavioral Health Services Rule	X	☐	
Covered diagnoses list	X	☐	
Different behavioral / physical health reimbursement	X	☐	
institutions for Mental Diseases exclusion	X	☐	
OBH rules, reporting, or financing (regulatory differences between agencies)	X	☐	
PCMP financing structure	X	☐	
Per-member per-month amount	X	☐	
Physical space constraints	X	☐	
Privacy Laws (HIPAA, 42 CFR)	X	☐	
Professional / cultural divisions	X	☐	
RCCO or BHO contracts	☐	☐	
Staff capacity	X	☐	
State/Federal rules or reporting requirements	X	☐	
Technical resources / data sharing	X	☐	
Training	X	☐	
Others	This is complex work that requires a thoughtful approach and implementation. Priorities		

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

should be established in terms of mitigating or eliminating the barriers over a period of time. To move too quickly without a sound plan will have the potential of eroding the progress and goals of the ACC and will serve to frustrate providers, payers and clients. We strongly recommend an incremental and methodical approach to integrating behavioral and physical health as has been done with the original RCCO implementation.

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

Long-term, we need to think of integrated whole-person care beyond the "4 walls" of a clinic. We need to create a system of community-centered health homes to improve the health and safety of the members of a community. We need to improve the integration and coordination of preventive services between public health, primary and behavioral health and community settings. Only by promoting positive health behaviors for individuals and truly engaging the patient or caregiver to be part of the care team and share decision making will we truly achieve the goals of the Triple Aim and whole-person centered care.

Most immediately, SAMHSA and HRSA for integrated Health Solutions has developed a framework for levels of healthcare integration which describes the key elements for each level of integration which seems would be a good starting point.

10) Please share any other general advice or suggestions you may have about behavioral health integration.

The financial mechanism is going to be critical. At this juncture in time, there are a number of ancillary activities/services that behavioral health providers offer and provide that are critical to ensuring that the patient receives the right care at the right place and the right time. Often times, providers are unable to receive reimbursement for these services. If you keep the patient/client at the focus of your efforts, you can create a healthcare delivery system where individuals and families have the knowledge, ability, resources and motivation to identify and make healthy choices and are empowered to manage and organize their own care at the level they choose.

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination?

Because all healthcare is local, there is not necessarily a "best" definition of care coordination. Care coordination is going to look differently in every community based on the resources and needs of a given community. Payment models should support patient navigators, care coordinators, health coaches and community health workers that support individuals both in and out of the office setting.

b. How should RCCOs prioritize who receives care coordination first?

This should be informed by the data within a particular RCCO based on the demographics and needs in the particular region.

c. How should RCCOs identify clients and families who need care coordination?

The analysis of all available data is critical. If it's not already happening, the RCCOs should avail themselves of the community needs assessments completed by the local public health departments to help inform these discussions.

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

No answer

12) What services should be coordinated and are there services that should not be a part of care coordination?

No answer

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

Use existing data and ask the individual/client to identify their needs – the answers may surprise providers.

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today?

A mixture of duplicative services and ongoing gaps for certain populations.

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

The majority of behaviorai healthcare provides (inciuding SUD providers) are coordlnating care that includes a human services component (eg housing, transportation, community services and programs). For those clients recovering from addiction, this care coordlnation is critical to promote the long-term recovery for those clients.

c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

An assessment and mapping of the current care coordlnation relationships is critlcai to avoid duplication and identify gaps.

d. What are the gaps in care coordinatlon across the continuum of care?

While critical to a client's long-term recovery, 5UD providers often lack the necessary resources to deilver care coordination for an extended perlod of time. As previously noted, the care coordination often includes the interaction of human services agencies and other community supports and programs to support the client's recovery and overall health.

15) RCCOs' roles In addressing clients' and their families' non-medical needs. Please complete the table beiow, keeping in mind aduits, chlldren, and famiiies:

Non-medical need:	Should the RCCO have a role? Yes	No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma	☐	☐	☐	
Affordablllity (assistance with prescriptions or co-pays)	☐	☐	☐	
Daycare / childcare	☐	☐	☐	
Economic stability & employment	☐	☐	☐	
Education	☐	☐	☐	
Environment	☐	☐	☐	
Food access / nutrition	☐	☐	☐	
Health iiteracy	☐	☐	☐	

Housing	☐	☐	☐	
Language or translation services	☐	☐	☐	
Literacy	☐	☐	☐	
Transportation	☐	☐	☐	
Other	Please type your response here. Feel free to list as many non-medical factors as you want, and please explain how the RCCO should be involved.			

16) **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	Coordinate care? Yes	No	In what capacity should these individuals coordinate care in the ACC Program?
Advanced Practice (Registered) Nurses	☐	☐	
Certified Addiction Councilors	☐	☐	
Certified Nurse Midwives	☐	☐	
Community Health Workers	☐	☐	
Generalists (BA/BS/MA/MS)	☐	☐	
Health Coaches	☐	☐	
Licensed Clinical Social Workers	☐	☐	
Licensed Marriage and Family Therapist	☐	☐	
Licensed Mental Health Counselors	☐	☐	
Licensed Professional Counselor	☐	☐	
Masters of Public Health	☐	☐	
Medical Doctors / Doctors of Osteopathic Medicine	☐	☐	
Nurse Practitioners	☐	☐	

Patient Navigators	☐	☐	
Peer Advocates	☐	☐	
Promotoras	☐	☐	
Psychiatrists	☐	☐	
Psychologists	☐	☐	
Registered Nurses	☐	☐	
Social Workers	☐	☐	
Wraparound faciiitators	☐	☐	
Other	Please type your response here.		

17) Care coordination requirements for specific populations. Please use the tabie below to describe if any of the foiiowing populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	if specific, piease describe
Newborns and infants	☐	☐	
Children	☐	☐	
Children who are healthy, but in socially-complex environments	☐	☐	
Chiidren involved in the foster care system	☐	☐	
Chiidren with a chronic illness	☐	☐	
Chiidren with a serious emotional disturbance	☐	☐	
Chiidren with medical compiexity	☐	☐	
Children or youth with a behavioral health diagnosis or substance use disorder	☐	☐	
Transition-age adoiescents	☐	☐	
Parents and families	☐	☐	
Pregnant women	☐	☐	
Adults	☐	☐	
Adults who are healthy, but in socially-compiex situations	☐	☐	
Adults with a chronic illness	☐	☐	
Adults with a behaviorai health diagnosis or substance use disorder	☐	☐	
Clients invoived in the criminal justice system	☐	☐	

Clients with a disability	☐	☐	
Clients in a nursing facility	☐	☐	
Elderly clients	☐	☐	
Frail elderly clients	☐	☐	
Clients in palliative care	☐	☐	
Other populations, please comment:			

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

No answer

19) How should care coordination be evaluated? How should its outcomes be measured?

No answer

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

a. What is the PMPM cost for providing care coordination services?

b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

No answer

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

No answer

a. Care coordinator to client ratios. If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☐
51-100	☐
101-200	☐
201-500	☐
501-1,000	☐

1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

No answer

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Allow for flexibility within the framework to meet the needs of the providers, clients and communities. The ultimate long-term outcome should be that clients receive safe and effective care that is coordinated locally, using statewide resources when necessary, from a team of appropriately trained healthcare providers.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

To the extent possible, consistent data reporting is critical to ensure that similar activities and services are similarly measured to identify best practices across the board and to effectively measure health outcomes and corresponding costs.

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

The RFP should include a section where the RCCO has to include a community engagement plan that identifies its outreach efforts in established productive collaborations and relationships within the community.

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

No answer

27) Should the RCCO region maps change? Why or why not? If so, how?

It is my understanding that the original RCCO maps were devised so there would be an equal number of covered lives in each region. The RCCO maps should be changed to the extent that they accurately represent the natural occurring geographic ways in which clients access care.

28) Should the BHO region maps change? Why or why not? If so, how?

It seems the goals of integration would be better achieved if the BHO/RCCO maps were aligned. Any geographic divisions should reflect the patterns of how clients access services to promote better health outcomes and to leverage existing provider and community relationships.

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

No answer except to say that sometimes government does not have the best track record of operationalizing policy or new programs, so implementation should be deliberate in order to achieve optimal success.

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

Some of the legislation and policy changes need to happen at the Federal level. Any alignment of rules between the different state agencies impacted would be advisable.

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

Expanded substance use disorder benefits. It is complicated for providers to both bill Medicaid and use their block grant indigent dollars to fund non-covered Medicaid services.

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

Only if it promotes greater access for clients and improved health outcomes.

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

No answer

34) What role should RCCOs play in attributing clients to their respective PCMPs?

To the extent it promotes the continuation of an established medical home between the provider and the PCMPs and promotes greater access and improved health outcomes, the RCCOs may have an appropriate role to play.

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

The ACC Program and CDPHE should identify ways to strengthen prevention efforts within the RCCO structure.

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

The ACC Program and CDHS need to collaborate to ensure that Medicaid funds and OBH funds are appropriately paying for services. Better collaboration is needed to ensure that OBH funds continue to be used for those people who need behavioral and SUD services not covered by Medicaid. Additionally, collaboration can promote identifying and using resources that address the social determinants of health which are the real drivers of health and healthcare costs.

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

No answer

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

The ACC Program should work with DORA to modify licensure processes that currently slow the movement of qualified licensed healthcare professionals to Colorado from other States. Additionally, a review of the

current licensure provisions should be undertaken to expand the ability of behavioral healthcare specialists to work in an integrated care setting.

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

Ongoing, extensive and meaningful participation by clients and their families and client advocates is critical in obtaining the buy-in of the community. The RCCOs should have plans on how they are going to make the client experience more "client-focused" with true client engagement and how they are going to make the delivery system less fragmented and easier for clients to access needed services.

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

A very detailed plan by any RCCO bidding should be required as part of the RFP process.

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

Through authentic, meaningful, culturally-sensitive, consistent and intentional outreach.

42) How should the Department structure stakeholder engagement for the ACC as a whole?

The Department should demonstrate how it incorporated the feedback from stakeholders to improve the client experience and access within the RCCOs.

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

a. If no, what are the gaps?

b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

There is currently a workforce shortage of behavioral health practitioners in Colorado, especially in rural areas of the State. We need to identify the regulatory and administrative barriers that contribute to the workforce shortage.

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

a. What role should hospitals play in the next iteration of the ACC Program?

b. What role should pharmacies play in the next iteration of the ACC Program?

c. What role should specialists play in the next iteration of the ACC Program?

d. What role should home health play in the next iteration of the ACC Program?

e. What role should hospice care play in the next iteration of the ACC Program?

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

g. What role should counties play in the next iteration of the ACC Program?

h. What role should local public health agencies play in the next iteration of the ACC Program?

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

No answer

45) How can RCCOs help to support clients and families in making and keeping appointments?

improve the NEMT transportation component and continue to work on training staff to treat Medicaid clients in a respectful and non-judgmental way knowing that Medicaid clients are some of our most vulnerable members of the community and have a litany of issues of life besides their healthcare that contribute to missed appointments and non-compliance.

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

It should let the local communities determine the most appropriate deployment of workforce to meet its needs.

47) **Community Health Worker reimbursement.** Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement process	(Please check all that apply)
Independently bill	☐
On staff (salary) at Primary Care Medical Provider Clinic	☐
On staff (salary) at RCCO	☐
Per Member Per Month Payment	☐

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

No answer

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you?

b. What RCCO requirements would ensure cultural competency?

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

Bidders should be expected to demonstrate that they or their community partners can provide services in a culturally-competent manner.

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

Possibly and would need more information on the Department's thinking in order to provide an informed response.

51) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

Many of the clients accessing emergency rooms have co-occurring conditions involving both physical and behavioral health/substance abuse issues. The ACC should use the data to identify those clients utilizing the emergency room on a regular basis and implement a more intensive case-management program to work with these clients.

52) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

Practice Support

53) **Support for practices.** Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☐	☐	☐	☐
Network provider education	☐	☐	☐	☐
Assistance with practice redesign	☐	☐	☐	☐
Assistance with efficiency-enhancing activities	☐	☐	☐	☐
Provide web-based resources and directories	☐	☐	☐	☐
Provide practice-specific data reports	☐	☐	☐	☐
Provide clinical care guidelines and best practices.	☐	☐	☐	☐
Provide clinical screening tools	☐	☐	☐	☐
Provide health and functioning questionnaires	☐	☐	☐	☐
Provide chronic care templates	☐	☐	☐	☐
Provide registries	☐	☐	☐	☐
Offer client reminders	☐	☐	☐	☐
Offer client self-management tools	☐	☐	☐	☐
Offer educational materials about specific conditions	☐	☐	☐	☐
Supply behavioral health surveys	☐	☐	☐	☐
Supply other self-screening tools	☐	☐	☐	☐
Administer behavioral health surveys	☐	☐	☐	☐
Administer other self-screening tools	☐	☐	☐	☐
Prepare client action plans	☐	☐	☐	☐
Provide training on providing culturally-competent care	☐	☐	☐	☐
Provide training to supporting staff	☐	☐	☐	☐
Provide training on motivational interviewing	☐	☐	☐	☐
Provide tools and software for phone call and appointment tracking	☐	☐	☐	☐
Provide tools and resources for tracking labs, referrals, etc.	☐	☐	☐	☐
Provide referral and transitions of care checklists	☐	☐	☐	☐
Provide visit agendas or templates	☐	☐	☐	☐
Provide standing pharmacy order templates	☐	☐	☐	☐
Provide comprehensive directory of community resources	☐	☐	☐	☐
Provide directory of other resources	☐	☐	☐	☐
Provide materials regarding Nurse Advice Line	☐	☐	☐	☐
Ensure all tools and resources are centrally located on RCCO-specific website	☐	☐	☐	☐
Others				

54) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

No answer

55) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

For many SUD providers, especially the smaller providers, the transition to Medicaid has been challenging. I would recommend that RCCO's work with the Managed Services Organizations (MSOs) to assist with the practice transformation for these providers.

56) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

Incentivize providers through true performance-based contracting, not contracts that withhold funds from a provider before the provider has had an opportunity to perform the services.

57) Should the Department require that PCMPs utilize disease registries to manage the health of their population?

Yes

58) Please share any other advice or suggestions about provider support in the ACC.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

No answer

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

No answer

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

The SUD provider network that serves the State's indigent clients is an underfunded system and providers have never been paid their costs for providing critical SUD treatment services. Nonprofit SUD provider agencies have had to subsidize their operations and infrastructure by identifying outside funding sources to support their infrastructure costs. If the block grant funds could be used to improve and fill the gaps within the existing infrastructure, SUD providers would be in a better position to consider this approach.

62) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

No answer

63) What role – if any – should the RCCOs play in the distribution of payments to providers?

No answer

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

No answer

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

No answer

66) **Measuring Client experience.** Please complete the table below to indicate how the Department should measure Client/patient experience:

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☐	☐	
SF-12 Health Survey	☐	☐	
Other types of client interviews / surveys	☐	☐	
Patient Activation Measure	☐	☐	
Focus groups	☐	☐	
Other	Please type your response here.		

67) Knowing that, at this time, the Department only has claims data, how should population health be measured?

By integrating other sources of data, like registries, with the claims data.

68) How should quality and performance data be reported to the RCCOs, PCMPs, and the public?

CIVHC or CHI could provide guidance on this.

69) **Measures for payment.** Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☐
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

70) What percent of RCCO payments should be tied to measures or performance?

Percentage	
10-20%	☐
21-30%	☐
31-40%	☐
41-50%	☐
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

71) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?

Yes and no. I could envision a system where there would be certain baseline KPIs for all RCCOs and other KPIs established in each of the regions based on the needs and health status of clients in a given community.

72) Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?

No answer

73) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

No answer

74) **Incentive payment frequency.** Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	☐
Annually	☐
Other	☐

If you checked the "Other" box, please describe payment frequency below:

75) For potential offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

No answer

76) For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

No answer

Health Information Technology (HIT)

77) **Types of communication.** For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	☐
Text message	☐	☐
Web portal	☐	☐
Email	☐	☐
Telemedicine / Video chat	☐	☐
Face-to-face meeting	☐	☐
Smartphone app	☐	☐
Other:		

78) **HIT investments by organizations.** For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below:

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	☐	☐
Digital care management tool	☐	☐
Care transitions alerts	☐	☐
Electronic Health Records (EHRs)	☐	☐
Health risk assessment software	☐	☐
Practice assessment tools	☐	☐
Practice management tools (scheduling, billing)	☐	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☐
Patient education/wellness tools	☐	☐
Provider/case manager directory	☐	☐
Shared decision-making tools	☐	☐
Telemedicine software	☐	☐
Other:	☐	☐
Other:	☐	☐

79) Importance of technology by type. The Department is working to determine what technology is in place, what technology is needed, and what technology should be standardized. For RCCOs, providers, and other organizations, use the table below to answer what HIT infrastructure outside of the SDAC your organization would use to perform population health management activities. Tools are scored from 1-5, where 1 are those items least-likely to be used, and 5 are items most-likely to be used:

Tool	1 Least	2	3	4	5 Most
Population analytics / reporting / dashboard	☐	☐	☐	☐	☐
Care management tool	☐	☐	☐	☐	☐
Care transitions alerts	☐	☐	☐	☐	☐
Electronic Health Records (EHRs)	☐	☐	☐	☐	☐
Practice assessment tools	☐	☐	☐	☐	☐
Health risk assessment software	☐	☐	☐	☐	☐
Practice management tools (scheduling, billing)	☐	☐	☐	☐	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☐	☐	☐	☐
Patient education wellness tools	☐	☐	☐	☐	☐
Provider/case manager directory	☐	☐	☐	☐	☐
Shared decision-making tools	☐	☐	☐	☐	☐
Telemedicine	☐	☐	☐	☐	☐
Other:	☐	☐	☐	☐	☐

80) What are the primary barriers to RCCOs and providers increasing their use Health Information Technology to improve the performance of Primary Care Practices?

Federal privacy regulations related to the sharing of SUD information. HIT is incredibly expensive and implementation requires a long-term commitment and the realization of loss of productivity during the implementation phase.

81) How can Health Information Technology support Behavioral Health integration?

Dissemination and exchange of data with external providers, health systems, and other stakeholders can enhance care coordination and care accountability.

82) In the next iteration of the ACC, should there be a shared resource for data and analytics? Please describe the basic criteria for what a shared data and analytics platform needs to contain in order for it to be useful.

No answer

83) Should there be a shared care management tool? Please describe the basic criteria for what a care management tool would need to contain in order for it to be useful.

No answer

84) Should there be a shared population health management tool? Please describe the basic criteria for what a population health management tool would need to contain in order for it to be useful.

No answer

85) Please describe the functionality that a common Medicaid provider directory would need to contain in order for it to be useful.

No answer

86) How can the RCCOs support providers' access to actionable and timely clinical data?

No answer

87) What are the HIT solutions that would benefit clients, providers, and RCCOs? Please comment on the parameters these tools or platforms would need to possess and the ways in which they could be used.

Technology will be able to support patient engagement and patient activation and the State should have dedicated resources to provide these tools for clients.

88) What technical assistance or resources related to HIT infrastructure should the RCCOs supply? This assistance or these resources could be for providers, social service organization, clients/families, or for others.

No answer

89) What role should health information exchange platforms like CORHIO or QHN play in the next iteration of the ACC?

They need to play a critical role. The EHR systems that behavioral health providers use are quite different than used by the physical healthcare providers and there needs to be an entity that facilities the exchange of information between all of the divergent systems.

90) Please share any information, advice, and suggestions you have about health information technology in the ACC Program.

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

ACC Request for Information

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Annette Rosling, MD

Location: Grand Junction, CO

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Western Colorado Pediatric Associates

Location: Grand Junction, CO

☐ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☒ Medical provider / PCMP / other provider
  i. Type or specialty:
  ii. Area of practice: Pediatrics
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☒ Other (please describe): Advocate for children on Medicaid

Are you currently involved in the ACC program?

How have you been involved in the ACC program and what interaction have you had with RCCOs:

I provide medical care for children enrolled in an RCCO

Please briefly describe your involvement with Medicaid, either in Colorado or another state:

I provide medical care for children with Medicaid.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely
☒ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

☒ Yes
☐ No
☐ I don't know

Please feel welcome to describe why or why not using the space below.

If you answered "yes" above, how long?

☐ Less than one year
☒ 1-2 years
☐ 2-3 years
☐ 3-4 years
☐ Since before the program was implemented.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

- Reimbursement (mostly due to the Federal ACA) is fairer now.

- The decision to make the well child visit one of the KPIs was a very good decision in behalf of children, but unfortunately attribution is still flawed and the SDAC data is delayed and often inaccurate. So, it is difficult to create an effective QI process to improve the KPI, but this is a good start.

- The decision to focus on integrated behavioral health in medical homes is a wonderful decision to improve health outcomes for people covered by Medicaid. Thank you.

- You have a great opportunity to do what is needed for the majority of Medicaid recipients. The majority of Medicaid recipients in Colorado are children and adolescents; they should not be considered one of the subgroups. The following principles should be incorporated into the core objectives of the ACC:

    - Children's health care needs are very different than adults. For adults, the focus is on managing chronic disease more effectively. For children, it is about preventing the development of those chronic diseases.
    - If the ACC really wants to focus on health and wellness, the greatest opportunity is with the children (the majority of Medicaid recipients). By focusing on preventive care, early screening and early intervention for children, there will be big savings; unfortunately those savings may not occur for many years or decades in the future, but the investment will eventually be worth it.
    - So, the ACC will need to invest in children to the extent possible now even though the savings come much later. We recommend that a portion of short-term savings that occurs due to chronic disease management in adults in the ACC be invested back into preventive care for children.
    - Children are part of families and you can't help the child unless you help the family. So, care coordination is more involved for children since it includes care coordination of the parents/family.
    - There is increased recognition that behavioral health is a part of overall health and should be accessible within a pediatric medical home. However, the current mental health system must have policies, procedures, and resources that support integrated behavioral health activities at the practice level.

2) What is not working well in the ACC Program?

- Attribution continues to attribute patients to the wrong medical home and the process of getting patients reassigned to the correct medical home is onerous for the patient and family.

- The health care data through the SDAC is based on claims so it is delayed and is incomplete (particularly for children). Therefore, it is not very useful in helping medical homes improve outcomes for children.

- Each RCCO does things very differently, which is confusing for medical homes with patients in several RCCOs. RCCOs are inconsistent in how they respond to requests for care coordination (quite variable depending on whom you reach at the RCCO). So the new RFP should ask how RCCOs will develop policies and procedures to make their methods and responses to requests for help more consistent, both within the RCCO and among all RCCOs.

- There are certain expectations/requirements and ways of doing things that are so different from one RCCO to another that it requires significant extra work for the medical home to adapt to the differences. To deal with this. So, the RFP should ask how RCCOs intend

- If a patient lives in one region and goes to a medical home in another region, and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from the patient's region RCCO. This is particularly true in the Denver metro area. <u>There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients.</u>

- The "incentives" now are actually disincentives, especially the requirement that the RCCO must meet its KPIs before a high performing medical home can be rewarded for meeting its KPIs. The concept behind this approach is not consistent with how health care systems (and "medical neighborhoods") work.

- The geography of the 7 regions does not reflect the natural geography of health care systems and referral patterns. Larimer County should be in Region 2.

- RCCOs are not providing the level of care coordination that Medicaid patients need. We have had RCCO "care coordinators" just tell us to call 211. The level of commitment that patients and families need is difficult to find, unless care coordination is provided at the medical home level or the community level.

- Both family practices and pediatric practices report that the SDAC does not reflect their own data that the practice can obtain from their EHR or their own claims data. This is particularly true regarding data on health care screening. The RFP should ask how RCCOs and HCPF should take advantage of this practice-based data.

- Most medical homes are not working closely with RCCOs and are not receiving much support. The RFP should ask how RCCOs intend to work more closely with medical homes.

- Feedback from RCCOs to the medical home regarding patients referred to the RCCO for care coordination is spotty. How will RCCOs consistently provide feedback and communication to the medical home regarding what was done for the patients and whether there was improvement?

- There has been difficulty with communication from the state level through the RCCOs down to the individual practice/provider level. Providers feel as though they are not well informed from HCPF or RCCOs. We are grateful that CCHAP keeps us informed.

- The current system does not take into account the movement of patients on and off Medicaid and movement between RCCOs. Whether for KPIs or future shared savings incentives, practices need to be evaluated on established patients who have been in a practice for a minimum of six months. This allows the medical home to actually have time to make an impact on the child's care. Otherwise, it is a substantial disincentive for practices to be open to the more complex and challenging patients, those that likely need access the most.

- Currently, there is very little communication and alignment between BHO's and RCCO's. In order for integrated behavioral health to be successful at the practice and community level, the BHO's and RCCO's must have similar goals, policies/procedures that are aligned, payment structures that are aligned with movement toward integration and ongoing close communication with one another. The RFP should ask how they intend to do this.

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

- The decision to focus on integrated behavioral health in medical homes is a wonderful decision to improve health outcomes for people covered by Medicaid. Thank you.

- If Colorado is serious about promoting integration of behavioral and physical (medical) health care, then the RCCOs and BHOs should be integrated. This would mean they should have the same regions and function as though they are one organization. This would reduce duplication of efforts and have better alignment of incentives and payments that support integrated care.

- Open the behavioral health and wellness codes (96150 – 96155) now. Don't wait. This will encourage integration immediately and enable medical homes to start now the process of evolving toward full integration.

- Care coordination for both behavioral health and medical care should be done in the primary care setting. And either the RCCO and/or the BHO should delegate the responsibility to do care coordination and a pmpm to cover the expense to the medical home as part of the payment reform process. And behavioral health care coordination and medical care coordination needs to be fully reimbursed. In addition, the BHO and the RCCO will need to have information and care coordinators to assist medical homes to handle uncommon or very complex issues.

- Provide infrastructure and funding for data collection and management to support integrated behavioral health in the medical home and the care coordination that will have to be part of that. Utilizing SDAC data is just one way to understand the activities within a medical home. SDAC data is delayed and does not include enough information to support behavioral health care coordination in the medical home. Other methods and technologies are needed. There will need to be an investment in the development of new technologies and methods to do behavioral screening, track referrals, document treatment and collect data on the whole care coordination process at the medical home level. This will require adequate reimbursement to cover the cost of starting up new care coordination programs in the medical home and start up technologies to improve screening, intervention and care coordination with follow through in the medical home.

- The CPACK program developed by CBHC is a very good program, particularly the following:
  a. Assistance with finding a behavioral health provider for patients
  b. Telephone consultation by a child psychiatrist to primary care providers
  We recommend that BHOs be required to provide the 2 components above as part of their new contracts. The program also needs to be expanded to cover the entire state.

- Payment options for integrated behavioral health (not just co-location) need to be clear and understandable to providers and practices. In order for the integrated model to be sustainable, there need to be ways to access understandable billing rules/policies.

Care Coordinotian

Question 12) Whot needs for children/fomilies should be coordinated in medicol homes and are there services thot should not be o part of core coordination by the pediatric and family medicol home

One of the most difficult services to provide in the medical home is home visits. Support from the larger system is needed.

Services that can be provided in a pediatric or family medical home are: complex medical coordination including logistics/travel, ancillary services (PT/OT/home health services, ...), collaboration with mental/behavioral health, collaboration regarding school needs, referrals to early intervention services and Child Find, referral to other agencies (rehab, hospice, ...), collaboration with foster care and DHS system. RCCOs need to help medical homes with needs like assistance with housing, food, parental employment, child care, in which case the RCCO can help families connect with other agencies that provide these services.

Question 19: How should care coordination program be evaluated? How should its outcomes be measured?

A care coordination program should initially be measured by having good processes, not measured by outcomes, until solid data exists on outcomes that are risk adjusted and accurate for children. Initially all measures need to be quite separated from outcomes that are highly tied to patient behavior, or practices will again be less likely to serve those with highest risk.

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Our medical home relates to multiple RCCOs and we want to be delegated to do care coordination. If all RCCOs allowed medical homes to be delegated to do care coordination, we could receive a pmpm from all of them, which would enable us to afford to hire enough care coordinators to meet the needs of all of our ACC patients.

Where shauld care coordinotion be done? Care coordination is best done in the medical home. We are willing to do care coordination, because we have a relationship with our patients and they trust us and we recognize that coordinating complex medical care is essential for good care and for cost savings. Also, the primary care provider is best positioned to have a long term relationship with the patient, and therefore know and understand other aspects of the patient's life and how important those non-medical factors are on the patient's health and health issues.

If care coordination cannot be done in the medical home, then it is best done by community-based organizations. The least effective, least well-received, least trusted is care coordination done from a call center in an RCCO. The role of the RCCO should be to help the medical home-based care coordination staff access resources for families.

The majority of practices are willing to provide Care Coordination, if they can get financial support (PMPM) for providing the service.

Should you be doing care coordination for certain patient populations e.g. children with asthma or special needs children? Or for your entire Medicaid population healthy or chronically ill? The overall goal of Colorado Medicaid should be to provide care coordination services for ALL patients in the Medicaid population (for some patients it may be very minimal, others extensive). This is the essence of preventive care. A care

coordinator that is based in the medical home is in the best position to help identify risk factors proactively, as early as possible before they impact a patient's health and cause illness. Children with special healthcare needs (complex, complicated) require a higher level of care coordination, so the pmpm attached to their care coordination needs to be risk adjusted.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

- All RCCOs should have their offices in the region served, should be non-profits, be a Medicaid provider and be incorporated only in Colorado.

- All RCCOs should offer to delegate care coordination to medical homes willing to accept that responsibility and the RCCO should share a portion of the RCCO pmpm with the medical home that accepts delegation.

- All RCCOs should use the same criteria for delegation and for the amount that is paid for delegated services of care coordination. By doing this, services can reach a standard across the state. A patient would have access to similar services no matter where they moved across Colorado.

- RCCOs should all agree on how they will effectively communicate to medical homes regarding any contact the RCCO has with patients attributed to the medical home. They should include PCMPs in developing those criteria.

- All RCCOs should help (or contract with an organization to help) medical homes understand how to access their SDAC data, understand their data and use it to develop rapid cycle QI projects to improve health outcomes and meet KPIs.

- All RCCOs should agree to provide uniform support for medical homes when a medical home asks for help with care coordination, even when the medical home is in another region (and contracted with another RCCO) but the patient is in the first RCCO's region.

- RCCOs should be required to allow medical homes to give the RCCO a list of patients the medical home feels is their patients and receive help from the RCCO to understand why certain patients have been attributed to another medical home. If the patient is determined to be more appropriately attributed to the inquiring medical home, then the RCCO should help re-attribute the patient to the correct medical home.

- RCCOs should share on a regular basis the RCCO's performance on KPIs and share savings incentives and share with the medical home how their own performance compares with other medical homes.

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

This is particularly applicable to the Denver metro area. There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients. For many expectations/requirements and ways of doing things the RCCOs are so different from one another that it requires significant extra work for medical homes to adapt to the differences. In addition, if a patient lives in one region and goes to a medical home in another region, and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from that first region.

27) Should the RCCO region maps change? Why or why not? If so, how?

Yes. There are two changes we recommend:

- Larimer County should be included in Region 2, since the medical community and the support organizations of Larimer County and very closely linked to Weld County
- In the Metro Denver area, the boundary issues are so difficult that we recommend one RCCO be responsible for the whole metro area or that medical homes be allowed to choose one RCCO for all of their patients.

28) Should the BHO region maps change? Why or why not? If so, how?

If Colorado is serious about promoting integration of behavioral and physical (medical) health care, then the RCCOs and BHOs should be integrated. This would mean they should have the same regions and function as though they are one organization. They should share incentives that are aligned around successful integration of behavioral and medical services and outcomes. So the BHO maps/regions should conform to the RCCO regions/maps.

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients. There are certain expectations/requirements and ways of doing things that are so different from one RCCO to another that it requires significant extra work to adapt to the differences. If a patient lives in one region and goes to a medical home in another region and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from that first region. This is particularly true in the Denver metro area.

Another alternative: When a practice contracts with a RCCO currently they "belong" to one RCCO. Change that and have them only contract with the state and have that contract extend to all RCCOS. This way RCCOS would be more accountable to standardization through out all of Colorado, and the services provided to patients/families would be more uniform.

34) What role should RCCOs play in attributing clients to their respective PCMPs?

The attribution system is quite flawed still. RCCOs should be required to allow medical homes to give the RCCO a list of patients the medical home feels are their patients and receive help from the RCCO to understand why certain patients are attributed to another medical home. If the patient is determined to be more appropriately attributed to the inquiring medical home, then the RCCO should help re-attribute the patient to the correct medical home.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

- The payment structure absolutely does not support the ACC goals. A medical home does not receive incentives for KPIs unless the RCCO meets its KPI. This becomes a disincentive, because many medical homes meet their performance targets, but do not get rewarded because the RCCO did not meet its targets. So the medical home has no incentive to maintain the performance. The philosophy that HCPF has espoused (that the high performing medical home should encourage or help the low performing medical home) is not realistic and is not how the real world works. There is no time for that, plus the high performing medical home has no way of knowing who is low performing. This idea shows a lack of understanding of the world where health cares is delivered. Medical homes need to receive full incentives when they meet their KPI targets, no matter what happens in the RCCO.

- The incentives are too low to change much. Also, the KPIs need to remain focused on process, not outcomes, until the data is more sophisticated to accurately attribute patients and account for risk factors.

- Many medical homes have the ability to collect REAL-TIME data from their EHR and their claims database, which can be used to measure performance more accurately than the SDAC. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and providers to develop a vetting process that will enable HCPF and RCCOs to trust the medical home self-reported real-time data.

- Since children are the majority and give the best chance of truly improving health and wellness, KPIs need to be more child-focused. And since the potential cost savings for children's health care are so far in the future, KPIs need to be intermediate, process outcomes.

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

<u>There is very little of the infrastructure in the state in place at the present time to enable capitation to be implemented successfully.</u> Here are just some of the changes that would need to be in place before it would be fair or prudent to implement capitation:

- The state would need to already be paying fair amounts for all aspects of the care needed by Medicaid recipients before it could effectively move to capitation. In other words, codes for things that HCPF wants done under capitation should be opened and reimbursement adequately now. This would encourage medical homes to already be doing these things before the change to capitation. It would also give HCPF and medical homes experience regarding what the actual costs are for providing the desired services and determine a fair capitation. It will be difficult to change behavior to include new activities under capitation among providers, if you continue to hold codes closed now for things you want done under capitation. You have to help the medical homes create the habits you want before the switch to capitation.

- All providers would have to be reliably involved in the ACC: primary care, all of the various adult and child specialists, the hospitals, the therapies, dentists, mental health providers, etc.

- The data system would have to be able to report real time data and be far, far more accurate than it is now.

- The attribution system is flawed. That would have to be improved and provide accurate, real-time attribution data before capitation should be instituted.

- You will have to change a variety of policies that are barriers to population management.

- Capitation has to be combined with significant incentives to implement processes and improve outcomes. So, you will need to have the incentive system very well developed and viewed by providers as motivating before implementing capitation

- Healthcare for children focuses on prevention, early detection and early intervention, which require initial increased investment to reduce potential expenses many years and decades down the line. Other ACO programs have shown that savings on children are difficult to show early on. So, incentives in the care of children will initially be for intermediate outcomes (or for process outcomes) and need to be direct incentives rather than incentives in the form of shared savings.

- Early in the transition from pre-ACC payment methods to ACC payment structure (2012), some medical homes were asked to return money to Medicaid. Transitions like that (for example the transition to capitation) have to avoid this. Primary care medical homes have such narrow margins that this can be very difficult financially on a medical home

- Many medical homes have the ability to collect from their EHR and their claims database REAL-TIME data with which performance can be measured. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and providers to develop a vetting process that will enable HCPF and RCCOs to trust that medical home self-reported real-time data is trustworthy.

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

Many medical homes have the capability and infrastructure to adapt to payment tied to value. What is missing is the state, HCPF, RCCO, BHO infrastructure. See all of the infrastructure elements HCPF needs to have in place listed in question 60

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

- The HCPF Payment Reform Committee should meet at a time when providers and practice managers can actually attend. Monday afternoons is probably the worst time to actually enable providers or practice managers to attend. Once you select an appropriate time, then actively recruit participation.

- Make sure that your efforts are statewide. Views are different in the various regions of the state.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

- Many medical homes have the ability to collect from their EHR and their claims database REAL-TIME data with which performance can be measured. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and provider from medical homes to develop a vetting process that will enable HCPF and RCCOs to trust medical home self-reported real-time data.

- The measures for children can be drawn from HEDIS measures or CHIPRA measures or from the Pediatric Measurement Proposal that HCPF did in 2010 with the help of Jim Todd.
  Appropriate child health measures could be selected from the following measures :
  - Well child visits appropriate for age
  - Developmental screening by three years of age
  - Teen depression screening
  - Complete immunization status by age two
  - Post-partum depression screening rate for mothers of newborns by age 4 months
  - Appropriate antibiotic use in URI and strep pharyngitis

- Medical homes could also be measured on:
  - Patient (or family) satisfaction ratings
  - Documentation of QI projects

Screening should be part of KPIs, but you need to do more than just create a KPI. If you are going to have KPIs, then you need to track not only the number of times a screening was done, but also track the v-codes (or some way to track positives) and make them available in the SDAC so medical homes can track them. And the SDAC needs to track referrals (or intervention). Otherwise it is not worth measuring the number of screenings.

- The PCMP or medical home should receive real-time data (less than a month since date of service) with data that will allow them to compare their performance with performance of similar type of medical home.

- Healthcare for children focuses on prevention, early detection and early intervention, which require initial increased investment to reduce potential expenses many years and decades down the line. Other ACO programs have shown that savings on children are difficult to show early on. So, incentives in the care of children will initially be for intermediate outcomes (or for process outcomes) and need to be direct incentives rather than incentives in the form of shared savings.

69) Measures for payment. Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☒
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

We only need 2-4 KPIs. Any more will dilute the effect. What we really want is good data, so we can improve our outcomes by doing a quality improvement project. Since children are the majority of Medicaid recipients and give you the best chance of truly improving health and wellness in the long term, KPIs need to be more child-focused. And since the savings are so far in the future, KPIs need to be intermediate, process outcomes.

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Arnold Salazar
Location: Alamosa, CO

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Colorado Health Partnerships
Location: Western/Southern CO
☒ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☒ Medical provider / PCMP / other provider
  i. Type or specialty: Behavioral Health
  ii. Area of practice: Behavioral Health
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☐ Other (please describe): Click here to enter text.

Are you currently involved in the ACC program?

☒ Yes
☐ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☐ 3-4 years
☒ Since before the program was implemented.

How have you been involved in the ACC program and what interaction have you had with RCCOs:
Mind Springs works very closely with Region 1 and has been instrumental in developing the concepts used for 1281.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:
Behavioral Health provider covering 10 counties: Eagle, Garfield, Grand, Jackson, Mesa, Moffat, Pitkin, Rio Blanco, Routt, and Summit

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☒ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

Please feel welcome to describe why or why not using the space below.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

- Program is close to the community and allows local solutions to be developed. Having multiple RCCOs sharing these solutions with each other will have greatest impact.
- Focuses on local solutions – must be customized to meet local needs.

2) What is not working well in the ACC Program?

- Payment reforms are moving too slow to have significant impact on cost and quality of care. We are still largely tied to a fee for service system that is volume driven and not focused on quality outcomes. The question of how to transition provides away from Fee for Service and on to payment for quality has eluded almost everyone. While KPIs have been tried and have had some impact, they can have only limited impact on cost. A risk model that focuses on cost as well as quality and access will prove to be a much more effective reform tool. Additionally, much more attention is needed in the area of special populations such as those with DD or SPMI.

3) What is working best in the Behavioral Health Organization (BHO) system right now?

- The BHOs have been able to control costs over a long period of time while providing access to more members. BHOs have figured out how to manage provider risk which must be a key component of any payment reform initiative. Additionally, through the CMHC contractors, there now is a robust continuum of care for Medicaid individuals.

4) What is not working well in the BHO system?

- The payment structure over time has moved too much toward encounter reporting which has its roots in Fee for Service. HCPF has not been able to move to outcome based reimbursement which is strongly suggested to be the end goal.

5) What is working well with RCCO and BHO collaboration right now?

Locally in Region 1 there is awesome BHO/RCO/CMHC/PCP collaboration. It is believed to be the only area that has this level of partnership and innovation. This must be supported and even rewarded.

6) What is not working well with RCCO and BHO collaboration right now?

Progress toward payment reform is much too slow. SDAC data is still not being shared with the BHOs at a level that could help coordinate care in a much more effective manner.

7) What should be the next steps in behavioral health integration in Colorado?[1]

- The RCCO RPF should encourage integration. Bidders should be rewarded with higher scores for closer integration of programs, data and finances.

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	Barrier? No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☐	☒	
Community Behavioral Health Services Rule	☒	☐	Paperwork still needs to be streamlined.
Covered diagnoses list	☒	☐	It would be much easier to integrate if we did not have a limited diagnosis list; however I understand the cost implications of opening this up to all diagnosis and codes. Need to open up the integrated care codes for the next RFP to be successful.
Different behavioral / physical health reimbursement	☒	☐	Payment reform needs to move faster
Institutions for Mental Diseases exclusion	☒	☐	Although this is an issue, the 1915 (b)(3) waiver offers some flexibility through the Medicaid Managed Care program.
OBH rules, reporting, or financing (regulatory differences between agencies)	☒	☐	While this has improved, much more work needs to be done to streamline if integration is to occur. 42 CFR is a major issue as well
PCMP financing structure	☐	☐	I don't understand this well enough to comment.
Per-member per-month amount	☐	☒	However, the focus needs to be on outcomes, not encounters and FFS
Physical space constraints	☐	☒	
Privacy Laws (HIPAA, 42 CFR)	☒	☐	42 CFR is a real problem with care coordination, HIPAA however is not an issue.
Professional / cultural divisions	☒	☐	This is one of the many challenges we have found. The BHO and MHCs have some very rich experience in this area.
RCCO or BHO contracts	☐	☒	
Staff capacity	☒	☐	Staff capacity is an issue for all of health care in Colorado. BHOs and MHCs face those same challenges.

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

State/Federal rules or reporting requirements	☒	☐	The reporting requirements need to be aligned.
Technical resources / data sharing	☒	☐	SDAC data needs to be shared with the BHOs
Training	☐	☒	
Others	Please type your response here.		

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

- We think that the six levels of integration best reflect what we need in the field.

  http://www.integration.samhsa.gov/integrated-care-models/A_Standard_Framework_for_Levels_of_Integrated_Healthcare.pdf

10) Please share any other general advice or suggestions you may have about behavioral health integration.

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination?

- The deliberate organization of patient care activities between two or more participants involved in a patient's care to facilitate the appropriate delivery of health care services

b. How should RCCOs prioritize who receives care coordination first?

- I don't think that care coordination can be prioritized. To do so may ignore minor problems that can escalate. Sometimes our most effective care coordination prevents the escalation of health problems. I would caution against prioritizing.

c. How should RCCOs identify clients and families who need care coordination?

- Care coordination should occur at the primary care (bi-directional) level for anyone accessing more than one health care system.

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

The model used on the western slope is an example of great partnership between PCP and CMHC in delivering care coordination activities jointly. CMHC staff are a part of the PCP medical team. This utilizes the strength of each organization and the end result is better.

12) What services should be coordinated and are there services that should not be a part of care coordination?

- All services should be coordinated including services outside the medical visit that impact the health care of the Medicaid member; including Social Services and Public Health .

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

- Care coordinators need to know how patients access primary care including bi-directional service locations,(locations where behavioral health clients receive their primary care.) All care for specialty should be accessed through the primary care provider and should be coordinated by the RCCO. Care coordination is both an individual issue and also an organizational issue. There must be incentives for both levels of coordination. The 1281 project being done on the western slope is an example of this

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today?

- Care coordination is happening at all levels which is part of the problem. The RCCO bid should seek to consolidate this process and reward bidders for identifying and then developing systems that address the issue of multiple care coordination systems. Additionally need to support organizational alignment for care coordination

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

- BHOs are required to coordinate care for Behavioral Health patients. This sometimes can be in conflict the care coordination required by the RCCOs. Colorado Health Partnerships through its Mental Health Center providers has worked to make this an effective process. I believe this could be used as a model for how other system of care coordination is brought under the RCCO process. We have a care coordinator community meeting that is helpful on the western slope

c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

- By assuring this question is addressed, but allowing local solutions

d. What are the gaps in care coordination across the continuum of care?

I think the biggest gap is too many involved and not enough coordination of the coordinators. Again, local solutions can address this. It is also important to use strengths and core competencies. RCCO do not have the "boots on the ground" care coordinator staff, while the CMHCs do.

15) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

- The RCCOs should focus on non-medical systems only when these systems impact the health care of a Medicaid member. To take on the coordination of other systems would distract from the focus on healthcare that this RFI/RFP seeks to address.

Non-medical need:	Should the RCCO have a role?	Should the RCCOs coordinate with community supports and services?	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?

	Yes	No	Yes	
Abuse, neglect, and trauma	☐	☒	☒	Coordination occurs at the provider, not the RCCO. The RCCO needs to design supports and incentives for this to occur.
Affordability (assistance with prescriptions or co-pays)	☒	☐	☐	same

Transportation	☒	☐	☐	
Other	Please type your response here. Feel free to list as many non-medical factors as you want, and please explain how the RCCO should be involved.			

16) **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	Coordinate care? Yes	No	In what capacity should these individuals coordinate care in the ACC Program?

Advanced Practice (Registered) Nurses	☐	☒	
Certified Addiction Councilors	☐	☒	
Certified Nurse Midwives	☐	☒	
Community Health Workers	☒	☐	Primary responsibly deepening on organizational structure.
Generalists (BA/BS/MA/MS)	☒	☐	Primary responsibly deepening on organizational structure.
Health Coaches	☒	☐	Primary responsibly deepening on organizational structure.

Wraparound facilitators	☒	☐	Primary responsibly deepening on organizational structure.
Other	Please type your response here.		

17) **Care coordination requirements for specific populations.** Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe

Newborns and infants	☐	☒	
Children	☐	☒	
Children who are healthy, but in socially-complex environments	☐	☒	I'm not sure how socially complex is defined.
Children involved in the foster care system	☒	☐	
Children with a chronic illness	☒	☐	
Children with a serious emotional disturbance	☒	☐	Care should be coordinated by the BHO and CMHC
Children with medical complexity	☐	☒	
Children or youth with a behavioral health diagnosis or substance use disorder	☒	☐	Care should be coordinated by the BHO and CMHC
Transition-age adolescents	☐	☒	
Parents and families	☐	☒	
Pregnant women	☐	☒	
Adults	☐	☒	
Adults who are healthy, but in socially-complex situations	☐	☒	
Adults with a chronic illness	☒	☐	
Adults with a behavioral health diagnosis or substance use disorder	☒	☐	Care should be coordinated by the BHO and CMHC
Clients involved in the criminal justice system	☐	☒	
Clients with a disability	☐	☒	
Clients in a nursing facility	☐	☒	
Elderly clients	☐	☒	
Frail elderly clients	☐	☒	
Clients in palliative care	☐	☒	
Other populations, please comment: DD			

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

- The RCCO should only be involved if there are medical issues.

19) How should care coordination be evaluated? How should its outcomes be measured?

- Care coordination measures should monitor the reduction of duplicated care and the resulting reduction in medical expenses and the impact of this on health status.

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

a. What is the PMPM cost for providing care coordination services?

- This is very difficult to answer without actuarial analysis. The RCCOs may have a better handle on this. What is not advisable are rate cuts after the program has been implemented. This has occurred in the RCCO program as well as the BHO program. These changes can be very disruptive to the successful implantation of effective program strategies.

b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

- Same as above.

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

- It should vary by population but needs to be set by an actuarial analysis.

a. **Care coordinator to client ratios.** If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☒
51-100	☐
101-200	☐
201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

- Cost of care – reduction in wasted care because of un-coordinated care. And the impact of this on health outcomes.

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

- I would agree with the list provided above with the exception of provider contracts includes payment mythologies. Provider contracting creates a competitive edge that saves money for the state and should be left to the RCCO to manage.

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

- There is a danger in being too prescriptive in the RFP by requiring RCCOs to have certain community relationships. It would be better to have RCCO bidders describe the relationships they have and how they will enhance those relationships. Points should be awarded in the RFP for community relationships.

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

- I don't think this will work in rural and frontier areas of the state. These areas don't have the population needed to make this work.

27) Should the RCCO region maps change? Why or why not? If so, how?

- The state should go to fewer RCCOs and should consider combining RCCO regions 4 and 7. Most care in this part of the state is accessed through two major hubs, Pueblo and Colorado Springs. Having these regions in one RCCO will make care coordination much more effective.

28) Should the BHO region maps change? Why or why not? If so, how?

- If the BHO maps were changed a new BHO RFP would have to be issued. I don't think the BHO maps can be change unless the state is ready to combine both (RCCO and BHO) programs. To change the BHO maps without combing the programs would be very disruptive to the BHO patients.

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

- At least 6 months minimum would be needed.

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

- Moving to risk contracts would make the ACC more effective and produce saving more quickly. Allowing RCCOs to manage a PMPM for care I believe will show significant saving quickly. If quality

measures are added to the development of the PMPM, I believe that care and access can also be positively impacted.

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

- The addition of 9900 and 9600 codes that allow integrated sights to provide services that are needed would be a major improvement.

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

- I don't think this can work in rural /frontier Colorado, the population could not support two RCCOs. See question 26 above

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

- N/A

34) What role should RCCOs play in attributing clients to their respective PCMPs?

- Don't have the information to answer this question.

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

- Both should eb concerned with prevention and population health

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

- none

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

- Medicaid is already a big enough task for the RCCOs; we should not put more on them.

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

- DOI - only if there is a need for a license because of a risk contract.

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

- There is a tendency to over burden programs with stakeholder processes and engagement that rarely produces any meaningful outcomes. Most of the time outreach meetings are poorly attended with input coming from many of the same stakeholders who often provide input directly.

  I would suggest that the RFP allow bidder to propose a meaningful stakeholder process that works for their area.

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

- See answer to Question 39.

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

- This can be accomplished through the RFP awarding points for community involvement.

42) How should the Department structure stakeholder engagement for the ACC as a whole?

- See question 39 above.

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

- No
  a. If no, what are the gaps?

- Access to specialty care in rural/frontier parts of Colorado is a problem.

  b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

- I don't think the gaps are population specific.

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

a. What role should hospitals play in the next iteration of the ACC Program?

   Hospitals are a key part to achieve true cost reform and must be a part of change

b. What role should pharmacies play in the next iteration of the ACC Program?

- I don't see a role for pharmacies.

c. What role should specialists play in the next iteration of the ACC Program?

- Specialty care needs to be more accessible in rural/frontier counties. The ACC program should provide incentives to specialists to provide care in these areas. The expansion of tele medicine should be strongly encouraged.

d. What role should home health play in the next iteration of the ACC Program?

- Home health should be a central part of care planning. Hospitals should be required to work closely with home health agencies.

e. What role should hospice care play in the next iteration of the ACC Program?

- Hospice care should be readily available to all patients in the ACC program.

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

- Perhaps none initially, but then are added in and managed by the RCCO

g. What role should counties play in the next iteration of the ACC Program?

- This question is too broad.

h. What role should local public health agencies play in the next iteration of the ACC Program?

- Public health agencies need to be an integral part of the referral resource for the ACC program.

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

- HCPF should be cautious of over reaching and involving too many player in the ACC process thus making it burdensome to carry out the main mission of the program, deliver better, more coordinated care to a larger number of Medicaid members.

45) How can RCCOs help to support clients and families in making and keeping appointments?

- This will always be challenging but extensive outreach is the only approach that has worked for the BHOs

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

- No, this should be an option proposed by the respondents to the RFP. HCPF should be careful not to be too prescriptive in how the RCCO program should operate. Leaving room for communities to offer solutions should be a key theme of the RPF.

47) **Community Health Worker reimbursement.** Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement should be at the discretion of the RCCO and should not be prescribed by HCPF in the RFP.

Reimbursement process	(Please check all that apply)
Independently bill	☐
On staff (salary) at Primary Care Medical Provider Clinic	☐
On staff (salary) at RCCO	☐
Per Member Per Month Payment	☐

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

- The RCCOs should have a role in coordinating oral health. Oral health need to be a part of overall health care and needs also be integrated.

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you?

- Good customer service that understands local customs and traditions.

b. What RCCO requirements would ensure cultural competency?

- The fallacy in this question is that requirements can drive cultural competency. I've yet to see this work in any real world setting. Asking bidders to describe the uniqueness of their community and how they see themselves addressing their need will give HCPF an insight into the bidder's ability to ensure culturally competent services. These values need to be ingrained in the organization's culture; no amount to requirements will drive these values if they aren't already there. HCPF should select bidders who can demonstrate this competency.

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?

- The skills must be driven by the values of the organization.

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

- See 49 b. above

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

- This should be at the discretion of the RCCO to address region specific issues and should not be prescribed by HCPF.

51) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

- The RCCO bid should reward the respondents for proposing programs and services that divert patients from emergency rooms for routine care. The bid should redirecting these recourse to the RCCOs to develop additional programs and services that keep patients from accessing expensive emergency room care.

52) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

Practice Support

53) **Support for practices.** Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

- **The state should avoid designing a one size fits all program for the ACC. While many of these tools, programs and services are useful and can work, it should be up to the bidders to make a case to HCPF on how these fit the specific community they work in and what benefit they believe can be derived from their use.**

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?

Others				

54) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

- N/A

55) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

- Rather than have requirements, have the bidders propose methods that would address this question.

56) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

- Rate enhancements for participation in the RCCO program as defined by the RCCO in the bid response.

57) Should the Department require that PCMPs utilize disease registries to manage the health of their population?

- No

58) Please share any other advice or suggestions about provider support in the ACC.

- This section is very heavy on requirements. If these requirements are implemented as RFP requirements it leaves little or no room for creativity. It also shifts the success or failure from the bidder to the State. Winning bidder need only to focus on meeting the requirements to be successful rather than focus on solutions that meet the overall goal of population health.

  It would be better if the State allows bidder to offer solutions to improve population health and then monitor progress.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

- The RCCOs need to move to risk contracts that provide a PMPM that can be managed against goals for improved population health at a lower cost.

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

- We are not primary care providers but our BHO has operated for 18 years by having providers take risk. Each of our Mental Health Centers operates on a Global Budget. We think this system of financing providers can work for primary as well.

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

- No they are not. The biggest barrier is the fee for service system of reimbursement. The medical system in place currently is set up to generate volume not value, a fact that is known to anyone who has worked to reform the health care system. The biggest barrier is that there are no incentives for providers to move to a system that is based on value. In fact providers are penalized if they focus on value. The infrastructure will not be developed until the incentives for producing value are aligned with the payment structure. This transformation can best be achieved by introducing risk contract to the RCCOs that reward value rather than volume. I hope this can be done in the next RCCO bid.

62) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

- Our organization is licensed by the DOI and we are ready and able to acquire any needed license and the required reserves. A license would not preclude us from bidding.

63) What role – if any – should the RCCOs play in the distribution of payments to providers?

- RCCOs should be completely responsible for reimbursing providers they are required to manage.

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

- Capitation payments (PMPM) with rate setting factors that reward quality

66) **Measuring Client experience.** Please complete the table below to indicate how the Department should measure Client/patient experience:

- The State should have broad measures of success for all RCCOs and should allow RCCOs to suggest additional measure that address local needs.

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☒	☐	All of these should be options for measuring quality.
SF-12 Health Survey	☒	☐	
Other types of client interviews / surveys	☒	☐	
Patient Activation Measure	☒	☐	
Focus groups	☒	☐	
Other	Please type your response here.		

67) Knowing that, at this time, the Department only has claims data, how should population health be measured?

- This needs to be the responsibility of the RCCOs but must be funded by the State.

68) How should quality and performance data be reported to the RCCOs, PCMPs, and the public?

- Open and transparent though a website.

69) **Measures for payment.** Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7 at most	☒
8-10	☐
11-20	☐

21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

70) What percent of RCCO payments should be tied to measures or performance?

Percentage	
10-20%	☐
21-30%	☐
31-40%	☐
41-50%	☒
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

71) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?

- It should be a combination. Overall KPIs should address population health but allow for local indictors to address community needs.

72) Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?

- Based on improvements

73) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

- The Department should not be constrained by the claims dilemma. RCCOs can develop the systems to monitor progress. These systems can be audited for accuracy to assure the State of their validity. To wait until the State can develop a system would waste valuable time.

74) **Incentive payment frequency.** Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	☒
Annually	☐
Other	☐

If you checked the "Other" box, please describe payment frequency below:

N/A

75) For potential Offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

- I don't know the fixed costs of operating a RCCO but I do know the fixed costs of operating a BHO which might have some similarities. The BHOs are required to have access standards for routine, emergent and emergency care along with access to providers within acceptable driving distances. In order to meet these standards we have to over staff. This is one example but there are many such requirements in our current contract that drive cost. RCCO RFP requirements will drive fixed costs. That state should evaluate very carefully the whether these requirements will generate value to the health care system.

76) For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

- The BHOs are evaluated on 28 measures but reimbursement is not tied to any of them. We believe that these quality measures should be incorporated into the rate setting process for the BHOs. A similar process could be used to set RCCO rates if the state chooses, and we suggest they do, move to risk contracts.

Health Information Technology (HIT)

77) **Types of communication.** For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	No, I wouldn't use	Yes, I would use

78) **HIT investments by organizations.** For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below:

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	☐	☒
Digital care management tool	☐	☒
Care transitions alerts	☐	☒
Electronic Health Records (EHRs)	☐	☒
Health risk assessment software	☐	☒
Practice assessment tools	☐	☒
Practice management tools (scheduling, billing)	☐	☒
Client web portal for communicating care plan, services, benefit enrollment	☐	☒
Patient education/wellness tools	☐	☒
Provider/case manager directory	☐	☒
Shared decision-making tools	☐	☐
Telemedicine software	☐	☒
Other:	☐	☐
Other:	☐	☐

79) **Importance of technology by type.** The Department is working to determine what technology is in place, what technology is needed, and what technology should be standardized. For RCCOs, providers, and other organizations, use the table below to answer what HIT infrastructure outside of the SDAC your organization would use to perform population health management activities. Tools are scored from 1-5, where 1 are those items least-likely to be used, and 5 are items most-likely to be used:

Tool	1 Least	2	3	4	5 Most
Population analytics / reporting / dashboard	☐	☐	☐	☒	☐
Care management tool	☐	☐	☐	☐	☒
Care transitions alerts	☐	☐	☐	☐	☒
Electronic Health Records (EHRs)	☐	☐	☐	☒	☐
Practice assessment tools	☐	☒	☐	☐	☐
Health risk assessment software	☐	☐	☒	☐	☐
Practice management tools (scheduling, billing)	☐	☒	☐	☐	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☒	☐	☐	☐

Telemedicine	☐	☐	☐	☐	☒
Other:	☐	☐	☐	☐	☐

80) What are the primary barriers to RCCOs and providers increasing their use Health Information Technology to improve the performance of Primary Care Practices?

- Staff feeling comfortable with the technology and rules for reimbursement is the primary barrier.

81) How can Health Information Technology support Behavioral Health Integration?

- Information technology will benefit all of health care with behavioral health being equally impacted. The ability to reach out to rural/frontier areas will be of special interest to the rural BHOs and RCCOs. CHP has invested heavily in tele-medicine for this reason.

  One challenge we are facing is the integration of medical information. There currently does not exist an electronic medical record (EMR) that can handle both primary care and behavioral health. This is a very big barrier to true integration. We are meeting this challenge through creative bridging of two EMRs but this is not an ideal solution. The expense of having to buy two systems may deter many providers from embracing the true impact that interstation can achieve. We are happy to share our experience.

82) In the next iteration of the ACC, should there be a shared resource for data and analytics? Please describe the basic criteria for what a shared data and analytics platform needs to contain in order for it to be useful.

- Yes there should be a shared system for data and analytics. However, the state has been challenged to implement even a basic system of data sharing. I believe better results would be achieved if this task was given to the RCCOs and BHOs. The RPF should require that the contracting entities transmit analytics to the state rather than have the state develop a state wide system for data and analytics.

  The RFP could require that RCCOs track cost of care; health outcomes and other health outcome measure and be able to transmit these data in a common platform.

83) Should there be a shared care management tool? Please describe the basic criteria for what a care management tool would need to contain in order for it to be useful.

- And effective care management tool must monitor access to care on a real time basis. Care managers need to know when appointments are made, prescriptions are filled and emergency rooms are accessed. Currently most care management is addressed after the fact and can only prevent future problems rather than intervene as duplicate and inappropriate care is being planned.

84) Should there be a shared population health management tool? Please describe the basic criteria for what a population health management tool would need to contain in order for it to be useful.

- This task should be the responsibility of the RCCO. The tool could look at the overall use of care by a population and identify duplicate and inappropriate care so that these trends can be addressed with the providers in the network. This arrangement works best under a risk model where providers are incentivized to be efficient.

85) Please describe the functionality that a common Medicaid provider directory would need to contain in order for it to be useful.

- The Connect for Health Colorado provider resource guide is a good model for such a directory. Members and care managers should be able to search for providers based on the needs of the patient.

86) How can the RCCOs support providers' access to actionable and timely clinical data?

- The solution is clearly an effective CORHIO and QHN. Anything short of this would not be as effective.

87) What are the HIT solutions that would benefit clients, providers, and RCCOs? Please comment on the parameters these tools or platforms would need to possess and the ways in which they could be used.

- A combined primary care – behavioral health EMR, the effective implementation of CORHIO/QHN with access for primary care providers and a real time system that tracks access to care.

88) What technical assistance or resources related to HIT infrastructure should the RCCOs supply? This assistance or these resources could be for providers, social service organization, clients/families, or for others.

- The RCCOs in rural/frontier areas should be the primary source of HIT infrastructure. Most provider groups with the exception of hospitals and FQHCs cannot afford nor can they support the HIT systems needed. The RFP should accommodate this condition.

89) What role should health information exchange platforms like CORHIO or QHN play in the next iteration of the ACC?

- See question 86 above.

90) Please share any information, advice, and suggestions you have about health information technology in the ACC Program.

RE: RFI Response

Dear Mr. Dunlevy-Wilson,

GSI Health, LLC is pleased to submit our comments and response to portions of the Request for Information RFI UHAA 201S000017 Accountable Care Collaborative Request for Information.

Our solution has been in commercial use since 2011 with over 940 affiliated provider organizations and a Fortune 50 Managed Care Organization currently leveraging GSI Health's solution nationally to coordinate care. We have drawn upon our experience and those of our customers in assembling our comments included in this document.

Thank you for your time and consideration in reviewing our response. Please contact me directly with any questions you may have about GSI Health or our response.

Sincerely,

Lori Evans Bernstein
President

GSI Health Introduction

GSI Health was founded in 2003 and originally provided consulting and software solutions for clients focusing on cutting-edge health IT initiatives. Since 2010 GSI Health has been developing GSIHealthCoordinator, our SaaS based care coordination and population health management solution for Medicaid and special need populations such as the Dual Eligibles. GSIHealthCoordinator has been specifically designed to support Medicaid integrated health care delivery programs.

Our solution has been in commercial use since 2011 with over 940 affiliated provider organizations and a Fortune 50 Managed Care Organization are currently leveraging GSI Health's solution nationally to coordinate care. Patient volume within the solution has increased 12-fold in the last year.

Within one of our Medicaid Health Home customers, program enrollees of at least one year have seen a consistent decline in inpatient admissions, from 10.1 admissions per 100 patients in August 2013 to 4.1 in January 2014 – a reduction of more than 50%.

GSI Health's executive team possess deep domain expertise and are nationally recognized leaders in care management, care coordination, and health information exchange. Over the last 20 years, the executive team has served various roles in shaping the emerging healthcare standards including, but not limited to:

- Senior Advisors to the former ONC for Health IT Chair, Dr. Brailer
- Chair of the National Health Information Technology Standards Panel
- Deputy Commissioner of the New York State Department of Health IT
- Chair of the National Consolidated Informatics Initiative

This experience combined with an innovative solution platform has enabled GSI Health to enable various healthcare initiatives nationwide (i.e., Medicaid Health Homes, Medicaid ACOs, Duals Programs, etc.) to proactively manage and coordinate the care of 150,000+ patients reducing emergency room utilization while preventing avoidable hospital admissions and readmissions.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Lori Evans Bernstein
Location: New York, New York

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Not Applicable
Location: Not Applicable
☐ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☐ Medical provider / PCMP / other provider
  i. Type or specialty: Click here to enter text.
  ii. Area of practice: Click here to enter text.
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☒ Other (please describe): Software Vendor

Are you currently involved in the ACC program?

☐ Yes
☐ No
☐ I don't know

If you answered "yes" above, how long?

How have you been involved in the ACC program and what interaction have you had with RCCOs:

GSI Health is not involved in the ACC program but our solution is being leveraged by 940 affiliated provider organizations and a Fortune 50 Managed Care Organization to coordinate the care of over 150,000 patients.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:

GSI Health is the prominent solution being used in the State of NY Health Home initiative and is currently working with many of the Health Homes on their upcoming DSRIP initiative. We also have presence in the States of WA, NM, MO, TX, AZ, TN and OH.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☒ N/A

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☐ 3-4 years
☐ Since before the program was implemented.

Please feel welcome to describe why or why not using the space below.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

2) What is not working well in the ACC Program?

3) What is working best in the Behavioral Health Organization (BHO) system right now?

4) What is not working well in the BHO system?

5) What is working well with RCCO and BHO collaboration right now?

6) What is not working well with RCCO and BHO collaboration right now?

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☐	☐	
Community Behavioral Health Services Rule	☐	☐	
Covered diagnoses list	☐	☐	
Different behavioral / physical health reimbursement	☐	☐	
Institutions for Mental Diseases exclusion	☐	☐	
OBH rules, reporting, or financing (regulatory differences between agencies)	☐	☐	
PCMP financing structure	☐	☐	
Per-member per-month amount	☐	☐	
Physical space constraints	☐	☐	
Privacy Laws (HIPAA, 42 CFR)	☐	☐	
Professional / cultural divisions	☐	☐	
RCCO or BHO contracts	☐	☐	
Staff capacity	☐	☐	

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

State/Federal rules or reporting requirements	☐	☐	
Technical resources / data sharing	☐	☐	
Training	☐	☐	
Others	Please type your response here.		

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

10) Please share any other general advice or suggestions you may have about behavioral health integration.

To effectively integrate behavioral health, it is important that a coordinated care plan (CCP) exist for the patient that includes the clinical, behavioral, and social areas of care. The CCP should then be available in real-time by the care team where they can access the patient issue, goals, treatment, and interventions/progress against those issues to monitor outcomes. It is our experience that a patient's care team minimally includes care management, behavioral health and primary care providers from multiple stakeholder organizations.

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination?

The efficient tracking, referral, coordination and analysis of patient care across the full continuum, including ambulatory, acute, post-acute, long term and home care facilities and programs. For example; a diverse interdisciplinary care team creates and manages a shared coordinated care plan between medical, behavioral and social service providers and track real-time patient adverse event notifications and changes in medications and diagnoses.

b. How should RCCOs prioritize who receives care coordination first?

Depending on the State and program (i.e., Medicaid Health Home, Duals, etc.), many of our customers are provided the list of patients. They have relied on population size to determine the prioritization approach. Small populations are approached as a whole while applying methodologies for population segmentation, risk stratification and predictive risk are used to prioritize care within large populations.

The parameters in which to analyze and identify priority patients varies by state and program and will depend on Colorado's goals.

c. How should RCCOs identify clients and families who need care coordination?

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

GSI Health recommends a shared coordinated care plan between medical, behavioral and social service providers jointly track conditions, manage and assign care steps and track real-time patient adverse event notifications and changes in medications and diagnoses. Typically the care is coordinated by a designated care manager / navigator.

12) What services should be coordinated and are there services that should not be a part of care coordination?

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today?

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

d. What are the gaps in care coordination across the continuum of care?

15) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	Should the RCCO have a role? Yes	No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma	☐	☐	☐	
Affordability (assistance with prescriptions or co-pays)	☐	☐	☐	
Daycare / childcare	☐	☐	☐	
Economic stability & employment	☐	☐	☐	
Education	☐	☐	☐	

Environment	☐	☐	☐	
Food access / nutrition	☐	☐	☐	
Health literacy	☐	☐	☐	
Housing	☐	☐	☐	
Language or translation services	☐	☐	☐	
Literacy	☐	☐	☐	
Transportation	☐	☐	☐	
Other	Please type your response here. Feel free to list as many non-medical factors as you want, and please explain how the RCCO should be involved. The list of services coordinated by the RCCO will be largely dependent upon the needs of the patient population. An emphasis should be placed on "whole" person care that crosses the medical, behavioral, and social aspects of care. Within one of our Medicaid Health Home customers that adopted this approach, program enrollees of at least one year have seen a consistent decline in inpatient admissions, from 10.1 admissions per 100 patients in August 2013 to 4.1 in January 2014 – a reduction of more than 50%.			

16) **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	**Coordinate care?** Yes	No	**In what capacity should these individuals coordinate care in the ACC Program?**
Advanced Practice (Registered) Nurses	☐	☐	
Certified Addiction Councilors	☐	☐	

Certified Nurse Midwives	☐	☐	
Community Health Workers	☐	☐	
Generalists (BA/BS/MA/MS)	☐	☐	
Health Coaches	☐	☐	
Licensed Clinical Social Workers	☐	☐	
Licensed Marriage and Family Therapist	☐	☐	
Licensed Mental Health Counselors	☐	☐	
Licensed Professional Counselor	☐	☐	
Masters of Public Health	☐	☐	
Medical Doctors / Doctors of Osteopathic Medicine	☐	☐	
Nurse Practitioners	☐	☐	
Patient Navigators	☐	☐	
Peer Advocates	☐	☐	
Promotoras	☐	☐	
Psychiatrists	☐	☐	
Psychologists	☐	☐	
Registered Nurses	☐	☐	
Social Workers	☐	☐	
Wraparound facilitators	☐	☐	
Other	Please type your response here. Additional roles will be dictated by the patient population. For example; several of our Health Home customers in New York include a Probation Officer on their care team for patients that have a history of incarceration.		

17) **Care coordination requirements for specific populations.** Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and infants	☐	☐	
Children	☐	☐	
Children who are healthy, but in socially-complex environments	☐	☐	
Children involved in the foster care system	☐	☐	
Children with a chronic illness	☐	☐	
Children with a serious emotional disturbance	☐	☐	
Children with medical complexity	☐	☐	
Children or youth with a behavioral health diagnosis or substance use disorder	☐	☐	
Transition-age adolescents	☐	☐	
Parents and families	☐	☐	
Pregnant women	☐	☐	
Adults	☐	☐	
Adults who are healthy, but in socially-complex situations	☐	☐	
Adults with a chronic illness	☐	☐	
Adults with a behavioral health diagnosis or substance use disorder	☐	☐	
Clients involved in the criminal justice system	☐	☐	
Clients with a disability	☐	☐	
Clients in a nursing facility	☐	☐	
Elderly clients	☐	☐	
Frail elderly clients	☐	☐	
Clients in palliative care	☐	☐	
Other populations, please comment: For those patients that have a history of repeated incarceration, you will need to decide if the care coordination extends into the correctional facility or is suspended until released.			

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

19) How should care coordination be evaluated? How should its outcomes be measured?

Measurement will be determined by the goals of your initiative (i.e., reduce readmissions, HbA1C < 7, etc.). Within one of our Medicaid Health Home customers, program enrollees of at least one year have seen a consistent decline in inpatient admissions, from 10.1 admissions per 100 patients in August 2013 to 4.1 in January 2014 – a reduction of more than 50%.

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

a. What is the PMPM cost for providing care coordination services?

Software solutions to support the care coordination services are typically based on a PMPM based fee and vary on functionality provided. Fees can range from $1.50 PMPM on down depending on extended functionality and population size.

b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

We have seen the PMPM vary by level of services/care. For example, in WV has separated the types of services provided into two tiers. Tier 1 provided services are reimbursed $51 PMPM while Tier 2 services are reimbursed $229.50 PMPM (Source: State of WV Medicaid website).

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

a. **Care coordinator to client ratios.** If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☐
51-100	☐
101-200	☐
201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐

3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

GSI Health recommends a common solution supporting a coordinated care plan that spans medical, behavioral and social service areas of care. The solution should enable providers to jointly track conditions, manage and assign care steps and track real-time patient adverse event notifications and changes in medications and diagnoses.

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

27) Should the RCCO region maps change? Why or why not? If so, how?

28) Should the BHO region maps change? Why or why not? If so, how?

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

GSI Health's customers chose to limit scope and phased in the required capabilities. For example, many of our Health Home customers started only with the coordinated care plan that enabled the program start within 60 days (Phase I). During this time they identified appropriate external data sources for both claims and clinical information and brought them online (Phase II). Also completed during this time were required state reporting, etc.

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

34) What role should RCCOs play in attributing clients to their respective PCMPs?

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

A growing trend within population health management is engaging and including the patient. One way of doing this is to require the patient or patient advocate be a member of the care team. As a first step (and a member of the care team), patients and/or patient advocates should be provided the means of securely communicating with other members of the care team via the Direct protocol.

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

42) How should the Department structure stakeholder engagement for the ACC as a whole?

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

a. If no, what are the gaps?

b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

a. What role should hospitals play in the next iteration of the ACC Program?

b. What role should pharmacies play in the next iteration of the ACC Program?

c. What role should specialists play in the next iteration of the ACC Program?

d. What role should home health play in the next iteration of the ACC Program?

e. What role should hospice care play in the next iteration of the ACC Program?

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program

g. What role should counties play in the next iteration of the ACC Program?

h. What role should local public health agencies play in the next iteration of the ACC Program?

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

45) How can RCCOs help to support clients and families in making and keeping appointments?

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

47) **Community Health Worker reimbursement**. Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement process	(Please check all that apply)
Independently bill	☐
On staff (salary) at Primary Care	☐

Medical Provider Clinic	
On staff (salary) at RCCO	☐
Per Member Per Month Payment	☐

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you?

b. What RCCO requirements would ensure cultural competency?

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

51) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

The ability to track and provide real-time patient adverse event notifications and changes in medications and diagnoses is critical here. A notification to the care manager that one of their assigned patients is in the emergency room provides the opportunity to intervene, address the care needs appropriately, and prevent a readmission.

The coordinated care plan is also critical. As experienced within one of our Medicaid Health Home customers, program enrollees of at least one year have seen a consistent decline in inpatient admissions, from 10.1 admissions per 100 patients in August 2013 to 4.1 in January 2014 – a reduction of more than 50%.

The coordination of care when applied consistently works.

52) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

Practice Support

53) **Support for practices.** Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☐	☐	☐	☐
Network provider education	☐	☐	☐	☐
Assistance with practice redesign	☐	☐	☐	☐
Assistance with efficiency-enhancing activities	☐	☐	☐	☐
Provide web-based resources and directories	☐	☐	☐	☐
Provide practice-specific data reports	☐	☐	☐	☐
Provide clinical care guidelines and best practices.	☐	☐	☐	☐
Provide clinical screening tools	☐	☐	☐	☐
Provide health and functioning questionnaires	☐	☐	☐	☐
Provide chronic care templates	☐	☐	☐	☐
Provide registries	☐	☐	☐	☐
Offer client reminders	☐	☐	☐	☐
Offer client self-management tools	☐	☐	☐	☐
Offer educational materials about specific conditions	☐	☐	☐	☐
Supply behavioral health surveys	☐	☐	☐	☐
Supply other self-screening tools	☐	☐	☐	☐
Administer behavioral health surveys	☐	☐	☐	☐
Administer other self-screening tools	☐	☐	☐	☐
Prepare client action plans	☐	☐	☐	☐
Provide training on providing culturally-competent care	☐	☐	☐	☐
Provide training to supporting staff	☐	☐	☐	☐
Provide training on motivational interviewing	☐	☐	☐	☐
Provide tools and software for phone call and appointment tracking	☐	☐	☐	☐
Provide tools and resources for tracking labs, referrals, etc.	☐	☐	☐	☐
Provide referral and transitions of care checklists	☐	☐	☐	☐
Provide visit agendas or templates	☐	☐	☐	☐
Provide standing pharmacy order templates	☐	☐	☐	☐
Provide comprehensive directory of community resources	☐	☐	☐	☐
Provide directory of other resources	☐	☐	☐	☐
Provide materials regarding Nurse Advice Line	☐	☐	☐	☐

Ensure all tools and resources are centrally located on RCCO-specific website	☐	☐	☐	☐	
Others	GSI Health recommends that the agreed upon processes and procedures be centrally located to ensure efficiency for updating and across all RCCO participants. Also ensure that the care coordination solution being used across the RCCO contains a library of assessments that will automatically score the results and update the coordinated care plan with the identified issues and corresponding interventions / care plan steps. This will ensure protocol consistency across the RCCOs.				

54) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

55) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

56) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

57) Should the Department require that PCMPs utilize disease registries to manage the health of their population?

It is our experience that disease registries not be the sole path for managing the participating patient population as this narrows the focus to just clinical indicators. Rather, it should be a combination of clinical, social, and behavioral factors for managing the population. For example; a diabetes patient may not understand how to monitor their blood sugar or not able to provide themselves with the proper nutrition. Knowing these additional factors will help the PCMP to assign care plan tasks to the appropriate care team members resulting in approaching whole person care resulting in more positive, higher quality outcomes.

58) Please share any other advice or suggestions about provider support in the ACC.

In addition to the coordinated care plan shared by all members of the care team, additional patient information via a longitudinal patient record assembled from community data sources can provide value. Especially if the information most appropriate to the current patient care can be pulled forward by the care team into a patient summary. For example; only the current most impactful meds with confirmation that the scripts were filled could be front and center instead of searching through a long listing of prescriptions.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

62) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

63) What role – if any – should the RCCOs play in the distribution of payments to providers?

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

66) **Measuring Client experience.** Please complete the table below to indicate how the Department should measure Client/patient experience:

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☐	☐	
SF-12 Health Survey	☐	☐	
Other types of client interviews / surveys	☐	☐	
Patient Activation Measure	☐	☐	
Focus groups	☐	☐	
Other	Please type your response here.		

67) Knowing that, at this time, the Department only has claims data, how should population health be measured?

68) How should quality and performance data be reported to the RCCOs, PCMPs, and the public?

69) **Measures for payment.** Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☐
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

70) What percent of RCCO payments should be tied to measures or performance?

Percentage	
10-20%	☐
21-30%	☐
31-40%	☐
41-50%	☐
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

71) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?

72) Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?

73) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

74) **Incentive payment frequency.** Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	☐
Annually	☐
Other	☐

If you checked the "Other" box, please describe payment frequency below:

75) For potential offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

76) For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

Health Information Technology (HIT)

77) **Types of communication.** For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	☐
Text message	☐	☐
Web portal	☐	☐
Email	☐	☐
Telemedicine / Video chat	☐	☐
Face-to-face meeting	☐	☐
Smartphone app	☐	☐
Other:		

78) **HIT investments by organizations.** For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below:

Tool	Own / Operate	Plan to Operate in next 2 years

Population analytics / reporting	☐	☐
Digital care management tool	☐	☐
Care transitions alerts	☐	☐
Electronic Health Records (EHRs)	☐	☐
Health risk assessment software	☐	☐
Practice assessment tools	☐	☐
Practice management tools (scheduling, billing)	☐	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☐
Patient education/wellness tools	☐	☐
Provider/case manager directory	☐	☐
Shared decision-making tools	☐	☐
Telemedicine software	☐	☐
Other:	☐	☐
Other:	☐	☐

79) **Importance of technology by type.** The Department is working to determine what technology is in place, what technology is needed, and what technology should be standardized. For RCCOs, providers, and other organizations, use the table below to answer what HIT infrastructure outside of the 5DAC your organization would use to perform population health management activities. Tools are scored from 1-5, where 1 are those items least-likely to be used, and 5 are items most-likely to be used:

Indicated below are the tools that we see most used by our Medicaid Health Home Clients.

Tool	1 Least	2	3	4	5 Most
Population analytics / reporting / dashboard	☐	☐	☐	☐	☒
Care management tool	☐	☐	☐	☐	☒
Care transitions alerts	☐	☐	☐	☐	☒
Electronic Health Records (EHRs)	☐	☐	☐	☐	☐
Practice assessment tools	☐	☐	☐	☐	☐
Health risk assessment software	☐	☐	☐	☐	☒
Practice management tools (scheduling, billing)	☐	☐	☐	☐	☐

Client web portal for communicating care plan, services, benefit enrollment	☐	☐	☐	☐	☒

Provider/case manager directory	☐	☐	☐	☐	☒
Shared decision-making tools	☐	☐	☐	☐	☒
Telemedicine	☐	☐	☐	☐	☐
Other: Predictive Analytics / Risk Assessment	☐	☐	☐	☐	☒

80) What are the primary barriers to RCCOs and providers increasing their use Health Information Technology to improve the performance of Primary Care Practices?

81) How can Health Information Technology support Behavioral Health Integration?

To effectively integrate and support behavioral health, it is important that a coordinated care plan (CCP) exist for the patient that includes the clinical, behavioral, and social areas of care. The CCP should then be available in real-time by the care team where they can access the patient issue, goals, treatment, and interventions/progress against those issues to monitor outcomes. It is our experience that a patient's care team minimally includes care management, behavioral health and primary care providers from multiple stakeholder organizations.

82) In the next iteration of the ACC, should there be a shared resource for data and analytics? Please describe the basic criteria for what a shared data and analytics platform needs to contain in order for it to be useful.

83) Should there be a shared care management tool? Please describe the basic criteria for what a care management tool would need to contain in order for it to be useful.

It is important that a coordinated care plan (CCP) exist for the patient that includes the clinical, behavioral, and social areas of care. The CCP should then be available in real-time by the care team where they can access the patient issue, goals, treatment, and interventions/progress against those issues to monitor outcomes. It is our experience that a patient's care team minimally includes care management, behavioral health and primary care providers from multiple stakeholder organizations. Additionally the solution should contain a library of assessments that auto score and update the CCP with the diagnosed issue list and associated interventions and care plan steps.

84) Should there be a shared population health management tool? Please describe the basic criteria for what a population health management tool would need to contain in order for it to be useful.

A shared population health management tool can be paired with the CCP for optimal effectiveness. Typically, the tool would be used by the organization responsible for managing the care of the patient population. The tools This initiative will need to determine how much of the capabilities would be extended to the care team.

85) Please describe the functionality that a common Medicaid provider directory would need to contain in order for it to be useful.

86) How can the RCCOs support providers' access to actionable and timely clinical data?

Via a coordinated care plan (CCP) that includes the clinical, behavioral, and social areas of care. The CCP should then be available in real-time by the care team where they can access the patient issue, goals, treatment, and interventions/progress against those issues to monitor outcomes. Additionally, the CCP should have the ability to generate alerts to the care team for various events including, but not limited to, emergency room visits, admission / discharge, change in care plan, etc.

87) What are the HIT solutions that would benefit clients, providers, and RCCOs? Please comment on the parameters these tools or platforms would need to possess and the ways in which they could be used.

88) What technical assistance or resources related to HIT infrastructure should the RCCOs supply? This assistance or these resources could be for providers, social service organization, clients/families, or for others.

89) What role should health information exchange platforms like CORHIO or QHN play in the next iteration of the ACC?

The majority of our customers leverage the state and regional HIEs and data sources to minimize the number of required interfaces. For example; if 15 hospitals are already sending information to QHN, only a single interface to QHN would be needed to incorporate and take advantage that information vs an interface to each hospital, etc.

90) Please share any information, advice, and suggestions you have about health information technology in the ACC Program.

Appendix: GSI Health Solution Overview

GSIHealth*Coordinotor* is a highly scalable and extensible web based solution offered via a Software-as-a-Service model. The solution is based on the HIT standards for healthcare interoperability and security with user interaction occurring through a web browser.

The data flow and system interaction is facilitated by an embedded full-service, Master Patient Index (MPI) and standards based Health Information Exchange (HIE). The HIE is based on Integrating the Healthcare Enterprise (IHE) recommended standards and supports transactions for managing patient identity and exchanging clinical information. These services are leveraged to achieve interoperability amongst GSIHealth*Coordinotor* apps and to integrate with external systems (i.e., HIEs, RHIOs, EMRs, etc.) systems to exchange health home patient information. Using the standards-based backbone for interoperability helps our platform efficiently integrate with disparate systems to get data required for care coordination.

The GSIHealth*Coordinotor* solution platform is comprised of the following layers:

- **Care Coordination Applications** - an extensible application layer providing the necessary set of applications (i.e., messaging via Direct protocol, alerts, patient summary, virtual care plan, patient engagement, etc.) to enable care coordination. A grouping of applications can be configured to meet initial needs and then extended as initiative requirements evolve.

- **Reporting and Analytics Applications** – a set of applications that include predictive analytics, predefined reports, and ad-hoc reporting capabilities to meet the patient identification, reporting, billing and score carding needs of your initiative.

- **Clinical Data Repository** – a robust data layer containing both claims and clinical data including the flexibility to add additional conditions and measure sets as needed for population health management initiatives. Fully HIPAA compliant, the solution maintains the appropriate audit trails.

- **Data Interoperability** – this layer enables our solution to exchange both claims and clinical data to and from a variety of systems (i.e., HIE, EMR, Payer, Lab, etc.) while leveraging the investment of our customers' current systems. Exchanged information includes patient demographics, clinical data, HL7 and ADT, consent, alerts, care plan, and secure messages.

GSI Health employs a phased implementation approach. This approach allows GSI Health to best meet the needs of each customer's program and allow for incremental workflow adjustments as the program model is implemented. First operational use of the solution is typically within 90 days.

GSIHealthCoordinator Apps

Enrollment App - The Enrollment App facilitates patient enrollment into integrated care programs such as Health Home, and others, and manages the necessary patient consent policies. Patients can be added to the application via batch process, real-time interface, or directly into the App manually. Care managers can immediately start enrolling patients in the Health Home or other integrated care program(s), manage consent and document outreach activities. Patient consent is managed dynamically at the organizational level and individual provider level.

Care Teams App – The Care Teams App enables the creation of interdisciplinary care teams within and among various providers, care management and social service organizations and the assignment of patients to them. Care teams can be created in advance or in real-time and modified as needed. A patient's care team can include up to 10 roles, including supervisor, specialist, staff extender, care management, primary care, and behavioral health and social service providers. The care team has access to patient information, the coordinated care plan and receives alerts regarding patient care services, adverse events and care plan updates.

Care Plan App – The Care Plan App is a specialized, dynamic clinical assessment and care planning tool. It enables integrated, whole person care providing a patient-centric view of all medical, behavioral and social services issues, goals and interventions accessible in real time to all members of the care team through a Coordinated Care Plan (CCP). The Care Plan App has as a robust library of over 100 assessments to choose from and the ability to configure customized assessments. All assessments include integrated scoring, interpretation, trending and auto-populate issues and care steps in the CCP. Monitoring progress against the care plan is supported by key features, including an audit log highlighting updates and changes to the care plan, filtering by particular domains such as housing, employment, substance abuse, notifications regarding updates or changes and patient input.

Messages App – The Messages App enables all members of the care coordination program to communicate securely with one another about patients via Direct. The Messages App supports the ability to securely attach documents to messages such as CCPs, patient summaries and/or CCDs, to facilitate transitions in care as the patient moves throughout the care delivery system. GSIHealthCoordinator's Messages App can also be configured with custom templates to facilitate referral management and a wide array of standard communications across the care team.

Alerts App – The Alerts App enables care team members to be automatically alerted to adverse events, including ED and inpatient hospital admissions/discharges and other care coordination events such as medication changes and updates to CCP such as a new intervention. The alerts are configurable based on user preferences and rendered within the alerting app which provides a short description of the alert event. A mobile application will be available to notify users of preferred alerts in the future. The Alerts App can connect to an HIE to receive data for a variety of event alerts.

Population Manager App – The Population Manager App is comprised of data analytics and business intelligence tools providing outcomes and operational measurement and reporting. A gap in care feature also allows for drilling down to the patient level for any measure. This enables users to create cohorts and registries based on clinical conditions and risk profiles to inform population management programs.

The Population Manager app includes an integrated data warehouse containing all data entered into GSIHealth*Coordinator* and from integrated HIEs, hospital administrative data and claims systems. Available is a library of Population Management Outcomes and Operational Measures and Reports for regulatory and non-regulatory reporting. Also available is the configuration of custom measure sets based specific customer requirements.

Carebook Patient Summary – The Carebook App provides longitudinal and care coordination-specific patient summaries with integrated Clinical Decision Support (CDS). With the Carebook app, care team members can review aggregated patient CCD data and select and authorize the import of specific current patient information such as medications, allergies, encounters and crisis information to create a patient summary specifically for care coordination purposes. The integrated CDS provides care team members with prompts when a patient's care summary deviates from predefined clinical protocols and evidence-based guidelines. The integrated CDS is getting piloted in the second half of 2014 and will be generally available in 2015.

Patient Engagement App – The Patient Engagement app enables patients to become members of their care team and communicate with their care team and for the care team to communicate with their patients through a secure messages feature. Providers can recommend relevant readings, disease management programs, and self-management programs to a patient as well as share clinical summaries and information with patients. Patients can view their care plan and medications and if available diagnostic test results and discharge summary. This application is currently being piloted and will be fully rolled out in 2015.

Caretriage Risk Stratification App – GSI Health has partnered with CCNC Services to incorporate its patent pending predictive modeling and risk stratification technology into GSIHealthCoordinator. Today Caretriage is driving an 800 care manager work force in North Carolina to target those patients that are most likely to be re-admitted and recommend the appropriate best practice pathways in order to provide better outcomes and lower cost. Caretriage brings time tested algorithms in order to predict risk and recommend the appropriate clinical pathways using integrated data sources such as pharmacy, claims and clinical data from GSIHealthCoordinator. This application is currently being integrated with GSIHealthCoordinator and will be fully rolled out in 2015.

A sample screenshot of the predictive modeling patient stratification is below.

ACC Request for Information

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Edward C Maynard MD

Location:

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Iron Horse Pediatrics

Location: 555 East Pikes Peak Ave Ste 200

Colorado Springs CO 80903

☐ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☒ Medical provider / PCMP / other provider
  i. Type or specialty:
  ii. Area of practice: Pediatrics
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☒ Other (please describe): Advocate for children on Medicaid

How have you been involved in the ACC program and what interaction have you had with RCCOs:

Member of Region 7 RCCO community advisory committee; practice contracted with the RCCO, including for care coordination

Please briefly describe your involvement with Medicaid, either in Colorado or another state:

Primmary care provider

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely x
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

Are you currently involved in the ACC program?

Please feel welcome to describe why or why not using the space below.

☐ Yes x
☐ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years x
☐ 2-3 years
☐ 3-4 years
☐ Since before the program was implemented.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

- Reimbursement (mostly due to the Federal ACA) is fairer now.
- The decision to make the well child visit one of the KPIs is a good one
    - Support for care coordination is helpful
- Support for integrated behavioral health in the medical home will be helpful

2) What is not working well in the ACC Program?

- Patients continue to be attributed to the wrong medical home, and the process of getting patients reassigned to the correct medical home is onerous for the patient and family.
- The 5DAC data does not reflect the data in our EHR. The RFP should ask the RCCOs to take advantage of practice-based data.
- Feedback from RCCOs to the medical home regarding care coordination would be helpful.
- **Behavioral Health Integration**

7) What should be the next steps in behavioral health integration in Colorado?[1]

- Open the behavioral health and wellness codes (96150 – 96155) to encourage integration

- Provide infrastructure and funding for data collection and management to support integrated behavioral health in the medical home.

- The CPACK program developed by CBHC provides:
  a. Assistance with finding a behavioral health provider
  b. Telephone consultation with a child psychiatrist
  We recommend that BHOs be required to provide these 2 components as part of their new contracts.

- Payment options for integrated behavioral health need to be clear and understandable to providers and practices.

- ***Care Coordination***

Question 12) What needs for children/families should be coordinated in medical homes and are there services that should not be a part of care coordination by the pediatric and family medical home

Services that can be provided in a pediatric or family medical home are: complex medical coordination including logistics/travel, ancillary services (PT/OT/home health services, ...), collaboration with mental/behavioral health, collaboration regarding school needs, referrals to early intervention services and Child Find, referral to other agencies (rehab, hospice, ...), collaboration with foster care and DHS system. RCCOs can help with such needs as housing, food, parental employment, and child care, usually by helping families connect with other agencies that provide these services.

Question 19: How should care coordination program be evaluated? How should its outcomes be measured?

A care coordination program should initially be measured by having good processes, not measured by outcomes, until solid data exists on outcomes that are risk adjusted and accurate for children.

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Where should care coordination be done?

Care coordination is best done in the medical home. We are willing to do care coordination, because we have a relationship with our patients and they trust us and we recognize that coordinating complex medical care is essential for good care and for cost savings.

Should you be doing care coordination for certain patient populations e.g. children with asthma or special needs children? Or for your entire Medicaid population healthy or chronically ill?

The overall goal of Colorado Medicaid should be to provide care coordination services for all patients in the Medicaid.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard

examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

- All RCCOs should have their offices in the region served, should be non-profits, be a Medicaid provider and be incorporated only in Colorado.

- All RCCOs should offer to delegate care coordination to medical homes willing to accept that responsibility and the RCCO should share a portion of the RCCO pmpm with the medical home that accepts delegation.

- All RCCOs should use the same criteria for delegation and for the amount that is paid for delegated services of care coordination. By doing this, services can reach a standard across the state. A patient would have access to similar services no matter where they moved across Colorado.

- RCCOs should all agree on how they will effectively communicate to medical homes regarding any contact the RCCO has with patients attributed to the medical home. They should include PCMPs in developing those criteria.

- All RCCOs should help medical homes understand how to access their SDAC data, understand their data and use it to develop rapid cycle QI projects to improve health outcomes and meet KPIs.

- RCCOs should be required to help medical homes check which patients have been attributed the medical home, and assure accurate attribution.

- RCCOs should share on a regular basis the RCCO's performance on KPIs and shared savings incentives, and provide the medical home with comparative performance data.

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

This is applicable to the Denver metro area, not our Region 7.

27) Should the RCCO region maps change? Why or why not? If so, how?

Region 7 seems to be working well.

28) Should the BHO region maps change? Why or why not? If so, how?

In Region 7 the BHO region already conforms to the RCCO region, and the two systems have been fully integrated from the start.

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

n/a

34) What role should RCCOs play in attributing clients to their respective PCMPs?

The RCCOs should work with each medical home to be sure patients are correctly attributed.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

- Medical homes need to receive full incentives when they meet their KPI targets, no matter what happens in the RCCO.
- The incentives are too low to change much. Also, the KPIs need to remain focused on process, not outcomes, until the data is more sophisticated to accurately attribute patients and account for risk factors.
- Many medical homes have the ability to collect REAL-TIME data from their EHR and their claims database, which can be used to measure performance more accurately than the SDAC.

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

There is very little of the infrastructure in the state in place at the present time to enable capitation to be implemented successfully. Here are just some of the changes that would need to be in place before it would be fair or prudent to implement capitation:

- The state would need to already be paying fair amounts for all aspects of the care needed by Medicaid recipients before it could effectively move to capitation.
- All providers would have to be reliably involved in the ACC: primary care, all of the various adult and child specialists, the hospitals, the therapies, dentists, mental health providers, etc.
- The data system would have to be able to report real time data and be far more accurate than it is now.
- The attribution system is flawed. That would have to be improved and provide accurate, real-time attribution data before capitation should be instituted.
- The incentive system should be developed and reviewed by providers before implementing capitation

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

Many medical homes have the capability and infrastructure to adapt to payment tied to value. What is missing is the state, HCPF, RCCO, BHO infrastructure

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

- Make sure that your efforts are statewide. Views are different in the various regions of the state.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

- Appropriate child health measures could be selected from the following measures :
  - Well child visits appropriate for age
  - Developmental screening from age 6 months to 5 years
  - Teen depression screening
  - Complete immunization status by age two
  - Appropriate antibiotic use in URI and strep pharyngitis
    Patient (or family) satisfaction ratings
  - Documentation of QI projects

- The PCMP or medical home should receive real-time data (less than a month since date of service) with data that will allow them to compare their performance with performance of similar type of medical home.

69) Measures for payment. Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Kathleen Patrick, Lynn Jenkins Nygren, Paula Chelewski, Elizabeth Clark, Pam Brunner Nii
Location: Denver, CO

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Colorado Department of Education
Location: Denver, CO
☐ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☐ Medical provider / PCMP / other provider
  i. Type or specialty: Click here to enter text.
  ii. Area of practice: Click here to enter text.
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☒ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☐ Other (please describe): Click here to enter text.

Are you currently involved in the ACC program?

☐ Yes
☒ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years

How have you been involved in the ACC program and what interaction have you had with RCCOs:
Click here to enter text.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:
Outreach and Enrollment of students and families in Medicaid, School Health Medicaid Program

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☒ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

Schools are not currently part of the medical neighborhood but the potential is there for the contribution of the school nurse to provide prevention and education in the school setting.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

Improved access for enrollment with the Connect for Health Colorado

2) What is not working well in the ACC Program?

Barriers to care for children, especially in the rural areas, is still occurring in regards to limited provider networks, families how to access system, understand benefits.

3) What is working best in the Behavioral Health Organization (BHO) system right now?

Improved parity of physical and mental health, increased awareness of mental health issues.

4) What is not working well in the BHO system?

Confusing system – who is responsible for providing services. School Outreach specialists is not defined and underutilized. BHOs are not aligned with RCCOs. Not enough providers. Barriers to services could be improved by providing services in the schools.

5) What is working well with RCCO and BHO collaboration right now?

6) What is not working well with RCCO and BHO collaboration right now?

Unsure about confidentiality and ability to coordinate care.

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

Needs to be a task force at a state level and eventually at a regional level to determine the needs of the patients and communities at a local level. There needs to be a sustainable partnerships between schools and BHOs to provide services.

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☐	☐	
Community Behavioral Health Services Rule	☐	☐	
Covered diagnoses list	☐	☐	
Different behavioral / physical health reimbursement	☐	☐	
Institutions for Mental Diseases exclusion	☐	☐	
OBH rules, reporting, or financing (regulatory differences between agencies)	☐	☐	
PCMP financing structure	☐	☐	
Per-member per-month amount	☐	☐	
Physical space constraints	☒	☐	Services need to be provided in the community and not just in the BHO office
Privacy Laws (HIPAA, 42 CFR)	☒	☐	FERPA and HIPAA
Professional / cultural divisions	☒	☐	Integrate physical and mental health. 30% of students that present in a school health room has an underlying mental health issue.
RCCO or BHO contracts	☐	☐	
Staff capacity	☒	☐	Not enough qualified providers to provide services. Waiting lists are long. Lack of bi-lingual providers. Improve training and better utilize of professionals including the schools
State/Federal rules or reporting requirements	☐	☐	
Technical resources / data sharing	☐	☐	

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

Training	☐	☐	
Others	Services need to be provided where the patient is working, living, attending school so that access is improved.		

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

For each visit, they get a contact with a physical and mental health professional. Universal screening and referral needs to be done at every visit. Care should be patient driven and respect for autonomy and cultural differences.

10) Please share any other general advice or suggestions you may have about behavioral health integration.

Schools are a hidden health care system that are underutilized and not valued as a member of the healthcare community. School nurses are trained in assessing the behavioral health of children. They have the additional strength of being a healthcare professional and thus can facilitate the integration of physical and mental health.

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination?

Right care at the right time and avoid unnecessary duplication of services.

b. How should RCCOs prioritize who receives care coordination first?

High needs or those who over utilize the system

c. How should RCCOs identify clients and families who need care coordination?

Identify the patient in the medical home – criteria developed, using data on utilization, and patients identified in their medical home.

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

Electronic health records for better communications among providers including the school health system so all providers are aware of current

12) What services should be coordinated and are there services that should not be a part of care coordination?

All services

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

Everything mentioned in #15 – comprehensive health and social history important.

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today?

Depends on what system the child/family is in. 'Struggling families tend to have difficulty obtaining primary prevention care, so sometimes the school nurse is the one that works with the parent in directing and navigating them through the medical system

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

Schools and school nurses have access to students and families and are providing care coordination every day without any additional financial support.

c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

Recognize that many school nurses are providing care coordination and importance of allowing for communication between providers.

d. What are the gaps in care coordination across the continuum of care?

Good communication

15) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	Should the RCCO have a role? Yes	Should the RCCO have a role? No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma	☒	☐	☒	
Affordability (assistance with prescriptions or co-pays)	☒	☐	☐	
Daycare / childcare	☐	☐	☒	
Economic stability & employment	☐	☐	☒	
Education	☐	☐	☒	
Environment	☐	☐	☒	
Food access / nutrition	☒	☐	☐	
Health literacy	☒	☐	☐	
Housing	☐	☐	☒	
Language or translation services	☒	☐	☒	

Literacy	☐	☐	☒	
Transportation	☐	☐	☒	
Other	Please type your response here. Feel free to list as many non-medical factors as you want, and please explain how the RCCO should be involved.			

16) **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	Coordinate care? Yes	No	In what capacity should these individuals coordinate care in the ACC Program?
Advanced Practice (Registered) Nurses	☐	☐	
Certified Addiction Councilors	☐	☐	
Certified Nurse Midwives	☐	☐	
Community Health Workers	☐	☐	
Generalists (BA/BS/MA/MS)	☐	☐	
Health Coaches	☐	☐	
Licensed Clinical Social Workers	☐	☐	
Licensed Marriage and Family Therapist	☐	☐	
Licensed Mental Health Counselors	☐	☐	
Licensed Professional Counselor	☐	☐	
Masters of Public Health	☐	☐	
Medical Doctors / Doctors of Osteopathic Medicine	☐	☐	
Nurse Practitioners	☐	☐	
Patient Navigators	☐	☐	
Peer Advocates	☐	☐	
Promotoras	☐	☐	
Psychiatrists	☐	☐	

Psychologists	☐	☐	
Registered Nurses	☒	☐	
Social Workers	☒	☐	Medical social workers
Wraparound facilitators	☐	☐	
Other	All have a role but the professionals that should be providing the major coordination would be nurses and social workers who have been trained in providing care coordination. School Nurses could be trained in the Navigator role.		

17) **Care coordination requirements for specific populations.** Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and infants	☐	☒	
Children	☐	☒	
Children who are healthy, but in socially-complex environments	☒	☐	
Children involved in the foster care system	☒	☐	
Children with a chronic illness	☒	☐	
Children with a serious emotional disturbance	☒	☐	
Children with medical complexity	☒	☐	
Children or youth with a behavioral health diagnosis or substance use disorder	☒	☐	
Transition-age adolescents	☐	☒	
Parents and families	☐	☒	
Pregnant women	☐	☒	
Adults	☐	☒	
Adults who are healthy, but in socially-complex situations	☒	☐	
Adults with a chronic illness	☒	☐	
Adults with a behavioral health diagnosis or substance use disorder	☒	☐	
Clients involved in the criminal justice system	☒	☐	
Clients with a disability	☒	☐	
Clients in a nursing facility	☐	☒	
Elderly clients	☐	☒	

Frail elderly clients	☐	☒	
Clients in palliative care	☐	☒	
Other populations, please comment:			

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

Partnering with schools and childcare agencies with identified outcomes would address the needs of medically and socially complex children including foster children.

19) How should care coordination be evaluated? How should its outcomes be measured?

Care coordination can be evaluated with progress towards outcomes which should be measured through cost savings and improved health of participants. There should be a cost benefit analysis.

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

a. What is the PMPM cost for providing care coordination services?

b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

The benefit of increasing the PMPM for behavioral health and medically complex children would promote additional services within community agencies.

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

It should vary depending on the complexity of the child

a. **Care coordinator to client ratios.** If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☐
51-100	☐
101-200	☐
201-500	☐
501-1,000	☐
1,001-1,500	☐

1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

Steady progress in cost savings, shared EMR, improved health outcomes for children and patient/provider satisfaction

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Involved health providers in community agencies where children with special healthcare needs are located such as schools, daycares, preschools.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

Data reporting to and from the RCCOs, payment methodologies, and standardization. RCCOs were designed to ensure that every member receives care coordination but children by and large are not receiving these services.

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

Development of a community advisory board that represents the divers population within the community including school staff such as school nurse, counselors and administrators.

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

Relationships already exists in many communities by stakeholders and having competition between RCCOs would improve the program.

27) Should the RCCO region maps change? Why or why not? If so, how?

RCCO and BHO should align!

28) Should the BHO region maps change? Why or why not? If so, how?

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

More ability to connect stakeholders and invite divers populations to discuss needs and outcomes.

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

School include schools beyond the School Health Medicaid Program.

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues

would this address? Competition improves standards and reduces cost. Modeling of highly effective RCCOs would significantly add to improving outcomes.

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

Schools could be Medicaid provider beyond School Health Program as it is limited to Medicaid Children with Special Education Services that require Medicaid billable services. We are looking from a health frame of reference. 10% of students receive special education services with a smaller percentage of which are Medicaid eligible.

34) What role should RCCOs play in attributing clients to their respective PCMPs?

Providing communication pathways between all providers and community points of access.

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

All programs that provide similar or the same types of services for population health should be better coordinated

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

Same as 35

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

Facilitating provider and agency education about services and education to improve health literacy of community members

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

There should be coordination where applicable but definitely there should be (possible advisory council) increased communication about community and regional gaps in services and how to address individuals in transition with job changes, etc

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

Client's and families need to have an equal seat at the table in terms of needs and this should include cultural considerations, including language. Providing health education and literacy first is key as well as some training in self-advocacy and civic leadership.

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

Requirements should be a facilitation of opportunity to speak to regional needs and should encourage innovation at the simplest level to the top of the organization. RCCOs should engage all interested parties.

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

Policy creation should include all stakeholders.

42) How should the Department structure stakeholder engagement for the ACC as a whole?

Again, this collaborative should be driving thoughtful strategic planning that addresses real issues and needs that are regional and does not depend on only the healthcare industry and insurance industry for ideas to promote health and prevention of illness.

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

Data reflects this is a resounding no, especially in the rural regions. However, there needs to be more real collaboration between mental and behavioral health, primary care and these services, and alternative and health promotion practices—so that effective care is provided, with continuity across the care continuum. This should include the hidden system of care that is the school system.

Secondly, more assistance with navigating the systems is needed, and more trained professionals (interprofessional education) in higher education to develop a competent and collaborative 21st century workforce.

a. If no, what are the gaps?

Pediatric mental and behavioral health is the highest needs. Also, ratios in schools are unsafe with respect to school health care professionals. Acuities are higher than ever before and the educational system is not prepared to meet those needs with the existing levels of funding. Colorado's ratio for school nurse to student is 1800:1. Healthy People 2020 recommends 1 school nurse for every 750 healthy students.

b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

See above

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.
All of these should be viewed across a developmental spectrum of care—and these are all a type of primary care that assumes different shades of service depending on the place in the lifespan of an individual. We need to function across these stages as a whole, and figuring out how to do that with efficiency and quality is the real question.

a. What role should hospitals play in the next iteration of the ACC Program?

Hospitals are a part of the acute system of care and should be included in the care coordination model.

b. What role should pharmacies play in the next iteration of the ACC Program?

Pharmacies should focus primarily on education and assisting individuals to safely and effectively manage their medication regimens. They should be more regulated in terms of dispensing of pediatric medications and narcotic pain medications.

c. What role should specialists play in the next iteration of the ACC Program?

Specialists are key to the overall care system and need to be considered equal partners in coordination and also, carry equal responsibilities for communicating patient needs and for driving innovative educational methods including telehealth

d. What role should home health play in the next iteration of the ACC Program?

Home health is another part of the spectrum of care, and should be included in the care coordination model as well as in the health information and electronic transfer of information

e. What role should hospice care play in the next iteration of the ACC Program?

Same as above

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

g. What role should counties play in the next iteration of the ACC Program?

Again local government and this includes county leadership should be at the table.

h. What role should local public health agencies play in the next iteration of the ACC Program?

They are a level of primary care in essence and fill certain niches that are prevention and population health focused.

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

Definitely—school districts, non-profits and faith based organizations can and do provide many services and provide a safety net for many who would otherwise go without health care services.

45) How can RCCOs help to support clients and families in making and keeping appointments?

By building relationships at the individual, family, provider and community level. Specifically, navigators (all levels) are instrumental in this area. Navigators function as a bridge and glue for the patient and family who are struggling in one or more areas of life (social, emotional, physical, spiritual, mental). Also helping address any barriers such as transportation or childcare.

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

No, they should not be required, but rather a system that provides more incentive for better coordination and patient satisfaction as well as health outcomes could be the result of navigator services. Schools are a place that could provide staff that is already fulfilling the community health worker role.

47) **Community Health Worker reimbursement**. Please use the table below to detail how Community Health Workers should be reimbursed:

Reimbursement process	(Please check all that apply)
Independently bill	☐
On staff (salary) at Primary Care Medical Provider Clinic	☒
On staff (salary) at RCCO	☐
Per Member Per Month Payment	☒

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

Regular visits for oral health should be a component of the follow-up RCCO's provides. Rural areas need additional support and resources as they lack providers.

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you?

Cultural sensitivity is at the most basic level understanding that health itself means very different things to many cultures and ethnic groups. It is at the base level acknowledging the need to be sensitive to and aware of differences and respecting those. Cultural competence is an ideal that can hardly be maintained at all systemic levels because it would require too many large system changes. However, it is important for organizations and individual providers to be aware of the population they are primarily working with and take the time to learn about the various cultural practices and beliefs, and incorporate this across the organizational structures they are in contact with--

b. What RCCO requirements would ensure cultural competency?

Again, there should be incentives not requirements.

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?

Language interpreters and bilingual/multilingual staff are key as well as materials in various languages and at literacy levels that are conducive to understanding. Training for ALL staff on the various relevant cultural origins of their patient populations. General training in patient centered practice and team-focused care as well as motivational interviewing and caring communication to that facilitates relationship building from the time the patient enters the building/organization until they leave. And a caring system of follow up that speaks to respecting the patient's autonomy as well as their decision making.

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

It would be more productive to allow for organizations and systems to assess their needs and plan for meeting these with the understanding that incentivizing this rather than requiring certain elements would be more productive and promote innovation.

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

Yes with very specific expectations of health literate appropriate induction/education of all 'clients' in accessing care.

51) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

Yes with very specific expectations of health literate appropriate induction/education of all 'clients' in accessing care.

52) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

Alerting the public to challenges and obstacles to care related to ACC. Just like there are road signs warning of pending road construction and slow down, there needs to be guidance to the public about anticipated slow-downs and alternative routes to care access.

Practice Support

54) **Support for practices.** Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☐	☒	☐	☐
Network provider education	☒	☐	☐	☐
Assistance with practice redesign	☒	☐	☒	☐
Assistance with efficiency-enhancing activities	☒	☐	☐	☐
Provide web-based resources and directories	☒	☐	☒	☐
Provide practice-specific data reports	☒	☐	☒	☐
Provide clinical care guidelines and best practices.	☒	☐	☒	☐
Provide clinical screening tools	☒	☐	☒	☐
Provide health and functioning questionnaires	☒	☐	☒	☐
Provide chronic care templates	☒	☐	☒	☐
Provide registries	☒	☐	☒	☐
Offer client reminders	☒	☐	☒	☐
Offer client self-management tools	☒	☐	☒	☐
Offer educational materials about specific conditions	☒	☐	☒	☐
Supply behavioral health surveys	☒	☐	☒	☐
Supply other self-screening tools	☒	☐	☒	☐
Administer behavioral health surveys	☒	☐	☒	☐
Administer other self-screening tools	☒	☐	☒	☐
Prepare client action plans	☒	☐	☒	☐
Provide training on providing culturally-competent care	☒	☐	☒	☐
Provide training to supporting staff	☒	☐	☒	☐
Provide training on motivational interviewing	☒	☐	☒	☐
Provide tools and software for phone call and appointment tracking	☒	☐	☒	☐
Provide tools and resources for tracking labs, referrals, etc.	☒	☐	☒	☐
Provide referral and transitions of care checklists	☒	☐	☒	☐
Provide visit agendas or templates	☒	☐	☒	☐
Provide standing pharmacy order templates	☒	☐	☒	☐
Provide comprehensive directory of community resources	☒	☐	☒	☐
Provide directory of other resources	☒	☐	☒	☐
Provide materials regarding Nurse Advice Line	☒	☐	☒	☐
Ensure all tools and resources are centrally located on RCCO-specific website	☐	☐	☐	☐
Others				

55) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

The RCCO's should develop or follow national or international standards like the Colorado Health TeamWorks collaborative that defines standards of practice making evaluation of the RCCO's care much easier to evaluate.

56) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

Customer sotisfoction surveys ond outcome torgets for common chronic conditions.

57) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

First the Deportment should require consistent evidence bosed guidelines be employed ond once estoblished begin utilizing diseose registries.

58) Should the Department require that PCMPs utilize disease registries to manage the health of their population?

First the Deportment should require consistent evidence bosed guidelines be employed ond once estoblished begin utilizing diseose registries.

59) Please share any other advice or suggestions about provider support in the ACC.

A residency or internship progrom for oll providers in the ACC ensuring odequote role performonce.

Payment Structure and Quality Monitoring

60) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

Schools ore the lorgest pediotric heolth core institution for children yet hove the greotest dispority for poyment structure.

61) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

Not o PCMP but con envision copitotion poyments would support preventive heolth services occess.

62) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

63) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

School heolth core providers licensed os o Limited Service license Provider network hos the potentiol to bring in much needed relief for heolth services currently provided without reimbursement.

64) What role – if any – should the RCCOs play in the distribution of payments to providers?

Monitors of the reimbursement process.

65) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

66) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

Meosures thot ossess the Triple Aim- improving the quolity of core, sotisfoction of clients ond providers, ond heolth core outcomes for common chronic heolth conditions.

67) **Measuring Client experience.** Please complete the table below to indicate how the Department should measure Client/patient experience:

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☒	☐	
SF-12 Health Survey	☐	☐	
Other types of client interviews / surveys	☒	☐	
Patient Activation Measure	☐	☐	
Focus groups	☒	☐	
Other	Please type your response here.		

68) Knowing that, at this time, the Department only has claims data, how should population health be measured?

Claims data address primarily medical care in response to a problem.
To change to a Prevention and Health Promotion focus, new measurements must be implemented that consider the time needed for behavioral change (year instead of month), barriers to change (access to resources, transportation, time from work, cultural, and language) and the response of the client. For example,

- percentage of client with a medical home or similar health support services that encourages preventative and health promotion
- referrals to programs that requires monitoring and ongoing education between provider visits
- patient and provider developed plan of care (success has been documented using Motivational Interviewing for diagnosis like obesity prevention and medication adherence)
- follow up questionnaire that looks at behaviors that will increase life span and decrease use of services (like medication adherence, dietary modification, increased activity

69) How should quality and performance data be reported to the RCCOs, PCMPs, and the public?

Bi-annual reports

70) **Measures for payment.** Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☐
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

71) What percent of RCCO payments should be tied to measures or performance?

Percentage	
10-20%	☐
21-30%	☐
31-40%	☐
41-50%	☐
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

If the measure or performance indicators continue to be medically based, then a low percentage. If the indicators are Prevention and Health Promotion based, then 50%. Access to care should be easier for the client for Prevention and Health Promotion with only urgent care allowing easy access. The client in a person centered care system needs to take responsibility for decreasing the cost and increasing the effectiveness.

72) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?

Yes . the same general category of KPI can be used.
and No. The strength of the RCCO is that it is regionally based, so the strengths and barriers of each region will be different. Providers should have incentives to care for the clients who use the most resources, but who will have to most barriers to care. Providers should not be penalized for caring for client with the most difficult-to-change indicators of health.

73) Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?

There should be a general alignment with national standards with a modification to regional issues. Improvement should be included but it should be measured on what the providers can change.

74) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

Payment should be tied to short term interventions that would reflect urgent care, reasonable medical interventions, and regular medical care.
Additional payment can be made for annual improvements to health.

75) **Incentive payment frequency.** Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	☐
Annually	☐
Other	☐

If you checked the "Other" box, please describe payment frequency below

76) For potential offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

77) For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

Health Information Technology (HIT)

78) **Types of communication.** For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	☒
Text message	☐	☒
Web portal	☐	☒
Email	☐	☒
Telemedicine / Video chat	☐	☒
Face-to-face meeting	☐	☒
Smartphone app	☐	☒
Other:		

79) **HIT investments by organizations.** For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below:

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	☐	☐
Digital care management tool	☐	☐
Care transitions alerts	☐	☐
Electronic Health Records (EHRs)	☐	☐
Health risk assessment software	☐	☐
Practice assessment tools	☐	☐
Practice management tools (scheduling, billing)	☐	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☐
Patient education/wellness tools	☐	☐
Provider/case manager directory	☐	☐
Shared decision-making tools	☐	☐
Telemedicine software	☐	☐
Other:	☐	☐
Other:	☐	☐

80) **Importance of technology by type.** The Department is working to determine what technology is in place, what technology is needed, and what technology should be standardized. For RCCOs, providers, and other organizations, use the table below to answer what HIT infrastructure outside of the 5DAC your organization would use to perform population health management activities. Tools are scored from 1-5, where 1 are those items least-likely to be used, and 5 are items most-likely to be used:

Tool	1 Least	2	3	4	5 Most
Population analytics / reporting / dashboard	☒	☐	☐	☐	☐
Care management tool	☐	☐	☐	☐	☒
Care transitions alerts	☐	☐	☒	☐	☐
Electronic Health Records (EHRs)	☐	☐	☐	☐	☒
Practice assessment tools	☐	☒	☐	☐	☐
Health risk assessment software	☐	☐	☐	☒	☐
Practice management tools (scheduling, billing)	☐	☒	☐	☐	☐
Client web portal for communicating care plan, services, benefit enrollment	☐	☐	☐	☐	☒
Patient education wellness tools	☐	☐	☐	☒	☐
Provider/case manager directory	☐	☐	☐	☐	☒
Shared decision-making tools	☐	☐	☐	☒	☐
Telemedicine	☐	☐	☐	☐	☒
Other:	☐	☐	☐	☐	☐

81) What are the primary barriers to RCCOs and providers increasing their use Health Information Technology to improve the performance of Primary Care Practices?

We need to overcome the barriers of HIPAA and FERPA so that school nurses can communicate effectively with providers and have access to EMRs to be able to provide continuity of care.

82) How can Health Information Technology support Behavioral Health Integration?

Behavioral health should be a part of EMR so that providers are looking at the whole child.

83) In the next iteration of the ACC, should there be a shared resource for data and analytics? Please describe the basic criteria for what a shared data and analytics platform needs to contain in order for it to be useful.

84) Should there be a shared care management tool? Please describe the basic criteria for what a care management tool would need to contain in order for it to be useful.

There should be only one care management tool that all providers work from.

85) Should there be a shared population health management tool? Please describe the basic criteria for what a population health management tool would need to contain in order for it to be useful.

86) Please describe the functionality that a common Medicaid provider directory would need to contain in order for it to be useful.

Major limitation in the rural areas is identifying providers that will take Medicaid. Are there any providers in the urban areas that are willing to visit the smaller towns or participate in telemedicine.

87) How can the RCCOs support providers' access to actionable and timely clinical data?

School nurses should have access to EMR of select students to be able to provide continuity of care.

88) What are the HIT solutions that would benefit clients, providers, and RCCOs? Please comment on the parameters these tools or platforms would need to possess and the ways in which they could be used.

There needs to be shared access to better communicate care.

89) What technical assistance or resources related to HIT infrastructure should the RCCOs supply? This assistance or these resources could be for providers, social service organization, clients/families, or for others.

They can work with the schools/ school nurses so they can have access to health information.

90) What role should health information exchange platforms like CORHIO or QHN play in the next iteration of the ACC?

There needs to be a single platform that all providers can access to obtain health information.

91) Please share any information, advice, and suggestions you have about health information technology in the ACC Program.

Colorado Department of Health Care Policy and Financing

RFI Response Received and Recorded.

Serial Number: 053

Accepted by: KJDW

Notes: Standard cover sheet added;

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Katherine A. Price
Location: Grand Junction, Mesa, CO

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Western Colorado Pediatric Associates, a division of Primary Care Partners
Location: Grand Junction, Mesa, CO
☐ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☒ Medical provider / PCMP / other provider
  i. Type or specialty: Pediatrics
  ii. Area of practice: Mesa County – inpatient and outpatient services
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☐ Other (please describe): Click here to enter text.

Are you currently involved in the ACC program?

☒ Yes
☐ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☒ 1-2 years
☐ 2-3 years

How have you been involved in the ACC program and what interaction have you had with RCCOs:

I see patients who are in the ACC program. I interact with our RCCO to try and better understand the program and provide services to our patients.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:

I have been a Medicaid provider for the last 14 years, first in Utah, then California and now Colorado.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☒ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

I, and my practice, are committed to providing care for children on Medicaid in Western Colorado.

☐ 3-4 years
☐ Since before the program was implemented.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

There is a renewed understanding of the importance of the primary care provider being the center of the medical home. There is also understanding of the importance of coordination of care and there is an attempted focus on preventative care.

2) What is not working well in the ACC Program?

There has been difficulty with communication from the state level through the RCCOs down to the individual practice/provider level.

It does not seem like there is a system built in to account for the mobility/churn of patients on/off Medicaid and between RCCOs. Whether it be KPIs or future shared savings marks, seems like practices need to be judged on the patients who have been under the influence of the practice for a min 6 months (otherwise there is quite a bit of disincentive for practices to be open to the more complex/challenging patients... those that likely need access the most).

3) What is working best in the Behavioral Health Organization (BHO) system right now?

Not much at all.

4) What is not working well in the BHO system?

Access is very limited and cumbersome for patients and providers. There is very poor communication between our BHO and our RCCO and our PCMPs. Payment is not aligned in a way that allows for the right service at the right time

5) What is working well with RCCO and BHO collaboration right now?

Not much, but they are talking, and there is acknowledgement that these programs need to work together to care for patients.

6) What is not working well with RCCO and BHO collaboration right now?

They are separate systems with separate payment models and are still very much separate silos.

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

We need embedded counselors and pediatric psychiatric services who do medication management also embedded. We need the BHOs and the RCCOs to be combined under the same program.

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☒	☐	
Community Behavioral Health Services Rule	☐	☐	
Covered diagnoses list	☒	☐	
Different behavioral / physical health reimbursement	☒	☐	
Institutions for Mental Diseases exclusion	☐	☐	
OBH rules, reporting, or financing (regulatory differences between agencies)	☒	☐	
PCMP financing structure	☐	☐	
Per-member per-month amount	☐	☐	
Physical space constraints	☐	☐	
Privacy Laws (HIPAA, 42 CFR)	☒	☐	
Professional / cultural divisions	☐	☐	
RCCO or BHO contracts	☒	☐	
Staff capacity	☒	☐	
State/Federal rules or reporting requirements	☒	☐	
Technical resources / data sharing	☒	☐	
Training	☐	☐	
Others	Please type your response here.		

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

Site visit and chart review by knowledgeable staff that understands the concepts of integrated, whole-person/whole-family physical and behavioral health care.

10) Please share any other general advice or suggestions you may have about behavioral health integration.

There needs to be a model and a culture on the behavioral health side of care that care providers form long-term relationships with patients, and not a culture of plug and play. There needs to be less turnover of behavioral health providers.

Care Coordination

11) Care coordination is an important part of the ACC Program.

Care coordination should be done in our PCMPs practice. Because, the patients know us and we know them. The patients trust us. We (the Medicaid medical providers) are the most stable/consistent provider/player/entity in our area.

We are very willing to provide this care in our office, because we have a relationship with our patients and they trust us and we recognize how important coordinating complex medical care is essential for good care and for cost savings. Also, the primary care provider is best positioned to have a long term relationship with the patient, and therefore know and understand other aspects of the patient's life and how important those non-medical factors are on the patient's health and health issues. Primary care providers are also best positioned to be connected to local community resources specific to their area.

a. What is the best definition of care coordination?

b. How should RCCOs prioritize who receives care coordination first?

c. How should RCCOs identify clients and families who need care coordination?

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

If you are willing to do care coordination in your practice, how much money do you need as a pmpm to make the program work for your patient panel?

An ongoing rate of $6-7pmpm once care coordination programs are up and running, with an initial period of investment at $10 pmpm, because establishing these services requires even more resources initially.

Should you be doing care coordination for certain patient populations e.g. children with asthma or special needs children? Or for your entire Medicaid population healthy or chronically ill?

The overall goal of Colorado Medicaid should be to provider care coordination services for ALL patients in the Medicaid population (for some patients it may be very minimal, others extensive). This is the essence of preventative medicine and care coordinator are very well positioned to help identify risk factors proactively, before, potentially before they impact a patient's health and cause illness.

If your practice provides care coordination how should your care coordination program be evaluated? How should its outcomes be measured?

A care coordination program should initially be measured by having good processes, not measured by outcomes, until solid data exists to account for risk. The program should be measured by how far the practice is down the path of practice transformation (including, but not limited to how well the practice is connected to its medical neighborhood, closing the loop on the referral process, how established the programs is with community resources and other community agencies). Initially all measures need to be quite separated from outcomes that are highly tied to patient behavior, or practices will again be less likely to serve those with highest risk.

12) What services should be coordinated and are there services that should not be a part of care coordination?

Services that should be covered: complex medical coordination including logistics/travel, ancillary services (PT/OT/home health services, ...), mental/behavioral health, schools, early intervention services, other agencies (rehab, hospice, ...), foster care and DHS system.

Services that should not be part of care coordination (except for rare circumstances): assistance with housing, food, parental employment, child care. But care coordination should help families connect with other agencies that provide these services.

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today?

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

d. What are the gaps in care coordination across the continuum of care?

15) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	Should the RCCO have a role? Yes	Should the RCCO have a role? No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma	☒	☐	☐	Embedded mental health
Affordability (assistance with prescriptions or co-pays)	☒	☐	☐	Education on generic medications, complex pharmacy med management
Daycare / childcare	☐	☒	☒	
Economic stability & employment	☐	☒	☐	
Education	☒	☐	☐	Coordination with school based services
Environment	☐	☒	☐	
Food access / nutrition	☐	☒	☒	
Health literacy	☒	☐	☐	Care coordination, personal health coach, motivational. This is key for long term cost savings!!
Housing	☐	☒	☒	
Language or translation services	☒	☐	☐	
Literacy	☐	☒	☒	
Transportation	☐	☒	☒	
Other	Please type your response here. Feel free to list as many non-medical factors as you want, and please explain how the RCCO should be involved.			

16) **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	Coordinate care? Yes	No	In what capacity should these individuals coordinate care in the ACC Program?
Advanced Practice (Registered) Nurses	☒	☐	
Certified Addiction Councilors	☒	☐	
Certified Nurse Midwives	☒	☐	
Community Health Workers	☒	☐	
Generalists (BA/BS/MA/MS)	☒	☐	
Health Coaches	☒	☐	
Licensed Clinical Social Workers	☒	☐	
Licensed Marriage and Family Therapist	☒	☐	
Licensed Mental Health Counselors	☒	☐	
Licensed Professional Counselor	☒	☐	
Masters of Public Health	☒	☐	
Medical Doctors / Doctors of Osteopathic Medicine	☒	☐	
Nurse Practitioners	☒	☐	
Patient Navigators	☒	☐	
Peer Advocates	☒	☐	
Promotoras	☐	☐	??
Psychiatrists	☒	☐	
Psychologists	☒	☐	
Registered Nurses	☒	☐	
Social Workers	☒	☐	
Wraparound facilitators	☒	☐	
Other	Please type your response here.		

17) **Care coordination requirements for specific populations.** Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and infants	☐	☐	
Children	☐	☐	
Children who are healthy, but in socially-complex environments	☐	☐	
Children involved in the foster care system	☐	☐	
Children with a chronic illness	☐	☐	
Children with a serious emotional disturbance	☐	☐	
Children with medical complexity	☐	☐	
Children or youth with a behavioral health diagnosis or substance use disorder	☐	☐	
Transition-age adolescents	☐	☐	
Parents and families	☐	☐	
Pregnant women	☐	☐	
Adults	☐	☐	
Adults who are healthy, but in socially-complex situations	☐	☐	
Adults with a chronic illness	☐	☐	
Adults with a behavioral health diagnosis or substance use disorder	☐	☐	
Clients involved in the criminal justice system	☐	☐	
Clients with a disability	☐	☐	
Clients in a nursing facility	☐	☐	
Elderly clients	☐	☐	
Frail elderly clients	☐	☐	
Clients in palliative care	☐	☐	
Other populations, please comment:			

Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

a. If no, what are the gaps?

No, there are big gaps in access to specialists and mental health services. Also, there are not enough PCMPs in our area. Our patient panels are too big to provide appropriate and timely access to care.

What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

They should absolutely play a role so that resources can be better allocated and there is not so much overlap of services without communication between resources.

How can RCCOs help to support clients and families in making and keeping appointments?

Provide enough funding for practices to have care coordinators who can help identify barriers. And the RCCO program needs to find a way to hold patients accountable for making and keeping appointments.

Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

Health Information Exchanges must work to feed ER info back into the PCMP. Also, patients need a financial disincentive for using the ER for ambulatory sensitive conditions. And the RCCOs need to find a way to help improve after-hours access for patients to appropriate, quality non-ER services.

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

19) How should care coordination be evaluated? How should its outcomes be measured?

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

    a. What is the PMPM cost for providing care coordination services?

    b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

a. **Care coordinator to client ratios.** If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☐
51-100	☒
101-200	☐
201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Program Structure

Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and in what parts of the state? What issues would this address?

I am not sure that multiple RCCOs in one region would be helpful. For as complex as the RCCOs are already, I think that would add even more confusion for practices and patients.

How involved are you with the RCCO? How willing are you to be involved with the RCCO? What do the RCCOs need to do to get you interested in getting involved?

It would be beneficial to have some coordination/communication of subpopulation groups within and between the RCCOs (for example pediatric practices).

What is working well with the RCCOs?

There is momentum for practice transformation.

What is not working well with the RCCOs?

There is not enough funding via pmpm for practices to make the necessary changes to move from a FFS model to a value based payment or ACO model.

Payment Structure and Quality Monitoring

Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

No. The pmpm is too low to change much. Also, the KPIs need to remain focused on process not outcomes until the data is more sophisticated to account for risk factors and where patients start.

Right now medical homes don't get rewards for good outcomes (KPI), unless the whole RCCO has the good outcomes (KPI). Is this fair? Or should a practice get rewards for good performance no matter how well the RCCO does?

No, it is not fair. Rewards for good outcomes (KPIs) need to be at the practice level, because that is their sphere of influence, not the entire RCCO.

If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

No, the underlying foundation is not in place yet.

Measurement / Evaluation

What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

Vaccination rates (with patients who were offered, counseled on the importance and declined count and patients who have contraindication count).

24) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

25) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

26) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

27) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

28) What role – if any – should the RCCOs play in the distribution of payments to providers?

29) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

30) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

31) **Measuring Client experience.** Please complete the table below to indicate how the Department should measure Client/patient experience:

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☐	☐	
SF-12 Health Survey	☐	☐	
Other types of client interviews / surveys	☐	☐	
Patient Activation Measure	☐	☐	
Focus groups	☐	☐	
Other	Please type your response here.		

32) Knowing that, at this time, the Department only has claims data, how should population health be measured?

33) How should quality and performance data be reported to the RCCOs, PCMPs, and the public?

34) **Measures for payment.** Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☒
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

35) What percent of RCCO payments should be tied to measures or performance?

Percentage	
10-20%	☒
21-30%	☐
31-40%	☐
41-50%	☐
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

36) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?

37) Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?

38) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

39) **Incentive payment frequency**. Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☒
Quarterly	☐
Annually	☐
Other	☐

If you checked the "Other" box, please describe payment frequency below:

Colorado Department of Health Care Policy and Financing

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

ACC Request for Information

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Kelly Phillips-Henry, PsyD
Location: Colorado Springs, CO 80903

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: AspenPointe
Location: Colorado Springs, CO 80903
☒ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☐ Medical provider / PCMP / other provider
  i. Type or specialty: Click here to enter text.
  ii. Area of practice: Click here to enter text.
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☒ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☐ Other (please describe): Click here to enter text.

Are you currently involved in the ACC program?

☒ Yes
☐ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☐ 3-4 years
☒ Since before the program was implemented.

How have you been involved in the ACC program and what interaction have you had with RCCOs:

AspenPointe was one of the founding member organizations for RCCO 7 which is part of Community Health Partnership, a not for profit collaborative organization of healthcare agencies. Currently, AspenPointe is significantly connected to RCCO 7: we contract with RCCO 7 to operate the Service Center, manage the provide network as well as provide back office/data functions. Additionally we participate in multiple pilots that connect physical health to critical behavioral health services including coordination of care supports for shared RCCO/BHO patients, training care coordinators in RCCO physical health practices in behavioral health issues, and targeted health coaching to activate those with chronic diseases such as diabetes, asthma and obesity to better self-manage their own health and wellness.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:

AspenPointe is a behavioral health provider in Southern Colorado that aligns to Colorado Health Partners BHO.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☒ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

- Strong community partnership to deliver care across entire community healthcare system
- Our approach focuses on local solutions to deliver the best health outcomes and care customizable to the needs in our community
- Having multiple RCCOs that all have a focus on shared decision making for their unique communities has been very effective.

2) What is not working well in the ACC Program?

- While service delivery and coverage expansion has made significant progress since the inception of the ACA , payment reform still lags.
- There has been little movement in impacting quality care metrics and bending the cost curve.
- Until the state is ready to move away from Fee For Service (FFS) and move towards paying for outcomes/quality care, the RCCOs will only have marginal success achieving all parts of the Triple Aim.
- Cost, quality and outcomes must all be emphasized.

3) What is working best in the Behavioral Health Organization (BHO) system right now?

The State of Colorado has been a strong leader and model for the nation over the past 20 years as it relates to the management and delivery of Behavioral Health services. Instead of operating in a system that emphasizes volume through a fee for service system, Colorado has been progressive in their approach by moving to a capitated, risk-based approach for an entire population of people. Risk stratification, expansive access, management of expensive clinical care with best practice clinical pathways and a strong emphasis on taking care back into the communities has allowed for significant statewide savings and better care outcomes. With over 20 years of experience in this risk-based model, which is a fundamental component in any payment reform initiative, the BHOs have figured out how to manage provider risk. This skill set can be scaled to accomplish similar outcomes across all of healthcare.

4) What is not working well in the BHO system?

Even though the BHOs have operated in a managed, risk-based contract for decades, over the years this model has continued to emphasize encounters and retroactive fee for service accounting continues to take place. To be successful in healthcare delivery moving forward, HCPF will need to plan for a system that reimburses strong, performance-based outcomes.

5) What is working well with RCCO and BHO collaboration right now?

- The RCCO/BHO meetings are working very well at both the state level as well as locally.
- Strong collaboration on care coordination for SPMI and SED patients.
- Many pilot opportunities to demonstrate enhanced ways to maximize population health information and risk stratification for the shared Medicaid populations.
- C-PACK, the child psychiatric consultation model, has been an excellent resource to local pediatricians.
- Sensitivity in planning and delivering care to address local solutions – this should remain a critical feature for next round of RCCO bids. Additionally, because our response is local, we pull in many ancillary supports that impact total health outcomes – including the Health Department, social service agencies, emergency response agencies and law enforcement.
- Through improved and ongoing communication there is an increased awareness of the role that behavioral health plays in the holistic care of individuals

6) What is not working well with RCCO and BHO collaboration right now?

- We believe that progress towards payment reform is way too slow.
- We believe that the BHOs & mental health centers should be included in receiving SDAC data to best coordinate care across our shared population.
- Care coordination needs to be expanded to the whole population – not just high-utilizer patients. The BHOs/MHCs could provide much greater supports to this cause.
- Many RCCO practices believe that only a psychiatrist can help with behavioral health conditions or life style change factors for patients that struggle with chronic disease conditions. Our continuum is very large and supports could be utilized in a much more expansive manner.
- Similar to above, many RCCO practices believe that integration with MHCs is only achieved through implementation/co-location of Behavioral Health Consultants (BHCs). However, the continuum offered through MHCs is broad and supports beyond BHCs could be utilized in a much more expansive manner.
- We believe that MHCs should be able to be PCMPs and credentialed/paneled into the RCCO PCMP network (including the pmpm care coordination payment) for patients who see the MHC as the primary source of their care.
- While there is an awareness that behavioral health contributes to many of the challenges in managing high cost complex patient, there is still a disconnect on how and where along the full care continuum it is most effective to partner and link with BHO to successfully co-manage these cases

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

First, as alignment continues between the RCCO and BHOs, the RCCO RFP should continue to emphasize further integration of programs, data and finances to meet goals related to the development of health homes and person-centered care, as well as finding further efficiencies. RCCOs that can demonstrate continued movement in this direction should be awarded with higher scores on RFP scoring.

Second, the Colorado State Health Innovation Plan is critical to the advancement of healthcare integration in Colorado. Bringing together stakeholders from multiple disciplines to create a centralized platform to best deliver care and track both the data and finance on the back end is critical. Feedback from the medical community, behavioral health community, social services, and educational fields need to be included.

Third, to truly allow behavioral health to integrate into physical health, the alignment of government funding streams must occur. Funds from HCPF (Medicaid) and OBH must work in tandem to allow for comprehensive care of patients as well as achieve population health goals moving forward.

Fourth, to provide comprehensive care, we must continue to move away from a fee for service system, which emphasizes volume, and move towards a risk-based payment model where comprehensive care utilizing advanced techniques such as risk stratification, produces stronger clinical and financial outcomes. The greatest buy in towards this model will happen when HCPF incentivizes providers to assume and manage this risk.

Fifth, as we move further into integrated care planning for people with multiple, complex health needs (i.e. intellectual and developmental disabilities, organic-based dementia care and traumatic brain injuries), we encourage HCPF to utilize BHO/MSO experience since they have been successfully providing risk-based population care for years.

Sixth, creating enough flexibility in the billing and reporting systems to distill specific types of encounters in organizations that are hosting behavioral healthcare providers but not hiring those providers directly.

Lastly, we encourage HCPF to consider enhancing the existing Medicaid SUD benefit to a full continuum of care, including services in parity with those offered for mental heat6h and physical health (such as intensive outpatient, partial-hospitalization and inpatient / residential treatment services) to produce better health outcomes and lower costs over time.

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services. Using the table below, please explain which issues are barriers, and how they can be addressed:**

Factor:	Barrier? Yes	Barrier? No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☐	☒	
Community Behavioral Health Services Rule	☐	☒	
Covered diagnoses list	☒	☐	If there was not a limited diagnosis set, it would allow for much more comprehensive services to be provided to patients in a physical health setting.
Different behavioral / physical health reimbursement	☐	☒	Right now we cannot bill physical health in the behavioral health setting so we are not able to run primary care unless we become an FQ. Also physical health is incentivized by FFS and we are not, so the billing mechanisms do not align.
Institutions for Mental Diseases exclusion	☒	☐	IMD continues to be a barrier for expanded services to meet local population needs. While the 1915 (b) waiver through the Medicaid managed Care program offers some flexibility, the risk of how our waiver could be interpreted by the Feds have prevented many service expansions from occurring in our community.
OBH rules, reporting, or financing (regulatory differences between agencies)	☒	☐	Better alignment in licensing and compliance standards between OBH, HCPF and CDPHE could assist with streamlined standards and service provision process for approach by state agencies
PCMP financing structure	☐	☐	Don't understand well enough to add input here
Per-member per-month amount	☐	☒	
Physical space constraints	☒	☐	Locally we are looking for additional solutions for expanded space for primary care in the MHC (bidirectional care). As 2703 continues to be considered in Colorado, this will remain an important area to address.
Privacy Laws (HIPAA, 42 CFR)	☒	☐	42 CFR is a real problem for care coordination and a barrier to ensuring the best care is delivered to patients; HIPPA is not as much of a concern

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

Professional / cultural divisions	☒	☐	As the primary care and behavioral health fields continue to come together and integrate, professional and cultural divisions is something we will need to continue to bridge. The BHO and the MHCs have very rich experience in this area that can be utilized to bring the two fields closer together.
RCCO or BHO contracts	☐	☒	
Staff capacity	☒	☐	Work force issues and staff capacity is an issue nationally for all of healthcare. We have an aggressive state and local recruiting strategy to bring in specialists in the behavioral health area.
State/Federal rules or reporting requirements	☒	☐	The reporting requirements need to be aligned across state agencies
Technical resources / data sharing	☒	☐	For best continuity of care, SDAC data needs to be shared with the BHOs
Training	☒	☐	While there are national training programs to best train BH specialists to work in Primary Care, the field is still fairly young. Training happens mostly through internship programs and certificate training programs. Very few Masters/Doctorate programs teach to integrated care and even fewer primary care residencies and nursing programs train to how to utilize behavioral health consultants as a part of the medical team. More work needs to continue in this area.
Others	Please type your response here.		

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

We are strong advocates of the SAMHSA 6 levels of integration. This approach aligns with an emerging national standardization of levels of behavioral/physical health integration. It allows for training, research and cross-collaboration while using a similar language and operational approach.

http://www.integration.samhsa.gov/integrated-care-models/A_Standard_Framework_for_Levels_of_Integrated_Healthcare.pdf

10) Please share any other general advice or suggestions you may have about behavioral health integration.

We strongly believe that in order to achieve strong integration across primary care practices and behavioral health, the principles of integration need to be agreed to across state agencies and should align across all payors. Only through this alignment will the RCCO, BHO and commercial payors be able to accomplish the goals of Colorado's State Health Innovation Plan. This not only should align services and the integration model (e.g. SAMHSA 6 Levels of Integration Model), but also administrative systems, data, financing, provider needs, and patient needs including social determinants of health, physical and behavioral health needs. Additionally, there are many key populations that still rest in different oversight and funding streams that need to be integrated into our centralized care structure: such as people with autism-spectrum disorders, traumatic brain injuries, and developmental disabilities.

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination?

No answer submitted

b. How should RCCOs prioritize who receives care coordination first?

No answer submitted

c. How should RCCOs identify clients and families who need care coordination?

No answer submitted

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

No answer submitted

12) What services should be coordinated and are there services that should not be a part of care coordination?

- We believe that all services should be coordinated for best outcomes.
- Services should include all medical and behavioral health as well as social services and public health.

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

- Care coordinators need to be able to track the care of all patients through their primary care provider, including in bi-directional settings where patients receive both primary and behavioral healthcare in a MHC.
- Specialty services should be assessed through primary care and coordinated.

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today?

- Care coordination is occurring in too many locations and by too many different entities. The RCCO RFP should take the opportunity to streamline this process and provide incentives to RCCOs who can care coordinate complex, multiple systems of care.

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

- BHOs are required to care coordinate for BH patients. This sometimes causes major duplication in efforts and at times this care coordination is in direct opposition to each other leading to confusion. THE MHCs have done care coordination for decades and could assist the RCCOs with a proven process.

c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

- Centralize care coordination under the RCCO

d. What are the gaps in care coordination across the continuum of care?

- No answer submitted

15) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

Non-medical need:	Should the RCCO have a role? Yes	Should the RCCO have a role? No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma	☐	☐	☒	
Affordability (assistance with prescriptions or co-pays)	☐	☒	☐	
Daycare / childcare	☐	☒	☐	
Economic stability & employment	☐	☐	☒	
Education	☐	☒	☐	
Environment	☐	☒	☐	
Food access / nutrition	☐	☐	☒	
Health literacy	☒	☐	☐	
Housing	☐	☒	☐	

Language or translation services	☒	☐	☐	
Literacy	☐	☒	☐	
Transportation	☐	☐	☒	
Other	Please type your response here. Feel free to list as many non-medical factors as you want, and please explain how the RCCO should be involved.			

16) **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	Coordinate care? Yes	No	In what capacity should these individuals coordinate care in the ACC Program?
Advanced Practice (Registered) Nurses	☐	☒	
Certified Addiction Councilors	☐	☒	
Certified Nurse Midwives	☐	☒	
Community Health Workers	☒	☐	
Generalists (BA/BS/MA/MS)	☒	☐	
Health Coaches	☒	☐	
Licensed Clinical Social Workers	☐	☒	
Licensed Marriage and Family Therapist	☐	☒	
Licensed Mental Health Counselors	☐	☒	
Licensed Professional Counselor	☐	☒	
Masters of Public Health	☐	☒	
Medical Doctors / Doctors of Osteopathic Medicine	☐	☒	
Nurse Practitioners	☐	☒	
Patient Navigators	☒	☐	
Peer Advocates	☒	☐	

Promotoras	☐	☐	
Psychiatrists	☐	☒	
Psychologists	☐	☒	
Registered Nurses	☐	☒	
Social Workers	☒	☐	
Wraparound facilitators	☒	☐	
Other	Please type your response here.		

17) **Care coordination requirements for specific populations.** Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and infants	☐	☒	
Children	☐	☒	
Children who are healthy, but in socially-complex environments	☒	☐	
Children involved in the foster care system	☒	☐	
Children with a chronic illness	☒	☐	
Children with a serious emotional disturbance	☒	☐	
Children with medical complexity	☒	☐	
Children or youth with a behavioral health diagnosis or substance use disorder	☒	☐	
Transition-age adolescents	☐	☒	
Parents and families	☐	☒	
Pregnant women	☐	☒	
Adults	☐	☒	
Adults who are healthy, but in socially-complex situations	☐	☒	
Adults with a chronic illness	☒	☐	
Adults with a behavioral health diagnosis or substance use disorder	☒	☐	
Clients involved in the criminal justice system	☒	☐	
Clients with a disability	☐	☒	
Clients in a nursing facility	☐	☒	
Elderly clients	☐	☒	

Frail elderly clients	☐	☒	
Clients in palliative care	☐	☒	
Other populations, please comment:			

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

- The RCCO should be involved if required by their contract – pertaining to medical services.

19) How should care coordination be evaluated? How should its outcomes be measured?

- Due to duplication in care coordination efforts that are currently occurring, care coordination efforts should be measured and tracked. As the overall goal is to decrease overall medical costs, this will be critical in the next RCCO contract.

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

a. What is the PMPM cost for providing care coordination services?

- We would recommend consulting with actuarial support as this is not an easy answer. Unfortunately even after pmpm was set, rates were changed which makes it difficult to have a steady plan in place.

b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

- No answer submitted

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

- No answer submitted

a. **Care coordinator to client ratios.** If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☒
51-100	☐
101-200	☐
201-500	☐
501-1,000	☐

1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

- Look at quality measures like health outcomes
- Reduction in total cost of care metrics

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

- Care coordination efforts should align with Section 2703 of the AFA for patients with multiple chronic disease states.
- If care coordination is over-regulated, the creativity and flexibility necessary will be eliminated. Assess care coordination success by measuring outcomes, not assessing a RCCOs compliance with box checking.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

- Provider contracting allows for a competitive edge that can save money for the state and should be left to the RCCO to manage.

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

No answer submitted

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

No answer submitted

27) Should the RCCO region maps change? Why or why not? If so, how?

No answer submitted

28) Should the BHO region maps change? Why or why not? If so, how?

NO – this would immediately lead to another BHO RFP, which does not appear to be the direction of HCPF. We are prepared for BHO maps to change in alignment with RCCOs in the future.

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

- We recommend at least 6 months minimum.

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

- No answer submitted

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

- Continuous eligibility is important for continuity of care
- 9900 codes that allow integrated sights to provide services that are needed would be a great improvement.

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

- I think this is more of a Denver-centric question/issue. I am not sure any part of Southern Colorado would benefit from this arrangement. Having one RCCO allows for the necessary scale to provide care to rural and frontier areas.

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

- No answer submitted

34) What role should RCCOs play in attributing clients to their respective PCMPs?

- No answer submitted

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

- No answer submitted

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

- No answer submitted

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

- Somehow figure out how to better manage a patients churning of benefits.

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

- No answer submitted

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

RCCOs should be required to continue to utilize the current Performance Improvement Advisory Committee (PIAC) structure to provide input into the contractor's implementation and ongoing management of the ACC program. The PIAC should continue to involve members, client's families, client advocates, and advocacy organizations that interact with mutual members. At least one member of the PIAC should represent the Medicaid-Medicare community in an effort to improve innovation and collaboration efforts for the Medicaid-Medicare Program where possible. RCCOs should also ensure that engagement with clients, their families, and advocates includes a diverse representation that ensures the RCCO is responsive to community needs and encourages building of a medical neighborhood to include behavioral health providers, PCMPs, and non-medical providers. The PIAC should continue to be required to meet at least quarterly, with minutes posted to the contractor's website, and RCCOs should complete PIAC projects in a reasonable time frame to promote member engagement and innovation. Members have different health beliefs, and opinions, on how they receive care. Therefore, member focus groups may continue to be useful in ensuring that RCCOs are able to adjust to varying local community and member needs specific to their unique region. RCCOs should also continue to be required to promote member education and healthy lifestyle choices in a manner that is appropriate for the respective region (newsletters, decision aids, etc.).

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

Again, the PIAC should remain as a requirement for RCCOs as the committee provides for member, provider, community, and social service provider engagement in a forum that promotes collaboration and accountability amongst the local community. Moreover, RCCOs should be required to put in place guidelines that facilitate stakeholder engagement across RCCO boundaries where appropriate. In order to promote ongoing feedback, process improvement, and innovation RCCOs should be required to regularly survey providers, community organizations, and social service providers to glean specific feedback that can be used to improve care coordination, overall engagement, and build upon comprehensive care coordination, integrated care, and a patient centered medical neighborhood. Suitable suggestions made by stakeholders should be implemented in a reasonable time frame as deemed appropriate by the RCCO. The RCCO should be able to adjust to the feedback of stakeholders in a way that allows for local variation amongst each community.

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

It is crucial that RCCOs are able to respond to the unique needs of their respective communities. Much work has been done to establish and maintain relationships within local communities. In HCPF's scoring and RFP should award extra points for community involvement. It is important to create community involvement that demonstrates the responsiveness of RCCOs to their community and ensures stakeholders have a vested interest in the success of the RCCO. RCCOs should also work with their respective communities to reduce duplication of services, eliminate redundancies, and/or collaborate where

appropriate in an effort to streamline services, refer to appropriate resources, and build upon referral networks which can positively impact the medical neighborhood as well as health and well being of the member. It also may be beneficial to communicate opportunities for public comment, specific to the work of the RCCOs, with an ever-widening net to ensure the uniqueness and diversity of each community is represented. Enhanced community engagement may also be created through an annual Colorado ACC conference that provides opportunities to share best practices, successes, collaborate, and create deeper community engagement.

42) How should the Department structure stakeholder engagement for the ACC as a whole?

The Department should continue to require that RCCOs submit a regular Stakeholder Feedback report that describes the contractor's work in collaborating with stakeholders, a summary of stakeholder feedback, trends, issues, complaints, and proposals to solve issues. The Department should allow for RCCOs to be less prescriptive in how they address issues, which allows for local variation and ensures a local patient centered approach that better meets the needs of the individual than a population specific approach. Stakeholder engagement is critical to the success the ACC. Ongoing regular consultation, involvement, and broad inclusivity of stakeholders will remain important in steering ACC initiatives, promoting shared accountability, two-way engagement, and collaborative decision making that allows for flexibility by region. Stakeholder engagement should not merely be a public exercise but a way to engage in issues that matter to the respective community, which goes beyond reporting, where information is used to make critical decisions. In that, it's important to tie stakeholder benefits to the goals of the ACC where appropriate. RCCOs should be able to demonstrate and report on their successes, as well as lessons learned, through interacting with stakeholders and be allowed to adjust programming as appropriate while ensuring the Department is well informed through a regular reporting process.

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?

a. If no, what are the gaps?

- No, access to specialty care in rural/frontier areas is very limited.

b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

- Gaps are not population specific.

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

a. What role should hospitals play in the next iteration of the ACC Program? No answer submitted

b. What role should pharmacies play in the next iteration of the ACC Program? No answer submitted

c. What role should specialists play in the next iteration of the ACC Program? No answer submitted

d. What role should home health play in the next iteration of the ACC Program? No answer submitted

e. What role should hospice care play in the next iteration of the ACC Program? No answer submitted

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program? No answer submitted

g. What role should counties play in the next iteration of the ACC Program? No answer submitted

h. What role should local public health agencies play in the next iteration of the ACC Program? No answer submitted

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations, which have been overlooked in the past? No answer submitted

45) How can RCCOs help to support clients and families in making and keeping appointments?

- Outreach has worked for MHCs

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

- We would suggest allowing RCCOs to make this proposal in the RFP.

47) **Community Health Worker reimbursement.** Please use the table below to detail how Community Health Workers should be reimbursed:

Health workers should reimbursed through individual RCCO contracts – this should not be prescribed by HCPF in the RFP

Reimbursement process	(Please check all that apply)
Independently bill	☐
On staff (salary) at Primary Care Medical Provider Clinic	☐
On staff (salary) at RCCO	☐
Per Member Per Month Payment	☐

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

- Whole-person health does include the mouth. We recommend that oral health should be included in the RCCO.

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you?

- Excellent care that values regional values, spiritual values, cultural traditions, language, and customs.

b. What RCCO requirements would ensure cultural competency?

- No answer submitted

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all Clients/families including those with low health literacy?

- No answer submitted

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

- No answer submitted

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

- This decision should be up to each RCCO in their RFP

51) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

- The ACC program should develop a way for RCCOs to share more real-time data with providers so they can intervene concurrently while a patient is still receiving emergency services.

52) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

- No answer submitted

Practice Support

53) **Support for practices.** Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

We believe that the state should avoid designing a one size fits all program and instead allow regional RCCOs to design what best works locally.

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☐	☒	☐	☐

Others	

54) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

- No answer submitted

55) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

- No answer submitted

56) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

- Rate enhancements for participation in the RCCO program as defined by the RCCO in the bid process

57) Should the Department require that PCMPs utilize disease registries to manage the health of their population?

- No

58) Please share any other advice or suggestions about provider support in the ACC.

- No answer submitted

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

- No. Substandard Medicaid fee-for-service provider reimbursement rates, even when combined with RCCO provider PMPM payments provide little incentive for PCMPs. Reimbursements are certainly not adequate to mature strong medical homes. We must discover more innovative ways to deliver cost effective care. Some type of shared savings will be instrumental to any solution.

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

- The BHO has operated through the entirety of our contracts in an at-risk environment using a global budget. We believe this system could work equally well in the RCCO.

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

- In some cases, yes. Medicaid providers serve low-income populations and some may require extra assistance in building their RCCO client-capacity. Larger providers are often more adequately staffed and trained to deliver the services critical to medical home success and consequently, a value-based reimbursement system would likely favor those entities. Some of the barriers to smaller, less mature practices include strained & less adequately-trained clinical and administrative staff, antiquated records systems, the lack of EHR's, and inability to manage expanding regulatory requirements. Inefficient processes quickly translate to higher costs and mitigate the advantage of value-based payment systems. Finally, it is important to keep in mind providers are strained with similar, but distinct care management mandates from other insurers, often adding yet another obstacle to uniform care delivery.

62) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

- No answer submitted

63) What role – if any – should the RCCOs play in the distribution of payments to providers?

- The RCCO's relationship with network providers and their level of participation in coordinating patient care should dictate the control of incentive distributions. And as goes provider performance, so goes RCCO performance, and both should be measured by the same standards. However, we believe RCCO's should be given the option to dictate the distribution of value-based payments to the providers within their individual regions.

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

- We must create more robust systems of quality measurement and evaluation of payment reform pilot programs, ones which align financial incentives and support ACO capacity-building. RCCO incentive and shared-payment capacity must be directly tied to their ability to manage population health and improve outcomes. And, to determine the most efficient care management activities needed to deliver those quality outcomes, it is imperative RCCO's have access to timely data, particularly data related which drives agreed-upon KPI's.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

- Capitation payment (PMPM) with rate setting factors that reward quality

66) **Measuring Client experience.** Please complete the table below to indicate how the Department should measure Client/patient experience:

We believe a comprehensive set of measures for client experience is critical for RCCOs success to align to their needs and remain patient-centered. RCCOs should be encouraged to weigh in on the process and suggest additional measures.

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☒	☐	
SF-12 Health Survey	☒	☐	
Other types of client interviews / surveys	☒	☐	
Patient Activation Measure	☒	☐	
Focus groups	☒	☐	
Other	Please type your response here.		

67) Knowing that, at this time, the Department only has claims data, how should population health be measured?

- This needs to be the responsibility of the RCCOs but must be funded by the state.

68) How should quality and performance data be reported to the RCCOs, PCMPs, and the public?

- Open and transparent through a website

69) **Measures for payment.** Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☒
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

70) What percent of RCCO payments should be tied to measures or performance?

Percentage	
10-20%	☐
21-30%	☐
31-40%	☐
41-50%	☒
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

71) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?

- It should happen in combination: overall KPIs should address population health while still addressing local needs.

72) Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?

- Based on improvements

73) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

- No answer submitted

74) **Incentive payment frequency.** Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	☒
Annually	☐
Other	☐

If you checked the "Other" box, please describe payment frequency below:

75) For potential offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

- No answer submitted

76) For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

- The MHCs are tied to 28 quality and outcome measures but none connect to reimbursement at this point.

Health Information Technology (HIT)

77) **Types of communication.** For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	☒
Text message	☐	☒
Web portal	☐	☒
Email	☐	☒
Telemedicine / Video chat	☐	☒
Face-to-face meeting	☐	☒
Smartphone app	☐	☒
Other:		

78) **HIT investments by organizations.** For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below:

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	☒	☐
Digital care management tool	☒	☐
Care transitions alerts	☒	☐
Electronic Health Records (EHRs)	☒	☐
Health risk assessment software	☒	☐

Provider/case manager directory	☐	☐	☒	☐	☐
Shared decision-making tools	☐	☐	☐	☒	☐
Telemedicine	☐	☐	☐	☐	☒
Other:	☐	☐	☐	☐	☐

80) What are the primary barriers to RCCOs and providers increasing their use Health Information Technology to improve the performance of Primary Care Practices?

- The primary barrier for staff is feeling comfortable with multiple platforms of technology for reimbursement.

81) How can Health Information Technology support Behavioral Health Integration?

-

82) In the next iteration of the ACC, should there be a shared resource for data and analytics? Please describe the basic criteria for what a shared data and analytics platform needs to contain in order for it to be useful.

83) Should there be a shared care management tool? Please describe the basic criteria for what a care management tool would need to contain in order for it to be useful.

84) Should there be a shared population health management tool? Please describe the basic criteria for what a population health management tool would need to contain in order for it to be useful.

- Yes, and it should rest in the RCCO.

85) Please describe the functionality that a common Medicaid provider directory would need to contain in order for it to be useful.

- The Connect for Health CO provider esource guide is a good model for a directory.

86) How can the RCCOs support providers' access to actionable and timely clinical data?

- CORHIO and QHN need to function across the state. This is critical.

87) What are the HIT solutions that would benefit clients, providers, and RCCOs? Please comment on the parameters these tools or platforms would need to possess and the ways in which they could be used.

- A merged physical health/behavioral health EMR
- Tracking in real time access to care data
- CORHIO/QHN implementation – this is very slow in our region

88) What technical assistance or resources related to HIT infrastructure should the RCCOs supply? This assistance or these resources could be for providers, social service organization, clients/families, or for others.

- More needs are necessary in frontier and rural areas for IT supports. In larger cities, larger health systems can combine efforts to scale IT needs for communication.

89) What role should health information exchange platforms like CORHIO or QHN play in the next iteration of the ACC?

- See number 86 above

90) Please share any information, advice, and suggestions you have about health information technology in the ACC Program.

- No answer submitted

RFI Response Received and Recorded.

Serial Number: 055

Accepted by: KJDW

Notes: Standard cover sheet added;

REQUEST FOR INFORMATION

RFI UHAA 2015000017

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Polly Anderson for CCHN
Location: Denver, CO

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Colorado Community Health Network
Location: Denver, Colorado
☒ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☐ Medical provider / PCMP / other provider
  i. Type or specialty: Click here to enter text.
  ii. Area of practice: Click here to enter text.
☒ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☐ Other (please describe): Click here to enter text.

Are you currently involved in the ACC program?

☒ Yes
☐ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
☐ 3-4 years
☒ Since before the program was implemented.

How have you been involved in the ACC program and what interaction have you had with RCCOs:

The Colorado Community Health Network (CCHN) is the statewide membership association for Colorado's 18 Federally Qualified Community Health Centers (FQHCs or CHCs). CHCs provide a health care home for almost 650,000 Coloradans, including 28% of all Medicaid enrollees in 2013. CHCs have been integral to the ACC program and its success. CHCs helped launch the ACC by taking the first enrollees in 2011, formed the RCCO or serve in a governance role in several regions, serve the majority of patients now enrolled, and serve over 40% of the patients attributed to a PCMP (as of October 2014). CCHN has been an active participant in the ACC performance improvement advisory committee (PIAC) and subcommittees.

Please briefly describe your involvement with Medicaid, either in Colorado or another state:

See response above.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☒ N/A

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

As the statewide member association representing Colorado's 18 CHCs, serving 28 percent of Medicaid enrollees in 2013, and over 40 percent of the patients attributed to an ACC PMCP (as of October 2014), CCHN and our members have been highly involved and integral to the ACC program and its success. The ACC has been a positive step towards improving care coordination and establishing more accountability for outcomes, most notably:

- Financial support for care management has brought focus to high risk populations.
- Partnerships with local hospitals and community partners have been strengthened in some regions, particularly around the Key Performance Indicators (KPIs).
- Medicaid, RCCOs and PCMPs are engaging to improve outcomes and contain cost growth.
- Payment reform is being piloted and conversations are underway about how and when to include additional regions and/or providers.

2) What is not working well in the ACC Program?

While the ACC has led to some improvements in care, there are a number of areas in need of further development. To further improve the outcomes of the ACC, the following areas are in need of particular attention:

- Attribution:
    - Too many Medicaid enrollees remain unattributed to a PCMP for too long, decreasing the ability of PCMPs to engage patients and begin implementing interventions to improve outcomes and contain costs. While monthly attribution has addressed some of these concerns, the ACC program should move to auto-assignment for those that remain unattributed after attempts have been made to have them select a PCMP. See question 30 for specific recommendations about auto assignment.
    - The process to change PCMP attribution is too burdensome on the patient, and as a result some providers serve as a patient's PCMP without the recognition and financial support provided by accurate attribution. This process needs to be refined to allow patients to change PCMPs in a timely fashion.
- Timely and accurate data is central to a provider's ability to successfully manage population health and make adjustments to improve outcomes. Current data provided to PCMPs is not timely, not actionable, and not presented in a way that allows providers to validate that their data is accurately represented. Additionally, data provided varies by RCCO and therefore cannot be aggregated across regions, preventing PCMPs serving patients from multiple RCCOs to accurately understand their performance. Specific recommendations regarding data are included throughout this response, but in particular see the Program Structure and Health Information Technology sections.
- RCCO and PCMP relationships vary by region and present challenges for large PCMP systems located in multiple regions. These large PCMPs often find themselves stretched between differing requests and requirements, and varying priorities and strategies which are not always coherent. In one example, a CHC serving multiple RCCOs was able to launch a diabetes intervention program in one region with a RCCO, but not another, which resulted in participation being dictated by the county the patient lived in

even when they utilized the same clinic and saw the same provider. In addition to increased standardization of expectations across RCCOs, RCCOs need to be held to a high standard of engaging PCMPs in discussions that will impact clinical practice or reimbursement. See Program Structure section for specific recommendations.

- The ACC program should require more transparency from RCCOs in governance, operations and financing to be assured that there are adequate dollars going to impact care and provide support to providers.
- Hospitals must play a significant role in the ACC to achieve the desired outcomes of better health care and healthier patients at a lower cost, but there are not enough incentives currently to participate, nor disincentives for not participating in these efforts. Isolated, local relationships may be strong enough to create some impact in a single community, but incentives are lacking in the current ACC and should be included in the next iteration.

3) What is working best in the Behavioral Health Organization (BHO) system right now?

Similar to the ACC, CHCs have seen both areas of success with the BHO system and areas in need of significant change. A few successes to highlight:

- Access to behavioral health care is expanding in some areas as Community Mental Health Centers (CMHCs) are hiring staff and working to meet the increased demand created by Medicaid expansion.
- Partnerships between CMHCs and CHCs are very strong in some areas, resulting in improved access to behavioral health services through the integration of CMHC staff into CHC care teams, and in a few places, improved access to primary care by bringing CHC staff to the CMHC.
- The launch of the statewide crisis response system is filling a gap and providing a service that was not available in the state before now.

4) What is not working well in the BHO system?

Overall, the focus of the BHO program on covered diagnosis and procedures does little to support integration in the primary care setting, where the behavioral health needs of patients don't always fall neatly into a diagnosis. PCMPs are ideally situated for providing preventative care and early interventions, but PCMPs must navigate complicated and varied CMHC/BHO relationships and billing procedures to receive payment for this care. Access to behavioral health care for Medicaid patients seems to be improving where there have been issues, but continues to vary by community and region and is overly dependent on local contractual relationships.

The separation of funding for behavioral health care from medical health care, does not allow for the alignment of incentives to improve care. Integrating the funds for medical and behavioral care (e.g. ending the carve-out) will make both service provision and access to care more efficient and patient centric. Money should follow the patient, meaning if a patient receives their behavioral health care at a CHC, the CHC should be able to bill a single entity for care. In addition to the need to integrate funding, the following issues need to be addressed:

- Access to psychiatric care for Medicaid patients continues to be highly limited. In particular this is true for patients with intermediate level needs, as the focus has been placed on providing care for patients

with the highest needs. Additionally, to increase access to care, the following need to be included as performance measures: wait time for an appointment, underutilization monitored by comparing disease prevalence rates to penetration rates, and network/provider experience reporting.

- The CCAR is not designed to assess and report progress on behavioral health issues that are typically addressed in the primary care setting. Further, the lengthy CCAR, in combination with other requirements to "open" a case with the BHO, is not compatible with the fast pace of the primary care setting, where increasingly behavioral health providers are utilized to assist with brief interventions in the exam room. Generally in the primary care setting, patients are "enrolled" indefinitely and may receive care across their lifespan without regard to acuity or diagnosis, and at CHCs, even as their insurance status moves from Medicaid, to uninsured or commercially insured.
- The requirement that CMHCs ensure co-location at high volume practices needs to be reviewed for compliance and enforced.
- There is no clarity or direction on the intended relationships between BHOs and RCCOs, so these relationships vary greatly depending upon the region.
- The rules and regulations of the BHO system are cumbersome in integrated care settings, providing reasons to resist creative integration opportunities. Additionally, for behavioral and medical care to become more integrated, incentives need to be aligned for both sets of providers.
- PCMPs contributing to positive care outcomes and cost avoidance on the BHO side of Medicaid have no ability to share in the savings generated.

5) What is working well with RCCO and BHO collaboration right now?

In one region the BHO and RCCO are collaborating closely to make care transitions seamless, but this is not the experience across the state. BHO and RCCO relationships appear to be limited as CHCs are not aware of much collaboration at the patient level that could impact care.

6) What is not working well with RCCO and BHO collaboration right now?

Without a specific requirement to collaborate, integration seems to be a locally driven effort, and is not being mirrored in the relationship between RCCOs and BHOs as stated in question four. Having discussions at the regional level could lead to consistency across the region and assist in extending partnerships to all providers. Without regional level leadership, access to care depends upon local relationships; this creates gaps in access to services where relationships are not strong.

Sharing of data is a barrier at the practice level, and it is unknown what, if any, data is being shared between RCCOs and BHOs. Increased partnership regarding data sharing between systems could greatly benefit clients by improving patient centered care.

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

Central to successful behavioral health integration is the integration of funding, as stated in question four. The RCCO rebid process should be used to begin developing alternative payment structures. Blended funding will lead to the best patient care by removing barriers to providing needed care, and it would be a good start to payment reform.

RCCO and BHO contracts should be changed to require and demonstrate partnership at the both the regional and practice levels.

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☒	☐	Carving out behavioral health funding creates silos which are an inherent barrier to integration.
Community Behavioral Health Services Rule	☒	☐	Rule places too much emphasis on providing high level care. To encourage preventative care and early intervention it should authorize receiving care through patient chosen providers, including PCMPs.
Covered diagnoses list	☒	☐	Too focused on severe and persistently mentally ill
Different behavioral / physical health reimbursement	☒	☐	This creates different systems of service with different outcome measures and objectives.
Institutions for Mental Diseases exclusion	☐	☐	
OBH rules, reporting, or financing (regulatory differences between agencies)	☒	☐	The CCAR is overly burdensome in primary care settings. The requirement to license substance abuse providers and facilities (vs. just providers as in other areas of behavioral health) creates a burden for primary care providers that could otherwise expand SA services on site.
PCMP financing structure	☐	☐	
Per-member per-month amount	☐	☒	PMPM itself is not a barrier, but the amount can be if it does not sufficiently cover expenses of required services.
Physical space constraints	☐	☒	
Privacy Laws (HIPAA, 42 CFR)	☒	☐	42 CFR in particular is a barrier, including over application/mis-application of current rules.
Professional / cultural divisions	☒	☐	CHCs providing onsite, integrated care have found that many behavioral health professionals need additional training to function in team based care models. Moving from the intensity of counseling sessions to brief interventions and opening and closing cases based on strict criteria to providing a broader range of

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

		behavioral health (vs. mental health) interventions is challenge for BH professionals new to the primary care setting.
RCCO or BHO contracts	☒	☐	See responses to questions 5-7
Staff capacity	☒	☐	CHCs face recruitment challenges for qualified staff.
State/Federal rules or reporting requirements	☒	☐	The narrow definition of behavioral health providers that are billable to a BHO create difficulty when partnership with CMHC is not possible.
Technical resources / data sharing	☒	☐	The systems are often not in place or extremely expensive to implement and maintain to share data between providers. Data sharing between RCCOs and BHOs if done, is not shared with PCMPs.
Training	☒	☐	Training on how to work as a member of an integrated team is not readily available, so integrated practices are recruiting from a narrow group of behavioral health providers who already have the needed experience.
Others			

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?

The state needs to maintain consistency between the ACC expectation regarding integration and what is contained in the State Innovation Model (SIM) proposal presented to CMS. Of particular importance in the SIM proposal is the expectation that integrated care requires integrated, on-site teams of behavioral and physical health clinicians working on a unified care plan. Additionally, CCHN feels that medication management, integrated health records, and providing for the majority of a member's comprehensive primary, preventive and sick care is necessary for a practice to be integrated.

It is also worth noting, that without the inclusion of oral health care, true whole-person/whole-family care is not achieved. Across the state CHCs are demonstrating how it is possible to care for the whole person through our focus on all three elements: physical, behavioral and oral health. While not every clinic is providing all services on site, they are all committed (and federally required) to addressing the needs of their patients in a comprehensive way through service provision and community partnerships. Not only are CHCs demonstrating the possibility of comprehensive care, but the benefits: Colorado Department of Health Care Policy and Financing data shows that CHC patients have one-third few emergency room visits, hospital admissions and primary care preventable hospital admissions than private FFS providers.

10) Please share any other general advice or suggestions you may have about behavioral health integration.

Integration of funding in Medicaid for mental and physical health is required to make primary, preventative and behavioral health services more efficient and patient centered. Money should follow the patient – if a patient receives his/her mental health care at a CHC, the CHC should be able to bill HCPF directly for those services. Aligned with this and the comments made throughout this section, payment systems and contracts for behavioral and physical health must reimburse for preventative efforts. The current behavioral health payment system is designed to respond primarily to individuals with behavioral health diagnoses, as opposed to paying for early psychosocial and behavioral intervention for individuals and families with risk factors. Behavioral health prevention and health promotion efforts are critically important to cost effective, patient centered care.

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination?

The Safety Net Medical Home Initiative (SNMHI) provides the most comprehensive definition of care management, and the National Committee for Quality Assurance (NCQA) provides the most comprehensive tool to measure the implementation of care management in a practice.

SNMHI defines the key charges of care coordination as: linking patients with community resources to facilitate referrals and respond to social service needs; integrate behavioral health and specialty care into care delivery through co-location or referral agreements; track and support patients when they obtain services outside the practice; follow-up with patients within a few days of emergency room visit or hospital discharge; and communicate test results and care plans to patients/families.

NCQA's assessment of a provider's care coordination and care transition system focus on three elements: test tracking and follow-up; referral tracking and follow up; and coordinating care transitions. The specific elements outlined in these three areas provide a comprehensive image of whether the organization providing care coordination has the procedures and mechanisms in place to provide the care as defined by SNMHI.

b. How should RCCOs prioritize who receives care coordination first?
c. How should RCCOs identify clients and families who need care coordination?
d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?

As referenced throughout this section, CCHN does not recommend a prescriptive approach to care coordination as it has been the experience of our members that State requirements are often pushed down to the PCMP, often without regard for the PCMP's system of care. PCMPs and RCCOs should work together to develop systems for identifying those most in need of care coordination supports, and the value of having a local care coordination provider should always be considered in identifying if the service is best offered by the RCCO or the PCMP.

12) What services should be coordinated and are there services that should not be a part of care coordination?

No service should be explicitly excluded from care coordination, though there are several areas that require further development including:

- Pharmaceutical care coordination has primarily been focused on punitive measures that identify abuse in the system. Incorporating medication management more fully into care coordination will address those concerns while also reaching patients in need of further support with their medication.
- Communication between specialist and primary care providers needs improvement: Completing the communication loop between the PCMP and specialist is necessary to ensure that care coordinators have full information on patient needs and an up to date care plan.

- Reducing use of emergency room care for non-emergent needs continues to be a focus to reduce costs in health care, but not all regions have built systems that allow care coordinators to know when a patient has presented in the emergency room so follow up can be completed. Additionally, hospital systems tend to focus on what is needed to discharge a patient, not on connecting with providers who will continue care after discharge. Focusing on the relationship between PCMP and RCCO care coordinators and hospital systems will help address both of these issues.

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?

Psychosocial information such as where the patient lives, with whom the patient lives, and what resources he or she has are key to understanding what kind of care coordination he or she needs. While access to the patient's medical and behavioral health records are also essential, these often do not include the information that needs to be a part of the patient record for successful care management.

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today?

From the experience of CHCs, two predominate models of care coordination have been identified. The first is care coordination which is disease specific. Patients with disease specific care coordination may have more than one care coordinator within the same health system. The second predominant model incorporates care coordinators into the care team, across diseases or issues. Regardless of which model is being used, it is likely that patients are engaging with other health care providers and care coordinators. To reduce duplication and improve outcomes, PCMPs need access to more complete and timely patient care data to provide meaningful care coordination across systems.

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

Different organizations have coordinators dealing with different issues (i.e. housing, food access, etc.) whom may also be dealing with health care issues. The work being done by those organizations may have profound impacts on the health of a patient, but if a relationship is not present between the PCMP and the outside organization there is no way to identify those potential impact areas. To address this issue there may be a role for RCCOs in convening coordinators across communities to increase communication and reduce duplication.

c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

It is important to recognize that care coordination is often done by individuals with a variety of titles and training, such as Transition Coordinator, Promotoras, and Case Managers. In exploring what is already in place in a community it is important to focus on the functions and outcomes, not titles. See b. above for the possible role of RCCOs in "coordinating the coordinators."

d. What are the gaps in care coordination across the continuum of care?

PCMPs need access to real-time patient care and cost information in order to providing meaningful care coordination. Access to actionable data needs to be prioritized in the RFP.

15) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

The areas identified in the table below are functions that the organization providing care coordination should be providing. Across the state, CHCs have care delegation agreements with RCCOs and in those situations the responsibility for coordinating with community supports and services on these issues would typically be delegated along with other responsibilities to the PCMP. In instances in which the RCCO is providing the care management (no care delegation in place, non-attributed patient, or patients attributed to PCMPs without a delegation agreement), the RCCO does have the responsibility for coordinating on each of these issues as needed within the region.

Non-medical need:	Should the RCCO have a role? Yes	No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?

16) **Requirements about who should be doing care coordination.** Care coordination is often a team effort with several people with different skills working together to serve clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Care coordination models should not be dictated by the state or RCCO. Focus should be placed on the outcomes desired (see response to question 19), not on restricting or defining the providers or provider team. RCCOs and PCMPs with care coordination delegation should have the flexibility to create a system that works for their population in achieving those outcomes.

Type:	**Coordinate care?** Yes	No	**In what capacity should these individuals coordinate care in the ACC Program?**

Other populations, please comment:			

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

RCCOs should connect with and complement existing resources to support children today. There should not be duplication or replacement of existing structures. This should include RCCOs connecting with regional resources and supporting PCMPs with care coordination delegated in accessing existing resources and structures for this population.

19) How should care coordination be evaluated? How should its outcomes be measured?

KPIs should continue to be used to evaluate outcomes. Additional measures that could be used are changes in the cost of total cost of care, number of emergency room visits for non-urgent issues, and patient experience and satisfaction.

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

a. What is the PMPM cost for providing care coordination services?

The cost of providing care coordination services varies depending on a number of factors, including volume of clients. In particular, rural areas can be more expensive because of lower volume. Budgetary constraints should not be the only consideration in setting PMPM rates, rather these amounts need to be justifiable through an actuarial process. As payment reform moves forward, transparency in what is included in delegation contracts and the justification for the PMPM amount will need to be established.

b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

Yes, but only if the variation in PMPM is actuarially set.

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

No. Care coordination models should not be dictated by the state or RCCO. Focus should be placed on the outcomes desired (see response to question 19), not on the allowed providers or provider team requirements. RCCOs and PCMPs with care coordination delegation should have the flexibility to create a system that works for their population in achieving those outcomes.

a. **Care coordinator to client ratios.** If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	☐
51-100	☐

4,001-5,000	☐
More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

The Department should continue to utilize KPIs to demonstrate the effectiveness of care coordination. See response to question 19 for specific outcome measure examples.

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Care coordination models should not be dictated by the state or RCCO. Focus should be placed on the outcomes desired, not on the allowed providers or provider team requirements.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

Colorado's 18 CHCs have 169 sites spread throughout the state; several CHC systems span multiple RCCO regions. With some CHC systems managing relationships with up to 4 RCCOs, there are many areas where consistencies across RCCOs would improve system efficiency.

Uniform RCCO governance structure is one area that should be addressed. Suggested requirements include: consumer representation within the governance structure and seats designated for large volume providers such as CHCs; report administrative expenses transparently and be limited to a 10% administrative cost threshold (further information in Question 25).

The following functions should be standardized across RCCOs:

- PCMP reporting to RCCOs and standards for reporting needs to be standardized. It is administratively burdensome to large provider systems that serve patients in multiple RCCOs to meet varying requirements on what data and how it is provided.
- RCCO reporting to PCMPs needs to be standardized and presented in a way that allows practices providing services in multiple RCCOs to analyze their overall impact on the Medicaid population served.
    - This data should be real time to ensure care coordination and quality improvement efforts are meaningful
    - RCCOs should provide comparison data to all providers based on provider type (e.g. CHC, non-CHC, practice size, etc.)
- Referral protocols - currently the referral protocols submitted by the RCCOs vary in intensity, creating an unmanageable system of expectations for PCMPs and specialists serving patients in multiple RCCOs.
- Communication from RCCOs to PCMPs should be streamlined and RCCOs encouraged to partner in communicating to providers that serve multiple regions. In particular, attending meetings for multiple RCCOs which cover the same or similar information is administratively burdensome and unnecessary. Cross RCCO communication would allow RCCOs to identify areas in which they do not align to communicate differences to PCMPs more effectively and allow conversation regarding areas to create alignment.

Finally, as the state moves forward with payment reform, consistency will be needed in how providers are paid and large systems need to have the flexibility to choose a single RCCO with which to contract. Our response to question 26 contains further discussion of the complications of a single system managing multiple payment methodologies for a single population.

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

From the provider perspective, transparency is central to being successful in establishing community relationships. Transparency should include RCCOs reporting all real and perceived conflicts of interest, reporting regularly on how state funds are being spent within the region, and including provider and consumer

representation in the decision making process. Reporting on how funds are allocated and spent by the RCCO, and capping administrative spending by the RCCO to 10 percent, would provide additional accountability and ensuring that 90 percent of funds are spent improving patient care and access to care.

In addition to expectations regarding transparency, we recommend setting the expectation for community relationships in the RFP process by requiring applicants to include letters of support from community organizations and safety-net providers and hospitals, including CHCs. To evaluate the strength of those relationships, applicants should include information on the length and extent of their relationship with those partners. Additionally, a clear plan for or explanation of their community engagement process should be included, contain what community meetings are attended and the RCCOs advisory committee structure. These processes should include a mechanism for improving community level care decisions.

Finally, to ensure that a RCCO successfully engages the communities in their region requires clear contract oversight and enforcement.

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

CCHN thinks large PCMPS with sites in multiple regions should be able to select a single RCCO. The Department has stated that simplicity is one of the pillars of the ACC, and the ability to select a single RCCO decreases complexity both for CHCs and the state. As discussed in earlier questions, working with multiple RCCOs creates administrative complexities and presents barriers to future innovations to improve patient centered care, particularly around payment reform.

RCCOs themselves are very diverse organizations with different approaches to payment reform, referral processes, care coordination, and willingness to partner on innovative approaches to care. When working with multiple RCCOs, PCMPs are faced with challenges as simple as the time commitment required to attend multiple meetings on similar topics, to the difficulties of aligning systems with multiple systems, including billing systems should the RCCOs become a payer. Being able to work with a single RCCO would eliminate the complexities and allow large provider systems to work more closely with that RCCO to identify areas for improvement and innovation.

In addition to the efficiencies created, the ability to work with a single RCCO is a requirement for CHCs to pilot payment reform. A Medicaid payment pilot would have to involve all or most Medicaid patients in a single CHC system to be successful.

CCHN recognizes that this is a departure from the way the program is currently structured and there are several considerations that will need to be discussed. One of the original principles of the regional distribution was the equitable distribution of lives, so the issue to consider now is if with the increased number of patients covered whether equitable distribution is still necessary to the success of the program. A second area to consider is attribution. There would need to be a mechanism in place to ensure that RCCOs attribute to providers within their region, even if they are not the CHC-designated RCCO the provider is working with. Additionally, attribution to RCCOs is currently done based on the patient, so the criteria for how large provider systems would be attributed to a RCCO have not been established.

CCHN is interested in continuing this conversation with the Department and ensuring that the implications for either the decision to maintain status quo or allow this change are understood by all impacted. We believe there are options to address each of the concerns that would lead to an equitable solution that will be beneficial to RCCOs, PCMPs and patients.

If this change is not determined to be feasible, CCHN would ask that the Department work directly with CHCs to pilot CHC payment reform, and work with the CHCs/CCHN and the RCCOs to determine how and whether RCCOs would be involved.

27) Should the RCCO region maps change? Why or why not? If so, how?

Regions should reflect the natural referral patterns and clinical appropriateness rather than administrative simplicity concerns. As an example, Larimer and Weld counties have a lot of overlap between providers, hospital systems, and referral patterns between Loveland, Greeley and Fort Collins, yet are divided between RCCOs. These divisions may not have an impact on referral patterns or access to care currently, but as RCCOs develop medical neighborhoods they could increasingly become an issue.

In addition to the example above regarding community referral patterns, the division of natural communities, such as metro areas, creates difficulties in establishing community relationships and partnerships. For example, the Denver metro area is divided between three RCCO regions. Two of those regions share an administrative organization, but with the patient population served by Medicaid it is a recurring issue that patients move, and in doing so change RCCOs which creates communication issues.

CCHN believes that the RCCO region map should be evaluated based on the concerns of providers in those regions. Therefore, we are not making specific recommendations regarding changes, but have asked CHCs to submit comments regarding the challenges and strengths of the region(s) they serve.

28) Should the BHO region maps change? Why or why not? If so, how?

Behavioral and physical health cannot be fully integrated until payment systems are integrated, so alignment of regions is a logical first step to integration of care.

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

The required time for successful transition will largely depend on the structure of the new vendor. If the vendor selected is currently serving as a RCCO in a different region, the transition should take less than three months as attention can focus on changes to contracts with providers and care coordination delegation. If the organization is a new RCCO contractor without systems in place, it will take at least six months to establish both IT systems and the contracts with providers and care coordination organizations.

In either scenario, CCHN feels that the following requirements should be established:

- There is no disruption in payment to providers,
- There is no reattribution of patients to PCMPs, and
- A measurement of a successful transition should be provider feedback.

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

In order for patient designated attribution to work better, Health*Colorodo*'s contract should include the following:

- Funding and accountability to assure efficient and accurate patient designated attribution.
- The ability for clients to designated their PCMP on the Medicaid application, both on paper and through PEAK.
- Ability for all Medicaid clients, new and those previously enrolled, to submit PCMP selection and changes through a fax or online form which receives a confirmation receipt for both the patient and selected PCMP.
- Appropriate call center staffing levels to minimize wait times to under 5 minutes and a system implemented which allows patients to leave a number and be called back by a representative rather than remaining on hold.
- If a patient does not select a PCMP after a designated time period, auto attribution to a narrow group of high volume, high quality providers is implemented. Screening criteria for eligible providers should include items such as: practice open to new Medicaid patients, practices with delegated care coordination agreements with the RCCO, practices with national Patient Centered Medical Home recognition or other similar standards, practices with electronic medical records capable of running reports for patient population health management and quality improvement, and practices contracted with CORHIO.

In addition to the changes to the Health*Colorodo* contract regarding attribution, HCPF should implement policy in which providers that can demonstrate having served as the PCMP between enrollment and attribution receive retroactive PMPM payment.

The following waivers or SPAs should be sought from CMS:

- Waiver to allow patient assignment or lock in to providers. This will be necessary to move forward with payment reform because providers cannot be held responsible for managing patient health outcomes if the patient does not have an obligation to utilize the assigned provider.
- SPA to utilize projected annual income for Medicaid determination.
- Waiver to allow 12 months continuous eligibility for adults in order to address issues of churn.
- SPA for alternative payment mechanism for CHC payment once the methodology is developed and agreed to.

Suggested changes to the RCCO contracts have been outlined in Questions 24 and 25.

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

The two primary limitations that need changes are regarding the cap on dental services for adults and case management restrictions.

- The need for dental care exceeds the $1,000 cap and is limiting the ability of providers to provide high quality care in an efficient time frame in order to reduce further cost implications in the future. If patients cannot afford to continue treatment after the cap the state risks those needs elevating from a simple dental procedure to an emergency room case.
- Case management is not included in the benefit structure, though it is provided by CHCs and reduces the overall cost of care. Adding case management to covered benefits would allow expansion of the service, ultimately decreasing the overall cost of caring for the population.

Additionally, the current benefit structure does not incentivize patients to utilize less expensive, more appropriate care settings. A lot can be accomplished through providers and care coordinators, but structuring the benefit to further incentivize patient choice would further these efforts.

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

No, CHCs have already experienced the complications of working with multiple RCCOs and expanding the number per region would only accentuate the problem. Additionally, multiple RCCOs per region adds a degree of complexity to not only the provider level, but processes such as attribution.

While multiple RCCOs in an individual region should not be an option, there should be the ability for providers, such as CHCs, within a RCCO to partner and be acknowledged as a separate provider group or type within the RCCO. This would be beneficial in providing a mechanism for practices to track impacts and savings on a more localized level.

33) If you or your practice provide services to clients referred through a BHO, but you are not a Medicaid provider, would you be willing to become a Medicaid provider? If so, what has prevented you from becoming a provider in the past? If not, why not?

All CHCs are Medicaid providers.

34) What role should RCCOs play in attributing clients to their respective PCMPs?

RCCOs should be responsible for ensuring that everyone selects a PCMP within the first three months of enrollment. As enforcement of this responsibility, RCCOs should lose PMPM entirely for those who remain unattributed after three months.

35) What types of collaboration should exist between the ACC Program and the Colorado Department of Public Health and Environment?

The Department of Public Health and Environment (CDPHE) already tracks many population level health trends which would be of use to the ACC Program. Likewise, information gathered regarding the Medicaid population through the ACC would be beneficial to CDPHE in expanding their data set. Additionally, CDPHE tracks data regarding emerging public health issues which would be beneficial to share in a timely fashion with providers, and providers could be a useful resource to CDPHE in responding to emergency situations. Collaboration around bi-directional data sharing should be built for the benefit of both programs.

Perhaps even more impactful is the relationships at the local level. RCCOs should have a requirement to collaborate with Local Public Health Departments.

36) What types of collaboration should exist between the ACC Program and the Colorado Department of Human Services?

The ACC and DHS should, at a minimum, compare goals to ensure alignment. This would be accomplished best at the Governor's Cabinet level.

37) What types of collaboration should exist between the ACC Program and the insurance marketplace / Connect for Health Colorado?

The two programs should align eligibility determination methodology. For example, the two should align income requirements to annual income projections, and Medicaid adults should receive 12 months continuous eligibility. Aligning these two elements will reduce churn between the programs and increase consistency of care for patients.

Until the necessary alignments can be accomplished, Connect for Health Colorado and the ACC Program should work closely to ensure that patients whose eligibility changes and movement between the programs is necessary have consistent access to primary care.

38) What types of collaboration should exist between the ACC Program and the Colorado Department of Regulatory Agencies or the Division of Insurance?

The ACC Program should collaborate with DOI to utilization of the Medicaid definition of Essential Community Providers is consistent with the definition in the private insurance market to ensure consistent access to ECP providers in both public and private insurance settings. Additionally, the DOI should be an active participant in payment reform discussions and evaluation of models which include risk.

Stakeholder Engagement

39) What should be required of the RCCOs in terms of stakeholder engagement with clients, clients' families, and client advocates?

As referenced in response to question 24, RCCOs should have a uniform governance structure which requires at least two consumer representatives. These representatives should be clients, client family members or client advocates.

40) What specific requirements should RCCOs have for stakeholder engagement with providers, community organizations, social service providers, and others in their region?

As referenced in response to question 24, RCCOs should have a uniform governance structure which requires representation from providers, community organizations and others in the region.

41) Many of the successes of the ACC Program can be attributed to the involvement of local communities. How can enhanced community engagement be created in the ACC?

See response to question 40.

42) How should the Department structure stakeholder engagement for the ACC as a whole?

The Department should continue to host one to two regional stakeholders meetings per year like those hosted spring, 2014 which were well attended. It is important that HCPF leadership and ACC staffs have a presence in each region at least once per year.

ACC PIAC and subcommittee meeting materials should be posted at least two business days in advance of meetings. Agendas for these meetings should have items for public input clearly articulated so stakeholders can come prepared to meetings to share their input.

Finally, to encourage and ensure stakeholder engagement, the Department must have technology that allows stakeholders outside of the Denver metro area to actively participate in meetings. Current call-in systems do not support active participation.

Network Adequacy and Creating a Comprehensive System of Care

43) Does the current network of PCMPs, specialists, behavioral health providers, hospitals, pharmacies, dental, home health, and non-medical providers adequately serve the ACC population?
    a. If no, what are the gaps?
    b. Please address gaps for the population as a whole, and for specific subpopulations such as children/families and individuals with disabilities.

The increased enrollment in Medicaid has exacerbated the issue of obtaining timely access to behavioral health treatment and therapy, dental care and specialist care. CHC dental programs are overwhelmed with the pent up need among both those previously enrolled in Medicaid and the expansion population. Additionally, the expansion of Medicaid has made waiting lists for specialty care longer, which is particularly true in rural areas.

A large part of the problem with accessing care is the lack of providers accepting Medicaid, and part of that is driving by the lack of incentives for hospitals and specialists to engage patients and respond to the population needs. RCCOs should have the flexibility and the charge to work with providers in their regions to develop these incentives.

44) ACC Clients and the RCCOs interact with many parts of the Medicaid program, as well as with service entities and other types of providers or facilities.

    a. What role should hospitals play in the next iteration of the ACC Program?

One of the central roles that hospitals need to play is engaging with the RCCO to remove roadblocks to sharing information with PCMPs. Having access to real-time data about patient access of services in a hospital setting is essential to care coordination and engaging patients to utilizing PCMP services before an issue requires emergency care. RCCOs should develop plans to incentivize hospitals to engage in this work, to engage patients beyond just providing emergency care, and mechanisms to dis-incentivize not participating.

    b. What role should pharmacies play in the next iteration of the ACC Program?

Pharmacists should have increased representation at RCCO/regional meetings. As mentioned in response to question 12, pharmacy is an area that needs to be increased in care coordination work. Pharmacists can be contributing to care coordination through medicine reconciliation for patients and working with care coordinators to educate patients.

    c. What role should specialists play in the next iteration of the ACC Program?

RCCOs should be required to create a care transition system that includes specialists, hospitals, pharmacies, home health, hospice and PCMPs.

d. What role should home health play in the next iteration of the ACC Program?

RCCOs should be required to create a care transition system that includes specialists, hospitals, pharmacies, home health, hospice and PCMPs.

e. What role should hospice care play in the next iteration of the ACC Program?

RCCOs should be required to create a care transition system that includes specialists, hospitals, pharmacies, home health, hospice and PCMPs.

f. What role should Single Entry Points (SEPs) and Community Centered Boards (CCBs) play in the next iteration of the ACC Program?

RCCOs should have community advisory boards which include representation from SEPs, CCBs, counties, local public health agencies, and other community health organizations and nonprofits.

g. What role should counties play in the next iteration of the ACC Program?

RCCOs should have community advisory boards which include representation from SEPs, CCBs, counties, local public health agencies, and other community organizations and nonprofits.

h. What role should local public health agencies play in the next iteration of the ACC Program?

RCCOs should have community advisory boards which include representation from SEPs, CCBs, counties, local public health agencies, and other community organizations and nonprofits.

i. What role should community organizations and non-profits play in the next iteration of the ACC Program? Are there potential partnerships with these organizations which have been overlooked in the past?

Provider associations, including CCHN, and organizations that provide care coordination and management services should be included at the ACC and RCCO levels.

45) How can RCCOs help to support clients and families in making and keeping appointments?

RCCOs should utilize client no show rates to identify those patients potentially in need of care management and use their care management teams to find and address their root problems. RCCOs should work with their delegated practices on how to partner around no shows. Additionally, RCCOs could support PCMPs in

implementing practice level interventions, such as implementing recall or appointment reminder systems, through technical and financial support.

46) Community Health Workers are lay members of a community who provide coordination or help people to navigate the health care system in that community. Should the Department require Community Health Workers or Patient Navigators as part of the next RFP?

The functions described should be included in each region's care coordination approach, but the specifics of job titles and the mix of providers should not be prescriptive. Community Health Workers are most effective at the PCMP level within the community, so it should be an option for PCMPs and organizations with care coordination delegation but it should not be a requirement. The focus should be on developing locally appropriate systems that fulfil the functions and meet identified outcomes.

47) **Community Health Worker reimbursement.** Please use the table below to detail how Community Health Workers should be reimbursed:

All options could be viable options for reimbursing for the work done by Community Health Workers, but see question 46 for thoughts on the appropriate level for utilizing these workers.

Reimbursement process	(Please check all that apply)
Independently bill	☐
On staff (salary) at Primary Care Medical Provider Clinic	☒
On staff (salary) at RCCO	☒
Per Member Per Month Payment	☒

48) Oral health is an important part of overall health for both children and adults. Oral health benefits in Colorado are currently structured through an administrative services organization. What should be the RCCO's role in coordinating dental care and ensuring an adequate network of providers?

The dental ASO's contract contains the responsibility for ensuring an adequate network of providers, so this should not be a focus of the RCCO. However, as the RCCOs are more locally focused and have established relationships in the community, they would be a good partner for the ASO to utilize in establishing those local relationships and identifying providers.

RCCO care coordinators should include oral health and accessing dental services in their efforts to get patients appropriate and timely care. To accomplish this, the RCCO should have established relationships with the

appropriate ASO staff. Additionally, RCCOs should be providing encouragement and education to patients about the importance of regular, preventative oral health care.

The CHC model of care integrates physical, behavioral, and oral health care in a patient centered setting. Throughout this RFI there is significant focus on the first two components, but little on oral health. As RCCOs provide support and trainings to practices regarding integrated care, they should be highlighting the importance of oral health in whole-person care, total cost of care and quality improvement. Additionally, RCCOs should be educating providers on options for including oral health in medical practices, including independent practice dental hygienists as an option in Colorado.

49) Cultural competence among providers is important to ensure a Client-centered, effective system that supports the health and well-being of clients and families.

a. What does cultural competence mean to you?

The National Committee for Quality Assurance define cultural competency as not only having empathy, but expressing it towards patients regardless of the patient or provider's cultural background. In order to do so, clinical and non-clinical staff must have an adequate understanding of their patient population including its diversity, health literacy, language needs, etc. With understanding of the patient population, providers are encouraged to utilize motivational interviewing as a technique to facilitate culturally competent conversations.

b. What RCCO requirements would ensure cultural competency?

All clinical staff should be trained in motivational interviewing and enroll in cultural competency trainings with continual follow up, both of which RCCOs can provide or facilitate connections to. RCCOs should also require practices to determine cultural competency standards and hold them accountable for meeting training all staff about and meeting those standards.

c. What skills must providers and staff have in order to provide culturally and linguistically-responsive care to all clients/families including those with low health literacy?

See response to b.

d. Low heath literacy, different cultural health beliefs, and language barriers make communicating about health complicated. What RCCO requirements would help address these and reduce inequality in health outcomes?

Bilingual or translation services, on-site staff with expertise in cultural competency, and ensuring that every patient completes a health literacy assessment are factors that contribute to enhanced cultural competency.

Skills learned during trainings would incorporate the ability to refrain from making assumptions and would ideally educate participants on what it means to have implicit and explicit biases.

50) Should the next RFP allow for preferred networks for specialty, facility, or ancillary care?

Preferred networks help manage population health and generally help reduce waste in the continuum of care, but without movement towards payment reform RCCOs will not have the ability to develop or enforce these networks.

If payment reform options with any element of risk, even if only partial, are to be considered in the next RFP, networks of preferred specialist, facility and ancillary providers must be allowed. The development of these networks will need to be coupled with enhanced prior authorization processes to allow RCCOs and PCMPs to reduce total costs, improve outcomes and improve patient care.

51) Nationally, rates of emergency room utilization are on the rise. This presents challenges in terms of cost and coordination of care. What should the ACC do to address this trend?

At the patient level the ACC should evaluate options for slight changes to patient co-pays which would disincentive inappropriate use of emergency rooms, particularly where other care options are available. Additionally, not all hospitals are actively participating in ACC. A combined effort by RCCOs and the state should build additional mechanisms into the ACC which will engage more hospitals.

At the regional level, RCCOs should be developing community diversion strategies where one is not in place. Partnerships between PCMPs and hospitals have been highly successful in redirecting patients to primary care when more appropriate and making that care available, and RCCOs could be bringing community partners to the table to begin these discussions. Additionally, RCCOs have access to data which would allow them to analyze emergency room practices to identify outliers. Understanding if there are emergency rooms that cost significantly more than others in the region or extensive use of tests without clinical reasons would identify opportunities to reduce unnecessary care.

52) Please feel welcome to share other general advice, suggestions, and information you may have about network adequacy, PCMPs, specialists, pharmacies, or hospitals.

The specialist network for Medicaid patients is highly limited. RCCOs need to have the authority and charge to develop incentives to encourage specialist and hospital participation.

Practice Support

53) **Support for practices.** Please use the table below to describe the types of support RCCOs should offer to practices and other providers. Please check boxes to indicate if specific tools should be provided, and if the state, rather than the RCCOs, should offer a platform of support:

A high functioning RCCO should be able to provide all of these supports as needed to practices, though it should be recognized that not all practices will need these supports and therefore none should be tied to a specific tool. As PCMPs who have care management delegated, our members have most of these elements in place, and requiring a specific tool would require additional administrative work to utilize both the PCMPs process and the RCCOs, and would likely require financial investments to incorporate a duplicative function.

Type of support	Yes	No	Should a specific tool be required?	Should the state provide?
Administrative support	☒	☐	☐	☐
Network provider education	☒	☐	☐	☐
Assistance with practice redesign	☒	☐	☐	☐

Ensure all tools and resources are centrally located on RCCO-specific website	☒	☐	☐	☐
Others				

54) If you checked any of the boxes in the column entitled "should a specific tool be required" from the table above, please provide details about the specific process, tool, or product that should be required.

No specific tool should be required. Smaller practices and those without care delegation may need higher levels of support or templates to use, but practices that have care management delegation and existing processes in place should not have to change or duplicate work and financial investments to meet a RCCO specific requirement. In particular for situations in which providers serve patients from multiple RCCOs, requirements of specific tools would create additional barriers to providing patient focused and cost effective care.

55) What RCCO requirements or services should be required to support practices in practice transformation or to assist practices in becoming more efficient and robust medical homes?

RCCOs should provide resources and support as requested by practices, but they should not be prescriptive. Especially practices that are already engaged in medical home efforts, such as CHCs engaged in Patient Centered Medical Home certification, should be able to evaluate their practice's needs and drive the support needed from the RCCO in addressing those areas. In order to accommodate both practices such as CHCs that are actively engaged in advancing the medical home model and those practices which are newer, RCCOs could consider a grant program that would allow practices to propose changes and needed supports from the RCCO.

56) What is the most effective way to recognize and reimburse PCMPs based on their capacity to serve as a client's medical home?

Established national standards, such as the National Committee for Quality Assurance's Patient-Centered Medical Home Recognition, are the most effective way to recognize a PCMP's capacity to service as a medical home for patients. These standards set expectations of what is expected of a medical home that are consistent regardless of the region and have an established process for recognition.

Practices should be compensated for their level of recognition through these national standards, with practices incentivized to improve their rate because it is tied to increased PMPM or capitation payments.

57) Should the Department require that PCMPs utilize disease registries to manage the health of their population?

All PCMPs should utilize a registry or electronic medical record that has the capability of running reports for population health management and quality improvement as that is the standard of care. This should be a requirement for practices to be eligible for auto-attribution as discussed in response to question 30.

58) Please share any other advice or suggestions about provider support in the ACC.

High performing PCMPs need to be rewarded based on their performance. Currently in the ACC recognition is primarily at a regional level, which does not encourage further development of those high performing practices. RCCOs should be required to report and reward individual practices.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

No, the current payment structure is still paying for volume, not quality. As discussed in response to question 58, providers are not being rewarded or tracked by their own individual performance which is not providing incentives to low performers to improve or for high performers to continue to develop. Additionally, as discussed in response to questions 4, 43, and 52 there is no incentive for specialists to participate and engage with patients in a meaningful way.

The Shared Savings component of the ACC is particular limited in its ability to recognize and reward high performers – many measures can only be attributed to the region, which may result in a high performer being left out of payments due to poor performance by providers elsewhere in the region. The size and geographic diversity of many of the regions prevent meaningful coordination and care improvements between providers, and it must be recognized that in most cases, these providers never agreed to work together or to be at risk for another provider's performance.

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

CHCs are interested in working with HCPF to develop and pilot an Alternative Payment Methodology (APM) that moves away from FFS and towards population-based payment. Many CHCs are interested in taking on additional risk over time. Other states are piloting converting the PPS rate into a PMPM for primary care.

In a capitated payment structure, the initial PCMP cap should include physician services, non-E&M PCP services, and OP Labs/Pathology as these are services primarily handled by PCMPs. In later years the program could begin to expand into additional services, such as diagnostic imaging, PT/OT/ST, DME (with agreed upon carve outs), and OP Radiology (professional services only). Ideally all three elements of integrated, whole person care (physical, behavioral, and oral health) would be included.

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

CHCs as providers do have the infrastructure to support value based payments, however additional resources would be needed to add expertise at the State and RCCO level for rate setting. Without rate setting expertise and third party validation, CHCs cannot risk PPS/APM and expect to remain viable.

One of the other large barriers to managing a population successfully and being paid based on value is the lack of real time, meaningful data as has been mentioned in response to questions 2, 6, 8, 14, 24, and 44. Helping to facilitate real-time data sharing between PCMPs, facilities, specialists, and community providers must be a requirement of RCCOs in order for value based payments to be accomplished.

62) The Department is evaluating various financial and administrative arrangements that may involve licensure by the Division of Insurance (DOI). Licensure may require financial reserves or the fulfillment of other regulatory requirements. For potential RCCO bidders: is your organization licensed by the DOI with an LSLPN, HMO, or other license? Would the requirement to obtain a Limited Service Licensed Provider Network (LSLPN) license or a Health Maintenance Organization (HMO) license preclude your organization from bidding?

For providers, the need to obtain licensure will be prohibitive to participation in a model involving risk. There are models utilized, both partial risk and capitation, which do not require a DOI license if sufficient reserves are held. The Department should evaluate options for payment reform models which will not require DOI licensure.

63) What role – if any – should the RCCOs play in the distribution of payments to providers?

For CHCs, it may make sense for the state to remain the payer to resolve the potential of large CHC systems being subject to different payment pilots or methodologies in each region where they have patients. This could also be resolved by allowing CHCs to choose a single RCCO. Regardless of the direction taken, all parties involved (CHCs, RCCOs and the state) will need to work together closely to determine the appropriate role of the RCCO in payment distribution. See also the response to question 25, 50, 68 and 75.

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

As discussed in response to questions 58 and 59, high performing PCMPs are not currently incentivized to continue to improve their practice, a concern that payment reform needs to take into account. Providers who are responsible for care improvement and cost savings should be rewarded with shared savings and incentive payments.

The vision of RCCOs is to increase system effectiveness, but the care and decisions made regarding payment and practice reform most greatly impact the PCMP. To address this negotiations regarding payment reform need to be with the PCMP providers with RCCOs as a partner.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

Measurements such as clinical data on behavioral health, oral health, chronic and acute care services, unhealthy behavior, and factors that contribute to care such as social determinants of health and assessment of health literacy should be used to measure impact.

66) **Measuring Client experience.** Please complete the table below to indicate how the Department should measure Client/patient experience:

Tool:	Should it be used? Yes	No	Comments:
Consumer Assessment of Healthcare Providers and Systems (CAHPS)	☒	☐	In 2012, CCHN worked with our members to establish patient satisfaction measures that would meet the NCQA PCMH requirements. The full CAHPS survey is composed of S2 questions and the administration of it in entirety was felt to be too administratively difficult to implement. CHCs did agree to utilize and report on S questions from CAHPS, and we would advocate considering this shortened version to evaluate patient satisfaction: 1. In the last 12 months, how many days did you usually have to wait for an appointment when you needed care right away? (a. Same day, b. 1 day, c. 2 to 3 days, d. 4 to 7 days, e. More than 7 days) 2. In the last 12 months, how often did this provider explain things in a way that was easy to understand? (a. Never, b. Sometimes, c. Usually, d. Always) 3. In the last 12 months, did anyone in this provider's office talk with you about specific goals for your health? (a. Yes, b. No) 4. Specialists are doctors like surgeons, heart doctors, allergy doctors, skin doctors, and other doctors who specialize in one area of health care. In the last 12 months, did you see a specialist for a particular health problem? (a. Yes, b. No – if no, skip question S) S. In the last 12 months, how often did your provider seem informed and up-to-date about the care you got from specialists? (a. Never, b. Sometimes, c. Usually, d. Always)
SF-12 Health Survey	☒	☐	This tool is not used by CHCs at this time, so while we have no objection to it being an option, it should not be the only tool available.
Other types of client interviews / surveys	☒	☐	
Patient Activation Measure	☐	☒	The tool is not used for patient satisfaction, primarily a patient education tool
Focus groups	☒	☐	
Other	The state should focus on patient satisfaction tools, not patient education tools. Additionally, as referenced in other questions, tools should not be prescriptive and requiring practices to implement duplicative efforts.		

67) Knowing that, at this time, the Department only has claims data, how should population health be measured?

The Department should look beyond claims data to other partnerships that could be provided to develop data on population health, in particular through partnership with the Colorado Department of Public Health and Environment (CDPHE). Claims data, lab and pharmacy data, CDPHE's health survey data, and outside data sources such as the Colorado Health Access Survey could be utilized to measure population health until more robust and timely data tracking and measurement tools are in place.

In developing ways to measure population health the Department should not develop prescriptive tools for implementation in PCMPs, but should look for ways to mine data from what is already tracked by PCMPs.

68) How should quality and performance data be reported to the RCCOs, PCMPs, and the public?

PCMPs should be included in the development of reporting models in order to ensure transparency in how their data is utilized and that reports are presented in a way that can be utilized to facilitate further improvements in their system. To address these concerns, a review system should be established to create and maintain transparency and integrity of data, and large PCMP systems, such as CHCs, should have representation in that system.

Quality and performance data should be reported to PCMPs consistently across RCCOs so that those who serve patients across multiple regions can better understand their impact on their patient population. Additionally, this data should be provided on a regular basis and should include comparison information demonstrating not only how the PCMP is performing in relation to itself, but also in relation to comparable practices and the region as a whole. Presenting comparison data is the only way to identify top performers and ways to learn from their system to achieve the triple aim.

69) **Measures for payment**. Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☒
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

The problem has been the frequency with which the Department has changed measures. Impact cannot be measured over time if the measures do not remain consistent. Over time it would be feasible to add additional measures, but at the moment the Department needs to identify a set of core measures that will be maintained.

70) What percent of RCCO payments should be tied to measures or performance?

Percentage	
10-20%	☒
21-30%	☐
31-40%	☐
41-50%	☐
51-60%	☐
61-70%	☐
71-80%	☐
81-90%	☐
91%+	☐

The percentage should start low and be increased over the period of the contract as policies and reporting systems need to be established in order to tie payment to performance. As referenced in response to questions 61 through 63, CHCs are interested in the development of models with capitation and risk corridors, but in developing those models we are opposed to a fixed formula regarding the percentage of payment tied to performance. The question should be regarding how to accelerate payment to high performing RCCOs.

71) Should all RCCOs, across each region of the state, be paid on the same Key Performance Indicators (KPIs)? Should providers and RCCOs be paid on the same KPIs?

Yes, all regions should have the same KPIs, and RCCOs and providers should be working toward the same statewide goals. This is necessary because to achieve KPI performance large PCMP systems, such as CHCs, adopt organization wide quality initiatives which will impact sites across multiple RCCO regions.

72) Should RCCOs be reimbursed based on their performance compared to national standards or based on improvement?

Reimbursement should be based on progress toward meeting national standards, with ongoing rewards for those who meet or beat the standards. While it might be necessary to create incentives that are based on individual improvement to encourage movement towards national standards, payment systems should more heavily reward those that have meet and continue to beat national standards.

73) Should the Department only tie payment to measures where data can be provided on a monthly or regular basis (as opposed to annually or bi-annually)? This will mean that, for a period of time, we may be constrained to only tying payment to claims-based measures.

Yes

74) **Incentive payment frequency.** Please use the table below to answer how frequently the Department should make incentive payments:

Monthly	☐
Quarterly	☒
Annually	☐
Other	☐

If you checked the "Other" box, please describe payment frequency below:

75) For potential offerors and other similar organizations: please describe the fixed costs of operating a RCCO.

Increased transparency, as discussed in response to questions 2, 24, 25 and 63, is necessary to strengthen relationships with RCCOs as it is not clear that funding is being sufficiently invested in care and the care system. To address this, RCCO's should have a ten percent administrative cost threshold. Additionally, a medical loss ratio standard should be established and RCCOs should have reporting requirements regarding funds spent and unspent.

76) For practices and community providers, what are you currently measuring to assess the quality of your care delivery? Are you being reimbursed on any of these measures?

CHCs monitor and report performance publicly via the Uniform Data System and small amounts of funding are increasingly tied to quality payments, including:

- Performance in Medicare Advantage
- Meaningful Use has paid practices based on meeting quality outcomes with HIT PCMH attainment

CHCs are increasingly seeking and occasionally receiving reimbursement for performance on patient satisfaction, provider satisfaction, services and screening rates, and access and availability measures.

Health Information Technology (HIT)

77) **Types of communication.** For clients with Medicaid coverage, please use the table below to rank each by whether or not you would use it to communicate with your provider or RCCO:

Type of Communication	No, I wouldn't use	Yes, I would use
Phone call / phone number	☐	☐
Text message	☐	☐
Web portal	☐	☐
Email	☐	☐
Telemedicine / Video chat	☐	☐
Face-to-face meeting	☐	☐
Smartphone app	☐	☐
Other: As providers, CHCs find phone calls and face-to-face meetings to have the most success in communicating with patients. Some CHCs have begun to use text messages and all are working to get patients to use web portals. Meaningful Use requires the use of patient portals, but it is too early to know at this time if this will work with the population served.		

78) **HIT investments by organizations.** For all organizations, including potential bidders, networks, practices, and others: the table below asks about what HIT your organization has invested in and what it plans to invest in over the next two years. Please complete the table below:

Responses in the table below reflect what the majority of CHCs in Colorado have. Individual CHCs have been encouraged to respond with their specifics.

Tool	Own / Operate	Plan to Operate in next 2 years
Population analytics / reporting	☒	☐
Digital care management tool	☒	☐
Care transitions alerts	☒	☐
Electronic Health Records (EHRs)	☒	☐
Health risk assessment software	☒	☐
Practice assessment tools	☒	☐
Practice management tools (scheduling, billing)	☒	☐
Client web portal for communicating care plan, services, benefit enrollment	☒	☐
Patient education/wellness tools	☒	☐
Provider/case manager directory	☒	☐
Shared decision-making tools	☒	☐
Telemedicine software	☐	☐
Other:	☐	☐

79) **Importance of technology by type.** The Department is working to determine what technology is in place, what technology is needed, and what technology should be standardized. For RCCOs, providers, and other organizations, use the table below to answer what HIT infrastructure outside of the SDAC your organization would use to perform population health management activities. Tools are scored from 1-5, where 1 are those items least-likely to be used, and 5 are items most-likely to be used:

Tool	1 Least	2	3	4	5 Most
Population analytics / reporting / dashboard	☐	☐	☐	☐	☒
Care management tool	☐	☐	☐	☐	☒
Care transitions alerts	☐	☐	☐	☐	☒
Electronic Health Records (EHRs)	☐	☐	☐	☐	☒
Practice assessment tools	☐	☐	☐	☐	☒
Health risk assessment software	☐	☐	☐	☐	☒
Practice management tools (scheduling, billing)	☐	☐	☐	☐	☒
Client web portal for communicating care plan, services, benefit enrollment	☐	☐	☒	☐	☐
Patient education wellness tools	☐	☐	☐	☐	☒
Provider/case manager directory	☐	☐	☒	☐	☐
Shared decision-making tools	☐	☐	☐	☐	☒
Telemedicine	☐	☐	☒	☐	☐
Other:	☐	☐	☐	☐	☐

80) What are the primary barriers to RCCOs and providers increasing their use Health Information Technology to improve the performance of Primary Care Practices?

The lack of access to timely, updated and accurate information regarding care sought outside of a CHCs system are needed to be actionable for care transitions and planned care. The lack of shared data systems is a huge barrier to this, but CORHIO is a quickly developing solution to this issue that should be utilized and encouraged.

The issue is the inability to share data across systems, not necessarily the systems themselves. Consequently, requirements from RCCOs to implement specific systems that don't align with a practice's existing system will not address the issue and will only create need for additional administration resources. RCCOs should work with their providers and CORHIO to address these issues.

81) How can Health Information Technology support Behavioral Health Integration?

The issue with technology and the integration of physical and behavioral health is not in relation to the capabilities of technology. As mentioned in response to question 80, CORHIO has been able to develop

mechanisms to bridge gaps between different systems in order to facilitate access to real time data. However, CORHIO has not been able to address the barriers related to sharing behavioral health information as the federal regulatory requirements on sharing this information are more burdensome. Changes are needed to the regulations that are preventing data sharing from behavioral health.

Without changes to regulation, integrating and sharing data between behavioral and physical health can only be done on an individual partnership level and will continue to require highly sophisticated systems. Until regulations can be changed, RCCOs sould be supporting local efforts to develop these systems.

82) In the next iteration of the ACC, should there be a shared resource for data and analytics? Please describe the basic criteria for what a shared data and analytics platform needs to contain in order for it to be useful.

Yes, there needs to be a way to share data across systems in the next iteration of the ACC because without it there is no way to ensure that PCMPs across the state are getting consistent data, which is of particular concern for those participating in multiple RCCOs. As discussed throughout this response, this shared data and analytics platform should not create additional administrative burdens and costs for PCMPs, but should utilize available technology to share data across systems. In order for it to be useful, it must also meet basic requirements of transparency and timeliness:

- Transparency would be established by ensuring the ability to see background data being compiled and a vendor that is responsive to questions.
- Real time information about care accessed is necessary to provide timely, actionable data for care coordinators the information needed to address high utilizers now.

While individual care data is useful in care coordination, a shared data and analytics system should also be able to run useful reports on the population they serve as a whole. These reports should include outcome data and true cost of care comparisons rather than just percentage change information. Additionally, for PCMPs to control the cost of care they need information about the charges associated with care provided outside of their system. The data and analytics tool should allow providers to see if a hospital or specialist cost is significantly higher than another to enable the provider to make a smart referral.

83) Should there be a shared care management tool? Please describe the basic criteria for what a care management tool would need to contain in order for it to be useful.

No. Refer to response to question 80 regarding the issue to address being the ability to share information across systems, not implementation of duplicative systems at the practice level.

84) Should there be a shared population health management tool? Please describe the basic criteria for what a population health management tool would need to contain in order for it to be useful.

No. Refer to response to question 80 regarding the issue to address being the ability to share information across systems, not implementation of duplicative systems at the practice level.

85) Please describe the functionality that a common Medicaid provider directory would need to contain in order for it to be useful.

A provider directory should be searchable by provider, site, and/or entity; contain information on if they are currently accepting new ACC enrollees; and contain accessibility information such as hours of operation and languages spoken. Additionally, the provider interface should have a way to easily update information, contain provider contact information, and contain information regarding making referrals to the practice. On the patient side it should also contain quality information about the provider.

86) How can the RCCOs support providers' access to actionable and timely clinical data?

As stated throughout this response, access to actionable, real-time data needs to be prioritized by the Department. PCMPs need access to more complete patient care and cost data, often across RCCOs, to effectively manage the population and provide care coordination.

In addition to the comments made in response to question 82, RCCOs should be working with providers, including PCMPs, hospitals and specialists, across their region regarding how data will be shared. These conversations should happen within a state wide context as often patients and providers cross RCCO region lines. RCCOs could both be supportive of efforts to join CORHIO to achieve the outcome of sharing actionable and timely clinical data, and be implementing requirements that providers engage in these efforts.

87) What are the HIT solutions that would benefit clients, providers, and RCCOs? Please comment on the parameters these tools or platforms would need to possess and the ways in which they could be used.

There are many HIT solutions which would provide benefits to clients, providers and RCCOs. Patient access to web portals to track their health information and direct messaging with providers would be useful in engaging patient in their health. Telemedicine, especially in relation to accessing specialists, would beneficial in expanding access to care. Instant communication in the form of email or text when a patient presents in the ER would be beneficial to case managers.

In order for any of these to be utilized to the full extent of their possibilities, there needs to be a system in place for sharing data across systems. CORHIO is a locally developed solution that could be wider used to address this barrier.

88) What technical assistance or resources related to HIT infrastructure should the RCCOs supply? This assistance or these resources could be for providers, social service organization, clients/families, or for others.

RCCOs should be encouraging or requiring participation in CORHIO and including technical assistance with that process, which would address a requirement that they should have to ensure the flow of information across systems. Additionally, RCCOs should be providing support to Meaningful Use implementation, which could be simply coordinating with organizations that provide support in this area

89) What role should health information exchange platforms like CORHIO or QHN play in the next iteration of the ACC?

As mentioned throughout the answers to questions in this section, CORHIO has a large role to play in successfully developing the data systems which will allow real-time, clinical data to be shared, which is required to fully realize the benefits of care coordination. Many of the barriers that were alluded to in the questions of this RFI, such as is a single system needed for a particular purpose across a region, are issues CORHIO has already been working on solutions to, so they should be included as a partner in these efforts from the beginning.

90) Please share any information, advice, and suggestions you have about health information technology in the ACC Program.

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: R Holbrook Stapp

Location: 9094 E Mineral Ave

Suite 120

Centennial, CO 80112

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: Pediatrics S280

Location:

☒ Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
☒ Medical provider / PCMP / other provider
  i. Type or specialty:
  ii. Area of practice: Pediatrics
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☒ Other (please describe): Advocate for children on Medicaid

How have you been involved in the ACC program and what interaction have you had with RCCOs:

Medicaid providing private pediatric practice

Please briefly describe your involvement with Medicaid, either in Colorado or another state:

Medicaid providing private pediatric practice

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

☐ Very likely
☒ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

Are you currently involved in the ACC program?

☐ Yes

Concerned about metrics, data integrity, analysis and how they will be used to modify payments to providers.

☐ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☒ 1-2 years
☐ 2-3 years
☐ 3-4 years
☐ Since before the program was implemented.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

- Reimbursement (mostly due to the Federal ACA) is fairer now.

- The decision to make the well child visit one of the KPIs was a very good decision in behalf of children, but unfortunately attribution is still flawed and the SDAC data is delayed and often inaccurate. So, it is difficult to create an effective QI process to improve the KPI, but this is a good start.

- The decision to focus on integrated behavioral health in medical homes is a wonderful decision to improve health outcomes for people covered by Medicaid. Thank you.

- You have a great opportunity to do what is needed for the majority of Medicaid recipients. The majority of Medicaid recipients in Colorado are children and adolescents; they should not be considered one of the subgroups. The following principles should be incorporated into the core objectives of the ACC:

    - Children's health care needs are very different than adults. For adults, the focus is on managing chronic disease more effectively. For children, it is about preventing the development of those chronic diseases.
    - If the ACC really wants to focus on health and wellness, the greatest opportunity is with the children (the majority of Medicaid recipients). By focusing on preventive care, early screening and early intervention for children, there will be big savings; unfortunately those savings may not occur for many years or decades in the future, but the investment will eventually be worth it.
    - So, the ACC will need to invest in children to the extent possible now even though the savings come much later. We recommend that a portion of short-term savings that occurs due to chronic disease management in adults in the ACC be invested back into preventive care for children.
    - Children are part of families and you can't help the child unless you help the family. So, care coordination is more involved for children since it includes care coordination of the parents/family.
    - There is increased recognition that behavioral health is a part of overall health and should be accessible within a pediatric medical home. However, the current mental health system must have policies, procedures, and resources that support integrated behavioral health activities at the practice level.

2) What is not working well in the ACC Program?

- Attribution continues to attribute patients to the wrong medical home and the process of getting patients reassigned to the correct medical home is onerous for the patient and family.

- The health care data through the SDAC is based on claims so it is delayed and is incomplete (particularly for children). Therefore, it is not very useful in helping medical homes improve outcomes for children.

- Each RCCO does things very differently, which is confusing for medical homes with patients in several RCCOs. RCCOs are inconsistent in how they respond to requests for care coordination (quite variable depending on whom you reach at the RCCO). So the new RFP should ask how RCCOs will develop policies and procedures to make their methods and responses to requests for help more consistent, both within the RCCO and among all RCCOs.

- There are certain expectations/requirements and ways of doing things that are so different from one RCCO to another that it requires significant extra work for the medical home to adapt to the differences. To deal with this. So, the RFP should ask how RCCOs intend

- If a patient lives in one region and goes to a medical home in another region, and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from the patient's region RCCO. This is particularly true in the Denver metro area. <u>There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients.</u>

- The "incentives" now are actually disincentives, especially the requirement that the RCCO must meet its KPIs before a high performing medical home can be rewarded for meeting its KPIs. The concept behind this approach is not consistent with how health care systems (and "medical neighborhoods") work.

- The geography of the 7 regions does not reflect the natural geography of health care systems and referral patterns. Larimer County should be in Region 2.

- RCCOs are not providing the level of care coordination that Medicaid patients need. We have had RCCO "care coordinators" just tell us to call 211. The level of commitment that patients and families need is difficult to find, unless care coordination is provided at the medical home level or the community level.

- Both family practices and pediatric practices report that the SDAC does not reflect their own data that the practice can obtain from their EHR or their own claims data. This is particularly true regarding data on health care screening. The RFP should ask how RCCOs and HCPF should take advantage of this practice-based data.

- Most medical homes are not working closely with RCCOs and are not receiving much support. The RFP should ask how RCCOs intend to work more closely with medical homes.

- Feedback from RCCOs to the medical home regarding patients referred to the RCCO for care coordination is spotty. How will RCCOs consistently provide feedback and communication to the medical home regarding what was done for the patients and whether there was improvement?

- There has been difficulty with communication from the state level through the RCCOs down to the individual practice/provider level. Providers feel as though they are not well informed from HCPF or RCCOs. We are grateful that CCHAP keeps us informed.

- The current system does not take into account the movement of patients on and off Medicaid and movement between RCCOs. Whether for KPIs or future shared savings incentives, practices need to be evaluated on established patients who have been in a practice for a minimum of six months. This allows the medical home to actually have time to make an impact on the child's care. Otherwise, it is a substantial disincentive for practices to be open to the more complex and challenging patients, those that likely need access the most.

- Currently, there is very little communication and alignment between BHO's and RCCO's. In order for integrated behavioral health to be successful at the practice and community level, the BHO's and RCCO's must have similar goals, policies/procedures that are aligned, payment structures that are aligned with movement toward integration and ongoing close communication with one another. The RFP should ask how they intend to do this.

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

- The decision to focus on integrated behavioral health in medical homes is a wonderful decision to improve health outcomes for people covered by Medicaid. Thank you.

- If Colorado is serious about promoting integration of behavioral and physical (medical) health care, then the RCCOs and BHOs should be integrated. This would mean they should have the same regions and function as though they are one organization. This would reduce duplication of efforts and have better alignment of incentives and payments that support integrated care.

- Open the behavioral health and wellness codes (96150 – 96155) now. Don't wait. This will encourage integration immediately and enable medical homes to start now the process of evolving toward full integration.

- Care coordination for both behavioral health and medical care should be done in the primary care setting. And either the RCCO and/or the BHO should delegate the responsibility to do care coordination and a pmpm to cover the expense to the medical home as part of the payment reform process. And behavioral health care coordination and medical care coordination needs to be fully reimbursed. In addition, the BHO and the RCCO will need to have information and care coordinators to assist medical homes to handle uncommon or very complex issues.

- Provide infrastructure and funding for data collection and management to support integrated behavioral health in the medical home and the care coordination that will have to be part of that. Utilizing SOAC data is just one way to understand the activities within a medical home. SDAC data is delayed and does not include enough information to support behavioral health care coordination in the medical home. Other methods and technologies are needed. There will need to be an investment in the development of new technologies and methods to do behavioral screening, track referrals, document treatment and collect data on the whole care coordination process at the medical home level. This will require adequate reimbursement to cover the cost of starting up new care coordination programs in the medical home and start up technologies to improve screening, intervention and care coordination with follow through in the medical home.

- The CPACK program developed by CBHC is a very good program, particularly the following:
  a. Assistance with finding a behavioral health provider for patients
  b. Telephone consultation by a child psychiatrist to primary care providers
  We recommend that BHOs be required to provide the 2 components above as part of their new contracts.

- Payment options for integrated behavioral health (not just co-location) need to be clear and understandable to providers and practices. In order for the integrated model to be sustainable, there need to be ways to access understandable billing rules/policies.

Care Coordination

Question 12) What needs for children/families should be coordinated in medical homes and are there services that should not be a part of care coordination by the pediatric and family medical home

One of the most difficult services to provide in the medical home is home visits. Support from the larger system is needed.

Services that can be provided in a pediatric or family medical home are: complex medical coordination including logistics/travel, ancillary services (PT/OT/home health services, ...), collaboration with mental/behavioral health, collaboration regarding school needs, referrals to early intervention services and Child Find, referral to other agencies (rehab, hospice, ...), collaboration with foster care and DHS system. RCCOs need to help medical homes with needs like assistance with housing, food, parental employment, child care, in which case the RCCO can help families connect with other agencies that provide these services.

Question 19: How should care coordination program be evaluated? How should its outcomes be measured?

A care coordination program should initially be measured by having good processes, not measured by outcomes, until solid data exists on outcomes that are risk adjusted and accurate for children. Initially all measures need to be quite separated from outcomes that are highly tied to patient behavior, or practices will again be less likely to serve those with highest risk.

23) Please share any other general advice or suggestions you have about care coordination in the ACC.

Our medical home relates to multiple RCCOs and we want to be delegated to do care coordination. If all RCCOs allowed medical homes to be delegated to do care coordination, we could receive a pmpm from all of

them, which would enable us to afford to hire enough care coordinators to meet the needs of all of our ACC patients.

Where should care coordination be done? Care coordination is best done in the medical home. We are willing to do care coordination, because we have a relationship with our patients and they trust us and we recognize that coordinating complex medical care is essential for good care and for cost savings. Also, the primary care provider is best positioned to have a long term relationship with the patient, and therefore know and understand other aspects of the patient's life and how important those non-medical factors are on the patient's health and health issues.

If care coordination cannot be done in the medical home, then it is best done by community-based organizations. The least effective, least well-received, least trusted is care coordination done from a call center in an RCCO. The role of the RCCO should be to help the medical home-based care coordination staff access resources for families.

The majority of practices are willing to provide Care Coordination, if they can get financial support (PMPM) for providing the service.

Should you be doing care coordination for certain patient populations e.g. children with asthma or special needs children? Or for your entire Medicaid population healthy or chronically ill? The overall goal of Colorado Medicaid should be to provide care coordination services for ALL patients in the Medicaid population (for some patients it may be very minimal, others extensive). This is the essence of preventive care. A care coordinator that is based in the medical home is in the best position to help identify risk factors proactively, as early as possible before they impact a patient's health and cause illness. Children with special healthcare needs (complex, complicated) require a higher level of care coordination, so the pmpm attached to their care coordination needs to be risk adjusted.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

- All RCCOs should have their offices in the region served, should be non-profits, be a Medicaid provider and be incorporated only in Colorado.

- All RCCOs should offer to delegate care coordination to medical homes willing to accept that responsibility and the RCCO should share a portion of the RCCO pmpm with the medical home that accepts delegation.

- All RCCOs should use the same criteria for delegation and for the amount that is paid for delegated services of care coordination. By doing this, services can reach a standard across the state. A patient would have access to similar services no matter where they moved across Colorado.

- RCCOs should all agree on how they will effectively communicate to medical homes regarding any contact the RCCO has with patients attributed to the medical home. They should include PCMPs in developing those criteria.

- All RCCOs should help (or contract with an organization to help) medical homes understand how to access their SDAC data, understand their data and use it to develop rapid cycle QI projects to improve health outcomes and meet KPIs.

- All RCCOs should agree to provide uniform support for medical homes when a medical home asks for help with care coordination, even when the medical home is in another region (and contracted with another RCCO) but the patient is in the first RCCO's region.

- RCCOs should be required to allow medical homes to give the RCCO a list of patients the medical home feels is their patients and receive help from the RCCO to understand why certain patients have been attributed to another medical home. If the patient is determined to be more appropriately attributed to the inquiring medical home, then the RCCO should help re-attribute the patient to the correct medical home.

- RCCOs should share on a regular basis the RCCO's performance on KPIs and share savings incentives and share with the medical home how their own performance compares with other medical homes.

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

This is particularly applicable to the Denver metro area. There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients. For many expectations/requirements and ways of doing things the RCCOs are so different from one another that it requires significant extra work for medical homes to adapt to the differences. In addition, if a patient lives in one region and goes to a medical home in another region, and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from that first region.

27) Should the RCCO region maps change? Why or why not? If so, how?

Yes. There are two changes we recommend:

- Larimer County should be included in Region 2, since the medical community and the support organizations of Larimer County and very closely linked to Weld County
- In the Metro Denver area, the boundary issues are so difficult that we recommend one RCCO be responsible for the whole metro area or that medical homes be allowed to choose one RCCO for all of their patients.

28) Should the BHO region maps change? Why or why not? If so, how?

If Colorado is serious about promoting integration of behavioral and physical (medical) health care, then the RCCOs and BHOs should be integrated. This would mean they should have the same regions and function as though they are one organization. They should share incentives that are aligned around successful integration of behavioral and medical services and outcomes. So the BHO maps/regions should conform to the RCCO regions/maps.

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?

There should be one RCCO for the metro area or medical homes should be allowed to select one RCCO for all of their ACC patients. There are certain expectations/requirements and ways of doing things that are so different from one RCCO to another that it requires significant extra work to adapt to the differences. If a patient lives in one region and goes to a medical home in another region and the medical home is not contracted with the RCCO for the region in which the patient lives, it is difficult to get help from that first region. This is particularly true in the Denver metro area.

Another alternative: When a practice contracts with a RCCO currently they "belong" to one RCCO. Change that and have them only contract with the state and have that contract extend to all RCCOS. This way RCCOS would be more accountable to standardization through out all of Colorado, and the services provided to patients/families would be more uniform.

34) What role should RCCOs play in attributing clients to their respective PCMPs?

The attribution system is quite flawed still. RCCOs should be required to allow medical homes to give the RCCO a list of patients the medical home feels are their patients and receive help from the RCCO to understand why certain patients are attributed to another medical home. If the patient is determined to be more appropriately attributed to the inquiring medical home, then the RCCO should help re-attribute the patient to the correct medical home.

Payment Structure and Quality Monitoring

59) Does the current payment structure support the goals of the ACC? How can financial incentives be further aligned to support these goals?

- The payment structure absolutely does not support the ACC goals. A medical home does not receive incentives for KPIs unless the RCCO meets its KPI. This becomes a disincentive, because many medical homes meet their performance targets, but do not get rewarded because the RCCO did not meet its targets. So the medical home has no incentive to maintain the performance. The philosophy that HCPF has espoused (that the high performing medical home should encourage or help the low performing medical home) is not realistic and is not how the real world works. There is no time for that, plus the high performing medical home has no way of knowing who is low performing. This idea shows a lack of understanding of the world where health cares is delivered. Medical homes need to receive full incentives when they meet their KPI targets, no matter what happens in the RCCO.

- The incentives are too low to change much. Also, the KPIs need to remain focused on process, not outcomes, until the data is more sophisticated to accurately attribute patients and account for risk factors.

- Many medical homes have the ability to collect REAL-TIME data from their EHR and their claims database, which can be used to measure performance more accurately than the SDAC. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and providers to

develop a vetting process that will enable HCPF and RCCOs to trust the medical home self-reported real-time data.

- Since children are the majority and give the best chance of truly improving health and wellness, KPIs need to be more child-focused. And since the potential cost savings for children's health care are so far in the future, KPIs need to be intermediate, process outcomes.

60) If PCMPs could voluntarily elect to receive capitation payments rather than fee-for-service, would your practice be interested in participating? Under what parameters? What services should be included in a primary care capitation?

There is very little of the infrastructure in the state in place at the present time to enable capitation to be implemented successfully. Here are just some of the changes that would need to be in place before it would be fair or prudent to implement capitation:

- The state would need to already be paying fair amounts for all aspects of the care needed by Medicaid recipients before it could effectively move to capitation. In other words, codes for things that HCPF wants done under capitation should be opened and reimbursement adequately now. This would encourage medical homes to already be doing these things before the change to capitation. It would also give HCPF and medical homes experience regarding what the actual costs are for providing the desired services and determine a fair capitation. It will be difficult to change behavior to include new activities under capitation among providers, if you continue to hold codes closed now for things you want done under capitation. You have to help the medical homes create the habits you want before the switch to capitation.

- All providers would have to be reliably involved in the ACC: primary care, all of the various adult and child specialists, the hospitals, the therapies, dentists, mental health providers, etc.

- The data system would have to be able to report real time data and be far, far more accurate than it is now.

- The attribution system is flawed. That would have to be improved and provide accurate, real-time attribution data before capitation should be instituted.

- You will have to change a variety of policies that are barriers to population management.

- Capitation has to be combined with significant incentives to implement processes and improve outcomes. So, you will need to have the incentive system very well developed and viewed by providers as motivating before implementing capitation

- Healthcare for children focuses on prevention, early detection and early intervention, which require initial increased investment to reduce potential expenses many years and decades down the line. Other ACO programs have shown that savings on children are difficult to show early on. So, incentives in the care of children will initially be for intermediate outcomes (or for process outcomes) and need to be direct incentives rather than incentives in the form of shared savings.

- Early in the transition from pre-ACC payment methods to ACC payment structure (2012), some medical homes were asked to return money to Medicaid. Transitions like that (for example the transition to

capitation) have to avoid this. Primary care medical homes have such narrow margins that this can be very difficult financially on a medical home

- Many medical homes have the ability to collect from their EHR and their claims database REAL-TIME data with which performance can be measured. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and providers to develop a vetting process that will enable HCPF and RCCOs to trust that medical home self-reported real-time data is trustworthy.

61) Do providers have the infrastructure to be successful in an environment where payments are tied to value? If not, what are the barriers to developing that infrastructure?

Many medical homes have the capability and infrastructure to adapt to payment tied to value. What is missing is the state, HCPF, RCCO, BHO infrastructure. See all of the infrastructure elements HCPF needs to have in place listed in question 60

64) Please feel welcome to add any further thoughts or suggestions pertaining to payment reform within the ACC.

- The HCPF Payment Reform Committee should meet at a time when providers and practice managers can actually attend. Monday afternoons is probably the worst time to actually enable providers or practice managers to attend. Once you select an appropriate time, then actively recruit participation.

- Make sure that your efforts are statewide. Views are different in the various regions of the state.

65) What types of measures should be tied to payment in order to ensure the program improves the quality of care, satisfaction of clients and providers, and health outcomes?

- Many medical homes have the ability to collect from their EHR and their claims database REAL-TIME data with which performance can be measured. HCPF, SDAC (Treo Solutions), CIVHC, and RCCOs only have Medicaid claims data, which is far too delayed to be useful for medical homes to use to do rapid cycle quality improvement to improve performance in a timely manner. Therefore, HCPF and RCCOs will have to use data self-reported from medical homes to obtain real-time, useable data. This requires that HCPF and RCCOs work closely with representative practice managers and provider from medical homes to develop a vetting process that will enable HCPF and RCCOs to trust medical home self-reported real-time data.

- The measures for children can be drawn from HEDIS measures or CHIPRA measures or from the Pediatric Measurement Proposal that HCPF did in 2010 with the help of Jim Todd.
  Appropriate child health measures could be selected from the following measures :
  - Well child visits appropriate for age
  - Developmental screening by three years of age
  - Teen depression screening
  - Complete immunization status by age two
  - Post-partum depression screening rate for mothers of newborns by age 4 months

- Appropriate antibiotic use in URI and strep pharyngitis

- Medical homes could also be measured on:
  - Patient (or family) satisfaction ratings
  - Documentation of QI projects

Screening should be part of KPIs, but you need to do more than just create a KPI. If you are going to have KPIs, then you need to track not only the number of times a screening was done, but also track the v-codes (or some way to track positives) and make them available in the SDAC so medical homes can track them. And the SDAC needs to track referrals (or intervention). Otherwise it is not worth measuring the number of screenings.

- The PCMP or medical home should receive real-time data (less than a month since date of service) with data that will allow them to compare their performance with performance of similar type of medical home.

- Healthcare for children focuses on prevention, early detection and early intervention, which require initial increased investment to reduce potential expenses many years and decades down the line. Other ACO programs have shown that savings on children are difficult to show early on. So, incentives in the care of children will initially be for intermediate outcomes (or for process outcomes) and need to be direct incentives rather than incentives in the form of shared savings.

69) Measures for payment. Please use the table below to describe how many measures should be tied to payment at one time. These could function similarly to Key Performance Indicators, but they do not necessarily have to do so. Please assume that the Department will try to align measures with other programs to the extent possible.

Measures	
1-7	☒
8-10	☐
11-20	☐
21-30	☐
31-40	☐
41-50	☐
51+	☐
None	☐

We only need 2-4 KPIs. Any more will dilute the effect. What we really want is good data, so we can improve our outcomes by doing a quality improvement project. Since children are the majority of Medicaid recipients and give you the best chance of truly improving health and wellness in the long term, KPIs need to be more child-focused. And since the savings are so far in the future, KPIs need to be intermediate, process outcomes.

Accountable Care Collaborative Request for Information

THIS IS A REQUEST FOR INFORMATION (RFI) ONLY
THIS IS NOT A FORMAL BID SOLICITATION.

NO AWARD WILL RESULT FROM THIS RFI.

ACC Request for Information

RESPONSE WORKSHEET

Basic Questions for All Respondents to this Request for Information:

Please provide your name and location:

Name: Fernando A Martinez, CEO

Location: Alamosa, Alamosa County, CO

If you are a member of (or affiliated with) an association, business, or other similar entity, please provide the name and location of that organization:

Name of organization: San Luis Valley Behavioral Health Group

Location: Alamosa, Alamosa County, CO

X Please check if you are answering on behalf of this entity

Please choose the best description for you, your organization, or the person on the behalf of whom this response is being submitted – Check all that apply:

☐ Client
☐ Client's family member
☐ Client advocate
X **other provider**
  i. **Type or specialty: Behavioral Health**
  ii. **Area of practice: MH and SUD**
☐ Provider advocate (e.g. medical society)
☐ Potential bidder for RCCO contract
☐ Behavioral Health Organization
☐ Data or HIT entity
☐ Foundation
☐ Educational or research institution
☐ Another public or private program
☐ Legislator or elected official
☐ Other (please describe):

Are you currently involved in the ACC program?

X Yes
☐ No
☐ I don't know

If you answered "yes" above, how long?

☐ Less than one year
☐ 1-2 years
☐ 2-3 years
X 3-4 years
☐ Since before the program was implemented.

How have you been involved in the ACC program and what interaction have you had with RCCOs: We are a member of a BHO. We have worked very closely with ICHP and provide care coordination services for our area.

Please briefly describe your involvement with Medicaid, either in Colorado or another state: We serve the behavioral health needs of the Medicaid population in the 6 counties of the San Luis Valley.

If you are a client, provider, or potential bidder, what is the likelihood that you will seek to participate in the program?

X Very likely
☐ Likely
☐ Reserved (waiting to see the RFP)
☐ Unlikely without significant changes
☐ Will not seek to participate
☐ N/A

Please feel welcome to describe why or why not using the space below.

General Questions

1) What is working best in the Accountable Care Collaborative (ACC) right now?

The RCCOs try to collaborate at the local level. This is a major strength of the program. It will be helpful to have the RCCOs continue to work on local solutions, but to collaborate at the higher level to share solutions, and determine if they fit in other areas of the state. It is important to continue to allow the solutions to be driven locally between the RCCO and the communities.

2) What is not working well in the ACC Program?

Payment reforms are not keeping up with the needs in the community. It is imperative that payment models allow for the flexibility to serve all community members. It will be necessary to create payment structures based on outcomes in the communities and allow for population based health outcomes for the region that is supported by the RCCO. A risk-based payment model with outcome requirements may be a solution to this challenge.

3) What is working best in the Behavioral Health Organization (BHO) system right now?

The BHOs have shown that they are able to provide services to many people with complex needs and support their continued recovery. The current risk-based payment structure has allowed the BHOs to meet the needs of the population they serve and cut the costs for serving those clients. It is the belief of this organization that we must have a risk-based system in the future of our RCCOs in order to achieve the triple aim.

4) What is not working well in the BHO system?

The system needs to be focused on outcome based reimbursement for the services provided to members. Not only will this require an agreement on which outcomes should be measured and how, it will also require data system streamlining and reorganization. It will also be necessary for the BHOs to have access to physical health data in "real-time" in order to assist in driving down those costs for members who have dual diagnosed conditions in chronic physical health and behavioral health.

Colorado is also experiencing a shortage of qualified professionals to serve the population and meet the coding requirements that are currently in place. It will be necessary to acknowledge this shortage and be able to provide higher incentives and quicker license transferability so providers can recruit from the national pool.

5) What is working well with RCCO and BHO collaboration right now?

The collaboration and team approach with the RCCO ensures that medical management and care coordination are provided in a comprehensive framework, including utilization of health data, assessment, and holistic care planning that supports the patient/family-centered approach, and that services be integrated comprehensively.

Again, the collaboration between the RCCOs and the BHOs has been most successful because of the allowance of local solutions to local issues. This must be considered as the new bid is written. The collaboration has also allowed for conversations to be had about system and organizational barriers to providing care for the members. These solution-based conversations and plans are the key to providing excellent service to our members and reaching the triple aim.

6) What is not working well with RCCO and BHO collaboration right now?

Data that is essential to outreach and care coordination is not shared, and the data we do receive is 90 days or more outdated.

In addition to receiving the data in a more timely fashion, we need to be able to share data in a transparent way to our members. There is some confusion from members about why and how we (the BHO) know about their care coordination needs.

While conversations are starting about the barriers in all of our systems, there seems to be a scarcity mentality around the payments and that there needs to be a "competition" to survive and provide all services in one place instead of focusing on partnerships and mutual accountability. It will be necessary for the new RCCO plan to address payment concerns and partnership accountability adequately. There is still a need for specialty care and specialty services, the important part is to coordinate and work together to reduce the duplication in services in order to provide a smooth pathway to a healthier life for the members.

Behavioral Health Integration

7) What should be the next steps in behavioral health integration in Colorado?[1]

It is important to realize that integration is more than the ability for a patient to receive two different services in one location. So much of what we do now, and what we aspire to do in the future, depends on our ability to better define the role of behavioral health in the overall healthcare system. It depends on our ability to better coordinate and integrate our own core areas- mental health, substance abuse treatment, health promotion and prevention. To take the next steps in behavioral health integration we need to move from program frameworks and policies that create systems to work independently of each other and support full practice transformation.

- Identify, standardize and disseminate integration best-practices across the region
- Support robust evaluation of integrated practices (includes data management, centralized analytics)
- Monitor progress along an integration continuum
- Identify and address operational, financial, and system barriers associated with integrated practice transformation

[1] Many terms and definitions can be found in the Appendix at the end of this document.

8) **Barriers to the Integration of behavioral health and physical health services.** Using the table below, please explain which issues are barriers, and how they can be addressed:

Factor:	Barrier? Yes	No	If yes, please provide details of the barrier and how to address it:
Community Mental Health Center financing structure[2]	☐	☐	
Community Behavioral Health Services Rule	☐	☐	
Covered diagnoses list	X	☐	There are continued exclusions, and then a "fight" over who will pay for which services. If there are certain diagnoses that each "camp" would cover, we would like those outlined.
Different behavioral / physical health reimbursement	X	☐	It will be important to make sure the reimbursement rates are equitable if we are providing similar services.
Institutions for Mental Diseases exclusion	X	☐	We are advocating for parity with the institutes in line with the PH hospitals.
OBH rules, reporting, or financing (regulatory differences between agencies)	X	☐	It would be helpful if all the regulators had similar rules. Currently, Medicaid has different rules than OBH – this makes it tough to manage all the requirements.
PCMP financing structure	☐	☐	
Per-member per-month amount	☐	☐	
Physical space constraints	☐	☐	
Privacy Laws (HIPAA, 42 CFR)	X	☐	It would be helpful if SUD and MH and medical all had consistent privacy laws.
Professional / cultural divisions	X	☐	There are cultural divisions among PH and BH providers. This could be addressed by focus groups or work groups.
RCCO or BHO contracts	☐	☐	
Staff capacity	X	☐	We need a more robust workforce. We need to have improved reciprocity rules for practitioners entering our state.
State/Federal rules or reporting requirements	X	☐	Consistency would allow for easier integration.
Technical resources / data sharing	X	☐	Data sharing requirements and needs should be consistent. We should not have to enter information into several different databases.
Training	X	☐	Training is necessary as it will address the cultural concerns as well as enhance staff capacity in an integrated setting.

[2] More information about these rules, payment types, and entities can be found in the Appendix at the end of the document.

9) What characteristics are necessary for the State to recognize a clinic as providing integrated, whole-person/whole-family physical and behavioral health care?
http://www.integration.samhsa.gov/integrated-care-models/A_Standard_Framework_for_Levels_of_Integrated_Healthcare.pdf

10) Please share any other general advice or suggestions you may have about behavioral health integration.

Population based screenings are a key component of a fully integrated system. It will be important to have a set of screenings everyone uses to track outcomes consistentiy across regions. It may aiso be necessary to develop systems for individualizing the screenings by region.

Having Behavioral Health Providers on site less than 50% of the time does not support the integration process. There needs to be an understanding of the continuum of care and provide a team-based approach that keeps the client/patient at the center of care.

Care Coordination

11) Care coordination is an important part of the ACC Program.

a. What is the best definition of care coordination?
   - Care coordination is the deliberate organization of care activities involved in a patient's care to facilitate the appropriate delivery of health care services. It also includes patient empowerment and involvement in their own care in order to ensure adherence to treatment protocols.

b. How should RCCOs prioritize who receives care coordination first?
   - Prioritizing patients who receive care coordination can lead to patients "falling through the cracks" and may cause higher costs later in the treatment provision. Every patient should be eligible for care coordination. It will be up to the providers and the RCCOs to address care coordination needs of the population.

c. How should RCCOs identify clients and families who need care coordination?
   - Care coordination should occur at the primary care (bi-directional) level for anyone accessing more than one health care system by utilizing Health Care Data and Assessments. Care coordination should work with patients who have been identified with multiple care needs.

d. How should RCCOs track care coordination when the care coordination takes place at a delegated Medical provider?
   - It will be important that any tracking of these services is built upon current data structures and reporting. This reporting should not add much administrative burden to the providers.

12) What services should be coordinated and are there services that should not be a part of care coordination?
Services that impact the members' health should be coordinated. This can and should include social determinants of health as well as direct physical health needs. It is important that members get support to remain healthy outside of the physical health care realm.

13) What pieces of information are most important to have about someone in order to know what care coordination he or she needs?
It is imperative that the care coordinators know where and how the patient engages in all aspects of his/her health care – primary and behavioral health care. Specialty health care should be assessed through the primary care provider and coordinated by the RCCO. It will also be necessary to know the patient's medical history and current needs in both behavioral and physical health care in order to prioritize with the team and the patient to meet the most critical needs first as well as address any social factors in his/her health.

14) Many clients and their families have access to a number of different care coordinators. These coordinators often work in different systems.

a. What care coordination is going on today?
   - Care coordination (without a shared definition) is happening in private practices, in early childhood settings, in schools, in behavioral health, in public health, in hospitals, and probably in other social services settings. It will be imperative to incentivize and award the RCCOs for developing a systematic approach that meets community needs for care coordination provision.

b. What care coordination takes place outside of the RCCO or ACC, and what makes that coordination different?

   - As a mental health center, we already coordinate care for our clients. Sometimes, this care coordination conflicts with the care coordination required by the RCCOs. We have been working with the RCCO to make this an effective process for our clients. There may also be requirements for Public Health and FQHCs to provide care coordination in addition to the RCCO/ACC. Recently, there have been some funding/grant sources applications that require care coordination – these grants and funding streams often do not specify that care coordination may be being provided in multiple areas. It will be important for the RCCOs to lead the way in identifying how care coordination should be coordinated in order to appropriately and effectively serve the members.

c. How can the ACC avoid duplicating or disrupting current care coordination relationships?

   - It makes sense to have the care coordination driven from the place of service where the patient feels most comfortable. A patient without a behavioral health concern may be best served through a primary care setting while the opposite may also be true. It is imperative to take the patient's current state in to consideration and if they have other human services needs, the behavioral health provider may be the most appropriate fit.

d. What are the gaps in care coordination across the continuum of care?

- Gaps are occurring when a patient has multiple Care Coordinators who are not working with each other. There are also care coordinators providing coordination for only one specific area that falls into their specialty or knowledge base rather than providing coordination for the whole array of services the patient needs.

15) **RCCOs' roles in addressing clients' and their families' non-medical needs.** Please complete the table below, keeping in mind adults, children, and families:

It will be important to identify the needs members have in these "non-medical" areas that directly impact their health care. It is unnecessary to have the RCCOs address non-medically impactful social needs.

Non-medical need:	Should the RCCO have a role? Yes	No	Should the RCCOs coordinate with community supports and services? Yes	Should the RCCOS have an additional role beyond coordinating with these supports? If so, what should that role be?
Abuse, neglect, and trauma	☐	☐	X	
Affordability (assistance with prescriptions or co-pays)	X	☐	☐	
Daycare / childcare	☐	X	☐	
Economic stability & employment	☐	X	☐	
Education	☐	X	☐	
Environment	☐	X	☐	
Food access / nutrition	☐	☐	X	
Health literacy	X	☐	☐	
Housing	☐	X	☐	
Language or translation services	X	☐	☐	
Literacy	☐	X	☐	
Transportation	☐	X	☐	
Other	Please type your response here. Feel free to list as many non-medical factors as you want, and please explain how the RCCO should be involved.			

16) Requirements about who should be doing care coordination. Care coordination is often a team effort with several people with different skills working together to serve Clients and families. Please use the table below to describe who should be a part of coordinating care and what roles those different people should play:

Type:	Coordinate care? Yes	No	In what capacity should these Individuals coordinate care in the ACC Program?
Advanced Practice (Registered) Nurses	☐	☒	
Certified Addiction Councilors	☐	☒	
Certified Nurse Midwives	☐	☒	
Community Health Workers	☒	☐	Depends on the structure and capacity of the organization
Generalists (BA/BS/MA/MS)	☒	☐	Depends on the structure and capacity of the organization
Health Coaches	☒	☐	Depends on the structure and capacity of the organization
Licensed Clinical Social Workers	☐	☒	
Licensed Marriage and Family Therapist	☐	☒	
Licensed Mental Health Counselors	☐	☒	
Licensed Professional Counselor	☐	☒	
Masters of Public Health	☐	☒	
Medical Doctors / Doctors of Osteopathic Medicine	☐	☒	
Nurse Practitioners	☐	☒	
Patient Navigators	☒	☐	Depends on the structure and capacity of the organization
Peer Advocates	☒	☐	Depends on the structure and capacity of the organization
Promotoras	☐	☒	
Psychiatrists	☐	☒	
Psychologists	☐	☒	
Registered Nurses	☐	☒	
Social Workers	☒	☐	Depends on the structure and capacity of the organization
Wraparound facilitators	☒	☐	Depends on the structure and capacity of the organization
Other	Care coordination should be placed with the provider most appropriate for that client/patient.		

- Care coordination should be offered by a staff member who can operate as a generaiist and who can integrate and faciiitate connection to resources that will address the social determinants (health, jobs, housing, Income, and social or famliy relationships) as a fundamental component of care planning in order to increase rates of client recovery and improve the client's quality of life. Care Coordinators have to have a skill set that supports and increases the patient's motivation to engage in a partnership with their health care team.

17) Care coordination requirements for specific populations. Please use the table below to describe if any of the following populations require unique care coordination requirements, or if general requirements are sufficient:

Population	Specific	General	If specific, please describe
Newborns and Infants	☐	X	
Children	☐	X	
Children who are healthy, but in socially-complex environments	☐	X	Define socially complex.
Children involved in the foster care system	☐	X	
Children with a chronic illness	☐	X	
Children with a serious emotional disturbance	X	☐	Care should be coordinated by the BHO
Children with medical complexity	☐	X	
Children or youth with a behavioral health diagnosis or substance use disorder	X	☐	Care should be coordinated by the BHO
Transition-age adolescents	☐	X	
Parents and families	☐	X	
Pregnant women	☐	X	
Adults	☐	X	
Adults who are healthy, but in socially-complex situations	☐	X	
Adults with a chronic illness	☐	☐	
Adults with a behavioral health diagnosis or substance use disorder	X	☐	Care should be coordinated by the BHO
Clients involved in the criminal justice system	☐	X	
Clients with a disability	☐	X	
Clients in a nursing facility	☐	X	
Elderly clients	☐	X	
Frail elderly clients	☐	X	
Clients in palliative care	☐	X	
Other populations, please comment:			

18) How do you envision the RCCOs working with child-serving agencies in the state to deliver care for medically or socially complex children or for children involved in the foster care system?

The RCCO should only be involved if there are medical issues that need to be addressed.

19) How should care coordination be evaluated? How should its outcomes be measured?

Care coordination outcomes should be measured by a decrease in duplicated services, patient satisfaction and achievement of health goals, and a decrease in costs to the system.

20) Today, RCCOs receive $8-$9 per member per month (PMPM) to cover care coordination and other expenses, like developing and supporting a network of providers.

a. What is the PMPM cost for providing care coordination services?

We would request an actuarial analysis to determine this.

b. Is it advisable to have the PMPM vary by specific population? If so, what would be the recommended PMPM cost by population?

We would request an actuarial analysis to determine this.

21) Should there be care coordinator to client ratio requirements in the next RFP? How should this vary by client acuity or population?

We believe the analysis mentioned above will drive the client to care coordinator ratios.

a. Care coordinator to client ratios. If you answered "yes" to the previous question: with roughly 45% adults, 55% children, and with 6% of covered clients having disabilities, please estimate how many clients one care coordinator can serve. Please use the table below for your response:

Clients	
Fewer than 25	☐
26-50	X
51-100	☐
101-200	☐
201-500	☐
501-1,000	☐
1,001-1,500	☐
1,501-2,000	☐
2,001-3,000	☐
3,001-4,000	☐
4,001-5,000	☐
More than 5,000	☐

22) How should care coordination outcomes be evaluated by the Department? Which metrics are most important?

One of the most important aspects to measure is the decrease in cost of providing services if they are coordinated. It will also be Important to measure health outcomes achieved like increase in function and Improvement on the population based assessments and screenings.

23) Piease share any other general advice or suggestions you have about care coordination in the ACC.

It is Important to remember that care coordination Is most effective when It is provided at the point of care and that it needs to be flexible enough to meet the patients' needs. We need to focus on better health outcomes and reduction of cost because of thls coordlnation for patients with muitiple chronlc health conditions.

Program Structure

24) If you could require all RCCOs to implement certain functions in the same way across the state (or across all regions), what functions would you consider most important? (The Department has heard examples such as: care coordination requirements, data reporting to the RCCOs, data reporting from the RCCOs, provider contracting, and payment methodologies).

While there is benefit to requiring things like data requirements and defining care coordination activities, it is important to remember that one of the most successful aspects of the RCCO model has been the local control to provide localized solutions, and too much regulation in this area would hinder that success. We believe that allowing the RCCO to determine the provider contracting and payment methodologies can create a cost saving system by creating competition to provide services.

25) What should be required of a bidder to ensure that, as a RCCO, it could form community relationships and understand community strengths and needs?

Community relationships are an important piece to a successful RCCO. It would be our preference that bidders identify their current strengths and weaknesses in this area rather than the RFP requiring certain actions be undertaken. Prescriptive community building may be easier to "measure" because bidders can check items off for the partners at the table, but it does not truly show the impact of the relationship. It will be important for bidders to identify the areas in the relationships they need to enhance and those that are going well and how those will be maintained.

26) The Department has received suggestions that, in the next RFP, PCMPs should be allowed to choose the RCCO to which that practice's clients are enrolled. Please comment on this proposal.

This would be very difficult in rural and frontier areas. We also believe this would be difficult to track and maintain as some of the data we have been exposed to shows that the identified PCMP may not even know the patient or have seen the patient in several years.

27) Should the RCCO region maps change? Why or why not? If so, how?

It should be considered that RCCOs 4 and 7 be combined as these two geographic areas relate to patient migration and various types of care. RCCOs 4 and 7 have much in common when it comes to consumer choices. A great portion of RCCO 4 is geographically isolated by large expansions of grasslands and mountains. This reality is compounded by sparse isolated population centers with limited consumer choice. The historical patterns are for these isolated communities to migrate to Pueblo and Colorado Springs A combining of both regions would validate historical patterns that were set into motion by the need to have better and more choices for care. Currently, our BHO is functioning in these two RCCOs and we feel it could be beneficial to combine for better management of outcomes as well as consistency among providers. It will be necessary to look at where and how patients are currently accessing care to see if this makes sense for the patients.

28) Should the BHO region maps change? Why or why not? If so, how?

The BHO contract would have to be re-bid if this were to occur. The BHOs have been in place for a very long time and this could negatively impact the clients if this were done. There would need to be a lot of

education and support for this transition to occur. It would also be our hope that the State would be ready to combine the BHO and RCCO programs. The disruption to our clients that could occur if they were not combined and the maps changed could be very detrimental to the recovery that is already in place.

29) Based on the current scope of work for RCCOs, how many months of transition would new vendors require? What needs to happen during the transition period? What are the expenses involved in this transition?

6 months would be the minimum transition period necessary. We would imagine that education, marketing and patient support would be integral in ensuring a smooth transition. The expenses would need to be identified by the new vendor, but should include outreach and support to patients in addition to operational needs.

30) What legislation, policy, rules, or changes in procedure are needed to make the ACC more effective?

We believe that moving toward a risk based contract would support the decrease of costs and increase population health management. If providers were to receive a PMPM, they could develop supports and systems to meet their population's needs and create operational structures that would be sustainable. It would be advisable to add access and quality measures to the PMPM structure. We believe these measures would dramatically impact the health of the members and show a cost savings early in its implementation.

31) What are the limitations of the current benefit structure and what – if any – changes are needed?

There is some discrepancy on billing for the 99000 and the HCPC codes because of credential issues of the providers. There is also no ability to provide co-located services. We would recommend that all services that can be provided at the Mental Health Centers can also be presented in other facilities by our providers.

32) Should there be multiple RCCOs per region? This would involve two or more entities operating in the same region and competing for clients and providers. If so, why? If so, how many and where? What issues would this address?
